CHAPTER I

MISSION

During the months of September and October, 1950, the mission assigned to the 6th Air Division and to the 800th Air Base Group remained unchanged. (U)

It continued to be, in the case of the division, the monitoring and coordination of the manning, training, equipping, and operational readiness of the units assigned to it. The air base group's task remained one of support for the air division, its tactical wings, and for other assigned and attached organizations. (U)

The overriding objective remained the maintenance of MacDill's capability to launch global strategic aerial operations in any weather and against any enemy. (U)

ORGANIZATION, ADMINISTRATION AND PERSONNEL

3

contact Colonel Leibel by a number of his subordinates. At the end of October the case had not developed sufficiently to warrant detailed historical coverage. During the suspension, Colonel Walker was recalled to his former post as base commander. (U)

At lower echelons changes took place in a much less dramatic fashion. On 29 September [FOIA (b)(6)] Mater Pool Officer, assumed command of the 800th Transportation Squadron. Four days later [FOIA (b)(6)] was assigned as Division Aircraft Maintenance Officer. On 1 October, [FOIA (b)(6)] was appointed as Base Operations Staff Officer, replacing [FOIA (b)(6)] [FOIA (b)(6)] who became Base Operations Officer. (U)

The program which Colonel Leibel put into effect during his first two months was essentially a continuation of that previously directed by Colonel Walker. There was, however, an unprecedented emphasis on improving the appearance of the base. Sections were instructed and re-instructed on maintaining their buildings and grounds. All the trees on the base were whitewashed up to a height of five feet. And a constant

ORGANIZATION, ASSIGNMENT AND PERSONNEL

While the leadership of the 6th Air Division, under the command of Colonel Paul W. Tibbets, Jr., remained quite stable during the months of September and October, 1950, the same could not be said of the 300th Air Base Group. (U)

With the beginning of the period covered by this history began Colonel Louis L. Leibel's tour as MacDill's fifteenth base commander. Colonel Silver E. Walker, Jr., who had served as base commander since July of 1947, moved to the 304th Bombardment Wing as Director of Operations. (U)

Colonel Leibel came to MacDill from his post as base commander at Pecos Air Force Base, Puerto Rico. Prior to that he had served as deputy base commander at Ellsworth Air Force Base, South Dakota. (U)

On 25 October, however, Colonel Leibel was temporarily suspended from his position by Colonel Tibbets and assigned as special assistant to the division commander. The suspension arose from charges brought

ORGANIZATION, ADMINISTRATION AND PERSONNEL

1

check was kept on the performance of these tasks. ¹¹ (U)

That this campaign was successful could be attested by the comments made upon the base's appearance by the inspecting team which visited MacDill during November. The General Air Force inspectors reported that MacDill had never before looked so good. ¹² (U)

Another major innovation made by Colonel Leibel was the introduction of weekly Management Control System (MCS) meetings of representatives from all sections. All sections were required to submit reports covering those areas graded by the Director's Air Command (DAC) each Friday morning. Mondays these reports were returned by the Management Analysis Section and discussed. On Tuesdays the reports, bearing the endorsements of Management Analysis and the section submitting the report, were forwarded to the base commander. ¹³ (U)

This pattern of weekly reports and meetings was not entirely successful. Some sections, Information Services and Air Police for example, complained that weekly figures were not always significant; too many of the items graded could only be reported on a monthly or quarterly basis. ¹⁴ SAC respiratory ratings and Aircraft Without-Official-Logbook (AWOL) cases, among others, do not fit into

COMMUNICATION, IMPLEMENTATION AND IMPROVEMENT

a weekly pattern. (U)

On the other hand, it cannot be denied that weekly VCS meetings did increase the management-consciousness of many units at MacDill. No unit was ever to submit an unsatisfactory report to the base commander; problem areas, therefore, received increased attention. What's more, at these weekly meetings, help could be solicited from other units in the solution of important problems. (U)

Effectiveness of the new approach on management was registered in the VCS scores for September and October. In the quarter ending in June 1958 six base groups had scored a grand total of 76 per cent. By September this score had risen to 85 per cent. During October, the estimated score was 84 per cent. (U)

Among the individual highlights recorded in the VCS report were the continued 100 per cent score in aircraft retention, the increase in On-Job-Training (OJT) effectiveness from June's 76 per cent to September's 100 per cent and October's 88 per cent, the improvement in security effectiveness from June's 87 per cent to September and October's 98 per cent, and the improvement in utilities conservation from June's 46 per cent to a high of

SAC [unclear]

ORGANIZATION, ADMINISTRATION AND PERSONNEL

6

18
66 per cent. (U)

In broader terms, the quarter ending in September marked the following improvements as compared to the quarter ending in June: personnel, from 55 to 76 per cent; material, from 47 to 58 per cent; installations engineering, from 45 to 51 per cent. (U)

Problems remained. Inadequate facilities continued to plague the 800 Squadron, a shortage of qualified personnel and the lack of an additional command system continued to hurt supply effectiveness, shortage of higher grade pilots continued to damage fuel service's cost per gallon served, and the high electricity consumption of air conditioners during Florida's summers continued to lower utilities conservation results. The weekly 800 meetings, however, have increased attention to these problems. (U)

In addition to the 800 reports, the Squadron Evaluation System served as a management tool. The most notable item in this system was the rise of the 800th Transportation Squadron from sixth place in the September standings to first place in October. Accounting for this improvement were higher scores in such personnel

22
 matters as retention and PWIs. The major overhaul of the transpor-
 tation squadron recently implemented by FOIA (b)(6) seems,
 therefore, to have finally registered in the Squadron Evaluation
 System. (U)

The two major concerns, in the personnel area, were under-staffing
 in certain areas and retention. As was true earlier in the year, Food
 Services and the 4834th United States Air Force Hospital were particu-
 larly hard hit by personnel shortages. At the end of September the
 hospital had but 255 of the 303 men authorized it, while Food Services
 had only 326 of the 398 authorized it. October saw no alleviation of
 the problems plaguing these two units. (U)

Retention provided a more pleasant picture. In comparing the
 figures for August and September of 1958 the following points deserve
 mention: immediate airman reenlistments for the division increased
 from 57.9 per cent to 58.1 per cent, this despite a fall on the part
 of the 305th Bombardment Wing from 55.9 down to 39.3; and first term
 airman reenlistments rose from 37.9 per cent to 43.9 per cent. Leading

the improvement in first term reenlistments was the 809th Air Base Group, which enlisted 10 of 17 for a percentage of 58.8.²⁷ (U)

To increase its understanding of the retention problem the 6th Air Division, during the month of October, conducted a poll among airmen separating from the division. Of the 42 men questioned 24 found at least some fault with the promotion system, 10 complained of working conditions, and 11 expressed dissatisfaction with the supervision they had received. The promotion system was cited by men separating from the 809th Air Base Group as the primary factor in their failure to reenlist. Air Police complained of unfair work schedules which denied them the opportunity to take accrued leave. The sample polled was not extremely broad, nor was there time to tell whether action could or would be taken to remove grounds for complaint; this poll, however, was an attempt to do something about an important personnel problem. (U)

CHAPTER III
OPERATIONS AND TRAINING

From the statistical point of view MacDill units under supervision from division headquarters compiled the following record during September of 1958: the 303rd Bombardment Wing flew 2134 hours in B-47D, B-47B, KC-97B, and KC-97C aircraft; the 306th Bombardment Wing, 2461 hours in B-47B, KC-97B, and KC-97C aircraft; the 809th Air Base Group, 490 hours in C-45B, C-123B, W-19B, T2-25B, and T-33A aircraft. In October the figures rose to 2379 for the 303rd, 2587 for the 306th, and 463 for the air base group. (U)

More important than flying statistics, at least from the point of view of this history, were the planning activities undertaken by the division. (U)

On 1 September 1958 the 6th Air Division published a set of extremely important operating procedures for home base alerts. These procedures, in effect, established MacDill's alert force on a firm footing. They provided in some detail for such matters as testing of the klaxon norms, provision of billeting for alert

personnel, the pattern of alert duties and briefings, traffic plans, and similar items. Almost every organization, from the bomb wings to transportation and food services, was affected by these new procedures. (U)

Related to the establishment of the alert force and its facilities was the publication of the internal protection plan, Operations Plan 190-59, by the division on 1 September.⁵ This plan provided for the establishment of a day-to-day security program capable of expansion into a full-fledged sabotage alert force. Under it the bomb wings were directed to maintain access rosters to IAW aircraft, the hospital was instructed to maintain a close check on food and water at MacDill, and the air police⁶ were ordered to provide a vigorous Combat Defense Force. (U)

The third publication on 1 September was that of Amendment Number One to 6th Air Division Operations Plan Serial Number 490-59.⁷ This amendment provided instructions for the receiving, storing, assembling, delivering, testing, and loading of air weapons in tactical aircraft.⁸ MacDill units were assigned specific

8. Ibid.

responsibilities by the plan in the handling of nuclear weapons. (3)

On 5 September Amendment Number One to 6th Air Division Plan 224-58⁹ was published. This amendment altered B-47 hurricane evacuation routes and bases, amended KC-97 flight plans, and provided for the hurricane evacuation of the alert force. And on 7 October the division published the first amendment to the new Home Base Alert Procedures of the preceding month.¹⁰ Principal purpose of the changes was to tighten security. (U)

During October a number of plans and amendments were published on various matters. On 1 October, for example, Operations Plan 112-59 in support of Military Air Transport Service Plan 112-59 was issued; this provided for the establishment of a provisional transportation squadron at MacDill in the event of a domestic transportation emergency.¹¹ Also published in October were Amendment One¹² to a 6th Air Division plan dealing with disaster control, a change¹³ to the division mobility plan, and a contingency mobility plan providing for the deployment of the 306th Bombardment Wing to forward

14
bases. (U)

Perhaps most important of the plans published during the period covered by this history, however, was the division's Hostile Action Evacuation Plan 10-59, published on 15 September. ¹⁵ Recognizing that war might well be preceded by an attack on the forces of the Strategic Air Command stationed at bases like MacDill, the division took action to minimize the effects of such a contingency. Under the new plan the wings were to prepare to evacuate 15 B-47s each when given the order to do so; such an order might come any time after a "SAC Alert" or Emergency War Operation had been implemented. An amendment clarifying some details was published on 27 October. ¹⁶ (U)

Two major exercises were planned for in the period covered by this history, but were not actually carried out. ¹⁷ "Battle Cry" established ground rules for a "Rendezvous" airborne alert. ¹⁸ "Grand Slam", which established unit duties in a "no notice" unit simulated combat exercise, was published on 1 October and amended in minor detail on ¹⁹

15 October. (U)

While these two plans were not carried out before 31 October,
MacDill units were submitted to "Full Moon" tests²¹ twice during the
period - on 26 September and on 22 October. (X)

Throughout the period principal attention was paid to estab-
lishing the alert force and providing for any one of a number of
possible emergencies which might threaten the division's opera-
tional readiness. (U)

CHAPTER IV

PERSONNEL AND FACILITIES

The most important items carried in MADILL's inventory con-
sisted to be the strike and support aircraft owned by the two
task wings. (1)

During September and October of 1958 the two wings possessed
a total of 30 B-47s and 41 B-27s. In October all categories
of aircraft retained a low-commission rate in excess of 50 per cent,
though low-commission rates for the B-47s dipped slightly below that
figure in September. (2)

Just as essential as MADILL's tactical aircraft were the
alert force facilities. The base area alert procedures published
by the Division on 1 September established a goal rate which the
609th Air Base Group attempted to reach as quickly as possible. (3)
By September the new bachelor officers' quarters on Langley Road
and Tappan Boulevard were being used by the alert force. (4)
In September a project to stabilize the alert crew parking area

6
had been completed. Another project, that of installing air conditioning in the alert crew quarters, was 80 per cent completed by the end of October. 7 (U)

Despite these and other efforts to meet the goals set for alert facilities, the visit of Second Air Force's Chief of Staff early in October indicated that a number of deficiencies existed. General Hester, Chief of Staff, noted the insufficiency of janitorial service in the alert quarters, a failure to stock the refrigerators with sufficient food, some sanitary weaknesses, and similar problems. A letter from Major General John T. McConnell, commander of Second Air Force, emphasized the importance of improving the alert facilities. The general urged high priorities for this project and promised to inspect personally in December. 8 (U)

9
Following General Hester's visit and General McConnell's letter, the 809th Air Base Group moved quickly to remove all possible grounds for complaint. More food was placed in alert refrigerators, furniture and rugs were improved in quality, and

PERSONNEL AND FACILITIES

10

all possible amenities were made available to alert crews. At the end of the period covered by this history MacDill was waiting to take possession of new alert vehicles and of house trailers for use right in the alert area. ¹¹ Everything possible was being done to bring alert facilities up to General McConnell's expectations. (U)

Work also proceeded on projects not related to the alert force. Construction began earlier in 1958 on four airmen's dormitories, an airmen's dining hall, a new HCO's Open Mess, a photographic laboratory for the Air Defense unit coming to MacDill in 1959, and a missile storage building continued toward completion. ¹² (U)

Maintenance projects were also continued, though the end-of-year shortage of funds did curtail the number of projects which MacDill's engineers could undertake. ¹³ More than \$245,000 worth of plans and specifications had been drawn but not advertised for bids due to non-availability of funds. ¹⁴ While some projects were initiated

14. Ibid.

during September and October, notably the heating of five buildings, and others continued, notably the air conditioning of the dental clinic, "not started" is the term which best characterized most planned installations projects during the months covered by this history. (U)

In a more optimistic vein, three projects being conducted with non-appropriated funds did move to completion in September and October. At a cost of more than \$47,000 the base bowling alleys were air conditioned, and the flight line exchange and the flight line cafeteria were remodeled. While not crucial to MacDill's mission, these three projects were all important in the maintenance of morale among the personnel stationed at MacDill. (U)

SAC MANAGEMENT CONTROL SYSTEM
SOUTH AIR BASE GROUP

24 June 1958

F O R E W O R D

1. The purpose of the SAC Management Control System for Air Base Groups is twofold:
 - a. To provide a procedure by which the Air Base Group Commander and his staff will be aided in determining effectiveness in reaching and maintaining prescribed and implied goals and the efficiency with which available resources are utilized.
 - b. To provide information on individual factors affecting the performance of the Air Base Group so that corrective action can be instituted. This action may be the responsibility of the Air Base Group, Wing, Air Division, Command, or other outside agencies as determined by a complete analysis of data.
2. Through increased analysis of unfavorable performance areas, it will be assured that management is receiving control information from which management action can be taken. Analysis is primarily supported by the computations of data monthly, and officially scored quarterly, by Headquarters, SAC, through the media of the SAC Management Control Statements. These statements are designed to permit a systematic monthly analysis of performance in areas included in the Management Control System.

AIR BASE GROUP MANAGEMENT CONTROL STATEMENT
ROPER AIR BASE GROUP
MacDill Air Force Base, Florida
June 1958

(2-SAC-136)

1. Highlights:

- a. The AVOI rate for the quarter was 0.4 compared to 1.2 for the March quarter.
- b. ANFM continues to earn 100% of score for the quarter.
- c. Base Commissary score improved from 65% for the March quarter to 80% this quarter.
- d. Food Service Management score improved from 76% to 85% this quarter.
- e. PDI Support earned 100% of score for the June quarter.

AIR BASE GROUP MANAGEMENT CONTROL STATEMENT
809TH AIR BASE GROUP
MacDill Air Force Base, Florida
June 1958

1. Weak Areas

- a. OJT Effectiveness - 76% of Score Earned: The score in this area dropped from 100% the previous quarter. For the first two months this quarter scores were below Second Air Force averages but continued to improve in June. Most points lost on percent passing tests.
- b. MCO Mess - 60% of Score Earned: The club did not meet the minimum acceptable Financial Operating Efficiency Index of 7 this quarter although it obtained an Index of 8 in June. Insufficient Net Profit to Surplus during April and May was the principal factor.
- c. Flyaway Kits - 0% of Score Earned: Four of the B-47 squadrons are converting to the new master list which resulted in no score in this area.
- d. Supply Effectiveness - 0% of Score Earned: Supply Effectiveness received no score this quarter after receiving 30% of score for the March quarter. The cause for this drop was an excessive number of requests (43,605) against line items issued (22,893) as compared to 34,041 line items requested during the previous quarter. Low depot effectiveness and the transferring of responsibility for certain property classes from one depot to another, also affected the MacDill rate.
- e. Automotive Maintenance - 58% of Score Earned: Downtime hours have decreased slightly over the last three months; however, it must continue to decline the next quarter to receive maximum score. Also, Supply and Contractual Services Expense per Vehicle Equivalent were in excess for the quarter by \$17.86 per vehicle equivalent. The amounts spent for supply and maintenance during this quarter should be reflected in decreased downtime hours in subsequent quarters.

f. Fire Incidents - 10% of Score Earned: Three fires in this quarter with a dollar loss of \$7,418 made in impossible to score more than 10%.

g. Utilities Conservation - 46% of Score Earned: In the area of Electricity, KWH per Person Supported was 294 as compared to 240 required for minimum score and 160 for maximum score. In heating fuels the percent of fuel target attained was 100%. A utilization of 92% of target or less would have resulted in maximum score.

2. Marginal Areas

a. Retention (First Term and Career): Although MacDill received 100% of score in this area it was a low 100%. First Term airmen retention rate was 41% and career airmen retention rate was 81% for the June quarter. Minimum rates of 40% and 80% respectively are required to receive 100% of score in this area.

b. Ground Safety: The Ground Safety Index was 3.85 for the quarter which is high, although MacDill received 100% of score. Effective 1 July 1958 the scoring table on the Ground Safety Index lowered the acceptable safety index for maximum score from 4.85 to 1.00. Under those conditions the performance of the 809th Air Base Group during the June quarter would have earned 45% of maximum score.

c. AMCL: Effective 1 July 1958 the scoring table was changed so that the minimum rate to obtain 100% was reduced from 2.3 per thousand to .4. This means that MacDill can have only three AMCL's in the Air Base Group per quarter to receive maximum score.

SAC MANAGEMENT CONTROL SYSTEM
809TH AIR BASE GROUP

22 October 1958

F O R E W O R D

1. The purpose of the SAC Management Control System for Air Base Groups is twofold:
 - a. To provide a procedure by which the Air Base Group Commander and his staff will be aided in determining effectiveness in reaching and maintaining prescribed and implied goals and the efficiency with which available resources are utilized.
 - b. To provide information on individual factors effecting the performance of the Air Base Group so that corrective action can be instituted. This action may be the responsibility of the Air Base Group, Wing, Air Division, Command, or other outside agencies as determined by a complete analysis of data.
2. Through increased analysis of unfavorable performance areas, it will be assured that management is receiving control information from which management action can be taken. Analysis is primarily supported by the computations of data monthly, and officially scored quarterly, by Headquarters, SAC, through the media of the SAC Management Control Statements. These statements are designed to permit a systematic monthly analysis of performance in areas included in the Management Control System.

AIR BASE GROUP MANAGEMENT CONTROL STATEMENT
809TH AIR BASE GROUP
MacDill Air Force Base, Florida
September 1958

WEAK AREAS

- a. NCO Mess - 70% of Score Earned: This item suffered loss in two factors, Net Profit to Surplus and Sales per Member. Some of the reasons for low net profit were the alert situation during part of July, which reduced sales and increased expenses, and low gross sales during September. The low sales in September were partially caused by the short month (26 days) imposed by the new accounting cut-off date. Sales per member has consistently failed to meet the \$22 standard. [FOIA (b)(6)]
- b. Supply Effectiveness - 40% of Score Earned: Supply Effectiveness received 40% of score this quarter as compared to 0% for the June quarter. Factors bearing on low score have been need for a fifth cardtype machine and shortage of qualified personnel. [FOIA (b)(6)]
- c. Base Commissary Management - 75% of Score Earned: Weaknesses were in low inventory turnover rate (3.04) and excessive losses in grocery market subsection. Action to correct deficiencies has been taken by reducing inventory from \$295,000 in July to \$256,000 as of end of September. [FOIA (b)(6)]
- d. Food Service Management - 79% of Score Earned: Entire loss of score occurred in Personnel cost per meal served. Reason for low score here is in coverage of higher grade airmen. [FOIA (b)(6)]
- e. Utilities Conservation - 66% of Score Earned: Maximum score attained in Water and Heating Fuels. Weak item was Electricity - KWH per capita, with 9,100,000 KWH consumed, or 408 KWH per capita. To obtain any score in this area the average consumption per capita in KWH cannot exceed 240 KWH per capita. [FOIA (b)(6)]

f. Base Support Operating Costs - 69% of Score Earned: Total Support Material Costs was \$26.74 per person supported for the quarter which is well above the desired SAC standard of \$20.75. Also, Contractual Services and other Miscellaneous Costs was \$10.14 above the SAC standard in cost per person supported.

g. Ground Safety - 45% of Score Earned: Six military disabling injuries, of which one was a fatality, account for the low score. [FOIA (b)(6)]

h. AWOL - 10% of Score Earned: Nineteen AWOL's occurred during the quarter. To obtain maximum score in this area the Air Base Group can have only three AWOL's per quarter. [FOIA (b)(6)]

AIR BASE GROUP MANAGEMENT CONTROL STATEMENT
809TH AIR BASE GROUP
MacDill Air Force Base, Florida
September 1958

HIGHLIGHTS

- a. OJT Effectiveness attained maximum score this quarter which is an improvement from the 76% received for the June quarter. [FOIA (b)(6)]
- b. Retention of First Term and Career Airmen still receiving 100% of score for the quarter. [FOIA (b)(6)]
- c. AACP and ANFE continues to earn 100% of score for the quarter. [FOIA (b)(6)]
- d. Flyaway Kits received maximum score of 100% for the quarter. This was a vast improvement from last quarter when there was no points scored. [FOIA (b)(6)]
- e. Automotive Maintenance score improved from 58% for the June quarter to 80% this quarter. [FOIA (b)(6)]
- f. POL Support earned 100% of score for the September quarter. [FOIA (b)(6)]
- g. Security Effectiveness improved from 87% for the June quarter to 98% of score this quarter. [FOIA (b)(6)]

RETENTION

A substantial increase in the Retention rates for the last calendar quarter of this year will insure the permanent possession of the Strategic Air Command Retention Trophy for the 6th Air Division.

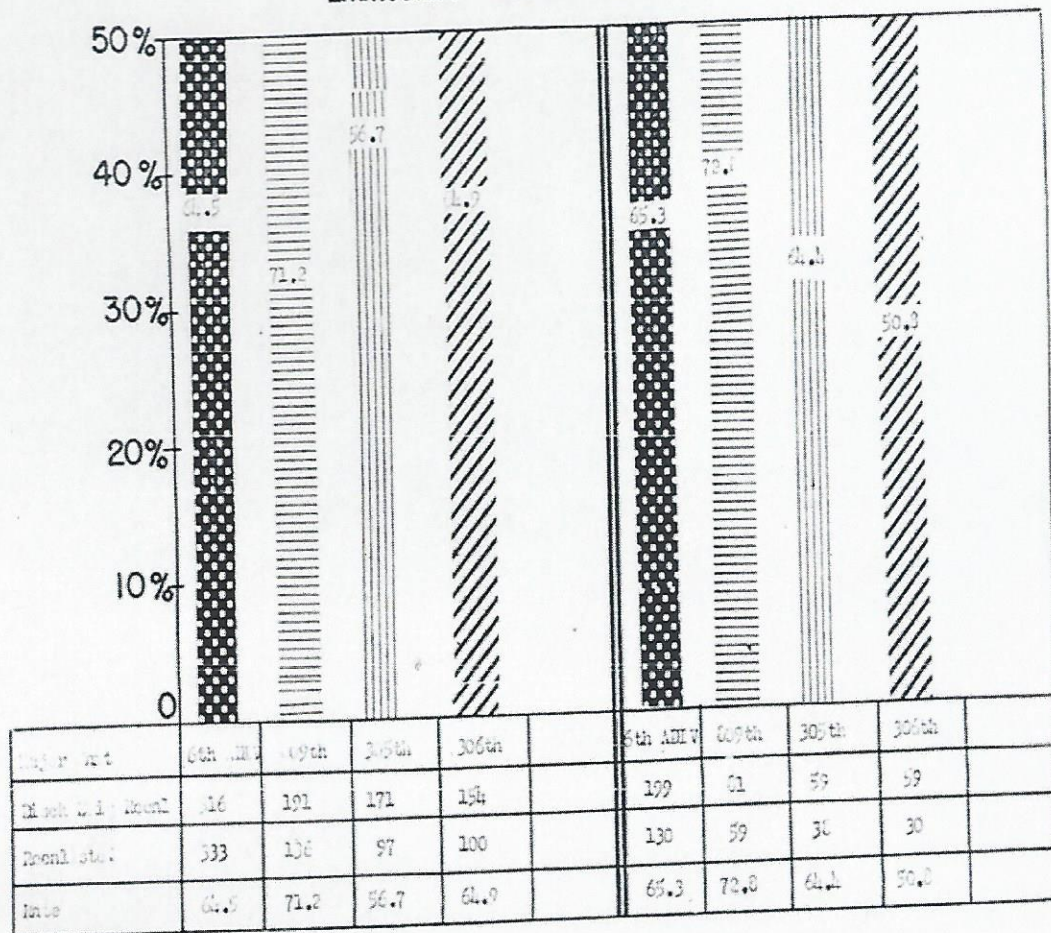

MacDill AFB topped all other SAC Bases earlier this year by winning the SAC Trophy for the first calendar quarter. The winning of this award twice in one year is an unprecedented feat unequalled in the history of the SAC Retention effort.

In order to achieve maximum results in attaining an exceptionally high retention rate for this calendar quarter certain innovations in the present retention program were required. As stated by FOIA (b)(6) Base Retention Officer, "we have had to streamline and revitalize the present program by implementing a quota system and eliciting the aid of the NCO Wives and the Family Services function on the Base. Their primary purpose in this drive is to provide counseling assistance to the younger airman's wives. We have a good program now and with the cooperation of all concerned I feel that we will accomplish something that has never before even been attempted." Of course the two innovations mentioned above are just a few of the many designed to improve the overall effectiveness of the program. Some startlingly new ideas have matured and as this drive progresses they will be publicized more fully in this booklet.

SOMETHING ABOUT RETENTION

Retention is a function which must commence when the individual is assigned to an organization. An airman who understands the Air Force Mission is satisfied with his assigned duties, and respects his superiors, needs little persuasion to remain in the Air Force. One of the Retention Officer's major responsibilities is to apprise organizational commanders of the reasons given by airmen for leaving their organizations. The commander must reduce or alleviate dislikes created by policies which are contrary to good management practices. The major causes for a low retention rate can therefore be classified under marginal management and human relations practices. Too often, not enough is done to correct the seemingly minor dislikes which compound during the course of time to a degree that they become major factors against retention. A progressive retention program cannot be limited to the confines of the Retention Office.

MORE NOW VULNERABLE FOR OVERSEAS SERVICE

More airmen are now vulnerable for overseas due to a new policy for selecting career airmen for overseas service.

The new policy, effective 1 Oct 58 primarily removes the bar against assigning career airmen overseas with less than 18 months retainability.

Airmen on their second or subsequent enlistment are eligible for assignment overseas regardless of the time remaining on their current enlistments.

When selected for overseas assignment they will be required to extend their current enlistment to cover the overseas tour period or take a "short discharge" and reenlist, if they don't have enough time remaining on their current enlistment to complete the overseas tour for which selected.

A career airman selected for overseas assignment longer than the time remaining on his enlistment may decline to extend his enlistment or reenlist. In such case, his commander will take action to release him from the PCS movement. However, the airman will have to sign a statement that if he doesn't reenlist or extend his enlistment, he will be ineligible to reenlist for 91 days after his discharge. His commander must request another overseas assignment which the airman can complete before his current enlistment ends.

The policy on selection of first term airmen for overseas assignments remain the same. Airmen with between 12 and 18 months retainability will be selected for 12 month tour overseas before other airmen with more than 18 months remaining on their enlistments. Also, any airmen, whether first term or career type, with between 12 and 18 months retainability who has not yet served overseas will be selected for a 12 month overseas area ahead of an individual who already has served overseas.

RETENTION INFORMATION

Commanders, Retention NCO's and Supervisors may be able to use the following item to their advantage.

1. ITEM: The Chrysler Corp announced on 23 Oct that it had suffered a net loss of \$45,000,000 during the 9 months of 1958.

2. DIAGNOSIS: This means that Chrysler has (1) Over expanded its production facilities and or (2) Sales have not come up to expectations. In either event a cut-back can be expected if Chrysler is to get out of the red.

3. SIGNIFICANCE: A cut-back in production will mean auto workers will either be laid off or they will work fewer days per week which will reduce these workers buying power. Also Chrysler will make fewer purchases of raw materials, mainly steel. This in turn will force a similar cut-back in the steel industry unless the slack is taken up somewhere else. Likewise a cut-back can be expected in the "thirde" it takes to make steel and on and on - it is a chain reaction. The only question is, How long will it take?

4. EMPLOYMENT OUTLOOK: Not good in the auto industry, steel industry, coal mining and fuels. It also will not be good in the support industries. Business in general and the service functions that depend upon these industries can be expected to decline. Until this adjustment is completed, jobs will be harder to get and pay raises will be fewer than they have been in the past.
