SOURCE: SAC Form 126 and 126-1

Total write-up averaged 6 per sortie.

43d Bomb Wing - October 1968

REPEA...ITE-UPS B-52

1. There were 145 sorties flown with repeats occurring on 64 sorties. They range from 1 to 4 per sortie as follows:

1 Repeat on	39	3 Repeats on	3
2 Repeats on	20	4 Repeats on	2

2. The reliability code distribution on the repeats was 53 code 2 and 45 code 3. The distribution of the repeats by system are as follows:

SYSTEM	CODE 2	CODE 3	SYSTEM	CODE 2	CODE 3	SYSTEM	CODE 2	CODE 3
Engine	1	0	Doppler	3	15	Autopilot	4	1
A/C Press	1	0	S/N	22	3	UHF Radio	1	1
HYD/PNEU	1	0	HCM Rec	2	0	Tacan	1	1
Airframe	2	0	R.. Beacon	1	0	Radar Alt	1	2
HF Radio	0	1	Afterburner	1	0	Nav	1	6
IFF	0	1	Elec Pwr Supp	1	0	FCS	2	2
Compass	2	1	Fuel (Other)	7	0	HCM Trans	1	7

3. There were 14 repeat code 2 that were code 2 on the previous sortie. These repeats were on the following systems:

SYSTEM	REPEATS	SYSTEM	REPEATS
Autopilot	1	IFF	1
Tacan	1	Compass	1
Doppler	4	Nav	1
S/Nav	3	FCS Radar	1

4. There were 27 repeat code 3 that were code 3 on the previous sortie. These repeats are on the following systems:

SYSTEM	REPEATS	SYSTEM	REPEATS
HF Radio	1	UHF Radio	1
Radar Alt	2	Doppler	11
Elec Pwr Supply	1	Nav	5
FCS Radar	1	HCM Trans	6

5. The repeats followed the normal system pattern with most going to the electronics area. This is the case in both code 2 and code 3 repeats.

The number of tire changes decreased slightly during the month of October. Increases were noted in FOD, "BURST", and "OTHER" while there was a decrease in tires "WORN". The prime cause for the higher rate of .26 was due to a 61% increase in "CUT" tires.

MAINTENANCE SUMMARY

FOREWORD

[illegible] Wing

1. This Maintenance Summary is developed and published each month by the Analysis Division of the Deputy Commander for Maintenance in accordance with Volume II, CAOM [illegible].

2. This summary is designed for use of local maintenance managers and by contents will be used at the discretion of local management. Maintenance supervisors are invited to suggest the addition of items to be included in this summary, and/or any other special analyses. Data is available in the following areas:

a. Maintenance Data Collection System. This covers data areas as Command Emphasis, Family review, manning effectiveness, type maintenance performed, action taken values and all areas of the MDC System.

b. Aerospace Vehicle Status Reporting System. This covers such areas as NORS ratios, NORM ratios, CM ratios, items causing NORS, aircraft causing NORS and NORM, etc.

c. Air Vehicle Performance Reporting System. This covers prevailing effectiveness, aircraft utilization, airborne effectiveness, launch effectiveness, FRACA information, repeat write-ups, etc.

3. The above listing reflects the broad areas of data available. If an analysis or study on the above or any subject relating to the maintenance effort is desired, contact DOM Analysis.

James D. Rigley Jr.

JAMES D. RIGLEY, JR., Colonel, USAF
Deputy Commander, Maintenance

FMS	14.5	19.5	19.5

NARRATIVE

B/TB-58: The overall cost per sortie increased during November as compared with October. Although there was a decrease in sorties flown, cost per flying hour slightly increased with a decrease in the total number of flying hours.

NARRATIVE (Continued)

KC-135: The manhours per sortie and flying hour decreased during November. The prime cause for this was a decrease in the number of AFSC 3[illegible]'s processed for the aircraft and an increase in maintenance teams deployed TDY.

NOTE: Manhours expenditure supply and other suffixes non-identifiable to aircraft were not used in computation, although they were in support and distributed between:

PP/Transient	5[illegible]

ORGANIZATION: 43[illegible] Bomb Wing

REPORTING: November 1960

REMARKS

Possessed aircraft are based on hours reported in the MAP-AI Report. Possessed and available fluctuate due to Depot Modification inputs/outputs.

Of the 138 sorties flown, 12 were launched away from the home station. There were primarily weather diverted return sorties and ferry sorties for modification.

Overall sortie production was effected by 21 cancellations, with 15 for material reasons.

REMARKS

Possessed aircraft are based on hours reported in MAP-AI Report.

Sortie production was effected by 32 cancellations, with 27 for materiel reasons and 5 for supply.

REMARKS

The overall wing repair rate continues to decrease; 96.9% in October, 96.7% in November. Contributing factors were; a. reduction in repair actions and a high level of NRTS actions, especially in Code 4 - Bench checked - NRTS - Lack of Parts. Special emphasis, especially the lack of bits and pieces is being evaluated to pinpoint supply bottlenecks.

REMARKS

The overall squadron's base self sufficiency rate dropped from 98.5% in October to 98.3% in November. The total number of items repaired also dropped; 1660 in October, 1435 in November. Coupling this reduction in items repaired with a steady NRTS action level, contributed to the loss of .2% in the monthly repair rate.

The Pneudraulic Shop continues to have parts problems and the Electric Shop's repair capability is also being effected by the non-receipt of parts.

REMARKS

A marked reduction in code 0-bench checked - repair deferred has been noted, i.e., 141 recorded in October, 98 in November. The Electric and Pneudraulic Shops showed the greatest improvement, although they are still faced with a parts shortage.

Code 8 - Bench checked returned to depot facility by direction of system or item manager.

4. The 9 materiel cancellations by cause and tail number:

2436	4 Nov	Nr 2 engine change. Internal oil leakage. Removed and replaced Nr 2 pressure pump and replaced seals.
2439	7 Nov	Pod swap due to scupper valve leak - Removed and replaced valve.
1015	13 Nov	Fuel leak aft tank. Injected sealant.
2440	14 Nov	Special inspection of wheel and brake system due to emergency landing.
2458	14 Nov	Fuel leak aft tank. Repair accomplished by Depot Assistance Team.
1021	20 Nov	Cracked spar left wing station - 538.36. Depot engineer patch plates installed.
2467	20 Nov	Fuel leak aft tank. Injected sealant.
2460	22 Nov	Fuel leak Nr 2 pylon. Injected sealant.
2454	25 Nov	Fuel leak Nr 4 pylon. Injected sealant.

5. The 8 materiel late take offs; by cause and aircraft tail number:

2433	1 Nov	No ignition Nr 1 engine. Removed and replaced main ignition unit.
2433	5 Nov	Nr 4 engine running at pre T/O check. Removed and replaced amplifier temperature control.
1122	5 Nov	Broken wire on pilot U-92 connector. Repaired wire.
1011	7 Nov	Engine mount bolt stripped. Replaced bolt and bushing.
2437	12 Nov	Nr 1 engine hydraulic pressure lite on. Removed and replaced pressure switch.
2078	15 Nov	Left hand elevon Nr 10 actuator leaking. Removed and replaced Nr 10 actuator.
1011	21 Nov	Pod swap-leak at pod to aircraft disconnect drain.
2078	22 Nov	Pod swap- leak at pod to aircraft disconnect drain.

6. The 4 air aborts by cause and aircraft tail number:

2440	12 Nov	Lost utility hydraulic system. Replaced line on brake shutoff valve.
2436	19 Nov	Lost cabin pressure. Replaced coupling on cool duct.
2446	22 Nov	No cabin pressure. Removed and replaced cabin pressure regulator.
1010	29 Nov	28 + 250 power pack flux. Smoke in cockpit. Removed and replaced AC generator and drive assembly.

Hydraulic Pwr Supply		1	1
Landing Gear		2	2
Flight Control	1	2	3
Total	10	30	40

* Supply -- 3 CANX

4. The 30 Materiel cancellations for November; by cause and aircraft tail number:

668	1 Nov	1st sortie - Nr 1 engine hot start. Removed and replaced engine.
668	4 Nov	2nd sortie - Aft tank indicator out of tolerance. Repaired [illegible] connector at bulkhead.
668	5 Nov	1st sortie - Aft tank indicator out of tolerance. Removed and replaced aft tank unit.
668	8 Nov	1st sortie - Fuel leak left inboard w/w.
668	13 Nov	2nd sortie - Auto trim drives down HF1 follows. Adjusted auto trim stick.
661	14 Nov	1st & 2nd sortie - Nose strut cylinder cracked. Removed and replaced nose strut.
661	15 Nov	2nd sortie - Yaw damper caution lite came on and would not reset. Repaired chafed wire behind damper panel.
670	18 Nov	1st, 2nd & 3rd sortie - (Supply) Fuel reservoir manifold leaking - NRFB.
661	19 Nov	1st sortie - Fuel leak- left tank w/w fairing.
668	19 Nov	1st, 2nd & 3rd sortie - Fuel leak Nr 2 pylon. Tank entry required.
661	20 Nov	1st sortie - Nr 3 engine hydraulic leak. Removed and replaced Nr 3 fire shutoff valve.
661	20 Nov	2nd sortie - Nr 14 hydraulic rpm leaking. Removed and replaced Nr 14 elevon actuator.
668	20 Nov	1st, 2nd & 3rd sortie - Fuel leak Nr 2 pylon. Tank entry required.
668	21 Nov	1st, 2nd sortie - Fuel leak Nr 2 pylon. Tank entry required.
670	21 Nov	1st, 2nd & 3rd sortie - Pylon attach fittings leaking. Tank entry required.
670	22 Nov	1st & 2nd sortie - Pylon attach fitting leaking. Tank entry required.
668	22 Nov	1st sortie - Fuel leak Nr 2 pylon. Tank entry required.
670	25 Nov	1st sortie - 1st station canopy lite on. Repaired wire on connector plug.
668	29 Nov	2nd sortie - Aft fuel tank gage fluctuates. Broken wire inside cable.

5. The 10 Materiel late take offs by cause and tail number:

670	5 Nov	1st sortie - No rotation Nr 4 engine. Starter shaft sheared.
670	12 Nov	1st sortie - Nr 3 left hand elevon actuator leaking. Removed Nr 3 actuator.
661	18 Nov	2nd sortie - CG out of tolerance. Calibrated CG system.
670	25 Nov	2nd & 3rd sortie - Insufficient maintenance time after 1st sortie cancelled.
661	25 Nov	2nd sortie - Shorted connector reservoir tank indicator. Repaired connector.
670	26 Nov	2nd sortie - Aft tank fluctuates. Repaired coaxial connector at bulkhead probe 3A.
668	26 Nov	2nd sortie - Nr 2 engine oil leak. Replaced garlock seal.
668	29 Nov	1st sortie - Fuel pump leaking on Nr 1 engine. Removed and replaced fuel pump.
670	29 Nov	1st sortie - No rotation Nr 1 engine. Starter shaft sheared.

FOD RATE	.52	.55	.61	.36	.14	.35	.46	.37	.20	.17	.26	.39

SOURCE: MDC RPT #5

The number of tire changes decreased during the month of November. An increase was noted in FOD while there was a decrease in the number of tires "worn" The partial cause for the higher rate of .39 is due to a decrease in the number of sorties flown.

43d Bomb Wing - November 1968

KC-135 NORM

1. The NORM rates exceeded the DOD standards for the first time since April. An increase in unscheduled maintenance and phased inspection contributed to the overall increased rate.

2. The high NORM systems were:

Landing Gear	323	Radar Nav	178
Power Plant	276	Flight Control	136
Fuel	220	UHF Communications	114
Instruments	191	Electrical	107

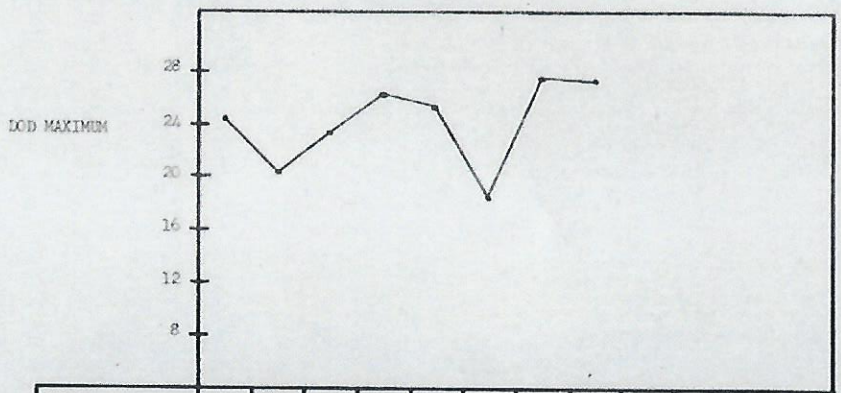
3. The high NORM aircraft were:

1471 - Primarily on instrument system, fuel system and landing gear.
1467 - Primarily on electrical system.
0346 - Primarily on power plant system.
1470 - No one particular system. The electrical, power plant, flight control, UHF, instruments, landing gear and airconditioning systems were involved.
0343 - Primarily landing gear.
0345 - Primarily radar nav.
0344 - Primarily instruments.

4. Requirements to accomplish phased inspections prior to forward base deploy, contributed to increased phased inepection rates and overall NORM rates.

43d Bomb Wing - November 1968

B-52 NORM RATES



MONTH	APR	MAY	JUN	JUL	AUG	SEP	OCT	NOV				
TOTAL RATE	24.9	20.4	23.7	26.7	25.6	18.5	27.8	27.6				
UNSCHED MAINT	22.2	18.5	21.8	24.1	23.5	16.6	26.0	25.9				
PHASE	2.7	1.9	1.9	2.6	2.1	1.9	1.8	1.7				

SOURCE: Aerospace Vehicle Status Report PCN 22006A

43d Bomb Wing - November 1968

B-58 NORM

1. The B-58 NORM rates are above the DOD Maximum for the second consecutive month and for 5 of the 8 plotted months. The 27.6 percent represents 6953 hours and based on 720 hours for the month, equates to 9.7 aircraft per day, every day of the month.

2. Overall, 35 aircraft reflected NORM time during November. The time ranged upwards to more than 400 hours for some aircraft. There were 8 aircraft contributing to approximately 45 percent of the total NORM time. These acft and systems were:

1015 - Primarily the airframe system - fuel leaks
1021 - Airframe and electrical system
2439 - Primarily the fuel system - CG problems
2440 - Auto pilot and radar nav
2458 - Primarily the airframe system - fuel leaks
2460 - Fuel, bomb-nav, ECM and radar nav systems
2064 - Airframe and bomb-nav systems
2078 - Hydraulic, bomb-nav, flight control, UHF communications, power plant and ECM systems

3. Unscheduled maintenance is the area where emphasis must be placed to bring NORM rates within standards. Phased inspection rates are not a problem at this time.

43d Bomb Wing - November 1968

REPEAT WRITE-UPS B-52

1. There were 131 sorties flown with repeats occurring on 68 sorties. They range from 1 to 5 per sortie as follows:

1 Repeat on	39	3 Repeats on	2	5 Repeats on 2	
2 Repeats on	24	4 Repeats on	1		

2. The reliability code distribution on the repeats was 65 code 2, 41 code 3 and 1 code 5. The distribution of the repeats by system are as follows:

SYSTEM	CODE 2	CODE 3	SYSTEM	CODE 2	CODE 3	CODE 5	SYSTEM	CODE 2	CODE 3
Engine	6	0	Doppler	2	15	1	Auto Pilot	3	1
A/C Press	2	1	B/N	28	2	0	UHF Radio	4	4
A/Refuel	2	0	ECM Rec	0	1	0	Oxygen	1	0
Instrument	2	0	R.V. Beacon	0	2	0	Radar Alt	2	2
STBY Comp	1	0	Elec Pwr Sup	0	2	0	Nav	0	9
Compass	3	0	Fuel (Other)	6	0	0	ECM Trans	1	2

3. There were 11 repeat code 3 that were code 2 on the previous sortie. These repeats were on the following systems:

SYSTEM	REPEATS	SYSTEM	REPEATS
Auto Pilot	1	ECM Rec	1
Radar Alt	1	Nav	1
Doppler	3	UHF	1
B/Nav	2	Electric	1

4. There were 30 repeat code 3 that were code 3 on the previous sortie. These repeats are on the following systems:

SYSTEM	REPEATS	SYSTEM	REPEATS
A/C Press	1	UHF Radio	3
Radar Alt	1	Doppler	12
Elec Pwr Supply	1	Nav	8
R.V. Beacon	2	ECM Trans	2

5. The repeats followed the normal system pattern with 78.5% going to the electronics area. This is the case in both code 2 and 3 repeats.

6. The following aircraft had more than one repeat write-up on a single system during the month of November. The aircraft tail number and repeat system are listed below:

ACFT #	DATE	SYSTEM	CODE and REPEAT #	
2018	21 Nov	UHF Radio	3	1
	26 Nov		3	2
	29 Nov		3	3

MAINTENANCE SUMMARY

TOINBY

MAINTENANCE SUMMARY

FOREWORD

43 Bomb Wing

1. This Maintenance Summary is developed and published each month by the Analysis Division of the Deputy Commander for Maintenance in accordance with Volume VI, SACM 66-1.

2. This summary is designed for use of local maintenance managers and the contents will be based on the desires of local management. Maintenance supervisors are invited to contact the Analysis Division on items to be included in this summary and/or any other special analyses. Data is available in the following areas:

a. Maintenance Data Collection System. This covers such areas as component failures, repair rates, manhour utilization, type maintenance performed, action taken codes and all areas of the MDC System.

b. Aerospace Vehicle Status Reporting System. This covers such areas as NORS rates, NRFM rates, OR rates, items causing NORS, aircraft causing NORS and NRFM, etc.

c. Air Vehicle Performance Reporting System. This covers scheduling effectiveness, aircraft utilization, airborne effectiveness, launch effectiveness, FSAMA information, repeat write-ups, etc.

3. The above listing reflects the broad areas of data available. If an analysis or study on the above or any subject relating to the maintenance effort is desired, contact DCM Analysis.

JAMES D. RIGLEY, JR., Colonel, USAF
Deputy Commander, Maintenance

OMS	15.1	9.8	10.9
AEMS	4.2	3.4	3.0
PMS	19.5	19.5	16.5

NARRATIVE

B/TB-58: The overall cost per sortie decreased considerably during December as compared with November. Cost per flying hour also decreased while the total number of flying hours was the same as for November.

NARRATIVE (Continue)

KC-135: The manhours per sortie and flying hour decreased during December. The prime cause for this was a decrease in the number of AFTO 349's processed for the aircraft and an increase in maintenance teams deployed TDY.

NOTE: Manhours expended on supply and other suffixes non-identifiable to aircraft were not used in computation, although they were in support and distributed among:

B/F Transient	6153
AGE	9048
Supply	2127
All Others	6253

REMARKS

The overall wing repair rate showed a sharp increase during the month of December; 96.7 in November, 98.6 in December.
The NRTS code 4, "Lack of Parts" continues to be the major problem area, causing 88.2 percent of the NRTS actions.

2400 Total	493	276	12	48			829	1		21			22	838	94.6	94.4	97.4

REMARKS

The overall squadron repair rate increased sharply during the month of December. Three shops failed to achieve the desired 95 percent goal. All due to low volume of items processed, combined with the requirement to NRTS some items.

B-52 SCHEDULING EFFECTIVENESS AND ACCOMPLISHMENTS

1. The information that follows is extracted from the 1-SAC-082 Report and reflects the B-52 activity for December and the preceding 6 months:

	JUN	JUL	AUG	SEP	OCT	NOV	DEC
Sorties Scheduled	142	150	158	138	165	137	147
Sorties Cancelled	10	10	14	13	31	21	23
Sorties Added	7	9	15	6	11	18	10
Sorties Airborne	139	149	159	131	145	134	134
Sorties Early/Late	15	16	11	15	12	19	19
Sorties On Time	124	133	148	116	133	115	115
Air Aborts	4	4	6	2	3	4	2
Hours Flown	798	892	1010	708	899	843	803
Average Sortie Length	6.3	6.4	6.4	5.7	6.2	6.4	6.

2. The schedule deviation causes for December were:

	AIR	LTO	CAMX	TOTAL
Weather	6	3	11	20
ATC		2		2
Operations	3		1	4
Materiel	1	12	9	22
Receiver/Tanker		2		2
SAC			2	2
Total	10	19	23	52

3. Materiel deviations for December by system:

	LTO	CAMX	AIR ABT	TOTAL
Air Frame		2		2
Auto Pilot	1			1
Instrument	1			1
Power Plant	3	1		4
Elect Pwr Supply	2	1		3
Fuel System	2	2	1	5
Bomb Nav	1			1
Hydraulic		1	1	2
Landing Gear	1	2		3
UHF	1			1
Total	12	9	2	23

4. The 9 Materiel cancellations by cause c ail number:

1019	4 Dec	Fuel leak - right wheel well fairing
1021	5 Dec	Nr 3 generator coupling shaft sheared. Removed and replaced coupling shaft
1010	6 Dec	Nr 4 engine oil pressure high. Low EGT on take off roll. Removed and replaced Nr 4 engine
2439	10 Dec	Nr 5 brake dragging. Removed and replaced fwd inbd brake assy
2435	13 Dec	Nose strut leaking. Replaced seals
1021	17 Dec	Nr 1 hydraulic pressure lite on. Removed and replaced pressure switch and pump
2458	17 Dec	Fuel quantity flux. Shorted cable at ICA probe
2444	30 Dec	Hole in Rt walkway panel. Patched hole
2440	30 Dec	CG out of tolerance. Removed and replaced calibrator

5. The 12 Materiel late take offs by cause and aircraft tail number:

2454	2 Dec	Hydraulic leak search radar antenna. Removed and replaced antenna
2455	6 Dec	Nr 3 engine starter inoperative. Removed and replaced starter
1014	9 Dec	Nr 1 generator decoupled at pre T/O. Engine run reset
2435	9 Dec	No rotation Nr 3 engine. Starter shaft sheared. Removed and replaced shaft
2434	10 Dec	CG switch won't go out of auto. Adjusted switch
2461	19 Dec	Fuel quantity flux. Bad resistor fuel control panel
2444	19 Dec	Nr 2 engine vibration. Adjusted push-pull rod main control
2052	20 Dec	Interphone blows fuses. Repaired wire control panel plug
1019	20 Dec	1st station auxiliary attitude indicator bad. Removed and replaced indicator
2450	20 Dec	Left main gear axle beam sheared. Removed and replaced strut
2433	20 Dec	Nr 3 generator went off line during engine run - recoupled
2442	30 Dec	Signal to ACA continues after control stick stops. Removed and replaced ACA

6. The 2 air aborts by cause and aircraft tail number:

2245	2 Dec	Cannot air refuel; ready lite not on and air refueling door unopen. Removed and replaced signal amplifier
2458	5 Dec	Clamp broken on hot air line and damaged seals in hydraulic shutoff valve. Removed and replaced valve.

TB-58 SCHEDULING EFFECTIVENESS AND ACCOMPLISHMENTS

1. The information that follows is an extract from the 1-SAC-M52 Report and reflects the TB-58 activity for December and the preceeding 6 months:

	JUN	JUL	AUG	SEP	OCT	NOV	DEC
Sorties Scheduled	71	83	65	71	84	76	91
Sorties Cancelled	12	14	13	18	28	32	31
Sorties Added	4	3	2	6	5	4	4
Sorties Airborne	63	72	54	58	62	47	64
Sorties Early/Late	16	14	15	15	24	12	22
Sorties On Time	47	58	39	43	38	35	42
Air Aborts	0	1	0	0	0	0	0
Hours Flown	156	215	170	138	199	128	163
Average Sortie Length	2.6	2.9	3.1	2.4	3.2	2.7	2.5

2. The schedule deviation causes for December were:

	ADD	LTO	CANX	TOTAL
FAA		3		3
Weather			8	8
Operations	4	1		5
Materiel		18	23	41
Total	4	22	31	57

3. The Materiel and Supply deviations for December by system:

	LATE	CANX	TOTAL
Air Conditioning		1	1
Auto Pilot	1	0	1
Fuel System	3	4	7
Air Frame	1	2	3
Power Plant	4	2	6
Hydraulic Power Supply		1	1
Landing Gear	1	4	5
Flight Control	2	8	10
Electrical Power Supply		1	1
Instrument	1		1
Misc Utilities	2		2
UHF Comm	2		2
Interphone	1		1

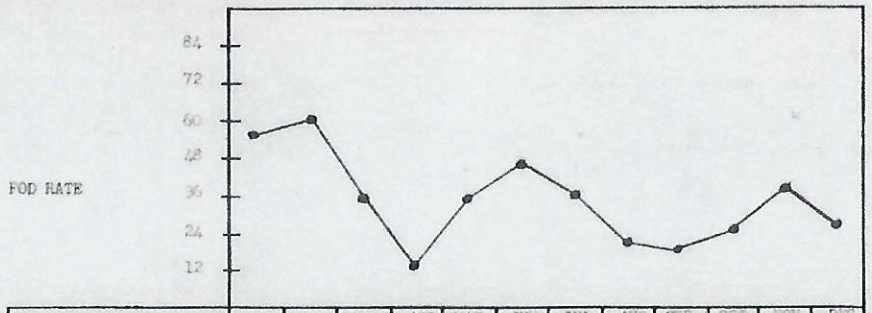
4. The 23 Materiel cancellations for December by cause and aircraft tail number:

5670	2 Dec	2nd sortie	- Lost right brake during taxi for T/O. Removed and Replaced cable
5661	4 Dec	2nd sortie	- Leaking Nr 3 engine quick disconnect. Removed and replaced Nr 3 self sealing quick disconnect coupling
5670	4 Dec	2nd sortie	- Nr 2 engine goes into afterburner too easily. Rerigged Nr 2 throttle
5661	4 Dec	4th sortie	- Nr 2 pylon leak
5661	9 Dec	1st sortie	- CG out of tolerance. Calibrated CG system
5668	9 Dec	2nd sortie 3rd sortie	- EPI drove out of limits. Removed and replaced PCLA
5661	10 Dec	1st sortie 2nd sortie	- Left anti-skid conduit broken. Removed and replaced conduit
5668	11 Dec	3rd sortie	- Elevon trim lite stays on. Adjusted switch on ETA
5668	12 Dec	1st sortie	- Elevon trim lite stays on. Removed and replaced PCLA
5670	13 Dec	2nd sortie 2nd sortie	- RH air to air heat exchanger leaking. Removed and replaced exchanger
5670	17 Dec	2nd sortie	- Nr 3 generator flux on 1 sortie tripped off line. Removed and replaced generator
5670	17 Dec	3rd sortie	- Canopy nitro leak. Removed and replaced tubing in belly of acft
5661	18 Dec	1st sortie 2nd sortie	- Balance tank takes fuel with refuel valve off. Replaced pilot line to refuel valve
5661	19 Dec	3rd sortie	- Rudder oscillation. Removed and replaced control valve
5670	19 Dec	2nd sortie	- Aft tank off by 2000 lbs. Replaced 5 connectors in aft tank probe
1007	23 Dec	1st sortie 2nd sortie	- Rudder position transmitter 13 degrees in error. Removed and replaced transmitter
1007	26 Dec	2nd sortie	- 3 degree rudder required for taxi. Removed and replaced steering positioning transmitter
1007	30 Dec	2nd sortie	-Nr4 eng A/B leak. Removed and replaced fuel pump garloc seal

5. The 18 Materiel late take offs by cause and tail number:

5661	5 Dec	1st sortie - Nr 3 starter shaft sheared. Removed and replaced starter shaft
5661	5 Dec	2nd sortie - 3rd station indicator ejection switch out of adjustment. Adjusted switch
		3rd sortie
5668	5 Dec	2nd sortie - UHF weak and intermittent. Removed and replaced Nr 1 receiver
5670	6 Dec	1st sortie - No nose draw trim. Replaced PCLA fuse
5661	9 Dec	2nd sortie - Auto trim and elevator available out of limits. Elevator aileron input position transmitter
5668	11 Dec	2nd sortie - ARC-97 won't channelize. Removed and replaced RT-377 receiver transmitter
5670	11 Dec	2nd sortie - Pod sump coupler leaking. Removed and replaced fuel disconnect
5670	13 Dec	1st sortie - Nr 3 engine would rotate. Adjusted electrical connection on starter
5668	13 Dec	1st sortie - Fuel quantity disagrees with fuel sheets. Defuel and Refuel
5670	16 Dec	1st sortie - Nr 4 engine no RPM - tach inoperative. Removed and replaced tach generator
5670	16 Dec	2nd sortie - 2nd station altimeter stuck. Removed and replaced altimeter
5668	17 Dec	2nd sortie - Interphone external receptacle plug loose. Repaired receptacle
5661	19 Dec	2nd sortie - Fuel seep bottom LH wing. Reseated fasteners
5661	23 Dec	2nd sortie - Nr 2 engine 2nd station EGT indicator reads hi. Removed and replaced indicator
5661	23 Dec	3rd sortie - 6 main gear tires cut. Removed and replaced 6 main gear tires
1307	26 Dec	1st sortie - J-4 blows fuses. Removed and replaced fuse
5668	26 Dec	2nd sortie - Aft tank indicates 500 lbs when empty. Calibrated fuel quantity indicator

B-52 TIRE FOD



HOW MALFUNCTION	JAN	FEB	MAR	APR	MAY	JUN	JUL	AUG	SEP	OCT	NOV	DEC
020 WORN	162	128	113	170	226	171	169	74	139	108	87	127
111 BURST	24	8	9	2	1	8	0	8	3	6	0	0
OTHER	18	19	21	5	9	16	10	10	3	5	5	0
(FOD) 116 CUT	109	103	66	32	76	84	80	41	31	53	70	53
(FOD) 540 PUNCTURED	0	0	0	0	0	8	1	1	0	0	0	0
TOTAL	313	258	209	209	312	287	260	134	176	172	162	180
TOTAL FOD	109	103	66	32	76	92	81	42	31	53	70	53
SORTIES FLOWN	197	170	180	225	216	202	221	213	179	207	178	198
FOD RATE	.55	.61	.36	.14	.35	.46	.37	.20	.17	.26	.39	.27

SOURCE: MDC RPT #5 The number of tire changes increased during the month of December. A decrease was noted in FOD but there was an increase in the number of tires "worn". The reason for the lower rate is that more sorties were flown with fewer "cut" codes and no punctures.

AIRCRAFT ...IZATION

The following reflects the bomber aircraft and maintenance team utilization for the month of December 1968:

TEAM #	ACFT	SCHED	TOTAL CNX	MAT CNX	ADU	ADH	TOTAL LATE	MAT LTO	AIR ABT	DAYS ON ALERT	HRS FLOWN

KC-135 SCHEDULING EFFECTIVENESS AND ACCOMPLISHMENTS

1. The information that follows is an extract from the 1-SAC-U82 Report and reflects the KC-135 activity for December and the preceeding 6 months:

	JUN	JUL	AUG	SEP	OCT	NOV	DEC
Sorties Scheduled	94	84	101	114	99	80	84
Sorties Cancelled	16	7	24	19	19	9	16
Sorties Added	17	25	22	12	11	7	12
Sorties Airborne	95	102	99	107	91	78	80
Sorties Early/Late	10	9	17	6	8	13	12
Sorties On Time	85	93	82	101	83	65	69
Air Aborts	0	2	0	1	0	2	1
Hours Flown	399	444	429	450	447	424	392
Average Sortie Length	4.2	4.4	4.3	4.2	4.9	5.4	4.9

2. The schedule deviation causes for December were:

	ADD	LATE	CANX	TOTAL
FAA		2		2
Weather	3		2	5
SAC	6	3	10	19
Operations	2		1	3
Materiel	1	5	3	9
Receiver/Tanker		1		1

3. Materiel deviations for December by system:

Instrument	1 Late Take Off	Air Condition	1 cancellation
Power Plant	2 Late Take Offs	Fuel System	1 cancellation
Elec Pwr Sup	2 Late Take Offs	Auto Pilot	1 cancellation

4. The 5 Materiel Late Take Offs by cause and tail number:

1610 4 Dec MD-1 Gyro inoperative, off flag failed. Removed and replaced displacement Gyro

0339 13 Dec No ignition Nr 1 engine. Repaired broken wire in harness

1462 16 Dec Generators won't come on line. Faulty lock on relay. Repaired lock on relay

0339 20 Dec Nr 3 fuel flow transmitter inoperative. Removed and replaced fuel flow transmitter

0343 23 Dec Nr 1 generator reads low. Removed and replaced Nr 1 freq and load control

5. The 3 Materiel Cancellations by cause and tail number:

0344 2 Dec Start Cart Air dumping in cabin. Removed and replaced emergency auxiliary heat and pressure valve

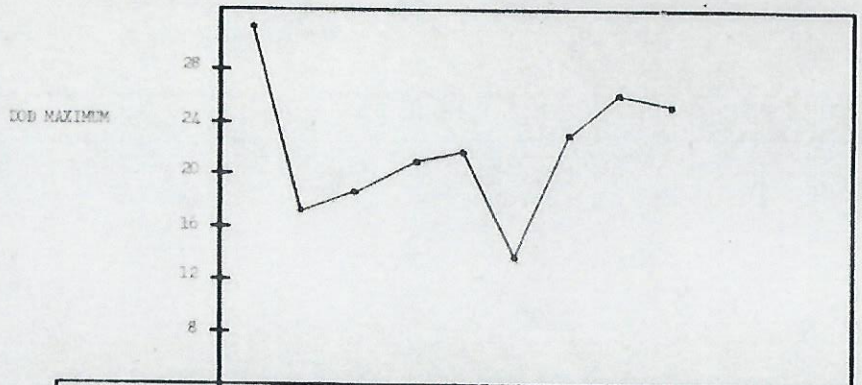
1462 4 Dec J-4 Compass in error. Removed and replaced J-4 Servo Amplifier Assy

1480 16 Dec Nr 4 Main Fuel Tank leak

6. The 1 Air Abort by cause and tail number:

1410 9 Dec Nr 3 Engine Oil Pressure flux. Engine shutdown at 35 PSI. Removed and replaced 4# Carbon Seal

KC-135 NORM RATES



MONTH	APR	MAY	JUN	JUL	AUG	SEP	OCT	NOV	DEC			
TOTAL RATE	31.3	17.6	18.4	20.9	21.3	13.8	23.4	26.7	25.5			
UNSCHED MAINT	26.8	15.1	14.9	16.6	17.0	11.3	18.8	19.7	17.2			
PHASE	4.5	2.5	3.5	4.3	4.3	2.5	4.6	7.0	8.3			

SOURCE: Aerospace Vehicle Status Report PCN 22006A

43d Bomb Wing - December 1968

KC-135 NORM

1. The NORM rates exceeded the DOD standards for the second consecutive month. The unscheduled maintenance rates decreased from November, however, this decrease was off set by an increase in phased inspection rates.

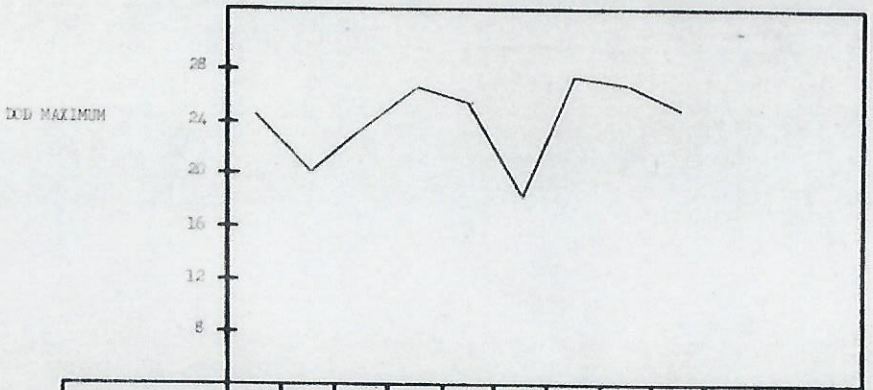
2. The high NORM systems and components within each system were:

SYSTEM	HOURS
Jet Engine	297
UHF Communications	168
Airframe	158
Landing Gear	155
Hydraulic	134
Radar Nav	134

COMPONENTS	
Power Plant	53 hours
Breather Pressurization Valve	48 hours
RT-263/ARC 34	168 hours
Nacelle Panel	158 hours
Nose Tires	78 hours
Main Tires	39 hours
Hydraulic Pump	57 hours
Quick Disconnects	25 hours
Computer Control	24 hours
Electronic Control Amp	24 hours
Flexible Wave Guide	20 hours

3. Hours possessed on the 1-HAF-A1 Report were 9577. Of these, 1648 were reported Not Operational Ready due to maintenance. Phased inspection consumed 791 of these. The requirements to accomplish multiple phased inspections prior to deploying aircraft to forward bases naturally will cause a high phase rate. This requires close monitoring of unscheduled maintennance to keep the NORM rates within standards.

B-58 NORM RATES



MONTH	APR	MAY	JUN	JUL	AUG	SEP	OCT	NOV	DEC			
TOTAL RATE	24.9	20.4	23.3	26.7	25.6	18.5	27.8	27.6	25.1			
UNSCHED MAINT	22.2	18.5	21.8	24.1	23.5	16.6	26.0	25.9	23.1			
PHASE	2.7	1.9	1.5	2.6	2.1	1.9	1.8	1.7	2.0			

43d Bomb Wing - December 1968

B-58 NORM

1. The B-58 NORM rates are above DOD maximum for the third consecutive month and for 6 of the 9 plotted months. The 25.1 percent represents 6342 hours and based on 744 hours for the month, equates to 8.5 aircraft for the entire month.

2. NORM hours were reported against 20 systems with 8 of these 20 having more than 200 hours. These systems and the high NORM components within the system were:

SYSTEM	HOURS	COMPONENT	
Bomb Nav	1129	PMSV	277 hours
		Astro Tracker Telescope Assy	96 hours
		IGU	72 hours
		Frequency Tracker	66 hours
Fuel System	831	Aft Tank Indicator	148 hours
		Quantity Totalizer	79 hours
		Boost Pump	73 hours
Jet Engine	601	EGT Indicator	116 hours
		Starter Air Ducts	67 hours
		Spike Actuator	55 hours
Electrical	506	AC Generator	177 hours
		Decoupler Assy	159 hours
		Decoupler Shaft	60 hours
Hydraulic	346	Nr 3 Engine Pump	72 hours
		Primary System	72 hours
		Quantity Transmitter	70 hours
Air Conditioning	306	Throttle Control Valve	96 hours
		Cabin Pressure Safety Valve	69 hours
		Cabin Pressure Regulator	53 hours
Airframe	288	Aft Tank	106 hours
Landing Gear	213	Axle Beam	41 hours
		Main Tires	38 hours
		Nose Gear Door	30 hours

3. Unscheduled maintenance continues to be the area causing high NORM rates. Phased inspection is not a problem at this time.

43d Bomb Wing - December 1968

REPEAT W...-UPS B-52

1. There were 134 sorties flown with repeats occurring on 74 sorties. They range from 1 to 5 per sortie as follows:

1 Repeat on	48	3 Repeats on	9
2 Repeats on	15	4 Repeats on	1

5 Repeats on 1

2. The reliability code distribution on the repeats was 69 code 2, 44 code 3 and 1 code 5. The distribution of the repeats by system are as follows:

SYSTEM	CODE 2	CODE 3
Engine	2	6
A/C Press	1	1
A/Refuel	3	0
LDG Gear	2	0
Hydraulic	1	0
Compass	0	2
IFF	6	2
ILS	1	0

SYSTEM	CODE 2	CODE 3	CODE 5
Doppler	2	7	0
B/N	32	6	0
ECM Rec	3	0	0
Tacan	0	1	0
Elec Pwr Sup	0	3	0
Fuel(Other)	9	0	0
HF Radio	1	1	1

SYSTEM	CODE 2	CODE 3
Auto Pilot	7	1
UHF Radio	0	1
Oxygen	2	0
Radar Alt	1	6
Nav	1	5
ECM Trans	0	8
FCS Radar	1	0

3. There were 8 repeat code 3 that were code 2 on the previous sortie. These repeats were on the following systems:

SYSTEM	REPEATS	SYSTEM	REPEATS
Auto Pilot	1	Compass	1
Radar Alt	1	Tacan	1
Doppler	1	UHF	1
B/Nav	1	Air Conditioning	1

4. There were 36 repeat code 3 that were code 3 on the previous sortie. These repeats are on the following systems:

SYSTEM	REPEATS	SYSTEM	REPEATS
HF Radio	1	Compass	1
Radar Alt	5	Doppler	6
Elec Pwr Supply	3	Nav	5
IFF	2	ECM Trans	8
Bomb/Nav	5		

5. The repeats followed the normal system pattern with 78.9 going to the electronics area. This is the case in both code 2 and 3 repeats.

43d Bomb Wing - December 1968

REPEA. ...ITE-UPS B-58

1. There were 134 sorties flown with repeats occurring on 74 sorties. They range from 1 to 5 per sortie as follows:

1 Repeat on	48	3 Repeats on	9	5 Repeats on 1	
2 Repeats on	15	4 Repeats on	1		

2. The reliability code distribution on the repeats was 69 code 2, 44 code 3 and 1 code 5. The distribution of the repeats by system are as follows:

SYSTEM	CODE 2	CODE 3	SYSTEM	CODE 2	CODE 3	CODE 5	SYSTEM	CODE 2	CODE 3
Engine	2	0	Doppler	2	7	0	Auto Pilot	7	1
A/C Press	1	1	B/N	32	6	0	UHF Radio	0	1
A/Refuel	3	0	ECM Rec	3	0	0	Oxygen	2	0
LDG Gear	2	0	Tacan	0	1	0	Radar Alt	1	6
Hydraulic	1	0	Elec Pwr Sup	0	3	0	Nav	1	5
Compass	0	2	Fuel(Other)	9	0	0	ECM Trans	0	8
IFF	0	2	HF Radio	1	1	1	FSC Radar	1	0
ILS	1	0							

3. There were 8 repeat code 3 that were code 2 on the previous sortie. These repeats were on the following systems:

SYSTEM	REPEATS	SYSTEM	REPEATS
Auto Pilot	1	Compass	1
Radar Alt	1	Tacan	1
Doppler	1	UHF	1
B/Nav	1	Air Conditioning	1

4. There were 36 repeat code 3 that were code 3 on the previous sortie. These repeats are on the following systems:

SYSTEM	REPEATS	SYSTEM	REPEATS
HF Radio	1	Compass	1
Radar Alt	5	Doppler	6
Elec Pwr Supply	3	Nav	5
IFF	2	ECM Trans	8
Bomb/Nav	5		

5. The repeats followed the normal system pattern with 78.9 going to the electronics area. This is the case in both code 2 and 3 repeats.

6. The following aircraft had more than one repeat write-up on a single system during the month of December. The aircraft tail number and repeat system are listed below:

ACFT #	DATE	SYSTEM	CODE and REPEAT #
1013	3 Dec	Auto Pilot	2 1
	5 Dec		2 2
	9 Dec		2 3
1018	3 Dec	Auto Pilot	2 1
	5 Dec		2 2
	10 Dec		2 3
1019	18 Dec	Radar Altimeter	3 1
	20 Dec		3 2
	26 Dec		3 3
2433	12 Dec	Radar Altimeter	2 1
	16 Dec		3 2
	20 Dec		3 3
2439	13 Dec	Doppler	3 1
	17 Dec		3 2
2439	19 Dec	Bomb/Nav	2 1
	23 Dec		2 2

B-58 POST MODIFICATION

AIRCRAFT PERFORMANCE

REVIEW

15 - 16 October 1968

Little Rock AFB, Arkansas

1. The review was convened by SAAMA, 0900, 15 October 1968 in B-362, AEMS Conference Room with representatives from SAC, WRAMA and contractors in attendance. A list of attendees is provided as Atch 1.

2. Colonel Lewis Williams of SAAMA opened the meeting and outlined the Agenda to be followed. The purpose of this meeting is to review the performance of modified aircraft received from the Mod Site (GD/Waco). This included a discussion of problems associated with Mod 882, 1588, 10002 and 10003.

(OLD BUSINESS)

3. Data on Action Items from Previous Meeting

a. LRU Quality

(1) Dog LRU'S: Funds required for contractor repair of "Dog LRU'S" were approved by Headquarters AFLC on 2 Oct 1968. WRNN initiated urgent Purchase Request for repair of these LRUs on 4 Oct 1968. Target for repair contract award is 29 Nov 1968. WRNN will report progress to all concerned on 31 Oct 1968.

(2) Alignment procedures at GD/Waco: SANBP directed the DCSAR on 24 Sep 1968 to assure the contractor uses RLRUTS when alignment of RTM and PRU is required.

b. Overheat Problems

(1) Sperry will provide 43rd and 305th Bomb Wings a plan for installation of temperature sensitive tapes and a quantity of tapes required to monitor ten aircraft at each Wing. Tapes and plan will arrive at Wings on or about 31 Oct 1968. Confirmation of tape ranges selected should be achieved by 30 Nov 1968. At that time Sperry will take action to obtain tapes for remaining aircraft. These additional tapes will be furnished the Wings by 16 Dec 1968. Bomb Wing assistance will be required to install, read, record and report tape readings.

(2) Investigation of ARU overheat on aircraft at Little Rock AFB indicates 3 failures attributed to pressure regulator valve in cold air duct, 1 to warm air valve control and 1 to broken temperature sensor. Confirmation of failures at Grissom AFB has not been received. Present

phased inspection requirements for warm air control and temperature sensor are considered adequate. However, SAAMA will recommend adding operational check of the pressure regulator valve at the next Maintenance Management Review. A fact finding team will convene at Grissom AFB, 16-18 Oct 1968, for further evaluation of the problem.

4. Wiring and Harness Problems

a. Nav Chassis

(1) A decision has been made to rehabilitate problem Navigation Chassis Units identified by SAC at Depot level rather than at Grissom AFB or GD/Waco as discussed during the 11-12 Sep 1968 Mod 10003 Review at Grissom AFB. It is estimated that 40-manhours, in addition to the current Depot repair standard, will be required to rehabilitate each problem Navigation Chassis.

(2) WRAMA implemented the Navigation Chassis rehabilitation program at SAAMA on 26 Sep 1968.

5. Navigator Training

All GFE for Bomb/Nav mission simulator is available at Curtiss-Wright Corp. Prototyping is in progress at Grissom AFB. Final retrofit installation is expected to be completed in Dec 1968.

6. Items Outside MOD 10003

a. TCTO 1B-58A-827 has been issued to correct the wiring error in Mod 887 (Cartridge Starter). Thirteen aircraft are affected and all have been completed.

ACTION: (1) SAC will advise SANB of training requirements,

(2) SANBR will notify SAC when adequate supply of cartridges will be available.

b. LARA wiring discrepancies have been brought to the attention of the Contractor and DCSAR. DCSAR surveillance of installation has been initiate

c. Contractor assistance has been provided to Grissom AFB to resolve Flight Control Tester problems. The Tester has been made operational, modified ACA and new YACA box were checked out on Tester. The Tester is now functional. RYD modified aircraft have been experiencing what appears to be excessive yaw damper caution light illumination. Additional flight experience must be obtained to determine if tolerances require changing. YACA monitor tolerances must be kept tight, otherwise their purpose would be defeated.

ACTION: SANBT will investigate yaw rate to roll and yaw caution light problem to determine if actual malfunctions exist during illumination. Method of investigation and target date for completion will be provided by 30 Oct 1968.

d. In order to provide AFLC with additional information concerning Bomb/Nav System performance, SAC will report significant in-flight discrepancies on the first five sorties following aircraft delivery. SAAMA will evaluate the data and initiate any required corrective action.

e. All PRU cameras received at the SRA (OOAMA) are being overhauled Adequate assets are on hand and no problems are anticipated in supplying assets to meet the modification schedule.

7. MOD Power Supply

Investigation of Mod Power Supply problems are continuing at Raytheon and Litton.

ACTION: WRAMA will provide a status report on the progress of efforts to solve problems with modified Mod Power Supply by 31 Oct 1968. This report will include results and recommendations of the WRAMA/Raytheon investigation of the failed A-1 and A-2 diode stacks, magnetron operating current and interface problem between the magnetron and MPS.

8. Tech Data Shortage

a. SAAMA provided available copies of 33 and 5 series TOs to 43AEMS on 17 Sep 1968 together with pertinent information concerning availability

of the remainder. Formal copies of 11B Series Technical Orders required by SAC were shipped from WRAMA on 10 Sep 1968. Formal distribution of TO 12P5-4-54-2 is scheduled for November 1968.

b. SAC indicated numerous errors are in 33 Series Technical Data changed by Mod 10003. The entire spectrum of 33 series TOs requires post publication. Specific TOs having errors too numerous to follow normal AFTO Form 22 procedures are:

33D7-14-4-8	33D7-14-4-1	33D5-8-54-4
33D7-14-4-4		33D5-8-54-2
33D7-14-4-2		33D5-8-54-1

The deadline for correcting deficiencies under contract warranty is 31 Oct 1968. All changes to Mod 10003 date must be documented through WRAMA (WRPIF) prior to this time.

ACTION: SANB will contact SANR and attempt to arrange for a post publication review.

9. LARA zero, blanking pulse, termination and tracker calibration cables are local manufacture IAW TO 12P5-4-54-2. To assure proper data was available, additional copies of manufacturing instructions were provided to SAC bases 26 Sep 1968. (Connectors are local purchase items.)

(NEW BUSINESS)

10. MOD 887 (Self Start Capability)

Manufacturer of Gearbox Drive is unable to meet the delivery schedule therefore, SAAMA will only be able to provide kits to modify the #2 engine.

ACTION: SANBP will notify SAC as soon as possible of the date modification can be resumed to include all four engines.

11. MOD 1588 (LARA)

Investigation of antenna problem is continuing. As an interim measure, the antenna will be installed at GD/Waco and the system checked out. The

antenna will then be removed and a plate installed. The antenna will be delivered to SAC with the aircraft.

ACTION: SANBT will provide a progress report by 15 Nov 68.

12. MOD 10002

Failures have increased on new RG&A. Lack of spares support is causing cannibalization.

ACTION: SAAMA will apprise the IM of the problem and request an investigation be conducted.

13. MOD 10003 (Bomb/Nav)

a. Dr. Kirby (Sperry WSIG) presented a status report of all Code 3 failu occurring on modified aircraft and an analysis of the failure trends. One of basic problems is repeat write-ups. This is caused primarily by lack of serviceable spares. WRAMA's action to repair the identified problem LRUS is e pected to alleviate this problem. Future identified LRUS will be cycled thro the SRA for complete overhaul under a special Depot project.

ACTION: WRAMA will investigate possibility of authorizing the contractor to modify spare LRUS presently on hand at Sperry in order to expedite overhaul of Dog LRUS. WRAMA will be action agency to provide specific type canine LRU's to Sperry for repair and return to SAC. WRAMA will select LRUs by serial number and provide SAC a replacement spare in those cases where the "Dog LRU" to be repaired is a SAC spare. Mr Mullaney (WRNNR, Ext 5314) will direct all "Dog LRU" shipments.

b. SANB has received an unsolicited proposal from Sperry Corp concern purchase of flat harness for the field maintenance shops.

ACTION: SAAMA will evaluate the proposal to ascertain if time and cost allows obtaining this capability.

c. A discussion of spares support ensued. WRAMA requested SAC prov a list of Bits and Pieces required to repair their AWP items. Included in this

list should be those items that experience dictates will be troublesome to obtain.

ACTION: 43BW requirements are listed on Atch 2.
305BW requirements will be provided
WRNNR (Mr Tom Mullaney) by 22 Oct 1968.

14. Mr Mullaney (WRAMA/WRNNRD) reported on the results of the spares review. A spares delivery schedule is provided as Atch 3. SAC (DM3B) has authorized Priority 2 requisitions on LRUs and spare parts to support Modification 10003. Followup action will be provided by SANBR. SAC (DM4D) will investigate possibility of obtaining priority action on spares support for MOD 10002.

15. WRAMA/WRNN will advise all concerned by 31 Oct 1968 current status MOD 10003 field AGE support due in from Raytheon, Sperry and SMED. Information will cover kits required to modify spare modules and provisional spare parts.

SANB

30 OCT 1968

Status of Action Items - B-58 Post Modification Aircraft Performance Review 15-16 Oct 1968

825 Strat Aerosp Div (DM)
Little Rock AFB
Jacksonville AR 72076

1. Reference is made to the minutes of subject post modification review.

2. The following comments are provided on para 6 concerning investigation of repeated yaw rate to roll and yaw caution light illuminations:

a. A review was conducted of SAC Form 126 data and AFM 66-1 failure data for period covering RYD flight experience. The review revealed a number of repeat light illuminations and Yaw Amplifier Computer Assembly (YACA) box/module failures. However, this information could not be correlated to identify the cause, if any. SAC assistance may subsequently be required to identify repeat offender aircraft, results of system trouble-shooting and providing failed components for analysis.

b. ASD, as OPR for the RYD system, has been advised of the above condition and requested to investigate same. Method of investigation and target date for completion will be provided as soon as it is developed.

3. The following comments are provided on para 12 concerning new Rate Gyro and Accelerometer (RGSA) reported failures:

a. AFM 66-1 failure data for Jul-Sep 1968 revealed only one actual failure of the modified (new) RGSA, Part No 19914.

b. A review of our supply information does not reveal any spares/cannibalization problems on this item. No further action can be taken until detailed specifics are provided.

SUBJECT: B-58 Post-Modification Aircraft Performance Review - 15-16 Oct 1968, Little Rock AFB (Your Ltr, 23 Oct 1968)

TO: 825 Strat Aerosp Div (C)

My Materiel staff will closely monitor the problem areas outlined in your letter. Please insure that all possible actions are taken by your units within their capability to improve the reliability of the modified aircraft.

s/t/
A. J. RUSSELL, Lt General, USAF
Commander

C

23 OCT 1968

C-5A Post-modification Aircraft Performance Review -
14-16 October 1968, Little Rock AFB

Lieutenant General A. J. Russell
Commander, Second Air Force
Barksdale AFB, La 71110

Dear General Russell

1. The second C-5A post-modification conference was held 15-16 October 1968 at Little Rock Air Force Base. The conference included, in addition to an overview of both aerodynamic modification 1003, problems encountered in centrifugal start switches, redundant yaw damper modification 1002 and the [illegible] power alternator modification 1001, progress made in areas of my letter of 16 September on this subject is as follows:

a. Mr. Raymond Dalla (AFLC) Quality Warner-Robins Air Material Area (WRAMA), South, Wilson) briefed that [illegible] for contractor repair of "Gas Lights" or "D-30" were approved by AFLC on 2 October 1968. Repair evaluation would be completed by December 1968.

b. Air Conditioning/Overheat Problem: Sperry will provide a plan for installation of temperature sensitive tapes by 31 October 1968. Tapes and plan will arrive at the wings over about the [illegible] and confirmation of tape [illegible] should be achieved by 30 November 1968. The wings will select [illegible] each in an effort to determine equipment operating envelopes. San Antonio Air Material Area (SAAMA) will develop procedures for the auxiliary reference unit "overheat" problem and send [illegible] team to Grissom Air Force Base 16-18 October 1968 for [illegible] evaluation.

c. Harness and Wiring: Although the field [illegible] to establish a navigation unit chassis IRAN program was not finished, Warner-Robins Air Material Area (WRAMA) has decided to establish

a rehabilitation program at depot level. It is estimated that 40 manhours, in addition to the normal depot repair standard, will be required to rehabilitate each problem navigation unit chassis.

d. LRU Shortage: WRAMA requested SAC provide a list of "bits and pieces" required for repair of AWT items. SAC (DOSD) has authorized Priority 2 requisitions on LRUs and spare parts to support modification 16002. SAC will investigate the possibility of obtaining priority action on spares support for modification 16002. WRAMA (Mr. Mullaney, WRHMAE) will advise all concerned by 31 October 1968 on status of modification 16003 field AGE support due in from Raytheon, Sperry and Sperry Microwave Electronics Division.

2. New items of discussion and problems encountered are identified.

a. Low Altitude Radar Altimeter: Antenna installation of the improved radar altimeter appears to have design deficiencies to the extent that antennas have departed the aircraft in-flight on several occasions. As an interim measure, the antenna will be located at General Dynamics/Waco and system cleared. The antenna will then be removed and a plate installed. The antenna will be delivered to SAC with the aircraft. Minneapolis Honeywell has designed a "fix" in the form of a "beefed up" antenna, which should be available in the field by mid-December, thus solving this problem.

b. Redundant Yaw Damper: The redundant yaw damper modified aircraft have been experiencing what appears to be excessive yaw damper caution light illumination. The possibility of too tight tolerances exists; however, loosening the tolerances would defeat the purpose of the modification. SAAMA (SANET) will investigate yaw rate to roll and yaw caution light problem to determine if an actual malfunction exists. Method of investigation and target date for completion will be provided by 30 October 1968.

c. Cartridge Start: The vendor of the gearbox drive is unable to meet the delivery schedule. Therefore, SAAMA will only be able to provide modification kits for the #2 engine. SAAMA (SANET) will notify SAC as soon as possible of the resumption of modification to include all four engines.

PRIORITY	RELEASED BY	DRAFTED BY

UNCLASSIFIED AFTO

THIS IS URGENT ACTION AND DIAGONAL INTENT: THIS COMMUNICATION TECHNICAL ORDER No-58A-831 DTG 15 OCT 68 DATA CODE 0136837.

SUBJECT: Deactivation of Low Altitude Radar Altimeter (LARA).

1. Application

a. This technical order is applicable to certain B-58A aircraft modified by TO 1B-58A-817 4 Apr 68. Mobile training sets are not affected.

b. This work shall be accomplished on the following aircraft: B-58A Serial No 58-1010, 59-2440, 59-2444, 59-2449, 60-1110, 60-1112, 60-1113, 60-1114, 60-1115, 60-1117, 60-1121 through 60-1127, 61-2055, 61-2059, 61-2060, 61-2064, 61-2068, 61-2075, 61-2076, 61-2078, 61-2080.

2. Purpose - This technical order removes LARA antennas to prevent damage due during flight.

3. When to be accomplished - Not later than ten days after receipt of this technical order. Failure to accomplish the work by the expiration date shall result in discontinued use of affected systems. The work required herein will be accomplished [illegible] to the [illegible] 1B-58A.

ABBREVIATED [illegible] and/or CONTINUATION SHEET

ACTION	ACCEPTED	RELEASED BY	CREATED BY
INFO	ENTERED		

5. What is required.

a. Supply information and requirements:

(1) Kits required: Not applicable.

(2) Action required on items in stock: Not applicable.

(3) Parts required to modify items in stock: None.

(4) Disposition of removed and replaced parts: Return to supply organization.

(5) Drawings required: None.

(6) Size, weight and cost of kits: Not applicable.

(7) Disposition of kits: Not applicable.

b. Personnel information and requirements:

Work Phases	AFSC Skills	Manhours Required
Isolate Power	Acft Electrician	0.25
Remove Antenna	Acft Electrician	0.50
Install Cover Plate	Sheet Metal Tech	2.25
Total Manhours Required (Estimated)		3.00

c. Special tools, jigs, fixtures required: Not applicable.

6. How work will be accomplished - Warning: Insure all existing safety procedures are complied with.

a. Remove +28 Volt DC, 5 amp fuse labeled LOW ALT RADIO from Power Panel, 3rd Station.

[illegible]

b. Remove two each LARA antennas. Install dust covers on co-ax coaxial antenna connectors. Secure co-ax cable to aircraft. Stowage screws.

c. Fab plates and shims as follows:

Plate - .060 X 5.55 X 6.22 2024-T81, -T86, -T3 or -T4. Clad aluminum alloy. Round corners to .25R.

Shim (2 ea) - .060 X .50 X 5.50 material as above.

Shim (2 ea) - .060 X .50 X 5.00 material as above.

Locate holes from antenna housing. Drill holes .187 + .010 - .010 dia and countersink .328 + .051 - .000 dia by 82° ± 2°. Install plate and shims using existing screws (Part No C15C8-2). Screws shall be sprayed with zinc chromate primer prior to installation.

7. Supplemental information.

a. Operational checkout requirements:

(1) No functional check flight required prior to release for normal operation.

(2) No functional checkout of affected circuit is required.

b. Weight and balance information: The weight and balance change resulting from the instructions contained herein is negligible.

6 NOV 1968

B-58 Bombing Navigation System Heading Rack Modification

Rockwell AFB La.

1. Request for Class II modification authority in accordance with Note 4, Table 1, AFR 57-4, on B-58 Heading Rack.

a. Heading Rack, part number 401160-4, stock number 1280-897-4477 in the AN/ASN-42V Bombing Navigation System installed on B-58A aircraft.

b. When the Primary Navigation Stabilization Unit (PNSU) and Auxiliary Reference Unit (ARU) become inoperative inflight, all synchronous bombing capability is lost because of loss of heading and velocity references. This modification will provide a malfunction mode which will give accurate heading and velocity references with the PNSU and ARU inoperative or unusable, thus providing synchronous capability. Heading is computed by diverting Error Psi, through relay action in the heading rack, from Psi in the PNSU and ARU. Then, Error Theta (flux valve) is inserted, through relay action, into the Psi servo in heading rack on the wire that was the Course Error Psi input to the [illegible] limiter. The Error Theta (flux valve) signal is dampened with a resistor. This results in the Psi shaft positioning to a value equal to Theta heading + Theta D. This end result provides a correct flux valve Theta heading signal in the computers, which is fed to the associated circuits in the normal manner. Velocity is computed by resolving airspeed about Psi in the same manner as air speed inertial. The output of the Psi shaft Vg resolver, through relay action, is routed to the Theta y/Theta N Vg resolver. This results in a Vge and Vgn in the system that is of the same accuracy that is now available in airspeed inertial. Vge and Vgn are fed to the remainder of the associated circuits in the normal manner.

c. Subject modification request was initiated to increase [illegible] capability and mission effectiveness during First Sortie After Ground Start (FSAGS), profile, and other training sorties by providing synchronous bombing capability when the PNSU and ARU are inoperative or unusable.

d. Relay, 6 each, FSN 5950-660-6001, source Air Force stock. Toggle switch, one each, FSN 5930-618-0630, source Air Force stock. The equipment involved is primary.

e. The 43d AEMS Bomb/Nav Shop can accomplish the proposed modification.

f. This unit has 40 bombing racks.

g. We propose modifying one (1) bombing rack for experimental purposes.

h. No effect on related AGE and training equipment.

i. No additional training required. A checklist of operational procedures is adequate.

j. This letter also constitutes request to make two operational flight tests for modification proofing.

UNCLAS 43DCM

[redacted] SUBJ: B-52 FUEL LEAKS

The purpose of this ltr is to apprise you of the current status of problems being experienced by this wing with the B-52 fuel system. During the period 10 Oct - 21 Nov the 43Bw has cancelled 18 sorties (12 and 1) due to fuel leaks. The impact of these training losses in CMR rated crews and their effect on the unit's E/O capability is sufficient to warrant concern. Normal minor fastener leaks are to be expected and can be coped with. My concern is

21 NOV 1

3317

JAMES D. HIGLEY, JR
COLONEL, USAF
43D DEP COMDR FOR MAINT

JAMES D. HIGLEY, JR., COLONEL

UNCLASSIFIED

ROUTINE 43DCM 43DCM 3

directed towards an excessive number of leaks that have occurred at the inboard engine pylons of the forward tank. Leaks appear to be a direct result of improper sealant application accomplished during the recent 1000 modification. Thus far, five (5) ship are affected with the leak appearing thru the fasteners directly over the engine pylons at the outboard end of panels P/N 410-62170-5 and -6. Repair of the leak is a major task requiring:

(1) Defuel and drain

(2) Jack and shore

(3) Removal of upper wing skin (300 bolts)

(4) Remove faulty sealant

(5) Reseal and cure

(6) Replace skin and cure 24 hrs

(7) Refuel and leak check

Accomplishment of those steps result in loss of the ship for 5-7/10 days with work proceeding around the clock. Examination of the area indicates foreign matter, i.e., safety wire, brush bristle impregnated in the sealant and improper preparation of

UNCLASSIFIED

ROUTINE 43DCM 43DCM 33

the surface prior to application of sealant are cause for the sealant breakdown. CINCLANT has been advised of our findings and CO/TW and [redacted] Engineers are scheduled to arrive Little Rock AFB 22 Nov to evaluate the problem. Unless the findings of the Engineers dictate a re-assessment of my position, I feel that our experience on these five (5) fuels indicates a trend and the condition is possibly prevalent throughout the fleet. If this be the case, I recommend consideration of develo[illegible]ing plans to re-accomplish the fix of the [illegible] mod. You will be advised of further developments as they occur.

50-1021. One (1) KC-135 returning early from AFC Light deployment for fuel leaks not reparable at the forward base. In addition, fifteen (15) pods still require fuel cell repair. Known requirements constitute approximately an 800 manhour backlog. It is essential that the same depot personnel be utilized since they are now familiar with all personnel, equipment locations, facilities and procedures peculiar to this base, and are highly qualified in repair of major fuel leaks resulting from recent 1050 Mod.

Deputy Commander Maint. AFSCM Maint Supt

NOTE: Differences between assigned and available are one (1) five (5) level departure PCS (Jan MCOA), one (1) five (5) level TDY (return Apr 69 for early out, must be replaced), one five (5) level PCD (Comp 15 Jan). Known gains are:

One (1) 7-level, APRIL MCOA, avail May 69.

Two (2) 5-level, DEC MCOA, avail Jan 69.

One (1) 5-level, FEB MCOA, avail Mar 69.

One (1) 5-level, MAR MCOA, avail Apr 69.

One (1) 3-level, FEB MCOA, avail Mar 69.

One (1) 3-level, MAY MCOA, avail Jun 69.

Known losses are:

One (1) 5-level early out Jan 69.

One (1) 5-level, early out Feb 69.

Providing no further PCS/TDY withdrawals occur, an end position of thirteen (13) assigned will be attained in June 1969. In the interim depot personnel are required to accomplish the workload. Estimated military available for the three month assistance period is January 8, February-8 and March 10. Documented direct labor for this shop during November was 8259 MH (MILITARY) and 2321 (civilian). This labor performed by six (6) military and nine (9) civilian personnel operating two (2) twelve (12) hour shifts, six days per week.

Grounded Hustler Finds New Job

At first glance, it appears to be just another General Dynamics B-58 Hustler sitting in a corner of the jumbo hanger awaiting repairs.

However, a closer examination reveals that it is nothing but a skeleton of a once-mighty supersonic bomber.

This aircraft will never again thunder down the runway and leap into the air, flashing light and fire for all to see. It was classified as "beyond repair" by an evaluation team from General Dynamics after an accident earlier this year.

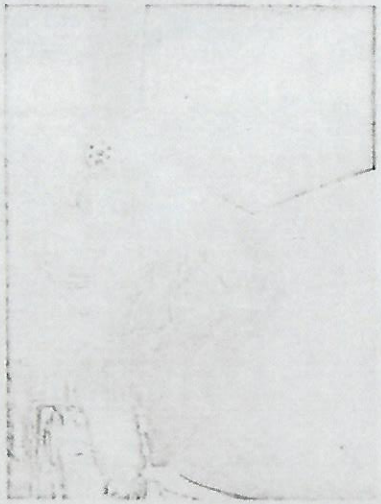
When Col. James D. Rigley [illegible], 43rd Bombardment Wing deputy commander for maintenance, and Lt. Col. Carlton [illegible] Marsh, 27th Munitions Maintenance Squadron commander, heard the evaluation team's verdict, they knew they had found an answer to an age-old problem for the military--how to train unskilled personnel.

Having their own training aircraft would eliminate the need to tie-up a flying aircraft and would enable the squadron to set up a firm training schedule, not just work on a "catch as catch can" arrangement.

The squadron had to rewire it as most of the wiring was either burned-out or cut. They also took landing gear which could not be used on a flying aircraft, but would support a stationary aircraft, and substituted it for the landing gear on the aircraft. They put together a team of 43rd Armament and Electronics Maintenance Squadron personnel, 43rd Field Maintenance Squadron personnel, and their own people to make it ready.

Since they started using the aircraft for training purposes, the time required to train unskilled personnel up to a certifiable level has been reduced by about 40 per cent. It used to take about 20 working days, eight to 10 hours per day, to certify a crew, and it now takes only 12 to 13 days.

The squadron has one loading evaluation team to instruct the trainees. These men are the highest-qualified personnel available.



VISUAL CHECK—Sgt. Daniel D. Dolse performs a visual inspection of the pod to insure that it is in good, usable condition.

involved and the malfunctions were high RPM on 2453 during takeoff roll on 8 Oct. No airspeed indication on 1019 during take off roll on 9 Oct; lost Search Radar on 2435 during taxi, on 9 Oct. The cancellations on 9 Oct were snowtime sorties. Under normal operations with the 3 hour cancellations criteria, the aircraft could have made a takeoff. The remaining 7 cancellations establish no trend as to malfunction, component or system. Supply was not a contributing factor and the malfunctions were all discovered by ground crews during some phase of maintenance. Part 2. Tanker Cancellations. Three Supply Cancellations on 86 scheduled [illegible] sorties put this area above standard. Two aircraft were involved. Aft 1467 was NORS and cancelled on 7 and 8 Oct for a Nose Strut. The old strut was scored. Aft 1460 was NORS and cancelled 8 Oct for a flexible fuel hose. Part III. Combined bomber and tanker cancellations for the month was 19 with 9 occurring during the week of 7-13 Oct. An MSAT visit during that week could have been a contributing factor.

Subj: Materiel C-5 Red Ball from 43X for November 1968.

This message is 4 parts. Part I. C-5A Materiel Cancellation.. There were 8 cancellations on 315 scheduled C-5A sorties for a rate of 7 percent. Red Ball which required tank entry for refueling accounted for 5 of the 8 cancellations. There were 4 aircraft involved and they were: 1015 on 13 Nov; 2456 on 14 Nov; 2460 on 20 and 22 Nov and 2454 on 25 Nov. A depot maintenance team was in place assisting repair. The remaining 3 cancellations were for different cause: Acft 2435 cancelled 4 Nov due to an internal oil leak in Nr 2 engine. Acft 2440 cancelled 14 Nov for extensive maintenance and inspection following an Air Alert on 12 Nov. Acft 1010 was not released from alert 15 Nov. Replacement

aircraft was used to replace an unscheduled removal of another aircraft for fuel leaks. Part II. B-52 Air Aborts. There were 4 air aborts on 106 C-1 sorties for a rate of 3.8 percent. Two aborts were caused by the pressurization system, 1 by the hydraulic system and 1 by the electrical system. The pressurization aborts were: sortie 2440 on 22 Nov. Cabin pressure would climb with altitude. The cabin pressure regulator was defective. Sortie 2436 on 19 Nov lost cabin pressure due to a blown coupling on the cold air ducts. The hydraulic system abort was sortie 2440 on 22 Nov. The utility system was lost during gear retraction due to a broken line to the left brake shut-off valve. The electrical system abort was sortie 1010 on 29 Nov, due to failure of the #3 generator resulting in fluctuating gear posts and cache in the cockpit. Part III. KC-135 Aborts. There were 2 aborts on 69 C-2 sorties for a rate of 2.9 percent. One was caused by the power plant system. Sortie 0340 shutdown #1 engine 14 Nov, due to fluctuating oil pressure. The engine was removed and replaced due to #3 carbon seal and #4 bearing support failure. The remaining abort was caused by the hydraulic system. Sortie 1470 lost hydraulic quantity 20 Nov, in the right system due to a cracked union on the pressure filter. Part IV. No red areas for the period.

LITTLE ROCK AIR FORCE BASE - JACKSONVILLE, ARKANSAS 72076

16 January 1969

MINUTES OF THE BASE FAMILY HOUSING MANAGEMENT COUNCIL - LITTLE ROCK AFB, ARKANSAS

1. The LITTLE ROCK AIR FORCE BASE FAMILY HOUSING MANAGEMENT COUNCIL convened in accordance with SACR 85-10 at 1000 hours, 16 January 1969.

a. Members Present:

Capt Martin H. Levin, 825th Svc Sq (BSV) Acting Chairman
Capt Norman L. Blakley, 825th Sec Pol Sq (BOSP)
Capt W.E. Burlescn, 825th Cmbt Spt Gp (ECR) Authorized Representative
Capt C.R. Consnt, 825th Cmbt Spt Gp (BPR) Authorized Representative
Capt Joe R. Lamport, 825th Hq Sq (BJA) Authorized Representative
W.J. Hutchins, DAFC, 825th Sup Sq (CSUP), Authorized Representative
Jerry F. Ryan, DAFC, 825th Civ Engr Sq (BCE) Authorized Representative
Milton P. LaVasque, DAFC, 825th Svc Sq (LJVS), Recorder

b. Members Absent:

Colonel Theodore R. Dale, 825th Cmbt Spt Gp (BDC)
Colonel Walter J. Schweiger, Jr., 825th Cmbt Spt Gp (BP)
Captain James C. Threet, 825th Trans Sq (TSTM)

c. Others Present:

TSgt James Camille, 825th Civ Engr Sq (BCEP)
Patricia S. Bentley, 825th Svc Sq (BSVH)

2. Old Business:

a. Mr. Ryan of CES reported that in-house capability for garbage collection could not be obtained. He suggested that the present contract for this service be rewritten to emphasize in detail the requirements that must be met by the contractor. CES personnel will continue to exercise close supervision over these services.

b. The Base Housing Office has assumed the responsibility of maintaining a current listing of available Housing Contract Cleaners. This responsibility will be limited to reference purposes only and made available to occupants for ready reference as they schedule termination of quarters. The Base Housing Office will not encourage or discourage the use of Contract Cleaners, nor will Base Housing personnel recommend anyone for this service. Personnel desiring this information will be referred to the available listings, informed of minimum/maximum charges as determined by the Installation Commander, and given a blank contract form for use by the individual and cleaner, if desired. Utilization of these services will be the sole responsibility and choice of each individual.

c. Captain Blakley of Security Police reported that in accordance with the provisions of AFR 125-14, B/Sup-1, housing occupants may park boats and/or trailers in their driveways or carports provided there is available space for privately-owned vehicles. It was emphasized that there is a designated area for utilization of housing personnel specifically for the purpose of parking boats, trailers, etc. which would alleviate the necessity of using driveways and carports for this purpose.

3. New Business:

a. Housing Occupancy Rate as of 31 December 1968: 99.6%

b. Assignments and Terminations:

(1) Housing Status:

Type of Quarters:	Available:	Assigned:	Reassigned:	Waiting:
Senior Grade, 4-BR	12	12	0	0
Field Grade, 3-BR	171	171	3	3
Company Grade, 3-BR	344	342	12	0
Company Grade, 2-BR	86	86	5	9
Enlisted, 3-BR	552	449	21	0
Enlisted, 2-BR	370	369	20	0

(2) Number of On-Base Moves: 113

(3) Number Quarters Declared Excess: -0-

(4) Number Families of Eligible Sponsors Currently Overseas Occupying Government Quarters: 6

(5) Number DOD Civilians Occupying Government Quarters: 0

(6) Number Ineligibles Occupying Government Quarters: 1

(7) Number Families of Ineligible Sponsors Currently Overseas Occupying Government Quarters: -0-

(8) Total Vacant Unit Days Chargeable to Base Housing: 92

(9) Average Unit Days Per Vacant Unit Chargeable to Base Housing: 158

(10) Number Quarters Vacated During the Month of December: 58

c. Programming of Maintenance, Repair, Alteration, and Construction:

(1) Service Calls (Housing & Base) - 1684

(a) Received (Housing Only): 1394
(b) Completed (Housing Only): 839

(2) Units in CE Hands on 31 December 1968: 4

(3) Units Processed by CES During the Month of December: 59

(4) Total Vacant Unit Days Chargeable to CES in December: 64

(5) Average Unit Days Per Vacant Unit Chargeable to CES: 1.08

(6) Longest Period of Time CES had Any One Unit During the Month of December: 10 Days (179 Pennsylvania Drive)

d. Housing Bench Stock Fill Rate: 76.6%

e. Occupant Care and Maintenance of Structures and Adjacent Grounds: (See paragraph 3j for Contracts/Projects in progress and programmed).

f. Summary of P-721 and P-722 Funds as of 31 December 1968:

(1) P-721 Funds:

EE:	Description:	[illegible]:	2nd Qtr Allot:	Spent To Date:	% of Annual Program:
392.00	Labor	$ 26,900	$ 15,200	$ 15,187	56.5 %
480.XX	Utilities	458,600	215,900	203,594	44.4
533.30	Refuse Collection	30,400	30,385	30,375	99.9
569.40	Furniture Maintenance	5,200	3,000	1,447	27.8
592.30	Rentals	9,900	5,200	5,129	51.8
609.00	Supplies	5,400	3,300	3,239	60.0
	Sub-Total:	$ 536,400	$ 272,985	$ 258,971	48.3 %

(2) P-722 Funds:

392.00	Labor	$ 156,500	$ 85,000	$ 84,861	54.1 %
521.XX	Projects	110,877	110,877	110,816	99.9
529.XX	Projects	5,986	5,986	4,110	68.7
569.40	Appliance Maintenance	3,000	500	-0-	-0-
609.00	Supplies	192,000	94,486	75,667	39.4
628.00	Equipment	13,400	13,400	13,395	100.0
	Sub-Total:	$ 481,763	$ 310,249	$ 288,849	59.9 %
	TOTAL:	$1018,563	$ 583,234	$ 547,820	53.8 %

g. Preparation of All Reports Pertaining to Family Housing: The Quarterly Housing Report was submitted as of 31 December 1968. The next Quarterly Housing Report will be due as of 31 March 1969. The Semi-Annual World-Wide Housing Report will be submitted in January 1969.

h. Calculation of Housing Requirements:

(1) Known Enlisted Gains: -0-

(2) Known Enlisted Losses: 11

(3) Known Officer Gains: 12

(4) Known Officer Losses: 8

i. Control and Issue of Furniture and Equipment:

(1) Number of Terminal Inspections Required: 58

(2) Number of Terminal Inspections Completed: 58

j. Family Housing Programs:

(1) LRK 12-8, Roof Repairs - Approximately 78% complete as of 31 December 1968.

(2) LRK 10-8, Painting of Exteriors of Capehart Quarters - This contract was reported to be approximately 26% complete on 31 December 1968. This contract has been temporarily closed, but will reopen 15 March 1969, weather permitting.

(3) W/O #9 1244, Installation of Yard Lamps for Pride Quarters - To be accomplished as soon as materials are received (4 lamps available now).

(4) LRK 70-8, Sidewalk Construction - Approximately 98% complete on 31 December 1968.

(5) W/O #9 1435, Replacement of Street Signs - Materials 50% complete; scheduled for completion in FY 70.

4. Meeting adjourned at 1110 hours. The next meeting of the BASE FAMILY HOUSING MANAGEMENT COUNCIL will convene at 1000 hours on Thursday, 20 February 1969, in the Blue Room of the Officers Open Mess.

Crew S-45 Wins Bomb Wing Trophy

Crew S-45 has won the ... Bombardment Wing's ... Crew Trophy" for Ju... to Dec. 31, 1968.

Col. Sherwin G. Desens, ... BW commander, presented the trophy to the crew Jan. 8 on the flight line.

Crew S-45 members are Majors Rodney B. Henney, pilot, and Paul A. Johnson, navigator; and Capt. Alan D. McKenzie, defensive systems operator.

The award is based upon a crew rating system which uses average points per mission as the criteria.

The crew established the highest points per mission average, and also set a wing record for the most points credited for one sortie.

In addition, during this rating period, Crew S-45 was subjected to Second Air Force Combat Evaluation Group testing and received a rating of "Highly Qualified."

Colonel Desens stated, "This award is a significant achievement as there are more than 50 hand picked, highly professional and competitive crews within the 43rd Bombardment Wing."

Crew S-45 is assigned to the 43rd BW Combat Crew Training School. Major Henney is the most experienced instructor pilot in the school, having accumulated more than 1,300 hours in the General Dynamics B-58 Hustler. He graduated his first student in 1963.

During one of his earlier training flights a flight control malfunction developed which could have resulted in the loss of a multi-million dollar aircraft. Major Henney was awarded the Air Medal for the safe recovery of his aircraft.

Major Johnson has been assigned to the 43rd BW for six years. He has served with Major Henney for more than two years.

Captain McKenzie was assigned to the wing in 1964 from Lincoln AFB, Neb., where he served as wing penetration aids officer. He has been a member of Crew S-45 for more than one and one-half years.

Two Majors Decorated For SEA Duty

Maj. Prince H. Harris, 70th Aerial Refueling Squadron, received two Silver Stars, the Distinguished Flying Cross, and the ninth Oak Leaf Cluster to the Air Medal; and Maj. Leslie P. McConnell, 70th ARFFS, the Distinguished Flying Cross in ceremonies yesterday morning.

Brig. Gen. James E. Hill, 823th Strategic Aerospace Division commander, made the presentations.

Major Harris was awarded the Silver Stars for similar actions as a T-28 fighter pilot in Southeast Asia. On Dec. 11, 1967, he flew a night armed reconnaissance mission of heavily defended hostile lines of communication in a renovated T-28 trainer. He made repeated passes into the focal point

Major Harris

of antiaircraft and automatic weapons positions. Despite heavy fire, strong winds, and rugged terrain, Major Harris destroyed three hostile vehicles and silenced two gun positions.

On Nov. 18, 1967, Major Harris was engaged in conducting a night armed reconnaissance mission in an extremely mountainous and heavily fortified area when he detected a hostile forces convoy. He attacked the convoy, destroying and burning five heavily loaded supply vehicles.

The DFC went to Major Harris for the close air support he provided friendly ground forces on Feb. 13, 1968.

The ninth OLC to the Air Medal was awarded Major Harris for his achievements in aerial flight from Aug. 27, 1967 to June 3, 1968.

Major McConnell was awarded the DFC for his participation as an EB-66 aircraft commander in aerial flight over North Vietnam. On Dec. 20, 1967, he flew his unarmed electronic

Major McConnell

countermeasures aircraft on a jamming support mission against radar directed antiaircraft weapons and surface-to-air missiles which threatened a B-52 combat force. The B-52s were attacking hostile troop concentrations near the Demilitarized Zone.

Aerial Heroics In SEA Bring DFC To Thomas

[redacted] Land Caster to the Distinguished Flying Cross Friday for aerial heroics in Southeast Asia.

Captain Thomas serves as an RF-[redacted] pilot in SEA. On Jan. 29, 1968, he flew an unarmed and unescorted night reconnaissance mission to obtain photographic coverage for bomb assess-

[redacted] the enemy area "...In spite of formidable terrain barriers, and intense and accurate hostile fire, Captain Thomas skillfully guided his aircraft through these hazards and obtained complete coverage of his assigned target."

His accomplishment enabled friendly forces to pinpoint hostile gun positions, and map and determine the serviceability of unfriendly supply routes.

Captain Thomas also received his thirteenth OLC to the Air Medal for service in SEA from July 2, 1967 to April 29.

Captain Thomas
