HEADQUARTERS
CONTINENTAL AIR COMMAND
Mitchel Air Force Base, New York

PP-R 320.4 7 May 1949

SUBJECT: AROTC Personnel

TO : Director of Training and Requirements, DCS/O, Headquarters USAF, Washington 25, D. C.

1. The present personnel space authorization for ARTOC military personnel includes 444 officer instructors and 416 airmen for the school year 1948-1949 for 110 units. The separation of the Air ROTC units from the Army ROTC units, as well as curriculum additions and improvements, renders it essential that the Air units receive an increased authorization to enable them to carry out an effective program. Your particular attention is invited to the fact that the University of Maryland has advised the Department of the Army that it desires to drop its Army ROTC program and give its entire support to the Air Force ROTC unit. Consequently, the ARTOC requirement at this institution alone is increased from six to nineteen officers with a proportionate increase of enlisted personnel to a total of sixteen.

2. Twenty-nine or thirty additional institutions are entering the ARTOCProgram in September 1949. Each of the new units requires a minimum authorization of four officers and four airmen, resulting in a total increased requirement of 120 officers and 120 airmen.

3. In substance the present space requirement for military personnel for the AROTC program 1949-1950 school year is for 744 officers and 747 airmen. This requirement is broken down (with the exception of the thirty new units) in the attached tables by Air Force, Unit, and SSN for officers and airmen. The requirement is based on a careful study of the curriculum to be offered at each institution and the anticipated student load. It is not possible at this time to identify by name the thirty new units to be activated this year. The estimated minimum space requirement for officer instructors by SSN and grade for the new units is as follows:

New Units	No. of Officers	SSN	Grade
30	6	0200	Major or Captain
	2	0600	" "
	66	2120	Col or Lt Col (30) Major or Captain (36)
	30	4000	Major or Captain

Ltr, Hqs ConAC, SUBJECT: AROTC Personnel

(Cont'd)

New Units	No. of Officers	SSN	Grade
	3	4822	Major or Captain
	9	4823	" "
	2	6305	" "
	2	7025	" "
Total Number	120 Officers		

4. It is regretted that it has been impossible to draft and forward a firm AROTC space requirement prior to this date. Administration of the ARTOC program is a major responsibility of this command. The success of the program is dependent primarily upon the provision of an adequate number of qualified officer and enlisted personnel. Failure to establish an adequate space authorization will cripple the program without question. Consequently, an urgent request is made that the personnel space authorization for the AROTC program be increased immediately to 744 officers and 757 airmen. It is important that this command be notified of the status of this request with the least delay.

FOR THE COMMANDING GENERAL:

Basic Ltr fm Hq. ConAC, Mitchel AFB, N.Y., dated 7 May 49, subj: AROTC Personnel

AFOOR 1st Ind 24 May 1949

Department of the Air Force, Hq USAF, Washington 25, D.C.

TO: Commanding General, Continental Air Command, Mitchel Air Force Base, New York

1. Budgetary and program planning for FY 1950 contemplated the assignment of an average of 4 officers and 4 enlisted men for each Air ROTC unit. With 139 units planned for FY 1950 the total strength allowed for this function amounted to 556 officers and 556 enlisted men. Current restrictions on manpower resources, especially officers, makes it impossible to authorize additional troop spaces.

2. It is suggested that if it is impossible to operate 139 ROTC units on the above personnel authorization that you submit your maximum capability within the authorization and recommendations as to future action.

EO 11652

CA-325/

7 March 1948

SUBJECT: Air National Guard Field Training Sites

TO : Commanding General, Continental Air Command, Mitchel AFB, New York

* * * * *

3. Victorville Air Force Base was approved as the best Field Training site for the 61st and 62nd ANG Wings by the State Adjutants General of California, Arizona, Nevada and Utah and by the Commanding General of this headquarters at the conference held on 4 March 1949. It is believed that with the selection of Moses Lake Air Force Base and Victorville Air Force Base, excellent Field Training will be accomplished by the three Air National Guard Wings of this Air Force. The Adjutants General of the various states are in complete accord with this final plan.

HEADQUARTERS
CONTINENTAL AIR COMMAND
Inter-Office Routing Slip

File OA 325

Subject: Reorganization of ANG Day Fighter Units

* * * * *

7 17Dec AirD ANG * * * *

2. A re-study of the original recommendation by this office on the conversion of ANG fighter squadrons to all-weather fighter squadrons indicates that it may be unwise to reduce the number of aircraft from the present authorization of 25 for the penetration squadron to 12 or 13 for the all-weather squadron. This would seriously reduce the flying training capability of the unit. It appears therefore that a compromise between the present organization and complete reorganization into the all-weather T/O should be requested. That is, the units should be redesignated all-weather fighters, and should train under all-weather training standards insofar as possible. Further, if equipment becomes available, the units should be authorized sufficient electronos personnel to maintain wing tip or wing tank radar installation on the conventional fighter.

HEADQUARTERS
CONTINENTAL AIR COMMAND
Mitchel Air Force Base, New York

POAR 325 8 December 1949

SUBJECT: Schedule for Jet Conversion of Air National Guard Units

TO : Commanding General, First Air Force, Mitchel Air Force Base, New York

(Same Letter to the CG's, Fourth, Ninth, Tenth and Fourteenth AF's)

1. Recently an Air National Guard Jet Conversion list was drawn up by this headquarters in conjunction with Headquarters, United States Air Force and the Air Force Division, National Guard Bureau. This list was based on the air defense needs and the capability of existing facilities to handle jet aircraft (where construction had actually been initiated it was construed that the improved facilities existed). Further, this list is predicated on the 48 Group Program for the regular USAF.

2. The new list supersedes the listing included in the "USAF Equipping and Conversion Program," Seventh Edition, 30 June 1949. Inclosure No. 1 is that portion of the Air National Guard jet conversion list that pertains to the units in your Air Force area.

3. The above information is forwarded for planning purposes only and to preclude confusion resulting from the conversion schedule set forth in the "USAF Equipping and Conversion Program," Seventh Edition, 30 June 1949.

HEADQUARTERS
CONTINENTAL AIR COMMAND
Mitchel Air Force Base, New York

P&O 325 8 November 1949

SUBJECT: Air National Guard Jet Conversion Priority List

TO : Special Assistant to the Chief of Staff for Reserve Forces
Headquarters, USAF, Washington 25, D.C;

1. Pursuant to a directive from your office, a conference was held at this headquarters, 12 October 1949, for the purpose of revising the existing Air National Guard jet priority list. This conference was attended by a representative of your office, a representative of Operations, Headquarters, USAF and a representative of the Air Force Division, National Guard Bureau. The list attached as Inclosure No. 1 is the result of this conference.

2. The factors used in the formulation of the list were the requirements of air defense and existing runway facilities (where construction was under way to extend runways it was construed that the lengthened runways actually existed). The limitation of existing runway facilities precluded the inclusion of certain units in key air defense areas, i.e., Van Nuys, California; Bradley Field, Connecticut and Grenier Air Force Base, New Hampshire. Considering the scheduled jet aircraft flow this list should hold until the end of Fiscal Year 1951, with the addition of three stations not yet determined.

3. The attached priority list is made up in four columns. Column I includes those stations which have runways sufficiently long to accommodate the F-84 aircraft, as well as the F-80, F-86 and F-94 aircraft. Column II includes those stations which can accommodate the F-80, F-86 and F-94, but cannot handle the F-84. Column III includes those units which are to be reequipped with the F-94 aircraft when this equipment becomes available; these units are All Weather Fighter Squadrons. Column IV includes those units which are to be reequipped with the F-86 as soon as this equipment becomes available this list was dictated by air defense needs. The F-80 and F-84 aircraft which became available as a result of the reequipped indicated in Columns III and IV should then be used to equip other Air National Guard Fighter Squadrons in the priority indicated in Columns I and II.

Initiated by: C.O. Swart
Major, USAF X-2125

1. Plans call for the gradual conversion of Air National Guard Fighter Units from conventional fighter aircraft to jet type aircraft. To implement these plans this command formulated a priority listing for converting Air National Guard fighter units to jet type aircraft based on air defense needs; the existing priority list which was last revised in February, this year, has become antiquated through the availability of additional information relative to existing runway lengths (information on runway lengths was furnished by the Air Force Division, National Guard Bureau). In light of the foregoing, Headquarters USAF directed that a conference be held at this headquarters, 12 October 1949, for the purpose of revising the existing priority list. This conference was attended by representatives of the Office of the Special Assistant to the Chief of Staff for Reserve Forces, the Operations Division, Headquarters USAF; and Air Force Division National Guard Bureau. This headquarters was represented by members of DAC, Air Installations, Air Defense Plans and War Plans of P&O.

2. At the present time 6 Air National Guard Squadrons have Jet Fighters of the F-80 type:

126th Ftr Sq (JP)	Gen Mitchell Fld	Milwaukee, Wis
132d Ftr Sq (JP)	Dow AFB	Bangor, Me.
158th Ftr Sq (JP)	Hunter Field	Savannah, Ga.
159th Ftr Sq (JP)	Thomas Imerson Fld	Jacksonville, Fla.
173d Ftr Sq (JP)	Municipal Apt	Lincoln, Neb.
194th Ftr Sq (JP)	San Bernardino AFB	San Bernardino, Calif.

This disposition is satisfactory and will not be altered by the following priority list. Information available based on the initiation of the 48 group program for the United States Air Force indicates that during the present fiscal year the Air National Guard will receive F-80 aircraft for 1 additional squadron and F-84 for 12 additional squadrons. During Fiscal Year 1951 the Air National Guard

Number and date each entry - show date of dispatch. Show staff division or office in FROM-TO columns. Sign each entry legibly - show actual signer. Draw a line across the page under each entry. Use full width of page for long entries.

is scheduled to receive F-80 aircraft for 8 squadrons; F-84 aircraft for 3 squadrons, F-86 aircraft for 3 squadrons and F-94 aircraft for 6 squadrons; thus making a total of 41 jet equipped squadrons for Air National Guard by the end of "Iscal" Year 1951.

3. Since the flow of jet aircraft to the Air National Guard will as indicated above be fairly rapid, it was decided that the new conversion list should be based realistically on air defense factors in conjunction with existing air field facilities (where contracts have actually been let to extend runways it was construed that these facilities exist). Thus certain areas which need air defense units are not included in this list because of the lack of suitable runway facilities i.e. Van Nuys Airport, Los Angeles and Bradley Field, Windsor Locks, Conn. It was agreed that this list will hold until the end of FY 1951 with exception of 2 additional stations not yet determined; at that time another list will be necessary to establish priorities for re-equipping the remainder of the National Guard Squadrons.

4. It will be noted on the priority list that Columns III and IV (F-84 and F-86 conversion) include units already equipped with jets. (See Columns I and II). This second re-equipping was dictated by air defense needs and by the fact that certain of the units are to be All Weather, thus would logically get the F-94. On reequipment of these squadrons the aircraft (F-80 and F-84) they had formerly utilized will be reassigned to other Air National Guard squadrons based on the priority list in Column I and II.

5. The air fields listed under Column I will handle any type of the four jet aircraft mentioned (F-80, F-84, F-86, F-94); whereas the air fields listed under Column II will not accommodate the F-84 but will accommodate the F-80, F-86 and F-94.

CLASSIFIED INTEROFFICE ROUTING SLIP

SUBJECT: 1st Ind, fr Hq USAF, 22 Jun 49, on B/ltr Hq ConAC, 5 Jan 49, subj: "Redesignation of Certain ANG Ftr, Sqdns, as All Weather Sqdns".

* * * * *

5 30 Jun DTAO LOTAO at ConAC

1. Information in this hq indicates that the Air Natl Guard is to have three light bomb wing hq & 12 light bomb squadrons. It is believed that the three light bomb wing headquarters & 12 light bomb squadrons should remain in the National Guard Program until such time as the Hq USAF has decided to eliminate light bombardment from the Air Force Program. This has not been decided as yet. It is believed in this hq that the light bombardment acft will have a useful purpose in air operations of the future.

2. Pertaining to the designation of the 11 fighter squadrons specified in basic communication as all-weather squadrons, it is recommended that the designation of all fighter squadrons in the Air National Guard program be studied by representatives of the Air Defense Command, the Tactical Air Command, & the Continental Air Command Headquarters. The object of the study should be to make conclusions & appropriate recommendations to Hq USAF for proper numbers of interceptor, all-weather, & penetration fighter units in the Air National Guard, based on M-Day requirements. The penetration fighter is currently considered the proper acft for tactical air type operations when working in conjunction with Ground Forces and Amphibious Forces. Based on the conclusions of this study, recommendations to USAF Hq should include specific Air National Guard fighter squadrons to be designated interceptor, all-weather, and penetration fighter units.

3. Concur with recommendations of Hq USAF for the replacement of B-26 aircraft with fighter type for towing purposes in the utility squadrons.

Subject: Reorganization of ANG Day Fighter Units

1 2 Sep AirD DO ATT: Col Kyle
Civ

1. In a plan recently received, ADC is assigned the task of reorganizing certain Air National Guard day fighter units into all-weather units. As with the task of reorganizing ANG into the wing-base T/O, reorganization of selected fighter units will also require considerable time before the unit may be considered operational. The requirements for these all-weather units will exist on D-Day. The units, however, will not be effective for a considerable period after D-Day. It is logical then that this reorganization should be completed prior to D-Day and that Air Defense Command should make a request to have this reorganization initiated immediately.

2. The only real objection which the people in USAF have expressed to this proposal is the fact that USAF will be unable to furnish all-weather fighter aircraft for this project for several years. However, the advantages of having the unit working and training under the all-weather T/O and flying under all-weather training directive, outweigh the disadvantage of not having all-weather aircraft. The unit would be partially effective, particularly in night operations with conventional fighters. Later conversion to all-weather fighter aircraft could be accomplished much more rapidly and would make the unit available for operations at an earlier date. The units could begin procurement and training of the electronics personnel immediately. There also exists the possibility of installing wing tip or wing tank radar installations on conventional fighter aircraft and employing them in the all-weather role.

3. The Directorate of Air Defense is presently preparing a recommendation to USAF for the employment of different ANG units from those listed in the present plan. Until this recommendation is approved by USAF and the necessary changes made in this plan, it is not feasible to specify which ANG units should be converted to all-weather.

4. This project should have the same priority as the reorganization of the Air National Guard into the wing-base T/O. It is requested that your division take the action to prepare and forward the necessary recommendation to Hq USAF.

CA 325

SUBJECT: Redesignation of Certain Air National Guard Fighter Squadrons as All Weather Fighter Squadrons

TO : Chief of Staff, United States Air Force, Washington 25, D. C.
ATTN: Office of Special Ass't. to the Chief of Staff for Reserve Forces

1. Current Air Defense planning in this Headquarters visualizes the eventual utilization of a number of Air National Guard Fighter Squadrons as All Weather Fighter Squadrons. While the requirement for these All Weather Fighter units will exist on "D" day, it is realized that Air National Guard Squadrons so designated will not be operationally effective in the All Weather role for a considerable period after "D" day. It is logical that the initial steps in accomplishing this reorganization from Day Fighter to All Weather Fighter be accomplished as early as possible in order that All Weather designated units will have specific and realistic training objectives.

2. This Headquarters is aware of the fact that the United States Air Force will be unable to furnish All Weather Fighter aircraft for the Air National Guard for several years. However, the advantages of having a unit working and training under United States Air Force All Weather Training Directives outweigh the disadvantages of not having All Weather aircraft. The unit would be partially effective, particularly in night operations with conventional fighters. Later, conversion to All Weather Fighter aircraft could be accomplished more rapidly and would make the unit available for operations at an earlier date. The units could begin procurement and training of the electonics personnel immediately. There also exists the possibility of installing wing tip or wing tank radar installations on conventional fighter aircraft and employing them in the All Weather role.

3. Based on current Air Defense plans it is recommended that the following Air National Guard units be redesignated All Weather Fighters but left under present TO/E's. It is further recommended that training be initiated under United States Air Force All Weather Training Standards insofar as possible.

Redesignation of Certain Air National Guard Fighter Squadrons as All Weather Fighter Squadrons
AFCRF-2 1st Ind.

Department of the Air Force, Hq. USAF, Washington 25, D. C.

TO: Commanding General, Continental Air Command, Mitchel AFB, New York

1. Following receipt of basic communication and conferences with the National Guard Bureau, the latter conducted staff studies to determine the most appropriate recommendation regarding the reorganization of the Air National Guard units. As a result of these studies, the Air Force Division, National Guard Bureau has recommended as follows:

a. The present Light Bomb Squadrons, equipped with B-26 aircraft be converted to All-Weather Fighter Squadrons and, in addition, the B-26 aircraft presently assigned to Fighter Squadrons Utility Flights, for towing targets be replaced by fighter type aircraft, in order to ease maintenance difficulties and costs.

2. Your headquarters recommended that fighter type aircraft be substituted for B-26 aircraft for towing targets in fighter squadron utility flights in letter of 15 November 1948, subject, "Tow Equipment for Air National Guard Units" an in basic communication recommended that certain units of the Air National Guard be redesignated All-Weather Fighters.

3. As a result of the above studies and recommendations this headquarters recommends as follows:

a. That Continental Air Command designate the squadrons of the Air National Guard to be converted to All-Weather Fighter Squadrons. These squadrons to retain their present organization and aircraft until All-Weather aircraft becomes available.

b. The remainder of the Light Bomb Squadrons be converted to either Fighter or Fighter-Bomber Squadrons as soon as practical with an additional number of Fighter Squadrons to be redesignated as Fighter Bombers sufficient in number to maintain a total of three Group Headquarters and 12 Fighter-Bomber Squadrons. These units are to be equipped with conventional type fighter aircraft commonly assigned in their geographical area.

c. That all B-26 aircraft presently assigned to Fighter Squadron Utility Flights for towing targets be replaced with fighter aircraft of the type assigned the parent squadrons, as soon as the parent organization is equipped with jet type aircraft.

THIS PAGE IS UNCLASSIFIED

Redesignation of Certain Air National Guard Fighter Squadrons As All Weather Fighter Squadrons.

PR 325 (5 Jan 49) 2d Ind. PR/GSW/80
HQ. CONTINENTAL AIR COMMAND, Mitchel Air Force Base, New York

TO: Special Assistant to the Chief of Staff for Reserve Forces, Headquarters United States Air Force, Washington 25, D.C.

1. The arbitrary conversion of all the Air National Guard Bomb Squadrons (Light) to Fighter Squadrons (All Weather) would result in a scattering of these units throughout the United States just as the Light Bomb Squadrons are now dispersed. It is believed far more satisfactory to organize the various squadrons geographically into groups similar to the present Air National Guard Fighter Group organization. Therefore eight (8) Light Bomb Squadrons are recommended for redesignation as All Weather, two (2) are recommended for redesignation as Fighter Bomber, and the remaining two (2) are recommended for redesignation as Day Fighter. The Light Bomb Group Headquarters would logically be redesignated in accord with the redesignation of assigned Squadrons, thus two (2) Groups would be All Weather and one (1) Group Day Fighter. The proposed unit redesignation is shown in Inclosure No. 1.

2. To augment the total All Weather Fighter strength of the Air National Guard nine (9) Fighter Squadrons plus four (4) Fighter Group Headquarters are recommended for redesignation to All Weather. The ANG All Weather Fighter strength would then be six (6) groups composed of seventeen (17) squadrons. The squadrons would be organized into groups geographically as stated above (See Inclosure No. 1).

3. To meet the Fighter Bomber requirement for three (3) Group Headquarters and twelve (12) Squadrons, it is proposed to designate the fighter units of the Twelfth and Fourteenth Air Force Areas as Fighter Bomber (See Inclosure No. 1). This proposal would make a total of four (4) Group Headquarters and fourteen (14) Squadrons available for this mission. These units are geographically located in the South where the bulk of the Ground and Joint maneuvers are conducted.

4. It is recommended that the B-26 aircraft now assigned to Fighter Squadron Utility Flights to accomplish the tow target mission be replaced as soon as possible by appropriately equipped Fighter Aircraft.

August 15, 1949

Dear Mr. President,

In accordance with the oral commitment which I gave you some time ago, I am submitting herewith pertinent highlights of the Fiscal Year 1951 Budget for the Military functions of the Department of Defense. The complete budget in detail will be forwarded to the Bureau of the Budget as required by existing regulations. The estimates of the operating agencies have been held to amounts below the ceiling which you have set, so as to make provision for anticipated legislation deficiencies that are now under study, and contingencies that might arise.

Although the military strength provided for is approximately 100,000 less than are now in service under the 1950 budget program, this reduction is partially offset by the modernization of materiel, better trained regular and reserve forces, and efficiencies growing out of the unification process which are expected to be attained. Other offsetting factors are the achievements of our occupation forces in maintaining their rightful position in overseas areas despite provocative pressures exerted by a nation whose policies and objectives are opposed to our own, the ratification of the North Atlantic Pact, and our program of assistance to friendly nations. Aside from the above factors, the Department of Defense recognizes the overriding necessity of keeping military costs within limits which will not endanger the fundamental soundness of our economy-- one of our primary military assets.

Maintenance of the following forces is presently contemplated:

Department of the Army: 630,000 officers and men will be organized into 9 Divisions, with auxiliary combat and supporting forces in proper proportion; the National Guard and Organized Reserves are provided a strength of 635,000, and it is planned that all will participate in part-time drills and training. This program represents a decrease, from present strength, of 29,000 in the regular forces and the deactivation of one infantry division. The civilian components are, however, being increased by 150,000.

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS UNCLASSIFIED

situation will be under continuous evaluation so that at the time of your budget message to the Congress, there may be presented the soundest possible plan for maintenance of the military forces within the budget ceiling.

The allocation of new obligational authority for fiscal year 1951 is $12,981,800,000. This includes:

For the Dept. of the Army (Military Functions)	$3,993,000,000
For the Dept. of the Navy	3,821,700,000
For the Dept. of the Air Force	4,205,100,000
For the retired pay of all Services	300,000,000
For the Office of the Secretary of Defense and its associated boards and agencies	12,400,000
For military public works which must of necessity be submitted after the passage of legislation to authorize programs of facilities construction for the Military Departments. It is now considered that the amount required for this purpose is	300,000,000
For anticipated legislation such as the currently considered Civilian Reclassification Bill, for deficiencies which are under study, and for contingencies that always arise in a large and fluid program and that usually result in numerous supplemental requests	350,000,000

Since there is, as yet, no appropriation for fiscal year 1950, the amounts listed for individual cost categories can only be set tentatively. The necessary changes will be made as soon as definitive action can be taken.

There are certain other activities not included in these estimates which are the responsibility of the Department of Defense. These include the Civil Functions of the Department of the Army, for which a separate submission is to be made; and the program for critical materials under the Strategic Stockpiling Act. Stockpiling estimates will be prepared in collaboration with the General Services Administration for inclusion as part of the budget of the Bureau of Federal Supply.

Respectfully,

signed
Louis Johnson

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS UNCLASSIFIED

Department of the Navy: For the Navy and the Marine Corps, 447,000 officers and men will be on full time active duty at the end of the year. 648 active ships will be operated, including 234 major combatant vessels; 5,454 active aircraft are provided for the regular forces, organized into 6 groups, 19 combat squadrons, 20 patrol squadrons and necessary supporting elements. Organized reserves in a drill-pay status, for the Navy and Marine Corps, will be increased to 220,000 and 51,000 respectively. This plan contemplates the reduction of 85,000 Naval and Marine personnel from present strength, reduces the number of active combatant ships by 38, and decreases the number of aircraft by 3,600.

Department of the Air Force: 416,000 officers and airmen will be organized to man and support 48 groups and 13 separate squadrons in the combat forces. For the regular Air Force, 8,798 aircraft will be operated and maintained. In addition, there will be maintained 27 National Guard Groups and over 71,000 reservists. Training rates of both will be stepped up, and strengths will be modestly increased. These proposals represent an increase in military personnel strength of about 6,000 from the number now in service, while active aircraft are reduced by 238.

With reference to civilian employment in the Department, I have already directed the three Secretaries to make substantial reductions in the current year and the estimates for fiscal year 1951 reflect the projection of these lower rates of employment.

The planned forces outlined above, together with the supporting establishments are undergoing searching examination, not only by the agencies of the Department of Defense regularly established for this purpose, but also by a special task force which I have just set up for the purpose of finding ways to provide maximum security at minimum cost. On the basis of such studies, it may be desirable to make certain changes in the planned forces or support within the next few weeks.

Furthermore, the plans of the Department of Defense must be somewhat fluid in view of the uncertainty of Congressional action on matters vitally affecting our armed forces and our national security. For example, the outcome of the military assistance legislation may require some changes. The military appropriation has not been passed and the action of Congress on it may not be known for some time. When it is enacted, it may well direct general reductions without specifying where and how they are to be made. Such action by Congress may require extensive reprogramming in 1950 which, in turn, will affect the forces and plans for 1951. These factors plus developments in the international

situation will be under continuous evaluation so that at the time of your budget message to the Congress, there may be presented the soundest possible plan for maintenance of the military forces within the budget ceiling.

The allocation of new obligational authority for fiscal year 1951 is $12,981,800,000. This includes:

DEPARTMENT OF THE AIR FORCE
HEADQUARTERS UNITED STATES AIR FORCE
WASHINGTON 25, D. C.

AUG 2 1949

Lt. General Ennis C. Whitehead
Continental Air Command
Mitchel Air Force Base, New York

Dear General Whitehead:

I transmit herewith Copy 14 of Phase III, Category V of Air Force Budgetary Presentations before the Joint Chiefs of Staff. This entire document was made up in my office and reflects the programming for 1951 for the Air Force Reserve, the Air National Guard and the Air ROTC, in terms of the following categories:

Personnel Costs
Maintenance and Operation Costs
Major Procurement Costs
Public Works Construction

You will note on the fly leaf that the budget figures do not necessarily agree with the official budget submissions. They will, moreover, not agree with the adjusted budget submissions which we will present to the Bureau of the Budget on 1 January 1950. However, this book does represent substantially the category programming and budgetary support planned for Fiscal Year 1951, and we do not estimate any substantial change.

Pages 17 to 37, together with the charts preceding Page 17, constitutes our formal presentation to the Budget Advisory Committee of the Joint Chiefs of Staff. The balance of the book constitutes back-up data, detailed budgetary presentations and categorized programming data for all three components. It appears now that of the total budget requirements established within these programs we will go to the Bureau of the Budget with a proposal for approximately $6,900,000 less than envisaged by this study. This $6,900,000 decrease, imposed by the Budget Advisory Committee of the Joint Chiefs of Staff, if sanctioned by the Secretary of Defense will have substantially the following effects:

a. Reduce slightly the total number of people entitled to receive active duty and inactive duty pay, both in the National Guard and the Air Force Reserve.

b. Reduce the number of aircraft hours available to Air National Guard pilots from 125 to 110 per year per pilot.

Reg #1178457

0053

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS UNCLASSIFIED

SECRET

In addition to the reduction in aircraft hours, the number of pilots has been reduced from 4200 to 3800 who will receive 110 hours per year.

c. Reduce major procurement in the Reserve by $1.2 million.

Of course, adjustments may be made either up or down and it is not at all final as yet.

Outside of these adjustments the book, as it stands, is rather firm as far as our programming for 1951, Subject, of course, to changes which may be introduced to it either by the Bureau of the Budget or by the Congress.

The least we could say about it is that it is by far the best guide we have ever had to a program this far in advance.

I have other copies available and will be glad to dispatch them to anyone in your command whom you suggest. You will also receive copies to your Headquarters only, from Air Force Comptroller sources.

Sincerely,

J. P. McCONNELL
Brigadier General, USAF
Deputy, Special Asst for Reserve Forces

OTR-353NG, 12 November 1949
Subject: Recommendations for Air National Guard Field Training for Calendar Year 1950

RBL/mfn
O&T 325 (12 Nov 49) 1st Ind 25 Nov 1949

HQ CONTINENTAL AIR COMMAND, Mitchel Air Force Base, New York

TO: Special Assistant for Reserve Forces, Headquarters United States Air Force, Washington 25, D.C.

1. The following comments are offered to the reisions for the Fourth Air Force's Air National Guard field training plan originally submitted to your headquarters with Headquarters ConAC Letter, "Air National Guard Field Training Sites and Cost Estimates, Calendar Year 1950 as Altered by Conference Held at Headquarters USAF on 20 October 1949", 19 October 1949:

a. Reference is made to paragraph 4 of the basic letter. This headquarters has no objection to the use of Walla Walla County Airport by the 60th Fighter Wing, Washington Air National Guard. This was the original field training site recommendation of the Fourth Air Force but was deleted in a conference conducted by the Special Assistant for Reserve Forces when National Guard Bureau representatives pointed out that the use of Air National Guard facilities at Boise, Idaho, should be used for the entire 60th Fighter Wing for reasons of economy. As a result of that decision, this headquarters has recently requested Fourth Air Force to survey Boise Air Terminal to determine its adequacy and develop cost estimates to the National Guard Bureau for its use. Apparently the basic letter was prepared before this request was received. In view of the feelings of the Commanding General, 60th Fighter Wing, it may be necessary for the National Guard Bureau to take directive action if the Boise and Mountain Home facilities are to be utilized.

b. Refernce is made to paragraph 7 of the basic letter. During a recent conference in this headquarters between Brig Gen McConnell, of the Office of the Special Assistant for Reserve Forces, and Maj Gen Myers, it was agreed that your headquarters would determine from the Strategic Air Command whether the use of Victorville Air Force Base can be considered. This headquarters has subsequently queried the Air Materiel Command and the Air Training Command concerning the possibility of using McClellan Air Force Base or Mater Air Force Base respectively. It is anticipated that either of these bases will be used in conjunction with Hamilton Air Force Base.

2. This headquarters recommends that Air National Guard organizations train at home stations only as a last resort and after all other field training site possibilities have been exhausted.

Recommendations for Air National Guard Field Training for Calendar Year 1950
O&T 325

3. This headquarters concurs with the aircraft control and warning field training plan as submitted in the basic letter. Air National Guard cost estimates for aircraft control and warning training were included with the letter cited in paragraph 1 above.

4. It is requested that this headquarters be advised of the final decision of your headquarters and/or the National Guard Bureau concerning, the utilization of Walla Walla County Air-port or the Boise-Mountain Home Air Force Base area for the 60th Fighter Wing, Washington Air National Guard.

HEADQUARTERS
CONTINENTAL AIR COMMAND
Mitchel Air Force Base, New York

15 April 1949

RG 353

SUBJECT: Specialized Training for Air National Guard Units, Field Training Calendar Year 1949

TO : Commanding General, Tactical Air Command, Langley Air Force Base, Virginia

1. The georgraphical location of certain Air National Guard field training sites for calendar year 1949 makes it possible to give certain fighter groups specialized training in air defense or tactical air support operations. In order not to interfere with the other training required of the Air National Guard, the specialized training will be conducted through the four-day Operational Readiness Test.

2. In order to implement this provision for specialzied training:

a. The Air Defense Command will write the Operational Readiness Test problems for the following units:

Unit	Location	Date
First Air Force Area		
101st Ftr Gp, Me. ANG	Dow AF Base, Me	20 Aug - 3 Sep
102nd Ftr Gp, Mass. ANG	Grenier AF Base, N.H.	" "
103d Ftr Gp, Conn. ANG	Bradley Fld, Conn	" "
108th Ftr Gp, N.J. ANG	McGuire AF Base, N.J.	23 Jul - 6 Aug
107th Ftr Gp, N.Y. ANG	Dover AF Base, Del	" "
Fourth Air Force Area		
142nd Ftr Gp, Ore. ANG	Moses Lake AF Base, Wash	11 - 25 June
Ninth Air Force Area		
113th Frt Gp, D.C. ANG (to include the 148th) (Ftr Sq, Pa. ANG)	Dover AF Base, Del	13-27 Aug
Tenth Air Force Area		
127th Ftr Gp, Mich. ANG	Camp Grayling, Mich.	30 Jul - 14 Aug
131st Ftr Gp, Me. ANG	Camp Williams, Wisc	14 - 28 Aug
133d Ftr Gp, Minn. ANG	Camp Williams, Wisc	14 - 28 Aug

	1,216	1,490	1,472	363	1,835	1,203	57	1,146

NOTES: a. Excess T-6 aircraft will be returned to the regular establishment in accordance with the schedule shown in Incl #6.

b. This reflects a reduction of ten (10) C-46 aircraft. In review of the FY 1949 Air Force Reserve funding program, the Comptroller, Air Materiel Command, advised that sufficient aircraft is not available from Z. I. storage to meet the total requirement.

c. Twelve (12) additional aircraft of suitable type (C-46 or C-47) will be acquired from regular Air Force stock as they become available to the Air Force Reserve by either free issue or by out-processing from storage utilizing AF Reserve funds.

d. Estimated attrition indicated above is based on the rated indicated in AFL 150-10, which are as follows:

Aircraft Model	Quarterly Attrition Rates FY 1949	FY 1950	FY 1951
T-6	1.2	1.2	1.2
T-7	1.6	1.2	1.2
T-11	1.2	1.2	1.2
C-46	1.5	1.5	1.5
C-47	0.9	0.9	0.9
B-26	1.4	1.4	1.4

	148,210	118,345	123,067	121,607	113,804	117,234	144,239	146,687	529,320	503,873
1/ T-6		29,865 a/		1,460 b/		3,430 c/		2,448		25,447
	148,210	148,210	123,067	123,067	113,804	113,804	144,239	144,239	529,320	529,320

Factors that are applicable to the above schedule:

a. Seasonal adjustment of hours FY 1950 (AFL 150-10)

Quarter:	1st	2nd	3rd	4th
Factor:	1.12	0.93	0.86	1.09

b. Annual flying hours FY 1950 (AFL 150-10)

T-6	T-7	T-11	C-46	C-47	B-26
420	420	420	600	600	300

1/ In view of the delivery schedule as shown in inclosures 1 and 5 and the above programmed schedule of seasonal adjusted flying hours, the following comments are applicable:

a/ An average of 255 additional T-6's are required for the months of July, August and September, over and above program requirements of 280 to provide for the deficiency in flying hours required for the first quarter FY 1950 as indicated.

b/ Of the above 255 additional T-6's required for the first three (3) months, 240 become available for release during October. The remaining 15 T-6's are required for the months of October, November and December to provide for the deficiency in flying hours required for the second quarter FY 1950 as indicated.

ESTIMATED SCHEDULE FOR RELEASE OF T-6 AIRCRAFT FROM USAF RESERVE TO USAF - FISCAL YEAR 1950 (1 June 1949)

Available Inventory, T-6, 30 June 1949		895
Programmed Requirements	280	
Additional Requirements (See remarks a/, Incl #4)	255	535
Available for release		360
Requested and Available for transfer prior to 30 Jun 49		302
Available for release - 1 Jul 49		58
Requested and Available for transfer for month of July		21
Available for release - 1 Aug 49		37
Requested for transfer for month of Aug (53), available for transfer for month of August		37
Available for release - 1 Sep 49		0
Requested for transfer for month of Sep (59), available for transfer for month of September		0
		0
Additional T-6 aircraft to become available after 1 Oct 49 (See remarks b., Schedule #4)		1/ 240

Requests indicated above are in reference to teletype CONAC MS 10907, 12 May 49, (AFIN 657)

1/ Of the above aircraft available as indicated for release 1 October, in the amount of 240, the deficiency that existed in requested release of T-6 aircraft for months of August (16), September (59) and October (34) may be met at this time.

Due to the uncertainty of the present out-processing schedule of aircraft, it is felt that a further schedule of release of T-6 aircraft would not be practical at this time.

This office will make a monthly review of the reserve aircraft situation to insure rapid release of all T-6's.

NOTE: This schedule is based on the assumption that all aircraft being out-processed for the USAF Reserve willbe delivered in accordance with the delivery schedule shown in Inclosure #5. In the event that the delivery schedule is not met, it will be necessary to withhold (2) T-6's for each twin-engine aircraft not delivered in order to perform the number of flying hours (pilot) in the program.

AIR FORCE RESERVE AIRCRAFT INVENTORY SCHEDULE - FISCAL YEAR 1951 (1 June 1949)

Type of Aircraft	Inventory 30 June 1950	Requirements 1 July 1951 (No Attrition)	Estimated Attrition	Requirements 30 June 1951 (Attrition Added)
T-6	267	255	12	243
T-7	140 a	143	7	136
T-11	362	359	16	343
C-46	272 b	288	16	272
C-47	48 c	50	2	48
B-26	86	84	4	80
	1,175	1,179	57	1,122

The Fiscal Year 1951 budget estimates will contain funds to out-process the following aircraft as noted above:

a. 3 T-7 aircraft.
b. 16 C-46 aircraft - assuming that 10 additional C-46, or suitable type aircraft willbe made available during FY 1950
c. 2 C-47 aircraft - assuming that 2 additional C-47, or suitable type, aircraft will be made available during FY 1950.

It is requested action be taken to earmark these aircraft for USAF Reserve to meet Fiscal Year 1951 requirements.

If these aircraft cannot be made available to meet USAF Reserve Fiscal Year 1951 requirements, it is assumed that suitable substitutions will be made. As soon as a determination is made indicating how this particular requirement will be met, it is requested that this office be informed so that necessary Fiscal Year 1951 budget estimates can be developed accordingly.

SUMMARY OF CONFERENCE WITH GENERAL DEVERS

0915 - 1015, 19 January 1949

SUBJECT: USAF resources for joint operations and tactical air operations with the Army during the coming year.

Organization and Functions of TAC Headquarters under the present organization.

1. Units and type of aircraft to be available for work with the Army during the coming year were outlined to General Devers. Projects, particularly those pertaining to reviewing of tactical air operations doctrine and any method of determining characteristics for suitable aircraft and evaluating present aircraft, were outlined to General Devers. General Devers expressed concern over the following matters in the tactical Air Command's field:

337-Confirmed
X 322 - only TAC

a. Command structure of airborne operations. He stated that he would like to set up an airborne center at Ft. Bragg with General Evers or anyone else suitable to the Air Force in command with an integrated Army-Air Force Staff. The purpose of this would be to get the troop carrier and airborne people together so that they could solve more adequately some of their problems. He would not propose to move the jump training from Ft. Benning as he feels it would require additional facilities at Ft. Bragg and, further, he feels that the jump school should have the leveling influence of the Infantry Center as it now exists at Ft. Benning. He believes that troop carrier units should work more closely with the 82d Airborne Division. He is not sure whether a unit should be stationed there but, if not, a unit should be there more frequently than they have been in the past in order that such training could be obtained. I pointed out to General Devers that a system currently exists for obtaining unit training by troop carrier units with airborne units. It is necessary to obtain definite requirements of the [illegible] Division in order for this system to work. [illegible] greater emphasis to this in order that maximum utilization of troop carrier units available may be made for airborne training. Nevertheless, the positive and reasonable requirements must [illegible] Airborne Division.

(12)

b. Ability of the Air Force to [illegible]. Gen Devers has had not too many complaints [illegible]. However, [illegible] Squadrons there have been [illegible]

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS UNCLASSIFIED

Center's require ents. He was particularly concerned over the ability of the Air Force during the fiscal year 1950 to meet the requirements of the increased activities of the Anti-aircraft Center at Bliss as well as the summer training of the National Guard and Reserve anti-aircraft units. He stated that if the Army is unable to obtain towing requirements from the Regular or National Guard Air Force, they will be forced to consider forming their own towing units or obtaining it from the Navy. He stated that they had already gone to the National Guard Bureau to attempt to have some of the National Guard units go to their summer training at the same time and in the same location as the National Guard and Reserve Anti-aircraft units in order that they may accomplish some of the towing. I pointed out to General Devers that the TAC Headquarters would assist in any way possible in coordinating with the National Guard for this purpose and outlined the proposed method of furnishing towing requirements for the Anti-aircraft Center in the Ft. Bliss-Biggs Field area. (Base unit or element of wing structure with appropriate personnel and equipment.)

3. General Devers then outlined his directive to prepare a presentation for General Vandenberg which will outline the Army's opinion of his capability of doing his job with the support which the Air Force is able to furnish. In General Devers' words, he is required to tell General Vandenberg whether or not he thinks the Air Force can render the support which he thinks necessary with the weapons which the Air Force has or contemplates. I told General Devers that this fits in closely with the project which we have which includes the review of our doctrine, determination of whether or not our weapons are suitable, and correction of the way in which we think the job should be done. I told him that I felt that his staff, in preparing his presentation, should work closely with our Plans Division which is working on the TAC project. General Devers agreed wholeheartedly and further stated that it was his intention to resolve any controversial points at this level. In his presentation, he has no intention of undercutting TAC Headquarters and it is his desire to show that Field Forces Headquarters and TAC Headquarters have made every effort to solve the problem. He would like to have the Commanding General, TAC, present at his presentation to General Vandenberg. It was pointed out to General Devers that one of the desirable reasons for having TAC Staff work with Field Forces Staff on this project was to insure that the presentation reflected the latest thought of the TAC on how to accomplish the Air Force support to the Army. We are getting new ideas every day and our current studies will develop changes in our thoughts. If there is a problem which appears without a solution at the moment, we may have some project for evaluation of equipment or tactics under which may produce the answers. General Devers agreed. It was agreed to have our staffs work closely on our projects. I asked General Devers what the time element was on the completion of his project. He stated that Colonel Lynd was working on the project and he would like to give him some little time to finish a complete report as he wanted. No specific suspense date was given.

Jim that indicated that he too would be present JS

DEPARTMENT OF THE AIR FORCE
HEADQUARTERS UNITED STATES AIR FORCE
WASHINGTON

15 January 1949

SUBJECT: Field Training for Air National Guard Units, 4th Quarter Fiscal Year 1949 and 1st Quarter Fiscal Year 1950

TO : Commanding General
Continental Air Command
Mitchel Air Force Base
New York

1. In order to minimize the expense to be incurred in opening and closing additional Air Bases for Air National Guard Field training, during the summer of Calendar Year 1949, it is desired that your command formulate plans for this training based upon the following:

a. A minimum number of additional air bases (suggested maximum of 15) will be opened and operated to accommodate the Air National Guard field training program. A suggested list of bases and the units using these bases is attached hereto as Tab A. This list may be modified or changed according to the availability of air bases to suit the desires of the States' Adjutants General, or the Numbered Air Force commanders.

353-Treasury
Y326-Air Records

b. All units assigned to an Air National Guard Wing will attend field training simultaneously. Separate light bomb squadrons may attend field training with the fighter group to which they are assigned. The Wing commanders will be responsible for the formulation of training policies and directives. The Numbered Air Force commanders of the area in which field training will be conducted will be responsible for the selection of the training bases and for the arrangements for the use of suitable gunnery ranges.

c. Aviation Engineer units may attend field training with either the Air National Guard or the Army National Guard. Aircraft Control & Warning groups and their assigned squadrons may perform field training with USAF Control & Warning Group similar to the field training of the 113th Control & Warning Squadron at Greenville Air Force Base during 1948. No recommended stations for Aircraft Control & Warning Group field training have been included in Tab A.

d. Schedules for occupancy of these bases by the various groups will be so arranged that there will be no appreciable time lag between the departure of one group and the arrival of the succeeding one. This will eliminate the need for funds to prepare bases for subsequent units or to close and reopen these fields between periods of occupancy.

(F-L) 2-607

c. Specifically, it is desired that your command initiate the necessary action to accomplish the following:

a. Determine the availability of the subject air bases or suitable alternates for the field training period.

b. Establish a field training schedule utilizing these bases. It is requested that this Headquarters and the National Guard Bureau be advised of this schedule not later than 1 February 1949.

c. Estimate the amount of funds required for opening, operating and closing the selected air bases for field training periods.

(1) Funds for opening, operating and closing State-owned or leased bases will be requested by the State in which located, regardless of whether or not units of that State participate in training at the base. Detailed instructions regarding these funds will be issued to the States by the National Guard Bureau.

(2) When field training is conducted at a regular USAF base which is not already in operation, the funds required for opening, operating, and closing the base will be allocated by the National Guard Bureau to USAF upon request.

(3) Where such training is conducted at a regular USAF base which is presently in operation, the Air National Guard will pay a pro-rata share of the cost of operation of the base during periods of occupancy by the Air National Guard units and such funds will be allocated by the National Guard Bureau to the USAF upon request.

BY COMMAND OF THE CHIEF OF STAFF:

/s/ & /t/ J. P. McCONNELL
Brigadier General, USAF
Deputy Spec. Asst. for Reserve Forces

Field Training for Air National Guard Units, 4th Quarter Fiscal Year 1949 and 1st Quarter Fiscal Year 1950

CA 353 (15 Jan 49) 1st Ind. 19 JAN 1949

HQ, CONTINENTAL AIR COMMAND, Mitchel Air Force Base, New York

TO: Commanding General, Fourth Air Force, Hamilton Air Force Base, Calif.

1. Reference is made to letter, Headquarters, USAF, subject: "Field Training Bases for Air National Guard Units", 1 October 1948 with Headquarters, ADC 1st Indorsement, 6 October 1948, thereto; and to letter, Headquarters, Continental Air Command, subject: "Air National Guard Field Training Objective - Calendar Year 1949", file CA 353, 15 December 1948.

2. The basic correspondence outlines the broad concept of Field Training for Calendar Year 1949. Tab "A" lists proposed training sites for all units other than Aircraft Control and Warning.

3. This Headquarters has requested the use of Kirtland Air Force Base, New Mexico for Field Training for the 62d Fighter Wing, California Air National Guard and the 137th Fighter Group, Oklahoma Air National Guard; as yet, no decision has been made. In the interim it is desired that plans be made on the basis of utilizing Kirtland Air Force Base or Reno Air Force Base for the 62d Fighter Wing. In any event, the Aircraft Control and Warning organizations so designated (Tab "B") will utilize the site at Albuquerque, New Mexico.

4. Tab "B" (Inclosure No. 2), added by this Headquarters, lists the only available United States Air Force sites on which Air National Guard Aircraft Control and Warning units may train. Generally, there will be no housing available, therefore plans must include provisions for tentage. If it is not possible to adhere to the proposed site list, then the unit will have to be trained with its parent Wing utilizing its own electronic equipment and simulating operations where necessary to insure realistic training.

5. Coordination between numbered Air Forces is necessary where units from one Air Force are utilizing sites in another Air Force. The scheduling of units into the available sites must be carefully formulated to prevent overloading or conflict at any one facility.

6. The deadline established in paragraph 2 b, of the basic letter has been changed to 1 March 1949. In order that this information may be

HEADQUARTERS NINTH AIR FORCE
Langley Air Force Base, Virginia

9 April 1949

9AF 325

SUBJECT: Training of National Guard Units

TO : Commanding General, Continental Air Command, Mitchel Air Force Base, New York
ATTN: ADC

1. Reference is made to the forthcoming summer training encampments of the following Air National Guard organizations from within the Ninth Air Force Area at Dover Air Force Base, Delaware, during the periods indicated below:

55th Fighter Wing, Ohio National Guard	9-23 July 1949
53d Fighter Wing, Pennsylvania NG	14-27 August 1949

In connection with the above, certain units of the Aircraft Control and Warning Group assigned to each Fighter Wing are to undergo training with established detachments of the 503rd Aircraft Control and Warning Group. This Aircraft Control and Warning Group is an organization of the First Air Force and has its headquarters at Roslyn, New York. In conjunction with this training program, the Air National Guard AC&W organization concerned will establish a temporary Tactical Air Control Center (TACC) at Dover AFB, which will operate in close coordination with the reporting stations of the 503rd Aircraft Control and Warning Group at Indiantown Gap, Pennsylvania, and Palermo, New Jersey.

2. To provide maximum training for all units concerned, particularly the fighter and light bombardment squadrons, it is desired to utilize the Aircraft Control and Warning facilities in the vicinity of the Dover encampment for conducting ground controlled intercept missions; ground controlled tactical sweeps; and practice penetrations of defended areas. To obtain optimum benefits from such training missions, it is necessary that operational control of the TACC and reporting stations concerned be vested in the Commanding Officer of the Fighter Wing involved, who will function under the supervision of Hq Ninth Air Force. It is realized such a training program will restrict the normal operation of the Aircraft Control and Warning reporting unit concerned; therefore, it is requested your headquarters establish a schedule of operation which will pass operational control of the reporting stations to the Wing Commander concerned for specified periods daily during the summer encampment.

Subject: Training of National Guard Units

3. The schedule established should provide for a minimum of four operation hours daily, and, if practicable, should also provide for a minimum of four night problems of three hours duration for each Fighter Wing. It is intended the ANG personnel will perform the actual functions of GCI Control during these periods and that the regular Air Force personnel of the 503rd Group will act as instructors and observers and will continue to pass all data to the appropriate USAF ADCC so as to provide for continuous surveillance of the metropolitan areas. It is understood, of course, that should an emergency arise, the USAF ADCC will immediately assume full control functions.

4. It is further requested that during the encampment periods, and sufficiently prior thereto to allow issuance of necessary warning and travel orders, so much of the plans for the National Guard summer encampment as pertains to the movement and location of personnel of the ANG AC&W units be declassified from SECRET to CLEAR.

5. This headquarters has initiated action to expedite the security clearance of all National Guard personnel who will require access to classified documents, equipment, and/or areas in connection with the summer training encampment (see copy of TWX attached, marked Inclosure No. 1).

HQ CONTINENTAL AIR COMMAND, Mitchel Air Force Base, New York

TO: Commanding General, First Air Force, Fort Slocum, New York

1. This headquarters and the Air Defense Command concur in the proposal of paragraph 2 and 3 of the basic correspondence. It is desired that you in conjunction with the Ninth Air Force conclude the detailed arrangements for the control of the Aircraft Control and Warning net. It is to be noted that the same arrangements that are necessary for the 53d and 55th Fighter Wings, Air National Guard, should likewise be necessary for the 52nd Fighter Wing, New York Air National Guard.

2. Action has been initiated by this headquarters to make possible the declassification of Aircraft Control and Warning sites to be used for the Air National Guard.

3. Reference in paragraph 1 of basic to Tactical Air Control Center (TACC) should read Air Defense Control Center (ADCC).

TO: Commanding General
Continental Air Command
Mitchel Air Force Base
Hempstead, New York

1. This headquarters is at present attempting to establish a sound and clear cut Air Force policy with regard to mobilization planning of flying training activities. It is recognized that the training aspect of any mobilization plan will have a profound effect, either directly or indirectly, on the wartime activities of Strategic Air Command, Continental Air Command, Air Training Command and Military Air Transport Service. Therefore, it is felt apropos at this time, to request the comments of your command on the items enumerated below.

a. In which command(s) should the responsibility of conducting operational unit training be assigned?

b. Are replacement training centers necessary? If so, in which command(s) should the responsibility of conducting this type of training be assigned?

c. In which command(s) should the responsibility of conducting combat crew training be assigned?

d. To what extent will the Air Training Command be required to conduct transition pilot training?

e. Is there a requirement for a separate Personnel Command? If not, should this activity be assigned to the Continental Air Command or the Air Training Command?

2. This headquarters has recently conducted a staff study on this subject and a copy is inclosed for your information. It is to

Establishment of Air Force Policy on Mobilization Planning of Flying Training Activities
AG 381 (8 Mar 48)

28 MAR 1948

1st Ind

HQ CONTINENTAL AIR COMMAND, Mitchel Air Force Base, New York

TO: Director of Training and Requirements, DCS/O, Headquarters United States Air Force, Washington 25, D. C.

1. Reference paragraph 1a:

a. Recommendation: That OTU's be established and that responsibility for such training should be placed respectively under Strategic Air Command, Continental Air Command, and Military Air Transport Service.

b. Comments:

(1) Concur in conclusion contained in paragraph 12 and recommendation contained in paragraph 17 of attached United States Air Force staff study.

(2) Establishment within any single major command of the responsibility for all OTU training would extend the pipeline flow of personnel from induction or entry upon active duty, to their ultimate assignment in a tactical command.

(3) Initially, personnel and other logistical considerations will require Continental Air Command's training functions to be closely allied or integrated with operational functions.

(4) Personnel who are completely familiar with type units in peacetime would be more readily available to [illegible] mediately initiate OTU training with cadres which [illegible] unhesitatingly come within their command.

(5) Continental Air Command, Strategic Air Command, and Military Air Transport Service will be in a position where they can quickly and correctly incorporate [illegible] ing changes or methods brought about by unforeseen occurring in operations.

(6) In spite of the above-listed factors which indicate the wisdom of requiring each operational command to [illegible] its own operational training units, it must be recognized that as war progresses the Strategic Air Command or Military Air Transport Service might well desire [illegible]

they be freed of responsibility for the conduct of operational training. It is believed, therefore, that plans should be made for the transfer of this responsibility from the Strategic Air Command and Military Air Transport Service to the Continental Air Command at sometime after the commencement of hostilities. We think that three (3) to six (6) months of operations would indicate whether or not this transfer of responsibility is an urgent requirement or might be further delayed.

2. Reference paragraph 1b:

a. Recommendation: That no replacement training centers be established.

b. Comment:

(1) Concur in conclusion contained in paragraph 13 and recommendation contained in paragraph 18 of attached United States Air Force staff study.

3. Reference paragraph 1e:

a. Recommendation: That COTS be established for crew training and that the responsibility for such training should, depending on type of training, be placed respectively under Strategic Air Command, Continental Air Command, or Military Air Transport Service.

b. Comments:

(1) Concur in conclusion contained in paragraph 14 and recommendation contained in paragraph 19 of the attached United States Air Force staff study.

(2) Comments made in paragraphs 1b(2) through 1b(5) of first indorsement concerning OTU's are applicable to COTS.

(3) As in the case of operational training units, we feel that Strategic Air Command and Military Air Transport Service should be relieved of responsibility for COTS after hostilities commence.

Para 3a(3) of 1st Ind to DCS/O, Hq USAF, to ltr "Establishment of Air Force Policy on Mobilization Planning of Flying Training Activities," from Hq USAF, 5 Mar 48 continued.

Responsibility for this type of training might well be transferred to the Continental Air Command at the same time as responsibility for operational training units is transferred.

4. Reference paragraph 1d:

a. Recommendation: That the Air Training Command not be required to conduct transition pilot training.

b. Comment: The operational commands (Strategic Air Command, Military Air Transport Service, and Continental Air Command) will in all probability be the only commands possessing operational type aircraft on M-Day, therefore, these will be the only commands capable of conducting transition training. It is, of course, desirable to have all pilots trained into combat crew training centers qualified in the type of aircraft that they will be required to fly. It is doubted, however, that this desirable feature justifies the maintenance of operational type aircraft in the Air Training Command as well as in the operational commands. It is believed that more efficient utilization of aircraft and simplified logistic procedures would be possible if operational type aircraft were used exclusively in the OTU's, GOTS, and operational units.

5. Reference paragraph 1e:

a. Recommendation: There should be no Personnel Command. The responsibility should be assigned to the Continental Air Command.

b. Comments:

(1) The organization, war mission, and residual functions (after Air Defense Command and Tactical Air Command are provided for) of Continental Air Command provide a good basis for Personnel Command work. Continental Air Command can be expanded for the remainder much more conveniently than a new command can be established.

(2) In a protracted war it is entirely possible that the personnel functions will reach such proportions that a separate command will be required to carry them out. Such a command will in many features resemble the existing Continental Air Command. Duplication of headquarters and of geographic functions will naturally result if a Personnel Command is created. This action

Hq USAF, AFCRF-1 735
Subject: USAF Reserve Mobilization Assignment Program

PPM-R 210.4551 (7 Dec 49) 1st Ind.

HQ CONTINENTAL AIR COMMAND, Mitchel Air Force Base, New York

TO: Chief of Staff, Headquarters, USAF, Washington 25, D. C.

1. This headquarters has taken action to comply with certain portions of basic letter. Prior to taking further action your reconsideration is requested of other portions of this letter which conflict with hitherto accepted views and principles concerning mobilization assignments.

2. This headquarters concurs in the actions discussed in paragrephs 3a, 3b, and 3c. These actions have been and will continue to be carried out within the Continental Air Command.

3. Our mobilization assignment program must be based upon a troop basis which in turn is based on a war plan. The numbers of mobilization assignees by grade and SSN must be determined from this troop basis and should include as many as possible of those individuals whose services are required on M-Day. These are requirements and only by basing our planning on them can we have a successful mobilization assignment program. The proposals stated in paragraphs 2c and 3d are actually retrogression from these principles in that they will permit funds and individual participation in training to determine our requirements. In paragraph 3d there is an implicit reversal from the sound approach of AF Reg 45-3 wherein mobilization designations are established as a device to maintain an active Reserve connection of especially qualified personnel. The action proposed can result in the degeneration of this category into a group of inactive and ineffective personnel.

4. Paragraph 4, basic letter, is regarded as an unsound approach. No estimates are valid until and unless they are related to specific war and mobilization plans. Our requirements must be established, and then it would be a reasonable action to authorize a given portion of these requirements to be filled on a pay status by and within each of the major commands. I can provide such estimates on the basis of my current war plans insofar as ConAC is concerned. However, from correspondence which I have recently had with the other major commands, it is quite evident that they cannot do so pending certain advices from your headquarters. Until requirements are established for all commands on a firm and meaningful basis, I regard any such estimates as valueless.

5. Since I cannot agree with so many of the tenets of basis letter, I request that the following actions be taken:

a. Basid letter be withdrawn;

b. Careful reconsideration be given to these actions which I regard as a threat to our mobilization capacity and potential;

c. Thinking which ties our Reserve Program first to funds and individual participation rather than our predictable requirements be finally discarded;

d. Positive and prompt action be taken to establish a proper war plan, troop basis, and mobilization plan. These must be made known to the major commands. Estimates based on such facts would lend our Reserve Program a new and much needed assurance.

HEADQUARTERS
CONTINENTAL AIR COMMAND
Mitchel Air Force Base, New York

PPM-R 220.3 30 March 1950

SUBJECT: Airmen as Mobilization Assignees

TO : Deputy Chief of Staff, Personnel, Headquarters United States Air Force, Washington 25, D. C.

1. It is essential that ConAC have a specific plan and program for bringing its tactical units to war strength. The feasible means of accomplishing this is through the earmarking and, where practicable, the training of Reserve personnel who will fill specific positions within the tactical units. Present controls permit the accomplishment of this action for officer personnel, but they do not permit such action for the enlisted personnel who will be as immediately required as will the officers.

2. Air Force Regulation 45-3, 5 August 1949, authorized officer mobilization assignees. Other supplemental publications authorize training and pay for these mobilization assignees and for enlisted members of Reserve T/O&E units. I considere it essential that Air Force Regulation 45-3 authorize enlisted mobilization assignees and that as soon as budgetary arrangements permit, both training and pay be also authorized for this personnel. It is recognized that this latter action will not be capable of immediate implementation but programming should be adjusted to allow for its accomplishment at the earliest practicable date.

3. This does not solve the immediate problem which faces ConAC, that of earmarking airmen to fill M-Day requirements in tactical units. I propose to take prompt action to assign airmen as mobilization designees to the ConAC tactical units. This will have limited practical effect except that it will identify individuals to fill known requirements. It will permit contact to be maintained by the unit with the individual concerned. It will administratively improve the readiness of these units. Training of these mobilization designees cannot be required because of inability to provide inactive duty pay. Similarly, recruiting of this personnel will be inhibited by this same lack of funds. However, any gain that can be realized is one of significance. ConAC Air Force Commands have been directed

to determine the airman mobilization requirements in tactical units, to screen records of members of the Volunteer Air Reserve and to query those individuals selected to determine their interest in and willingness to accept this status. Assuming acceptance by the individual, necessary action will be taken to assign these airmen as mobilization designees of the appropriate unit.

4. It is requested that the program which has been established be approved, that specific authority be granted for the utilization of Reserve airmen in a mobilization designee status and that early action be taken to permit full development of an airman mobilization assignment program. When the determination of airman mobilization requirements referred to in paragraph 3 above has been completed, information to assist in your fiscal planning will be furnished.

HEADQUARTERS
CONTINENTAL AIR COMMAND
Mitchel Air Force Base, New York

21 March 1950

14 March 1950

Dear Willis,

It is my desire that every regular T/O&E Unit in the Continental Air Command determine the number of mobilization assignees or designees to bring the unit from its present authorized strength to its full war strength in officers and enlisted personnel.

Determining our mobilization positions, in accordance with AF Regulation 45-3, for our combat units is a relatively simple matter. All Wing Base Unit T/O&Es have both a peace and war strength column except the Wing Base Medical Group T/O&E (1-9012), and the Wing Base Food Service Squadron T/O&E (1-8015). For all except these two, personnel requirements by SSN necessary to bring Wing Base Units to war strength, are established. War strengths for the Wing Base Medical Groups will be computed on a basis of 1 x column 6, T/O&E 1-9012 for Fighter Wings, and 1 x column 7, T/O&E 1-9012 for Troop Carrier Wings. War strength for Food Service Squadrons will be computed on a basis of 1 x column 40, T/O&E 1-8015 for Fighter Wings, and 1 x column 46, T/O&E 1-8015 for Troop Carrier Wings. Mobilization positions will be computed on the difference between present authorizations and those established above.

Other T/O&E Units not having peace and war columns are Aircraft Control and Warning Units (1-500), Signal Battalion, Separate TAC (1-835), Reconnaissance Technical Squadron (1-2313), Radio Relay Squadron (1-2214), Engineer Aviation Battalion (5-415), and Shoran Beacon Unit (1-1017). These now operate under personnel modification lists. These personnel modification lists are in essence peace strengths. Personnel requirements necessary to bring the units to full T/O&E strength will be determined for all ANL units. Radar calibration unit (1-727) and Motor Transport Squadron (1-998R) will be considered as operating at war strength and will not be authorized additional mobilization positions. Communications Squadrons (1-1037) will be considered as having a war-time authorization as listed under 1 x column 9, T/O&E 1-1037; and mobilization positions will be computed on the difference between that 1 x column 5 (present authorization).

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS UNCLASSIFIED

SECRET

After these requirements have been determined, I want action taken to screen personnel records to select the individuals to fill these positions. This applies to both officers and airmen.

In so are as the officers are concerned, we can proceed at once and complete the procedure by making them mobilization assignees or mobilization designees. Officers so assigned or designated must become a part of their unit. They must be trained to assume their M-Day jobs. That training will not be limited by our own lack of well directed effort, but rather only by the willingness of the individual to be so trained and by the availability of funds to pay the individuals. Present procedures governing the pay of these officers remain unchanged.

For the airmen, our action at this time must be different. Right now the rules prohibit our having airmen as mobilization assignees or designees. When this situation is corrected it is not practicable to have them as mobilization assignees because the current budget will now allow them to be paid. In my proposal to the Chief of Staff, I have requested that we be permitted to have airmen as Mobilizationassignees. Actually, this means that I am proposing as our current action that with the concurrence of the individual, we select and earmark Reserve airmen now to move into place as members of specified units on M-Day. Since we cannot offer them pay, we cannot require them to participate in scheduled training; however, contacts can be maintained and some training offered on a no-pay basis for those who will accept it.

Specifically, what I want done right now is for you to screen those individuals who can properly fill these determined vacancies. In so far as possible, these individuals should come from as near the geographical location to the regular unit as possible. Place the officers so selected on mobilization assignment now. Contact the Reserve airmen through an individual and personnel questionnaire and determine their willingness to accept the status of mobilization designee. For those who are willing, issue orders assigning them in this status to the appropriate regular unit. I want this program completed, in so far as your local reserve personnel resources permit, not later than 1 June 1950; and not later than 5 June, I desire that you submit a list by SSN, unit and station of these positions which you cannot fill from personnel available within your Air Force area.

Major General Willis H. Hale, USAF 21 March 1960.

The Volunteer Air Reserve will be the primary source of individuals for those assignments. Personnel presently assigned to units of the Organized Air Reserve may be selected to fill mobilization positions under this program with the concurrence of both the individual and the Reserve Unit Command concerned.

Publicity releases will not be initiated on this program. Questions by news media may be answered factually stating this is a part of the implementation of the Air Force Reserve Program. Earmarked personnel will be indoctrinated that this is an essential part of this program. They should consider themselves as a reserve member of the unit for which they are earmarkdd, and may expect to report to that unit immediately in the event of an emergency. Unit commanders will maintain current, accurate lists of reservists allotted to them. Air Force Headquarters will be furnished copies of thse unit lists and will plan to take immediate action to order these personnel to extended active duty with the unit for which they are earmarked in the event of an emergency, or at the direction of higher headquarters.

Official directives implementing this program will follow in time. Action to implement this program will be initiated at once. Administrative blocks which may occur will be resolved without delay at the lowest level. You will insure this program's completion on the time schedule above.

I would like a letter from you not later than 15 April giving me a progress report. Problems which come up in the interim will be resolved, or referred here.

Sincerely,

t/ ENNIS C. WHITEHEAD
Lieutenant General, United States Air Force
Commanding

Major General William H. Hale, USAF

DECLASSIFIED
EO 11652

HEADQUARTERS
CONTINENTAL AIR COMMAND
Mitchel Air Force Base, New York

6 June 1950

Dear Harry,

As of 25 May the manning of Reserve Wings at our AFRTCs in airmen was as follows:

Over	80%	manned	in	Airmen -	15 Wings
"	70%	"	"	" -	16 "
"	60%	"	"	" -	20 "
Under	60%	"	"	" -	5 "
"	50%	"	"	" -	2 "

All wings in the First, Fourth and Twelfth Air Force areas are manned over 30% in airmen.

Of the 5 Wings manned, lessthan 60% in airmen, 4 are yours. These 4 Wings are:

Wing	Location	Airmen Auth	Airmen Assigned	Percent Manned
440th TC Wing	Wold-Chamberlain	1082	612	56.5
437th TC Wing	O'Hare Intl Apt	1082	492	45.5
441st TC Wing	O'Hare Intl Apt	1082	581	53.5
438th TC Wing	Offutt AFB	1082	623	57.5

While the Wings as Scott and Olathe still have a long way to go to reach 80%.

From 25 April to 25 May 1950, Wold-Chamberlain gained 54 airmen; 437th at O'Hare 42 airmen; 441st at O'Hare 127, and 438th at Offutt 29. Unless real recruiting is carried out now, the above Wings are not going to "make the grade".

Wold-Chamberlain. Husted has been away at school. I believe that he is at least an average Wing Commander. Wilhelm has faults in administration and maintenance, but at such things as promoting he is superior; he should be of more assistance in recruiting than most of your AFRTC Commanders.

At Offutt, I feel that the AFRTC Commander is well above average. I do not know about the Wing Commander.

At Chicago, Strahm is sour on the world. He had not done anything about assisting the Reserve Wings in getting the recruiting office downtown to sign up Reserve airmen. I now feel that the sooner Strahm is replaced the better. Palmer can find out in a week about plans for summer camps and carry these plans out.

Summarizing, it appears that it is doubtful that Chicago can recruit enough airmen to man more than one Wing at over 80%; that Offutt and Wold-Chamberlain are both doubtful. I feel that ConAC and the Tenth Air Force must inspect these AFRTCs and Wings, formally, to see what we can do to assist in making these units worth the cost to the taxpayer. Chicago runs over 6 million a year.

Taking $2,500,000 as an average, if a Wing is filled up; if it has 1500 officers and men, the annual cost (less Reserve pay) is $1667 per man available for training. The annual cost rate for your poorly manned wings is:

Wing	Location	Assigned Officer	Assigned Airmen	Total	Annual Unit Cost
438th TC	Offutt AFB	366	623	989	$ 2540
437th TC	O'Hare Intl Apt	370	492	862	$ 2900
441st TC	O'Hare Intl Apt	391	581	972	$ 2575
440th TC	Wold-Chamberlain	386	612	998	$ 2500

By comparison, the 439th TC Wing at Selfridge (1332 officers and men) would cost annually per individual available for training $1875. It might help to point out to the unsatisfactorily manned units that they are costing the taxpayer too much for what he is getting in return.

Copy of 25 May report is inclosed.

Sincerely,

t/ ENNIS C. WHITEHEAD
Lieutenant General, United States Air Force
Commanding.

1 Incl.

Brig General Harry A. Johnson
Commanding General, Tenth Air Force
Selfridge Air Force Base, Michigan.

DEPARTMENT OF THE AIR FORCE
HEADQUARTERS UNITED STATES AIR FORCE
Washington 25, D. C.

12 June 1950

Lt General Ennis C. Whitehead
Commanding General
Continental Air Command
Mitchel Air Force Base, New York

Dear Ennis:

Please refer to your personal letter to me of 1 June 1950.

I agree with your comments regarding:

(1.) All-Weather Fighter Corollary Units;

(2.) Movement of the 4th Troop Carrier Squadron.

(3.) Inability to recruit a Reserve Wing in the Puget Sound area. All services are having difficulty in recruiting in this area.

As you know, we had intended, and you had a directive, to inactivate the Troop Carrier Corollary Units at McChord (less the Tactical Corollary Squadron) and to activate comparable All-Weather Fighter Corollary Units as of 12 June. Subsequent to issuance of the directive, it appeared desirable, for political reasons, to delay the inactivation and activation until some later date, preferably after the units had completed their summer training. Consequently, after consultation with officers of your Staff, a further directive was issued, to delay compliance with the original inactivation and activation directive until further notice from Air Force Headquarters. I think we will have a final line of action adopted on this matter within the next two to three weeks. Meanwhile, nothing is sacrificed through the delay.

I am glad to see that you are making changes at Chicago. I think the situation there will improve. McConnell tells me he has talked to you about our relations there with the Air National Guard. While the Guard people are probably as much to blame as we are, I feel there is also room forimprovement on ourpart in this area. I am not entirely in agreement with you as to the impracticability of recruiting airmen for two wings at Chicago. I think, with good wing commanders and a good base commander, the job can be done.

Lt General Ennis C. Whitehead 12 June 1950

O'Here is an expensive facility, as you well know and I think we would find it uneconomical to operate it for only one Wing.

I believe action with respect to the rest of your letter, at least action we can take at this time, is included in the proposed regulation we drew up as a substitute to the letter you proposed. Your Staff's suggestions as to modification of this regulation have been accepted, and the regulation is in process of final revision at this time. If we can secure a high enough priority on publication, I think we will have it out by 1 July. At least we will have sufficient copies of it to give to your Staff and yourAir Force Commanders on 30 June at the Conference here when we discuss the VARTU Program. We should also be able to announce the policy at that time.

I think we should start the Conference at 0900 hours. The number of the Conference Room has not yet been determined, but when your representatives arrive, if they will get in touch, either with my office or with Miss Root, that information will be available to them.

Sincerely,

s/t/ EARL S. HOAG
Major General, U. S. Air Force
Special Assistant to the Chief of Staff
for Reserve Forces

DECLASSIFIED
EO 11652

HEADQUARTERS
CONTINENTAL AIR COMMAND
MITCHEL AIR FORCE BASE, NEW YORK

IN REPLY
REFER TO:

1 June 1950

Dear Earl,

Inclosed is copy of Upston's letter of 25 May to Thatcher and extract of Upston's 18 May letter to me both reference Air Reserve situation in the Puget Sound area are self-explanatory and factual.

I do not concur in any plan which envisages Corollary flying units using our all-weather fighters. Our permanent pilots will do well to operate F-94s, F-89s, and F-95s. Those are certainly not "one week end per month" aircraft.

I want, next September, to move the 4th Troop Carrier Squadron from McChord to Kelly. The 62nd Troop Carrier Group, less the 4th Troop Carrier Squadron, is now at Kelly. When that occurs, we can no longer have a Troop Carrier Corollary Squadron at McChord.

Also, when the 4th TC Squadron moves, we shall have maintenance space for a Reserve Wing and its accompanying AFRTC at McChord. I am not at all certain that the Air Reserve in the Puget Sound area can recruit up to 80% strength in airmen. The status of the Corollary Wing (302nd TC Wing (H) less 2 TC Squadrons) on 25 April was:

	Officer	Airmen
Authorized	132	682
Assigned	114	381
Short	18	301

In percentage, the Corollary Wing is only 56% manned as of 25 April 1950. To recruit a Reserve Wing up to 865-870 airmen (80% of T/O of 1082) would be a task which I doubt could be done.

On the other hand, of our 25 Wings at AFRTCs on 25 April 1950, 6 had less than 600 airmen each. These are:

Location	Officers Auth	Officers Asgd	Airmen Auth	Airmen Asgd
New Castle	429	368	1082	479
Wold Chamberlain	429	390	1082	558
O'Hare, 437th TC Wing	429	359	1082	450
O'Hare, 441st TC Wing	429	397	1082	454
Offutt	429	370	1082	594
Miami	429	327	1082	505

DECLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS UNCLASSIFIED

SECRET

We need have no illusions that all the above will reach 70% of airmen strength. New Castle may do it in six months since they are out of Reading. Miami is discouraging. We have a good AFRTC and a good Wing Command yet it does not "go".

Strahn is being replaced by Ivan Palmer at O'hare as soon as summer camp ends. I doubt, however, that Chicago can Mrecruit airmen for two wings.

Wold-Chamberlain is not making much progress.

Earl, I believe that following the T/O&E Wing (both Corollary and AFRTC) summer camps we should eliminate all which do not have over 60% manning in airmen. I further believe that USAF must now decide on a policy along these lines and make a press release on that policy.

If such a policy is announced, ConAC can then document each doubtful Reserve Wing showing among other things the following:

a. Number of aircraft available each week-end and utilization.

b. Extent of which other facilities were available.

c. Monthly and annual cost of operating the AFRTC.

d. Unit cost per Reserve Officer and airman who came out for training.

e. Visits made to the AFRTC concerned by the numbered Air Force Commander, by myself, and by General Officers of my staff.

In addition, Earl, I will have a special IG inspection made of each below 60% airmen Reserve Wing (Corollary or AFRTC) by the numbered Air Force with an IG representative of ConAC present if USAF announces a policy. In that inspection we will try to find out what we can do to help the units.

I believe that all of the above is a minimum before units can be eliminated.

Let me know what action you are taking on the above subjects.

Sincerely,

t/ ENNIS C. WHITEHEAD

OFFICE OF THE
COMMANDING GENERAL
HEADQUARTERS FOURTH AIR FORCE
Hamilton Air Force Base
Hamilton, California

25 May 1950

Brig. General Herbert B. Thatcher, USAF
Acting Vice Commander, Continental Air Command
Mitchel Air Force Base, New York

Dear Herb:

This is in reply to your similarly classified letter of 8 May, with inclosures. I am grateful to you for sending me copies of your exchange of correspondence with USAF on this subject. The information contained therein is of great value to me as well as to my staff.

While I subscribe wholeheartedly to the logic of General Whitehead's personal letter to General Fairchild dated 2 November 1949, and his official letter of the same date, I know from experience that there will be severe political repercussions from reserve pilots if the units to which they are now assigned are converted to non-flying units. Consequently, I feel that, before announcing any such change, Hq USAF must develop a defense of its action so strong that it will not find it necessary to retreat in the face of vigorous political opposition. In this connection, I am happy to note from the 3rd Indorsement, dated April 21, 1950 and signed by General Lynch, that a study of the entire corollary program is being made. I have recommended to General Whitehead that we not make any drastic changes in the Puget Sound area until a nation-wide revision of the corollary program is approved. As you know, the Air Force was placed in an unfavorable light prior to announcement of the Reserve Porgram for FY 1950 because of the absence of a clear out Reserve Program. I feel that until the first year's trial of that program has been fully evaluated, we are asking for trouble by taking piece-meal action. The Puget Sound Reservists feel that they have logical reasons for complaint because -

(1st) we transferred their AFRTC to Portland and substituted a Reserve Wing Corollary to the 62nd Troop Carrier Wing;

(2nd) while the new wing was getting organized, we changed the equipment of the 62d from C-82's to C-54's, thereby delaying the qualification of their combat crews; and

(3rd) we moved the 62d Wing leaving them without a parent unit after they had initiated an intensified recruiting program.

I realize that it is my job to make them understand that what we do is in the interests of the service at large and shall continue to do so to the extent of my ability. I can't however keep the ARA Chapter from going to their congressmen with their complaints which I am unable to satisfy, and that is why I counsel having a defense which will withstand political attack on the Washington level. Just in case you haven't seen my letter to General Whitehead, dated 18 May, I am inclosing an extract of that portion pertaining to the McChord Corollary units.

Sincerely,

t/ JOHN B. UPSTON
Major General, USAF
Commanding

Extract from personal letter
General Upston to General Whitehead
dated 18 May 1950

"8. We have discussed your proposal regarding corollary units at McChord with the Base Commander and key officers of the corollary units in the Pacific Northwest. Their reaction is that we should not redesignate the corollary troop carrier wing as fighter-all weather, but that we should maintain the 302d Troop Carrier Wing Headquarters, an air base group, an M&S group with its squadrons, and a troop carrier group, with all of them attached to the 325th Fighter-All Weather Wing for training. The 355th Troop Carrier Squadron (Cor) to remain in status quo and corollary to the Fourth Troop Carrier Squadron. I have just received a letter from General Thatdher, dated 8 May 1950, concerning the corollary program and inclosing copies of correspondence between your Headquarters and Hq USAF. In the light of that coorespondence, especially the factors for consideration expressed in 3rd Indorsement from Hq USAF to your basic letter, Subject: "Readjustment of USAFR Corollary Program", dated 2 November 1949, it is recommended that:

a. All units except the tactical squadron of the 302nd Troop Carrier Wing (Cor) be redesignated and reorganized as a fighter-all weather wing.

b. The 355th Troop Carrier Sq (Cor) be retained as a troop carrier unit until such time as Hq USAF has completed its evaluation of the Corollary Program and a firm decision is reached on the future of corollary tactical squadrons. If, at that time, a corollary tactical squadron is to be located at McChord AFB, and if a runway thereat is extended as now contemplated, it is recommended that 355th Troop Carrier Sq. be inactivated and replaced by a fighter-all weather squadron.

c. The 722nd AC&W Sq Cor recently activated at Silver Lake, Washington, be redesignated a corollary squadron of the 636th AC&W Sq. at McChord AFB. This recommendation is made because of the planned future move of the regular 634th AC&W Sq. from Silver Lake to McChord AFB. This subject is being covered in a separate letter to your headquarters."

1	1 June	DO	CG	1. Your note attached to General Upston's letter to General Thatcher dealing with the Corollary Reserve Program at McChord asked the following question: Has the 355th Troop Carrier Squadron, Corollary, been retained at McChord? 2. The 355th Troop Carrier Squadron (M), Reserve, is to be inactivated on 1 September 1950 after completion of their active duty training this summer. Hq USAF has advised us that the activation of an additional unit to replace the 355th at McChord will be held in abeyance pending the results of an over-all appraisal of the Corollary Program. 3. After the close of the ROTC Camp at Kelly AFB, there will be space at that station to accommodate the 4th Troop Carrier Squadron (M), and in the event that the squadron is moved to Kelly and rejoins the 62d Group there will, of course, be no Troop Carrier Squadron at McChord to serve as a parent unit for the 355th. t/ GEORGE S. DECLASSIFIED EO 13526

DEPARTMENT OF THE AIR FORCE
OFFICE OF THE VICE CHIEF OF STAFF
UNITED STATES AIR FORCE
Washington, D. C.

16 January 1950

Lt. General Ennis C. Whitehead
The Commanding General
Continental Air Command
Mitchel Air Force Base, New York

Dear Ennis:

You have, no doubt, received our reply of 21 December 1949 (copy attached) to your official letter, subject: Readjustment of USAFR Corollary Program.

I am inclined to agree with your suggestion that it would be more sound from the military and fiscal points of viewto place emphasis in the Corollary Program on non-flying units composed of specialists holding critical MOS's. Accordingly, we have authorized you to proceed with the activation of Corollary Aircraft Control and Warning Units, subject, of course, to a determination that the problems of training personnel and equipment can be solved.

Regarding deactivation of tactical Corollary Units, I am still uncertain as to what action should be taken. There is, as you know, a mobilization rerquirement for trained combat crew replacements of specific types. I know of no other source except the USAFR from which the requirement can be met. It may be that at a later date a portion of the requirement can be provided from the ANG. This possibility is now under study, as you know.

In addition, there are the political and morale problems with which we would be faced if tactical Corollary Units were deactivated. There would undoubtedly be protestations by Reservists concerned throught heir Congressional representatives if the tactical units were disbanded. We would probably be accused of failing to comply fully with the Presidential directive to utilize the resources of the Regular Establishment in the training of Reserves.

It is my sincere hope that the study which we have requested in our reply of 21 December will assist in solving this problem.

Sincerely,

(Signed) Santy
st/MUIR S. FAIRCHILD
General, United States Air Force
Vice Chief of Staff

HEADQUARTERS
CONTINENTAL AIR COMMAND
Mitchel Air Force Base, New York

20 February 1950

Dear Santy,

I appreciate the concern expressed in your 16 January letterover my proposal to eliminate the tactical corollary units. Admittedly there will be political repercussions and a lowering of morale in the affected units; however the continuance of these units will not only create a false picture of strength but also will act to reduce the efficiency of the parent unit out of all proportion to any eventual good that may be derived from the part-time unit.

The study you desired on this subject has resulted in a redommended unit for unit substitution which is detailed in the 2d Indorsement, PO&R 322, 8 February 1950, to DC/S O Hq USAF, (copy attached). To mitigate the reaction of the reserves and to round out the command and support echelons of the corollary program, units of other types are proposed as substitutes for the tactical units. Examination of the inclosure will disclose the detailed substitutions. It will be noted that at both Hamilton and Smyrna Air Force Bases a group of several units is proposed as a substitute for the tactical unit in these cases the ConAC air force has indicated previously that this load can be sustained.

I believe that the plan as proposed can meet the test of reserve criticism if prefaced with an explanation of the facts in each case.

Sincerely,

Hq. ConAC (No file)
Subject: Readjustment of USAFR Corollary Program

POR 322 (2 Nov 49) 2d Ind. (8 Feb 50)

HQ. CONTINENTAL AIR COMMAND, Mitchel Air Force Base, New York

TO: Deputy Chief of Staff, Operations, Headquarters, United States Air Force, Washington 25, D. C.

1. Reference is letter this headquarters, PO&R 322, subject: Activation of USAF Reserve Corollary Aircraft Control and Warning Units", 23 January 1950, to Director of Manpower and Organization, Headquarters, USAF, Washington 25, D. C. which requested activation authority for certain AC&W units.

2. Recommendations of this command as required in paragraph 3, 1st Indorsement are as follows:

a. The Corollary Unit Program, as the entire reserve program, must be predicated on National Defense requirements in consonance with reserve capabilities. The latter of these two factors largely eliminates the tactical units from the corollary program. The combat crews at present manning these tactical units are composed of World War II personnel, who as a group are rapidly becoming too old for jet fighter operation. These personnel can logically be utilized for cargo or troop carrier type operation as in the AFRTC program. It is not, however, logical or practical to continue the Corollary Troop Carrier Squadrons now organized at McChord Air Force Base and Smyrna Air Force Base because of the current and projected commitments of the parent units and because of the relatively high cost of operation of C-54 type aircraft at McChord.

b. It is proposed that the following type units be substituted for the tactical corollary units:

(1) Langley Air Force Base: a Fighter Wing HHS or Fighter Group Hq for the 10th Fighter Squadron (Jet).

(2) McChord Air Force Base: The AC&W units proposed in the basic correspondence for the 355th Troop Carrier Squadron (H).

(3) McGuire Air Force Base: The AC&W unit proposed for activation at Mavesink Mil. Res., N.J., for the 496th Fighter Squadron (AW).

(4) Otis Air Force Base: A Fighter Wing Communications Squadron and a Motor Vehicle Squadron for the 81st Fighter Squadron (Jet).

Subject: Allocation of Flying Hrs. for Air Force Res. Training Centers (Confd)

Both B-26 Light Bomb Wing

2-26	2400
2-6	2520
2-7	2520
2-11	2772

3. It is pointed out that the allocation to Light Bomb Wings provides each TOAI pilot with only 2.7 B-26 hours per month as compared to the figure of six (6) hours for each TOAI Troop Carrier pilot. As this allocation was promulgated to be inadequate for normal transition and proficiency flying requirements, the possibility of conversion of time from B-25 and C-47 aircraft to B-26 aircraft was explored. Based on conversion factors established by your headquarters by providing B-26 aircraft time of 4,000 hours and C-47 aircraft time by 1920 hours, an increase in B-26 aircraft time of 10,368 hours can be effected for allocation during the seven (7) month period (1 December 1949 - 30 June 1950). This conversion will provide all AFRTC TOAI pilots with five (5) total pilot hours per month on the respective tactical aircraft.

4. In order to meet this serious shortage of flying hours available to Air Force Reserve Training Centers equipped with B-26 type aircraft under the current allocation of hours, it is requested that either a supplemental allocation of 10,368 hours be granted or that the conversion outlined in paragraph 3 above be approved.

FOR THE COMMANDING GENERAL:

V. E. MURPHY
Lt. Col., USAF
Asst. Air Adj. Gen.

SUMMARY:

a. Sufficient aircraft are available in the USAF Reserve Program to accomplish the aircraft flying hours programmed above. This revision reflects the phasing out of T-6 aircraft from the USAF Reserve Program by 1 July 1950 and increasing the utilization of B-26 aircraft to provide each TO&E pilot in Light Bomb Wings with five (5) pilot hours per month on B-26 aircraft; also utilization of other type aircraft in accordance with the factors established in AFL 150-10 for the USAF Reserve.

b. As a matter of information, the Program, revised as of 1 October 1949, indicated a requirement of 471,190 A/C flying hours against an availability of 445,104 A/C hours. The deficiency of 57,558 pilot hours i.e. 824,099 pilot hours required vs 766,541 pilot hours available, was to be absorbed by utilization of additional T-6 aircraft thereby increasing available aircraft hours to 502,662. The USAF Reserve Aircraft Hour and Pilot Flying Hour Programs FY 1950, as revised 1 October 1949 are hereby replaced and superceded by this Program.

SCHEDULE FOR RELEASE OF T-6 AIRCRAFT FROM USAF RESERVE PROGRAM

Date of Release	31 March 1950	30 April 1950	31 May 1950	30 June 1950
Quantity to be Released	100	100	35	All remaining T-6 Aircraft

MISSION--No. 2

AIR FORCE TACTICAL AIR COOPERATION
WITH OTHER SERVICES

MISSION NO. 2

Provide for Air Force cooperation with land and/or amphibious forces in the United States and operational training therefor.

1. Responsibility: The Commanding General, Continental Air Command, exercises command jurisdiction over all units assigned or attached to the Continental Air Command. He is directly responsible to the Chief of Staff, USAF, for the following functions pertaining to this mission:

a. Air Force cooperation with land and/or amphibious forces in the Continental United States. Tab 1

b. Determination of the proper apportionment of the effort of assigned or attached units to the Tactical Air Command when required. Tab 2

c. Timely allocation of a proper portion of the effort of units assigned or attached, or otherwise made available, to the Continental Air Command, to the operational command of the Tactical Air Command when required. Tab 3

d. Coordination of the activities of the Tactical Air Command and numbered air forces for the most effective accomplishment of mission assigned the Continental Air Command. Tab 4

2. Responsibility: The Commanding General, Tactical Air Command, is responsible to the Commanding General, Continental Air Command, for the following specific functions in accomplishment of USAF tactical air cooperation with other services:

a. Continue to plan and to prepare for the conduct of tactical air operations in conjunction with field forces of the Department of the Army and/or amphibious forces of the Department of the Navy in the defense of the United States. Tab 5

b. In conjunction with designated elements of the Army, Navy, and the Air Force, train and indoctrinate personnel of the three services in joint operations by planning and participating in field exercises and maneuvers. Tab 6

c. Plan, supervise, and conduct tactical air operations in the Continental United States with the means specifically allocated by the Commanding General, Continental Air Command. Tab 7

d. Maintain continuous liaison with the Army Field Forces and designated Naval headquarters for the development of Air Force policies, plans, doctrine, organization, systems, materiel, tactics, techniques, and procedures applicable to the utilization and employment of tactical air power when acting in concert with land and/or amphibious forces and the timely submission of recommendations with respect to those matters. Tab 8

e. Maintain liaison with the Army Field Forces in order to determine the requirements for the training of Army and Air Forces Units and personnel in joint air-ground operations and submit recommendations to the Commanding General, Continental Air Command, for the allocation of the necessary forces to fulfill this requirement. Tab 9

f. In accordance with approved plans, participate in joint exercises and maneuvers by utilizing and employing designated personnel and units from other components of the National Military Establishment as may be made available. Tab 10

g. Conduct systematic training of forces allocated by the Commanding General, Continental Air Command, in tactical air operations. Tab 11

h. Be prepared to provide cadres of personnel trained and indoctrinated in the employment of tactical air power for the timely formation of Tactical Air Command and/or air force headquarters for oversea deployment, as required. Tab 12

i. Recommend to the Commanding General, Continental Air Command, the allocation and deployment of available forces in preparation for the conduct of tactical air operations in conjunction with land and/or amphibious forces. Tab 13

j. Recommend to the Commanding General, Continental Air Command, the proficiency standards and desired capabilities of units to be employed in tactical air operations. Tab 14

k. Promote progressive development of air-antiaircraft artillery coordination of techniques and doctrines as they pertain to the land battlefield. Tab 15

A. FUNCTION: Continue to plan and to prepare for the conduct of tactical air operations in conjunction with field forces of the Department of the Army and/or amphibious forces of the Department of the Navy in the defense of the United States.

B. OBJECTIVE: To prepare and maintain in current status existing war, mobilization, show of force, and protection plans involving tactical air power and the preparation for the conduct of tactical air operations incident to and in the event of emergency implementation of these plans.

C. DIRECTIVE:
1. Air Force Regulation 23-1, dated 11 January 1949.
2. ConAC Regulation 26-1, dated 31 January 1949.
3. Classified directives from Headquarters, United States Air Force.

MISSION #2 5.

D. WHAT HAS BEEN DONE: In the past, upon directives from Headquarters United States Air Force, Headquarters Tactical Air Command would prepare the plans in conjunction with the other services involved. The plans might encompass the USAF participation, the Tactical Air Command participation, or a combination of both. Upon completion and approval by USAF, it was the Tactical Air Command's responsibility to continuously maintain the plans in an up-to-date status. Concurrently, it was the Tactical Air Command's responsibility to prepare for the conduct of tactical air operations in the event of emergency implementation of the plans by constant supervision and coordination with the other services and commands involved; special inspections, operational readiness tests; and the submission of timely recommendations to Headquarters United States Air Force pertinent to the plan. These responsibilities were occasionally delegated to the numbered air forces with the exception of special inspections and operational readiness tests.

E. WHAT IS BEING DONE: Under the present organization, Tactical Air Command has retained these responsibilities with the exception of special inspections and operational readiness tests which have been assumed by Headquarters Continental Air Command. Specific responsibilities include the recommendation of force allocations, continuous review and analysis to

maintain the plans in a current status, constant daily supervision and coordination with the other services and commands involved, and continuous liaison with the inspection section, Headquarters Continental Air Command on matters pertinent to the plans. At the present time, Headquarters Tactical Air Command is responsible for approximately nine (9) plans of this nature.

F. WHAT IS PLANNED: It is contemplated that, in general, the future course of action will be similar to that presently in effect with respect to this function. A staff study presently in the final stages of preparation will recommend the specific allocation of forces to the Tactical Air Command under the conditions of "emergency allottment" and will determine and recommend for ellimination any duplicity of effort and any procedures not in consonance with those currently acceptable, by review and analysis of all the existing plans of this nature that have been disseminated to this command.

G. MONITORING RESPONSIBILITY: Deputy for Tactical Air Operations.

TAB __

A. FUNCTION: In conjunction with designated elements of the Army, Navy and the Air Force, train and indoctrinate personnel of the three services in joint operations by planning and participating in field exercises and maneuvers.

B. OBJECTIVE: To achieve a high state of proficiency among Air Force personnel assigned duties connected with tactical air support operations, through the training and indoctrination of units and individuals in the principles and techniques applicable to air-ground operations, through the provision of amphibious training of appropriate Air Force personnel in the transfer of tactical air control from ship to shore.

C. DIRECTIVE: Air Force Regulation No. 23-1, 11 January 1949. This directive prescribes the specific functions for which the Commanding General, Tactical Air Command, is responsible to the Commanding General, Continental Air Command.

MISSION #2 L.

D. WHAT HAS BEEN DONE:

1. Armored School Demonstration, Fort Knox, Kentucky, 30 March 1949: Tank Battalion Attack, supporting 1 Squad 332d Fighter Group, 1 TACP, 502d Tactical Control Group employed for control.

2. Air General Plan for Exercise "TARHEEL," Fort Bragg, North Carolina, 8-21 May 1949 was published and distributed on 1 April 1949.

3. Outline Plans for:

   a. A second Armored School Demonstration, Fort Knox, Kentucky, 30 April 1949: Infantry Battalion Attack, supported by 1 Squadron, 332d Fighter Group with 1 TACP for air control.

   b. Spring "COMBINE", Fort Bragg, North Carolina, 11-12 April 1949; Fort Benning, Georgia, 13-14 April 1949, and Greenville Air Force Base, South Carolina, 15-16 April 1949: Battalion combat team in airborne assault supported by squadrons of conventional and jet aircraft with control elements; Infantry-Artillery-Tank Team in the attack; demonstration of a Joint Operations Center and Tactical Air Control Center has been submitted to and approved by Headquarters, Continental Air Command.

4. Tentative, broad arrangements for the amphibious training of the 804th Aviation Engineer Battalion, 502d Tactical Control

CONFIDENTIAL

CONFIDENTIAL

Group, the 934th Signal Battalion, and the 817th Aviation Engineer Battalion have been made with ComPhibTraLant and ComPhibTraPac for Fiscal Year 1950.

5. Conferences have been held and a ten-day reconnaissance conducted with representatives of the Department of the Air Force, the Department of the Army, and the Canadian Army relative to a combined Artic exercise (Exercise "NORTH STAR") in Canada-Alaska during the winter of 1950. Draft of an Air Outline Plan for this exercise was prepared by this Headquarters. However, in conference on 5 April 1949, Department of the Air Force withdrew from participation in a similar exercise would probably be possible in Fiscal Year 1951.

6. Amphibious training requirements for Fiscal Year 1951 have been submitted to Headquarters, Continental Air Command.

E. WHAT IS BEING DONE:

1. An Outline Plan for Operation "COMBINE IV" is being studied in this headquarters prior to initial joint planning with Army Field Forces and the appropriate naval headquarters.

2. Outline Plans for participation in other joint exercises (CAMID IV, Caribbean Triphibious), Fiscal Year 1950, are being prepared for submission to Headquarters, Continental Air Command for approval. The content of these outline plans treats mainly the scope of the operation, forces required, and the detail necessary only to budget estimates.

3. Studies are being made of the proposed joint field exercises Fiscal Year 1951, as submitted by Department of the Army.

F. WHAT IS PLANNED:

1. When approval of the tentative arrangements for the amphibious training of Air Force units, Fiscal Year 1950, is received, firm provisions for such training will be made with ComPhibLant and ComPhibPac.

2. Preliminary conferences with ComPhibTraLant and ComPhibTraPac will be held in the near future relative to amphibious training of Air Force Units, Fiscal Year 1951.

A. FUNCTION: Maintain continuous liaison with the Army Field Forces and designated Naval headquarters for the development of Air Force policies, plans, doctrine, organization, systems, materiel, tactics, techniques, and procedures applicable to the utilization and employment of tactical air power when acting in concert with land and/or amphibious forces and the timely submission of recommendations with respect to those matters.

B. OBJECTIVE: To maintain the capability of designated units of the Air Force, appropriately equipped, properly trained, and effectively employed in accordance with up-to-date doctrine and techniques to conduct tactical air operations in conjunction with surface forces in the defense of the United States.

C. DIRECTIVE: Air Force Regulation No. 23-1, dated 11 January 1949.

D. WHAT HAS BEEN DONE:

1. The Tactical Air Command, acting as the responsible agency of the Air Force for the employment of Tactical Air Power in conjunction with the surface forces, has:

   a. Established liaison with the Department of the Army and the Department of the Navy through representation on joint agencies, boards, and committees, specifically constituted to recommend policies and organization to evaluate doctrine, tactics, and procedures on t joint aspects of tactical air support.

   MISSION #2 C

   b. Participated in joint planning for emergencies, mobilization, field exercises, and routine requirements.

   c. A Naval officer assigned to this headquarters for advisory and coordination purposes.

   d. Since 1946, conducted field exercises such as "Operations COMBINE," "Operations CAMID," cold weather tests in Alaska, and other special exercises. These exercises have been made possible a continuous, objective, and critical analysis of present concepts and equipment, tactics, techniques, and materiel.

2. Great strides have been made in the tactics and techniques of troop carrier operations especially with respect to air transportable training and in the lift of large and heavy equipment. The Air Force now has either in development or operation, cargo type aircraft capable of fulfilling

CONFIDENTIAL

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS UNCLASSIFIED

the primary requirements of the Army for both air transportability and airborne activities.

3. The fundamentals of Tactical Air Support of Ground Forces which were evolved in World War II were jointly assembled and published in Field Manual 31-35 in August 1946. This manual sets forth the current principles, doctrine, means, and procedures for the employment of tactical air power in support of a field army.

E. WHAT IS BEING DONE:

1. Headquarters Tactical Air Command and the Office, Chief of Army Field Forces are now jointly preparing a draft for the Joint Chiefs of Staff on Tactical Air Support of the Ground Forces. Upon approval by the Joint Chiefs of Staff, this paper will be incorporated into the document known as "Joint Action Armed Forces (JAAF)", which is a rewrite of the "Joint Action Army-Navy 1935 (JAAN)".

2. Drafts of the proposed Air Force position on the joint aspects of "Amphibious Operations," "Airborne Operations," "Tactical Air Support of Naval Forces," and "Mutual Support and Measures to Avoid Mutual Interference," were prepared and forwarded 18 March 1949 for use in connection with the "Joint Action Armed Forces."

3. A study is now in progress involving a re-examination of the concept, tactics, and techniques of employment of Tactical Air Power. This tudy specifically includes the jet fighter, light bombardment, troop carrier, reconnaissance, and liaison functions. That portion of this study concerning liaison squadrons was recently completed and forwarded to Headquarters Continental Air Command.

4. A proposed Joint Training Circular prepared by Headquarters Army Field Forces on the coordination of close air support with the fire of other supporting weapons is under study.

5. Tactical Air Force organizational studies are in the progress. Recommendations on the T/O&E for a mobile Tactical Air Force have been submitted to Headquarters Continental Air Command.

6. The entire field of air-ground operations is under review from the point of view of doctrine, procedures, and techniques. Integrated studies explaining such aspects as the influence of post-war electronic developments, the special considerations accompanying air support of airborne and amphibious operations. Upon enunciation of over-all guiding policy through the publication of "Joint Action Armed Forces," these sub-studies will be incorporated into a revision of Field Manual 31-35 and other basic documents governing the conduct of air-ground operations.

F. WHAT IS PLANNED: Liaison with Headquarters Army Field Forces and designated Naval headquarters continues as a primary function of Headquarters Tactical Air Command. Policies, plans, doctrine, organization, equipments, and techniques will be subjected to continuous review and evaluation in the light of new developments and changing concepts. Conclusions reached as the result of the inter-service liaison described above, studies conducted within the Headquarters Tactical Air Command, and joint field exercises and maneuvers will be submitted in the form of recommendations. Specific plans include:

a. Joint Field Exercises, Fiscal Year 1950:

(1) "TAMBIEL".

(2) Armored School Demonstration.

(3) Amphibious Training of the 804th Aviation Engineer Battalion.

(4) "LITTLE COMBINE".

(5) "COMBINE IV".

(6) "CAMID IV".

(7) "NORTH STAR".

G. MONITORING RESPONSIBILITY: Deputy for Tactical Air Operations.

TAB [illegible]

A. FUNCTION: Maintain Liaison with the Army Field Forces in order to determine the requirements for the training of Army and Air Force units and personnel in joint air-ground operations and submit recommendations to the Commanding General, Continental Air Command, for the allocation of the necessary forces to fulfill this requirement.

B. OBJECTIVE: Determine jointly the training requirements of Army and Air Force units and individuals in air-ground operations in order that plans for individual and unit training may be made and executed through the medium of schools, indoctrination courses, training exercises and field maneuvers.

C. DIRECTIVE: Air Force Regulation 23-1, 11 January 1949. This directive prescribes the specific functions for which the Commanding General, Tactical Air Command, is responsible to the Commanding General, Continental Air Command.

D. WHAT HAS BEEN DONE:

1. Conferences have been held with representatives of the Army Field Forces regarding:

   a. Troop Carrier requirements for jump training of airborne units and for air transportability training of other units.

   b. Joint field exercise and demonstration plans which have been implemented or which will be implemented prior to 1 July 1949.

   c. Routine training requirements in conjunction with liaison, reconnaissance, light bombardment, and fig[illegible] units.

MISSION #2 9.

2. A Joint Ad Hoc Committee, including representatives of Headquarters, Tactical Air Command, prepared and forwarded in March 1949 for the approval and consonance of the Joint Chiefs of Staff a directive to initiate planning for a joint field exercise in the Caribbean during Fiscal Year 1950.

3. From the information gained on the above subjects, recommendations were submitted to Continental Air Command.

E. WHAT IS BEING DONE: The action outlined above is of a continuing nature and requires constant revision to meet changing conditions.

F. WHAT IS PLANNED: Further conference with the Army Field Forces regarding plans for joint field exercises and demonstrations and other joint training are planned.

G. MONITORING RESPONSIBILITY: Deputy for Tactical Air Operations.

C. DIRECTIVE: Air Force Regulation 23-1, 11 January 1949. This directive prescribes the specific functions for which the Commanding General Tactical Air Command, is responsible to the Commanding General, Continental Air Command. The specific function set forth above is not clear in that: first, all plans of this headquarters for join exercises are being approved prior to participation; second, "other components" of the National Military Establishment includes more than Air National Guard and Air Force Reserve; third, it has been indicated that the above components will be included in plans for field exercises only upon specific request.

D. WHAT HAS BEEN DONE: Air General Plans for Exercise "TARHEEL" provides for the participationoof two (2) squadrons of the 54th Fighter Wing (ANG) on 7-8, 14-15 May 1949.

E. WHAT IS BEING DONE: Nothing.

F. WHAT IS PLANNED: Nothing until a policy is promulgated which clarifies the responsibility of this headquarters in relation to the other components. (See letter this headquarters, 28 February 1949, to Commanding General, Continental Air Command, subject: "Tactical Air Command Implementation of Air National Guard and USAF Reserve Unit Training.")

MISSION #2 10.

G. MONITORING RESPONSIBILITY: Deputy for Tactical Air Operations.

A. FUNCTION: Conduct systematic training of forces allocated by the Commanding General, Continental Air Command, in tactical air operations.

B. OBJECTIVE: To attain and maintain within all units of Continental Air Command capable of tactical operations a high state of effectiveness in performance of tactical air operations.

C. DIRECTIVE: Air Force Regulation 20-6, 11 June 1946.
Air Force Regulation 23-1, 11 January 1949.

D. WHAT HAS BEEN DONE: Tactical Air Command has actively participated in and supervised the training of such units of Continental Air Command as have been allocated to the Tactical Air Command. Rigid adherence to approved doctrines and concepts of tactical air operations have been maintained.

E. WHAT IS BEING DONE: The above training and supervision is being continued in such exercises as "Little Combine," "Tarheel," and routine exercises of the troop carrier groups with the 82d and the 11th Airborne Divisions.

F. WHAT IS PLANNED: The above functions will continue to be one of the most exacting duties of Tactical Air Command. Personnel from the augmented Joint Operations Center/Operations will be responsible for this training and supervision.

G. MONITORING RESPONSIBILITY: Deputy for Tactical Air Operations.

A. FUNCTION: Be prepared to provide cadres of personnel trained and indoctrinated in the employment of tactical air power for the timely formation of Tactical Air Command and/or air force headquarters for overseas deployment, as required.

B. OBJECTIVE: To achieve and maintain among assigned personnel such a high state of proficiency in assigned duties and such a thorough general knowledge of all phases of the tactical air mission that qualified cadres of personnel can be provided on short notice for the formation of air commands and/or air force headquarters for overseas deployment.

C. DIRECTIVE: Air Force Regulation 23-1, 11 January 1949. Department of the Air Force Letter, 9 August 1948, signed by Deputy Chief of Staff, Operations (Classified).

D. WHAT HAS BEEN DONE:

1. By letter this headquarters, dated 28 March 1949, file CC 320.3, subject: "Personnel Requirements," this command has requested assignment of 36 officers and 62 airmen to man a Tactical Air Force Headquarters at Pope Air Force Base, North Carolina.

2. Personnel of the Joint Operations Center/Operations Section, Headquarters Tactical Air Command are being trained to carry out the highly specialized duties of Joint Operations Center/Operations personnel in a Tactical Air Command and/or Air Force.

3. Additional personnel to fully man the Joint Operations Center/Operations Section have been requested by 5th Indorsement to letter, Hq. Continental Air Command, dated 12 January 1949, file OS 320.3, subject: "Submission of New Table of Distribution."

E. WHAT IS BEING DONE:

1. Personnel allocated for the manning of a Tactical Air Force (mobile) are being utilized and trained in current projects such as "Little Combine" and "Tarheel".

2. Training of Personnel of Headquarters Tactical Air Command is continuing through all available means including assignment to current projects such as "Little Combine" and "Tarheel."

3. Reserve personnel are being screened and placed on mobilization assignment to Hq. TAC with the view of their eventual assignment to cadres.

A. FUNCTION: Recommend to the Commanding General, Continental Air Command, the allocation and deployment of available forces in preparation for the conduct of tactical air operations in conjunction with land and/or amphibious forces.

B. OBJECTIVE: To assure the timely allocation and the effective deployment of such tactical air units as are required to adequately discharge the Air Force's responsibility for air training in cooperation with designated Army and Naval units in the Zone of the Interior.

C. DIRECTIVE: Air Force Regulation 23-1, 11 January 1949.

D. WHAT HAS BEEN DONE:

1. A staff study was prepared in March 1949 setting forth the minimum tactical air requirements necessary to adequately perform the Air Force's mission to joint tactical exercise with the Army and Naval forces.

2. Also the staff study included recommendations for the deployment of the air tactical units that will be used in performing the Tactical Air Command's mission.

3. Specific recommendations for the allocation of forces to perform the air mission have been made concurrently with the plans submitted for joint training exercises.

E. WHAT IS BEING DONE:

1. The action outlined above requires continuous study, therefore, every effort is being made to effectively utilize the tactical air resources to attain the maximum results in training and operations.

2. A staff study is being prepared outlining the recommended location of the Tactical Control Group and the Signal Battalion to enable this command to most effectively and efficiently utilize these units.

F. WHAT IS PLANNED: This headquarters will continue to study the requirements necessary for tactical air operations and deployment of air units and will submit timely recommendations to the Commanding General, Continental Air Command, thereon.

A. FUNCTION: Promote progressive development of air-antiaircraft artillery coordination of techniques and doctrines as they pertain to the land battlefield.

B. DIRECTIVE: Air Force Regulation No. 20-6, dated 11 June 1946.

C. SUMMARY OF ACTION: This command has engaged in no activity relative to the development of antiaircraft artillary doctrins and procedures in the land battle due to the lack of joint policy on the operational control of antiaircraft artillery units. The problem is under study by the Joint Chiefs of Staff, and it is anticipated that a document now being drafted to be known as "Joint Action Armed Forces" will delineate responsibilities for operational control of antiaircraft artillery units involved in surface action in overseas areas. Unless otherwise instructed, continued deferment of this subject is contemplated until a joint agreement has been announced.

D. MONITORING RESPONSIBILITY: Deputy for Tactical Air Operations.

1. USAF Reserve Aircraft. -- AAC Message ACMALT61-8-10, 26 May 1949, states that "Air Reserve aircraft are included wherein a technical order states all active USAF aircraft are affected". This question originally was raised in connection with the installation of equipment in B-26 aircraft.

2. Assignment, USAF Reservists.-- Chief of Staff USAF announced policy for assignment of USAF Reservists to AFRTC units and Corollary units (AFCRP-23620 and AFCon.CMilPers E-11959):

a. First consideration for assignment to either a unit assigned to an AFRTC or to a Corollary unit will be given to those AF Reservists who have previously participated in the AF Reserve Training Program; subject to the following screening criteria:

(1) Qualification in MOS

(2) Efficiency Index

(3) Existence of vacancies in units by rank.

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS UNCLASSIFIED

b. The continued participation of a Reservist in these units will be based upon his fulfillment of qualifications and training requirements.

3. USAF Reserve Program, Fiscal Year 1950. -- Message, AFConACRR 11897, 21 May 1949, to ConAC air force commanders itemized the instructions which had been issued and forecast issue of forthcoming instructions concerning implementation of the USAF Reserve Program, Fiscal Year 1950.

4. Accrual of Points, USAFR. -- Messages, C/S USAF, AFPHP-3D-28582, and AFConACMilPers-A-12007, 20 May 1949, mention the concern of individual Reservists over accrual of necessary points or credits for retention of Organized or Volunteer Air Reserve status. "Prior to publication of AFR 45-5, 6 July 1948, no requirement existed, advising Reserve officers of the necessity to accrue a predetermined number of credits or points. Therefore, it is not deemed equitable to require any member of the USAFR to have met any requirements prior to publication of 45-5. For administrative purposes, however, 30 June 1948 is the date that the 3-year period, which established requirements, began and 30 June 1951 is the date that the 3-year period, for which accrual of points or credits are required, will terminate. Points or credits earned subsequent to 30 June 1948, under the provisions of AFR 45-5, 6 July 1948, and prior to publication of AFR 45-5, 16 March 1949, may be accredited to an individual as provided by paragraph 21 of the latter regulation". The effect of this message is that no Reservist may be transferred to Inactive Air Reserve prior to 6 July 1951, except at his own request.

5. WAF Reserve Assignments. -- Chief of Staff, USAF policy for assignment of WAF Air Reservists in FY 1950 was announced in AFCAF-1-21505, and AFConACWAF 12548:

a. Not to exceed a total strength of 2% of WAF Air Reserve officers and airmen for the entire program, except Extension Course program.

b. For the Mobilization Assignment, Corollary Unit, AFRTC and VARTU programs, a total strength not to exceed 2% WAF Air Reserve officers and 2% Reserve airmen may be applied to each program.

c. AF Regulations of the 45-series are applicable to WAF Air Reserve officers and airmen.

6. Air Reserve Forces Review. -- Letter, DP 000.76, this headquarters, 13 May 1949, "Distribution Plan for Air Reserve Forces Review", announces the distribution procedures for the "Air Reserve Forces Review", to be published monthly by Hq USAF, beginning with the June issue. It is planned the magazine will be informative, stimulating, and interesting throughout, constituting a medium to keep all personnel concerned posted on matters pertaining to the Reserve Forces.

THIS PAGE IS UNCLASSIFIED

ConACB 45-6.

7. Classified Information. -- Have you read AFL 205-25, 30 March 1949, "Disclosure of Classified Information to Reserve Forces Personnel". Its scope includes USAFR, ANG, AF ROTC, and senior division of CAP, and its liberal provisions should be thoroughly understood by all instructors and unit training personnel.

8. Retired Enlisted Men. -- Message AFPMP-1-0-4-25621, 1 June 1949, states USAF Reserve Officers who are retired enlisted men will not be recalled to active duty for short periods (90 days or less). This restriction will be published soon in AF Regulations.

9. Inactive Duty Training Pay Clarification. -- Last sentence, Example 3, paragraph 7, Section V, ConAC Bulletin 45-6, 3 May 1949, is corrected to read: "In this case, the officers are entitled to receive inactive duty training pay because 60% of the assigned strength of the unit was present".

10. Definition, Mobilization Designation. -- Hq USAF Message AFCRP-19464, 26 April 1949, and AFCHQ-[illegible]-25, 29 April 1949, defined the terms "mobilization Assignment" and "mobilization designation', pending revision of AFR 45-3, 8 October 1948.

"a. Mobilization assignment will not be given to an individual who, in a civilian capacity, occupies a position which would be occupied by him as an officer in event of a mobilization. In all such cases the individual may be given a mobilization designation. The determination as to whether an individual will be given a mobilization assignment or mobilization designation will be made by the individual's immediate military supervisor.

"b. Mobilization designation is a means whereby an individual may be earmarked for mobilization position. Such individuals are members of the VAR. Requirements for retention in the VAR are contained in AFR 45-5, 16 March 1949.

"c. Administrative procedures pertinent to mobilization designations will be contained in the revised AFR 45-3, referred to above.

"d. Upon publication of the revised AFR 45-3, individuals who hold mobilization assignments in conflict with the above stated policy will be relieved of such assignments and tendered mobilization designations".

11. Inactive Duty Training Authorizations. -- Message, AFConACPI-D-10716, 11 May 1949, refers to paragraph 25, AFR 45-16, 7 March 1949, and delegates authority to issue inactive duty training authorizations to ConAC air forces and to subordinate units having USAF Reservists assigned or attached for training.

M-49-650

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS UNCLASSIFIED

12. Routing ORT Report on Air National Guard. -- Upon telephone request from one of the ConAC air forces, following exact routing for a completed Operational Readiness Test report on an ANG unit was advised: From the unit inspected to the next higher military unit, through military channels to Chief of Staff USAF -- squadron, group, wing, Co C air force, Hq ConAC, Hq USAF. The Adjutant General of the state to which the inspected unit is assigned will receive an information copy as it is indorsed by the unit commander to the next higher military unit outside the state. Thus, the Adjutant General of the state to which a group is assigned would receive the information copy; the Adjutants General of states to which individual squadrons of the group are assigned would not receive a copy unless the squadron was inspected as a single unit.

13. Double Unit Training Assemblies, ANG. -- Hq USAF, AFCRF-18371, 20 April 1949, relayed by AFConCRF-8383, 22 April 1949, says: "For units of ANGUS, not more than one unit training assembly (drill period) will be authorized for pay purposes for each calendar day, unless the total or aggregate duration of such participation is at least eight hours. When the total or aggregate duration of unit training conducted in a calendar day is eight hours or more, two unit training assemblies may be authorized for pay purposes in that calendar day".

14. Double Unit Training Assemblies, USAFR. -- This same provision (paragraph 13 above) applies to USAF Reserve units per paragraphs 23j and 24 a and b, AFR 45-8, 16 March 1949.

15. Wire Recorders for AF ROTC. -- A proposed revision of T/A 90-1, which would authorize one (1) each, Wire Recorder, Webster-Chicago, Model 180-1, per school, has been submitted to C/S USAF by this headquarters. Therefore some requisitions by AF ROTC units for recorders are being returned by this headquarters without action. Publication of the revised T/A 90-1 prior to the next school semester is anticipated. If suitable recorder-reproducer equipment is not authorized therein, the individual rejected requisitions may be resubmitted.

16. AF ROTC Supply, Fiscal Year 1949. -- The question of the supply procedures to be followed by AF ROTC units after 1 July 1949, is still under consideration by Hq USAF. This headquarters has recommended there be no change in the present supply procedure, with few exceptions. Tentative information is to the effect that the above recommendations will be adopted, but this information is not as yet firm.

a. This headquarters is endeavoring to obtain as much advance information as possible on this subject, and such information will be disseminated to all air forces as received.

0209

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS UNCLASSIFIED

b. Requisition channels for AF ROTC units after 1 July 1949, will depend on the recommendation mentioned above. For the time being, requisitions will be submitted in the same manner as in the past.

c. T/A 10-100 will continue to be used as a guide by AF ROTC units for requisitioning Quartermaster expendable supplies, until such time as T/A 10-100-2, now in the process of study by both Army and Air Force, is approved and published.

d. The provisions of AFR 67-14, 19 October 1948, are not applicable to AF ROTC units. Quartermaster expendable supplies are furnished to ROTC units from ROTC depot stocks, without reference to Quartermaster monetary credits.

17. Administrative Function Pay. -- Recent staff visits by members of this headquarters indicate the possibility of misapplication of paragraph 8, AFR 45-10, 22 March 1949. Wing commanders and group commanders, as such, are not eligible for administrative function pay. This allowance is intended for the commanding officers of wing and group headquarters and headquarters squadrons and the squadron commander of TO&E units.

18. Specialties, V.R.T Flights. -- This headquarters recently recommended to C/S USAF that this command be authorized to approve additional specialties for the composition of V.R Training Flights, in lieu of obtaining specific approval from Hq USAF in each case, as directed by paragraph 3, proposed AFR 45-23. Message AFORF-1-26534, 3 June 1949, approved that recommendation and advised that the regulation was being so revised.

19. Flight Pay, USAFR. -- Closing the gap of paragraph 5d, AFR 45-10, 22 March 1949, Executive Order 10059, 27 May 1949, authorizes flight pay for rated members of the reserve components not in active status but in an inactive-duty-training pay status or drill status and who is required to participate regularly and frequently in aerial flights by competent authority. Requirements are prescribed, and are in addition to any other duty or duties which may be required of such persons. The order is effective 1 June 1949.

20. Courtesy. -- We find it written into the Officers Guide -- we need to find more of it in our daily procedures. Courtesy is NOT bowing or kneeling -- it is good tempered respect for the other person.

REUBEN KYLE, JR.

CONTINENTAL AIR COMMAND
MITCHEL AIR FORCE BASE, NEW YORK

UNCLASS

IN REPLY
REFER TO:

15 April 1949

To All Officers, Airmen and Civilians of the Continental Air Command:

After three years of service with you I am leaving for Japan to assume command of our Air Forces in the Far East. To all who have served with me, first in the Air Defense Command, and now in the Continental Air Command, I wish to say a word of personal farewell. It has been an honor and a pleasure to work with you toward the accomplishment of our mutual goals. The extent to which we have succeeded has been measured by your loyalty, your hard work, your broad understanding of the job and your unselfish service.

I leave this command confirmed in the knowledge that I pass on to my successor, Lieutenant General Ennis C. Whitehead, an organization geared to carry out its responsibilities in the most creditable manner. I know that you will give him the same unstinting support and loyalty which you have accorded to me during these important post-war years of our association.

With every good wish and God bless.

Geo. E. Stratemeyer

1. Purpose.

a. This Letter prescribes standard instructions for the preparation and submission of reports reflecting the current combat readiness of USAF Reserve combat units, and to furnish:

(1) Monthly information which will aid in the determination of combat readiness of the USAF Reserve, the factors limiting such readiness, and the capabilities of the USAF Reserve in the event of an emergency.

(2) A continuous check of selected factors so that corrective action can be instituted immediately at the responsible echelon(s) of command where a deficiency develops adversely affecting combat readiness.

2. Scope. The provisions of this Letter for reporting purposes are applicable to all USAF Reserve combat units operating in connection with the AFRTC program. Reports will be submitted by USAF Reserve combat wings organized under a T/O&E as follows:

a. Report for the combat wing, reflecting the combat readiness of the wing headquarters and its assigned groups as a unit.

b. Report for the combat group as a unit, reflecting the combat readiness of the group headquarters and its assigned squadrons.

c. Report for the maintenance and supply group as a unit, reflecting the combat readiness of the group headquarters and its assigned squadrons.

d. Report for the air base group as a unit, reflecting the combat readiness of the group headquarters and its assigned squadrons.

e. Report for the medical group as a unit.

3. Responsibility. The commanding officer of each combat unit will be responsible for the accurate preparation and timely submission of the reports required herein. Reports will be based on factual data reflecting conditions as they actually exist. No change will be made in the original unit report by commanders at intermediate echelons; however, such commanders are responsible for the review and approval or disapproval of reports on all combat units under their command. Approval will be assumed unless disagreement is indicated by a remark giving the intermediate echelons' recommended index(es) with reason(s) therefor.

4. Definitions. For the purpose of the reports submitted under this Letter, the following definitions will apply:

a. Combat Wing - A combat unit consisting of a wing headquarters, headquarters squadron, and four operating groups; the combat group, the maintenance and supply group, the air base group, and the medical group.

b. Combat Unit - A classification of military force having an organization prescribed by the Department of the Air Force, the primary mission of which is one or more of the following:

(1) Destruction of enemy forces, resources, and/or installations, e.g., bombardment.

(2) Furnishing operational assistance to combat elements, e.g., troop carrier.

(3) Support of combat elements, e.g., maintenance and supply group, air base group and medical group.

c. Combat Mission - The combat mission of an organization is the specific combat task assigned, or, if no specific combat task is assigned, the task ordinarily performed by that type of organization under combat conditions.

d. Flying Units - Those USAF Reserve units organized under an appropriate T/O&E and which have flying operations as a mission, such as light bombardment and troop carrier.

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS UNCLASSIFIED

e. Nonflying Units - Those USAF Reserve units organized under an appropriate T/O&E not included in paragraph 4d, above, but whose primary mission is the support of those units.

f. T/E Aircraft - Combat aircraft utilized by a flying unit to perform the combat mission as indicated in paragraph 4c, above.

g. Combat-Ready Aircraft - A combat-ready aircraft is an aircraft which, without additional maintenance, can fly safely and carry out the combat mission of the unit. Loading of bombs, ammunition, classified equipment, or additional equipment necessary for operation in abnormal climatic zones (which can be readily installed) will not be considered in determining the combat-ready status of aircraft.

h. Aircraft on Hand - Combat aircraft physically available to a unit in the accomplishment of training for its combat mission.

i. Organized Combat Crew - A complete combat crew, organized as such and having the necessary combat position requirements of the aircraft. Organized complete crews, both trained and untrained, will be reported in this category.

j. Combat-Ready Crews - An organized crew having the necessary combat position requirements of the aircraft and considered by the unit commander as capable of performing the unit's combat mission, as defined in paragraph 4c, above. Only those crews which a commander would use for actual combat operations will be reported as combat-ready crews.

5. Preparation. The Reserve Combat-Readiness Report will be prepared monthly as of 2400 hours, local time, the last day of each month. The first line of each transmitted report will state the reports control symbol and the "as of" date.

6. Entries. The following entries will be made on this report as indicated:

a through g: by all units reporting.

h through m: by flying units only. However, these entries will not be completed in reports prepared by the wing headquarters.

n: as required by all units reporting.

a. Unit Designation. Enter the designation of the reporting unit.

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS UNCLASSIFIED

b. Location. Enter the name of the base at which the headquarters of the reporting unit is located.

c. Commanding Officer. Enter the last name of the assigned unit commander even though he may be temporarily absent from the unit on the "as of" date of the report.

d. Unit Classification. A, B or C unit, as defined by Inclosure No. 3 to Letter, Headquarters USAF, subject, "The AFRTC Program, Fiscal Year 1950," 6 May 1949. (The cited letter is included in booklet "USAF Reserve Program for F.Y. 1950.")

e. Unit Commander's Estimate of Combat Readiness. Enter the unit commander's estimate, expressed as a percentage, of the unit's state of preparedness for the execution of its combat mission, as defined in paragraph 4c, above. Equipment will not be considered when computing this estimate. Units will be considered to be 100 per cent equipped for the execution of its combat mission.

f. Authorized Personnel Assigned. Enter the percentage of authorized personnel assigned to the reporting unit. Only those assigned personnel possessing primary SSN's authorized the reporting unit will be considered. Overages in the form of surplus authorized SSN's and SSN's lacking authorization will not be included. A sample computation follows:

(1) Determine the authorized assigned personnel by primary SSN:

SSN	T/O&E Auth	Asgd Strength by Primary SSN	Auth Assigned
1024	21	18	18
0141	1	1	1
1037	20	12	12
060	8	4	4
256	0	2	0
405	5	7	5
502	1	1	1
514	0	4	0
521	0	9	0
573	1	0	0
684A	40	22	22
747D	30	45	30
750D	16	12	12
824	2	3	2
867	10	9	9
965	0	2	0
	155	151	116

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS UNCLASSIFIED

(2) Divide total of authorized assigned personnel by total of T/O&E authorization: 116 ÷ 155 = 75 per cent of authorized personnel assigned.

g. Combat Readiness of Personnel. Enter the percentage of authorized T/O&E positions filled by personnel considered combat-ready. This entry will be computed by dividing the total number of personnel in authorized duty SSN's who are qualified to perform combat duties therein by the total number of positions authorized the unit. The resulting quotient is the figure reported. Personnel will be considered combat-ready when in the opinion of the commanding officer they are fully qualified to perform in actual combat the duties to which assigned.

h. Type and Model of Aircraft. Enter the type and model of T/E aircraft available to the reporting unit.

i. Number of Aircraft on Hand. Enter the number of aircraft, by the type and model shown in paragraph 6h, above, assigned to the AFRTC for utilization by the reporting unit on the "as of" date of the report.

j. Average Number of Aircraft on Hand. Enter the average number of aircraft, of the type and model shown in paragraph 6h, above, assigned to the AFRTC for utilization by the reporting unit. To compute this, divide the number of hours aircraft were on hand by the number of hours in the reporting period. The resultant quotient will be the figure reported.

k. Average Number of Combat-Ready Aircraft. Enter the average number of combat-ready aircraft, of the type and model shown in paragraph 6h, above, for the reporting period. This entry will be computed by dividing the number of hours aircraft were combat-ready by the total number of hours in the reporting period. The resultant quotient will be the figure reported.

l. Number of Combat Crews Organized. Enter the number of complete combat crews organized within the unit for the operation of the aircraft reported in paragraph 6h, above.

m. Number of Combat-Ready Crews. Enter the number of combat-ready crews organized within the unit for the operation of aircraft reported in paragraph 6h, above.

n. Remarks.

(1) In general, this entry will consist of any factors which affect combat readiness but are not readily discernible from the data reported.

0224

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS UNCLASSIFIED

(2) Intermediate echelons will comment on corrective action initiated or to be initiated within the command with anticipated results from such action and any recommended action by higher headquarters.

7. The Index Code. Percentage entries required for items e through g, paragraph 6, will be expressed as an index code by a number from 0 through 10 in accordance with the codes listed in attachment 1.

8. Order of Transmission. Regardless of the method of transmission, entries required by paragraph 6 will be prepared in accordance with the example in attachment 2. Joint Messageform, NME Form 173, will be used. Item headings and linear identifications will not be used. Each entry will be separated by a slant (/).

9. Transmission. USAF Reserve wing commanders will consolidate and prepare the report as shown in attachment 2 and forward it to the AFRTC commander for transmission to the appropriate air force commander. Air force commanders will insure that the report reaches this headquarters, Attention: Director of Statistical Services, not later than the fifteenth calendar day of the month following the "as of" date. Transmission may be by courier, mail, or electrical means.

10. Classification. This report when completed will be classified RESTRICTED in accordance with AFR 205-1.

11. Effective Date. The provisions of this Letter become effective 1 June 1950. The first report submitted in compliance with this Letter will be prepared "as of" 30 June 1950.

12. Reports Control Symbol. The Reports Control Symbol assigned the USAF Reserve Combat-Readiness Report is CNC-CT-C1. (O&T)

ConAC REGULATION)
45-6)

HEADQUARTERS, CONTINENTAL AIR COMMAND
Mitchel Field, N.Y., 22 December 1948

USAF RESERVE
Mobilization Assignments for USAF Reserve Personnel

(This Regulation supersedes ConAC Regulation 45-6, 4 December 1947, as amended.)

1. Purpose. The purpose of this Regulation is to establish the procedure to be followed by USAF organizations in requisitioning USAF Reserve personnel for mobilization assignments in accordance with paragraph 6, AF Regulation 45-3, 8 October 1948.

2. General.

a. Mobilization assignments may not be given to a member of a T/O&E unit unless such individual is relieved from the T/O&E unit assignment.

b. Mobilization assignments will be made to Headquarters Continental Air Command and its subordinate units, in accordance with AF Regulation 45-3, 8 October 1948, to the extent of the difference between the authorized peacetime and wartime strength of Continental Air Command organizations. This numerical difference will be considered the numerical requirement as noted in paragraph 6a of AF Regulation 45-3. This headquarters will inform all Continental Air Command Table of Distribution organizations of their wartime strength requirement. Records will be maintained by Continental Air Command units to which individuals are assigned on mobilization assignment in the same manner as other major air commands.

3. Procedure. Major air commands will requisition USAF Reserve personnel directly from Continental Air Command air forces. Direct communication is authorized between air forces of this command and other major air commands in accomplishing mobilization assignments.

a. Individuals who are desired for specific assignments may be requested by name. To assure prompt and correct action on such requests, the following information should be furnished.

(1) Name of Reservist and permanent residence.

(2) MOS, grade and serial number.

(3) Desired assignment (complete designation of unit).

b. Orders and records will be forwarded from the Air Force Reserve Training Center direct to the gaining agencies, except when

directed otherwise by the major air command concerned. Information copies of orders will be furnished to the Continental Air Command air force headquarters and major air command headquarters concerned. AFRTC's will maintain a status card on each individual transferred on mobilization assignment, containing name, grade, serial number, MOS, home address, reference to order of assignment, station of assignment and date of transfer of records.

c. In the event the Continental Air Command air force cannot completely fill the requirements of other major air commands, the major air command concerned will be so informed.

d. Separate instructions will be issued on reports and reporting procedures.

e. To insure uniformity, mobilization assignment orders will conform with standard letter order, attachment 1.

4. Applicability. This publication is applicable to Regular Air Force and USAF Reserve.

SUBJECT: Mobilization Assignment

TO : Colonel John J. Doe, AO-123456, USAFR

1. Under the provisions of AF Regulation 45-3, 8 October 1948, you are hereby given a mobilization assignment to_____(organization).

2. This mobilization assignment may be changed in accordance with your desires or as determined by the headquarters to which you are given a mobilization assignment.

3. This is the assignment which you will be called upon to fill when ordered to extended active duty in the event of a national emergency.

4. It is most important that this headquarters and the unit to which this order assigns you be informed promptly of any permanent change of address.

5. You are attached to_____(organization) for flying training and for performance of such flying duties as the commanding officer thereof may deem appropriate.

ConAC REGULATION)
51-9)

HEADQUARTERS, CONTINENTAL AIR COMMAND
Mitchel Air Force Base, N.Y., 17 February 1949

FLYING TRAINING
Requirements for USAF Reserve Instructor Pilots

(This Regulation supersedes ConAC Regulation 50-1, 7 February 1947; ConAC Letter 45-1, 11 October 1946; and ConAC Letter 60-4, 28 August 1947.)

1. Purpose. The purpose of this Regulation is to establish a criteria governing the selection of personnel for duties as USAF Reserve flight instructors.

2. Responsibility. The responsibility for establishing and supervising specific qualitative and quantitative requirements for USAF Reserve flight instructors is delegated to ConAC air force commanders.

3. Minimum Requirements. It is suggested that the minimum requirements for USAF Reserve instructor pilots be no less than the minimums listed below; however, these requirements may be altered at the discretion of the Air Force Commander to meet existing circumstances.

a. Five hundred hours total pilot time. This will include flying time as aviation cadet.

b. Trainer type aircraft:

(1) T-6 — Fifty hours total pilot time in this type aircraft.

(2) T-7 or T-11 — One hundred hours total pilot time in multi-engine aircraft, of which fifty hours will be in the T-7 and/or T-11 type aircraft.

c. Tactical type aircraft:

(1) B-26 — Two hundred hours total pilot time in multi-engine aircraft, of which one hundred hours shall be in this type aircraft.

(2) C-46 or C-47 -- Two hundred hours total pilot time in multi-engine aircraft of which one hundred hours shall be in the type aircraft for which instructor pilot is being qualified

4. Instructor Pilots. a. Pilots meeting the requirements established for instructor pilots by their appropriate air force commanders, upon demonstration of their proficiency as instructor pilots to the satisfaction of the AFRTC commander or his authorized representative, will be designated

on orders as such in accordance with AF Regulation 60-7, 1 October 1945, as amended.

b. USAF Reserve pilots in an inactive duty status who meet the requirements for instructor pilots may be designated and placed on orders as such in accordance with AF Regulation 60-7.

5. General. It is of paramount importance that the best qualified personnel be selected as instructor pilots to insure that the highest quality of instruction possible is given rated USAF Reserve personnel.

6. Applicability. This publication is applicable to Regular USAF and USAF Reserve. (CR 353)

FLYING TRAINING
Minimum Requirements for Check-Out in C-47 Aircraft

(This Regulation amends ConAC Regulation 51-10, 2 March 1949.)

* * * * * *

3. Prerequisite Requirements. Air Force Reserve pilots, prior to undertaking C-47 transition, will be required to have accomplished the following:

a. A minimum of two hundred hours of multi-engine flight time of which at least eight hours first pilot time will have been accomplished within the previous three months in trainer type aircraft and/or twin-engine cargo type aircraft, or

b. A minimum of twenty hours first pilot time within the previous six months in trainer type aircraft and/or twin engine cargo type aircraft of which at least eight hours first pilot time will have been accomplished within the previous three months.

c. Where twin-engine trainer type aircraft are assigned for Air Force Reserve training, it is suggested that the requirements prescribed in paragraphs 3a and 3b be accomplished in T-7 and/or T-11 aircraft.

CONAC REGULATION)
51-10)

HEADQUARTERS CONTINENTAL AIR COMMAND
Mitchel Air Force Base, N.Y., 2 March 1949

FLYING TRAINING
Minimum Requirements for Check-out in C-47 Aircraft

1. Purpose. This Regulation establishes minimum requirements governing the checkout procedure in C-47 type aircraft for USAF Reserve pilots while on inactive duty.

2. Responsibility. All commanders are charged with the responsibility for proper supervision and screening necessary to insure compliance with the minimum requirements prescribed herein.

3. Prerequisite Requirements. USAF Reserve pilots, prior to undertaking C-47 transition, will be required to be checked out in the T-6, T-7, and/or T-11 type aircraft and have at least twenty (20) hours first pilot time within the previous six months of which a minimum of eight (8) hours first pilot time will have been obtained within the previous three months. Where twin-engine trainer type aircraft are available, the above requirements will be accomplished in T-7 and/or T-11 type aircraft.

4. Pilot Training. Pilot transition training will be accomplished by phases as indicated below. The air force or the Air Force Reserve Training Center commander will increase the minimum required hours of transition instruction under each phase in any case where the individual requires further instruction to attain the desired standard of proficiency.

a. Minimum training requirements for check-out in the C-47 by phases:

(1) Phase I - C-47 Orientation.

(a) Minimum of five (5) hours of ground instruction to attain proficiency in the following:

1. Visual preflight inspection and servicing.

2. Landing gear operation.

3. Fuel system.

4. Propeller.

5. Electrical system.

6. Brake system.

7. Hydraulic system.

8. Controls.

9. Flaps.

10. Engines.

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS UNCLASSIFIED

11. Oil system.

12. Engine and flight instruments.

13. Communications equipment.

14. Emergency procedures.

15. Restricted maneuvers.

16. Engine starting, operating and stopping.

17. Taxiing procedures.

18. Run-up procedures.

19. Take-off, landing and go-around procedures.

20. Power settings and maximum speeds.

21. Stalls and unusual positions.

22. Single engine procedures.

23. Ditching and bail out procedures.

(b) A written questionnaire on the subjects enumerated in paragraph 4a(1)(a), above, such as the suggested questionnaire in attachment 1, will be completed satisfactorily by each USAF Reserve pilot and filed in his AF Form 5 prior to advancing to Phase II.

(2) Phase II - C-47 Transition. Minimum of fourteen (14) hours flight transition in the C-47, and necessary number of flying hours to attain proficiency in the following prior to check-out:

(a) Orientation, familiarization and blindfold check of cockpit - 1 hour.

(b) Engine starting, operating and stopping procedures - 1 hour.

(c) Taxiing, take-off, landing and go-around procedures - 10 hours.

(d) Cross wind landings and simulated single engine landings - 1 hour.

(e) Air work to include instrument flights, stalls, unusual positions, single engine operations and emergency procedures - 3 hours.

b. ConAC air force commanders or Air Force Reserve Training Center commanders may waive the minimum hour requirements for each training phase established in paragraphs 4a(1) and 4a(2), in cases where USAF Reserve pilots have had previous experience in C-47 type aircraft and can satisfactorily demonstrate their ability to pilot the aircraft.

C-47 QUESTIONNAIRE

The following questions are of the multiple choice type, except where otherwise indicated. Circle the statement which most correctly answers the question.

1. Sitting in the pilot's seat and looking at the pedestal the following would be in order from left to right:

   a. Throttles, prop pitches and mixture.
   b. Prop pitches, throttles, and mixture.
   c. Prop pitches, mixture, and throttles.

2. The correct procedure for lowering the gear of a C-47 is:

   a. Move hydraulic gear handle down, wait for pressure to build up to at least 500 pounds, return hydraulic gear handle to neutral and lock positive latch on floor.
   b. Move hydraulic gear handle down, lock positive latch on floor, wait for pressure to build up to 750 pounds and return handle to neutral.
   c. Lock positive latch on floor, move hydraulic gear handle down, wait for pressure to build up and return hydraulic gear handle to neutral.

3. The C-47 has a hydraulic pump selector valve on the hydraulic panel. Choose which of the following is true:

   a. When the handle is straight up and down the left engine pump furnishes system pressure.
   b. When the handle is in the diagonal position the left engine pump furnishes system pressure.

4. The C-47 has tail wheel lock, which two (2) of the following is true?

   a. The aircraft may be turned with the tail wheel locked without damaging the equipment.
   b. The lock is located under the pedestal directly under the throttles.
   c. The tail wheel is locked when the handle is in the forward position.
   d. The tail wheel is locked when the handle is in the back position.

5. The C-47 has two fuel selector valves, one on each side of the pedestal. Which of the following is true?

   a. The left engine may draw fuel from only the two left tanks and the right engine may draw fuel from only the two right tanks.
   b. The left engine may draw fuel from any one of the four tanks, and the right engine may draw fuel from any one of the four tanks.

6. On take-off the first power reduction is made:

   a. Immediately after breaking ground.
   b. Immediately after the gear comes up and the airspeed is 100MPH.
   c. After the gear comes up and airspeed reaches 120 MPH.

7. The control handle for inflating the wing de-icer boots is located:

   a. Immediately behind the co-pilot's seat.

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS UNCLASSIFIED

b. Located to the left of the Bendix Control Box on the switch panel.
c. Immediately behind the pilot's seat.

8. Prior to starting engines, your landing gear pressure should be at least_____PSI before placing landing gear hydraulic level in neutral position.

9. After you are certain you have the wheel chocks in place, you release your brakes and spread your landing gear hydraulic handle and flap level handle for what reasons?

a. So you won't trip on the way out.
b. To release hydraulic pressure in the lines to allow for temperature change.
c. To relieve the pressure in the pressure accumulator.
d. To hold pressure in these hydraulic systems.

10. On take-off cowl flaps are in:

a. Trail position.
b. Open position.
c. Closed position.

11. If the engines are turning 2000 RPM, generators are on. With no indication on ammeter, the:

a. Cut-out relay is out.
b. Generators need to be paralleled.
c. Batteries are not charged.

12. If you are climbing and notice trail buffeting:

a. The flaps are down.
b. The cowl flaps are open.
c. The propellers are out of synchronization.
d. The landing gear is down.

13. Recommended maximum speed for lowering flaps is:

a. 140 MPH.
b. 120 MPH.
c. 112 MPH.
d. 150 MPH.

14. Maximum speed for lowering gear is:

a. 120 MPH.
b. 190 MPH.
c. 160 MPH.
d. 180 MPH.

15. Traffic pattern should be flown at what recommended airspeed?

a. 110 MPH.
b. 120 MPH.
c. 130 MPH.
d. 140 MPH.

0245

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS UNCLASSIFIED

16. The average C-47 with power off, full flaps, gear down, and grossing 26,000 pounds will stall out at:

a. 55-60.
b. 60-65.
c. 65-70.
d. 70-75.

17. Normal fuel consumption is 90 to 100 gallons per hour.

a. True.
b. False.

18. The maximum HP rating on take-off is:

a. 900 HP.
b. 1050 HP.
c. 1200 HP.
d. 1400 HP.

19. Maximum manifold pressure at sea level is:

a. 45 inches.
b. 48 inches.
c. 51 inches.
d. 42 inches.

20. Desired manifold pressure at 2050 RPM for cruising is:

a. 20 inches.
b. 28 inches.
c. 33 inches.
d. 40 inches.

21. Desired manifold pressure at 2350 RPM for climb is:

a. 30 inches.
b. 33 inches.
c. 38 inches.
d. 40 inches.

22. Maximum continuance RPM & manifold pressure is:

a. 2700 RPM -- 45 inches.
b. 2550 RPM -- 40 inches.
c. 2700 RPM -- 40 inches.
d. 2550 RPM -- 45 inches.

23. On checking magnetos at 30 inch manifold pressure - RPM should be at least:

a. 2700 RPM.
b. 2500 RPM.
c. 2350 RPM.
d. 2230 RPM.

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS UNCLASSIFIED

24. If the left engine fails, what position of hydraulic selector handle operates your landing gear, landing flaps, cowl flaps, and brakes?

a. Vertical or to rear.
b. Diagonal or to front.

25. The marker beacon is turned on only by turning on the inverter.

a. True.
b. False.

26. Each engine is equipped with a heating unit.

a. True.
b. False.

27. Normal operating range for fuel pressure is:

a. 14 to 16 pounds.
b. 12 to 17 pounds.
c. 16 to 22 pounds.

28. The landing gear hydraulic pressure should be at least 500 PSI before locking the mechanical latch.

a. True.

b. False.

29. Each oil system incorporates an oil tank having a capacity of 29 (U.S.) gallons.

a. True.
b. False.

30. You do not turn on your airplane battery switches when using a battery cart because:

a. It doesn't make a difference.
b. It will run down the airplane battery.
c. It will overcharge the batteries.
d. It may cause your radios to burn out.

31. On your indicators (instruments) green markers indicate normal operating range; red markers indicate maximum or minimum limits of safe operation and the white-lines are guides for correct position of cover glasses.

a. True.
b. False.

32. 200 PSI is needed to extend and lock the landing gear.

a. True.
b. False.

33. At high manifold pressures the maximum cylinder head temperature should not exceed:

0247

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS UNCLASSIFIED

a. 120°C.
b. 200°C.
c. 280°C.
d. 260°C.

34. During engine warm-up, do not allow engine cylinder head temperature to exceed:

a. 150°C.
b. 180°C.
c. 232°C.
d. 255°C.

35. There are two emergency escape hatches on each side of the fuselage on the C-47.

a. True.
b. False.

36. On single engine the C-47 will maintain 110 MPH with gear and flaps down according to the T.O.

a. True.
b. False.

37. The auto pilot should not be used at less than___MPH above stalling speed.

a. 20 MPH.
b. 30 MPH.
c. 40 MPH.
d. 50 MPH.

38. Normal oil temperature is:

a. 40° to 60°C.
b. 60° to 110°C.
c. 80° to 110°C.
d. 60° to 75° C.

39. In the carburetor anti-icing system "Wom" position stands for momentary operation.

a. True.
b. False.

40. The C-47 does not have a starter hand crank and gear box for emergency starting.

a. True.
b. False.

41. Pilots hand book for C-47 type planes is AN-CH-400-39-1.

a. True.
b. False.

42. Normal filter position for take-off is "Filtered Air."

a. True.
b. False.

0248

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS UNCLASSIFIED

43. Gross weight for take-off is:

a. 27,600 pounds.
b. 26,500 pounds.
c. 25,500 pounds.
d. 31,000 pounds.

44. Maximum gross weight for landing is:

a. 24,000 pounds.
b. 25,700 pounds.
c. 26,000 pounds.
d. 27,000 pounds.

45. The C-47 has how many gas tanks and holds a total of how many gallons?

a. 4 tanks --708 gallons.
b. 6 tanks --708 gallons.
c. 4 tanks --804 gallons.
d. 6 tanks --1000 gallons.

46. The engine nacelle fire extinguisher controls are located:

a. In the radio compartment.
b. On the floor between the pilot and co-pilot seats.
c. In the cabin on the left side.
d. Near the main door.

47. It is the pilot's responsibility to give the airplane a visual inspection prior to starting the engines.

a. True.
b. False.

48. On single engine operation you should maintain a minimum of:

a. 85 MPH.
b. 95 MPH.
c. 110 MPH.
d. 125 MPH.

49. In landing during a single engine operation, lower the gear and use your flaps:

a. As in a normal manner.
b. When you are on the final approach and are certain you can make a landing.
c. On the base leg.
d. On the down wind leg.

50. Normal operating range for oil pressure is:

a. 75-90 PSI.
b. 40-70 PSI.
c. 60-110 PSI.
d. 40-110 PSI.

CONAC REGULATION)
123-1)

*ConACR 123-1
1-3
HEADQUARTERS CONTINENTAL AIR COMMAND
Mitchel Air Force Base, New York, 16 Mar 1950

AIR INSPECTOR

Inspection of USAF Reserve Training Program

	Paragraph
Purpose	1
Responsibility	2
Organized Air Reserve	3
Reports Control Exemption	4

1. Purpose. The purpose of this Regulation is to provide for uniformity of inspection of the USAF Reserve training program within the Continental Air Command.

2. Responsibility. Inspection of the mobilization assignment training and of the headquarters and units of the Organized Air Reserve is the responsibility of the Continental Air Command air force to which the mobilization assignment personnel and the units are assigned.

3. Organized Air Reserve. a. Mobilization Assignments. Inspection of this phase of the USAF Reserve training program will be conducted concurrently with the annual air inspection and the quarterly inspections of the headquarters or unit to which such USAF Reserve personnel are assigned. Observation of the actual training of mobilization assignees will be made to the greatest extent possible. The inspection will include but will not be limited to the following:

(1) Assignment of best qualified eligible Reservists.

(2) Adherence to prerequisites for mobilization assignment.

(a) Member of Organized Air Reserve or Volunteer Air Reserve.

(b) Participation in USAF Reserve program.

(c) Within age-in-grade requirements.

(d) Professionally qualified.

(e) Physically qualified.

(3) Quality of group and individual training.

(4) General administration to include:

(a) Pay.

(b) Maintenance of records.

(c) Retention of assignees in the Organized Air Reserve.

b. Units (AFRTC and Corollary Program).

(1) Units of the Organized Air Reserve will be given the same annual air inspection as comparable organizations of the Regular United States Air Force. A separate written report

*This Regulation supersedes ConAC Regulation 123-1, 9 August 1949 L-50-256

UNCLASSIFIED

for each unit will be addressed through appropriate command channels to the commander ordering the inspection. This report will be forwarded through USAF Reserve command channels to the USAF Reserve wing, thence to the AFRTC or parent wing (Corollary program) and thence through regular command channels.

(2) Inspections will be conducted with the least possible interference with the training of the unit.

(3) Quarterly inspections will be conducted by air inspection personnel of the parent organization (AFRTC or tactical wing).

(4) The inspection of a wing or group is complete only when each subordinate unit has been inspected.

(5) Each subordinate unit will be inspected immediately prior to the inspection of the parent organization to the extent possible consistent with paragraph 3b(6), below.

(6) All inspections will be conducted during unit training assemblies.

4. Reports Control Exemption. The inspection reports required by this directive are exempt from reports control procedures in accordance with paragraph 9a(4), AFR 174-1. (IG)

INTRODUCTION

THE PURPOSE OF THE CONAC MANAGEMENT ANALYSIS REVIEW IS TO PROVIDE COMMANDERS AND THEIR STAFFS EACH MONTH WITH ANALYSES AND SELECTED DATA WHICH, WHEN PROPERLY INTERPRETED, WILL INDICATE ACHIEVEMENT WITHIN SPECIFIC FUNCTIONS OF THEIR ACTIVITY.

IT IS INTENDED THAT THIS REVIEW PRESENT FACTS IN SUCH A MANNER THAT COMMANDERS AND THEIR STAFFS CAN EVALUATE THE CONSISTENCY OF THEIR OPERATING ACTIONS, THE EFFICIENT AND ECONOMICAL USE OF RESOURCES AND THE PROGRESS OF THEIR VARIOUS ACTIVITIES TOWARD AUTHORIZED OBJECTIVES.

THE CONTENTS OF THIS REVIEW WILL VARY FROM MONTH TO MONTH. THIS WILL PERMIT GREATER COVERAGE OF COMMAND ACTIVITIES AND CONCENTRATION ON CURRENT ITEMS OF COMMAND INTEREST.

THE PRESENCE OF EXTREME CONDITIONS ARE READILY APPARENT TO COMMANDERS WHEN PROPERLY SHOWN IN GRAPHIC PRESENTATIONS. MANY OF THE EXTREME CONDITIONS INDICATED HEREIN MAY BE JUSTIFIED BY LOCAL SITUATIONS AND THE NATURE OF ASSIGNED MISSIONS. THESE ANALYSES, HOWEVER, SERVE AS A GUIDE TO AREAS AND ACTIVITIES WHERE FURTHER INVESTIGATIONS AND CORRECTIVE ACTIONS MAY RESULT IN BETTER MANAGEMENT.

THE ANALYSES CONTAINED HEREIN HAVE BEEN DERIVED FROM INFORMATION AS REPORTED TO THIS HEADQUARTERS.

EXPLANATION OF GRAPHIC PRESENTATION ON

TOTAL COST OF CONTINENTAL AIR COMMAND BY FUNCTIONAL GROUPING - MONTHLY DISTRIBUTION

The following activities are included in the functional groupings as shown on the chart:

COMMAND GROUP

Hq & Hq Sq, Continental Air Command
Hq & Hq Sq, Tactical Air Command
Hq & Hq Sq, Air Defense Forces
Hq & Hq Sq, ConAC Air Forces
Hq & Hq Sq, Air Divisions (Defense)
2220th Field Printing Plant (May through December 1950)
2220th Extension Group, Less Extension Course Activity (January through April 1950)
Hq & Hq Sq, Combat Wings

OPERATIONS GROUP

Combat - Total Operating Costs of Fighter Groups, Troop Carrier Groups, Tactical Recon Group, Bomb Squadrons (L), Assault Squadron.
Combat Support - Total Operating Costs of Liaison Squadrons and Flights, Aircraft Control and Warning Units, Tactical Control Groups, Shoran Beacon Unit.

SERVICE GROUP

Total operating costs of ConAC organizations less those included in Command, Operations and other Mission Groups.

OTHER MISSION GROUP

Air Force Reserve (AFRTC's only)
Air National Guard (includes Instructor Personnel)
Air ROTC (includes Instructor Personnel)
Air Explorer Liaison
Air Force Overseas Replacement Groups
All other (minor activities including Military Liaison Personnel with Army, Navy and other agencies)
Extension Course Activity of 2220th Extension Group (January through April 1950)

ADDITIONAL CHARGES

Cost of excess personnel and recruits awaiting shipment, APCRG Casuals, Detachment of Patients, Lump Sum Payments, reenlistment bonuses, initial issue of clothing, PCS, Supplies and Services furnished others, parts to salvage, extraordinary repairs and condemned inventory.

COMMENT

AN OVERALL INCREASE IN COSTS OF $964,126 FOR MARCH OVER FEBRUARY IS INDICATED. INCREASES ARE NOTED IN ALL FUNCTIONS WITH THE EXCEPTION OF ADDITIONAL CHARGES WHERE A DECREASE OF $266,000 HAS OCCURRED. THE MAJOR INCREASE OF $634,000 APPEARS IN THE OPERATIONS GROUP WHICH IS MAINLY ATTRIBUTED TO AN INCREASE IN FLYING AND THE COST OF FUELS AND LUBES ($499,433) FOR SPECIAL OPERATIONS SUCH AS PORTREX AND SWEETBRIAR.

EXPLANATION OF GRAPHIC PRESENTATION ON

COSTS OF OFFICE OF THE DEPUTY FOR PERSONNEL

HQ CONAC AND HQ CONAC AIR FORCES

This chart depicts the total cost (payroll, supplies and services), for the staff group supervised by the Office of the Deputy for Personnel, for Hq ConAC and Hq ConAC Air Forces, as follows:

DEPUTY FOR PERSONNEL

Costs of the Assistant Deputy, Administrative Division, WAF Staff Director, Director of Personnel Planning and Management (Account Code 20203).

DIRECTOR OF MILITARY PERSONNEL PROCUREMENT

Costs of Officer Procurement Division, Airmen Procurement Division, Selective Service Division, Advertising and Publicity Division (Account Code 20221).

DIRECTOR OF CIVILIAN PERSONNEL

Costs of Classification and Wage Administration Division, Employee Utilization Division (Account Code 20229).

AIR JUDGE ADVOCATE

Costs of Administrative Division, Military Justice Division, Military Affairs Division, Legal Assistance Division, Reserve Division, Training Division (Account Code 20209).

GROUND SAFETY DIVISION

Costs of Ground Safety Division (Account Code 20223).

DIRECTOR OF PERSONNEL SERVICES

Costs of Special Services Division, Non-Appropriated and Sundry Funds Division, Information and Education Division, Library Division (Account Code 20217).

DIRECTOR OF MILITARY PERSONNEL

Costs of Classification and Utilization Division, Officers Division, Airmens' Division (Account Code 20227).

DIRECTOR OF AIR FORCE ROTC

Costs of Training and Research Division, Requirements Division, the costs of field personnel are excluded (Account Code 21009, less 21009.01, AFROTC (field)).

AIR CHAPLAIN

Costs of Administrative Division, Professional Service Division, Projects and Requirements Division (Account Code 20211)

Costing of staff activities is in accordance with ConAC Ltr 170-1 and ConAC Ltr 170-7.

COMMENT

COST OF THE DIRECTORATE OF MILITARY PERSONNEL, HQ FOURTH AIR FORCE, AND COSTS OF THE DIRECTORATE OF PERSONNEL SERVICES AND THE GROUND SAFETY DIVISION, HQ TWELFTH AIR FORCE APPEAR TO BE OUT OF LINE WITH COSTS OF SIMILAR ACTIVITIES IN OTHER AIR FORCE HEADQUARTERS.

THE TOTAL COST FOR THE DEPUTY FOR PERSONNEL HAS SHOWN A GENERAL INCREASE SINCE FEBRUARY 1950 RANGING FROM $162 AT HQ TWELFTH AIR FORCE TO $2,161 AT HQ FIRST AIR FORCE (HQ NINTH AIR FORCE REPORTED A DECREASE OF $277).

EXPLANATION OF GRAPHIC PRESENTATION ON

COSTS OF OFFICE OF THE DEPUTY FOR OPERATIONS

HQ CONAC AND HQ CONAC AIR FORCES

This chart depicts the total cost (payroll, supplies and services), for the staff group supervised by the Office of the Deputy for Operations, for Hq ConAC and Hq ConAC Air Forces, as follows:

DEPUTY FOR OPERATIONS

Costs of Assistant Deputy and the Operations Analysis Division (Account Code 20303, less 20303.01).

DIRECTOR OF PLANS, ORGANIZATION AND REQUIREMENTS

Costs of Plans Division, Organization Division, Mission Requirements Division (Account Code 20307).

DIRECTOR OF COMMUNICATIONS AND ELECTRONICS

Costs of Plans and Policy Division, Electronics Systems Division, Communications Systems Division (Account Code 20315).

DIRECTOR OF OPERATIONS AND TRAINING

Costs of Operations Division, Training Division, Armament Division (Account Code 20305).

DIRECTOR OF INTELLIGENCE

Costs of Intelligence Requirements Division, Photo Intelligence Division, Intelligence Doctrine Division, Intelligence Estimates Division (Account Code 20311).

DIRECTOR OF CIVIL AIR DEFENSE

Costs of Directorate of Civil Air Defense (Account Code 20303.01).

Costing of staff activities referred to is in accordance with ConAC Ltr 170-1 and ConAC Ltr 170-7.

COMMENT

COST OF DIRECTORATE OF INTELLIGENCE, HQ FIRST AIR FORCE, REFLECTS LOW COST IN COMPARISON TO SIMILAR ACTIVITIES AT OTHER REPORTING HEADQUARTERS.

TOTAL COST OF THE OFFICE OF THE DEPUTY FOR OPERATIONS AT HQ CONAC, AND HQ TENTH, TWELFTH AND FOURTEENTH AIR FORCES, INDICATES A COST INCREASE OVER FEBRUARY 1950 RANGING FROM $111 AT HQ TWELFTH AIR FORCE TO $3,490 AT HQ FOURTEENTH AIR FORCE. THE LATTER AIR FORCE HOWEVER, IS RESPONSIBLE FOR THE SUPERVISION AND TRAINING OF FOUR COMBAT GROUPS, FOUR AFRTC'S AND TWO SEPARATE COMBAT SQUADRONS, TOGETHER WITH A HEAVY MANEUVER COMMITMENT.

HQ FIRST, FOURTH AND NINTH AIR FORCES REPORT DECREASES OF $641, $491 AND $417, RESPECTIVELY.

EXPLANATION OF GRAPHIC PRESENTATION ON

COSTS OF MAJOR STAFF GROUPS HQ CONAC AND HQ CONAC AIR FORCES

The total costs (payroll, supplies and contractual services) of the following staff activities are included in the major staff groups as shown on the chart:

COMMANDING GENERAL

Commanding General
Vice Commander
Assistant for Reserve Forces
Assistant to the Vice Commander
The Manpower Evaluation Board

AIR ADJUTANT GENERAL

Air Adjutant General
Director of Publications
Director of Administration
Director of Historical Services

AIR SURGEON

Air Surgeon

INSPECTOR GENERAL

Inspector General
Air Inspector
Air Provost Marshal

PUBLIC INFORMATION OFFICER

Public Information Officer

COMPTROLLER

Comptroller
Director of Programs and Costs
Director of Statistical Services
Director of Budget
Director of Audits
Director of Finance

DEPUTY FOR PERSONNEL

Deputy for Personnel
Ground Safety Division
Air Chaplain
Air Judge Advocate
WAF Staff Director
Director of Personnel Planning and Management
Director of Military Personnel
Director of Military Personnel Procurement
Director of Civilian Personnel
Director of Personnel Services
Director of Air Force ROTC

DEPUTY FOR OPERATIONS

Deputy for Operations
Director for Operations and Training
Director of Plans, Organization & Requirements
Director of Communications & Electronics
Director of Intelligence
Director of Civil Air Defense

DEPUTY FOR MATERIEL

Deputy for Materiel
Director of Materiel Planning
Director of Maintenance, Supply & Services
Director of Installations

Costing of staff activities referred to is in accordance with ConAC Ltr 170-7.

COMMENT

COSTS OF THE DEPUTY FOR MATERIEL, HQ TWELFTH AIR FORCE ARE NOT IN LINE WITH COSTS OF SIMILAR ACTIVITY IN OTHER AIR FORCE HEADQUARTERS, BEING $8,358 LESS THAN THE AVERAGE OF $21,829 FOR ALL HQ CONAC AIR FORCES.

EXPLANATION OF TABULAR PRESENTATION

ANALYSIS OF HEADQUARTERS COSTS - HQ CONAC AND HQ CONAC AIR FORCES

This presentation utilizes data reported by the various headquarters in accordance with ConAC Letter 170-7, 25 January 1950; items 2 through 10 are reported as described in paragraph 3, and item 11 is reported as set forth in paragraph 4. The Cost of the Headquarters Groups includes military and civilian pay of the major staff group indicated. Headquarters costs per person assigned were computed utilizing military totals of the ConAC Personnel Report for units comparable to the Headquarters for whom costs are shown. ConAC cost per military person assigned was computed utilizing overall command strength which includes Headquarters ConAC as well as each Air Force. Heavy figures indicate the staff section having the highest cost per unit of workload selected for this study. Undistributed Headquarters costs include costs applicable to the Headquarters such as costs of Hq Sq. Adm. Overhead, Hq Flight Section, Motor Pool, Personnel Without Duty Assignment, Prisoners, Rental Allowances paid, Laundry and Dry Cleaning, Hq Messing Facilities, Separate Rations paid airmen, Replacment issues of clothing, Janitor and Office Supplies, Communications, TDY costs, Overtime, Rental for leased facilities.

COMMENT

HQ TWELFTH AIR FORCE CONTINUES GENERALLY TO SHOW THE HIGHEST STAFF COST PER PERSON ASSIGNED. THIS CAN BE ATTRIBUTED TO STAFFING IN NUMBER AND GRADES OF PERSONNEL WHICH EXCEEDS THAT OF OTHER AIR FORCES FOR THE NUMBER OF MILITARY PERSONNEL ASSIGNED. HEADQUARTERS TENTH AIR FORCE SIMILARLY REFLECTS THE HIGHEST STAFF COST PER PERSON ASSIGNED TO THE DEPUTY FOR MATERIEL ACTIVITY.

ALL HEADQUARTERS REPORTED AN INCREASE THIS MONTH OVER FEBRUARY, IN UNDISTRIBUTED CHARGES, RANGING FROM $6,066 AT HQ TWELFTH AIR FORCE TO $18,423 AT HQ CONAC. INCREASE ATTRIBUTED TO TDY, RENTAL ALLOWANCE PAID, MISCELLANEOUS SUPPLIES, FOOD SERVICE AND SUBSISTENCE AND PERSONNEL WITHOUT DUTY ASSIGNMENT. PERSONNEL WITHOUT DUTY ASSIGNMENT INCREASED $1,606 (FROM $2,552 IN FEBRUARY TO $4,158) AT HQ FOURTH AIR FORCE AND $3,377 (FROM $3,359 IN FEBRUARY TO $6,736) AT HQ FOURTEENTH AIR FORCE.

EXPLANATION OF GRAPHIC PRESENTATION ON

COST OF CONTRACTUAL COMMUNICATIONS - HQ CONAC AND HQ CONAC AIR FORCES

The cost of Contractual Communications reflects all payments to commercial organizations for services and includes charges for long distance telephone calls, trunk service, telegraph and cable service, teletype service, charges for rental of commercial telephone service, central office equipment, and the cost of installation of communications equipment as required.

Where commercial service for a headquarters is paid for by the base on which located, the headquarters proportionate share of contractual costs is posted to this account (20527).

The chart reflects the cost variation to date for Contractual Communications since the beginning of Fiscal Year 1950.

COMMENT

EMPHASIS WAS PLACED ON THE REDUCTION OF COSTS OF COMMUNICATION SERVICES IN SEPTEMBER 1949. THIS PRESENTATION MEASURES THE EFFECT OF THIS EMPHASIS IN HQ CONAC AND EACH HQ CONAC AIR FORCE. THERE HAS BEEN A 40% REDUCTION IN COSTS FOR ALL HEADQUARTERS DURING THE NINE MONTHS PERIOD, RANGING FROM 60% AT HQ NINTH AIR FORCE TO 1% AT HQ FOURTEENTH AIR FORCE; HOWEVER, COSTS AT HQ FOURTEENTH AIR FORCE, PRIMARILY THOSE OF TRUNK AND TELEPHONE SERVICE HAVE INCREASED SINCE NOVEMBER. COSTS AT HQ CONAC, PRIMARILY THOSE OF LONG-DISTANCE TELEPHONE CALLS, INCREASED $366 IN FEBRUARY AND THE COST OF TELEPHONE AND EQUIPMENT SERVICE INCREASED $143 IN MARCH.

EXPLANATION OF GRAPHIC PRESENTATION ON

COST OF TEMPORARY DUTY TRAVEL - Hq CONAC AND Hq CONAC AIR FORCES

This chart indicates the trend of Temporary Duty travel costs for Hq ConAC and Hq ConAC Air Forces. Expenditures shown include those from both specific and open allotments and include the cost of Per Diem, Rail Transportation of persons and things, meal tickets and minor expenditures (liquid coffee money, taxi fares and porter's tips), for civilian and military personnel traveling on official business (Account Code 20529). Specific allotments provide for travel in conjunction with the following: Ferrying of Air Force, Air Force Reserve and Air National Guard aircraft, Operation of installations, area cadet recruitment, air combat manuevers, individual or group movements for attendance at schools, travel in conjunction with the Air Force ROTC instruction program at civilian institutions, and summer encampments of Air Force ROTC and Air National Guard. Open allotments normally cover costs incident to travel and per diem of civilian witnesses in connection with courts-martial, travel of medical attendants and escort of military dead to the place of burial. Although cost figures include adjustments over obligations, it is believed that totals for a three month period are comparable.

COMMENT

SINCE THE ACCOMPLISHMENT OF TDY TRAVEL IS CONTINUOUSLY UNDER THE INFLUENCE OF FUND LIMITATIONS, THE INCREASE IN TDY TRAVEL COSTS FOR THE PERIOD 1 JANUARY TO 31 MARCH (3RD QUARTER FY 50) COMPARED WITH THE PRIOR THREE MONTHS, REFLECTS THE INCREASED AVAILABILITY OF FUNDS AFTER THE REMOVAL OF LIMITATIONS ON EXPENDITURES DURING THE 2ND QUARTER. INCREASE IN TOTAL EXPENDITURES WAS $92,000, AN INCREASE OF 54%. MAJOR INCREASES IN COST DURING THE 3RD QUARTER AS COMPARED TO THE 2ND QUARTER OCCURED IN Hq CONAC ($30,000 - 125%), HQ FOURTH AIR FORCE ($18,000 - 106%), HQ NINTH AIR FORCE ($18,000 - 106%) AND HQ FOURTEENTH AIR FORCE ($23,000 - 115%). DURING THIS PERIOD, OPERATION PORTREX WAS IN EFFECT.

EXPLANATION OF GRAPHIC PRESENTATION ON

RELATIVE WORK PERFORMANCE OF SQUADRON ADMINISTRATIVE OVERHEAD

The costs include the combined costs of squadron administrative functions for the following units and/or activities: Hq and Hq Squadrons of Wing Organizations, Air Base Groups (Separate), AFRTCs, Air Base Squadrons (Separate), Aircraft Control and Warning Organizations (Special Mission Group B), Liaison Flights, Fighter and Bomber Squadrons (Separate), and Standby Base Squadrons (Account Code 01020); Hq and Hq Squadrons of Air Base Groups when a component of Wing Organizations (Account Code 02013); Communications Squadrons, Motor Vehicle Squadrons, Installation Squadrons, Air Police Squadrons, Food Service Squadrons, Air Base Service Squadrons, Installation Squadrons, and Air Base Groups (Separate), except Medical Squadrons (Account Code 02014); Maintenance Squadrons of M&S Groups of Wing Organizations and the maintenance activities of M&S Squadrons of Air Base Groups (Separate), (Account Code 05012); Supply Squadrons of M&S Groups of Wing Organizations and the supply activities of M&S Squadrons of Air Base Groups (Separate), (Account Code 05014); Mission Units - Combat Squadrons, Operations Squadrons of Aircraft Control and Warning Groups (Special Mission Group B); Operating companies of Engineer Aviation Battalions (Special Mission Group B) and Operating Squadrons of Air Base Groups (Separate), (Account Code 07014).

The work performance is determined by dividing the total costs of the above mentioned activities by the total military personnel of these organizations (except major or intermediate command headquarters), and applying the results in the formula below:

$$\frac{\text{United States Air Force Standard Cost}}{\text{Actual Cost of Base Activity}} \times 100 = \text{Work Performance Rating}$$

The ConAC Standard Cost for these functions is $8.75 for bases having a military strength over 500 and $4.75 for bases with a population under 500.

COMMENT

AT MEMPHIS, THE AVERAGE COST PER PERSON IN THE FUNCTION OF $181 FOR MARCH 1950 COMPARED WITH AN AVERAGE COST OF $137 IN MAY 1949 REPRESENTS AN INCREASE OF 40%. THE NUMBER OF PERSONS IN THE FUNCTION INCREASED FROM 9 TO 24 WHILE THE NUMBER OF PERSONS SERVICED INCREASED LESS THAN 20% FOR THE PERIOD MAY 1949 TO MARCH 1950. THERE APPEARS TO BE AN EXCESSIVE NUMBER OF PERSONS IN THE FUNCTION AS COMPARED TO SIMILAR TYPE BASES.

HENSLEY FIELD REPORTS A RATING OF 324 AND A COST PER PERSON SERVICED OF $2.78. ANALYSIS SHOWS THAT THE COST PER PERSON IN THE FUNCTION INCREASED FROM $115 IN MAY 1949 TO $180 IN MARCH 1950 AN INCREASE OF 57%. DESPITE THIS INCREASE IN COST, A DECREASE IN THE NUMBER OF PERSONS IN THE FUNCTION (FROM 11 TO 8) AND AN INCREASE IN THE NUMBER OF PERSONS SERVICED, (387 IN MAY 1949, 518 IN MARCH 1950) ARE RESPONSIBLE FOR THE HIGH WORK PERFORMANCE RATING. ON A RATIO BASIS, DOBBINS, FLOYD BENNETT, GODMAND AND MEMPHIS HAVE EXCESSIVE NUMBERS OF PERSONNEL IN THE FUNCTION FOR A WORKLOAD COMPARABLE TO THAT AT HENSLEY.

THE OTHER EXTREME IN THIS GROUP IS AT MCGUIRE AFB WITH A LOW WORK PERFORMANCE RATING OF 67 AND A COST PER PERSON OF $13.39. ANALYSIS REVEALS THAT THE AVERAGE COST PER PERSON IN THE FUNCTION IS $181 COMPARED TO $160 IN OCTOBER 1949, OR AN INCREASE OF 13% AFTER THE CAREER COMPENSATION ACT TOOK EFFECT. THIS IS NOT EXCESSIVE. BASED ON THE POPULATION WORKLOAD THE RATIO OF PERSONS IN THE FUNCTION TO PERSONS SERVICED APPEARS TO BE HIGH IN COMPARISON WITH BASES SUCH AS SHAW, STEWART AND POPE, AND ACCOUNTS FOR THE COMPARATIVELY LOW PERFORMANCE RATING.

EXPLANATION OF GRAPHIC PRESENTATION ON

RELATIVE WORK PERFORMANCE OF COST OF ADMINISTRATION

The costs of Administration include the combined cost of the A-1, S-1, and Adjutant functions, Squadron Administrative Overhead and Military Personnel. The work performance is determined by dividing the total cost of the above three groups of activities, by the total military personnel of the base, (except major or intermediate command headquarters) and applying the results in the following formula.

$$\frac{\text{United States Air Force Standard Cost}}{\text{Actual Cost of Activity}} \times 100 = \text{Work Performance Rating}$$

COMMENT

AT BIRMINGHAM, GODMAN, MEMPHIS, AND LAWSON, LOW PERFORMANCE RATINGS ARE CAUSED BY A RELATIVELY HIGH NUMBER OF PERSONS IN THE FUNCTION FOR THE EXISTENT WORKLOAD. ON A COMPARATIVE BASIS, WORKLOADS, 50 TO 100% GREATER THAN THESE BASES, ARE ADMINISTERED BY THE SAME OR FEWER PERSONNEL AT FAIRFAX, WOLD-CHAMBERLAIN, AND FLOYD BENNETT. THIS IS A PERSONNEL ASSIGNMENT PROBLEM AND WARRANTS INVESTIGATION.

THE FACT THAT THE MAJORITY OF BASES FOR THE POPULATION GROUP 500 AND OVER SHOW WORK PERFORMANCE RATINGS WHICH ARE BELOW THOSE OF STANDARDS SET BY HQ USAF IS AN INDICATION THAT THE USAF STANDARD MAY NOT BE APPLICABLE TO CONAC UNITS BECAUSE OF DIFFERENCE IN MISSION RESPONSIBILITIES AND/OR ORGANIZATIONAL STRUCTURE.

EXPLANATION OF GRAPHIC PRESENTATION ON

RELATIVE WORK PERFORMANCE OF COMMANDER AND STAFF

The costs include the combined costs of the Commanding Officer, his Deputy and Executive, the A-1, A-2, A-3, A-4, Comptroller, Inspector General, Air Inspector, Adjutant, Public Information Officer, Hq & Hq Sq Overhead, and Expendable Supplies utilized in these activities (Account Code 01051). The work performance is determined by dividing the total Base costs of the above mentioned activities by the total military personnel of all organizations on the base (except major or intermediate command headquarters), and applying the results in the formula below:

$$\frac{\text{United States Air Force Standard Cost}}{\text{Actual Cost of Base Activity}} \times 100 = \text{Work Performance Rating}$$

COMMENT

AT LAWSON A LOW PERFORMANCE RATING OF 59 IS EXPLAINED BY THE COMPARATIVELY HIGH NUMBER OF PERSONS IN THE FUNCTION FOR THE WORKLOAD. ON A COMPARATIVE BASIS A WORKLOAD OF APPROXIMATELY TWICE THAT AT LAWSON IS ADMINISTERED BY SUBSTANTIALLY THE SAME NUMBER OR FEWER PERSONNEL IN THE FUNCTION AT WOLD-CHAMBERLAIN, ATTERBURY, FAIRFAX, BENJAMIN HARRISON, READING AND PORTLAND. THIS IS A PERSONNEL ASSIGNMENT PROBLEM AND WARRANTS INVESTIGATION.
THE FACT THAT THE MAJORITY OF BASES FOR THE POPULATION GROUP 500 AND OVER SHOW WORK PERFORMANCE RATINGS WHICH ARE BELOW THOSE SET BY HQ USAF IS AN INDICATION THAT THE HQ USAF STANDARD MAY NOT BE APPLICABLE TO CONAC UNITS BECAUSE OF DIFFERENCES IN ORGANIZATIONAL ALIGNMENT FOR THE ACTIVITY.

EXPLANATION OF GRAPHIC PRESENTATION ON

RELATIVE WORK PERFORMANCE OF SUPPLY

The costs include the combined costs of all supply activities such as (a) Supply Control, (b) Supply Warehouses, (c) Subsistence Handling, (d) Commissary Sales, (e) Purchasing and Contracting, (f) Salvage and Surplus Property, Laundry and Dry Cleaning (Account Code 05450). The work performance is determined by dividing the total costs of the base supply activity by the total number of personnel, both civilian and military of the base. In addition, if a major or intermediate command headquarters is located on the base, personnel of those commands are added. The results of the above calculation will be applied to the formula below:

$$\frac{\text{United States Air Force Standard Cost}}{\text{Actual Cost of Activity}} \times 100 = \text{Work Performance Rating}$$

Total installation personnel reported include all civilians as well as military personnel served by the supply activity. For purposes of comparison with overall USAF performance, the ConAC Average, derived from data reported during the period May 1949 through January 1950 is presented hereon.

COMMENT

IN CASES WHERE WORK PERFORMANCE RATINGS AND THE RATIO OF SUPPLY PERSONNEL TO TOTAL BASE PERSONNEL ARE BOTH LOW, AS AT MARSHALL, HANSCOM, READING, BIRMINGHAM, FLOYD BENNETT, PORTLAND AND O'HARE, THE EFFICIENCY OF THE SUPPLY ACTIVITY SHOULD BE CONSIDERED.

HIGH PERFORMANCE RATINGS AT POPE, SEWART AND BROOKS, DO NOT NECESSARILY INDICATE EFFICIENT OPERATION. IF INVESTIGATION SHOWS THAT HIGH PERFORMANCE RATINGS ARE DUE TO IMPROVED METHODS OR SYSTEMS RATHER THAN INCORRECT OR INADEQUATE REPORTING PROCEDURES, THIS HEADQUARTERS SHOULD BE INFORMED. THESE IMPROVED METHODS OR SYSTEMS WILL THEN BE AVAILABLE FOR IMPLEMENTATION THROUGHOUT THE COMMAND.

ONE FACTOR WHICH MAY HAVE AN INFLUENCING EFFECT ON THE SUPPLY RATING IS THE NUMBER OF CIVILIANS INCLUDED IN THE BASE STRENGTH: UNLESS EXCEPTIONAL CIRCUMSTANCES EXIST, ONLY A SMALL PORTION OF THE TOTAL SUPPLY FUNCTION COST IS INCREASED IN SERVICING CIVILIAN PERSONNEL.

EXPLANATION OF TABULAR PRESENTATION ON

WORK PERFORMANCE RATINGS

Presented on the facing page is a tabulation by Air Force and organization of Work Performance ratings extracted from AF Forms 323. This is designed to permit appraisal of unit efficiency relative to the USAF performance of 100. A minimum number of corrections, as indicated by notes, have been made. Due to time limitations, only a sampling audit can be performed prior to publication. With reference to the proper procedure for the accumulation of costs for Group 3, attention is invited to item 20 of Attachment 1 to ConAC Letter 170-1B.

COMMENT

THE APPLICATION OF THE USAF STANDARD TO CONAC UNITS BY STAFF ACTIVITIES SHOULD TAKE INTO CONSIDERATION MISSION RESPONSIBILITIES AND ORGANIZATIONAL DIFFERENCES WHICH AFFECT THE COST OF THE FUNCTION IN CONAC UNITS BEING EXAMINED. CONAC STANDARDS, AS THEY ARE DEVELOPED, WILL BE PRESENTED. THIS ISSUE INDICATES CONAC STANDARDS FOR SQUADRON ADMINISTRATIVE OVERHEAD. WHERE THEY ARE AVAILABLE, IT IS MORE FITTING TO CONSIDER CONAC RATHER THAN USAF STANDARDS AS THE "MEASURING STICK".

NORMALLY THE CAUSES OF DEVIATIONS INCLUDE THE FOLLOWING:

A. HIGH T/O&E STAFFING STANDARDS FOR FUNCTIONS AT BASES WHERE A SMALL WORKLOAD (PERSONNEL, MILES, LINE ITEMS) EXIST. THIS RESULTS IN HIGH COST PER UNIT OF WORKLOAD WHICH CANNOT BE READILY CONTROLLED BY THE REPORTING UNIT.

B. THE NECESSITY FOR SERVICING UNITS WHICH ARE WIDELY DISPERSED SUCH AS MAY EXIST FOR THE FUNCTIONS OF SUPPLY, OR MOTOR POOL, ABNORMALLY INCREASES THE OPERATING COST, ALTHOUGH THE WORKLOAD MAY BE COMPARABLE TO BASES WHERE THE GEOGRAPHIC FACTOR IS NOT A PROBLEM.

C. FLUCTUATIONS IN THE WORKLOAD FACTOR, SUCH AS A DECREASE, WHERE PERSONNEL ARE ON TDY, OR AN INCREASE, WHERE THE WORKLOAD IS INCREASED BY REASON OF SERVICES PROVIDED PERSONNEL TEMPORARILY ATTACHED FOR TRAINING, MANUEVERS ETC, AND THE FUNCTION NOT AUGMENTED OR REDUCED TO CONFORM TO THESE CHANGES IN WORK LOAD.

D. SERVICES PROVIDED PERSONNEL OF NON-AIR FORCE AGENCIES NOT CONSIDERED IN THE NORMAL WORKLOAD OR NOT REPORTED AS PART OF THE WORKLOAD ON THE WORK PERFORMANCE REPORT.

E. TEMPORARY UNDERMANNING OR OVERMANNING OF THE FUNCTION.

INVESTIGATIONS CANNOT BE CONDUCTED AT "DESK" LEVEL BUT MUST TAKE PLACE IN THE FIELD WHERE ACTIVITIES WHICH GENERATE COST AND OPERATING FACTORS ARE CARRIED ON.

THE 52ND FIGHTER-ALL WEATHER WING, MCGUIRE AFB, IS THE ONLY BASE REPORTING WORK PERFORMANCE RATINGS (SHOWN IN HEAVY PRINT) WHICH ARE BELOW STANDARD FOR ALL ACTIVITIES INCLUDED IN THIS SUMMARY.

EXPLANATION OF GRAPHIC PRESENTATION ON

COST OF SERVING THE RATION

This chart shows the cost of serving the ration at Continental Air Command Bases reporting Food Service, Subsistence Handling and Subsistence Costs. Costs of the Food Supervisor, Hq ConAC and Hq each numbered Air Force are not included since these functions service all units of the respective commands and do not materially affect the costs of the function described in this presentation.

The Food Service account includes the cost of the Base Food Supervisor and personnel necessary to direct and operate dining halls for airmen, the officer's mess and other central food activities such as bakeries. The Subsistence Handling account includes the costs incurred in the receipt, issue and distribution of subsistence. The Subsistence account includes the cost of the ration; this cost was not added as a cost, to the cost of serving the ration but was used as explained below. Subsistence costs of headquarters, tenant and special mission organizations as described in AF Manual 170-5 are reported under the organization providing the services, such as the Wings, Air Base Groups or Squadrons, or AFRTC's.

The number of rations served was obtained from the Commissary Operating Statement (HD AGO Form 10-133) for those bases submitting this statement. Where bases did not submit the Commissary Operating Statement, the number of rations was computed by dividing the total cost of subsistence by the ration value. If the field ration value was not available, the garrison ration value was used.

The cost of serving the ration was computed by dividing the total cost of the function (Food Service Costs plus Subsistence Handling Costs) by the number of rations served. The cost of the ration furnished is not included in costs of the function presented here, but was used to determine the number of rations served as explained above.

Averages were computed after eliminating the "extreme deviations from average" as indicated on the chart.

COMMENT

THE AVERAGE COST OF SERVING THE RATION DECREASED GENERALLY IN FEBRUARY OVER JANUARY FOR WINGS, AIR BASE GROUPS AND SQUADRONS DUE PRIMARILY TO CONSIDERABLE REDUCTIONS IN PERSONNEL IN THE FUNCTION. EXCEPTIONS EXIST AT OTIS WHERE INCREASES IN PERSONNEL AND COSTS ACCOUNT FOR A HIGHER COST PER RATION SERVED, AND AT MITCHEL AND KIRTLAND WHERE THE INCREASE IS CAUSED BY A SUBSTANTIAL REDUCTION IN THE NUMBER OF RATIONS SERVED.

NINE AFRTC'S SHOW INCREASES IN THE COST OF SERVING THE RATION. INCREASES IN PERSONNEL AND COSTS IN THE FUNCTION, WITH FEWER RATIONS SERVED, WERE THE PRIMARY FACTORS CONTRIBUTING TO THIS INCREASE.

LARGE INCREASES IN THE COST OF SERVING THE RATION IN FEBRUARY OVER JANUARY WAS NOTED AT KIRTLAND (11¢) MITCHEL (9¢) READING (9¢) FLOYD BENNETT (12¢) AND BIRMINGHAM (8¢). THESE INCREASES WARRANT INVESTIGATION.

AN ANALYSIS OF THE DATA REPORTED FOR BIRMINGHAM WAS MADE FOR THE PRIOR SEVEN MONTHS PERIOD, TO DETERMINE THE BASIC REASON FOR THE CONSISTENTLY HIGH COST PER RATION AT THIS BASE. THIS ANALYSIS INDICATED THAT THE LARGE NUMBER OF PERSONNEL IN THE FUNCTION WAS THE UNDERLYING CAUSE. ON A COMPARATIVE BASIS, THERE APPEARS TO BE NO JUSTIFICATION FOR THE EMPLOYMENT OF AS MANY AS 28 PERSONS IN THE FUNCTION WHEN THE WORKLOAD, 4850 RATIONS SERVED, IS COMPARED WITH WORKLOADS AT OTHER AFRTC'S WHICH EMPLOY 5 or 6 FEWER PERSONS AND SERVE FROM 1000 TO 4000 MORE RATIONS PER MONTH. THIS IS A PERSONNEL AND ASSIGNMENT PROBLEM AND WARRANTS IMMEDIATE INVESTIGATION.

FOR ALL UNITS THERE IS A NET REDUCTION FROM JANUARY OF 301 PERSONS AND $25,200 IN COSTS OF THE FUNCTION

0310

EXPLANATION OF GRAPHIC PRESENTATION ON

COST OF MAINTENANCE OF IMPROVED GROUNDS

The designation "Improved Grounds" includes grounds adjacent to buildings, other structures, street, roads, walks, parkways and similar facilities within the developed areas of the installation on which intensive ground maintenance is performed.

Specifically included are lawns, installation cemeteries, parade grounds, parkways, athletic fields, golf courses, rifle ranges, grassed, cultivated or similar fire breaks, beaches and the operation of greenhouses and plant nurseries.

All bases were divided into three groups depending upon the length of the growing season, or the frost-free time during which plants grow. An average was computed for each group and for all ConAC bases under consideration.

Among the factors which may influence cost in addition to acreage and length of growing season are the quality of maintenance, and the topography of the ground under cultivation.

COMMENT

WITH THE ADVENT OF WARMER TEMPERATURES, IT IS ANTICIPATED THAT THE COST OF MAINTENANCE OF IMPROVED GROUNDS WILL NORMALLY INCREASE. HOWEVER, THE CONAC AVERAGE COST PER ACRE FOR MARCH ($3.96) COMPARES FAVORABLY WITH THE AVERAGE MONTHLY COST PER ACRE ($4.20) FOR THE PERIOD FROM JULY 1949 THROUGH JANUARY 1950.

MIAMI, LONG BEACH, LANGLEY AND HENSLEY SHOW COSTS MORE THAN DOUBLE THE GROUP AVERAGE FOR THE FUNCTION.

IN THE SECOND GROUP (160-210 GROWING DAYS) THE MARCH AVERAGE IS $2.75. INCLUDED IN THIS FIGURE ARE ATTERBURY AND MCGUIRE WHICH, FROM DATA AVAILABLE IN HQ CONAC, APPEAR TO BE REPORTING INCORRECT ACREAGE: THE DEFINITION OF IMPROVED GROUNDS AS SET FORTH IN PAR 4b, AFR 90-1, 23 DECEMBER 1948, SHOULD BE CONSULTED. WITH THE DELETION OF ATTERBURY AND MCGUIRE FROM THE CALCULATION OF THE AVERAGE, THE ADJUSTED AVERAGE BECOMES $5.12, A FIGURE WHICH MORE ACCURATELY REFLECTS THE UNIT COST FOR THE GROUP.

COMMANDERS SHOULD TAKE STEPS TO ASSURE THEMSELVES THAT STANDARDS OF QUALITY OF MAINTENANCE AS SET FORTH IN AFR 90-1, AS WELL AS REASONABLE COSTS, ARE BEING MAINTAINED.

EXPLANATION OF GRAPHIC PRESENTATION ON

COST OF REFUSE COLLECTION

The function of "Refuse Collection" includes the collection of refuse, salvageable scrap and waste materiel and the washing of garbage containers and cans.

Activities included in this account are:

(1) Loading from designated pick-up points the garbage, trash, salvageable scrap, and waste materials into suitable vehicles, delivering and unloading at points of disposal.

(2) Washing and replacing garbage cans.

(3) Refuse collection and disposal accomplished under contract at a cost to the government. Credits collected under such agreements are not reported in the Refuse Collection account.

The bases were divided into USAF and USAFR groups. This division was made because of the strength difference in the number of personnel at USAF and USAFR bases.

Military labor, which makes up about 70% of the total cost of Refuse Collection for USAF bases and about 25% for USAFR bases may include some prison labor. In those instances where military prisoners accomplish refuse collection, the cost of such labor should be included in the cost report as this is an AIO responsibility. However, there is no way of differentiating between prison labor and other military labor on the Monthly Cost Report, AF Form 329. All labor is costed at civilian pay rates.

The average monthly cost and the average monthly number of cubic yards collected shown on this chart are one month averages of the cumulative totals reported in the Refuse Collection account (08303), AF Form 329.

The number of personnel shown on this chart is taken from the work unit quantity column for the Mess and Kitchen Equipment account (02102), AF Form 329. This figure includes the number of military and civilian personnel quartered on the base plus 1/2 the military and civilians quartered off the base. The quantity is a monthly average of the period from July 1949 to March 1950.

In addition to the computation of averages, ConAC standards for the cost per cubic yard collected were developed by deleting the upper and lower extremes of each group and computing averages based on the remaining costs.

The installations included in this analysis are those which submit a detailed AF Form 329. Installations which submit Army or Navy type reports and those which submit a short form report on AF Form 329 were omitted. Birmingham Municipal Airport was excluded because no costs or work units were reported in the Refuse Collection account.

COMMENT

SEVERAL BASES SHOW ABNORMALLY HIGH COSTS PER CUBIC YARD OF REFUSE COLLECTED. STEWART AFB WITH A COST OF $4.01, FAIRFAX FIELD WITH A COST OF $3.71 AND READING MUN APT WITH A COST OF $3.44 ARE THE HIGH COST BASES COMPARED TO THE STANDARDS OF $1.06 FOR USAF BASES AND $1.42 FOR USAFR BASES.

ON A PER CAPITA COST PER MONTH BASIS, STEWART AFB SHOWS MORE THAN TWICE THE AVERAGE FOR THE USAF GROUP OF BASES. THIS HIGH COST AT STEWART IS DUE IN PART TO THE LARGE DISTANCES TRAVELLED BY GARBAGE PICK-UP TRUCKS BETWEEN HOMES, THE BASE AND THE INCINERATOR. FURTHER INVESTIGATION SHOULD BE MADE INTO COSTS AND WORK UNIT QUANTITIES TO SEE IF THEY ARE CORRECT AND IF IMPROVEMENTS IN THE SYSTEM OF REFUSE COLLECTION CAN BE MADE.

THE PROCESS AND METHODS OF REFUSE COLLECTION AT STEWART, FAIRFAX AND READING SHOULD BE EXAMINED IN AN EFFORT TO BRING UNIT COSTS MORE IN LINE WITH THE CONAC STANDARDS.

THE WORK UNIT QUANTITY REPORTED IN THE HAMILTON COST REPORT, (714 CU.YDS.), IS NOT IN AGREEMENT WITH THE FIGURE REPORTED IN THE DAILY LOG OF REFUSE AND SALVAGE COLLECTION, WD AGO FORM 5-126, (37,361 CU.YDS.) THE LATTER QUANTITY IS MORE IN AGREEMENT WITH THE COST, AND WAS USED IN THIS ANALYSIS.

THE QUANTITY COLLECTED FOR MOSES LAKE AFB HAS NOT BEEN REPORTED SINCE SEPTEMBER 1949 AND THE FIGURE USED HERE IS AN ESTIMATE BASED UPON THE UNIT COST ON THE SEPTEMBER 1949 REPORT.

VARIATIONS IN BASE POPULATION ARE REFLECTED IN THE LOWER MONTHLY COST PER CAPITA AT USAF BASES - $.53 COMPARED TO $.92 AT USAFR BASES.

EXPLANATION OF GRAPHIC PRESENTATION ON

COMPARATIVE PAYROLL COST OF MOTOR POOL ACTIVITY

The Motor Pool Account includes the following costs of operation: Cost of Motor Pool Officer, Refueling Officer, dispatchers, clerks, drivers, service personnel, and cost of fuels and lubricants used. The "Payroll Cost per Vehicle Mile Operated" is determined by dividing the Payroll Cost of the above activities by the number of miles operated as reported on AF Form 122A.

The payroll costs of the Motor Pool activity do not include any of the payroll costs applicable to the field maintenance of Automotive and ground powered equipment.

The average payroll cost per vehicle mile operated for each organizational type was determined by dividing the total of average costs by the total of average miles operated for each period.

The factor "Payroll Cost" rather than Total Cost, was chosen for analysis, since personnel discrepancies revealed can more readily be "controlled" for the purpose of accomplishing a cost reduction of value to USAF.

COMMENT

WHILE A SLIGHT REDUCTION IN COST PER VEHICLE MILE OPERATED DURING MARCH 1950 IS NOTED FOR ALL THREE GROUPS AS COMPARED TO THE MONTH OF FEBRUARY 1950, THE AVERAGE COST FOR EACH GROUP IS STILL IN EXCESS OF THE SEVEN MONTH AVERAGE AS SHOWN IN THE MANAGEMENT ANALYSIS REVIEW, FEBRUARY 1950.

TOTAL PAYROLL COST OF THE MOTOR POOL ACTIVITY, $258,379, IS APPROXIMATELY THE SAME AS SHOWN IN FEBRUARY.

SIGNIFICANT REDUCTIONS IN COST PER MILE FOR MARCH AS COMPARED TO FEBRUARY ARE NOTED FOR THE FOLLOWING BASES:

TURNER AFB	- 51%	LAWSON AFB	- 31%
PORTLAND APT	- 39%	HANSCOM APT	- 25%
WOLD-CHAMBERLAIN	- 34%	FLOYD BENNETT NAS	- 25%
MITCHEL AFB	- 32%	SHAW AFB	- 19%

ON THE OTHER HAND SUBSTANTIAL INCREASES OVER FEBRUARY COSTS ARE EVIDENT FOR THE FOLLOWING (FIGURES IN PARENTHESIS SHOW INCREASES OVER THE SEVEN MONTH AVERAGE):

HENSLEY FIELD	- 46% (112%)	STEWART AFB	- 27% (91%)
BROOKS AFB	- 37% (10%)	POPE AFB	- 25% (79%)
GTR PITTSBURG APT	- 34% (31%)		

IN COMPARISON WITH THE SEVEN MONTH AVERAGE, COSTS AT HENSLEY, STEWART AND POPE ARE EXCESSIVE. ANALYSIS INDICATES THAT THE INCREASE AT HENSLEY IS DUE TO A 44% DECREASE OF MILEAGE WITH 17% INCREASE IN PAYROLL COST. AT STEWART, PAYROLL COSTS INCREASED 117% AGAINST INCREASED MILEAGE OF ONLY 14%. POPE SHOWS INCREASED PAYROLL OF 30% WITH A DECREASED MILEAGE OF 27%. FURTHER INVESTIGATIONS OF THE ACTIVITY AT THESE BASES IS WARRANTED.

EXPLANATION OF GRAPHIC PRESENTATION ON

COMPARATIVE PAYROLL COST OF MAINTENANCE - AUTOMOTIVE AND GROUND POWERED EQUIPMENT

Automotive and Ground Powered Equipment Maintenance Costs include cost of personnel and supplies utilized in the accomplishment of field maintenance. The "payroll cost per vehicle mile operated" is determined by dividing the payroll cost of the above activities by the number of miles operated as reported on AF Form 122A.

The payroll costs of the Maintenance activity do not include any costs applicable to the Motor Pool. The average payroll cost per mile for each group was determined by dividing the total of average payroll costs by the total of average miles operated for each period.

COMMENT

TOTAL PAYROLL COST OF MAINTENANCE FOR MARCH 1950, FOR THE THIRTY FOUR BASES INCLUDED IN THE ANALYSIS, AMOUNTS TO $215,109 COMPARED WITH $212,454 IN FEBRUARY.

SIGNIFICANT DECREASES IN COST PER MILE OPERATED ARE SHOWN BY:

POPE AFB	-	61%	PORTLAND APT	-	42%
MARSHALL AFB	-	49%	MITCHEL AFB	-	32%.
TURNER AFB	-	41%	WOLD-CHAMBERLAIN FIELD	-	29%
MCCHORD AFB	-	28%			

A SLIGHT DECREASE IN THE AVERAGE PAYROLL COST OF MAINTENANCE PER MILE OPERATED FOR MARCH IS SHOWN FOR ALL THREE GROUPS. HOWEVER, IT IS STILL HIGHER THAN THE SEVEN MONTH AVERAGES FOR EACH GROUP AS SHOWN IN THE FEBRUARY REVIEW. THESE FIGURES ARE AS FOLLOWS:

	7 MO AVG	FEBRUARY	MARCH
WINGS	$.121	$.167	$.147
AIR BASE GROUPS AND SQUADRONS	.085	.095	.087
AFRTC'S	.124	.152	.148

BASES REPORTING LARGE INCREASES IN COST PER MILE OPERATED IN MARCH COMPARED WITH FEBRUARY ARE:

	7 MO AVG	FEBRUARY	MARCH	% INCREASE MARCH OVER FEBRUARY
BROOKS AFB	$.025	$.022	$.050	127%
BENJAMIN HARRISON AFB	.044	.076	.168	121%
HENSLEY FIELD	.205	.335	.533	59%
MEMPHIS MUN APT	.062	.071	.092	30%

MILEAGE FOR THE ABOVE BASES DECREASED CONSIDERABLY, WHICH IS PRIMARILY THE REASON FOR THE INCREASE IN PAYROLL COST PER MILE OPERATED. THE EXCESSIVE INCREASE IN COST OVER THE SEVEN MONTH AVERAGE WARRANTS INVESTIGATION PARTICULARLY AT BROOKS AFB AND HENSLEY FIELD WHICH REPORT TOTAL MAINTENANCE PAYROLL COSTS FOR MARCH WHICH ARE GREATLY IN EXCESS OF THE SEVEN MONTH AVERAGE AS FOLLOWS:

	PAYROLL COST MARCH	7 MO AVG	% INCREASE
BROOKS AFB	$4,408	$2,701	63%
HENSLEY FIELD	6,384	4,404	45%

NON-PERSONNEL COSTS PER MILE OPERATED AT THE FOLLOWING BASES ALSO WARRANT INVESTIGATION:

	% OF INCREASE, MARCH OVER FEBRUARY
MOSES LAKE AFB	800%
HENSLEY FIELD	457%
ATTLEBURY AFB	450%
BROOKS AFB	400%

0318

EXPLANATION OF PAYOFF PROJECT

CONAC SAVINGS IN COST OF

CONTRACTUAL COMMUNICATIONS

The Payoff Project is presented to evaluate the effectiveness of positive management action as demonstrated by letter, Comm 676.1, Hq ConAC, 1 September 1949, "Reduction of Telecommunications Expenditures."

The data presented was obtained from Cost Control Reports on AF Forms 320, 321 and 322. Major and Intermediate Command Headquarters figures reflect average monthly totals contained in Communications - Contractual, Account Code 20527, while total costs of all other ConAC units are contained in Communications - Contractual, Account Code 04110.

COMMENT

THE ESTIMATED ANNUAL SAVINGS TO USAF OF $56,652 DUE TO THE OVERALL REDUCTION OF COST FOR THIS FUNCTION, SHOULD NOT BE INTERPRETED TO INDICATE THAT ALL UNITS ARE CURRENTLY OPERATING AT A SAVING AS COMPARED WITH THE SIX MONTH PERIOD PRIOR TO 1 SEPTEMBER 1949: THIS IS THE NET EFFECT OF THE REDUCTION ACHIEVED. A TEST-CHECK OF MAJOR AND INTERMEDIATE COMMAND HEADQUARTERS COSTS INDICATES THAT THE FOLLOWING ARE OPERATING AT AN INCREASED AVERAGE COST PER MONTH:

	MONTHLY AVERAGE MAR - AUG 49	MONTHLY AVERAGE SEP 49 - FEB 50	MONTHLY AVERAGE INCREASED COST
HQ 4TH AF, HAMILTON AFB	$333	$560	$227
HQ 10TH AF, SELFRIDGE AFB	668	673	5
HQ 14TH AF, ROBINS AFB	927	1,078	151
TOTAL AVERAGE MONTHLY LOSS			$383

SHOULD THESE THREE HEADQUARTERS BE IMPROVED TO THE POINT OF ZERO-INCREASE OVER PRIOR AVERAGES IN THE COST OF OPERATION, THERE WOULD ENSUE AN ADDITIONAL SAVINGS TO USAF OF $4,596.

EXPLANATION OF TABULATIONS OF COMPARATIVE DATA

FOR PROGRESS AND MANAGEMENT ANALYSIS

COMBAT GROUPS, SEPARATE SQUADRONS AND

AIR FORCE RESERVE TRAINING CENTERS

The purpose of the tabulations presented on the following three pages is to provide, to commanders and management analysts, at unit level, selected performance data. These tabulations provide a basis for local progress and management analysis.

The data contained in these tabulations does not replace, but rather supplements Comptroller Chart #6 and the presentations in this Review. Additional data will be included in future issues of this Review upon request. Information classified above RESTRICTED will not be included.

Examples of analyses possible from data shown here are:

a. Cost of Organizational Maintenance per Flying Hour (ConAC Cost Analysis Review, August).

b. Cost of Fuels and Lubes per Flying Hour (Page 16, ConAC Cost Analysis Review, July).

c. Utilization of in-commission rates.

d. Analysis of Fuel Consumption per hour.

e. Ratio of weather hours to total hours flown (Col. 11).

f. Cost of organizational maintenance per unit of flying, AFRTC (Page 11, ConAC Cost Analysis Review, November).

g. Hours flown per person assigned to organizational maintenance function.

EXPLANATION OF GRAPHIC PRESENTATION ON

ANALYSIS OF NIGHT, WEATHER, & HOOD HOURS FLOWN

The data reflected in the accompanying chart represents the per cent of the total flying hours accomplished over the 3-month period, January - March 1950, at night, in weather, or during simulated instrument conditions (hood).

The tabular data reflects the number of flying hours accomplished in each of the above categories reported by units on AF Form 110A.

COMMENT

OF THE THIRTEEN GROUPS PORTRAYED, THE FOURTH FIGHTER GROUP HAS FLOWN NO WEATHER TIME AND NO HOOD TIME THROUGHOUT THE THREE-MONTH PERIOD AND THE 56TH FIGHTER GROUP HAS FLOWN LESS NIGHT, WEATHER, AND HOOD TIME THAN ANY OTHER GROUP, EXCEPT THE 4TH FIGHTER GROUP.

THE THREE-MONTH AVERAGES FOR THE COMBAT GROUPS ARE AS FOLLOWS:

	FIGHTER GROUPS		TROOP CARRIER GROUPS	
	Avg Hrs Flown	% of Avg Hrs Flown	Avg Hrs Flown	% of Avg Hrs Flown
Total	3,751	-	4,314	-
Night	206	5.5%	565	13.1%
Weather	104	2.8%	633	14.7%
Hood	253	6.7%	197	4.6%

EXPLANATION OF TABULATION ON

ALLOCATION OF RESERVE FLYING HOURS (CUMULATIVE) VS ACTUAL RESERVE HOURS FLOWN

CONAC AIR FORCES

1 JAN - 30 JUNE 1950

The purpose of this presentation is twofold:

a. To indicate the progress being made by each ConAC Air Force in achieving the Reserve Flying Hour Program, by type aircraft.

b. To indicate a form that may be used in progress analysis.

The data contained in this presentation, when used in conjunction with the tabulations on data for progress and management analysis, in this Review, may indicate whether lack of progress is due to in-commission rates or to lack of utilization of in-commission rates.

COMMENT

ALL AIR FORCES ARE BEHIND PROGRAM IN ALL TYPES OF AIRCRAFT WITH THE EXCEPTION OF C-47'S IN THE FIRST AIR FORCE. ALL OF THE DATA CONTAINED UNDER THE COLUMNS "PROGRAM" HAS BEEN WEIGHTED FOR THE WEATHER FACTOR IN ACCORDANCE WITH AFL 150-10. THE PROGRAM THEN, IF IT IS TO BE ATTAINED BY UNITS WHO ARE NOT PERFORMING SATISFACTORILY AT PRESENT, MUST BE BROUGHT ABOUT THROUGH INCREASED UTILIZATION OF AIRCRAFT. THE LAG IN PROGRAM IN C-46'S RANGES FROM -3% IN THE FOURTH AIR FORCE TO -17% IN THE TENTH AIR FORCE. OVERALL, FOR THE TENTH AIR FORCE TO ATTAIN THE PROGRAM BY 30 JUNE 1950, IT WILL BE NECESSARY TO FLY AN AVERAGE OF 51 HOURS PER AIRCRAFT PER MONTH, BASED ON AN AVERAGE OF 380 AIRCRAFT (ALL TYPES) ON HAND DURING MARCH 1950.

INTRODUCTION

THE PURPOSE OF THE CONAC MANAGEMENT ANALYSIS REVIEW IS TO PROVIDE COMMANDERS AND THEIR STAFFS EACH MONTH WITH ANALYSES AND SELECTED DATA WHICH, WHEN PROPERLY INTERPRETED, WILL INDICATE ACHIEVEMENT WITHIN SPECIFIC FUNCTIONS OF THEIR ACTIVITY.

IT IS INTENDED THAT THIS REVIEW PRESENT FACTS IN SUCH A MANNER THAT COMMANDERS AND THEIR STAFFS CAN EVALUATE THE CONSISTENCY OF THEIR OPERATING ACTIONS, THE EFFICIENT AND ECONOMICAL USE OF RESOURCES AND THE PROGRESS OF THEIR VARIOUS ACTIVITIES TOWARD AUTHORIZED OBJECTIVES.

THE CONTENTS OF THIS REVIEW WILL VARY FROM MONTH TO MONTH. THIS WILL PERMIT GREATER COVERAGE OF COMMAND ACTIVITIES AND CONCENTRATION ON CURRENT ITEMS OF COMMAND INTEREST.

THE PRESENCE OF EXTREME CONDITIONS ARE READILY APPARENT TO COMMANDERS WHEN PROPERLY SHOWN IN GRAPHIC PRESENTATIONS. MANY OF THE EXTREME CONDITIONS INDICATED HEREIN MAY BE JUSTIFIED BY LOCAL SITUATIONS AND THE NATURE OF ASSIGNED MISSIONS. THESE ANALYSES, HOWEVER, SERVE AS A GUIDE TO AREAS AND ACTIVITIES WHERE FURTHER INVESTIGATIONS AND CORRECTIVE ACTIONS MAY RESULT IN BETTER MANAGEMENT.

THE ANALYSES CONTAINED HEREIN HAVE BEEN DERIVED FROM INFORMATION AS REPORTED TO THIS HEADQUARTERS.

EXPLANATION OF GRAPHIC PRESENTATION ON

TOTAL COST OF CONTINENTAL AIR COMMAND BY FUNCTIONAL GROUPING - MONTHLY DISTRIBUTION

The following activities are included in the functional groupings as shown on the chart:

COMMAND GROUP

Hq & Hq Sq, Continental Air Command
Hq & Hq Sq, Tactical Air Command
Hq & Hq Sq, Air Defense Forces
Hq & Hq Sq, ConAC Air Forces
Hq & Hq Sq, Air Divisions (Defense)
2220th Field Printing Plant (May through December 1950)
2220th Extension Group, Less Extension Course Activity (January through April 1950)
Hq & Hq Sq, Combat Wings

OPERATIONS GROUP

Combat - Total Operating Costs of Fighter Groups, Troop Carrier Groups, Tactical Recon Group, Bomb Squadrons (L), Assault Squadron.
Combat Support - Total Operating Costs of Liaison Squadrons and Flights, Aircraft Control and Warning Units, Tactical Control Groups, Shoran Beacon Unit.

SERVICE GROUP

Total operating costs of ConAC organizations less those included in Command, Operations and other Mission Groups.

OTHER MISSION GROUP

Air Force Reserve (AFRTC's only)
Air National Guard (includes Instructor Personnel)
Air ROTC (includes Instructor Personnel)
Air Explorer Liaison
Air Force Overseas Replacement Groups
All other (minor activities including Military Liaison Personnel with Army, Navy and other agencies)
Extension Course Activity of 2220th Extension Group (January through April 1950)

ADDITIONAL CHARGES

Cost of excess personnel and recruits awaiting shipment, AFORS Casuals, Detachment of Patients, Lump Sum Payments, reenlistment bonuses, initial issue of clothing, PCS, Supplies and Services furnished others, parts to salvage, extraordinary repairs and condemned inventory.

COMMENT

AN OVERALL DECREASE IN COSTS OF $855,728 FOR APRIL OVER MARCH IS INDICATED AND IS DIRECTLY DUE TO THE TERMINATION OF OPERATION PORTREX. HOWEVER, THERE IS AN INCREASE OF $25,034 IN THE COMMAND GROUP AND $20,251 IN OTHER MISSIONS GROUP. DECREASES OCCURRED IN THE OPERATIONS GROUP, $136,218, AND THE SERVICES GROUP, $192,320. DECREASES IN THE ADDITIONAL CHARGES GROUP WHICH AMOUNTED TO $402,475 WERE DUE TO REDUCTIONS IN THE FOLLOWING FUNCTIONS: DETACHMENT OF PATIENTS, $37,000, LUMP SUM PAYMENTS, $125,000, REENLISTMENT BONUSES, $97,000, INITIAL ISSUE OF CLOTHING, $98,000, AND PERMANENT CHANGE OF STATION, $108,000.

EXPLANATION OF GRAPHIC PRESENTATION ON

TOTAL COST OF CONTINENTAL AIR COMMAND

BY ELEMENTS OF COST - MONTHLY DISTRIBUTION

The component costs shown on this chart are derived from costs reported by all units listed in the explanation of the "Total Cost of Continental Air Command By Functional Grouping", as follows:

MILITARY PAY

Military pay includes the pay of all military personnel, officer or airman, exclusive of rental allowance for officers, and rental allowance and separate rations payable to airmen.

CIVILIAN PAY

Civilian pay is computed for the report period based on gross annual rates and does not include overtime.

CONTRACTUAL SERVICES

Contractual services include all charges for services rendered regardless of whether or not paid from funds available at base level, such as cost of shipment of government property, contract repair of office machines, communication charges, etc. Where contracts exceed one month, the monthly charge is computed on the basis of the fractional part that the month is of the total period covered. Thus, for example, where a contractual amount covers a one year period, the monthly charge will be 1/12th of the total contractual amount specified.

MISCELLANEOUS

Miscellaneous costs include the cost of PCS, TDY, overtime, lump sum payments, reenlistment bonuses, and T/A's (including T/A's for dependents)

SUPPLY

Supply costs include all supply items except complete aircraft and complete aircraft engines;includes AF Supplies, QM Supplies, Engineer Supplies (Air Installations), Fuels and Lubricants for aircraft, for ground powered vehicles, for heating, etc. All other supplies, such as Signal, Chemical, Ordnance, Medical.

The total of the items on the chart include the dollar cost of the resources which were consumed by ConAC during each month, classified to show the general purpose for which such expenditures were incurred. Total costs by elements of cost agrees with the total cost shown by functional grouping.

COMMENT

AN OVERALL DECREASE IN COSTS OF $855,728 FOR APRIL OVER MARCH IS INDICATED. PAYROLL COSTS, MILITARY AND CIVILIAN INCREASED $325,288, WHILE NON-PERSONNEL COSTS (INCLUDES MISCELLANEOUS, CONTRACTUAL SERVICES AND SUPPLIES) DECREASED $1,181,016: THE MAJOR DECREASE BEING INDICATED IN SUPPLIES, $814,717, WHICH IS A REFLECTION OF THE CESSATION OF OPERATION PORTREL.

EXPLANATION OF GRAPHIC PRESENTATION ON

COSTS OF OFFICE OF THE DEPUTY FOR PERSONNEL

HQ CONAC AND HQ CONAC AIR FORCES

This chart depicts the total cost (payroll, supplies and services), for the staff group supervised by the Office of the Deputy for Personnel, for Hq ConAC and Hq ConAC Air Forces, as follows:

DEPUTY FOR PERSONNEL

Costs of the Assistant Deputy, Administrative Division, WAF Staff Director, Director of Personnel Planning and Management (Account Code 20203).

DIRECTOR OF MILITARY PERSONNEL PROCUREMENT

Costs of Officer Procurement Division, Airmen Procurement Division, Selective Service Division, Advertising and Publicity Division (Account Code 20221).

DIRECTOR OF CIVILIAN PERSONNEL

Costs of Classification and Wage Administration Division, Employee Utilization Division (Account Code 20229).

AIR JUDGE ADVOCATE

Costs of Administrative Division, Military Justice Division, Military Affairs Division, Legal Assistance Division, Reserve Division, Training Division (Account Code 20209).

GROUND SAFETY DIVISION

Costs of Ground Safety Division (Account Code 20223).

DIRECTOR OF PERSONNEL SERVICES

Costs of Special Services Division, Non-Appropriated and Sundry Funds Division, Information and Education Division, Library Division (Account Code 20217).

DIRECTOR OF MILITARY PERSONNEL

Costs of Classification and Utilization Division, Officers Division, Airmens' Division (Account Code 20227).

DIRECTOR OF AIR FORCE ROTC

Costs of Training and Research Division, Requirements Division, the costs of field personnel are excluded (Account Code 21009, less 21009.01, AFROTC (field)).

AIR CHAPLAIN

Costs of Administrative Division, Professional Service Division, Projects and Requirements Division (Account Code 20211)

Costing of staff activities is in accordance with ConAC Ltr 170-1 and ConAC Ltr 170-7.

COMMENT

THE TOTAL COST FOR THE DEPUTY FOR PERSONNEL FUNCTION CONTINUES TO SHOW A GENERAL INCREASE SINCE MARCH RANGING FROM $317 AT HQ FOURTEENTH AIR FORCE TO $2,879 AT HQ TENTH AIR FORCE. THE LOW COST OF THE DIRECTORATE OF MILITARY PERSONNEL, HQ FOURTH AIR FORCE, IN RELATION TO THE OTHER CONAC AIR FORCE HEADQUARTERS SHOWN, IS ATTRIBUTED TO THE METHOD OF DIVISION OF COSTS FOR RESERVE RECORDS ADMINISTRATION BETWEEN THE AIR ADJUTANT GENERAL AND THE DEPUTY FOR PERSONNEL.

EXPLANATION OF GRAPHIC PRESENTATION ON

COSTS OF OFFICE OF THE DEPUTY FOR OPERATIONS

HQ CONAC AND HQ CONAC AIR FORCES

This chart depicts the total cost (payroll, supplies and services), for the staff group supervised by the Office of the Deputy for Operations, for Hq ConAC and Hq ConAC Air Forces, as follows:

DEPUTY FOR OPERATIONS

Costs of Assistant Deputy and the Operations Analysis Division (Account Code 20303, less 20303.01).

DIRECTOR OF PLANS, ORGANIZATION AND REQUIREMENTS

Costs of Plans Division, Organization Division, Mission Requirements Division (Account Code 20307).

DIRECTOR OF COMMUNICATIONS AND ELECTRONICS

Costs of Plans and Policy Division, Electronics Systems Division, Communications Systems Division (Account Code 20315).

DIRECTOR OF OPERATIONS AND TRAINING

Costs of Operations Division, Training Division, Armament Division (Account Code 20305).

DIRECTOR OF INTELLIGENCE

Costs of Intelligence Requirements Division, Photo Intelligence Division, Intelligence Doctrine Division, Intelligence Estimates Division (Account Code 20311).

DIRECTOR OF CIVIL AIR DEFENSE

Costs of Directorate of Civil Air Defense (Account Code 20303.01).

Costing of staff activities referred to is in accordance with ConAC Ltr 170-1 and ConAC Ltr 170-7.

COMMENT

A COST INCREASE SINCE MARCH IS INDICATED FOR Hq CONAC AND FIRST, FOURTH, TWELFTH AND FOURTEENTH AIR FORCE HEADQUARTERS, RANGING FROM $92 AT HQ CONAC TO $1,777 AT HQ TWELFTH AIR FORCE. (COST REDUCTIONS OF $771 AND $1,047 ARE REPORTED BY HQ NINTH AND HQ FOURTEENTH AIR FORCES, RESPECTIVELY). COST OF THE DIRECTORATE OF INTELLIGENCE, HQ FIRST AIR FORCE CONTINUES TO REFLECT LOW COST IN COMPARISON WITH THE SAME ACTIVITY AT OTHER REPORTING HEADQUARTERS.

COSTS OF MAJOR STAFF GROUPS HQ CONAC AND HQ CONAC AIR FORCES

The total costs (payroll, supplies and contractual services) of the following staff activities are included in the major staff groups as shown on the chart:

COMMANDING GENERAL

Commanding General
Vice Commander
Assistant for Reserve Forces
Assistant to the Vice Commander
The Manpower Evaluation Board

AIR ADJUTANT GENERAL

Air Adjutant General
Director of Publications
Director of Administration
Director of Historical Services

AIR SURGEON

Air Surgeon

INSPECTOR GENERAL

Inspector General
Air Inspector
Air Provost Marshal

PUBLIC INFORMATION OFFICER

Public Information Officer

COMPTROLLER

Comptroller
Director of Programs and Costs
Director of Statistical Services
Director of Budget
Director of Auditr
Director of Finance

DEPUTY FOR PERSONNEL

Deputy for Personnel
Ground Safety Division
Air Chaplain
Air Judge Advocate
WAF Staff Director
Director of Personnel Planning and Management
Director of Military Personnel
Director of Military Personnel Procurement
Director of Civilian Personnel
Director of Personnel Services
Director of Air Force ROTC

DEPUTY FOR OPERATIONS

Deputy for Operations
Director for Operations and Training
Director of Plans, Organization & Requirements
Director of Communications & Electronics
Director of Intelligence
Director of Civil Air Defense

DEPUTY FOR MATERIEL

Deputy for Materiel
Director of Materiel Planning
Director of Maintenance, Supply & Services
Director of Installations

Costing of staff activities referred to is in accordance with ConAC Ltr 170-7.

COMMENT

THE DIFFERENCE IN TOTAL COST FOR THE AIR ADJUTANT GENERAL AND DEPUTY FOR PERSONNEL, PARTICULARLY AT HQ FIRST AIR FORCE AND HQ FOURTH AIR FORCE, AS COMPARED TO SIMILAR ACTIVITIES IN OTHER CONAC AIR FORCE HEADQUARTERS IS ATTRIBUTED TO THE DIVISION OF RESPONSIBILITY FOR COST OF RESERVE RECORDS ADMINISTRATION BETWEEN THE AIR ADJUTANT GENERAL AND THE DEPUTY FOR PERSONNEL. THE COMBINED COST OF THE AIR ADJUTANT GENERAL AND DEPUTY FOR PERSONNEL, OF EACH HEADQUARTERS, IS SUBSTANTIALLY THE SAME, AND TENDS TO SUPPORT THE ABOVE CONCLUSION. PARAGRAPH 3, AFR 45-17, DATED 9 MARCH 1949 AND PARAGRAPHS 2, 2a, AND 2b OF CONAC LETTER 45-1, 9 MAY 1949 CONTAIN DETAILED INFORMATION AND CLARIFY RESPONSIBILITIES FOR THE ADMINISTRATION OF RESERVE RECORDS.

EXPLANATION OF TABULAR PRESENTATION

ANALYSIS OF HEADQUARTERS COSTS - HQ CONAC AND HQ CONAC AIR FORCES

This presentation utilizes data reported by the various headquarters in accordance with ConAC Letter 170-7, 25 January 1950; items 2 through 10 are reported as described in paragraph 3, and item 11 is reported as set forth in paragraph 4. The Cost of the Headquarters Groups includes military and civilian pay of the major staff group indicated. Headquarters costs per person assigned were computed utilizing military totals of the ConAC Personnel Report for units comparable to the Headquarters for whom costs are shown. ConAC cost per military person assigned was computed utilizing overall command strength which includes Headquarters ConAC as well as each Air Force. Heavy figures indicate the staff section having the highest cost per unit of workload selected for this study. Undistributed Headquarters costs include costs applicable to the Headquarters such as costs of Hq Sq. Adm. Overhead, Hq Flight Section, Motor Pool, Personnel Without Duty Assignment, Prisoners, Rental Allowances paid, Laundry and Dry Cleaning, Hq Messing Facilities, Separate Rations paid airmen, Replacment issues of clothing, Janitor and Office Supplies, Communications, TDY costs, Overtime, Rental for leased facilities.

COMMENT

HQ CONAC AND FOURTH, NINTH, TENTH AND TWELFTH AIR FORCE HEADQUARTERS REPORT INCREASES IN UNDISTRIBUTED CHARGES RANGING FROM $3,795 AT HQ FOURTH AIR FORCE TO $31,198 AT HQ CONAC. GREATEST INCREASE WAS CAUSED BY TDY IN CONNECTION WITH EXERCISE "SWARMER". HQ CONAC IS CHARGED WITH PRIMARY COSTING RESPONSIBILITY FOR EXERCISE "SWARMER", FOR OTHER MAJOR COMMANDS, WHICH HAS LED TO HIGH COSTS REPORTED HERE. TDY INCREASES SINCE MARCH RANGED FROM $3,867 AT HQ FIRST AIR FORCE TO $25,563 AT HQ CONAC.

AT HQ TWELFTH AIR FORCE, ONE EXPLANATION FOR THE HIGH COST PER PERSON ASSIGNED IS THE ASSIGNED STRENGTH, 3,900, WHICH IS 6,109 LOWER THAN THE AVERAGE FOR ALL CONAC AIR FORCES. DURING THE PERIOD IN WHICH THIS SUBJECT HAS BEEN TREATED IN THE MANAGEMENT ANALYSIS REVIEW, TWELFTH AIR FORCE HEADQUARTERS COST HAS RANGED FROM $216,000 TO $246,000. IT APPEARS THAT ANY SUBSTANTIAL REDUCTION IN COST FOR A HEADQUARTERS OF THIS TYPE IS IMPRACTICABLE OF ACCOMPLISHMENT MERELY BY A REDUCTION IN FIELD FORCE STRENGTH.

COST INCREASES SINCE MARCH, FOR PERSONNEL WITHOUT DUTY ASSIGNMENT (ACCOUNT CODE 20511) WERE REPORTED AS FOLLOWS: HQ CONAC $1,199, HQ FIRST AIR FORCE $591, HQ NINTH AIR FORCE $4,686, AND HQ TWELFTH AIR FORCE $2,484. HQ FOURTH, TENTH, AND FOURTEENTH AIR FORCE REPORTED DECREASES OF $226, $316 AND $4,909, RESPECTIVELY, IN THE PERSONNEL WITHOUT DUTY ASSIGNMENT ACCOUNT.

EXPLANATION OF GRAPHIC PRESENTATION ON

COST OF CONTRACTUAL COMMUNICATIONS - HQ CONAC AND HQ CONAC AIR FORCES

The cost of Contractual Communications reflects all payments to commercial organizations for services and includes charges for long distance telephone calls, trunk service, telegraph and cable service, teletype service, charges for rental of commercial telephone service, central office equipment, and the cost of installation of communications equipment as required.

Where commercial service for a headquarters is paid for by the base on which located, the headquarters proportionate share of contractual costs is posted to this account (20527).

The chart reflects the cost variation to date for Contractual Communications since the beginning of Fiscal Year 1950.

COMMENT

EMPHASIS WAS PLACED ON THE REDUCTION IN COSTS OF CONTRACTUAL COMMUNICATION SERVICES IN SEPTEMBER 1949. THIS PRESENTATION DEPICTS COSTS INCURRED FOR THE FIRST TEN MONTHS OF FISCAL YEAR 1950. THE CHART INDICATES A 7% ($389) OVERALL INCREASE IN COMMUNICATIONS COSTS FOR APRIL OVER THE AVERAGE ($5,202) FOR THE PREVIOUS NINE MONTHS. HEADQUARTERS, CONAC REFLECTS A 76% ($952) INCREASE AND HQ FOURTEENTH AIR FORCE REPORTS A 23% ($252) INCREASE, FOR APRIL, OVER THE AVERAGE FOR THE PREVIOUS NINE MONTHS. OTHER CONAC AIR FORCE HEADQUARTERS INDICATE COMMUNICATIONS COST REDUCTIONS FROM AVERAGES TO DATE RANGING FROM 9% ($44) AT HQ NINTH AIR FORCE TO 39% ($115) AT HQ TWELFTH AIR FORCE.

EXPLANATION OF GRAPHIC PRESENTATION ON

COST OF TEMPORARY DUTY TRAVEL - Hq CONAC AND HQ CONAC AIR FORCES

This chart indicates the trend of Temporary Duty travel costs for Hq ConAC and Hq ConAC Air Forces. Expenditures shown include those from both specific and open allotments and include the cost of Per Diem, Rail Transportation of persons and things, meal tickets and minor expenditures (liquid coffee money, taxi fares and porter's tips), for civilian and military personnel traveling on official business (Account Code 20529). Specific allotments provide for travel in conjunction with the following: Ferrying of Air Force, Air Force Reserve and Air National Guard aircraft, operation of installations, area cadet recruitment, air combat maneuvers, individual or group movements for attendance at schools, travel in conjunction with the Air Force ROTC instruction program at civilian institutions, and summer encampments of Air Force ROTC and Air National Guard. Open allotments normally cover costs incident to travel and per diem of civilian witnesses in connection with courts-martial, travel of medical attendants and escort of military dead to the place of burial. Although cost figures include adjustments over obligations, it is believed that totals for a three month period are comparable.

COMMENT

TDY COSTS REPORTED BY HQ CONAC INCLUDE THOSE INCURRED BY OTHER MAJOR COMMANDS DURING EXERCISE "SWARMER". INDIVIDUAL CONAC AIR FORCE HEADQUARTERS REPORT THEIR OWN TDY COSTS. INCREASES RANGE FROM 20% AT HQ FOURTH AIR FORCE TO 308% AT HQ CONAC OVER THE AVERAGE FOR THE PREVIOUS NINE MONTHS. INCREASE IN TOTAL EXPENDITURE WAS $85,384, AN INCREASE OF 108% OVER THE AVERAGE OF $79,029 FOR THE PREVIOUS NINE MONTHS.

EXPLANATION OF GRAPHIC PRESENTATION ON

RELATIVE WORK PERFORMANCE OF SQUADRON ADMINISTRATIVE OVERHEAD

The costs include the combined costs of squadron administrative functions for the following units and/or activities: Hq and Hq Squadrons of Wing Organizations, Air Base Groups (Separate), AFRTCs, Air Base Squadrons (Separate), Aircraft Control and Warning Organizations (Special Mission Group B), Liaison Flights, Fighter and Bomber Squadrons (Separate), and Standby Base Squadrons (Account Code 01000); Hq and Hq Squadrons of Air Base Groups when a component of Wing Organizations (Account Code 02013); Communications Squadrons, Motor Vehicle Squadrons, Installation Squadrons, Air Police Squadrons, Food Service Squadrons, Air Base Service Squadrons, Installation Squadrons, and Air Base Groups (Separate), except Medical Squadrons (Account Code 02014); Maintenance Squadrons of M&S Groups of Wing Organizations and the maintenance activities of M&S Squadrons of Air Base Groups (Separate). (Account Code 05012); Supply Squadrons of M&S Groups of Wing Organizations and the supply activities of M&S Squadrons of Air Base Groups (Separate), (Account Code 05014); Mission Units - Combat Squadrons, Operations Squadrons of Aircraft Control and Warning Groups (Special Mission Group B); Operating companies of Engineer Aviation Battalions (Special Mission Group B) and Operating Squadrons of Air Base Groups (Separate), (Account Code 07014).

The work performance is determined by dividing the total costs of the above mentioned activities by the total military personnel of these organizations (except major or intermediate command headquarters), and applying the results in the formula below:

$$\frac{\text{United States Air Force Standard Cost}}{\text{Actual Cost of Base Activity}} \times 100 = \text{Work Performance Rating}$$

The ConAC Standard Cost for these functions is $8.75 for bases having a military strength over 500 and $4.75 for bases with a population under 500.

COMMENT

AT MEMPHIS THE NUMBER OF PERSONS IN THE FUNCTION DECREASED FROM 24 TO 18, WHILE THE WORKLOAD REMAINED ABOUT THE SAME. THIS REDUCTION IN PERSONNEL IN THE FUNCTION IS REFLECTED IN IMPROVED WORK PERFORMANCE RATINGS FROM 75 TO 89, AND A REDUCTION IN COST PER PERSON SERVICED FROM $10.04 TO $8.42 OR 19%. THIS PROGRESS IS AN ENCOURAGING SIGN; HOWEVER, THE NUMBER OF PERSONS IN THE FUNCTION AS COMPARED TO SIMILAR TYPE BASES STILL APPEARS TO BE EXCESSIVE AND FURTHER IMPROVEMENT CAN BE SOUGHT.

IN THE POPULATION GROUP 500 PERSONNEL AND OVER, BROOKS AND MCGUIRE AFB'S HAVE SHOWN NO IMPROVEMENT OVER LAST MONTH, WHEREAS TINKER SHOWS AN IMPROVED WORK PERFORMANCE RATING FROM 73 TO 94 DUE TO INCREASED WORKLOAD BEING HANDLED (PERSONNEL RETURNED FROM OPERATION PORTMEX).

EXPLANATION OF GRAPHIC PRESENTATION ON

RELATIVE WORK PERFORMANCE OF ADMINISTRATION

The costs of Administration include the combined cost of the A-1, S-1, and Adjutant functions, Squadron Administrative Overhead and Military Personnel. The work performance is determined by dividing the total cost of the above three groups of activities, by the total military personnel of the base, (except major or intermediate command headquarters) and applying the results in the following formula.

$$\frac{\text{United States Air Force Standard Cost}}{\text{Actual Cost of Activity}} \times 100 = \text{Work Performance Rating}$$

COMMENT

AT BIRMINGHAM, GODMAN, MEMPHIS, AND LAWSON, LOW PERFORMANCE RATINGS ARE AGAIN CAUSED BY A RELATIVELY HIGH NUMBER OF PERSONS IN THE FUNCTION FOR THE EXISTING WORKLOAD. ON A COMPARATIVE BASIS, AT FAIRFAX, WOLD-CHAMBERLAIN AND HENSLEY, WORKLOADS OF APPROXIMATELY THE SAME SIZE AS AT THE ABOVE BASES ARE BEING ADMINISTERED BY FEWER PERSONNEL. IMPROVEMENT IS NOTED AT MEMPHIS WHERE A REDUCTION IN PERSONNEL OF ABOUT 15% HAS BEEN EFFECTED.

THE FACT THAT THE MAJORITY OF BASES FOR THE POPULATION GROUP 500 AND OVER SHOW WORK PERFORMANCE RATINGS WHICH ARE BELOW THE STANDARDS SET BY HQ USAF, IS AN INDICATION THAT THE USAF STANDARD FOR BASES IN THESE POPULATION GROUPS MAY NOT BE APPLICABLE TO ALL CONAC UNITS BECAUSE OF DIFFERENCE IN MISSION RESPONSIBILITIES AND/OR ORGANIZATIONAL STRUCTURE. IT IS THEREFORE MOST DESIRABLE IN THESE CASES THAT INDIVIDUAL STANDARDS BE DETERMINED BY BASE ANALYSTS FOR APPLICATION TO THE LOCAL SITUATIONS IN ACCOMPLISHING COST CONTROL. HQ CONAC IS STUDYING STANDARDS WHICH MAY BE MORE APPLICABLE TO THESE POPULATION GROUPS.

EXPLANATION OF GRAPHIC PRESENTATION ON

RELATIVE WORK PERFORMANCE OF COMMANDER AND STAFF

The costs include the combined costs of the Commanding Officer, his Deputy and Executive, the A-1, A-2, A-3, A-4, Comptroller, Inspector General, Air Inspector, Adjutant, Public Information Officer, Hq & Hq Sq Overhead, and Expendable Supplies utilized in these activities (Account Code 01051). The work performance is determined by dividing the total Base costs of the above mentioned activities by the total military personnel of all organizations on the base (except major or intermediate command headquarters), and applying the results in the formula below:

$$\frac{\text{United States Air Force Standard Cost}}{\text{Actual Cost of Base Activity}} \times 100 = \text{Work Performance Rating}$$

COMMENT

THE WORK PERFORMANCE RATING AT BIRMINGHAM DROPPED FROM 114 REPORTED IN MARCH TO 102, DUE TO AN INCREASE IN PERSONNEL IN THE FUNCTION, WITH NO APPRECIABLE INCREASE IN WORKLOAD. AT MEMPHIS, IMPROVEMENT IS NOTED IN THE WORK PERFORMANCE RATING FROM A PREVIOUSLY REPORTED 82 IN MARCH TO 94 IN APRIL. THE INCREASED PERFORMANCE IS DUE TO THE REDUCTION OF EIGHT (8) PEOPLE IN THE FUNCTION.

SLIGHT IMPROVEMENT IS NOTED AT LAWSON WHERE THE WORK PERFORMANCE RATING INCREASED FROM 59 TO 63 WITH A REDUCTION OF 1 PERSON IN THE FUNCTION. IN COMPARISON WITH OTHER BASES, WORKLOADS 50 TO 75% GREATER THAN THAT OF LAWSON ARE ADMINISTERED BY SUBSTANTIALLY THE SAME OR FEWER PERSONNEL IN THE FUNCTION. THIS RAISES THE QUESTION OF WHETHER IT IS POSSIBLE TO ACCOMPLISH THE FUNCTION OF COMMAND AND STAFF AT LAWSON WITH FEWER PERSONNEL. IT IS POSSIBLE THAT METHODS IMPROVEMENT MAY PROVIDE A SOLUTION.

THE FACT THAT THE MAJORITY OF BASES FOR THE POPULATION GROUP 500 AND OVER SHOW WORK PERFORMANCE RATINGS WHICH ARE BELOW THE STANDARDS SET BY HQ USAF, IS AN INDICATION THAT THE USAF STANDARD FOR BASES IN THESE POPULATION GROUPS MAY NOT BE APPLICABLE TO ALL CONAC UNITS BECAUSE OF DIFFERENCE IN MISSION RESPONSIBILITIES AND/OR ORGANIZATIONAL STRUCTURE. IT IS THEREFORE MOST DESIRABLE IN THESE CASES THAT INDIVIDUAL STANDARDS BE DETERMINED BY BASE ANALYSTS FOR APPLICATION TO THE LOCAL SITUATIONS IN ACCOMPLISHING COST CONTROL. EXPLANATION OF GRAPHIC PRESENTATION ON

RELATIVE WORK PERFORMANCE OF SUPPLY

The costs include the combined costs of all supply activities such as (a) Supply Control, (b) Supply Warehouses, (c) Subsistence Handling, (d) Commissary Sales, (e) Purchasing and Contracting, (f) Salvage and Surplus Property, Laundry and Dry Cleaning (Account Code 05450). The work performance is determined by dividing the total costs of the base supply activity by the total number of personnel, both civilian and military of the base. In addition, if a major or intermediate command headquarters is located on the base, personnel of those commands are added. The results of the above calculation will be applied to the formula below:

$$\frac{\text{United States Air Force Standard Cost}}{\text{Actual Cost of Activity}} \times 100 = \text{Work Performance Rating}$$

Total installation personnel reported include all civilians as well as military personnel served by the supply activity. For purposes of comparison with overall USAF performance, the ConAC Average, derived from data reported during the period May 1949 through January 1950 is presented hereon.

COMMENT

THE LOW WORK PERFORMANCE RATING OF 46 AT MARSHALL IS EXPLAINED BY THE HIGH NUMBER OF PERSONNEL IN THE FUNCTION FOR THE WORKLOAD. AN EVALUATION BY THE COMMANDER IS NECESSARY TO DETERMINE IF THIS IS JUSTIFIED.

AT SHERMAN A WORKLOAD APPROXIMATELY THE SIZE OF THAT AT MARSHALL IS ADMINISTERED BY 40% FEWER PERSONNEL. SHERMAN REPORTS AN IMPROVED WORK PERFORMANCE RATING (FROM 75 IN MARCH TO 87 IN APRIL) DUE TO REDUCTIONS IN THE COST OF PERSONNEL IN THE FUNCTION.

ATTERBURY REPORTS A REDUCTION IN WORK PERFORMANCE RATINGS FROM 86 IN MARCH TO 61 IN APRIL. THIS IS DUE TO A 40% INCREASE IN REPORTED TOTAL COSTS OF CONTRACTUAL SERVICES FOR LAUNDRY AND DRY CLEANING. HOWEVER, THIS INCREASE IN TOTAL COST IS DUE TO THE FACT THAT THE COST ANALYST ERRONEOUSLY INCLUDED TEN (10) MONTHS CHARGES FOR LAUNDRY IN COSTS FOR THE MONTH OF APRIL. HAD AN AVERAGE MONTHLY FIGURE BEEN USED IN THE COMPUTATION, A WORK PERFORMANCE RATING OF 81 WOULD HAVE RESULTED.

PORTLAND'S WORK PERFORMANCE RATING DROPPED FROM 66 IN MARCH TO 61 IN APRIL. THIS WAS DUE PRIMARILY TO AN INCREASE IN PERSONNEL IN THE FUNCTION WITH APPROXIMATELY THE SAME WORKLOAD.

EXPLANATION OF TABULAR PRESENTATION ON

WORK PERFORMANCE RATINGS

Presented on the facing page is a tabulation by Air Force and organization of Work Performance ratings extracted from AF Forms 323. This is designed to permit appraisal of unit efficiency relative to the USAF performance of 100. A minimum number of corrections, as indicated by notes, have been made. Due to time limitations, only a sampling audit can be performed prior to publication. No explanations have been furnished by the reporting units for ratings shown in heavy type. With reference to the proper procedure for the accumulation of costs for Group 3, attention is invited to item 20 of Attachment 1 to ConAC Letter 170-1B.

COMMENT

THERE IS AN APPARENT INCONSISTENCY BETWEEN MAINTAINING TOTAL PERSONNEL AUTHORIZATIONS AND THE ACCOMPLISHMENT OF WORK PERFORMANCE RATINGS ABOVE USAF STANDARDS.

EVALUATIONS BASED SOLELY ON WORK PERFORMANCE RATINGS SHOULD NOT BE CONCLUSIVE. CONSIDERATION MUST BE GIVEN TO VARIOUS CONDITIONS RELATED TO THESE RATINGS.

IT IS ESSENTIAL THAT TERMINOLOGY AND PROCEDURES BE UNDERSTOOD. THE WORK PERFORMANCE RATING IS MERELY A NUMERICAL EXPRESSION FOR COMPARING UNIT COST TO A STANDARD COST ESTABLISHED BY HQ USAF. THE UNIT COST IS DETERMINED AT BASE LEVEL BY DIVIDING THE FUNCTION COST BY THE UNITS OF WORKLOAD (THE WORKLOAD USED BEING THAT WHICH IS CONSIDERED BY HQ USAF TO BE MOST REPRESENTATIVE OF DIRECT OUTPUT IN THE PERFORMANCE OF THE FUNCTION); NORMALLY, THE GREATER THE FUNCTION COST, THE LOWER THE WORK PERFORMANCE RATING AND THE GREATER THE WORKLOAD THE HIGHER THE WORK PERFORMANCE RATING. IT SHOULD BE CLEAR THAT THE MORE WORK PRODUCED AND THE LOWER THE COST OF PRODUCING IT, THE GREATER THE INDEX OF ECONOMIC EFFICIENCY (THE WORK PERFORMANCE RATING) BECOMES.

SINCE ALL UNITS OF EQUAL SIZE AND/OR TYPE USE THE SAME STANDARD COST AS A BASIS OF COMPARISON, IT IS THUS POSSIBLE TO COMPARE ONE AGAINST THE OTHER AND SEE IF "A" IS MORE, OR LESS EFFICIENT THAN "B". HOWEVER, BEFORE IT CAN BE DETERMINED WHETHER TRUE EFFICIENCY HAS BEEN ACHIEVED, EITHER THE NORM (THE MEASURE OF WHAT IS TYPICAL, OR STANDARD FOR EACH PARTICULAR UNIT) OR THE USAF STANDARD MUST BE EXAMINED. SINCE THE USAF STANDARD IS BASED ON A WIDE AREA OF REPORTED COSTS, IT IS QUESTIONABLE WHETHER IT IS THE NORM FOR ALL UNITS. EACH ORGANIZATION SHOULD DEVELOP ITS INDIVIDUAL NORM OR STANDARD WHEN IT IS DESIRED TO DETERMINE WHETHER THE UNIT IS TRULY EFFICIENT BASED ON ITS WORK PERFORMANCE RATING. THERE MAY BE TWO INEFFICIENT ACTIVITIES YET ONE IS MORE EFFICIENT THAN THE OTHER; IT IS ALSO LIKELY THAT WHAT IS INEFFICIENT COMPARED TO THE NORM (STANDARD) FOR ALL USAF UNITS (HAVING A LOW WORK PERFORMANCE RATING) MAY BE TRULY EFFICIENT WHEN EXAMINED IN THE LIGHT OF ITS MISSIONS AND ORGANIZATIONAL STRUCTURE. A LOW WORK PERFORMANCE RATING IS NOT, "PER SE", POOR PERFORMANCE. IT MAY BE ENTIRELY CONSISTENT TO HAVE SIMULTANEOUSLY, A LOW PERFORMANCE RATING AND AN EVALUATION OF PERFORMANCE AS EFFICIENT AND ECONOMICAL. SUCH EVALUATIONS ARE THE PREROGATIVE AND RESPONSIBILITY OF THE MANAGEMENT AND STAFF OF EACH ACTIVITY.

EXPLANATION OF GRAPHIC PRESENTATION ON

COST OF SERVING THE RATION

This chart shows the cost of serving the ration at Continental Air Command Bases reporting Food Service, Subsistence Handling and Subsistence Costs. Costs of the Food Supervisor, Hq ConAC and Hq ConAC Air Forces are not included since these functions service all units of the respective commands and do not materially affect the costs of the function described in this presentation.

The Food Service account includes the cost of the Base Food Supervisor and personnel necessary to direct and operate dining halls for airmen, the officer's mess and other central food activities such as bakeries. The Subsistence Handling account includes the costs incurred in the receipt, issue and distribution of subsistence. The Subsistence account includes the cost of the ration; this cost was not added as a cost, to the cost of serving the ration but was used as explained below. Subsistence costs of headquarters, tenant and special mission organizations as described in AF Manual 170-5 are reported under the organization providing the services, such as the Wings, Air Base Groups or Squadrons, or AFRTC's.

The number of rations served was obtained from the Commissary Operating Statement (WD AGO Form 10-133) for those bases submitting this statement. Where bases did not submit the Commissary Operating Statement, the number of rations was computed by dividing the total cost of subsistence by the ration value. If the field ration value was not available, the garrison ration value was used.

The cost of serving the ration was computed by dividing the total cost of the function (Food Service Costs plus Subsistence Handling Costs) by the number of rations served. The cost of the ration furnished is not included in costs of the function presented here, but was used to determine the number of rations served as explained above.

The ConAC Standard shown on the chart is $.46 per ration applicable to all bases regardless of type. The decision to use a single standard applicable to all units was made after statistical tests indicated that there is no correlation between the size of the workload (number of rations served) and the cost per unit. High and low cost per unit of workload for both large and small workloads was evidenced for all three types of bases. An average for the four months period 1 November 1949 - 28 February 1950, after elimination of extreme deviations, was established. The median is approximately the same as the mean.

COMMENT

AN OVERALL REDUCTION OF $.04 IN THE COST OF SERVING THE RATION IN MARCH COMPARED TO THE PRIOR FOUR MONTHS PERIOD IS SHOWN. WINGS GENERALLY SHOW AN INCREASE IN COST OF SERVING THE RATION IN MARCH COMPARED TO THE PRIOR FOUR MONTHS. THIS IS ATTRIBUTED TO AN INCREASE IN PERSONNEL, PRINCIPALLY AT MCCHORD, SHAW, OTIS, SELFRIDGE AND HAMILTON. WITH THE EXCEPTION OF MITCHEL AND POPE, AIR BASE GROUPS AND SQUADRONS SHOW DECREASED COSTS AND NUMBERS OF PERSONNEL IN THE FUNCTION WITH A GREATER WORKLOAD, RESULTING IN A LOWER UNIT COST. THE CURTAILMENT OF ACTIVITY AT BEN HARRISON AND THE REDUCTION IN COST AT BROOKS AND LAWSON MATERIALLY AFFECTED THE AVERAGE FOR THIS GROUP.

WORKLOAD AT THE AFRTC'S INCREASED CONSIDERABLY WHILE THE OVERALL PERSONNEL FOR THE GROUP DECREASED SOMEWHAT. A CONSIDERABLE REDUCTION IN PERSONNEL AT PORTLAND, BIRMINGHAM, HENSLEY, AND MEMPHIS IS NOTED.

WHILE TOTAL COST INCREASED $16,000 AND NUMBER OF PERSONNEL INCREASED BY 51 IN MARCH OVER THE FOUR MONTHS PRIOR PERIOD, THE WORKLOAD INCREASE AT AIR BASE GROUPS, SQUADRONS AND AFRTC'S CONTRIBUTED TO THE OVERALL REDUCTION IN UNIT COST OF SERVING THE RATION. ACTION HAS BEEN TAKEN BY DIRECTOR OF MAINTENANCE, SUPPLY AND SERVICES, HQ CONAC TO REDUCE THE HIGH COST AT BIRMINGHAM.

EXPLANATION OF GRAPHIC PRESENTATION ON

COST OF REFUSE COLLECTION

The function of "Refuse Collection" includes the collection of refuse, salvageable scrap and waste materiel and the washing of garbage containers and cans.

Activities included in this account are:

(1) Loading from designated pick-up points the garbage, trash, salvageable scrap, and waste materials into suitable vehicles, delivering and unloading at points of disposal.

(2) Washing and replacing garbage cans.

(3) Refuse collection and disposal accomplished under contract at a cost to the government. Credits collected under such agreements are not reported in the Refuse Collection account.

The bases were divided into USAF and USAFR groups. This division was made because of the strength difference in the number of personnel at USAF and USAFR bases.

Military labor, which makes up about 70% of the total cost of Refuse Collection for USAF bases and about 25% for USAFR bases may include some prison labor. In those instances where military prisoners accomplish refuse collection, the cost of such labor should be included in the cost report as this is an AIO responsibility. However, there is no way of differentiating between prison labor and other military labor on the Monthly Cost Report, AF Form 329. All labor is costed at civilian pay rates.

The monthly cost and the monthly number of cubic yards collected shown on this chart are reported in the Refuse Collection account (08303), AF Form 329.

The number of personnel shown on this chart is taken from the work unit quantity column for the Mess and Kitchen Equipment account (02102), AF Form 329. This figure includes the number of military and civilian personnel quartered on the base plus 1/2 the military and civilians quartered off the base.

The installations included in this analysis are those which submit a detailed AF Form 329. Installations which submit Army or Navy type reports and those which submit a short form report on AF Form 329 were omitted. Birmingham Municipal Airport was excluded because no costs or work units were reported in the Refuse Collection account.

COMMENT

FOR USAF BASES THE AVERAGE COST PER CUBIC YARD COLLECTED, $1.12 IS 5.7% GREATER THAN THE CONAC STANDARD ($1.06). THIS IN ITSELF IS NOT A SIGNIFICANT INCREASE. CERTAIN BASES HOWEVER DO SHOW LARGE INCREASES. HAMILTON WENT FROM $1.50 TO $2.28 AN INCREASE OF OVER 50%; SELFRIDGE WENT FROM $1.74 TO $2.41, AN INCREASE OF 39%; STEWART INCREASED FROM $4.01 TO $4.46 AN INCREASE OF ONLY 12%. THE UNIT COST FOR STEWART IS EXCESSIVELY HIGH, OVER 4 TIMES GREATER THAN THE CONAC STANDARD. THE PER CAPITA COST FOR STEWART IS ALMOST 3 TIMES GREATER THAN THE APRIL AVERAGE. AN INVESTIGATION OF THIS ACTIVITY COST IS SUGGESTED FOR INCLUSION IN THE MONTHLY NARRATIVE ANALYSIS. ON THE OTHER HAND LANGLEY DECREASED FROM $1.21 TO $.67, A DECREASE OF 36%.

EXAMINATION OF THE USAFR BASES SHOWS A DECREASE IN THE AVERAGE OF $.08, OR 6% UNDER THE CONAC STANDARD. MIAMI SHOWS AN INCREASE FROM $1.27 TO $2.29 (80%) PER CUBIC YARD OF REFUSE COLLECTED. WOLD-CHAMBERLAIN ROSE FROM $2.77 TO $6.55, AN INCREASE OF $3.78 OR 136%. FAIRFAX AND NEW CASTLE (2237th AFRTC AT READING UNTIL 18 APRIL 1950) SHOW DECREASES OF 55% AND 36% RESPECTIVELY.

AT THOSE BASES WHERE APPRECIABLE INCREASES HAVE OCCURRED OR WHERE HIGH UNIT COSTS EXIST, INVESTIGATION SHOULD BE MADE INTO THE ACTIVITY TO SEE WHERE MORE EFFICIENT AND ECONOMICAL OPERATIONS CAN BE EFFECTED. REFERENCE CAN BE MADE TO ANY ACTION TAKEN, IN THE MONTHLY NARRATIVE ANALYSIS.

EXPLANATION OF GRAPHIC PRESENTATION

OVERHEAD OF AIR INSTALLATIONS ACTIVITY

"Overhead" personnel are those reported in the Administrative and Engineering Account (10103). It includes military and civilian administration and clerical personnel, personnel engaged in general engineering functions such as the preparation of project estimates, maintenance of real property cards and maps of installations, preparation of engineering reports, etc., and general superintendents assigned to the air installation activity.

"Total Installation Personnel" and "Administrative and Engineering Personnel" represent average monthly strength, over a 10 month period, (July 1949 - April 1950), of the personnel reported in the personnel data section of the report, (Account Codes 30001 and 30099). Exceptions to this exist at McGuire, for which a 7 month average is used and Portland, for which a 6 month average is used.

The average salary per civilian employed, other than Administration and Engineering Personnel, was computed by using the total civilian labor costs in the Grand Total account (19999) less Accrued Annual Leave account (10101), and Sick and Holiday Leave Taken account, (10102), and dividing the result by the total number of installations personnel, less the administration and engineering personnel.

The average salary per civilian in the administration and engineering activity was determined by dividing the total civilian labor costs in the A&E account by the total number of A&E personnel reported in account code 30001.

The average salaries shown are based upon ten months costs and personnel figures from July 1949 to April 1950. All average salaries exclude costs for accrued annual leave and sick and holiday leave. This procedure does not restrict the comparability of the values shown.

The installations included in this study are those which submit a detailed AF Form 329 and 330. Installations submitting Army or Navy type cost reports or short form reports on AF Form 329 were not included.

COMMENT

STAFFING OF ADMINISTRATIVE AND ENGINEERING PERSONNEL RANGES FROM 7% TO 15% OF TOTAL INSTALLATIONS PERSONNEL FOR USAF BASES: OF THE THIRTEEN USAF BASES UNDER CONSIDERATION, SIX REPORT 9%. THE HIGH POSITION OF OSCODA MAY BE EXPLAINED BY THE FACT THAT THEY HAVE 4 A&E PERSONNEL, A NUMBER WHICH APPEARS TO BE A MINIMUM FOR 26 INSTALLATION PERSONNEL.

FOR RESERVE BASES THE RANGE IS FROM 7% FOR MEMPHIS TO 16% FOR MIAMI. OF THE THIRTEEN BASES CONSIDERED, SIX REPORT 9% - 11% AS THEIR PERCENTAGE FACTOR. OTHER HIGH PERCENTAGE BASES ARE LONG BEACH - 15%, AND WOLD-CHAMBERLAIN - 14%.

BASES THAT SHOW THESE HIGH PERCENT FACTORS SHOULD INVESTIGATE THE ACTIVITY TO DETERMINE THAT THE FUNCTION IS NOT OVERSTAFFED, AND THE COST REPORTING TO BE SURE THAT NO ERRORS OF COSTING ARE BEING MADE.

EXPLANATION OF GRAPHIC PRESENTATION ON

COMPARATIVE PAYROLL COST OF MOTOR POOL ACTIVITY

The Motor Pool Account includes the following costs of operation: Cost of Motor Pool Officer, Refueling Officer, dispatchers, clerks, drivers, service personnel, and cost of fuels and lubricants used. The "Payroll Cost per Vehicle Mile Operated" is determined by dividing the Payroll Cost of the above activities by the number of miles operated as reported on AF Form 122A.

The payroll costs of the Motor Pool activity do not include any of the payroll costs applicable to the field maintenance of Automotive and ground powered equipment.

The average payroll cost per vehicle mile operated for each organizational type was determined by dividing the total of average costs by the total of average miles operated for each period.

The factor "Payroll Cost" rather than Total Cost, was chosen for analysis, since personnel discrepancies revealed can more readily be "controlled" for the purpose of accomplishing a cost reduction of value to USAF.

COMMENT

TOTAL PAYROLL COST OF THE MOTOR POOL ACTIVITY, $266,310, IS $7,931 MORE THAN THAT OF MARCH 1950. THIS INCREASE IS PRIMARILY DUE TO THE ADDITION OF COSTS AT SCHLEGEL AF PLANT NOW SUBMITTING AF FORM 320.

SLIGHT OVERALL DECREASED COSTS ARE SHOWN BY AIR BASE GROUPS AND AFRTC'S WHILE THE WINGS SHOW A PAYROLL INCREASE OF $.028 (16%) PER VEHICLE MILE OPERATED AS COMPARED TO MARCH.

IMPROVED OPERATING COSTS ARE SHOWN FOR THE FOLLOWING BASES:

O'HARE INT APT	32%	ATTERBURY AFB	17%	GODMAN AFB	13%
POPE AFB	28%	BROOKS AFB	16%	MCGUIRE AFB	11%
FAIRFAX FIELD	22%	HAMILTON AFB	16%	SHERMAN AFB	9%
STEWART AFB	21%	DOBBINS AFB	16%	MENSLEY FIELD	7%
MEMPHIS MUN APT	21%	SELFRIDGE AFB	14%		

ON THE OTHER HAND EXCESSIVE INCREASED COST PER MILE OPERATED IS EVIDENT FOR THE FOLLOWING:

	APRIL	MARCH	% INCREASE		APRIL	MARCH	% INCREASE
TURNER AFB	$.266	$.120	105%	SEWART AFB	$.296	$.193	53%
MARSHALL AFB	.166	.091	82%	WOLD-CHAMBERLAIN	.297	.198	50%
GTR PITTSBURG APT	.545	.325	68%	FLOYD BENNETT NAS	.255	.183	39%
SHAN AFB	.466	.279	67%				

ANALYSIS INDICATES THAT ALL OF THE INCREASES SHOWN ABOVE ARE DUE PRIMARILY TO A REDUCTION OF VEHICLE MILES OPERATED. INCREASED COSTS PER MILE FOR THE FOLLOWING CAN BE ATTRIBUTED TO INCREASED PAYROLL AS WELL AS A REDUCTION IN VEHICLE MILES OPERATED:

	APRIL	MARCH	INCREASE	PERCENT
WOLD-CHAMBERLAIN FIELD	$ 3,824	$ 2,773	$ 1,051	38%
TURNER AFB	15,095	11,286	3,809	34%
SEWART AFB	13,577	11,506	2,071	18%

FURTHER INVESTIGATION OF THE ACTIVITY AT THESE BASES IS WARRANTED. IF EXCESSIVE PERSONNEL AUTHORIZATIONS EXIST, IMMEDIATE ACTION SHOULD BE TAKEN TO REDUCE STAFFING, AS WELL AS AUTHORIZATIONS TO A POINT CONSISTENT WITH WORKLOAD.

[illegible]

Automotive and Ground Powered Equipment Maintenance Costs include cost of personnel and supplies utilized in the accomplishment of field maintenance. The "payroll cost per vehicle mile operated" is determined by dividing the payroll cost of the above activities by the number of miles operated as reported on AF Form 1124.

The payroll costs of the maintenance activity do not include any costs applicable to the Motor Pool. The average payroll cost per mile for each group was determined by dividing the total of average payroll costs by the total of average miles operated for each period.

COMMENT

TOTAL PAYROLL COST OF MAINTENANCE FOR APRIL 1950, FOR THE 35 BASES UNDER REVIEW, AMOUNTS TO $226,838 AS COMPARED TO $215,109 IN MARCH. $2,912 OF THIS INCREASE COVERS THE NEWLY REPORTED 2240TH AFRTC, SCHLEGEL AF PLANT AT CLEVELAND.

THE FOLLOWING BASES SHOW IMPROVED OPERATING COSTS OVER LAST MONTH:

HENSLEY FIELD	39%	HAMILTON AFB	22%	STEWART AFB	13%
SHERMAN AFB	39%	DOBBINS AFB	18%	SELFRIDGE AFB	9%
BEN HARRISON AFB	24%	MCGUIRE AFB	15%	O'HARE INT APT	5%

ALL THREE GROUPS OF BASES SHOW INCREASED OVERALL COST PER VEHICLE MILE OPERATED AS COMPARED WITH MARCH. THE INCREASED COST FOR THE WINGS WAS 13% AND THAT OF THE AFRTC'S WAS 10%.

EXCESSIVE INCREASED PAYROLL COST PER MILE OPERATED IS EVIDENT AT THE FOLLOWING BASES:

	APRIL	MARCH	% INCREASE		APRIL	MARCH	% INCREASE
MEMPHIS MUN APT	$.229	$.092	149%	GTR PITTSBURGH APT	$.339	$.180	88%
MIAMI INT APT	.118	.049	141%	SEWART AFB	.174	.115	51%
MARSHALL AFB	.089	.039	128%	TURNER AFB	.239	.159	50%

ANALYSIS INDICATES THAT THE WORKLOAD "VEHICLE MILES OPERATED" DIMINISHED AT EACH OF THE BASES. IN ADDITION, EXORBITANT PAYROLL COST INCREASES ARE REPORTED FOR MEMPHIS AND MIAMI, AS FOLLOWS: (FIGURES IN PARENTHESIS SHOW NUMBER OF PERSONS IN FUNCTION)

	APRIL	MARCH	INCREASE	PERCENT
MEMPHIS MUN APT	$ 3,015 (15)	$ 1,366 (5)	$ 1,646	121%
MIAMI INT APT	3,954 (19)	1,924 (9)	2,030	106%

FURTHER INVESTIGATION TO DETERMINE THE REASON FOR THESE ADDITIONAL PERSONNEL IS WARRANTED. POSSIBILITY OF ADJUSTMENT IN REPORTING PROCEDURE IS EVIDENT, IN THE CASE OF MEMPHIS, SINCE THE PAYROLL REPORT SHOWS A REDUCTION OF SEVEN (7) PERSONS SERVING IN MOTOR POOL ALONG WITH AN INCREASE OF TEN (10) PERSONS IN THE MAINTENANCE FUNCTION.

EXPLANATION OF PAY-OFF PROJECT

CONAC SAVINGS IN COST OF FUELS AND LUBES

MOTOR POOL

31ST FIGHTER-BOMBER WING, TURNER AIR FORCE BASE, GEORGIA

The Fourteenth Air Force has instituted a vigorous program seeking cost reductions in all activities where subnormal work performance ratings or inordinately high costs have indicated the need for management action.

This Pay-Off Project illustrates the effect of such management action and the savings accruing to the USAF as a result of the reduction in operating costs in the Motor Pool, at the 31st Fighter-Bomber Wing at Turner Air Force Base.

During November 1949, the number of general purpose vehicles authorized for use by the 31st Fighter-Bomber Wing was sharply curtailed by direction of Headquarters, USAF and ConAC (letter Hq ConAC, MatS 451, dated 26 Sept 1949, subject "Reduction in Utilization of Vehicles").

A ceiling of 131 general purpose vehicles, as authorized by TA 1-75, was approved by a team from Headquarters, Fourteenth Air Force during the first part of December 1949. Realizing that this ceiling did not represent the maximum possible reduction in the use of vehicles the Commanding Officer of the 31st M&S Group concurrently instituted a program calling for rigid control over the daily dispatch of vehicles from the Motor Pool, with particular emphasis being placed on the consolidation of all trips and the restriction of off-base trips. Average monthly POL (petroleum, oil and lubricants) costs for the three month period immediately preceding the reduction in authorized vehicles have been compared with December 1949 POL costs to determine the savings resulting from the reduction in authorization of vehicles. The savings resulting from the M&S group program have then been determined by subtracting the monthly average POL costs for January, February and March 1950 from the December cost of fuel and lubes.

This Pay-Off Project is an example of the method of analysis which can be used to indicate savings to the USAF resulting from management action in regard to a specific activity or function. Pay-Off Projects should include cost data covering the period before and after implementing action has been taken, and a reference to directives or program initiating such action, showing the date instituted and the authority for the program or action. Cost and workload data should be accurate and sources referred to of such a nature that ready reference may be made to reports from which the data was obtained. It is of primary importance in the reporting of "Pay-Off Projects" that the situation be one in which cost reductions have resulted in no loss in operating efficiency or mission performance.

ANALYSIS OF CONAC SAVINGS IN COST OF FUELS AND LUBES, MOTOR POOL

31ST FIGHTER-BOMBER WING

1 JAN - 31 MAR 1950 COMPARED WITH 1 SEP - 30 NOV 1949

Three months average cost of fuels and lubes before reduction in number of vehicles and institution of 31st M&S Group program (Sep - Nov 1949)	$ 2,708	
Cost of fuels and lubes, December 1949, after reduction in general purpose vehicles authorized by TA 1-75 and approved by Hq 14th AF	2,355	
Reduction in monthly cost of fuels and lubes attributable to reduction in number of vehicles		$ 353
Three months average cost of fuels and lubes (Jan - Mar 1950) during institution of M&S Group program	1,933	
Additional reduction in monthly cost of fuels and lubes attributed to M&S program (Jan - Mar 1950 compared with Dec 1949)		422
Total average monthly savings in cost of fuels and lubes accomplished by reduction in vehicles and maintenance of M&S group program, or an		775

ESTIMATED ANNUAL SAVINGS TO THE USAF OF $ 9,300

SOURCE: Analysis - 31st Fighter-Bomber Wing, March 1950

EXPLANATION OF TABULATIONS OF COMPARATIVE DATA
FOR PROGRESS AND MANAGEMENT ANALYSIS
COMBAT GROUPS, SEPARATE SQUADRONS AND
AIR FORCE RESERVE TRAINING CENTERS

The purpose of the tabulations presented on the following three pages is to provide, to commanders and management analysts, at unit level, selected performance data. These tabulations provide a basis for local progress and management analysis.

The data contained in these tabulations does not replace, but rather supplements Comptroller Chart #6 and the presentations in this Review. Additional data will be included in future issues of this Review upon request. Information classified above RESTRICTED will not be included.

Examples of analyses possible from data shown here are:

a. Cost of Organizational Maintenance per Flying Hour (ConAC Cost Analysis Review, August).
b. Cost of Fuels and Lubes per Flying Hour (Page 16, ConAC Cost Analysis Review, July).
c. Utilization of in-commission rates.
d. Analysis of Fuel Consumption per hour.
e. Cost of organizational maintenance per unit of flying, AFRTC (Page 11, ConAC Cost Analysis Review, November).
f. Hours flown per person assigned to organizational maintenance function.

EXPLANATION OF GRAPHIC PRESENTATION ON

RELATIVE MAINTENANCE EFFECTIVENESS - COMBAT GROUPS

The "Average Number of Personnel in Maintenance Function" was determined from account codes 07110 (Maintenance Performend by the Combat Group) and 05102 (Field Maintenance of the Predominant Type Aircraft in the Combat Group).

"Hours of Flying Per Person in Function" is the basic unit of measure charted in this presentation. This figure is obtained by dividing Average Hours of Flying per Month by Average Number of Personnel in Maintenance Function.

COMMENT

FOUR OF THE TWELVE COMBAT GROUPS CHARTED (20TH, 4TH, 314TH, 81ST) SHOW A SUBSTANTIAL INCREASE IN HOURS OF FLYING PER PERSON IN THE MAINTENANCE FUNCTION, WHILE THREE (56TH, 78TH, AND 325TH) SHOW A SUBSTANTIAL DECREASE. THE 56TH GP WITH AN INCREASE IN AVERAGE NUMBER OF MAINTENANCE PERSONNEL (286 TO 338), SHOWS PRACTICALLY NO INCREASE IN IN-COMMISSION RATE AND CONSEQUENTLY A SIZEABLE DROP IN HOURS FLOWN PER PERSON IN THE MAINTENANCE FUNCTION. THE 325TH GP, WHILE INCREASING FROM AN AVERAGE OF 259 TO 275 MAINTENANCE PERSONNEL, SHOWS A DECREASE IN IN-COMMISSION RATES (FROM 47% TO 41%) AND A DECREASE IN HOURS OF FLYING PER PERSON IN MAINTENANCE FUNCTION. ALTHOUGH THE IN-COMMISSION RATE DID INCREASE SLIGHTLY, THE 78TH GP FOLLOWS THE SAME PATTERN.

THE AVERAGE ZI WEATHER INDEX (AFL 150-10) FOR 1 SEPT - 31 DEC 49 WAS 97% AND FOR 1 JAN - 30 APR 50, 91%. ON THE AVERAGE, 6% OF ANY DECREASE IN FLYING FROM THE NORMAL PROGRAM MIGHT BE EXPLAINED BY WEATHER. THE ABOVE DECREASES ARE CONSIDERABLY MORE THAN 6%, (RANGING FROM 21% AT THE 78TH TO 31% AT THE 56TH GROUP) AND THEREFORE MUST BE ATTRIBUTED TO RELATIVELY LARGE INCREASES IN PERSONNEL.

EXPLANATION OF

RELATIVE MAINTENANCE EFFECTIVENESS

TENANT AFRTC'S

The purpose of this presentation is twofold:

a. To indicate the variation between Tenant Air Force Reserve Training Centers for the number of flying units produced in relation to number of personnel assigned in the maintenance function.

b. To compare the trends of performance at each AFRTC for the periods 1 July - 31 December 1949 and 1 January - 30 April 1950.

"Maintenance Function" data is obtained from Account Code 07110 (Maintenance performed by the organization).

Units of Flying are weighted flying hours. The weights used (Aircraft Maintenance Workload Factors) are based on the number of T/O&E authorizations in maintenance SSN's (modified for AFRTC's) in relation to the number of flying hours expected per aircraft, by type, as specified in AFL 150-10. The factors are as follows:

B-26 = 1	C-47 = .68
C-46 = .82	T-6 = .53
C-45, T-7, T-11 = .80	

"Units of Flying Accomplished" are then computed as follows: Workload Factor (By type acft) X Actual Hours Flown (By type acft) = Total Units of Flying Accomplished

EXAMPLE:	C-47	- 147 hrs x .68	=	99.96
	T-7	- 196 hrs x .80	=	156.80
	T-6	- 239 hrs x .53	=	126.67
TOTAL UNITS OF FLYING ACCOMPLISHED			=	383.43

The 2230th AFRTC at Floyd Bennett NAS and the 2596th AFRTC at Hensley Field, heretofore included with Tenants, have been excluded since they perform the major portion of Base Services normally required by their activity.

COMMENT

IN THIS GROUP, THE AFRTC AT OFFUTT ALONE IMPROVED ITS "MAINTENANCE EFFECTIVENESS" OVER THE PRIOR PERIOD. THE GREATEST DECREASE IN EFFECTIVENESS (33%) IS SHOWN FOR HAMILTON. THE AVERAGE II WEATHER FACTOR (AFL 150-10) DECLINED 11% DURING THE SAME PERIOD. THIS FACTORIAL DECREASE WOULD EXPLAIN THE DECREASED FLYING, THEREFORE WE MIGHT CONCLUDE THAT THE INCREASE IN PERSONNEL AT HAMILTON IS THE DIRECT CAUSE OF DECREASED MAINTENANCE EFFECTIVENESS.

THE 2240TH AFRTC ACTUALLY HAD AN INCREASE IN FLYING, YET THE INCREASE IN MAINTENANCE PERSONNEL (119 TO 174) OVERCAME THIS INFLUENCE AND PRODUCED A SUBSTANTIAL DECREASE IN "MAINTENANCE EFFECTIVENESS".

EXPLANATION OF

RELATIVE MAINTENANCE EFFECTIVENESS

NON-TENANT AFRTC'S

The purpose of this presentation is twofold:

a. To indicate the variation between Non-Tenant Air Force Reserve Training Centers for the number of flying units produced in relation to number of personnel assigned in the maintenance function.

b. To compare the trends of performance at each AFRTC for the periods 1 July - 31 December 1949 and 1 January - 30 April 1950.

"Maintenance Function" data is obtained from Account Code 07110 (Maintenance performed by the organization)

Units of Flying are weighted flying hours. The weights used (Aircraft Maintenance Workload Factors) are based on the number of T/O&E authorizations in maintenance SSN's (modified for AFRTC's) in relation to the number of flying hours expected per aircraft, by type, as specified in AFL 150-10. The factors are as follows:

B-26 = 1	C-47 = .68
C-46 = .82	T-6 = .53
C-45, T-7, T-11 = .80	

"Units of Flying Accomplished" are then computed as follows: Workload Factor (By type acft) X Actual Hours Flown (By type acft) = Total Units of Flying Accomplished

EXAMPLE:	C-47	- 147 hrs	x .68	=	99.96
	T-7	- 196 hrs	x .80	=	156.80
	T-6	- 239 hrs	x .53	=	126.67
TOTAL UNITS OF FLYING ACCOMPLISHED				=	383.43

The 2230th AFRTC at Floyd Bennett NAS and the 2596th AFRTC at Hensley Field, heretofore included with Tenants, are included since they perform the major portion of Base services normally required by their activity.

COMMENT

OF THE SIXTEEN AFRTC'S IN THIS GROUP, ONLY TWO (2230TH AND 2237TH) SHOW A SUBSTANTIAL INCREASE IN UNITS OF FLYING PER PERSON IN FUNCTION FOR THE PERIOD 1 JAN - 30 APR OVER THE PREVIOUS SIX MONTHS. THE FOLLOWING AFRTC'S SHOW A SUBSTANTIAL DECREASE:

2236TH	GODMAN AFB	2585TH	MIAMI INTERNATIONAL AIRPORT	2466TH	ATTERBURY AFB
2234TH	HANSCOM AFB	2471ST	O'HARE INTERNATIONAL AIRPORT	2347TH	NEW CASTLE COUNTY AIRPORT
2472D	FAIRFAX FIELD	2465TH	WOLD-CHAMBERLAIN FIELD	2596TH	HENSLEY FIELD

THE AVERAGE ZI WEATHER INDEX (AFL 150-10) FOR 1 JUL - 31 DEC WAS 102% AND FOR 1 JAN -30 APR, 91%. ON THE AVERAGE, THEREFORE, 11% OF ANY DROP IN FLYING COULD BE EXPLAINED BY WEATHER. THESE DECREASES ARE CONSIDERABLY MORE THAN 11%, RANGING FROM A 15% DECREASE AT HANSCOM TO A 48% DECREASE AT LONG BEACH. THE DECREASE IN EFFICIENCY AT LONG BEACH WAS DUE TO BOTH A LARGE INCREASE IN MAINTENANCE PERSONNEL (245 TO 341) AND A DECREASE IN FLYING HOURS, DESPITE AN INCREASE OF PERCENT IN COMMISSION. THE DROP OF 46% AT ATTERBURY WAS DUE ENTIRELY TO DECREASED FLYING.

IT IS INTERESTING TO NOTE THAT THE AFRTC'S WHICH WERE HIGH FOR THE 1 JUL - 31 DEC 49 PERIOD ALL DECREASED, AND THOSE WHICH WERE LOW MOSTLY SHOWED INCREASES.

INTRODUCTION

THE PURPOSE OF THE CONAC MANAGEMENT ANALYSIS REVIEW IS TO PROVIDE COMMANDERS AND THEIR STAFFS EACH MONTH WITH ANALYSES AND SELECTED DATA WHICH, WHEN PROPERLY INTERPRETED, WILL INDICATE ACHIEVEMENT WITHIN SPECIFIC FUNCTIONS OF THEIR ACTIVITY.

IT IS INTENDED THAT THIS REVIEW PRESENT FACTS IN SUCH A MANNER THAT COMMANDERS AND THEIR STAFFS CAN EVALUATE THE CONSISTENCY OF THEIR OPERATING ACTIONS, THE EFFICIENT AND ECONOMICAL USE OF RESOURCES AND THE PROGRESS OF THEIR VARIOUS ACTIVITIES TOWARD AUTHORIZED OBJECTIVES.

THE CONTENTS OF THIS REVIEW WILL VARY FROM MONTH TO MONTH. THIS WILL PERMIT GREATER COVERAGE OF COMMAND ACTIVITIES AND CONCENTRATION ON CURRENT ITEMS OF COMMAND INTEREST.

THE PRESENCE OF EXTREME CONDITIONS ARE READILY APPARENT TO COMMANDERS WHEN PROPERLY SHOWN IN GRAPHIC PRESENTATIONS. MANY OF THE EXTREME CONDITIONS INDICATED HEREIN MAY BE JUSTIFIED BY LOCAL SITUATIONS AND THE NATURE OF ASSIGNED MISSIONS. THESE ANALYSES, HOWEVER, SERVE AS A GUIDE TO AREAS AND ACTIVITIES WHERE FURTHER INVESTIGATIONS AND CORRECTIVE ACTIONS MAY RESULT IN BETTER MANAGEMENT.

THE ANALYSES CONTAINED HEREIN HAVE BEEN DERIVED FROM INFORMATION AS REPORTED TO THIS HEADQUARTERS.

EXPLANATION OF GRAPHIC PRESENTATION ON

TOTAL COST OF CONTINENTAL AIR COMMAND BY FUNCTIONAL GROUPING - MONTHLY DISTRIBUTION

The following activities are included in the functional groupings as shown on the chart:

COMMAND GROUP

Hq & Hq Sq, Continental Air Command
Hq & Hq Sq, Tactical Air Command
Hq & Hq Sq, Air Defense Forces
Hq & Hq Sq, ConAC Air Forces
Hq & Hq Sq, Air Divisions (Defense)
2220th Field Printing Plant (May through December 1950)
2220th Extension Group, Less Extension Course Activity (January through April 1950)
Hq & Hq Sq, Combat Wings

OPERATIONS GROUP

Combat - Total Operating Costs of Fighter Groups, Troop Carrier Groups, Tactical Recon Group, Bomb Squadrons (L), Assault Squadron.
Combat Support - Total Operating Costs of Liaison Squadrons and Flights, Aircraft Control and Warning Units, Tactical Control Groups, Shoran Beacon Unit.

SERVICE GROUP

Total operating costs of ConAC organizations less those included in Command, Operations and other Mission Groups.

OTHER MISSION GROUP

Air Force Reserve (AFRTC's only)
Air National Guard (includes Instructor Personnel)
Air ROTC (includes Instructor Personnel)
Air Explorer Liaison
Air Force Overseas Replacement Groups
All other (minor activities including Military Liaison Personnel with Army, Navy and other agencies)
Extension Course Activity of 2220th Extension Group (January through April 1950)

ADDITIONAL CHARGES

Cost of excess personnel and recruits awaiting shipment, AFCRC Casuals, Detachment of Patients, Lump Sum Payments, reenlistment bonuses, initial issue of clothing, PCS, Supplies and Services furnished others, parts to salvage, extraordinary repairs and condemned inventory.

COMMENT

AN OVERALL DECREASE IN COSTS OF $732,873 FOR JUNE OVER MAY IS INDICATED. INCREASES ARE NOTED IN ALL GROUPS HOWEVER, WITH THE EXCEPTION OF THE ADDITIONAL CHARGES GROUP (WHERE A DECREASE OF $1,290,941 HAS OCCURRED) AS FOLLOWS: COMMAND GROUP $79,900, OPERATIONS GROUP $156,912, SERVICES GROUP $45,294 AND OTHER MISSION GROUP $275,872. DUE TO DELINQUENCY IN REPORTING, THE COSTS FOR THE 62ND TROOP CARRIER GROUP ARE NOT INCLUDED. THESE HAVE APPROXIMATED $250,000 IN PAST MONTHS.

EXPLANATION OF GRAPHIC PRESENTATION ON

TOTAL COST OF CONTINENTAL AIR COMMAND

BY ELEMENTS OF COST - MONTHLY DISTRIBUTION

The component costs shown on this chart are derived from costs reported by all units listed in the explanation of the "Total Cost of Continental Air Command By Functional Grouping", as follows:

MILITARY PAY

Military pay includes the pay of all military personnel, officer or airman, exclusive of rental allowance for officers, and rental allowance and separate rations payable to airmen.

CIVILIAN PAY

Civilian pay is computed for the report period based on gross annual rates and does not include overtime.

CONTRACTUAL SERVICES

Contractual services include all charges for services rendered regardless of whether or not paid from funds available at base level, such as cost of shipment of government property, contract repair of office machines, communication charges, etc. Where contracts exceed one month, the monthly charge is computed on the basis of the fractional part that the month is of the total period covered. Thus, for example, where a contractual amount covers a one year period, the monthly charge will be 1/12th of the total contractual amount specified.

MISCELLANEOUS

Miscellaneous costs include the cost of PCS, TDY, overtime, lump sum payments, reenlistment bonuses, and T/R's (including T/R's for dependents)

SUPPLY

Supply costs include all supply items except complete aircraft and complete aircraft engines; includes AF Supplies, QM Supplies, Engineer Supplies (Air Installations), Fuels and Lubricants for aircraft, for ground powered vehicles, for heating, etc. All other supplies, such as Signal, Chemical, Ordnance, Medical.

The total of the items on the chart include the dollar cost of the resources which were consumed by ConAC during each month, classified to show the general purpose for which such expenditures were incurred. Total costs by elements of cost agrees with the total cost shown by functional grouping.

COMMENT

THE OVERALL DECREASE IN COSTS OF $732,873 FOR JUNE OVER MAY IS THE RESULT OF THE DECREASE IN SUPPLIES OF $423,907 AND MILITARY PAY $815,239. INCREASES IN CIVILIAN PAY AMOUNT TO $77,798, CONTRACTUAL SERVICES $306,399 AND MISCELLANEOUS EXPENDITURES $118,076. THE DECREASE IN MILITARY PAY IS DUE TO THE EXCLUSION OF ALL HOSPITAL SQUADRONS (TRANSFERRED TO HEADQUARTERS COMMAND) AND THE OMISSION OF THE 62ND TROOP CARRIER GROUP PAYROLL (APPROXIMATELY $110,000).

EXPLANATION OF GRAPHIC PRESENTATION ON

COST OF CONTRACTUAL COMMUNICATIONS - HQ CONAC AND HQ CONAC AIR FORCES

The cost of Contractual Communications reflects all payments to commercial organizations for services and includes charges for long distance telephone calls, trunk service, telegraph and cable service, teletype service, charges for rental of commercial telephone service, central office equipment, and the cost of installation of communications equipment as required.

Where commercial service for a headquarters is paid for by the base on which located, the headquarters proportionate share of contractual costs is posted to this account (20527).

The chart reflects the cost variation for Contractual Communications during Fiscal Year 1950.

COMMENT

THE AVERAGE MONTHLY COST FOR EACH HEADQUARTERS IS $766, A TOTAL EXPENDITURE OF $64,312 FOR CONTRACTUAL COMMUNICATIONS FOR FISCAL YEAR 1950. THE COST OF CONTRACTUAL COMMUNICATIONS FOR JUNE AT HQ CONAC IS INCLUDED IN THE TOTALS AT THE MONTHLY AVERAGE RATE OF ELEVEN MONTHS; FISCAL ACCOUNTING, WHICH PROVIDES MUCH OF THE INFORMATION USED IN ASSEMBLING COST DATA, HAS NOT YET BEEN ADJUSTED FOR REVISED RATES INVOLVED.

HEADQUARTERS FIRST AIR FORCE REPORTED AN "ESTIMATED" COST FOR CONTRACTUAL COMMUNICATIONS FOR BOTH MAY AND JUNE INDICATING A POSSIBLE RECURRING DELAY IN RECEIPT AND PROCESSING OF INVOICES.

EXPLANATION OF GRAPHIC PRESENTATION ON

COST OF TEMPORARY DUTY TRAVEL - HQ CONAC AND HQ CONAC AIR FORCES

This chart indicates the trend of Temporary Duty travel costs for Hq ConAC and Hq ConAC Air Forces. Expenditures shown include those from both specific and open allotments and include the cost of Per Diem, Rail Transportation of persons and things, meal tickets and minor expenditures (liquid coffee money, taxi fares and porter's tips), for civilian and military personnel traveling on official business (Account Code 20529). Specific allotments provide for travel in conjunction with the following: Ferrying of Air Force, Air Force Reserve and Air National Guard aircraft, Operation of installations, area cadet recruitment, air combat maneuvers, individual or group movements for attendance at schools, travel in conjunction with the Air Force ROTC instruction program at civilian institutions, and summer encampments of Air Force ROTC and Air National Guard. Open allotments normally cover costs incident to travel and per diem of civilian witnesses in connection with courts-martial, travel of medical attendants and escort of military dead to the place of burial. Although cost figures include adjustments over obligations, it is believed that totals for a three month period are comparable.

COMMENT

A TOTAL OF $1,096,130 WAS EXPENDED FOR TEMPORARY DUTY TRAVEL DURING FISCAL YEAR 1950. HQ CONAC AND THE SIX CONAC AIR FORCE HEADQUARTERS INCURRED A MONTHLY AVERAGE COST OF $13,049 EACH.

AT HQ NINTH AIR FORCE, $837 OF THE TEMPORARY DUTY TRAVEL COST REPORTED IS CHARGEABLE TO EXERCISE "SWARMER." TEMPORARY DUTY TRAVEL COSTS AT HQ FOURTEENTH AIR FORCE FOR JUNE WERE ESTIMATED BECAUSE OF A TEN-DAY EXTENSION ALLOWED FOR CLOSING OF FISCAL YEAR 1950 FISCAL RECORDS. NECESSARY ADJUSTMENTS WILL BE INCORPORATED IN A SUBSEQUENT REPORT.

EXPLANATION OF GRAPHIC PRESENTATION ON

RELATIVE WORK PERFORMANCE OF SUPPLY CONTROL

The costs included in the activity are those of the Supply Control Officer, Accountable Property Officer, Consolidated Supply Officer, Technical Supply Officer and office staffs, administrative assistants and stock record and M/R posting clerks. Warehouse personnel are not included. The Work Performance Rating is determined by dividing the total cost of the activity on the base by the number of voucher line items (taken from the Voucher Register) accomplished during the month. The results of this calculation are applied in the formula below:

$$\frac{\text{United States Air Force Standard Cost}}{\text{Actual Cost Per Voucher Line Item}} \times 100 = \text{Work Performance Rating}$$

ConAC tentative standards have been developed and are shown in this presentation. An average cost, excluding extremes, per voucher line item was determined based on data reported for the two months period January and February 1950. Details of procedures used in determining ConAC Standards are on file in the Directorate of Programs & Costs, Comptroller, Hq. ConAC.

COMMENT

IN THE GROUP REPORTING 0-10000 VOUCHER LINE ITEMS, FLOYD BENNETT, LAWSON, AND SHERMAN HAVE RELATIVELY LOW PERFORMANCE RATINGS AS COMPARED WITH BIRMINGHAM WHICH APPROXIMATES THE STANDARD ESTABLISHED BY USAF. ANALYSIS OF THE ACTIVITY SHOWS THAT A WORK LOAD OF 5,170 VOUCHER LINE ITEM IS BEING COMPLETED BY 24 PEOPLE AT BIRMINGHAM, OR AN AVERAGE OF 215 PER PERSON. BY COMPARISON, AT FLOYD BENNETT A WORKLOAD OF 2,769 VOUCHER LINE ITEM REQUIRES 17 PEOPLE OR AN AVERAGE OF 162 PER PERSON. AT LAWSON A WORKLOAD OF 3,157 VOUCHER LINE ITEMS IS BEING PRODUCED BY 18 PEOPLE (175 VOUCHER LINE ITEMS PER PERSON) AND AT SHERMAN 1,121 VOUCHER LINE ITEMS ARE BEING HANDLED BY 17 PEOPLE (66 VOUCHER LINE ITEMS PER PERSON). IF IT CAN BE ASSUMED THAT THE WORK ACCOMPLISHED BY EACH INDIVIDUAL IN THIS FUNCTION SHOULD APPROACH A STANDARD QUANTITY, THE NUMBER OF PERSONNEL IN THE FUNCTION AT BASES REPORTING LOW RATINGS MAY BE INCONSISTENT WITH WORKLOAD AND WARRANTS FURTHER INVESTIGATION.

EXPLANATION OF GRAPHIC PRESENTATION ON

RELATIVE WORK PERFORMANCE OF SUPPLY WAREHOUSES

The costs included in this activity are those of operating supply warehouses receiving and issuing all types of supply, excluding medical supply, subsistence, and commissary sales items. The work performance is determined by dividing the total base cost of the activity by the number of voucher line items accomplished during the month, (count of voucher line items are made at the time of registering and numbering of vouchers in the Voucher Register). The results of the above calculation are applied to the formula below:

$$\frac{\text{United States Air Force Standard Cost}}{\text{Actual Cost Per Voucher Line Item}} \times = \text{Work Performance Rating}$$

COMMENT

LOW WORK PERFORMANCE RATINGS ARE REPORTED FOR LAWSON, MCGUIRE, AND FLOYD BENNETT. ANALYSIS REVEALS THE REASON FOR THE LOW PERFORMANCE RATING AT LAWSON IS DUE TO THE AVERAGE HIGH COST OF $307 PER PERSON IN THE FUNCTION AS COMPARED WITH $192 PER PERSON AT BIRMINGHAM. AT MCGUIRE THERE APPEARS TO BE AN EXCESSIVE NUMBER OF PERSONNEL IN THE FUNCTION, FOR EXAMPLE A WORKLOAD OF 10,791 VOUCHER LINE ITEMS IS ACCOMPLISHED BY 89 PEOPLE OR AN AVERAGE OF 121 VOUCHER LINE ITEM PER PERSON, AS COMPARED WITH A WORKLOAD OF 5,170 VOUCHER LINE ITEMS AT BIRMINGHAM ACCOMPLISHED BY 23 PEOPLE OR AN AVERAGE PER PERSON OF 225, WHICH IS ALMOST DOUBLE THE AMOUNT AT MCGUIRE. FLOYD BENNETT IS IN THE SAME CATEGORY AS MCGUIRE WITH 28 PEOPLE IN THE FUNCTION ACCOMPLISHING 99 VOUCHER LINE ITEMS PER PERSON. THIS IS A PERSONNEL MANAGEMENT PROBLEM AND WARRANTS INVESTIGATION.

EXPLANATION OF GRAPHIC PRESENTATION ON

RELATIVE WORK PERFORMANCE OF SUBSISTENCE HANDLING

The cost of Subsistence Handling includes the costs incurred in the receipt, issuance, and distribution of subsistence. The cost of items of subsistence issued is not included. Personnel working part-time on Subsistence Handling and part-time on Commissary Sales are costed entirely to Subsistence Handling. The Work Performance Rating is determined by dividing the total base cost of the activity by the number of rations issued, (taken from WD AGO Form 10-133). This cost was applied in the formula below:

$$\frac{\text{United States Air Force Standard Cost}}{\text{Actual Cost of Handling Per Ration Issued}} \times 100 = \text{Work Performance Rating}$$

ConAC tentative standards have been developed and are shown in the tabular presentation. An average cost per ration issued was determined excluding extremes, based on data reported for January and February 1950. Details of procedures used in determining ConAC Standards are on file in the Office of the Director of Programs and Costs, Comptroller, Hq. ConAC.

COMMENT

LOW WORK PERFORMANCE IS NOTED AT BIRMINGHAM, PORTLAND, MITCHEL AND LANGLEY. ANALYSIS OF THE FUNCTION SHOWS THE REASON FOR THE LOW RATINGS TO BE DUE TO THE NUMBER OF PERSONNEL IN THE FUNCTION FOR THE WORKLOAD REPORTED. FOR EXAMPLE PORTLAND REPORTS SIX (6) PEOPLE IN THE FUNCTION ISSUING APPROXIMATELY 12,000 RATIONS COMPARED WITH POPE ISSUING 21,000 RATIONS WITH ONLY THREE (3) PEOPLE IN THE FUNCTION. AT MITCHEL 52,000 RATIONS ARE ISSUED BY 26 PEOPLE. SELFRIDGE, OTIS AND HAMILTON ARE HANDLING LARGER WORKLOADS WITH APPROXIMATELY ONE-THIRD THE NUMBER OF PERSONNEL.

UNLESS THERE ARE UNUSUAL CIRCUMSTANCES (SUCH AS ADDITIONAL WORK-LOAD FACTORS) JUSTIFYING THE LARGE NUMBER OF PERSONNEL IN THE FUNCTION THERE APPEARS TO BE AN EXCESS OF STAFF ASSIGNED TO THE FUNCTION. THIS IS A PERSONNEL MANAGEMENT PROBLEM AND WARRANTS INVESTIGATION.

EXPLANATION OF GRAPHIC PRESENTATION ON

RELATIVE WORK PERFORMANCE OF COMMISSARY SALES

The costs of Commissary Sales include the total costs of personnel engaged full time in the direction and operation of sales stores. Dollar value of retail sales includes all sales made by sales stores, plus gasoline sales, where gasoline sales are made by personnel assigned to the Sales Office. Also included are sales made to food-and-drink dispensing agencies authorized to buy from the sales commissary. The Work Performance Rating is determined by dividing the total cost of the activity by the dollar value of retail sales per month. The results of the above calculations are applied in the formula below:

$$\frac{\text{United States Air Force Standard Cost}}{\text{Actual Cost Per Dollar Sales}} \times 100 = \text{Work Performance Rating}$$

ConAC tentative standards have been developed and are shown in the tabular presentation. An average cost (excluding extremes) per dollar of sales was determined based on data reported for the two months period, January and February 1950. Details of procedures used in determining ConAC Standards are on file in the Office of the Director of Programs and Costs, Comptroller, Hq. ConAC.

COMMENT

OF THE NINE BASES REPORTING COMMISSARY SALES, TURNER AND HAMILTON REPORT WORK PERFORMANCE RATINGS BELOW 100. ANALYSIS INDICATES THAT THE REASON FOR THE LOW WORK PERFORMANCE RATING CAN BE ATTRIBUTED TO THE LARGE NUMBER OF PEOPLE IN THE FUNCTION FOR THE DOLLAR VALUE OF SALES. AT HAMILTON, $58,000 IN SALES ARE ACCOMPLISHED BY 30 PEOPLE. AT MITCHEL, DOLLAR SALES OF APPROXIMATELY $75,000 ARE HANDLED BY 12 PEOPLE OR LESS THAN HALF AS MANY PEOPLE IN THE FUNCTION HANDLING A MUCH LARGER VOLUME OF SALES. SIMILARLY, TOTAL DOLLAR SALES OF APPROXIMATELY $11,000 AT TURNER ARE ACCOMPLISHED BY 9 PEOPLE, WHILE AT OTIS, APPROXIMATELY $19,000 ARE ACCOMPLISHED BY 5 PEOPLE.

IF THERE ARE UNUSUAL CONDITIONS OR EXTENUATING CIRCUMSTANCES WARRANTING THESE DIFFERENCES, THIS HEADQUARTERS WOULD APPRECIATE A RESPONSE SO THAT ALLOWANCES MAY BE MADE AND GIVEN CONSIDERATION IN FUTURE ANALYSES. SUCH INVESTIGATIONS MAY APPROPRIATELY BE COMMUNICATED VIA THE "MONTHLY ANALYSIS." RECOMMENDATIONS FOR ADJUSTMENT TO THE WORK PERFORMANCE RATING SYSTEM, IF ANY, SHOULD BE FORWARDED IN SEPARATE CORRESPONDENCE.

EXPLANATION OF TABULAR PRESENTATION ON

WORK PERFORMANCE RATINGS

Presented on the facing page is a tabulation by Air Force and organization of Work Performance Ratings extracted from AF Forms 323 received in Headquarters ConAC. This is presented to permit appraisal of Base performance in relation to established USAF Standards which are rated at 100. A minimum number of mathematical corrections have been made on readily detected errors. No formal audit is performed prior to publication due to limitations of time. Attention is invited to ConAC Letter 170-1B, Paragraph 20, for clarification of proper reporting under Group 3.

COMMENT

THE COST OF APPROXIMATELY 60% OF THE ELEVEN FUNCTIONS ORIGINALLY COVERED IN WORK PERFORMANCE REPORTS BY CONAC INSTALLATIONS LAST MONTH ARE REPORTED BELOW STANDARD FOR JUNE; 52% FOR THE MONTH OF MAY. IN FOUR OF THESE FUNCTIONS MORE THAN 70% OF CONAC UNITS SHOW SUB-STANDARD RATINGS. UNLESS BASES WHICH CONTINUE SUB-STANDARD MONTHLY RATINGS SHOULD SUPPORT THEIR HIGH COSTS BY RELATING THEM TO BASE STANDARDS REFLECTING LOCAL CONDITIONS, EXISTING STANDARDS MUST BE ACCEPTED.

HQ CONAC HAS THUS FAR ESTABLISHED STANDARDS FOR SEVEN FUNCTIONS AS FOLLOWS:

STANDARDS -	GROUP 1 :	A-1, S-1 AND ADJUTANT	TENTATIVE - GROUP 12:	SUPPLY CONTROL
	GROUP 2 :	SQUADRON ADMINISTRATIVE OVERHEAD	STANDARDS - GROUP 14:	SUBSISTENCE HANDLING
			GROUP 15:	COMMISSARY SALES
	GROUP 7 :	SUPPLY FUNCTION		
	GROUP 11:	PERSONNEL SERVICES		

THE CONAC STANDARD FOR GROUP 2 WAS PRESENTED ORIGINALLY IN THE MANAGEMENT ANALYSIS REVIEW, MARCH 1950; ALL OTHERS APPEAR FOR THE FIRST TIME IN PRESENTATIONS IN THIS ISSUE.

FOR UNIFORMITY OF REPORTING AND TO PREVENT MISUNDERSTANDING OF BASIC TERMS THE FOLLOWING GLOSSARY IS PRESENTED:

WORK PERFORMANCE RATING	- RATING FOR ACTUAL COST IN RELATION TO USAF STANDARD
CONAC PERFORMANCE RATING	- RATING FOR ACTUAL COST RELATED TO THE CONAC STANDARD
PERFORMANCE INDEX	- RATING COMPUTED UTILIZING THE ESTABLISHED BASE STANDARD

COST ANALYSTS ARE URGED TO REPORT THEIR "CONAC PERFORMANCE RATING" AND "PERFORMANCE INDEX" MEASUREMENT OF FUNCTIONS ON THE REVERSE SIDE OF AF FORM #323 AND TO UTILIZE COST TREND STUDIES OF THE MOST SUITABLE OF THESE MEASURES IN ACCOMPLISHING LOCAL MANAGEMENT CONTROL.

EXPLANATION OF GRAPHIC PRESENTATION ON

ACTUAL vs STANDARD COST

A-1, S-1, AND ADJUTANT

The costs include the costs of all the Adjutant, and A-1 and S-1 staffs of the organizations which operate the base. On Wing-Base installations, the Wing A-1, Air Base Group A-1, Combat Group S-1, and M&S Group S-1, are all included, although at certain wings S-1 and Adjutant functions of M&S and Combat Groups may be combined and reported under Adjutant. Normally, on a base which is operated by an Air Base Group or an Air Base Squadron, only one S-1 will be included. The performance rating is determined by dividing the total cost of all base A-1, S-1 and Adjutant functions, (except those of intermediate and command headquarters) and applying the results in the following formula:

$$\frac{\text{ConAC Standard Cost}}{\text{Actual Cost of Base Activity}} \times 100 = \text{ConAC Performance Rating}$$

Standards for these functions developed by the Cost Analysis Division of Headquarters ConAC are shown in this presentation. The ConAC Standard is the average cost (excluding extremes) per unit of workload, (military personnel) based on data reported for the three months period, 1 March - 31 May 1950. Details of procedures followed in determining ConAC Standards are on file in the Office of the Director of Programs and Costs, Comptroller, Hq. ConAC.

COMMENT

FOURTEEN OF THE FIFTEEN BASES WHICH ARE OPERATING AT COST ABOVE THE CONAC STANDARD ARE IN THE POPULATION GROUP UNDER 1,000. THE ABILITY TO OPERATE AT LOWER COSTS RESULTS FROM AN ORGANIZATIONAL STRUCTURE WHEREBY ONLY ONE OR TWO PERSONNEL ARE PROVIDING ALL ADJUTANT, A-1 AND S-1, SERVICES FOR THE BASE.

THOSE BASES WHICH REPORT UNIT COSTS IN EXCESS OF THE STANDARD SHOULD BE INVESTIGATED FOR POSSIBLE OVERSTAFFING.

EXPLANATION OF GRAPHIC PRESENTATION ON

ACTUAL vs STANDARD COST

SUPPLY

Supply costs include the combined costs of all supply activities (Account Code 05450) such as (a) Supply Control, (b) Supply Warehouses, (c) Subsistence Handling, (d) Commissary Sales, (e) Purchasing and Contracting, (f) Salvage and Surplus Property, and (g) Laundry and Dry Cleaning. The performance rating is determined by dividing the total costs of the Supply activity by the total number of personnel, both civilian and military of the base. In addition, personnel of major or intermediate command headquarters which may be located on the base, are added. The results of the above calculation are applied in the formula below:

$$\frac{\text{ConAC Standard Cost}}{\text{Actual Cost of Base Activity}} \times 100 = \text{ConAC Performance Rating}$$

Standards for these functions developed by the Cost Analysis Division of Headquarters ConAC are shown in this presentation. The ConAC Standard is the average cost (excluding extremes) per unit of workload, (military personnel) based on data reported for the five months period, 1 November 1949 - 31 March 1950. Details of procedures followed in determining ConAC Standards are on file in the Office of the Director of Programs and Costs, Comptroller, Hq. ConAC.

COMMENT

OF THE THIRTY-FOUR BASES INCLUDED IN THE PRESENTATION TWENTY-THREE SHOW COSTS PER PERSON SERVICED, WHICH ARE GREATER THAN THE CONAC STANDARD. FIFTEEN OF THESE TWENTY-THREE ARE IN THE POPULATION GROUP UNDER 1,000 (THIRTEEN AFRTC'S AND TWO AIR BASE SQUADRONS). FLOYD BENNETT, O'HARE AND PORTLAND ARE PARTICULARLY HIGH; OF THE SIX WINGS SHOWING A PERFORMANCE BELOW STANDARD, TURNER, SHAW AND MCGUIRE REPORT EXCESSIVE COSTS.

THE HIGH COSTS FOR THE AFRTC'S WITH A WORKLOAD UNDER 1,000, MAY BE ATTRIBUTED TO THE IMPOSSIBILITY OF REDUCING STAFFING AT THE SAME RATE AS WORKLOAD. IN SUCH CASES, IT IS MOST DESIRABLE THAT BASE STANDARDS BE DEVELOPED AND EMPLOYED.

EXPLANATION OF GRAPHIC PRESENTATION ON

ACTUAL vs STANDARD COST

PERSONNEL SERVICES

Personnel Services costs include costs of the Special Services Officer, Information and Education Officer, Post Exchange Officer, Theater Officer, Billeting Officer, Off-Base Housing Officer, and staffs; administrative personnel of Central Post Fund; payroll and non-personnel expenses of Base Newspaper, Library, Guest House, Service Clubs and other recreation centers (when paid from appropriated funds). The performance rating is determined by dividing the total cost of the Personnel Services function by the total number of military personnel stationed on the base and applying the results in the formula below:

$$\frac{\text{ConAC Standard Cost}}{\text{Actual Cost of Base Activity}} \times 100 = \text{ConAC Performance Rating}$$

Standards for these functions developed by the Cost Analysis Division of Headquarters ConAC are shown in this presentation. The ConAC Standard is the average cost (excluding extremes) per unit of workload, (military personnel) based on data reported for the five months period 1 January - 31 May 1950. Details of procedures followed in determining ConAC Standards are on file in the Office of the Director of Programs and Costs, Comptroller, Hq. ConAC.

COMMENT

TWENTY BASES (9 AFRTC'S, 8 WINGS, 3 AIR BASE GROUPS OR SQUADRONS) REPORT OPERATING COSTS PER PERSON SERVICED WHICH ARE BELOW THE CONAC STANDARD. TEN OF 9 AFRTC'S AND ONE AIR BASE GROUP ARE IN THE POPULATION GROUP UNDER 1,000. FOUR (4) AIR BASE SQUADRONS AND EIGHT (8) AFRTC'S IN THIS POPULATION GROUP ARE ABOVE STANDARD. IN THIS FUNCTION THE NATURE OF SERVICES FURNISHED AND THE NUMBER VARIES GREATLY AT AFRTC BASES. RESERVE PERSONNEL UTILIZE SOME SERVICES AND SINCE THESE PERSONNEL ARE NOT INCLUDED IN THE WORKLOAD THIS DISTORTS COSTS OUT OF RELATION TO REPORTED WORKLOAD. IN ADDITION, ALL SERVICES ARE NOT PROVIDED AT EACH BASE DUE TO GEOGRAPHICAL LOCATION, COMMAND POLICY AND DIRECTED EMPHASIS ON CERTAIN SERVICES BY SPECIAL SERVICES PERSONNEL. BECAUSE OF THESE FACTORS STAFFING STANDARDS DIFFER WIDELY AND ARE REFLECTED IN THE PERFORMANCE RATINGS.

EXPLANATION OF GRAPHIC PRESENTATION

OVERHEAD OF AIR INSTALLATION ACTIVITY

"Overhead" personnel are those reported in the Administrative and Engineering Account (10103). It includes military and civilian administration and clerical personnel, personnel engaged in general engineering functions such as the preparation of project estimates, maintenance of real property cards and maps of installations; preparation of engineering reports, etc., and general superintendents assigned to the air installation activity.

"Total Installation Personnel" and "Administrative and Engineering Personnel" represent monthly strength for June 1950, of the personnel data section of the report, (Account Codes 30001 and 30099).

The average salary per civilian employed, other than Administration and Engineering Personnel, was computed by using the total civilian labor costs in the Grand Total Account (19999) less Accrued Annual Leave Account (10101), Sick and Holiday Leave Taken, (10102) and the civilian labor costs in Administration and Engineering, and dividing the result by the total number of civilian installation personnel less the civilian employees in A&E, on the May report.

The average salary per civilian in the administration and Engineering activity was determined by dividing the total civilian labor costs in the A&E account by the total number of A&E civilian personnel reported in account code 30001, on the May report.

All average salaries exclude costs for accrued annual leave and sick and holiday leave. This procedure does not restrict the comparability of the values shown.

The installations included in this study are those which submit a detailed AF Form 329 and 330.

Installations submitting Army or Navy type cost reports or short form reports on AF Form 329 are not included in this presentation.

COMMENT

STAFFING OF ADMINISTRATIVE AND ENGINEERING PERSONNEL FOR USAF BASES RANGES FROM 7% TO 13%. WITH ONLY MCCHORD AND MCGUIRE OF THE 14 USAF BASES OVER 10%; MCCHORD REPORTS 13% AND MCGUIRE REPORTS 12% COMPARED TO 13% AND 10% RESPECTIVELY FOR THE PRIOR 10 MONTHS AVERAGE.

THE RISE FOR MCGUIRE IS CAUSED BY A 29% INCREASE IN A&E PERSONNEL (FROM 17 TO 22) WHILE THE INSTALLATION PERSONNEL INCREASED (163 TO 190) ONLY 10%. OSCODA DECREASED FROM 16% TO 7% WHILE ALL THE OTHERS REMAIN THE SAME OR SHOW A SLIGHT VARIATION.

THE RANGE FOR USAFR BASES IS FROM 8% TO 15%. BIRMINGHAM DECREASED FROM 11% FOR THE 10 MONTH AVERAGE TO 8% FOR JUNE, WHILE WOLD-CHAMBERLAIN DECREASED FROM 14% TO 10%. LONG BEACH AND MIAMI ARE STILL HIGH WITH 15%. THE ANALYSTS AT THESE BASES SHOULD INVESTIGATE THE ADMINISTRATION AND ENGINEERING ACTIVITY TO ASCERTAIN THE JUSTIFICATION, IF ANY, FOR THE HIGH PERCENTAGE FACTORS.

EXPLANATION OF GRAPHIC PRESENTATION OF PERCENTAGE DISTRIBUTION OF TOTAL COST OF MANAGEMENT AND PRESERVATION OF REAL ESTATE FACILITIES BASES PROVIDING OWN SERVICES FISCAL YEAR 1950

The amounts presented in this chart show the costs of Management and Preservation of Real Estate Facilities of each ConAC base providing its own Air Installation services. The costs are for the fiscal period from 1 July 1949 through 30 June 1950, and were obtained from the Grand Total of all Accounts of the 30 June 1950 Real Estate Facilities Monthly Cost Reports.

These costs include all elements comprising the cost of accomplishing management and preservation of Real Estate Facilities. Such cost elements include civilian labor, military labor, material and supplies, contractual services and depreciation.

The grand total of all accounts is the sum of all operating accounts in the Real Estate Facilities cost accounting system. For a breakdown of these operating accounts by Functional Component see page 33. For a breakdown of all accounts into the individual operating accounts and a description of the latter, reference is made to Chapters II & III, Part II of AF Manual 170-5.

The "Percent of Total Cost of All Bases" was obtained by dividing the cost of each base by the Grand Total of USAF or USAFR bases, whichever is applicable.

COMMENT

THE AVERAGE COST FOR THE MANAGEMENT AND PRESERVATION OF REAL ESTATE FACILITIES FOR USAF BASES PROVIDING OWN SERVICES IS APPROXIMATELY $1,080,000 A YEAR. GENERALLY SPEAKING, THE COST VARIES WITH THE SIZE OF THE BASE.

THE AVERAGE COST FOR THE MANAGEMENT AND PRESERVATION OF REAL ESTATE FACILITIES FOR USAFR BASES PROVIDING OWN SERVICES IS APPROXIMATELY $350,000, A YEAR. THIS FIGURE SHOULD BE CONSIDERED AS A GUIDE ONLY INASMUCH AS MANY RESERVE BASES HAVE AIR INSTALLATION WORK ACCOMPLISHED UNDER THE TERMS OF A LEASE-RENTAL CONTRACT, THE COSTS OF WHICH ARE NOT INCLUDED IN THE MONTHLY COST REPORT.

EXPLANATION OF GRAPHIC PRESENTATION ON

PERCENTAGE DISTRIBUTION OF TOTAL COST OF

MANAGEMENT AND PRESERVATION OF REAL ESTATE FACILITIES

BY FUNCTIONAL COMPONENT

BASES PROVIDING OWN SERVICES

FISCAL YEAR 1950

The dollar values shown in this presentation are costs incurred in the Management and Preservation of Real Estate Facilities from 1 July 1949 through 30 June 1950, for USAF and USAFR bases providing own Air Installation services. Cumulative data was extracted from the 30 June 1950 Real Estate Facilities Monthly Cost Report and compiled according to account groupings. A description of the individual operating accounts contained in each grouping may be found in Chapters II and III, Part II of AF Manual 170-5.

Reference may also be made to page 31 to see how the total costs incurred in the Air Installation activity are divided among all ConAC bases.

The purpose of this chart is to present information about the percentage distribution of the costs of Air Installation activities during Fiscal Year 1950. To arrive at this picture, the total cost of each functional component was divided by the Grand Total of all accounts - USAF or USAFR whichever was applicable. The result of this analysis is to show at a glance the part of the Air Installation dollar spent on each of the Air Installation function for the past fiscal year.

A more detailed breakdown has been made of the Special Projects and the Undistributed Costs Group. This serves to define more clearly these two groups which make up such a large percentage of total cost.

COMMENT

FOR USAF BASES, THE COSTS INCURRED FOR THE MANAGEMENT AND PRESERVATION OF HEATING PLANTS AND SYSTEMS (18%), FIRE PROTECTION AND AIRCRAFT CRASH RESCUE ACTIVITIES (15%), SPECIAL PROJECTS (15%) AND UNDISTRIBUTED COSTS (17%) TOGETHER CONSUME 65¢ OF EACH AIR INSTALLATIONS DOLLAR.

AT USAFR BASES, HEATING PLANTS AND SYSTEMS (12%), FIRE PROTECTION AND AIRCRAFT CRASH RESCUE ACTIVITIES (25%), SPECIAL PROJECTS (22%) AND UNDISTRIBUTED COSTS (16%) MAKE UP 75% OF ALL COSTS INCURRED.

EXPLANATION OF GRAPHIC PRESENTATION ON

TREND OF MONTHLY COSTS OF

MANAGEMENT & PRESERVATION OF REAL ESTATE FACILITIES

The costs depicted in this chart consist of the monthly Installations costs reported on AF Form 329 for each of four groups of bases: (1) Inactive installations. (2) Bases Provided Air Installation Services by the Army, Navy or other Major Air Force Commands. (3) Reserve Bases Providing their own Air Installation Services. (4) USAF Bases Providing their own Air Installation Services. These groups encompass all bases reporting Air Installation costs incurred by Continental Air Command.

GROUP I - Includes costs at Baer, Byrd, Dover, Hawkins, Moody, Newark, Stout; and Dow, Greenville, Grenier, Lockbourne, Orlando and Slocum subsequent to inactivation.

GROUP II - Includes costs at Lawson, Otis, Pope, Sherman, Olathe NAS (Fairfax), Godman, Dobbins (Marietta), and at Marshall until 15 June 1950, when it was transferred.

GROUP III - Includes costs at Atterbury, Birmingham, Greater Pittsburgh, Boston-Bedford (Hanscom), Hensley, Long Beach, Memphis, Miami, O'Hare (Orchard Place), Portland, Reading through April 1950, New Castle County for May and June, and Wold-Chamberlain.

GROUP IV - Includes costs at Brooks, Hamilton, Langley, Larson (Moses Lake), McChord, McGuire, Mitchel, Oscoda, Selfridge, Sewart (Smyrna), Shaw, Stewart and Turner and costs for Dow, Greenville, Grenier, Lockbourne, Orlando and Slocum until such time as these bases were inactivated; and Benjamin Harrison until May when it was transferred.

The costs used in this chart are the Grand Totals on the Real Estate Facilities Monthly Cost Report, AF Form 329.

The figures presented in the "No." column represent the number of bases actually in each category during the month.

COMMENT

THE VARIATIONS EVIDENT FROM THIS CHART ARE THE RESULT OF THE IMPOSITION AND RELAXATION OF BUDGET FUND CONTROLS, THE IMPETUS WHICH IS TYPICALLY GIVEN TO THE SPENDING PROGRAM FOR SPECIAL PROJECTS AT THE END OF THE FISCAL YEAR, AND THE COST ENTRY FOR DEPRECIATION OF MOBILE EQUIPMENT FOR THE ENTIRE YEAR IN JUNE.

THE ANNUAL COST FOR THE AIR INSTALLATION FUNCTION AS SHOWN ON THE CHART FOR THE CONTINENTAL AIR COMMAND IS $24,195,000.

EXPLANATION OF GRAPHIC PRESENTATION ON

OPERATING COSTS, FISCAL YEAR 1950

TENANT AIR FORCE RESERVE TRAINING CENTERS

The following chart depicts Operating Costs (account code 08181) incurred by Tenant Air Force Reserve Training Centers during Fiscal Year 1950. Operating Costs include the cost of all functions operated by personnel and supported by budgetary appropriations under the direct control of the installation Commander. They include the following: Commander and Staff (account code 01051), Administration and Services (account code 02477), Medical (account code 03277), Operations and Training - Mission Organization (account code 07270), Maintenance and Supply (account code 05581), and Undistributed Charges (account code 04151).

COMMENT

THE TOTAL OPERATING COST FOR TENANT AFRTC'S DURING FISCAL YEAR 1950 WAS $6,716,340; MONTHLY COSTS FOR EACH TENANT AFRTC AVERAGE $93,283. THE MONTHLY OPERATING COST FOR EACH TENANT AFRTC IS APPROXIMATELY 50% LOWER THAN THAT OF THE NON-TENANT AFRTC'S. THE 2233RD AFRTC AT MITCHEL WHICH REFLECTS A LOW ANNUAL OPERATING COST IN RELATION TO ALL OTHER TENANT AFRTC'S WAS IN OPERATION ONLY NINE MONTHS OF FISCAL YEAR 1950.

WHILE THE AFRTC AT SCOTT REPORTS IN 3RD LOWEST COST POSITION, IT IS NEXT TO LOWEST WITH RESPECT TO AVERAGE MONTHLY FLYING HOURS REPORTED (908 HOURS PER MONTH). THE AFRTC AT TINKER, IN NEXT TO HIGHEST COST POSITION, REPORTS THE LOWEST AVERAGE MONTHLY ACCOMPLISHMENT OF FLYING HOURS (867 HOURS PER MONTH).

THE OPERATING COST FOR ALL AFRTC'S (TENANT AND NON-TENANT) DURING FISCAL YEAR 1950 WAS $42,532,049.

EXPLANATION OF GRAPHIC PRESENTATION ON

OPERATING COSTS, FISCAL YEAR 1950

NON-TENANT AIR FORCE RESERVE TRAINING CENTERS

The following chart depicts Operating Costs (account code 08181) incurred by Non-Tenant Air Force Reserve Training Centers during Fiscal Year 1950. Operating Costs include the cost of all functions operated by personnel and supported by budgetary appropriations under the direct control of the installation commander. They include the following: Commander and Staff (account code 01051), Administration and Services (account code 02477), Medical (account code 03277), Operations and Training - Mission Organization (account code 07270), Undistributed Charges (account code 04151), and Maintenance and Supply (account code 05581).

COMMENT

NON-TENANT AIR FORCE RESERVE TRAINING CENTERS HAD AN AVERAGE ANNUAL OPERATING COST OF $2,106,806, RANGING FROM $1,592,627 AT THE 2240TH AFRTC AT CLEVELAND TO $3,711,694 AT THE 2347TH AFRTC, LONG BEACH. PAYROLL COSTS FOR BOTH THE 2471ST AFRTC, O'HARE AND THE 2347TH AFRTC, LONG BEACH ARE APPROXIMATELY DOUBLE THOSE OF ALL OTHER NON-TENANT AFRTC'S. ALTHOUGH IT IS REALIZED THAT THE AFOREMENTIONED AFRTC'S SUPPORT TWO RESERVE WINGS, DOUBLING OF WORKLOAD DOES NOT NECESSARILY INDICATE THE NECESSITY FOR DOUBLING OF STAFF. IT IS THEREFORE POSSIBLE THAT THE HIGH PAYROLL COSTS REFLECTED ARE, IN PART, CAUSED BY EXCESSIVE PERSONNEL ASSIGNMENTS IN CERTAIN AREAS.

FROM THE STANDPOINT OF WORKLOAD ACCOMPLISHMENT, EXAMINATION OF REPORTS OF FLYING TIME INDICATES THAT THE FOLLOWING AFRTC'S ARE REPORTING RELATIVELY LOW NUMBERS OF HOURS FLOWN PER RESERVE WING IN TACTICAL AND TRAINER AIRCRAFT:

2237TH AFRTC - READING AND NEW CASTLE	8,556
2471ST AFRTC - O'HARE	11,299
2587TH AFRTC - BIRMINGHAM	11,860
2236TH AFRTC - GODMAN	12,169
2240TH AFRTC - CLEVELAND	14,278

THE FOLLOWING AFRTC'S REPORT HIGH FLYING HOURS ACCOMPLISHED PER RESERVE WING:

2596TH AFRTC - HENSLEY	16,850
2589TH AFRTC - DOBBINS	18,550

EXPLANATION OF PAY-OFF PROJECT

CONAC SAVINGS IN SQUADRON ADMINISTRATIVE OVERHEAD

314TH TROOP CARRIER WING, SEWART AIR FORCE BASE

1. Because the cost of Squadron Administrative Overhead per person administered at Sewart Air Force Base for the three months period 1 January - 31 March 1950, exceeded both the USAF Standard of $9.42 and the ConAC average of $8.30, as presented in the ConAC Management Analysis Review, a study was initiated by the Comptroller, 314th Troop Carrier Wing, to determine the following:

a. Was the cost correct as reported?

b. If the cost is correctly reported, what is the cause of this excessive cost?

c. What course of action could be followed to reduce this cost and remedy the situation?

2. Findings and conclusions resulting from this study were:

a. Assignment of unauthorized personnel (over and above T/O&E and T/D-A) to the function in a few units already at full authorized strength was resulting in excess costs per person administered for the station as follows:

	Monthly	Annually
314th Installations Squadron (1 person)	$ 132.65	$ 1,591.80
314th Motor Vehicle Squadron (3 persons)	493.20	5,918.40
314th Supply Squadron (3 persons)	576.32	6,915.84
TOTAL	$1,202.17	$14,426.04

Deletion of these unauthorized personnel was recommended.

b. Authorizations for Squadron Administrative Overhead in some units was disproportionately high compared to authorized strength of unit. For example, the Air Police Squadron was administering 93 people with 7 airmen; the 50th and 61st Troop Carrier Squadrons were administering 235 people with 7 airmen.

c. In addition, it was recommended that 8 airmen be deleted from the T/D-A as not justified by the strength of the unit and inconsistent with staffing in other units. The wing is only 95.8% manned and cannot afford padding of any one function at the expense of others.

3. Savings if Recommended Action Taken:

Effecting these recommended reductions would result in the following savings in the function:

	Monthly	Annually
Reassignment of Unauthorized Personnel (6)	$1,202.17	$14,426.04
Deletions of Filled Positions from T/D-A (8)	1,213.50	14,562.00
TOTAL	$2,415.67	$28,988.04

4. The estimated annual savings, $28,988.04, which would result from action based on recommendations noted in paragraph 3 was based on the original survey described above. However, as may be noted on the facing page, the savings resulted from action finally taken, $41,806.68, was considerably in excess of the figure originally estimated.

5. This Pay-Off Project represents an excellent example of coordinated effort between Comptroller and Personnel staffs, working together to achieve greater economy without sacrifice of efficiency or degree of mission performance. It tends, also, to confirm the theory that a survey of personnel assigned to a function may reveal that the staffing in many activities may not agree with the T/O&E's and T/D-A's as originally constituted, or that the present workload does not justify the augmentation in the existing T/D-A, based on the original contemplated strength or workload and that manning tables have not been monitored. Cost Control can lead to Management Control. It remains for the staff to accept this instrument of management and utilize it to the fullest extent.

PAY-OFF PROJECT

ANALYSIS OF CONAC SAVINGS IN SQUADRON ADMINISTRATIVE OVERHEAD

314TH TROOP CARRIER WING - SEWART AIR FORCE BASE

SQUADRON ADMINISTRATIVE OVERHEAD COST REDUCED AS A RESULT OF FOLLOWING ACTION TAKEN:

1. Reduction in Cost resulting from:		
a. Replacement of high graded or rated personnel with lower grade or non-rated (1 Officer, 2 Airmen) personnel.	$ 210.20	
b. Survey resulting in change in method of costing. (1 Officer, 1 Airman)	558.60	
c. Reassignment to other functions of personnel now in function but unauthorized, and elimination of authorizations for activity. (4 Officers, 2 Warrant Officers, 14 Airmen)	4,154.22	
Total Reduction in Cost		$ 4,923.02
Less:		
2. Increases in Cost resulting from:		
a. Filling of vacancies (8 Airmen)	$ 879.25	
b. Assignment (2 Officers)	559.88	
Total Increase in Cost		$ 1,439.13
Net Reduction in Monthly Cost or an		$ 3,483.89

ESTIMATED ANNUAL SAVINGS TO THE USAF OF $ 41,807

The data shown herein represents a consolidation of detail shown in the Pay-Off analysis submitted by this base. Lack of space prohibits the inclusion of further detail in this presentation. The analysis as submitted has been reproduced by Hq ConAC and distribution has been made to interested staff agencies and to Hq 1st, 4th, 9th, and 10th Air Forces. Additional copies are available from Director of Programs and Costs, Comptroller, Hq ConAC, upon request.

EXPLANATION OF PAY-OFF PROJECTS

CONAC SAVINGS IN BASE OPERATIONS, AIRCRAFT MAINTENANCE AND COMMUNICATIONS FUNCTIONS

2587TH AFRTC, BIRMINGHAM MUNICIPAL AIRPORT

One Pay-Off presentation last month indicated a savings (through the procurement of additional housing) in quarters allowances paid to airmen. In addition to this item, the 2587th AFRTC has submitted additional Pay-Off projects demonstrating the application of managerial effort to achieve cost reduction and more efficient utilization of personnel resulting in the diversion of manhours to tasks requiring added effort within an organizational framework already fully manned.

This presentation indicates that thought and action to promote efficiency and economy are not confined to the Comptroller and Management Analysis personnel and provides definite evidence that coordinated action on the part of all agencies will result in reduced costs and increased efficiency. All personnel, military and civilians, should be enjoined to become management conscious and assist in determining areas where recommendations for action may "pay-off", as appears to be the case here. The Comptroller is best qualified to lead in guiding such campaigns.

While each project presented here does not represent a very great saving, it is believed that the methodology followed serves to illustrate that a substantial savings to the Air Force would follow, if similar coordinated action directed toward efficient manpower utilization and cost control resulted at more ConAC installations.

PAY-OFF PROJECTS

BASE OPERATION, AIRCRAFT MAINTENANCE, COMMUNICATIONS

2587TH AFRTC-BIRMINGHAM MUNICIPAL AIRPORT

PREPARED BY:
DIRECTOR, PROGRAMS & COSTS
HQ, CONAC
JULY 1950

1. Reduction in Cost of Base Operations

By closing Base Operations at 2400 hours and utilizing the services of the night duty airman, the use of one civilian has been eliminated with a resultant monthly payroll savings of $ 258.00

2. Savings in Man-Hours - Aircraft Maintenance

In the past, maintenance work was accomplished in two widely separated hangars resulting in wasted time by personnel going from one hangar to the other. By consolidating the two hangars into one, a savings of approximately 300 man-hours per month is anticipated. At the average maintenance wage rate of $1.67 per hour, the monthly savings is in excess of $ 500.00 or enough to cover the expense of three major aircraft inspections. Further savings are expected in July when the wash rack is moved nearer the maintenance shop.

3. Reduction in Toll Charges for Long Distance Calls

Effective controls placed on official long distance calls, (primarily achieved by placing collect calls to reservists, and increased use of radiotelephone) effected reduced charges as follows:

Average monthly cost 7 months period		
1 June 1949 - 31 December 1949	$ 38.46	
Average monthly cost 3 months period		
1 January 1950 - 31 March 1950	$ 9.86	
Savings Per Month		$ 28.60
Total Monthly Savings, or an		$ 786.60

ESTIMATED ANNUAL SAVINGS TO THE USAF OF $9,439

SOURCE: Pay-Off Projects - 2587th AFRTC - Birmingham Mun Aprt. 27 April 1950

These Pay-Off Projects are presented from data reported to Hq. ConAC by the Commanding General - Fourteenth Air Force.

EXPLANATION OF TABULATIONS OF COMPARATIVE DATA
FOR PROGRESS AND MANAGEMENT ANALYSIS
COMBAT GROUPS, SEPARATE SQUADRONS AND
AIR FORCE RESERVE TRAINING CENTERS

The purpose of the tabulations presented on the following three pages is to provide, to commanders and management analysts, at unit level, selected performance data. These tabulations provide a basis for local progress and management analysis.

The data contained in these tabulations does not replace, but rather supplements Comptroller Chart #6 and the presentations in this Review. Additional data will be included in future issues of this Review upon request. Information classified above RESTRICTED will not be included.

Examples of analyses possible from data shown here are:

a. Cost of Organizational Maintenance per Flying Hour (ConAC Cost Analysis Review, August).
b. Cost of Fuels and Lubes per Flying Hour (Page 16, ConAC Cost Analysis Review, July).
c. Utilization of in-commission rates.
d. Analysis of Fuel Consumption per hour.
e. Cost of organizational maintenance per unit of flying, AFRTC (Page 11, ConAC Cost Analysis Review, November).
f. Hours flown per person assigned to organizational maintenance function.

EXPLANATION OF GRAPHIC PRESENTATION ON

AVERAGE IN-COMMISSION RATES, PRIMARY AIRCRAFT

BY COMBAT GROUP

The graphic presentation reflects average in-commission rates for combat aircraft by unit for the periods considered. Combat type aircraft alone were included in this study, T-33, T-6 and F-51 types were excluded for the fighter units, and only the tactical type cargo aircraft, i.e., C-82, C-54, and C-119, were included for the troop carrier groups. The percentage figures were developed from the hours on hand and hours in-commission as extracted from the monthly consolidated AF Form 110A. In instances when units were in transition from one type tactical aircraft to another the data for both types were combined. Basic data from which this presentation was developed is reflected on Page 48.

COMMENT

COMPARISON OF THE IN-COMMISSION RATES OF THE COMBAT UNITS FOR JUNE WITH THE CONAC STANDARD (75%) INDICATES THAT THE 62ND TROOP CARRIER GROUP AND THE 81ST FIGHTER-INTERCEPTOR GROUP ARE THE ONLY GROUPS WHICH EQUALLED OR EXCEEDED THE CONAC STANDARD. THE LOW IN-COMMISSION RATES OF THE 314TH AND 316TH TROOP CARRIER GROUPS MAY BE ATTRIBUTED TO THE CONVERSION OF THE UNITS FROM C-82 TO C-119 AIRCRAFT. THE 31ST FIGHTER BOMBER GROUP REFLECTED A LOW IN-COMMISSION RATE DUE TO ACCP'S AND OTHER REASONS PENDING TRANSFER TO SAC.

EXPLANATION OF GRAPHIC PRESENTATION ON

AVERAGE IN-COMMISSION RATES, RESERVE TACTICAL AIRCRAFT

BY AIR FORCE RESERVE TRAINING CENTER

The graphic presentation reflects average in-commission rates for Reserve Tactical type aircraft by AFRTC for the periods considered. Tactical type aircraft alone were included in this study. In-Commission data for reserve trainer type aircraft is included in the presentation on Page 55. The percentage figures were developed from the hours on hand and hours in-commission as extracted from the consolidated Report of Aircraft Status and Operations on AF Form 110A. The ConAC Standard shown was extracted from existing ConAC Maintenance directives. Basic data from which this presentation was developed is reflected on Page 49.

COMMENT

ALL AFRTC'S EXCEPT THE 2472ND AT OLATHE, THE 2237TH AT NEW CASTLE, AND THE 2346TH AT HAMILTON, REFLECT A HIGH IN-COMMISSION RATE DURING JUNE THAN FOR THE 12 MONTHS AVERAGE. THE DECREASE IN THE IN-COMMISSION RATE AT 2346TH IS NOT CONSIDERED PARTICULARLY SIGNIFICANT. THE DECREASE AT THE 2472ND IS PROBABLY DUE IN PART TO THE MOVE OF THIS AFRTC FROM FAIRFAX TO OLATHE. THE DECREASE AT THE 2237TH SHOULD BE INVESTIGATED LOCALLY.

EXPLANATION OF GRAPHIC PRESENTATION ON

AVERAGE IN-COMMISSION RATES, RESERVE TRAINER TYPE AIRCRAFT

BY AIR FORCE RESERVE TRAINING CENTER

The presentation reflects average in-commission rates for Reserve Trainer type aircraft, i.e., T-6, T-11, T-7, by AFRTC for the periods indicated. Only trainer type aircraft are included here. The percentage figures were developed from hours on hand and hours in-commission as extracted from the Consolidated Report of Aircraft Status and Operations on AF Form 110A. The data for all types of trainer aircraft was combined. The ConAC standard shown was extracted from existing maintenance directives.

COMMENT

THE IN-COMMISSION RATES FOR TRAINER AIRCRAFT FOR JUNE ARE GENERALLY LOWER THAN THOSE FOR TACTICAL AIRCRAFT. SIGNIFICANT DECREASES IN IN-COMMISSION RATES WERE EXPERIENCED AT THE 2471ST AND 2237TH, WHERE FURTHER INVESTIGATION BY THOSE CONCERNED IS DESIRABLE. THE GREATEST IMPROVEMENT IN IN-COMMISSION RATE IS AT THE 2466TH, AN INCREASE OF 39% OVER THE AVERAGE FOR THE PREVIOUS YEAR.

SOURCE: Lines 1 - 17 Cost Control Reports - AF Forms 320, 322, 3209, and 3224
Lines 19 - 35 Columns (C) through (K): Real Estate Facilities Monthly Cost Report AF Form 329 - prepared in this Headquarters from Army type reports
Column (B): Real Estate Facilities Monthly Cost Report, AF Form 329 - submitted for Fairfax Field
Column (J): Data Not Available
Column (K): Real Estate Facilities Monthly Cost Report, AF Form 329 - received for Dobbins AF Base

REMARKS: Columns (C) through (K) Parenthesis immediately under name of Installation indicates the agency responsible for accomplishing and/or providing for the ConAC Installation all or a major part of real estate facilities services.

NOTE: Payroll Costs shown on line 30 are actual payroll costs for Airmen and are not based on civilian pay grades. The reporting of personnel and costs in the Air Installations account codes of the Cost Reporting system (Lines 1-29) should be accomplished with reference to paragraph 13b(3)(a) and (b) of ConAC Letter 190-18, 3 March 1960 and the cross servicing agreement which makes provision for such services.

MEMORANDUM

DECLASSIFIED
EO 11652

SUBJECT: Organizational Concept for the Continental Air Command

References: a. Hqs. USAF Ltr. 322 (AFOOR 9h9e), subject: "Establishment of the Continental Air Command and Designation of Air Defense Command and Tactical Air Command as operational Air Commands", dtd 19 Nov 1948.

b. Hqs. USAF Ltr 322 (AFOOR 9h8e), subject: "Reassignment of the 4th, 33rd, and 56th Fighter Wings, dtd 22 Nov 1948".

c. AF Reg. No. 20___, Organization, Continental Air Command, dtd _____.

1. Attached hereto, for the information of interested personnel, is copy of Staff Study outlining the concept of organization for the Continental Air Command. This Study, except for Para. 6b(2), which is contingent upon future developments, was approved by the Vice Chief of Staff on 18 Nov 1948. Reference (a), above, established the Continental Air Command, effective 1 Dec 1948.

2. Specific questions, relative to the above subject, may be directed to the Organizational Planning Branch, Organization Division, D/TCR, DCS/O, Ext. 73832).

3. It is anticipated that some minor changes may be made to Tab D (Mission Directive to CAC) prior to publication.

4. This document is classified secret because of information contained in para. 7.

AN ORGANIZATION FOR AI AIR OPERATIONS AND UNIT TRAINING

PROBLEM

1. To prescribe the organization and implementing action necessary to bring into existence an active continental air organization and provide it with means to meet its assigned missions.

FACTS BEARING ON THE PROBLEM

2. The present organization for air operations in the Continental United States is susceptible of substantial improvement. Air Defense Command is charged with a mission it is incapable of accomplishing without relying on Tactical Air Command and Strategic Air Command for furnishing, on a cooperative and coordinative basis, the majority of fighter elements required for employment in Air Defense operations. For maximum efficiency and effectiveness the resources susceptible to employment in air defense of the Continental United States should be under the direct control of the agency charged with the mission of continental air defense. The same condition exists in respect to the mission charged to the Tactical Air Command and the means available to it in carrying out its presently assigned mission.

3. The Air Defense Command is now charged with a multitude of functions unrelated to the actual air defense of the United States. These unrelated functions, coupled with the inadequacies of the current Air Defense Command organization for air defense, burdens one command with more functions than the commander thereof is capable of performing effectively and efficiently through the organization he is currently provided.

DISCUSSION

4. Attached as Tab "B" is a graphic portrayal of a continental air organization designed to enhance the organization for air operations and unit training in the Continental United States. The merging of the missions and resources of the current Tactical Air Command and Air Defense Command into a Continental Air Command permits the creation of a realistic organization for continental air defense, cooperation with ground and amphibious operations, and unit training including supervision of Air National Guard and Air Reserve training. One agency within the domestic command structure can be charged with complete jurisdiction over all resources susceptible to employment in non-strategic air operations, thereby insuring maximum flexibility and effectiveness of the means available for this purpose.

5. The organization shown on Tab "B" involves the following concepts:

SECRET

0539

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS UNCLASSIFIED

a. The present four geographical Air Forces of ADC will be increased to six (adding the 9th and 10th Air Forces as indicated), with boundaries between air forces coinciding with Army boundaries.

b. Present Tactical Air Command and Air Defense Command missions and resources will be merged into and assigned to the Continental Air Command.

c. Headquarters shown as Tactical Air Command and Air Defense Command bear no resemblance to the commands presently known as such. The Tactical Air Command Headquarters and Air Defense Command Headquarters portrayed on Tab "B" are operational headquarters only. These headquarters have no units actually assigned, therefore, they have no responsibility whatever for unit proficiency training, administration or logistics. The headquarters are subordinate to Continental Air Command on a newly created operational command echelon between major command and air force level. The two tactical division headquarters indicated under Tactical Air Command are mobile operational headquarters with no units actually assigned thereto. The headquarters indicated as Eastern and Western Defenses, as well as their subordinate air defense sector headquarters are likewise operational headquarters only with no units actually assigned.

(1) Tactical Air Command Headquarters is charged primarily with the planning function pertaining to air support of ground forces. The two tactical operational air division headquarters assist Tactical Air Command Headquarters in this respect. Secondarily, the two tactical operational air division headquarters will operationally control such forces as may be designated from time to time by Headquarters, Continental Air Command for special exercises as well as joint maneuvers with ground forces.

(a) One of the mobile tactical air division will be based on a tenant status at an installation located in the southeastern part of the United States and the other would be similarly based at an installation in the southwestern part of the United States, both in or near Army-Air Force maneuver areas.

(2) Air Defense Command Headquarters is charged with planning for, rendering advice on, and conducting active air defense operations. The Commanding General, Air Defense Command is responsible for these functions. The means and forces available to Headquarters, Air Defense Command, for the conduct of

S E C R E T

(c) Reassig. 4th, 83rd and 56th Fighter Wings; Otis Field (Camp Edwards), and Selfridge AFB's from TAC to CAC.

(d) Redesignate ADC and TAC as "Operational Air Command Headquarters" and assign to CAC.

(e) Publish AF Regulation outlining mission of CAC.

(f) CHARGE CG, CAC, WITH ACCOMPLISHING THE FOLLOWING BY 1 July 1949.

(a) In accordance with the following, realign to 5 Air Force Areas (AF boundaries to be coincident with Army boundaries, Tab E).

1. By progressive action, move all non-operational functions out of TAC and concurrently effect a corresponding withdrawal of personnel.

2. Move 12th Air Force Headquarters from March AFB to Brooks AFB.

3. Transfer 14th Air Force activities and functions in the 4th Army Area to the 12th Air Force as the 12th Air Force becomes established.

4. Move 14th Air Force to Langley AFB as soon as adequate space becomes available. (9th AF, with station at Greenville AFB, concurrently assumes 14th AF functions and activities in the 3rd Army Area.)

5. Have 14th AF, after situated at Langley AFB, gradually assume 1st AF functions and activities in the 2nd Army Area. Concurrently have 10th AF assume present 1st AF functions and activities in the 5th Army Area.

6. At the proper time, request this Headquarters to activate the Tactical Air Division Headquarters at March AFB and one at Greenville AFB.

b. PHASE II

(That portion of the plan, which for the most part, must be programmed for and which will require adjustments so that it can be accomplished within the FY 1950 budget)

-4-

S E C R E T

SECRET

(1) PROVIDE IT WAS THAT PROGRAM FOR THE FOLLOWING:

(a) Six operational Air Defense Sector headquarters (to be phased in coincident with the construction of control centers planned for FY 1960).

(b) The Eastern Air Defense Headquarters and the Western Air Defense Headquarters (to be phased in during the 4th quarter of FY 1960).

(2) MOVE HQ CAC, HQ ADC AND HQ TAC TO A CENTRAL LOCATION IN MID CENTER OF THE U.S.

7. Current programs for the utilization of air bases and current fighter group assignments and deployments have been determined with due consideration to training requirements and the need for economy in the development of facilities. These considerations are important. In preparation for a war which will entail air operations in the defense of the United States; however, it is imperative that a third consideration, the operational requirement, be introduced as a major factor influencing the utilization of bases and the assignment and deployment of fighter groups. This consideration should be paramount and should be met immediately in Phase I.

A. At present, four regular fighter groups are assigned to Air Defense Command as the air defense force "in being". (Of these, three are "Operational" and one, the 79th, is being organized). It is planned that this force will be augmented, upon mobilization, by certain fighter groups of the National Guard. It is further planned that all other fighter groups in the United States; i.e. five currently assigned to Strategic Air Command, four currently assigned to Tactical Air Command the the remaining National Guard groups, will participate, at least on a partial basis, in the air defense of the United States, prior to their deployment overseas. It is particularly noteworthy, in this respect, that of the five fighter groups assigned to Strategic Air Command, and the four assigned to Tactical Air Command, one is planned currently to go overseas on D-Day, one on D plus 60, and three after D plus 10 months, while four will remain in the United States. The sole operational mission of all of these units prior to going overseas will be air defense. Thus, current plans provide adequately, consistent with the peacetime strength of the Air Force, for United States air defense.

B. In any future war it is logical that air defense measures will occur before tactical air operations in cooperation with amphibious or ground forces. The adequacy of air defense plans must be judged from a capability to meet D-Day enemy action, when D-Day coincides with M-Day. It follows that the peacetime deployment of regular fighter units must be such as to permit immediate air defense measures on D-Day. The critical period extends from D-Day until the National Guard is mobilized, equipped, and deployed for operations, estimated at from five to twenty days. During this time regular units must bear the full air defense burden.

-5-

SECRET

0543

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS UNCLASSIFIED

SECRET

c. An undesirable feature concerning the current assignment of fighter groups relates to the training of regular fighter groups for the functions to be performed in wartime. It is particularly significant in this regard that, within current war plans, twelve of the thirteen fighter groups now deployed in the U.S. will perform an air defense function prior to deployment overseas, and that after overseas deployment all fighter groups will continue to perform an air defense function or a Ground Force cooperation function entailing air defense. Escort missions, on the other hand, will be encountered only occasionally, and then only if the security of airbases against air attack is reasonably assured. Yet five of the thirteen U. S. fighter groups are assigned to a command which is concerned with the training of fighters for strategic escort only.

d. Consideration of the foregoing makes it apparent that regular fighter groups should be redeployed to permit initiation of defense of vital areas and should be reassigned, in sufficient numbers for this purpose, to the Continental Air Command. Furthermore, it is apparent that this redeployment and reassignment, rather than reducing the USAF capability for the execution of war plans will tend, instead, to improve that capability.

e. The selection of specific units and specific airfields to meet initial air defense requirements must be based on an analysis of current unit assignments to air bases. Data analysis, in Tab 'C' hereto, reveals deficiencies which can be met by the transfer of the 4th, 325rd, and 56th Fighter Groups to the Continental Air Command, the reassignment of Otis Field, Camp Edwards, and Selfridge Air Force Base to Continental Air Command, the selection and ultimate development of a suitable fighter base in the Minneapolis-Duluth area, and the selection and/or development of a fighter base in the Utica-Syracuse area.

CONCLUSIONS

8. That the organization illustrated in Tab 'B' will permit efficient control and employment of those resources in the Continental United States which are susceptible for use in, and which can be made available for unit training; the defense of the Continental United States against air attack; and/or in cooperation with ground and sea forces employed in defense of the Continental United States against surface attack.

9. That the organization is adaptable, in time of emergency, to concurrent expansion, concentrated training and extensive operations without major reorganization.

10. That the requirements for regular USAF fighter units located to meet air defense needs necessitate the immediate assignment of the 4th, 325rd, and 56th Fighter Groups, Otis Field, Camp Edwards, and Selfridge AFB to the Continental Air Command, with the selection or

SECRET

development of suitable fighter bases in the Minneapolis-Duluth and Utica-Syracuse areas.

11. That the cost for implementing Phase I (Tab A) is nominal and can be supported within the current budget.

12. That the cost for implementing Phase II (Tab B) is such that the USAF Budget and USAF Programs must be adjusted to permit implementation during FY 1950.

RECOMMENDATIONS:

1. That the foregoing organization and assignment of areas for air operations and unit training in the Continental United States be approved for implementation in two phases, as indicated.

2. That the abbreviation CAC be approved for Continental Air Command to differentiate from the abbreviation CARCO now used for Caribbean Air Command.

3. That the Deputy Chief of Staff, Operations be charged with the dissemination of necessary implementing action to the Air Staff and be designated the Air Staff agency charged with monitoring the implementing action.

AF REGULATION)
NO. 20-)*

DEPARTMENT OF THE AIR FORCE
HQ UNITED STATES AIR FORCE
WASHINGTON, D. C.

ORGANIZATION

Continental Air Command

(AF Reg 20-19, 10 Oct 46; AF Reg 20-19A, 19 Dec 47; AF Reg 20-13, 19 Dec 47; and AF Reg 20-13A, 3 Feb 48, are hereby rescinded.)

1. Missions. The Continental Air Command is organized primarily to:

a. Provide for the active air defense of the United States, and operational training therefor.

b. Provide for U. S. Air Force cooperation with ground and amphibious forces in the United States, and operational training therefor.

c. Organize, administer, equip, train, and prepare for combat in accordance with directives, policies, and schedules issued by Headquarters, USAF, such units of the USAF as may be designated, assigned, or attached to the Continental Air Command.

d. Discharge, within the continental United States, the field responsibilities of the Chief of Staff, USAF, with respect to:

(1) The Air National Guard and the Air National Guard of the U. S.

(2) Such units and individuals of the U. S. Air Force Reserve as may be assigned to the Continental Air Command and all unassigned individuals of the U. S. Air Force Reserve.

(3) The Air Reserve Officers Training Corps.

(4) The Air Scouts of the Boy Scouts of America.

e. Prepare for mobilization, mobilize, and thereafter dispose such units and individuals of the U. S. Air Force Reserve as may be designated.

*This Regulation has been coordinated with and approved by the Chief, National Guard Bureau, as being applicable to the Air National Guard.

(d) Conducting U. S. Air Force participation in the Air Scout Program.

(e) Acting as the field agency of the USAF for the mobilization, preparation for movement, and disposition of all units of the Air National Guard of the U. S. in the Federal Service, and the U. S. Air Force Reserve.

(f) Preparing for overseas movement such units as may be directed, including those of the Air National Guard of the U. S. in the Federal Service.

(g) Formulating plans for, and coordinating the efforts of all USAF commands and activities in domestic emergencies (including disaster relief), and direct USAF operations in connection with such emergencies. (Each USAF unit, irrespective of major air command to which assigned, will participate in the planning for and conduct of emergency and disaster relief operations, at the request of a Continental Air Command Air Force Commander.)

(h) Constituting a single USAF contact for providing information and liaison with Army commanders, Naval district commandants, sea frontier commanders, and heads of civilian agencies. (This will not be construed as prohibiting contacts required by the specific functional responsibilities of other United States Air Force major commands.)

(i) Conducting such continental administrative functions as may be directed from time to time. These include:

1. General USAF liaison and other prescribed functions at water ports of embarkation.
2. Custody and disposition of USAF prisoners apprehended and turned over to the USAF by other authorities.
3. Processing of personnel enroute to and returning from overseas through water ports of embarkation.
4. Operation of USAF Special Aviation Cadet and Officer Candidate School Procurement Program.
5. Procurement and maintenance of records of former members of the Army Air Forces and the USAF, as directed.
6. Administration of the USAF extension course program.
7. Administration of the USAF program for return of World War II dead.
8. Providing USAF representation in local Armed Forces Disciplinary Control Boards in each of the six Army commands.

(4) Determination of the proper apportionment of the effort of assigned or attached units between the several missions of the Command.

0552

(5) Timely allocations of a proper portion of the effort of units assigned or attached, or otherwise made available, to the Continental Air Command, to the operational command of the Air Defense Command and the Tactical Air Command, respectively.

(6) Peacetime deployment of elements of the active air defense system of the United States in preparation for the conduct of immediate active air defense against surprise attack.

(7) Coordination of the activities of the Air Defense Command, Tactical Air Command, and numbered Air Forces for the most effective accomplishment of the missions assigned the Continental Air Command.

(8) Performing such other functions as may be directed by the Chief of Staff, USAF, from time to time.

b. The Commanding General, Air Defense Command, is responsible for the following specific functions:

(1) Continuous planning in preparation for the conduct of active air defense of the United States.

(2) Conducting the active air defense of the continental United States with the means made available by the Commanding General, Continental Air Command.

(3) Preparing for the employment of such units of the Army and Navy as may be made available for direct defense of the United States against air attack.

(4) Preparing and conducting USAF operational participation in civilian defense in connection with air attack of the continental United States.

0555

(5) Recommending policies, plans, doctrine, organization, systems, material, tactics, techniques, and procedures applicable to the air defense of the United States.

(6) Conducting systematic training of available forces in active air defense.

(7) Carrying out joint air defense training and joint air defense exercises and maneuvers, in accordance with approved plans, by utilization of such units of other elements of the National Military Establishment as may be made available.

(8) Recommending to the Commanding General, Continental Air Command, the allocation and deployment of available force in preparation for, and the conduct of, the active air defense of the United States.

(9) Establishing and maintaining liaison with Naval Sea Frontier commanders in joint matters pertaining to the air defense of the continental United States.

c. The Commanding General, Tactical Air Command, is responsible for the following specific functions:

(1) Continuous planning in preparation for the conduct of air operations in cooperation with ground and/or amphibious forces in defense of the United States.

(2) Conducting tactical air operations in the continental United States with the means made available by the Commanding General, Continental Air Command.

0554

(3) Being prepared to provide cadres of personnel experienced in tactical air support type operations, for the timely formation of Tactical Air Command and/or Air Force headquarters for overseas deployment, as required.

(4) Maintaining continuous liaison with the Army Field Forces for the development of USAF policies, plans, doctrine, organization, systems, materiel, tactics, techniques, and procedures applicable to air operations in cooperation with ground and/or amphibious forces, and submitting recommendations with respect to these matters.

(5) Cooperating with Army Ground Forces in airborne and airlift training of Army troops, with the means made available by the Commanding General, Continental Air Command.

(6) Conducting systematic training of available forces in tactical air operations.

(7) Carrying out joint training in tactical air operations and joint tactical air exercises and maneuvers, in accordance with approved plans, by utilization of such units of other elements of the National Military Establishment as may be made available.

(8) Recommending to the Commanding General, Continental Air Command, the allocation and deployment of available forces in preparation for, and the conduct of, air operations in cooperation with ground and amphibious forces.

d. Each Commanding General of a numbered Air Force assigned to the Continental Air Command will perform such command, administrative, training, and logistic support functions, within his assigned geographic area, as may be directed from time to time by the Commanding General, Continental Air Command. Initially, these responsibilities will include the functions enumerated in paragraph 3a (3), supra, as well as the logistic support of the Headquarters, Continental Air Command, and elements of the Air Defense Command and Tactical Air Command not assigned to a numbered Air Force.

4. Direct Communication. Direct communication between the Commanding General, Continental Air Command, and the commanding generals of other major air commands on matters pertaining to the mission of the Continental Air Command is authorized. The Commanding General, Continental Air Command may delegate this authority to the Commanding General, Air Defense Command, the Commanding General, Tactical Air Command, or the Commanding Generals of numbered Air Forces assigned to Continental Air Command, as he desires.

5. Conflicting Directives. All previous directives, regulations, and orders in conflict with this Regulation are superseded.

*ConACR 21-1
1-2

ConAC REGULATION)
21-1)

HEADQUARTERS CONTINENTAL AIR COMMAND
Mitchel Air Force Base, N.Y., 16 November 1949

CONTINENTAL AIR COMMAND

Command and Staff Organization

	Paragraph
Introduction	1
Command	2
Purposes, Functions and Doctrine	3
Duties and Interrelationships of Staff Officers	4
Staff Organization	5
Commanding Officer, Hq & Hq Sq, ConAC	6
Staff Procedure	7

1. Introduction. a. The purpose of this Regulation is to establish a common basic staff structure and to clarify doctrine in regard to command and staff organization throughout the Continental Air Command and to increase the efficiency of the command through uniformity of staff organization.

b. The staff structure herein is based on that in effect in Headquarters United States Air Force. The doctrine derives from the large body of Air Force and Army Regulations, directives, and command and staff procedures developed in recent years. The differences and occasional contradictions found in these sources of doctrine require compromise in matters of staff organization and terminology if approximate uniformity is to be achieved.

c. Continental Air Command air force commanders will conform to the doctrines and principles expressed herein; and will organize their headquarters using the same basic staff structure and the titles and duties of the deputies and directors, except that the office of Deputy for Tactical Air Operations will exist only in the Continental Air Command Headquarters. Subdivision of directorates into divisions, branches, sections, and units is left to the discretion of air force commanders.

2. Command. a. Command is the authority which an individual in the military service lawfully exercises by virtue of grade or assignment. Command is the right and power to decide. A commander is responsible, within the scope of his authority, for all that his subordinates do or fail to do. Responsibility and authority are commensurate. Command gives great power to a commander, especially in situations of unusual danger or responsibility. This power must be exercised with wisdom and justice. Commanders must not injure their subordinates by tyrannical or capricious conduct. Command in a military enterprise is inseparably interwoven with its mission, operations, and organization.

*This Regulation supersedes ConAC Regulation 21-1, 7 February 1949, as amended.

b. The exercise of command is a complicated function and process. In present-day military organization it entails the correlation and coordination of many and various individuals, units, services, operations, and activities. The interests and operations involved are at time divergent or conflicting. Command of air forces, and even of combat wings, groups, and bases, demands of the commander and staff a wide and detailed knowledge of air operations and of Air Force, Army and Navy administrative and technical services, personnel and materiel; the consideration of innumerable factors; the exercise of sound judgment; and the strength of character and will to carry difficult decisions into effect.

3. Purposes, Functions and Doctrine.

a. The purposes of a staff are:

(1) To assist the commander in carrying out his responsibilities of command.

(2) To assist the combat and service units to carry out their tasks.

b. The general functions of a military staff include:

(1) Collection, compilation, analysis and interpretation of information and data of all kinds.

(2) Formulation of policies for the commander's approval which will serve as guidance for the organization as a whole.

(3) Preparation of detailed and alternate plans for the accomplishment of both broad missions and minor tasks.

(4) Interpretation of the commander's basic decisions and policies into plans, directives, and orders.

(5) Making incidental or subordinate decisions based on policies, plans, and decisions of the commander, when authorized by the commander to make decisions in his name.

(6) Transmission of instructions, orders, and timely information to subordinate and other units and services.

(7) Supervision and evaluation of effectiveness in the execution of policies, plans, and orders by the command as a whole and by subordinate units.

(8) Furnishing technical advice to the commander.

(9) Coordination and reconciliation of divergent or conflicting requirements, interests, or actions by services and subordinate units.

(10) Continuing contracts with staffs of subordinate units, coordinate and higher commands, and nonmilitary authorities and activities.

(11) Maintenance of records and preparation of reports.

(12) Development of standing operating procedures.

c. The work of an air organization is done chiefly by its combat and service elements. The staff mission should be limited to coordinating and controlling the operations of the combat and service elements and directing them toward a common goal.

d. Continental Air Command staffs are organized in accordance with the same basic theories and principles as are the staffs of other Air Force or Army units. Staff organization must be based on the entire organic structure of the unit to which the staff belongs. The difference between the organization and operations of dissimilar military forces, as regards both combat and service elements, accounts for the apparent differences in their staffs. Fundamentally these staffs are quite similar. The salient features of the Army staff structure from which the Air Force staffs have developed are:

(1) A general staff group. The comparable group in the Continental Air Command, as prescribed herein, includes the four Deputies (Personnel, Operations, Materiel, and Tactical Air Operations), the Comptroller, the Inspector General, the Air Surgeon, the Air Adjutant General, and the Public Information Officer. Within the staff structure, the administrative function of each is termed an "Office."

(2) A special staff group. The corresponding group in the Continental Air Command includes the directors and other staff officers under the immediate supervision of the deputies. (See paragraph 5, below.)

(3) Assistants and Aides-de-Camp. Perform duties as their respective commanders may direct.

e. The Continental Air Command includes three operational elements: for air defense, the Eastern and Western Air Defense Forces; and for tactical air operations, the Tactical Air Command. The Continental Air Command Deputy

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS UNCLASSIFIED

for Tactical Air Operations is the Commanding General, Tactical Air Command. These duties as staff officer and as commander do not conflict; they are separate and distinct. (See Air Force Regulation 23-1.)

4. Duties and Interrelationships of Staff Officers. More specifically, the duties and interrelationships of the different staff officers include:

a. Deputies.

(1) The nine staff offices in the "Deputy Group" are so organized as to supervise collectively all of the activities, operations and problems of command, though each office is concerned primarily with a different broad aspect thereof. The "Deputy Group" contributes largely to the formulation of the Commanding General's basic policies and decisions, and is chiefly responsible for supervising their execution. In view of the wide responsibility and authority of each deputy acting for the Commanding General, it is imperative that they agree on, and insure thorough coordination of, all directives and orders issued by them pursuant to the Commanding General's basic policies, plans, and decisions. This applies in administrative and service matters, as well as in combat and training matters.

(2) The deputies have two distinct functions:

(a) The deputies formulate basic policies and plans for approval of the commander, and after approval issue directives and instructions in furtherance thereof.

(b) Each deputy, in his field of responsibility, supervises and coordinates the execution of those policies and plans. Success and ease in the exercise of this latter function depends on the professional competence and personality of both the deputies and the directors. The deputies are responsible for the initiation and supervision of action required for the proper discharge of their responsibilities and for the policies and administrative coordination of the directors. They effect their coordination through observation, office visits, field visits, and informal discussion. Their tasks become easier as all gain experience and indoctrination in the various specialized activities of the command and in the operation of staff organization. (See paragraph 4b(2), below.)

0564

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS UNCLASSIFIED

(3) The deputies exchange freely and as a matter of routine all information of common interest. The general scope of staff responsibility of each office of the deputy group is shown in paragraph 5.

b. Directors.

(1) The directors, individually and collectively, direct the execution of the plans and programs of the command by the subordinate units and services. The directors develop detailed plans and programs, formulate directives and orders to subordinate units and services for approval by the deputies, and follow up to insure effective execution.

(2) The directorates are grouped under the deputies in accordance with their primary duties. Direct communication is encouraged between all deputies and directors regardless of grouping.

(3) The 47th Article of War requires that the commanding general or other convening authority will at all times communicate directly with his staff judge advocate in matters relating to the administration of military justice, including the reference of charges for trial and subsequent review. The Article further provides that the staff judge advocate of any command is authorized to communicate directly with the staff judge advocate of a superior or subordinate command or with the Judge Advocate General, United States Air Force. No agency or indirect channel may be interposed between the commanding general of a command and the staff judge advocate of the command, nor is the staff judge advocate required to follow command channels in communicating with the persons mentioned above. The commanding general or convening authority may not delegate his responsibility in matters of military justice to a subordinate.

(4) Under the provisions of Air Force Regulation 165-3, the inclusion of the air chaplain within the Office of Deputy Chief of Staff, Personnel, or its equivalent, will not be interpreted as authorization for that deputy to determine independently the policies pertaining to chaplain administration without proper coordination with the air chaplain, nor does it impose any limitation upon the air chaplain as consultant to the commanding general/commanding officer on all matters pertaining to the duties and functions of chaplains within the command. Professional communications

0565

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS UNCLASSIFIED

between Air Force chaplains may be exchanged freely without recourse to military channels. Such communications as well as any correspondence which is obviously intended for a chaplain will be privileged against disclosure or military inspection.

(5) Although each directorate is responsible to only one of the deputies, the directors communicate and carry out their routine staff duties directly with each other and with all deputies in accordance with all their various interests and responsibilities. This calls for team work of the highest order and for breadth of view in order that each director's actions shall be reconciled with those of other directors whose specialized skills and responsibilities in their respective functions are comparable to his own. It calls for complete coordination of detailed plans, programs, directives, and orders, in order to prevent the demoralizing effect on subordinate units and services of ambiguous, conflicting, or contradictory instructions from higher authority. It requires good faith and friendly collaboration between all the directors under the monitorship of the deputies. Directors maintain direct contact with their counterparts in higher, lower, and coordinate headquarters on technical matters peculiar to their responsibilities. Each director has access to the Commanding General or Vice Commander and may be called on frequently by them for specialized, detailed or expert opinion; however, basic conflicts or disagreements among directors will first be submitted to the deputy or deputies concerned for decision or resolution. It is an essential feature of this concept of staff organization that deputies will provide reconciliation and make decisions in matters pertaining to the directorates.

(6) The general functions of the directorates in the headquarters of the Continental Air Command are shown in paragraph 5, below. The subdivision of directorates into divisions, branches and sections varies with changes in the nature and importance of the activities of the field commands.

c. The confidant and principal assistant to the Commanding General is the Vice Commander. He also supervises the entire staff. His responsibilities and labors are not decreased by reason of the increased initiative and authority characteristic of the deputies. He has the responsibility of concentrating the thoughts and energies of many individuals upon the achievement of common basic objectives.

0566

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS UNCLASSIFIED

d. As subordinate units become more specialized and as staffs decrease in size, from high to lower echelons of organization, it becomes necessary to assign two or more functions of a higher staff to a single subdivision of a lower headquarters; therefore, the offices of Vice Commander, the deputy group, and the directorates are prescribed only for the headquarters of the Continental Air Command air forces. The directorates of the latter will be organized into divisions, branches and units as the air force commanders may direct. The basic staff structure of subordinate combat units, bases, and other organizations is continually under study. No change in present staff organization of those organizations is prescribed herein. Tables of organization and other existing directives pertaining to table-of-organization units and to combat wings remain in effect until changes are directed.

e. Organization of Eastern Air Defense Force and Western Air Defense Force will be as prescribed in a separate directive.

f. The organizations of a military enterprise is like a living organism. It grows, changes, and adapts itself to its environment and tasks. Changes may be expected in the details of the organization of units and staffs of the Continental Air Command. Progress will be faster and smoother when basic concepts and methods of staff operations and organization are standardized.

5. Staff Organization. The basic staff organization, functions, and titles of deputies, directors, and chiefs of offices, with abbreviations therefor, are shown below:

a. Commanding General (CG)

Responsible for carrying out the missions assigned the Continental Air Command by the Chief of Staff, United States Air Force.

b. Vice Commander (VC)

Develops policy of the organization as a whole and supervises and directs the activities of entire staff. Acts for the Commanding General on delegated matters.

(1) Assistant for Reserve Forces (ARF)

Acts as consultant to the Commanding General and staff and as executive on matters pertaining to USAF Reserve Forces. Monitors, evaluates, and advises on the implementation of approved plans and policies pertaining to the USAF Reserve Forces. Is not an action agency. Each office on the staff is responsible for providing for the

0567

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS UNCLASSIFIED

requirements of the USAF Reserve Forces programs, in those matters of its primary interest, to the same extent as for the requirements of the Regular USAF.

(2) Assistant to the Vice Commander (AVC)

Is administrative executive for the Vice Commander; supervises the carrying out of projects as directed; supervises the activities of the Manpower Evaluation Board; acts as Secretary of the Staff; is Headquarters Continental Air Command Space Control Officer; acts for the Vice Commander on matters as directed.

(3) The Manpower Evaluation Board (MEB)

Performs manpower utilization surveys to determine the adequacy of manpower authorizations, as to both numbers and job descriptions. Evaluates effectiveness of personnel presently assigned, as to both numbers and capabilities. In connection with manpower utilization, surveys, reviews and evaluates organizational structure and allocation of functions thereunder to determine organizational effectiveness to accomplish assigned missions. Reviews mechanics established for obtaining coordination within headquarters and procedures to insure compliance with announced policies and published directives. Determines need for and evaluates procedures to accomplish the establishing of projects and the control and evaluation thereof. Reviews administrative methods, procedures, and standing operating procedures to determine effectiveness. Makes recommendations which will lead toward reduction in personnel requirements or improvements in accomplishments.

c. Air Adjutant General (AAG)

Assistant Air Adjutant General (AAAG)

Acts as administrative officer for the headquarters. Reviews correspondence and messages for staff coordination and conformity with command policy. Routes and maintains suspense on correspondence and messages. Supervises postal activities; office of record and central files; reference library; distribution center for publications; reproduction and forms control; records administration program including USAF Reserve records; maintenance of headquarters policy file; command and unit histories; custody of classified material; top secret control officer.

0568

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS UNCLASSIFIED

(1) Director of Publications (Dir Pub)

Advises and assists the Air Adjutant General on all matters of policy and procedures pertaining to publications, reproduction, and the control of printing.

(a) Reproduction Division

Reproduces all command blank forms and publications. Compiles requirements reports and prepares all command publications for mailing.

(b) Editorial Division

Prepares and issues general and special orders. Edits, coordinates, and prepares for reproduction all command standard administrative publications. Continuously reviews command publications.

(c) Library Division

Maintains reference material for Continental Air Command staff. Provides research services. Requisitions reference material.

(2) Director of Administration (Dir Admin)

Advises and assists the Air Adjutant General on all matters of policy and procedures pertaining to military correspondence, mail and records services, control of classified material, and records administration.

(a) Classified Division

Receives, processes, maintains suspense, and dispatches all classified material. Accounts for registered documents. Maintains special files on Top Secret and Atomic Energy material. Provides classified courier service.

(b) Mail and Records Division

Receives, processes, maintains suspense, and dispatches all unclassified material. Operates headquarters messenger service. Maintains central files. Is responsible for command and headquarters records administration program.

0569

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS UNCLASSIFIED

(c) Correspondence Division

Receives and authenticates correspondence and messages. Prepares correspondence for mailing and filing. Formulates policy pertaining to preparation of correspondence and messages.

(3) Director of Historical Services (Dir Hist)

Prepares annual command history and annual report of command activities; renders consultative and research services on history of tactical aviation and air defense and on historical matters pertaining to the Continental Air Command and its component organizations; administers and monitors field historical program; maintains historical archives of the command; prepares special historical monographs and operational studies.

d. Air Surgeon (A Surg)

Plans, administers, and supervises the command medical service including the dental service and veterinary program. Determines requirements for and recommends reassignments of medical service personnel. Supervises duties and training of medical service personnel. Reviews physical examinations for conformity to standards and qualifies same for general service and flying duty, granting waivers when required and justified. Formulates medical administrative procedures; compiles and consolidates medical statistics. Evaluates types of medical installations and recommends to the Surgeon General, USAF, increases or decreases in bed status based on military personnel serviced. Monitors aviation medicine and veterinary medicine programs. Represents the command as advisor on Character Guidance Council. Sits as a member of the Command Central Flying Evaluation Board.

(1) Administrative Division

Advises the Commending General, Continental Air Command, and Surgeon General, USAF, on all administrative matters. Determines the professional and technical standards for and monitors the procurement, classification, assignment and separation of all professional and medical technical personnel. Advises and, through liaison, implements the USAF Reserve program for personnel in the medical profession and allied specialties. Receives, processes, and evaluates sick and wounded report cards, statistical

0570

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS UNCLASSIFIED

health reports; and edits, corrects, and consolidates medical records and reports.

(2) Dental Division

Advises the Commanding General, Continental Air Command, and The Surgeon General, USAF, concerning dental matters of the command. Analyzes, corrects, and evaluates dental professional reports. Determines the requirements of the Continental Air Command for dental service and dental personnel.

(3) Professional Services Division

Supervises implementation of policies relating to the professional care of the sick and injured in command medical installations. Edits and prepares for publication all command medical bulletins. Reviews flying evaluation board reports and disposition boards on flying personnel. Processes all physical examinations.

(4) Aviation Medicine Division

Supervises policies for and provides medical and technical instruction on the development and implementation of the physiological training program for all rated personnel. Monitors program for utilization by flying personnel of protective equipment, protective clothing, etc. Supervises activities to maintain the highest possible standards of health, safety, and proficiency of flying personnel.

(5) Preventive Medicine Division

Monitors a program to minimize the incidence of preventable diseases, including acute communicable diseases and venereal diseases. Supervises a program relative to sanitation; advises on insect and rodent control, field sanitation, etc. Plans and supervises the mess sanitation program and in addition monitors a program in food hygiene matters, nutritional standards, and food inspection. Conducts all matters pertaining to the veterinary program.

0571

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS UNCLASSIFIED

e. Inspector General (IG)

Assistant to the Inspector General (AIG)

Informs the Commanding General as to the state of the command in respect to efficient and economical performance of the mission thereof and as to the maintenance of discipline and security. Monitors completed action on correspondence and inspection reports from the Air Inspector and Air Provost Marshal which reflect the status of the command. Conducts special investigations as required.

(1) Air Inspector (AI)

Inquires into and reports upon all matters affecting the tactical, technical, logistical, administrative, and flying safety activities of the command and the efficiency, economy, and adequacy thereof.

(a) Tactical Inspection Division

Conducts or participates in inspections, operational readiness tests, special surveys, and investigations pertaining to operations, training, and tactical matters as directed. Reviews and processes correspondence and inspection reports on these matters and insures that adequate and appropriate action is recommended.

(b) Technical and Logistical Inspection Division

Conducts or participates in inspections, operational readiness tests, special surveys, and investigations pertaining to technical and logistical matters as directed. Reviews and processes correspondence and inspection reports on these matters and insures that adequate and appropriate action is recommended.

(c) Administrative Inspection Division

Conducts or participates in inspections, operational readiness tests, special surveys, and investigations pertaining to administrative matters as directed. Reviews and processes correspondence and inspection reports on these matters and insures that adequate and appropriate action is recommended. Investigates and processes complaints.

0572

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS UNCLASSIFIED

(d) Flying Safety Division

Establishes and maintains an aggressive flying safety program for the command. Is responsible for the supervision, direction, and coordination of all flying safety activities within the command.

(2) Air Provost Marshal (APM)

Plans, directs and supervises the activities of the Air Provost Marshal office; under the direction of the Inspector General, Continental Air Command, exercises staff supervision and inspection responsibility over matters pertaining to the enforcement of security and maintenance of military discipline; renders periodic reports to the Commanding General on the status of discipline and security within this command, and makes recommendations for corrective action.

(a) Air Police Division

Exercises staff supervision and inspection of matters pertaining to the organization, operation, and training of Air Police units to determine their effectiveness and efficiency; formulates plans and policies for maintaining law and order, enforcement of rules and regulations, and the suppression of crime, including inquiries into commission of crimes and immoral practices; prepares for the effective and proper functioning of the USAF Absentee Apprehension Program; evaluates the quality of discipline, causes of failure in maintaining discipline among command personnel, and submits appropriate comments and recommendations; reviews all matters coming within the purview of the Armed Forces Disciplinary Control Boards; coordinates with civilian law enforcement agencies and with other services of the military establishment on law enforcement and disciplinary matters. Prepares directives pertaining to the confinement and rehabilitation of prisoners; clarifies and interprets existing policies and directives pertaining to the corrections activity; disseminates instructions received from higher headquarters to subordinate commands; initiates and prepares staff policies and procedures for all correction matters and the conduct of rehabilitation and training of prisoners; reviews existing rehabilitation programs to insure adequacy of operations; inspects confinement

0573

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS UNCLASSIFIED

facilities to insure compliance with directives pertaining to confinement and rehabilitation of prisoners and, when warranted, makes recommendations for changes and improvement in the operation and administration of guardhouses and stockades.

(b) Security Division

Establishes such enforcement procedures as are necessary to safeguard and maintain adequate security of classified military information, material, equipment, and projects under the control and jurisdiction of the command; supervises the operation of a personnel identification system; participates in the establishment and operation of a system for determining the loyalty and character fitness of military and civilian personnel within the command; enforces special measures for the security of Atomic Energy information; supervises a training and education program for the safeguarding of military information; exercises staff supervision over installations and activities coming within the jurisdiction of the command as may be necessary to insure compliance with all applicable security policies and regulations.

f. Public Information Officer (PIO)

Assistant Public Information Officer (APIO)

Advises and submits recommendations to the Commanding General concerning public relations matters and the effect on public opinion of the operations and activities of the Continental Air Command. Maintains direct liaison with public relations representatives of higher authority, appropriate officers and officials of other components of the Armed Forces, and officials of other governmental agencies in matters dealing with public relations pertinent to the Continental Air Command. Promulgates public relations plans and policies of Headquarters Continental Air Command, and Headquarters USAF, to lower echelons for promoting and assisting in public relations activities. Acts as Foreign Liaison Officer and Protocol Officer for the command in direct liaison with Foreign Liaison Branch, Directorate of Intelligence, USAF.

0574

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS UNCLASSIFIED

(1) Media Division

Prepares and publishes informational material for the guidance of public information officers of subordinate echelons on matters relative to policy, security, future operations, and basic operational statistics. Obtains and compiles basic material for publication and maintains records covering such material and statistics. Supervises the gathering and processing of information for dissemination by appropriate media, including newspapers, wire services, feature services, photo services, radio shows, radio networks, magazines, and industrial or institutional house organs. Maintains direct contact (subject to higher echelon approval) with all appropriate national media. Prepares drafts of speeches for special occasions.

(2) Field Liaison Division

Maintains liaison with field units and personnel. Processes inquiries and requests from public information officers of subordinate echelons. Formulates plans and policies for field public information officers. Prepares the Public Information Letter.

(3) Special Events and Administrative Division

Arranges programs of speeches, open houses, tours, displays, exhibits, demonstrations, and similar activities. Supervises administrative procedures and practices of the Public Information Office. Assists in staging award ceremonies, arranging for proper media coverage, and providing for care of persons decorated and their families. Provides the Commanding General, Continental Air Command, with a Daily Clip Sheet giving information and media reaction to new developments; maintains complete subject files of pertinent news clippings.

g. Comptroller (Compr)

Assistant Comptroller (A Compr)

Assembles, evaluates, and presents to the Commanding General, Continental Air Command, management information on all operations, programs, and projected plans. Provides the Commanding General and the chiefs of major staff sections with necessary data to support the accomplishment of command objectives in the

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS UNCLASSIFIED

most efficient and economical manner within available resources. Evaluates the relationship of accomplishment to command objectives, recommending such actions as are appropriate. Performs technical reporting, budgeting, and finance functions.

(1) Director of Programs and Costs (Dir Prog)

Analyzes command operations to determine if the components are consistent with each other; reflects the most efficient and economical use of resources to conform with authorized objectives. Provides special analytical services for the Commanding General and staff as required. Initiates, guides, and evaluates military management studies in the command and recommends the use of improved methods and systems developed as a result thereof. Correlates and establishes basic measurement standards for computing the requirements of command operations and budget estimates, and for the evaluation of achievement. Evaluates achievement within the command in terms of basic measurement standards. Develops, maintains, and supervises the operation of the cost systems within the command. Presents information derived from analysis in a readily accessible and usable form.

(a) Mission Progress Division

Supervises the development of program analysis activities within the command. Initiates, perfects, and establishes policies, procedures, and methods for the appraisal of command programs. Analyzes in conjunction with other staff activities the internal consistency of command program components; the availability of adequate resources; and the conformance with established objectives. Develops and maintains graphic presentations which portray the current situation against the projected plan for all major objectivesof the command programs. Conducts management studies and analyses of command activities to measure program progress in order to focus attention on undesirable trends. Develops and maintains basic measurement standards for evaluating mission or program accomplishment. Supervises and conducts the technical aspects of training within the command which may be required to accomplish the above phases of management analysis.

0576

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS UNCLASSIFIED

(b) Installation Accounting Division

Supervises the system of Cost Accounting for Management and Preservation of Real Estate Facilities within the command. Establishes procedures, methods and controls which will insure compliance by all concerned with instructions covering the Cost Accounting for Management and Preservation of Real Estate. Processes cost accounting reports, including the receipt, review, and examination of each report for correct preparation. Maintains cost information on the various aspects of real estate estimates; appraising administration and operations, developing standards, and other purposes which may require historical and factual cost data of this nature. Accomplishes audits and procedural examination of units as required by the system of Cost Accounting for Management and Preservation of Real Estate Facilities. Supervises and conducts the technical aspects of training of personnel within the command which may be required for the operation of the system of Cost Accounting for Management and Preservation of Real Estate Facilities. Analyzes the methods and procedures used in this cost accounting system and recommends improvements to the system when properly justified.

(c) Cost Analysis Division

Supervises cost analysis activities within the command. Prepares studies of operating costs which measure management ability, evaluate economy, reflect efficiency, forecast results, or develop cost standards. Prepares analyses which reflect the degree of efficient and economical management of resources as measured by their monetary cost. Prepares comparative analyses which relate operating costs to work performance, applying therein statistical methods, to develop standards of costs and performance. Supervises and conducts training of personnel in cost analysis activities. Analyzes the methods used for measuring work performance and prepares recommendations for improvements when properly justified.

(d) Cost Control Division

Supervises the USAF cost control system within the command. Establishes procedures, methods, and

0577

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS UNCLASSIFIED

controls which will insure compliance by all concerned with instructions covering the USAF cost control system. Processes cost control reports including the receipt, review, and examination of each report for correct preparation. Prepares cost control reports as may be required. Maintains operating cost information in proper file as may be required for determining trends, justification of estimates, appraising administration and operations, development of standards, and other purposes requiring historical and factual cost data of this nature. Supervises and conducts the technical aspects of training within the command which may be required for the operation of the cost control system. Accomplishes field procedure examinations of units as required by the USAF cost control system. Analyzes the methods and procedures used in collecting information through the cost control system and recommends improvements when properly justified.

(2) Director of Statistical Services (Dir Stat)

Supervises the operation of the comptroller reporting system of the command and conducts such field liaison as required to insure uniform, accurate, and timely reporting. Maintains and operates the strength accounting systems for military, civilian, and USAF Reserve Forces personnel in accordance with appropriate regulations and directives. Supervises and controls the collection and submission of all approved special and recurring reports; receives and checks all such reports for mathematical accuracy, internal consistency, and adequacy. Prepares and issues technical instructions necessary to secure special and recurring reports required by the command and higher headquarters. Prepares for command staff activities and higher headquarters such special and recurring reports and studies as may be required. Operates the reports control procedure within the command. Establishes and maintains an official repository of selected statistical information for staff reference purposes. Provides a central drafting and graphic presentation service for local staff activities.

(a) Administrative Division

Requisitions, maintains, and issues all supplies, including tabulating equipment supplies, and provides for proper supply records and discipline in

0578

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS UNCLASSIFIED

accordance with current directives. Establishes and maintains the proper military and civilian personnel records system on attendance and efficiency relating to the assigned military and civilian personnel. Arranges for and supervises the operation of custodial services for the machine room. Establishes and maintains the central files and distribution facilities. Arranges for and operates the mail service. Arranges for and supervises the operation of security procedures in accordance with current directives.

(b) Analysis and Presentation Division

Devises and maintains a system of graphic presentations on selected subjects as required by the staff. Conducts special statistical studies of selected types of statistical data for the use of the Commanding General and the various staff agencies of Continental Air Command. Provides drafting and graphic presentation service for Headquarters Continental Air Command.

(c) Reports Control Division

Examines for approval or disapproval proposed reports and report revisions and continually reviews reports previously approved to insure that all reports and reporting systems adhere to standards which: prevent or minimize unnecessary or duplicating reports; insure that instructions, forms, and procedures for reporting are clear and complete; insure that required reports provide data adequate for the purpose intended; insure that all necessary reporting is accomplished by the simplest means and with a minimum expenditure of effort. Maintains files of directives and related material of all reports for which the office of Statistical Services exercises reports control jurisdiction. Establishes, maintains, and operates a system for controlling all Statistical Service reports to insure adherence to established reporting schedules. Publishes and maintains a directory of recurring reports. Investigates and institutes corrective action on reports control violations.

(d) Machine Processing Division

Determines the requirements for and allocates tabulating equipment for the Statistical Services system,

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS UNCLASSIFIED

Continental Air Command. Maintains and operates tabulating and teletype equipment assigned to Statistical Services, Headquarters Continental Air Command. Establishes and maintains status card files on all military personnel assigned to Headquarters and Headquarters Squadron, Continental Air Command. Establishes and maintains locator card files on USAFR and USAF personnel assigned to Continental Air Command. Performs machine functions relating to special type locator files. Maintains on current basis technical manuals received from Headquarters USAF pertaining to operations of electrical accounting equipment and prepares supplemental procedures and wiring diagrams needed for command use. Prepares written procedures to supplement information on reporting and machine utilization for use of air forces.

(e) Control and Audit Division

Collects and audits all special and recurring Statistical Services reports. Audits, assembles, and issues Statistical Services reports, rosters and audit lists and related data. Conducts or supervises reporting and procedural surveys to develop standard procedures and forms for the recording and collection of basic source data necessary for reporting and processing statistical data. Interprets and implements directives and manuals from higher headquarters relating to Statistical Services reporting. Drafts directives and manuals relating to command Statistical Services reports.

(3) Director of Budget (Dir Bud)

Develops the budget estimates for Continental Air Command and prepares justifications in support thereof. Controls utilization of available financial resources in accordance with the command program and recommends current adjustments within fund limitations as required by changing conditions. Performs a continuing analysis of fund status; controls the allocation of funds and makes appropriate recommendations on requests for funds submitted by lower echelons. Advises the Commanding General and staff on legislative authority for proposed expenditures. Exercises technical supervision over all budget and fiscal functions performed under the jurisdiction of the command.

0580

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS UNCLASSIFIED

Exercises technical supervision over fund allotment accounting records and procedures utilized within the command. Prepares such special and recurring budget and fiscal type reports as are required by local staff agencies and higher echelons.

(a) Budget Requirements and Analysis Division

Utilizes estimating factors, work measurement units, standards of performance, and similar items in pricing any proposed program or operation. Develops the annual budget estimates of the command and prepares justification in support thereof. Issues call for installation annual program and fund requests with local staff agencies; prepares command annual financial plan. Assists in support of the annual budget estimates of the command before the Air Force Budget Advisory Committee. Develops and recommends necessary changes in the budget structure and fund accounts. Performs a continuing analysis of fund status within the command and each air force. Determines by analysis that fiscal accounting records reflect firm and necessary obligations and commitments. Prepares such special budget type reports as are required by local staff agencies and higher echelons. Provides special budget and fund analytical services for the Commanding General and staff as required; and presents information derived from analysis in a readily accessible and usable form.

(b) Budget Operations Division

Controls the utilization of available financial resources in accordance with the command program and recommends current adjustments within fund limitations as required by changing conditions during the current fiscal year. Controls the allocation of funds for approved operations; reviews, analyzes, and makes appropriate recommendations on requests for funds submitted by lower echelons. Advises the Commanding General and staff on legislative authority for proposed expenditures. Exercises technical supervision over the budget and fiscal operations under the jurisdiction of the command. Develops quarterly, supplemental, and special requests for current fiscal year funds for submission

0581

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS UNCLASSIFIED

to higher echelons and prepares justification in support thereof. •Determines the proper funds to be charged and the sufficiency thereof in advance of the implementation of any proposed program or operation.

(c) Accounting Division

Exercises technical supervision over fund allotment accounting records and procedures utilized within the command. Prepares and issues advice of sub-allocation documents to subordinate air forces. Maintains the official appropriated fund accounting records of the command for current fiscal year and two prior fiscal years. Receives, reviews, consolidates and prepares such recurring fiscal type reports as are received by the command and are required by higher echelons. Supervises reimbursement and collection transactions to insure proper reimbursement of Air Force appropriations. Maintains necessary records and submits required related reports. Reconciles expenditures with summary of expenditures furnished by the Accounting Division, Army Finance Center. Establishes and maintains all required appropriated fund accounting records to reflect the current status of all appropriated funds made available for the operation of Headquarters Continental Air Command. Determines the proper funds to be charged and the sufficiency thereof, in advance of the incurring of obligations against funds made available for the operation of Headquarters Continental Air Command. Prepares and submits required reports on status of all funds made available for the operation of Headquarters Continental Air Command. Maintains current status of travel funds available to each "TDY Control Officer" within Continental Air Command Headquarters. Certifies as to availability of funds for civilian personnel payrolls, USAF Reserve active and inactive duty pay, travel orders, overtime pay of civilians, and local procurement of Headquarters Continental Air Command and Headquarters Eastern Air Defense Force.

(4) Director of Audits (Dir Aud)

Supervises the audits of nonappropriated funds in the command. Audits fund allotment accounting records pertaining to Air Force appropriated funds in the command.

0582

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS UNCLASSIFIED

(a) Administrative Division

Responsible for preparation of correspondence and reports of audits. Maintains workload charts, suspense follow-up on delinquent audits, correspondence register and all files.

(b) Analysis, Research and Development Division

Analyzes financial statements and reports of audit and evaluates results of analyses. Develops accounting procedures for nonappropriated funds. Develops plans and programs for conducting analyses and audit of accounting records and reports. Performs field trips to audit and analyze accounting records and reports pertaining to appropriated fund suballocations, allotments, and obligations.

(c) Review and Audit Division

Reviews reports of audit of nonappropriated funds and statements of corrective action taken on audit reports. Reviews for final action proceedings of boards of officers pertaining to nonappropriated funds.

(5) Director of Finance (Dir Fin)

Advises the Commanding General and staff on matters pertaining to the receipt and disbursement of funds and the accounting incident thereto. Exercises the technical supervision and administration of the disbursement, collection, and accounting for all appropriated funds. Reviews reports of surveys and reports of boards of officers in connection with property or disbursing matters originating within the command and makes recommendations as appropriate to the scope of command authority. Makes recommendations in connection with requests for waiver of property accountability.

(a) Administrative Division

Exercises general supervision over civilian and enlisted personnel assigned to the directorate for duty. Prepares and/or reviews all recurring and nonrecurring reports required of, or received in the directorate. Is responsible for the proper administrative processing of correspondence.

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS UNCLASSIFIED

(b) Receipts and Disbursements Division

Exercises the technical supervision and administration of disbursement, collection and accounting for all appropriated funds. Processes for all command disbursing officers applications for assignment of disbursing symbol numbers, appointment of deputies and cashiers, and all requests for official surety bonds. Reviews and makes recommendations in connection with unpaid claims of vendors for nonpersonnel services furnished; claims for travel allowances; and remission of indebtedness submitted by enlisted personnel.

(c) Property Review and Clearance Division

Reviews reports of surveys and reports of boards of officers in connection with property accounts originating within the command, and makes recommendations as appropriate to the scope of command authority. Makes recommendations in connection with requests for waiver of property accountability. Initiates corrective action on the deficiencies reported in audits performed by regional offices of the auditor general.

h. Deputy for Personnel (DP)

Assistant Deputy for Personnel (ADP)

Develops plans, policies and administrative arrangements in respect to personnel procurement, processing, distribution, classification, separation, and management; maintains policy direction and administrative coordination of legal, and religious affairs; administers ground safety; is responsible for general administration not otherwise assigned.

Administrative Division

Receives, routes, and dispatches correspondence and messages including classified documents. Reviews correspondence prior to dispatch to insure proper preparation in compliance with existing directives. Procures and issues office supplies and equipment; maintains reference file of numbered publications, Security Alert Plan, and control records of TDY funds allocated DP; furnishes

0584

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS UNCLASSIFIED

stenographic assistance to ADP when called for and performs any other administrative tasks not elsewhere assigned.

Ground Safety Division

Maintains and provides safety engineering consultation service; institutes appropriate corrective action in event of upward ground accident trends, unsatisfactory ground accident frequencies, hazardous conditions, or inadequate ground safety programs; recommends plans, policies and procedures for all ground safety activities within the command; procures and distributes posters, films, technical data and other safety educational and promotional materials; assembles, analyzes, summarizes and disseminates data concerning the ground accident experience and costs of subordinate commands and installations and prepares summaries of ground accident experience and reports of progress of ground safety activities required by higher authority.

(1) Air Chaplain (ACH)

Initiates action, reviews coordination, development, supervision and execution of all matters, policies, plans, objectives, and procedures as applies to chaplains and chaplain activities pertinent to the Air Force Chaplain Program. Advisor to the Commanding General on all matters pertaining to the religious life, morale, morals, and character guidance within the command and moral and spiritual welfare of Air Force personnel and dependents. Supervises casualty assistance, USAF Reserve chaplains' activities, liaison with civil religious and social service activities, humanitarian services, and ecclesiastical supply and equipment.

(a) Administrative Division

Implements Air Force Chaplain Program; recommends assignment and reassignment of air chaplains and welfare specialists; provides technical information; supervises Jewish activities; advises on personnel requirements for air chaplains and welfare specialists; maintains liaison with civil religious and social service activities.

0585

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS UNCLASSIFIED

(b) Professional Service Division

Supervises preaching missions, character guidance, prisoner rehabilitation, historical and statistical activities, audio-visual aids, humanitarian services, ecclesiastical supplies and equipment, air chaplain professional reports, Catholic activities, and casualty assistance.

(c) Projects and Requirements Division

Supervises training of air chaplains, USAF Reserve chaplains, and welfare specialists; monitors auxiliary chaplains, public information and cultural activities; supervises Protestant activities.

(2) Air Judge Advocate (AJA)

Is responsible for administration of military justice and legal matters; recommends or supervises selection, assignment, training, and indoctrination of professional legal personnel on active duty and in Judge Advocate General's Department Reserve.

(a) Administrative Division

Makes initial distribution of all incoming papers and material, maintains law library, journals, and publications; processes records of summary, special, and general courts-martial and courts of inquiry; maintains office files and prepares recurring reports; maintains a roster of Regular USAF and USAF Reserve officers who are qualified judge advocates.

(b) Military Justice Division

Renders opinions on jurisdictional, substantive, and procedural questions arising from the operations of courts-martial; prepares admonitions and reprimands; maintains liaison with subordinate commands with respect to matters affecting the exercise of disciplinary control.

(c) Military Affairs Division

Interprets laws, regulations, and policies affecting the operations and activities of the Continental Air Command; renders legal opinions; advises with

0586

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS UNCLASSIFIED

regard to proposed new regulations; considers matters pertaining to taxation, social security and bonding; reviews proceedings of boards of officers; litigates in civilian courts when directed to do so by the Department of the Air Force.

(d) Legal Assistance Division

Renders legal advice and assistance to military personnel and their dependents concerning legal problems; maintains liaison with local bar organizations and legal aid societies; maintains supervision over the legal assistance program in the Continental Air Command.

(e) Reserve Division

Administers Air Force Regulation 45-24, establishing the Judge Advocate General's Department Reserve in the United States Air Force Reserve; reviews professional qualifications of all applicants, reviews requests for assignment and recommends orders of assignment in the Judge Advocate General's Department Reserve of the USAF Reserve to eligible applicants; considers requests for waivers for USAF Reserve appointments and AFROTC.

(f) Training Division

Supervises the training and indoctrination of Regular USAF and USAF Reserve officers attached prior to permanent station assignment; supervises training of mobilization assignees; prepares training schedules, and assigns training material; supervises the procurement, preparation, and administration of extension courses in collaboration with the Air University.

(3) WAF Staff Director (WAF)

Advises on all matters pertaining to WAF activities.

(4) Director of Personnel Planning and Management (Dir PPM)

Represents Deputy for Personnel in joint planning of this headquarters; develops and prepares personnel plans and studies; surveys and analyzes personnel management

0587

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS UNCLASSIFIED

practices and procedures; monitors military classification procedures; monitors officer and airmen career program.

(a) Planning Division

Represents Deputy for Personnel in joint planning efforts of the headquarters; initiates and prepares plans and actions relating to personnel functions in the event of and subsequent to mobilization, insures dissemination within office of Deputy for Personnel of information concerning operational and logistical planning; accomplishes projects and studies as directed.

(b) Classification and Utilization Division

Monitors utilization, classification, processing, and accounting of personnel by skills; develops standing operating procedures for maintenance of basic personnel records; has custody of Headquarters Continental Air Command organizational and command copies of DA AGO Form 66; supervises officers and airmen career programs; maintains Officer Effectiveness Reports.

(5) Director of Military Personnel (Dir Mil Pers)

Advises and assists the Deputy for Personnel on all matters of policy and procedures pertaining to Regular USAF and USAF Reserve military personnel, and in the formulation and implementation of such policies and procedures as directed by the Deputy for Personnel.

(a) Officers Division

Assists and advises the Director of Military Personnel in formulation and execution of all policies and procedures pertaining to Regular USAF and USAF Reserve officer personnel. Directs the execution and implementation of administrative details and procedures pertaining to Regular USAF and USAF Reserve officers, including appointments (in USAFR), assignment, reassignment, transfer, replacement, promotion, demotion, separation, recall to active duty (USAFR), mobilization (USAFR), retirement, pay, awards and decorations, discipline, leaves of absence, career

0588

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS UNCLASSIFIED

development, school selections, uniform, quartering and billeting, prisoners of war, own personnel in enemy custody, deceased personnel and next of kin, overseas and domestic projects.

(b) Airmen's Division

Assists and advises the Director of Military Personnel on all matters of policies and procedures pertaining to Regular USAF and USAF Reserve airmen. Directs the execution and implementation of administrative details and procedures pertaining to Regular USAF and USAF Reserve airmen, including: requisitioning, allocation of quotas, assignment, reassignment, transfer, replacement, promotion, demotion, separation, recall to active duty (USAFR), retirement, pay, awards and decorations, discipline, leaves of absence, career development, school selections, uniform, quartering and billeting, prisoners of war, own personnel in enemy custody, deceased personnel and next of kin, overseas and domestic projects, line of duty investigations; AFORD, and processing and assembly station administration.

(6) Director of Military Personnel Procurement (Dir MPP)

Directs and coordinates officer and airmen procurement activities; represents USAF in matters pertaining to selective service.

(a) Officer Procurement Division

Directs and coordinates procurement of aviation cadets and officer candidates by traveling officer procurement teams; supervises aviation cadet and officer candidate examining boards on all USAF installations; supervises and monitors activities of Air Force Officer Screening Boards; processes applications for pilot training in officer grade, including Air Force ROTC graduates; maintains liaison with six armies of ZI on matters pertaining to officer procurement.

(b) Airmen Procurement Division

Supervises and coordinates enlistment and reenlistment for command installations and maintains

0589

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS UNCLASSIFIED

recruiting of civilians for ZI and overseas; placement, training, and employee relations programs; operations of local Civil Service Boards of Examiners; suggestions, awards, and other incentive programs.

(8) Director of Personnel Services (Dir PS)

Formulates and develops policy and procedure pertaining to welfare of military personnel and supervises execution of following activities:

(a) Special Services Division

Monitors athletics, to include an organized sports program; recreation, to include an amateur show program; Army and Air Force Motion Picture Service activities; administration of service clubs; arts and crafts program; Air Force bands; and maintains liaison with American Red Cross, AFA, and USO.

(b) Nonappropriated and Sundry Funds Division

Monitors administration of nonappropriated funds; officers' and noncommissioned officers' clubs; custody of Continental Air Command Welfare Fund; and Air Force Aid Society.

(c) Information and Education Division

Monitors all phases of Information and Education activities to include counselling and advisement; conducts voluntary fund raising campaigns; and supervises Personal Affairs program.

(d) Library Division

Supervises establishment and administration of libraries.

(9) Director of Air Force ROTC (Dir AFROTC)

Prepares plans, programs, and policies with regard to the Air Force ROTC and for USAF participation in the Explorer program. Monitors the execution of these programs.

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS UNCLASSIFIED

(a) Training and Research Division

Plans and implements all courses of instruction given at institutions and camps of the Air Force ROTC, to include the preparation of manuscripts, lesson outlines, the selection of references, preparation of examinations for each subject, and the selection of training aids and devices.

(b) Requirements Division

Plans and implements the requirements of the institutional and camp phases of the Air Force ROTC program and established basic requirements for funding, personnel, and general logistical data. Develops requirements for manuals, slides, and other items peculiar to the training requirement.

1. Deputy for Operations (DO)

Assistant Deputy for Operations (ADO)

Supervises organization, training, and preparation for combat of units and combat crews of the USAF and USAFR; training of the Air National Guard; establishment of requirements in support of command missions; planning and preparation for and conduct of mobilization requirements, movement, air defense, and tactical support operations; planning, preparations, and operations in connection with domestic emergencies; determination of proper apportionment of resources between the several missions of the command, including timely allocation of resources to the operational commands; coordination of over-all command programs; air intelligence; communications requirements, operations, services, procedures and facilities; termination and establishment of requirements for performance of command missions; armament operations, training, plans and requirements; establishes requirements for and locations of physical facilities required to accomplish assigned mission.

(1) Director of Operations and Training (Dir O&T)

Formulates doctrine, standards, and directives pertaining to operations and training of assigned and attached Regular USAF units, and for units of the USAF Reserve and Air National Guard; requirements, requisitions and allocation of stations, training areas and ranges. Prepares plans for USAF participation in domestic

0591

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS UNCLASSIFIED

emergencies. Determines requirements for training aids and determines allocation. Determines budget requirements for and monitors allocation of Air Combat Maneuver Funds. Maintains contact with governmental or civilian agencies in aeronautical or operations matters. Determines basis of aircraft allocation; establishes requirements for operations and training in the fields of photography and armament, and defensive doctrine applicable to special weapons, including atomic, biological and chemical; makes analysis of operational trends and current program achievements. Processes Operational Readiness Test Reports.

(a) Operations Division

Supervises activities in connection with domestic emergencies; liaison with other military and civilian agencies on matters pertaining to operations; aircraft allocations throughout the command; issuance of procedures, directives, and regulations on matters pertaining to operations; maintenance of information concerning commitments of aircraft and units to maneuvers, demonstrations, air shows, etc. Determines requirements for flight facility installation, including GCA, radio aids to navigation, weather service, etc. Monitors the provision of members and alternate members for airspace subcommittees; flight information service pertaining to hazards and restrictions; administrative procedures relative to operations division; preparation of operation studies assigned. Reviews and approves plans for air combat maneuvers, operations orders, and necessary supervision to insure operational efficiency in connection therewith. Initiates necessary corrective action upon receipt of notice of operations deficiencies.

(b) Training Division

Supervises and evaluates the training of units and individuals of the Regular USAF and USAF Reserve Forces assigned or attached to the command. Supervises preparation, dissemination and implementation of training programs, standards, directives, and tactical doctrines and techniques. Monitors the development, procurement, distribution and utilization of training aids and allied equipment. Determines requirements for and utilization of training

L-49-1329

THIS PAGE IS UNCLASSIFIED

areas and gunnery and bombing ranges. Supervises establishment of uniform training reports within the command, the analysis and evaluation of reports received from subordinate echelons, and the maintenance of training charts to reflect the training status of units of the command. Processes Operational Readiness Test Reports. Initiates budget estimates for and monitors allocation of Air Combat Maneuver Funds.

(c) Armament Division

Supervises all armament operations and training activities to include chemical, biological, and radiological warfare, aircraft weapons, conventional munitions, and related equipment. Determines, recommends and coordinates armament materiel and personnel requirements. Prepares and coordinates the armament phases with other agencies of the Armed Forces on matters pertaining to armament development. Acts as coordinating agency for the staff on armament operations and training activities, and on matters pertaining to armament personnel and units engaged in these activities. Supervises the Special Munitions Branch, the Weapons Branch, and the Photographic Branch.

(2) Director of Plans, Organization and Requirements (Dir PO&R)

Coordinates and correlates over-all Continental Air Command operational planning programs. Prepares broad operational, capability, organizational, defense, war, mobilization and psychological warfare plans in coordination with the Commanding General's, Eastern Air Defense Force and Western Air Defense Force, and Deputy for Tactical Air Operations for the accomplishment of the missions and tasks of the command. Prepares, coordinates, evaluates and reviews requirements and programming data to support the missions and responsibilities of the command. Prepares, coordinates, and directs all unit organizations and troop space allocations for the command.

(a) Plans Division

Develops, coordinates, and revises defense, war, mobilization, psychological warfare, and other

0593

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS UNCLASSIFIED

operational plans to support the command missions and responsibilities; develops the war plans of the Eastern and Western Air Defense Forces; reviews and correlates the war plans of the Tactical Air Command; prepares, coordinates, and reviews plans for accomplishing the mobilization of the Air National Guard, USAF Reserve personnel, and units assigned or attached to the Continental Air Command. Initiates plans for, reviews and correlates plans and programming data pertaining to the organization and reorganization, the activation and inactivation, and the movement and assignment of units and forces of the command. Plans the conduct of psychological warfare within the United States.

(b) Organization Division

Prepares and coordinates organization structures for new units of the Regular USAF, Air National Guard, and the USAF Reserve. Allocates troop space authorizations for all units of the Continental Air Command. Directs and supervises preparation and coordination of activation, inactivation, organization, reorganization, and movement of all units of the command. Maintains a comprehensive file on all units to insure that up-to-date, pertinent information is available to Headquarters United States Air Force, Headquarters Continental Air Command staff, and air forces of the Continental Air Command.

(c) Mission Requirements Division

Prepares, coordinates, evaluates, and reviews operational requirements and programming data to support the operational missions and responsibilities of the Continental Air Command; prepares, coordinates and reviews military requirements and characteristics in respect to aircraft and associated equipment within the limits of command responsibility. Represents the Continental Air Command headquarters on Mock-Up and Engineering (689) Boards; coordinates, synchronizes, and standardizes the systems requirements and systems integration of the Eastern and Western Air Defense Forces. Coordinates and reviews the requirements of the United States Army and United States Navy and other governmental agencies as they affect the Continental Air Command air defense mission in

0594

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS UNCLASSIFIED

order to assist in development of correlated joint operational systems requirements for air defense; reviews and coordinates in respect to operation requirements the over-all integration of the civilian agencies that participate in air defense (CAA, FCC, CARW, ODCP and the Ground Observer System); reviews and evaluates tests, training exercises and maneuvers involving Continental Air Command units in order to establish operational missions requirements essential to the improvement of their combat efficiency. Collects, devises, reviews and adjusts, assembles, publishes, and distributes planning assumptions and planning factors concerning time, space, materiel, and personnel requirements, in collaboration with the appropriate staff agencies.

(3) Director of Communications and Electronics (Dir Comm)

Advises the staff concerning technical matters relating to communications and electronics, including policy and plans for employment of communications and electronics equipment, personnel and units of the USAF and the USAFR to carry out the mission of the command; matters pertaining to communications and electronics training of the Air National Guard; policies and programs to insure maximum coordination, integration, and effectiveness of communications and electronics both within the command and in coordination with military and civil organizations.

(a) Plans and Policy Division

Formulates policies and monitors revision of communications and electronics policies. Prepares technical training material for units and individuals. Recommends changes in existing T/O&E's to provide adequate communication and electronics personnel and equipment. Determines requirements for communications and/or electronics projects.

(b) Electronics Systems Division

Acts as technical advisor on plans, requirements, and employment of all electronic activities, including ground and airborne electronic and electronic countermeasures involving their defensive and tactical aspects. Assists in the formulation of policy and the preparation of plans to give assurance of maximum coordination, integration and effectiveness

0595

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

of electronics activities both within the command and in cooperation with other military and civil organizations.

(c) Communications Systems Division

Acts as technical advisor on plans, requirements, and employment of all communications activities, including wire, radio communications, communications center, operations procedures control and cryptography. Maintains maximum coordination, integration, and effectiveness of communications activities both within the command and in cooperation with other military and civil organizations. Initiates and reviews budget estimates and monitors allocation of communication funds. Allocates call signs and frequencies for the command. Exercises operational and technical supervision of the command communications squadron.

(4) Director of Intelligence (Dir Int)

Advises the commander and staff on all matters pertaining to air intelligence; continuously appraises offensive capabilities of foreign air forces and weapons in relation to the strategic vulnerability of the United States; continuously appraises economic, political, and scientific war potential of major foreign powers; recommends policies and plans for organization, training, and mobilization of USAF Reserve intelligence personnel; prepares policies and procedures in matters pertaining to the criteria for safeguarding military information.

(a) Intelligence Requirements Division

Ascertains command requirements for intelligence information and collects same from the Department of the Air Force, adjacent and subordinate commands; maintains an intelligence library as a repository for all intelligence information received in Continental Air Command headquarters; renders library service, including research, for the staff, adjacent and subordinate commands; recommends policies and procedures in matters pertaining to the criteria for the safeguarding of military information; maintains a two-way flow of intelligence information pertinent to the mission of Continental Air Command; arranges

0596

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS UNCLASSIFIED

for the publication, preparation, assembly, production, and distribution of intelligence information, reports, books, estimates, accession lists, etc.

(b) Photo Intelligence Division

Maintains photo intelligence library of target and air objective folders and target chart material; collects related data to supplement photo intelligence material on file; maintains map library; supervises supply and distribution of aeronautical charts, maps, and publications for briefing and planning within the Continental Air Command headquarters and subordinate units; maintains liaison with other Government and civilian map agencies to insure adequate supply of up-to-date maps.

(c) Intelligence Doctrine Division

Formulates policies and plans for intelligence training in the USAF Reserve and Air Force ROTC in coordination with the responsible deputies. Supervises establishing and training of VART units (Intelligence); makes policies and plans for intelligence training in the Air National Guard and Regular USAF units, and monitors intelligence training progress. Recommends intelligence training standards and training directives.

(d) Intelligence Estimates Division

Produces continuing air intelligence estimates necessary for accomplishment of the command mission, including: studies of air order of battle, offensive doctrines and tactics, effectiveness of offensive weapons, and basis for offensive operations of all foreign countries; studies of the offensive capabilities of alien air forces and air weapons in relation to the strategic vulnerability of the United States; foreign economic and political developments as they affect the security of the United States; studies of the subversive potential within the United States.

THIS PAGE IS UNCLASSIFIED

j. Deputy for Materiel (DM)

Assistant Deputy for Materiel (ADM)

Supervises and coordinates logistics plans, policies, and requirements relating to: Installations, transfer and joint use; common utilization of facilities and functions with the Army and Navy; maintenance, supply, and services pertaining to the Air Force and other armed services.

(1) Director of Materiel Planning (Dir Mat P)

Formulates long range materiel plans designed to facilitate supply, maintenance, transportation, and construction operations. Studies and prepares plans to supplement special projects as directed by the Deputy for Materiel. Analyzes cost reports pertinent to Deputy for Materiel functions and recommends action necessary to effect more efficient operations.

(2) Director of Maintenance, Supply and Services (Dir MS&S)

Initiates action, reviews, coordinates, develops, and supervises the execution of all matters, policies, plans, objectives and procedures falling within the fields of maintenance, supply, and services pertinent to or affecting the command, except maintenance of fixed installations.

(a) Maintenance Division

Directs and monitors all matters pertaining to maintenance of Air Force and other armed services equipment, including the initiation, action, review, coordination, development, supervision, and execution of all matters, policies, plans, objectives, and procedures within the field of maintenance. Formulates and establishes policies and procedures governing maintenance and issues such command directives as are required to implement these policies and procedures. Evaluates personnel requirements of maintenance activities and initiates and coordinates plans and provisions for personnel necessary to meet these requirements. Coordinates with Supply Division on requirements for equipment and spare parts required for maintenance; coordinates with staff and outside agencies on matters pertaining to aircraft accidents, procurement of new aircraft and equipment, and the transfer, modification, storage, reclamation, repair, and reconditioning of assigned aircraft and

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS UNCLASSIFIED

equipment. Analyzes reports affecting the safety, combat effectiveness, design feature, and operation of equipment as pertains to maintenance and submits recommendations for corrective instructions. Reviews research and development projects to insure compliance with established policies and adherence to technical standards; maintains such records of status of aircraft and equipment as required by the Deputy for Materiel. Exercises staff supervision in connection with foregoing responsibilities and takes follow-up action on all unsatisfactory conditions noted. Maintains technical order files for offices of Deputy for Materiel.

(b) Supply Division

Directs and monitors all matters pertaining to supply of Air Force and other armed services equipment, including initiation, action, review, coordination, development, supervision and execution of all matters, policies, plans, objectives, and procedures with respect to requirements, distribution, scheduling, receipt, storage, issue, corrosion control, packing and crating, stock levels, stock control and balances; the establishment of quantitative and qualitative requirements with respect to changes to tables of equipment and allowances. Formulates and establishes policies and procedures governing supply and prepares such command directives as are required to implement these policies and procedures; evaluates personnel requirements of supply activities and initiates and coordinates plans to provide personnel to meet requirements. Prepares the armament phase of all plans. Maintains aircraft accountable records and location data for command aircraft; arranges for ferry crews for aircraft being transferred; maintains records of AOCP and status of major items of equipment as reflects trends in supply and equipping of units and bases; submits periodic reports to Air Materiel Command on requirements for petroleum; recommends changes to tables of equipment and allowances; maintains cost control register pertaining to credit allowances of expendable materiel; takes staff action on requests for equipment in excess of authorizations; exercises staff supervision over supply activities, and takes follow-up action on unsatisfactory conditions noted.

0599

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS UNCLASSIFIED

(c) Services Division

Initiates action, reviews, coordinates, develops, and supervises the execution of matters, policies, plans, objectives, and procedures within the field of supply services pertinent to or affecting the command. Performs staff contacts with the Army and Air Force Exchange Service; provides staff supervision over command exchanges, commissary stores and subsistence, food service, salvage and reclamation, laundry, and purchasing and contracting services; makes recommendations on requisitions for equipment required by command activities for above services; reviews for propriety and legal sufficiency all awards and formal contractual instruments entered into by command activities; exercises staff supervision over Continental Air Command service activities and takes follow-up action on all unsatisfactory conditions noted.

(d) Transportation Division

Performs the functions of control and movement. Directs and monitors commercial transportation and motor pool operation by executing the plans, policies, and procedures prescribed by the Chief of Staff, USAF; provides technical advice and assistance in transportation matters; establishes additional transportation plans, policies, and procedures as required for accomplishment of the assigned mission of the command; supervises transportation activities, and determines and coordinates transportation requirements for all Continental Air Command installations via commercial and military highway, rail, water, and air means; recommends appointment, transfer, or reassignment of command transportation officers; establishes and monitors quotas for technical training of transportation personnel, including monitoring of the Air Force ROTC transportation curriculum. Determines rate estimates and prepares other transportation control data required for efficient operation.

(e) Field Advisory Group

Reviews proposed maintenance and supply procedures for adequacy of coordination and propriety of substance; analyzes, develops, and recommends maintenance and supply procedures; reviews the needs of

0600

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS UNCLASSIFIED

field maintenance and supply activities with regard to organization methods and procedures and prepares recommendations covering the action proposed as a result thereof; formulates property accounting policies and procedures, subject to directives of higher authority, regarding the establishment thereof at all echelons of supply; acts as a coordinating agency regarding maintenance and supply procedures; collaborates with the divisions within the directorate of Maintenance, Supply and Services on the preparation of recommended changes to Air Force Supply Manual 67-1 and other similar directives, and maintains staff contact with Headquarters United States Air Force, Air Materiel Command and other Air Force commands on matters of policy and procedure in connection with the Air Force supply system.

(3) Director of Installations (Dir Instl)

Prepares plans, programs, policies, and procedures governing Installations activities; develops facilities requirements and Engineer troop requirements of Continental Air Command; performs technical supervision of repairs and utilities, including those pertaining to crash and structural fire protection and prevention; performs technical reviews and processes requests for acquisition and disposal of real estate and related facilities; compiles and maintains appropriate data on all airfield facilities of military significance; establishes basis of budget estimates to determine air installations office funds and personnel requirements.

(a) Installations Policy Division

Reviews, develops, interprets, and coordinates on policy and procedures affecting Installations activities and maintains Installations policy file. Monitors programs for privately constructed and owned dependent housing; makes special field investigations and attendant reports relating to unusual installations problems; prepares studies concerning current research and development projects on new materials or advanced methods of construction; reviews civilian and military personnel T/O&E's and T/DA's pertaining to Installations.

Organization - Continental Air Command
DO (28 Mar 49) 1st Ind -5 APR 1949

HQ CONTINENTAL AIR COMMAND, Mitchel Air Force Base, New York

TO: Commanding General, Ninth Air Force, Langley Air Force Base, Virginia

1. This headquarters appreciates your concern as to the workability of the present organization of the Continental Air Command. We are none the less making every effort to operate under the conditions imposed by the current organization because we feel that to do otherwise would be "fighting the problem." The framers of this organization did so with full realization that it was a departure from commonly-accepted practices and that its functioning might prove difficult; however, it was hoped that the ends to be attained would justify the means. 4 Apr '49 JEB/202

2. This command is constantly studying our organization with a view of correcting deficiencies as they are found. We believe that we might in time evolve a very satisfactory method of operation which is entirely in keeping with the principles which influenced the adoption of our current organization. Nevertheless, if after a proper period of trial our organization proves to be basically unsound, we will, of course, take remedial action. Your comments in basic letter, therefore, are well taken and are appreciated.

3. Your current problem will, I believe, be somewhat clarified by a letter that will issue in a few days.

F O R E W A R D

1. The Strength data herein represents the number of authorized and assigned military and civilian personnel in the Continental Air Command as of 31 October 1949.

2. The authorized and assigned figures represent the following variables combined:

   a. Sex

   b. Race

   c. Departmental Status

3. The authorization shown herein are T/O and T/DA figures reflected separately.

4. The unallotted authorization reported represent that portion of allotment for T/DA Units from Headquarters USAF not reallotted to any agency of the command.

5. Although Air National Guard and ROTC Instructors do compose part of the Authorized and Assigned complement of the Headquarters & Headquarters Sq. of each Air Force, in this report the instructors are shown separately and are not included in the strength shown for each Air Force Headquarters.

6. Data for Pipeline Personnel is included in Tables I and II only. Strength reflected in Tables III represent Permanent Party Personnel.

7. ROTC Instructors authorizations for 31 October 1949 are not reported by air force. The spaces for ROTC Instructors were held in abeyance at Hq. ConAC. 553 Officers and 553 Airmen spaces are shown as reserved on page 2.

8. Student authorizations shown on page 2 are spaces reserved for student detachments of Hospital Squadrons. Distribution of grades for these spaces have not been allotted to the respective Hospital Squadrons as of 31 October 1949.

FOREWORD

1. The strength data herein represents the number of authorized and assigned military and civilian personnel in the Continental Air Command as of 30 June 1950.

2. The authorized and assigned figures represent the following variables conbined.

   a. Sex

   b. Race

   c. Departmental Status

3. The authorizations shown herein are T/O and T/D. figures reflected separately.

4. The unallotted authorizations reported represent that portion of allotment for T/D. Units from Headquarters USAF not reallotted to any agency of the command.

5. Although Air National Guard and ROTC Instructors do compose part of the authorized and assigned complement of the headquarters and headquarters sq. of each air force, in this report the instructors are shown separately and are not included in the strength shown for each air force headquarters.

6. Data for Pipeline Personnel is included in Tables I and II only. Strength reflected in Tables III represent Permanent Party Personnel.

PREFACE

This handbook is a compilation of carefully selected and illustrated lectures on intelligence subjects.

It is designed to enable the intelligence officers of the TO&E units of the reserve forces assigned to this command to achieve the standards of training established by Continental Air Command Training Standard, 45-2; and to assist the training officers of Intelligence Volunteer Air Reserve Training Units in implementing their individual unit training programs. Also, it is considered that this handbook will provide a great measure of assistance to intelligence officers of Regular Air Force TO&E Units in implementing Continental Air Command Training Standard 45-1.

For ease of reference and study, the handbook is divided into three (3) sections, each of which deal with a specific phase of intelligence procedures in their logical sequence. Thus, Chapters I through IX consist of an introduction to intelligence and a discussion of intelligence procedures in higher echelons. Chapters X through XVIII are devoted to the special sources of air intelligence that are employed by the higher echelons in their development of intelligence and information for use by the intelligence sections at wing, group and squadron level. The final chapters, XIX through XXIV outline the intelligence procedures employed by the lower echelons in the performance of their assigned missions. Additional information will be found in the appendices.

While the principles of intelligence remain constant, techniques and procedures are subject to change with technological advances; therefore, alert intelligence officers will adapt this handbook as a flexible guide to changing intelligence requirements.

CHAPTER I

AN INTRODUCTION TO AIR INTELLIGENCE

INTELLIGENCE PRIOR TO WORLD WAR II

Prior to World War II, the United States had no national intelligence structure. The armed forces and the State Department made efforts to obtain intelligence in their own fields, but these efforts were thwarted by lack of authority, sufficient funds, and personnel.

General Marshall summed up the efficiency of War Department Intelligence when testifying before the Senate Military Affairs Committee on the Unification Bill: "Prior to entering the war we had little more than what a military attache could learn at dinner, more or less over the coffee cups."

INTELLIGENCE DURING WORLD WAR II

With the outbreak of war in the Hawaiian Islands and the series of tragic defeats that followed in quick succession, our armed forces made frantic efforts to secure intelligence on their enemies. Intelligence organizations immediately mushroomed in all governmental agencies which had any need for them. Personnel experienced in this field were practically non-existent. The various agencies were not content to cover the field of intelligence within their purview. Waste, duplication and confusion resulted. There was no over-all coordination, and no means of securing composite intelligence for use by the executive level of the government.

In the various theaters of war, our armed forces received and produced intelligence of progressively greater quantity, and better quality as the war progressed, but this was achieved by wasteful means. At the end of the war there were many intelligence organizations almost all over-staffed, competing with each other, and with no coordinating agency at the top.

INTELLIGENCE SINCE WORLD WAR II

Toward the end of the war, President Roosevelt directed the Joint Chiefs of Staff to study the intelligence requirements for the United States and to recommend improvements to remedy the defects in the situation. On January 22, 1946, President Truman issued a letter based on these recommendations

1205

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS UNCLASSIFIED

which is the basis for the present national structure.

The following year, Public Law 253, the National Security Act of 1947, defined this structure and clarified the responsibilities of the various intelligence agencies of the government. Figure No. 1 shows the organization of this structure which is explained in the succeeding paragraphs.

National Security Council

The National Security Council advises the President with respect to integration of domestic, foreign and military policies relating to the national security so as to enable the armed forces and the other departments of the government to cooperate effectively in matters involving national security. Its membership comprises the Secretaries of State, Defense, Army, Navy, and Air Force, the Chairman of the National Security Resources Board, and others designated by the President.

Central Intelligence Agency

The purpose of the Central Intelligence Agency is to:

a. Advise the National Security Council in matters concerning such intelligence activities of the departments and agencies of the government as relate to national security.

b. Make recommendations to the National Security Council for coordination of such intelligence activities of the departments and agencies of the government as relate to national security.

c. Correlate and evalute intelligence relating to national security, and provide for the appropriate dissemination of such intelligence within the government.

d. Perform, for the benefit of existing intelligence agencies, such additional services of common concern as the National Security Council determines can be more efficiently accomplished centrally.

e. Perform such other functions and duties relating to intelligence affecting the national security as the National Security Council may from time to time direct.

Intelligence Advisory Committee

The Intelligence Advisory Committee serves to coordinate the requirements of the armed forces and the State Department with the Director of Central Intelligence. Its membership comprises an Assistant Director of the Joint Chiefs of Staff for Intelligence and the heads of the intelligence organizations of the Departments of State, Army, Navy, and Air Force.

Joint Intelligence Committee

The Joint Intelligence Committee, which consists of the intelligence chiefs of the three armed services, coordinates intelligence activities of the armed services at the working level. It also reviews papers prepared by the Joint Intelligence Group.

Joint Intelligence Group

The Joint Intelligence Group is the permanent intelligence working body for the Joint Staff. It is responsible for preparing intelligence estimates for the Joint Chiefs of Staff. It draws its basic information from the intelligence echelons of the three armed services. The State Department has a liaison officer with the Joint Intelligence Group.

Intelligence Division, General Staff, Headquarters, U. S. Army

The mission of the Intelligence Division, General Staff, United States Army, is to collect and evaluate information, to disseminate intelligence pertaining to foreign countries, their war potential and military forces, in so far as it affects the mission of the United States Army.

Office of Naval Intelligence, U. S. Navy

The mission of the Office of Naval Intelligence is to administer, operate and maintain the intelligence service of the Navy in order to inform the top naval authority of all potentials and capabilities of foreign nations and of situations or trends threatening the security of the naval establishment.

Special Assistant, Research and Intelligence, Department of State

The mission of the Special Assistant, Research and Intelligence, is to advise and assist the Secretary of State in the field of foreign intelligence, and to formulate and execute a departmental program for providing the foreign intelligence required in the conduct of foreign affairs and the safeguarding of the national security.

Directorate of Intelligence, United States Air Force

The mission of the Directorate of Intelligence, United States Air Force, is to:

a. Insure the prevention of strategic, tactical, or technological surprise from any source.

b. Provide air intelligence required for command decisions and counsel upon air preparedness and air operations.

UNITED STATES AIR FORCE INTELLIGENCE STRUCTURE

The limited stress on air intelligence organizations, plans, policies, and programs prior to World War II resulted in intelligence deficiencies which were keenly felt throughout the war. As World War II progressed many improvements resulted from lessons learned, but air intelligence never was able to provide an adequate intelligence corollary to the concept of strategic air warfare. Aware of these deficiencies, the United States Air Force has based the reorganization of air intelligence on the fundamental doctrine that intelligence must be responsive to varied command missions. Further, there has been recognition of the necessity for stressing quality of intelligence and the need for air intelligence on a world-wide scale.

Within Headquarters, United States Air Force, the Director of Intelligence functions under the Deputy Chief of Staff, Operations, with an organization consisting of three main divisions as shown on the chart.

ORGANIZATION DIRECTORATE OF INTELLIGENCE

The mission assigned to the Director of Intelligence states:

That he is instrumentally responsible for the collection of information pertaining to foreign countries, their war potential and their military forces, for the production of intelligence from this information, and for the dissemination of such material not only within the Air Force but to the Joint Chiefs of Staff, the Central Intelligence Agency and other agencies as appropriate.

That he directs and controls all Department of the Air Force activities concerning Air Attaches, Signal Intelligence and Communications security, and such other intelligence activities as are now or may in the future be employed.

That he establishes the air intelligence requirements for USAF photo reconnaissance, mapping and charting, and geodetic surveying programs.

That he is responsible for meeting the intelligence requirements of the continental and overseas air commands and the air administrative and technical services.

That he is responsible for representing the Department of the Air Force on Intelligence matters with other departments of the government and with foreign governments.

Air Intelligence Policy Division

The Air Intelligence Policy Division of the Directorate of Intelligence is organized into a Plans and Policy branch and a Foreign Liaison branch. The mission assigned to this division states that it:

Provides executive services in support of the Director of Intelligence in his supervision and management of the activities under his jurisdiction.

Develops plans, policies, and suitable directives on Air Force intelligence functions and procedures, including security of military information.

Provides Air Force representation in combined, joint, and inter-departmental intelligence activities such as the Joint Intelligence Committee and the Central Intelligence Agency.

Participates to the extent necessary in Headquarters action on personnel, training inspection, logistics, and planning matters.

Discharges the foreign liaison responsibilities of the Director of Intelligence.

Exercises administrative management of the Intelligence Directorate to include preparation of all requirements for an action on personnel and office supplies for assigned activities and the maintenance of administrative records and files.

Air Intelligence Requirements Division

The Air Intelligence Requirements Division of the Directorate of Intelligence is organized into the following branches: Collection, Documents and Dissemination, Reconnaissance, Air Attache, and Communications. The mission assigned to this division states that it:

Ascertains Air Force requirements for and obtains intelligence information from established collection agencies, including subordinate Air Force echelons.

Establishes a two-way flow of intelligence information and air intelligence necessary to the production of adequate intelligence at all echelons of Air Force commands; determines what air intelligence will be disseminated to activities of the Headquarters, USAF, Joint Intelligence Committee, Central Intelligence Agency and other government agencies, and accomplishes this dissemination.

Arranges for the publication of intelligence information and air intelligence estimates, reports, and other similar data.

Maintains the Air Force Intelligence Library.

Recommends intelligence requirements and techniques for aerial photographic reconnaissance, com-

1209

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS UNCLASSIFIED

munications intelligence, communications security, technical intelligence and other special sources of information.

Recommends the tenor of Air Force representation to the photographic mapping and charting activities of the Army and Navy Departments.

Recommends air officer requirements for the attache system and nominates and indoctrinates the candidates for this and similar duty.

Air Intelligence Division

The Air Intelligence Division of the Directorate of Intelligence is organized into the following branches:

Offensive Air, Defensive Air, Air Facilities, Strategic Vulnerability, Air Estimates. The mission assigned to this division states that:

It shall produce air intelligence necessary to Headquarters, USAF, for command decisions and counsel upon air preparedness and air operations, the latter to consist primarily of continuing estimates of the following:

Alien forces, including air weapons and counter-air weapons, their offensive capabilities and their defensive capabilities against offensive operations.

Economic and physical vulnerability of the various segments of the war-making capabilities of all countries, including the United States, to air operations, and recommended specific strategic and general tactical objectives for air attack.

Conditions and installations in alien areas of particular concern to possible air operations, notably airfields, and generally weather, terrain, and transportation as influencing factors to airfield potentialities.

In addition, this division provides the air intelligence required by the Joint Intelligence Committee, the Central Intelligence Agency, and other such interdepartmental intelligence agencies.

Air Intelligence in Major Commands

Within major air commands air intelligence functions and organizations are established so as to provide the information and intelligence required by these commands in carrying out their assigned missions. *(See Chapter II)*

PRIMARY FUNCTION, THE AIR INTELLIGENCE OFFICER:

In the Field Commands of the USAF, the Air Intelligence Officer and his staff will keep the commanders and all others concerned informed of the enemy or potential enemy situation and his capabilities. The commander must have information on the strength, disposition and effectiveness of hostile combat aircraft, aircraft warning services, anti-aircraft artillery, rockets, guided missiles, searchlights, passive defenses, and other types of enemy capabilities. The activities of the Air Intelligence Officer and his staff must be geared to accomplish these functions. For the Air Intelligence Officer to understand and assess the enemy's capabilities it is necessary for him to become so steeped in the enemy's type of warfare that he thinks like the enemy and is in effect working with the enemy. Initiating the search for information, coordinating the search, and processing the information into intelligence is a basic function of command.

STRATEGIC AND TACTICAL INTELLIGENCE INFORMATION

Intelligence information may be divided into two broad categories, strategic and tactical.

Strategic intelligence information may be defined as information pertaining to the capabilities of nations in war and peace. This compilation of these studies is a continuous process and they form, in largest part, the basis on which the Joint Chiefs of Staff will formulate their over-all strategy in the initial phase of any future war.

Tactical intelligence information may be divided into two phases:

a. That which is available prior to entry into actual combat.

b. That which is produced in the field, derived from combat with, and reconnaissance of, the enemy.

The first phase, which may be termed the training or preparatory phase, is perhaps the most important in the over-all sense. The number of units in World War II that were committed to combat without sufficient preliminary intelligence information was large. The reasons for this situation were legion, but probably the two outstanding reasons were:

a. The lack of knowledge and appreciation by commanders, especially at the group level, of what to expect from intelligence officers.

b. The inability of the intelligence officer to sell his ideas to his commander, primarily due to the lack of adequate information disseminated by higher headquarters while the unit was training for combat.

It is agreed that this condition must not occur again. The bulk of the information with which the

1210

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS UNCLASSIFIED

intelligence officer will be armed will come from the strategic and tactical studies made in peacetime and will be disseminated in the form of intelligence summaries, USAF Letters and Regulations, Intelligence Pamphlets and Field Manuals.

A word of caution here; over-all dissemination, for the agency concerned, is a difficult task and subject to human error. It is not perfect; thus, it is quite possible for one to join a new organization as an intelligence officer and find practically nothing in the intelligence files. Should a new intelligence officer find himself in this position, he should analyze his needs, go after the required material, thru channels, or by personal contact, get it, and go to work.

The second phase may be termed the combat phase, the collection of combat intelligence information from interrogation of crews who have had combat contact, photo and visual reconnaissance, radio and radar intercept, capture of personnel, equipment and material, or from any other source available.

A commander planning tactical operations either offensive or defensive will require certain intelligence information for planning purposes. This intelligence information will be drawn from any source available, such as dissemination from higher headquarters, from adjacent air force units, from ground force units operating in the same area, and from information processed by his own intelligence staff gained from combat contact with the enemy. When all this intelligence information is finally analyzed and integrated into the plan, it is then Air Intelligence of a Tactical Nature. That portion of intelligence information produced by his own staff is also disseminated through normal distribution to higher and lower headquarters for whatever use they deem necessary. In the normal course of events this intelligence information or pertinent portions thereof will be delivered into the hands of the Joint Intelligence Committee and be used by the Joint or Combined Chiefs of Staff for strategic planning in the conduct of war.

INTELLIGENCE TERMS AND DEFINITIONS

The following definitions of terms commonly used in air intelligence are based on current available interpretation:

Air Intelligence

Military intelligence required for the employment of air power.

Air Technical Intelligence

Military intelligence pertaining to foreign air equipment and material.

Capabilities

A product of the Napoleonic school. A precise and analytical process whereby every possible line of action open to the enemy is considered. In an ideal solution all courses of action are eliminated but one. This method is employed by all U. S. military forces.

Capture Intelligence

Military intelligence obtained from examination and analysis of captured enemy equipment and documents, and from the interrogation of captured enemy personnel *(prisoners of war)*.

Combat Intelligence

Military intelligence gained through combat.

Electronic Intelligence

Evaluated and interpreted information obtained by intercepting electronic emanations.

Essential Elements of Information

That information about the enemy, or territory not under our control, which is vital and essential to the commander for planning and executing his mission.

Flak Analysis

The examination and study of Flak Intelligence to obtain data for use in air operations.

Flak Intelligence

Military intelligence concerning the enemy's anti-aircraft artillery, including ground-to-air missiles.

Information

Any unevaluated data.

Intelligence Annex

Details and instructions pertaining to the intelligence portion of an operations order, when they are too extensive for inclusion in the body of the order.

Intelligence Information

Information specifically collected for intelligence purposes, and information suitable for processing into intelligence.

Intelligence Net

A communication network provided for use of

1211

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS UNCLASSIFIED

intelligence officers and their intelligence collection agencies.

Intelligence Plan

An outline to guide the intelligence officer in the organized collection of required intelligence information. It includes the essential elements of information; an analysis of the required information; a list of the agencies that are to collect the information, and the orders and reporting time of each of the collecting agencies.

Intelligence Sources

Individuals, organizations, material, objects, electronic radiations, etc., which if exploited, can furnish intelligence information of an enemy or potential enemy. (Example: radio traffic, prisoners of war, etc.)

Intentions

Originated in the Prussian military system under Von Moltke. This system endeavors to determine what the enemy *intends* to do. Unless intelligence has indisputable data on the enemy's dispositions and his intentions, in other words, his field orders, this method becomes dangerous because it can lead to entirely false conclusions.

Internal Security

The measure taken within a unit or command to safeguard the security of classified matter (documents and material).

Military Intelligence

Evaluated and interpreted information of military significance.

Objective Folder

A compilation of detailed information regarding a specific target including maps and charts, identification data, structural analyses, evaluation of its importance in a system, vulnerability data, etc.

Photo Intelligence

Military intelligence secured through the interpretation and evaluation of information obtained from air photographs.

Security

The measures taken to prevent disclosure of military information and its compromise in the hands of unfriendly forces (See AR 380-5).

Target Analysis

The investigation of potential targets to determine their relative importance as military objectives, their vulnerability to available weapons and the assignment of a priority for military attack.

Target Folder

A compilation of information furnished combat personnel for the attack of a specific target. Such a folder contains approach charts, material for use in identification of target and assigned aiming points, etc.

Target System

A group of similar targets of the same function, or a group of interrelated, or interdependent, targets which are components of a single function or product. (Example: Electric power is a target system composed of a number of plants performing the same function; aircraft industry is a target system composed of a number of factories producing different parts or assembling the complete airplane.)

Questions and Leads for Classroom Discussion

1. What was the status of our intelligence organization prior to World War II?
2. Why?
3. How was intelligence organized during World War II?
4. What is Public Law 253?
5. What are the functions of: (a) The National Security Council? (b) The Central Intelligence Agency? (c) The Intelligence Advisory Committee?
6. What is the mission of the Directorate of Intelligence, USAF?
7. What is the primary function of the air intelligence officer in the field commands of USAF?
8. What are the differences between strategic and tactical intelligence information?

CHAPTER II

ORGANIZATION AND MISSIONS OF THE MAJOR COMMANDS, UNITED STATES AIR FORCE

The field Organization of the United States Air Force consists of eight major commands. There are the Continental Air Command, Strategic Air Command, Air Materiel Command, Proving Ground Command, Air Training Command, Air University, Military Air Transport Service and Headquarters Command, USAF.

CONTINENTAL AIR COMMAND

The Continental Air Command with Headquarters at Mitchel Air Force Base, N. Y. is organized primarily to accomplish the following missions:

a. Provide for the active air defense of the United States and operational training therefor.

b. Provide for Air Force cooperation with land and/or amphibious forces in the United States and operational training therefor.

c. Organize, administer, equip, train, and prepare for combat in accordance with directives, policies, and schedules issued by Headquarters USAF, such units and combat crews of the Air Force as may be designated, assigned, or attached to the Continental Air Command.

d. Discharge, within the Continental United States, the field responsibilities of the Chief of Staff, USAF, with respect to Air Force Reserve forces.

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS UNCLASSIFIED

Organization

In order to carry out its mission, the Continental Air Command is provided a headquarters (Continental Air Command); numbered air forces, to which all units, installations, and facilities of the Continental Air Command will be assigned; an Air Defense Command; and a Tactical Air Command. The Headquarters, Air Defense Command, and the Headquarters, Tactical Air Command, will act as operational command headquarters for their respective tactical functions, within the framework of the Continental Air Command, and will also act as the staff of the Commanding General, Continental Air Command, for their respective tactical functions. The numbered air forces will discharge such administrative, training, and logistic support functions as may be directed for units of the National Guard and Organized Reserve Corps and for such Air Force units as may be assigned or attached.

Responsibilities

a. The Commanding General, Continental Air Command, will exercise command jurisdiction over all units assigned or attached to the Continental Air Command. He will be directly responsible to the Chief of Staff, USAF, for the following specific functions:

1. Active air defense of the United States. *(See b below)*

2. Air Force cooperation with land and/or amphibious forces in the Continental United States. *(See c below)*

3. Discharge of the field responsibilities of the Chief of Staff, USAF, within the Continental United States, with respect to the following functions:

(a) Supervise training and make required inspections of all units of the Air National Guard.

(b) Activate, organize, maintain, administer, and train such units and individuals of the Air Force Reserve as may be assigned or attached to the Continental Air Command, and such units and individuals of the Organized Reserve Corps as may be assigned or attached to the Air Force for these purposes and are further assigned or attached to the Continental Air Command, and the administration of unassigned personnel of the Air Force Reserve.

(c) Function as a center for compilation of vital statistics of Air Force Reserve activities conducted by all major air commands, including oversea air commands; and in addition, provide a pool of Reserve personnel upon which requisitions and transfers by all other major air commands may be made in order to meet their Reserve personnel requirements.

(d) Activate, organize, maintain, administer, and train units and individuals of the Air Force Reserve Officers' Training Corps.

(e) Conduct Air Force participation in the Air Scout program.

(f) Act as the field agency of the Air Force for the mobilization, preparation for movement, and disposition of all units of the Air National Guard in the Federal service and units and individuals of the Air Force Reserve that are not assigned to other Air Force commands in accordance with directives, policies, and plans issued by Headquarters, USAF.

(g) Prepare for oversea movement such units as may be directed, including those of the Air National Guard in the Federal Service.

(h) Formulate plans for and coordinate the efforts of all Air Force commands and activities in domestic emergencies (including disaster relief) and direct Air Force operations in connection with such emergencies. (Each Air Force unit, irrespective of the major air command to which assigned, will participate in the planning for and conduct of emergency and disaster relief operations, at the request of a Continental Air Command air force commander.)

(i) Constitute a single Air Force contact to provide information and liaison with Army commanders, Naval district commandants, sea frontier commanders, and heads of civilian agencies. (This will not be construed as prohibiting direct contacts required by the specific functional responsibilities of other major air commands.)

(j) Be prepared to train replacement units and combat crews required for mobilization in accordance with directives, plans, and schedules issued by Headquarters, USAF.

(k) Conduct such Continental administrative functions as may be directed from time to time. These include:

(1) General Air Force liaison and other prescribed functions at water ports of embarkation, in accordance with AFR 75-9.

(2) Apprehension of Air Force absentees and their prompt delivery to the nearest Air Force prisoner receiving station or other Air Force installation capable of receiving them for future disposition. (This will include cross service with the Department of the Army, Department of the Navy, and the U. S. Coast Guard in the apprehension of absentees.)

1214

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS UNCLASSIFIED

(3) Acceptance of custody of Air Force prisoners from oversea theaters pending final disposition.

(4) Operation of Air Force special aviation cadet and officer candidate school procurement program.

(5) Administration of the various procurement programs for commissions and warrants in the Air Force.

(6) Administration of the Air Force extension course program.

(7) Administration of the Air Force program for return of World War II dead.

(8) Providing Air Force representation in local Armed Forces Disciplinary Control Boards.

(9) Coordination of local defense planning with Civil Air Patrol units and be prepared to furnish all reasonable and appropriate local assistance to the Civil Air Patrol.

4. Determination of the proper apportionment of the effort of assigned or attached units between the several missions of the command.

5. Timely allocation of a proper portion of the effort of units assigned or attached, or otherwise made available, to the Continental Air Command, to the operational command of the Air Defense Command, to the operational command of the Air Defense Command and the Tactical Air Command, respectively.

6. Peacetime deployment of elements of the active air defense system of the United States in preparation for the conduct of immediate active air defense against surprise attack.

7. Coordination of the activities of the Air Defense Command, Tactical Air Command, and numbered air forces for the most effective accomplishment of the missions assigned the Continental Air Command.

8. Performance of such other functions as may be directed by the Chief of Staff, USAF from time to time.

b. The Commanding General, Air Defense Command, is responsible to the Commanding General, Continental Air Command, for the following specific functions:

1. Continue to plan in preparation for the conduct of active air defense of the United States.

2. Conduct the active air defense of the Continental United States with the means made available by the Commanding General, Continental Air Command.

3. Prepare for the employment of such units of the Army and Navy as may be made available for direct defense of the United States against air attack.

4. Prepare and conduct Air Force operational participation in civilian defense in connection with an air attack of the Continental United States.

5. Recommend policies, plans, doctrine, organization, systems, materiel, tactics, techniques, and procedures, applicable to the air defense of the United States.

6. Conduct systematic training of available forces in active air defense.

7. Carry out joint air defense training and joint air defense exercises and maneuvers in accordance with approved plans, utilizing such units of other components of the National Military Establishment as may be available.

8. Recommend to the Commanding General, Continental Air Command, the allocation and deployment of available force in preparation for and the conduct of the active air defense of the United States.

9. Establish and maintain liaison with Naval sea frontier commanders and numbered army commanders in joint matters pertaining to the air defense of the Continental United States.

10. Recommend to the Commanding General, Continental Air Command, the proficiency standards and desired capabilities of units to be employed in air defense operations.

c. The Commanding General, Tactical Air Command, is responsible to the Commanding General, Continental Air Command for the following specific functions:

1. Continue to plan and to prepare for the conduct of tactical air operations in conjunction with field forces of the Department of the Army and/or amphibious forces of the Department of the Navy in the defense of the United States.

2. In conjunction with designated elements of the Army, Navy, and the Air Force, train and indoctrinate personnel of the three services in joint operations by planning and participating in field exercises and maneuvers.

3. Plan, supervise, and conduct tactical air operations in the Continental United States with the means specifically allocated by the Commanding General, Continental Air Command.

4. Maintain continuous liaison with the Army Field Forces and designated Naval headquarters for the development of Air Force policies, plans, doc-

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS UNCLASSIFIED

trine, organization, systems, materiel, tactics, techniques, and procedures applicable to the utilization and employment of tactical air power when acting in concert with land and/or amphibious forces and the timely submission of recommendations with respect to those matters.

5. Maintain liaison with the Army Field Forces in order to determine the requirements for the Army and Air Force units and personnel in joint air-ground operations and submit recommendations to the Commanding General, Continental Air Command, for the allocation of the necessary forces to fulfill this requirement.

6. In accordance with approved plans, participate in joint exercises and maneuvers by utilizing and employing designated personnel and units from other components of the National Military Establishment as may be made available.

7. Conduct systematic training of forces allocated by the Commanding General, Continental Air Command, in tactical air operations.

8. Be prepared to provide cadres of personnel trained and indoctrinated in the employment of tactical air power for the timely formation of Tactical Air Command and/or air force headquarters for oversea deployment, as required.

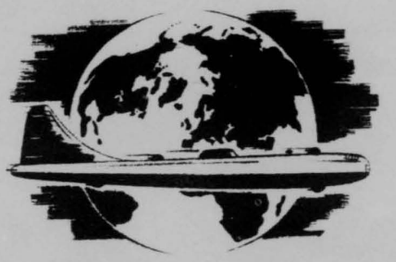
9. Recommend to the Commanding General, Continental Air Command, the allocation and deployment of available forces in preparation for and the conduct of tactical air operations in conjunction with land and/or amphibious forces.

10. Recommend to the Commanding General, Continental Air Command, the proficiency standards and desired capabilities of units to be employed in tactical air operations.

d. Each commanding general of a numbered air force assigned to the Continental Air Command will perform such command, administrative, training, and logistic support functions, within his assigned geographic area, as may be directed from time to time by the Commanding General, Continental Air Command. Initially, those responsibilities will include the functions enumerated in *a.* (3) above, as well as the logistic support of the Headquarters, Continental Air Command, and elements of the Air Defense Command and the Tactical Air Command not assigned to a numbered air force.

STRATEGIC AIR COMMAND

The Strategic Air Command has its headquarters at Offutt Air Force Base, Nebraska. This command includes very heavy bombers, medium bombers, very



long-range reconnaissance, transports, and very long-range jet fighters.

The Strategic Air Command is charged with providing and operating that portion of the U. S. Air Force which is maintained in the United States, and in such other areas as may be designated from time to time, for employment against objectives of air attack in any location on the globe; with conducting long-range reconnaissance over land or sea, either independently or in cooperation with other components of the Armed Forces; and with other missions as assigned by the Chief of Staff, USAF.

In order to fulfill the above mission, the Strategic Air Command is charged with the following specific responsibilities:

a. Maintain assigned units in a state of readiness to permit immediate operation, either alone or jointly with other forces, against enemies of the United States.

b. Prepare plans for the performance of combat air operations on a global scale and be prepared to execute these plans when directed by the Chief of Staff, U. S. Air Force.

c. Prepare plans for strategic reconnaissance, to meet the requirements of the armed forces, on a global scale and be prepared to execute these plans when directed by the Chief of Staff, U. S. Air Force.

d. Prepare plans for the performance of sea search and anti-submarine operations on a global scale, and be prepared to execute these plans when directed by the Chief of Staff, U. S. Air Force.

e. Organize, train, and stage as directed, appropriate combat, service, and supporting units for theater or other oversea deployment.

f. Develop, test, and improve the organization, equipment, training, tactics, and techniques of strategic bombardment crews and units for the performance of global bombardment operations.

1216

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS UNCLASSIFIED

g. Train very-long-range reconnaissance and photographic and mapping crews and units for the performance of global reconnaissance operations.

h. Train long-range fighter crews and units for the performance of fighter, fighter escort, and joint Army and Navy operations.

i. Organize, train, and stage, as directed, combat and service supporting units for theater or other overseas activities.

j. Conduct such universal military training as may be appropriate and directed by the Chief of Staff, U. S. Air Force.

The Headquarters, Strategic Air Command, is organized as a conventional general staff type of staff organization with personnel and coordinating staff groupings.

Two Air Forces, two Air divisions, twelve active separate wings and four record strength wings are assigned to the Strategic Air Command. The two Air Forces are the Eighth Air Force with headquarters at Forth Worth, Texas, and the Fifteenth Air Force with headquarters at Colorado Springs, Colorado. The Striking Force Task Headquarters of the 58th Air Division, Bombardment, is carried at record strength with personnel available for immediate augmentation to T/O strength. The remaining VHB elements of the proposed 70 group program are carried at record strength in Headquarters, Strategic Air Command (8 VHB Groups). The Strategic Air Command has requested authorization to activate another Air Force headquarters for the five separate wings.

AIR MATERIEL COMMAND

Headquarters, Air Materiel Command is located at Wright-Patterson Air Force Base, Dayton, Ohio. The mission of the Command is to provide the logistic support for the United States Air Force, i.e., to provide all elements of the Air Force with the most effective materiel that can be developed and produced; provide trained service units for air depot functions; and provide technical instructions and information as required. Specific functions performed in fulfillment of this mission are:

a. A detailed and realistic industrial program for preparedness planning to provide for rapid expansion of air units in case of future national emergency.

b. A technical intelligence program as an aid to industrial research and development planning as well as to maintain technical supremacy over all foreign powers.

c. A strong research and development program in cooperation with industry and scientific institutions to insure that the U. S. Air Force is technologically the most advanced in the world.

d. A procurement program to provide for all operating functions relative to initiating, monitoring, terminating, and settlement of industrial contracts to include careful supervision over production resources, scheduling allocation and control of production.

e. A supply program for the determination of requirements and performance of the operating functions of receipt, shipment, storage, preservation, issue, stock control, salvage and disposal of air force material.

f. A maintenance program to insure that Air Force equipment is constantly in excellent condition. The maintenance program includes the overhaul and modification of all aircraft, aircraft equipment, aircraft accessories, vehicles, and field communications systems, and the storage of complete aircraft and vehicles. Technical supervision of all echelons of maintenance is exercised through instruction such as technical orders and M & S directives.

g. A program to provide the Air Force with officer and enlisted personnel equipped with the necessary technical knowledge to accomplish the AF logistical mission. This program includes the training of service units to provide the nucleus of Air Force personnel trained in air depot techniques. The Air Force Institute of Technology is a part of the Air Material Command, and is directly responsible to the Commanding General, AMC. Its mission is to provide the technical and scientific phases of the Air Force educational program.

Headquarters, Air Materiel Command has a coordinating staff of three Directors. The Director of

1217

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS UNCLASSIFIED

Supply and Maintenance supervises the current phases of the Command mission while the Director of Research and Development, and the Director of Procurement and Industrial Mobilization Planning are more concerned with the phases of future planning. The current organizational structure indicates that the personal staff includes the Chief of Personnel and Administration, the Chief of Intelligence, the Comptroller, the Air Inspector, the Public Information Officer, and the Commandant, Air Force Institute of Technology. While this personal staff grouping departs from conventional procedure it must be realized that the basic function of this command is logistical in nature; and the coordinating staff is established for the accomplishment of the logistical function.

The field organization of the Air Materiel Command is composed of Air Materiel Areas, exempted stations, field procurement offices and plant representatives. Although this part of the AMC organization is presently undergoing a reorganization, no great deviation from the current arrangement is expected.

The Air Materiel Areas, which are primarily established to implement the AMC supply and maintenance program, serve all Air Force installations within the USAF. Air Materiel Area Headquarters are located at Sacramento, California; Ogden, Utah; San Antonio, Texas; Oklahoma City, Oklahoma; Mobile, Alabama; Warner Robins, Georgia, and Middletown, Pennsylvania.

There are eight exempted stations physically located within the Air Materiel Areas which report directly to Headquarters, Air Materiel Command. They are primarily concerned with the AMC Research and Development program. These stations, with their missions, are as follows:

a. The Wright-Patterson Air Force Base, Dayton, Ohio, performs the functions of an air base on which the major portion of engineering research, development and test functions of the Air Force is performed.

b. Clinton County Air Force Base, Wilmington, Ohio, conducts research and tests of USAF aircraft and related equipment in conjunction with the Air Forces effort to overcome weather flying obstacles.

c. Watson Laboratories, Red Bank, New Jersey, are primarily concerned with the development of proto-type and service test models of ground electronic equipment peculiar to the USAF.

d. Cambridge Field Station, Cambridge, Massachusetts, conducts basic and applied electronic and atmospheric research.

e. Muroc Air Force Base, Muroc, California, conducts engineering research, development and flight testing of experimental aircraft and allied equipment.

f. Holloman Air Force Base, Alamogordo, New Mexico, conducts tests on pilotless aircraft, guided missiles and allied equipment.

g. Kirkland Air Force Base, Albuquerque, New Mexico, provides field contact for the USAF with the Atomic Energy Commission and the Armed Forces Special Weapons Project and conducts necessary flight tests for these activities.

h. Griffiss Air Force Base, Rome, New York, conducts research and development in electronic, atmospheric and geophysical fields and performs currently assigned storage, training, and supply and maintenance functions.

Air Force-Procurement Field Offices and AF Plant Representatives are located at the main nerve center of industry and serve to implement the AMC procurement and mobilization planning program.

a. Procurement Field Offices are located at Boston, Chicago, Ft. Worth, Dayton, Detroit, Los Angeles, and New York.

b. Plant representatives are assigned to Allison Division (General Motors Corporation), Bell Aircraft Corporation, Boeing Aircraft Company, Fairchild Engine and Airplane Corporation, Republic Corporation and Wright Aeronautical Corporation.

AIR PROVING GROUND

Organized in May 1941, the Proving Ground Command was based on a wartime need, but its record of achievement and its value have dictated its continuance throughout the military future, at peace or at war. Under the control of the Command Headquarters, located at Eglin Field, Florida, Jimmy

1218

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS UNCLASSIFIED

Doolittle planned his famed Tokyo raid. There, too, the problems surrounding the destruction of underwater obstacles on the Normandy beachhead were solved. In Ladd Field, Alaska, cold-weather tests of men, clothing and machines have proved or disproved the theories of Air Force visionaries.

At Muroc Field, California, tests approximating tropical and desert conditions have been conducted to find the answer to problems of equatorial operations. The B-29 was tested at Eglin Field, before it set out on its Pacific mission. At the Proving Ground, have been tested all types of aircraft, particularly fighters and fighter-bombers used in the invasion and subsequent operations in Europe as well as in the Pacific. Recently, the P-80 has been the subject of many service tests, designed to determine its range, its lethal capacity, and its acceptability as a first-class high speed addition to the list of USAF planes. Ordnance equipment too has been under examination and guns of all descriptions have received their final check from the expert staff of the Proving Ground. Napalm, the flame-bomb, was developed at Eglin Field, and it was there that it first exhibited its power and presaged its successful use in combat. Radio and radar equipment, photographic equipment, navigation devices, personnel equipment, air-sea rescue equipment and technique, vehicles, tools of every conceivable appliance or device which would aid in winning the war have all been to the Proving Ground for consideration.

Mission

a. The mission of the Proving Ground Command is largely implied in the title and has been partially explained by the foregoing general statement. Defined in more formal terms, its mission is the development of improved operational techniques, and to conduct tests of materiel under simulated combat conditions to determine its operational suitability. Recommendations are submitted to the Chief of Staff, U. S. Air Force, relative to the establishment of military characteristics and requirements for operation systems and materiel. The Proving Ground Command has the further mission of furnishing such services, facilities and assistance to the Air Materiel Command and other agencies designated by higher authority as are not readily available elsewhere and which will not interfere with the above stated mission.

b. The Commanding General, U. S. Air Force Proving Ground Command, is responsible for:

1. Establishing such installations as are required and are approved by higher authority.

2. Operating in accordance with policies established by the Chief of Staff, U. S. Air Force.

Composition

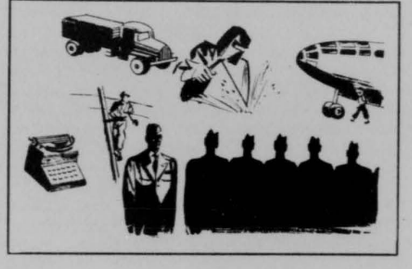
The Air Proving Ground Command consists of two divisions, the U. S. Air Force Board, which is concerned chiefly with review, evaluation, and recommendations in connection with materiel, doctrines, techniques, and training; and the U. S. Air Force Proving Ground, which deals with tactical testing.

The Current Program of the Proving Ground Command

The work of this command resolves itself into a continuous series of widely varying experiments with new aircraft, radar, photographic equipment, navigation devices, ordnance, and all other materiel essential to the air superiority of the United States. Since the expeditious completion of projects under the direction of the Proving Ground Command is highly desirable, certain priorities have been established relative to obtaining personnel and equipment. Test equipment and supplies such as Signal, Quartermaster, Ordnance, and Chemical are on a 1-A priority. This is in accordance with Priority List published for Service Boards, of which the Proving Ground Command is considered to be one.

AIR TRAINING COMMAND

The Air Training Command with its headquarters at Barksdale Air Force Base, Louisiana, has the following mission: Provide individual and unit training for officers and enlisted men in accordance with Air Force training standards and such directives as may be issued by the Chief of Staff, U. S. Air Force; be prepared to conduct Universal Military Training; conduct training research leading toward measurement and improvement of individual proficiencies, methods of personal selection and classifica-



1219

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS UNCLASSIFIED

tion, and achievement of high academic standards; plan, review, prescribe, and establish qualitative requirements (including objective characteristics) for Air Force training materiel and recommended basis of issue to Chief of Staff, United States Air Force; and perform such other missions as may be directed by the Chief of Staff, U. S. Air Force.

In addition, the Division of the Air Training Command have the following primary functions:

a. Provide formal basic military training for all Air Force enlistees not having sufficient previous military training.

b. Provide all training leading to initial aircrew ratings.

c. Conduct certain graduate and special flying courses.

d. Provide formal training leading to original military occupational specialties for officers and enlisted personnel, to include the operation of an Officers Candidate School.

e. Provide formal training leading to qualification of trainees in basic technical specialties.

f. Conduct advanced courses in technical training for enlisted personnel of the Air Force.

g. Provide certain advanced administrative and technical training courses for officers. This includes basic training in the intelligence techniques necessary to combat reporting, photographic intelligence, prisoner of war interrogation, briefing and interrogation of combat crews, and such other techniques as are peculiar to or pertinent to the operation of intelligence activities in the field.

h. Provide formal training for foreign nationals.

i. Maintain standards of proficiency in all phases of training and conduct training research leading toward improvement of individual training and methods of selection.

j. Activate, man and conduct unit training for designated Aviation Engineer units.

The organizational structure of the Air Training Command consists of Headquarters, Air Training Command, and three field divisions. These divisions are the Flying Division, Technical Division, and the Indoctrination Division. Headquarters, Air Training Command, is organized with a conventional general staff type of staff organization. The headquarters of each division is organized similar to the Headquarters, Air Training Command.

The Flying Division, with Headquarters at Randolph Air Force Base, San Antonio, Texas, operates the following flying schools: Basic, Fighter, Multi-engine, Liaison-Helicopter, Instrument, Bombardment-Navigation, and Fighter Gunnery.

The Technical Division, Air Training Command, with headquarters at Scott Air Force Base, Belleville, Illinois, is responsible for the operation of technical training schools and includes courses as follows: Airplane mechanic, armament, clerical, communications, photography, radar, weather and intelligence.

The Indoctrination Division located at Lackland Air Force Base, San Antonio, Texas, consists of the Basic Military School and the Officers Candidate School.

AIR UNIVERSITY

The Air University has its headquarters at Maxwell Air Force Base, Alabama. The mission and functions of this command are:

a. Conduct the schools established under the Air University and maintain its responsibilities to the U. S. Air Force School of Aviation Medicine and the U. S. Air Force Institute of Technology.

b. Recommend the selection of graduate and undergraduate courses of instruction to those institutions not under the control of the U. S. Air Force to which Air Force officers may be detailed.

c. Insure that Air Force officers who are required as instructors in other Service schools are trained properly to perform their mission; insure that the material presented by these instructors conforms with the approved doctrine of the U. S. Air Force; and administer and control these officers.

d. Recommend student eligibility requirements for attendance at all schools.

e. Be responsible for graduate and undergraduate training of Air Force officers in civilian institutions to include the receiving and screening of all applications; monitoring the individual student; liaison with civilian institutions; and arrangements with

1220

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS UNCLASSIFIED

the Commanding General, Air Materiel Command, to effect educational contracts.

f. Maintain a continuous study of the Air Force educational and training systems.

g. Review, revise, and prepare publications pertaining to Air Force basic doctrine and conduct staff studies as required by the Chief of Staff, U. S. Air Force.

h. Review and evaluate tactics and techniques in use or proposed.

i. Submit recommendations on matters included in the responsibilities of the Chief of Staff, U. S. Air Force, as pertain to anti-aircraft artillery.

j. Maintain liaison with educational boards of the other Services.

The staff organization of Headquarters, Air University, is the double deputy type. The Deputy Commanding General, Administration, is responsible for the operation of the stations assigned to the Command. He employs a general staff type of staff organization. The Deputy Commanding General, Education, is responsible for the operation of the various schools established to discharge the educational responsibilities of the Command. He employs a departmental type of staff organization.

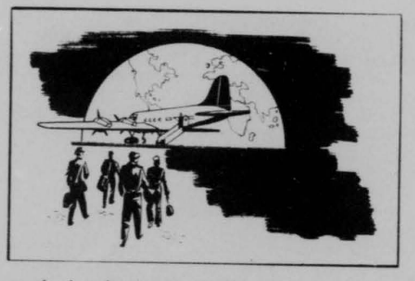
Under the Air University has been established the Air War College, the Air Command and Staff School, the Air Tactical School, and the U. S. Air Force Special Staff School. The Commanding General, Air University, is also responsible for the supervision and operation of the U. S. Air Force School of Aviation Medicine at Randolph Air Force Base, Texas, and for exercising broad supervision over the curricula of the U. S. Air Force Institute of Technology at Wright-Patterson Air Force Base, Ohio.

MILITARY AIR TRANSPORT SERVICE

Effective 1 June 1948, and in accordance with directives from the Secretary of Defense, the Military Air Transport Service (MATS) was established with headquarters located in the vicinity of Washington, D. C., and under the command and direction of the Chief of Staff, U. S. Air Force.

With the establishment of MATS the Air Transport Command of the U. S. Air Force and the Air Transport Service of the U. S. Navy were discontinued.

On the same date, 1 June 1948, all elements of the Air Transport Command were transferred to MATS without change of station or function. Thus, the Air Weather Service, the Airways and Air Communications Service, the Air Rescue Service, and the Flight Service, formerly components of ATC, now perform the same functions and have the same mission under MATS. Certain personnel, aircraft, equipment and facilities of the Navy were also transferred to MATS. Thus, MATS is unique in that officers of both the U. S. Air Force and the U. S. Navy occupy positions of authority within the Command.



The Commander, MATS, has a personal staff including the offices of a Comptroller, an Inspector General and Public Information. These personal staff sections perform functions normal to their designations. The Coordinating Staff includes a Director of Personnel and Administration, a Director of Plans and Operation, and a Director of Base Services and Supply. The assignment of the Coordinating Staff functions among these three staff divisions is normal.

The Commander of MATS exercises his command functions through two Deputy Commanders; one for Air Transport and one for Services. The Deputy Commander, Air Transport, exercises command over air transport functions of MATS through three divisions, the Atlantic, the Continental and the Pacific. The Deputy Commander, Services, commands the service elements which are the Air Weather Service, the Airways and Air Communications Service, the Air Rescue Service and the Flight Service; and commands the Newfoundland Base Command and other National Interest Bases. It would appear from the organization chart (verification is not available at present), that the Coordinating Staff of MATS also functions as the staff for the Deputy Commander, Services.

The Deputy Commander, Air Transport, is responsible for the transportation by air of personnel (including the evacuation of sick and wounded),

materiel, mail, strategic materials and other cargoes for all agencies of the national military establishment and as authorized for other government agencies of the United States. This does not include responsibility for tactical air transportation of airborne troops and their equipment; initial supply and resupply of units in forward combat areas; nor as required by the Department of the Navy for internal administration, the fulfillment of the mission of the Navy, or for air transport on routes of sole naval interest where the requirements cannot be met by MATS.

The Deputy Commander, Services, in order to assure safety of flight, will provide weather service, communications service, rescue service and flight service.

Certain other specific functions assigned the Commander of MATS other than those listed above are:

a. The establishment, control, operation and maintenance of facilities assigned to MATS within the United States and on air routes outside the United States.

b. In areas outside the continental limits of the United States where there is no other U. S. Military authority the Commander of MATS will exercise all normal responsibilities and prerogatives of commanders of theaters of operation, area or base commands.

c. Conduct ferrying operations within the United States and to and from points outside the United States as directed.

d. The control, operation and maintenance of ports of aerial embarkation as may be necessary to the performance of the MATS mission.

e. Administration of priorities for air transportation.

f. Coordination with agencies of the National Military Establishment and civilian agencies responsible for the design of transport type aircraft.

g. Liaison with civilian air carriers.

h. Preparation for submission to the Secretary of Defense of plans for the employment and expansion of MATS in times of national emergency.

The Department of the Army, the Department of the Navy and the Department of the Air Force and theater and fleet commands and other commands will take all necessary action to facilitate the efficiency and economic operation of MATS including the assignment of personnel, and the furnishing of facilities, services and equipment.

The Military Air Transport Board consisting of three members, one each to be appointed by the Secretary of the Army, Secretary of the Navy and the Secretary of the Air Force, has been established. The Board will recommend to the Secretary of Defense the policies to be followed by MATS with respect to the categories of passengers and cargo to be transported by air. The Board will also act in an advisory capacity to the Commander of MATS for the purpose of making recommendations.

HEADQUARTERS COMMAND, USAF

Headquarters Command, USAF, Washington, D. C. (formerly Bolling Field Command), was established to serve the Washington area, thereby releasing the other commands from the administrative details inherent to a base serving the activities of Headquarters, USAF. Specifically, it is charged with providing aircraft for Air Force and government personnel; controlling and administering assigned administrative and technical units; and providing base service, air transport, photographic, photogrammetric, reproduction, administrative, and other miscellaneous services for Headquarters, United States Air Force.

HQ COMMAND

Questions and Leads for Classroom Discussion

1. How many major commands, USAF, are in the Z.I.?
2. What is the function of each command?
3. Who is responsible for the Air Defense of the U. S.?
4. What command is responsible for the activities of the Reserve Forces of the USAF?
5. What is the mission of the Strategic Air Command?
6. What command is charged with processing technical intelligence?
7. Discuss briefly the mission of each of the major commands, USAF?

CHAPTER III

INTELLIGENCE PROCEDURES IN THE HIGHER ECHELONS

This chapter is a general discussion of the procedures involved in the production and use of intelligence in higher echelons. These procedures are discussed in greater detail in Chapters IV to IX.

At any echelon of command, high or low, the intelligence officer must be familiar with all branches of intelligence and their activities. He must anticipate the commander's intelligence requirements; he must know the collecting agencies and the means employed to procure information from them. He must know the procedures involved in converting raw information into usable intelligence and he must understand the imperative need for the delivery of such intelligence to the using agency in time to be of use.

In order to expedite these intelligence procedures, it is essential that all intelligence agencies within a command be closely coordinated. Coordination is accomplished by standard operating procedures (SOP's), the free use of staff channels and special provisions and directives in combat orders.

STRATEGIC AND OPERATIONAL PLANNING

At top level, over-all strategic planning is ordinarily performed by the Joint Chiefs of Staff, who consider the related intelligence problems. Such planning includes: Feasibility of employing air power in a particular area, employment of atomic or other special weapons, desirability of independent operations as opposed to joint operations, requirements for trained personnel, procurement of equipment, logistics, and defensive requirements.

In a theater of operations the air commander, through his staff intelligence officer, outlines a comprehensive plan for collecting and processing information. In planning for intelligence, the mission of the command initially determines the intelligence requirements. Information to satisfy these requirements falls, quite logically, into three classifications:

a. Information already on hand, and available for immediate use.

b. Information available from other headquarters

1225

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS UNCLASSIFIED

or agencies, with varying time elements necessary for its procurement.

c. Information which *must* be obtained from the enemy either by the unit itself or by other agencies. (Essential Elements of Information.)

It is obviously advisable to initially exhaust the first two classifications, inasmuch as these requirements can be filled without risk of personnel and equipment.

ESSENTIAL ELEMENTS OF INFORMATION

The essential elements of information, or EEI's, are those items of enemy information concerning forces, objectives, capabilities, terrain, and weather, which the air commander considers vital or essential in order to make a sound decision, formulate plans, and conduct operations in the performance of his assigned mission. Knowledge of these items would remove elements of surprise, or assist in the accomplishment of the mission and are thus formulated as questions or directives and are called EEI.

The amount of detail requested in the EEI increases with the echelon of command. EEI given verbally to combat aircrews preparing to go on a combat mission must be limited in detail and number. The requests to the trained technicians of the higher commands and agencies are more detailed and are submitted in writing. The more detailed the questions, the more completely the answers will satisfy the requirements.

When an operation is in the planning stage or when time permits, the air commander may announce the EEI after he has considered what is known or unknown about the enemy. In determining the EEI, he is guided by his staff, particularly his intelligence officer, and by requests for special information from higher, adjacent, or cooperating units. If the commander does not designate the EEI, the intelligence officer should recommend them. Because of the speed with which most air force operations must be planned, the intelligence officer should anticipate EEI and be prepared to provide the necessary information.

EEI may be expressed as directives or as questions about the strength of the enemy, his location, his equipment, his installations, and objectives, terrain, and weather conditions within his territory. EEI may also be stated formally in writing or be discussed informally in staff conferences. EEI are the basis of the Intelligence Collection Plan.

THE INTELLIGENCE COLLECTION PLAN

a. This plan is formulated to plan the collection of information required to answer the EEI. The specific subjects on which information is required are listed with the means and instructions for obtaining it.

b. The primary reason for the plan is to determine how information can be secured to estimate the enemy's capabilities. An enemy's ability to interfere with a mission or to accomplish his own mission depends upon the location, strength, and equipment of both forces on air, land, and sea, and the conditions of terrain and weather. The enemy's offensive and defensive capabilities will change with the accretion or the attrition of his forces and their deployment and supply. To keep constantly abreast of these changes, the intelligence plan must be flexible.

c. The scope of the plan depends upon the commander's sphere of action. It is modified to conform to his new decisions but it is necessary that definite instructions for obtaining information be given to the collecting agencies. To avoid omission or overlapping, the intelligence officer carefully analyzes the EEI, allots missions, and designates the time and method of reporting. He thus directs the collection of information and sparks the cycle of the operation of intelligence. To accomplish his purpose, the intelligence officer sets up a plan in detail as discussed in Chapter VI.

Information Collection

Upon receipt of the intelligence officers' orders or requests, the information collection agencies systematically exploit their individual sources of information and deliver information collected in the manner specified by the plan.

Processing

The information received from these collecting agencies is systematically recorded, collated evaluated and interpreted to produce applicable intelligence which will furnish the answers to the questions raised by the EEI.

Use and Dissemination

Each significant item of newly produced intelligence is integrated into the intelligence estimate to keep it up to date; other items are distributed to individuals and other units concerned in time to be of use.

AIR INTELLIGENCE ESTIMATE OF THE SITUATION

To present a clear and concise summary of the information he has obtained, the intelligence officer prepares an Air Estimate of the Situation, for use by the commander and his staff to arrive at the Commander's Estimate of the Situation.

1224

FUNDAMENTAL STEPS IN THE CONTINUOUS CYCLE OF OPERATION OF INTELLIGENCE

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS UNCLASSIFIED

The Air Estimate is prepared by the air intelligence officer upon his own initiative when warranted by the developments in the situation or when required by the commander. The estimate may be written or oral. It contains an evaluation of the enemy situation and possible lines of action that he is capable of taking. The amount of detail to be included is determined by the scope of operations.

The five-paragraph, or formal, Air Intelligence Estimate of the Situation should be used whenever time permits. A short form, or two-paragraph, Air Intelligence Estimate of the Situation is used when there is not time for the complete form.

Verbal estimates usually follow the latter short form, especially for successive air missions when a formal estimate has been prepared for the first mission, the general situation is materially unchanged, and quick decisions are required. *(For details see Chapter V.)*

ESTIMATE OF ENEMY AIR REACTION

A valuable supplement to the air intelligence estimate is the Estimate of Enemy Air Reaction. Where there are two or more methods of accomplishing the air mission, an estimate of enemy reaction to each method helps the commander to arrive at a decision. A knowledge of how the enemy reacted in the past is helpful in deciding which would be better: Day vs. night attack, high altitude vs. low or medium altitude, and concentrated attack vs. main attack, etc. When the mission may be accomplished by attacks against more than one objective, analysis is made of the estimated enemy reaction to each plan so that his weakest point or points may be discovered. All other things being equal, a careful analysis will reveal wide differences in the enemy's ability to provide air defense at the different points of attack or to launch counter attacks.

Questions and Leads for Classroom Discussion

1. At what echelon of command must the intelligence officer be completely familiar with all intelligence procedures?
2. How is coordination achieved between intelligence agencies?
3. Why is an intelligence estimate required?
4. What is meant by "processing" information?
5. What four phases constitute the cycle of operations of intelligence?
6. When is the cycle of intelligence closed?

1226

THIS PAGE IS UNCLASSIFIED

CHAPTER IV

AIR INTELLIGENCE ESTIMATE OF THE SITUATION

As stated in Chapter I, the primary function of the air intelligence officer and his staff is to keep the commander and all others concerned, informed of the enemy situation and the enemy capabilities.

The purpose of the Air Intelligence Estimate of the Situation is to present a clear concise summary of the enemy situation as it may affect the mission. Estimates are prepared on the initiative of the intelligence officer or when requested by the air commander. The commander utilizes the Intelligence Estimate together with the other staff estimates in arriving at his own Commander's Estimate of the Situation.

STAFF ESTIMATES

a. All staff estimates are prepared with one objective, to *"assist the commander in arriving at a sound decision."* Personnel, intelligence, operations and logistics estimates are usually required by the commander with each new mission. Only the intelligence estimate deals with the enemy; other staff estimates concern the commander's own unit.

1. The Personnel Estimate of the Situation is prepared by the Chief of Personnel and is an estimate concerning the personnel situation of the unit with conclusions drawn therefrom.

2. The Intelligence Estimate of the Situation is prepared by the Chief of Intelligence and is an estimate concerning the enemy situation and capabilities with conclusions drawn therefrom.

3. The Operations Estimate of the Situation is prepared by the Chief of Operations and is an estimate concerning the operations capabilities of the unit with conclusions drawn therefrom.

4. The Logistics Estimate of the Situation is prepared by the Chief of Supply and is an estimate concerning the logistic capabilities drawn therefrom.

5. Special Staff Estimates of the unit with conclusions are prepared by the responsible special staff sections as directed by the commander and are concerned with the capabilities of the unit as pertains to ordnance, chemical, signal, etc.

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS UNCLASSIFIED

b. As a general rule, an estimate of a broad strategic situation will be written out in some length. Estimates of tactical situations may, and should, be written out when time permits. There will be a large percentage of tactical decisions made mentally and in many cases made almost instantaneously. Even mental, quickly made decisions should result from thinking which follows a systematic and logical approach. The best tactical minds are those who are able to mentally size up the situation quickly and clearly, taking into account all features bearing on the situation.

c. Capabilities. "The method of capabilities," as defined in Chapter I, for the analysis of possible enemy action is a product of the Napoleonic school. This method is a precise and analytical process whereby every possible line of action open to the enemy is considered. By process of elimination, in an ideal solution, only one course of action remains. Since this procedure exhausts all possible hostile reactions, it materially reduces the possibility of the enemy achieving surprise. This method of studying enemy capabilities is used by all United States military forces.

THE AIR INTELLIGENCE ESTIMATE

a. In order to prepare an accurate Air Intelligence Estimate of the Situation and to make certain that important points are not overlooked, a five (5) paragraph (formal estimate) form has become standard, which deals progressively with:

Par. 1. The mission of the command.

Par. 2. The enemy situation.

Par. 3. Possible lines of action (capabilities), open to the enemy.

Par. 4. Comparison and merits of each enemy capability.

Par. 5. Conclusions: Summary of the enemy capabilities.

b. The intelligence officer prepares the Air Intelligence Estimate from current, factual and evaluated knowledge of the enemy. This knowledge is gained by constantly collecting, evaluating, and interpreting information of the enemy's air, ground, and naval situation and order of battle.

Formal Form

The five paragraph or formal Air Intelligence Estimate of the Situation should be used by air intelligence officers whenever time is available. Continuous practice in maintaining the necessary data and preparing successive formal estimates is highly beneficial to the individual in training his mind to an habitual and orderly analysis of all available information; correct conclusions can be drawn quickly and logically. Constant practice with the formal estimate will insure logical reasoning when a rapidly changing situation requires the intelligence officer to give verbal estimates on short notice.

a. The Mission.

The Mission of the unit is usually assigned by higher headquarters, either specifically by time, place, and numbers of aircraft, or generally, giving only general boundaries for action, and a general over-all picture of the desired objective. Sometimes the mission will appear as a multiple mission, and then the priority of the specific missions must be determined, either by the air command or through delegated authority by the intelligence officer. A clear determination of the mission is the essential basis for the estimate. Each new mission will normally require a new estimate. The statement of the mission must be given clearly and concisely, so that there is no possibility for a misunderstanding.

b. The Enemy Situation.

It is made up of six parts:

1. The general enemy situation, including the Enemy Air Order of Battle. This must cover all land based and, where applicable, water based planes. It should list all air units which are within effective radius of action. It should give the operational strength, serviceability rate, types of aircraft, combat efficiency, and known details of fighter control system. Included also would be all information that is available on the air defenses of the enemy, such as the locations, efficiency, and types of enemy aircraft warning systems and radar installations, flak defenses, ground-to-air missile sites and searchlights.

2. The general situation as regards the enemy ground forces, with the location, identification, strength, and disposition of enemy ground forces that might affect the mission. The location of front lines must be given as well as the location of islands and other areas occupied or under control of enemy forces.

3. The general situation as regards the enemy naval forces, with the location, identification, strength, and disposition of enemy naval surface units and submarines, including carriers and merchant vessels of all types that might affect the mission.

AIR INTELLIGENCE ESTIMATE

MAPS: (List maps referred to)

1. MISSION. (Mission of the unit as assigned by higher headquarters must be stated clearly and concisely. If there are multiple missions the priorities of each must be listed. Each new mission will normally require a new intelligence estimate.)

2. ENEMY SITUATION.

a. General

(1) Enemy Air Forces

(a) Land Based: (Give order of battle information on all enemy land based air units including naval and marine that can affect the mission.)

(b) Water Based: (Give order of battle information on all enemy carrier based air units, seaplanes, and catapult aircraft that can affect the mission.)

(c) Air Defenses: (Give information of enemy air defenses such as aircraft warning system, radar installations, flak defenses, and surface to air missile sites, that can affect the mission.)

(2) Enemy Ground Forces: (Location, identification, strength and disposition of enemy ground forces that can affect the mission. Give location of front lines and other areas occupied by or under control of enemy forces.)

(3) Enemy Naval Forces: (Give location, identification, strength and disposition of enemy naval surface units that can affect the situation, including carriers, submarines, transports, and naval bases and shore parties.)

b. Special

(1) Enemy Air Forces: (Pertinent detailed information about enemy air units that can affect the mission.)

(2) Enemy Ground Forces: (Pertinent detailed information about enemy ground units that can affect the mission.)

(3) Enemy Naval Forces: (Pertinent detailed information about naval forces that can affect the mission.)

c. Weather: (Weather forecast when available. For long range estimates or when weather forecast is not available, state how various conditions of weather may affect enemy capabilities.)

3. POSSIBLE ENEMY COURSES OF ACTION.

a. Enemy Air Forces: (Enumerate enemy air capabilities which can affect the accomplishment of the mission.)

b. Enemy Ground Forces: (Enumerate enemy ground force capabilities which can affect the accomplishment of the mission.)

c. Enemy Naval Forces: (Enumerate enemy naval capabilities which can affect the accomplishment of the mission.)

4. ANALYSIS OF ENEMY COURSES OF ACTION.

a. Enemy Air Forces: (Analyze each enemy air capability to insure that all known facts have been appropriately considered and to determine their significance and effect upon the mission.)

b. Enemy Ground Forces: (Analyze each enemy ground force capability to insure that all known facts have been appropriately considered and to determine their significance and effect upon the mission.)

c. Enemy Naval Forces: (Analyze each enemy naval capability to insure that all known facts have been appropriately considered and to determine their significance and effect upon the mission.)

5. CONCLUSIONS. (State the relative probability of adoption of any of the possible enemy capabilities with reasons therefor. This justification must consist of definite information which favors one or more capabilities and militates against the others. It requires a knowledge of the enemy's tactical doctrine, deception methods, past performance, national psychology, and the character and habits of the hostile commander.)

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS UNCLASSIFIED

4. Under the special sub-paragraph of the situation paragraph will be found the Enemy Air, giving in detail information about enemy air units normally operating in the area of the mission. Included will be any other particular information of the enemy air having a special bearing on the mission, such as defensive operational practices, tactics and techniques. Also included will be details of air defenses along the route of the mission and at the objective.

5. The enemy ground forces also come in for consideration under this special sub-paragraph, with details of composition, disposition, and movements of particular forces in the area of the mission. For low altitude missions, airborne operations, etc., there will be details with maps of drop zones, flak towers, infantry and armored concentrations, and other details of defensive capabilities of ground units and installations.

6. In this same sub-paragraph will be detailed consideration of the enemy naval forces, treated in the same manner as the ground forces, with all types of information that will affect the mission.

c. Possible Lines of Action.

Capabilities: This paragraph is divided into three (3) parts.

1. The first section deals with enemy air. In it should be listed each line of action which the enemy is physically capable of following, and which if adopted will affect the accomplishment of the mission of our own forces. Also to be considered is the capability of the enemy mass or sporadic bombing or airborne attacks on our bases prior to our own take-offs.

2. The second section deals with the enemy ground forces. Here are considered the capabilities of the enemy ground attacks, especially on our bases or line of communications.

3. The third section deals with the enemy naval forces. Here are considered the capabilities of enemy naval units disrupting our lines of communications, shelling our installations and affecting amphibious landings.

d. Comparison and Merits of Each Enemy Capability.

Again this paragraph is divided into three (3) parts, which are air, ground, and naval. The first item, that of air, is devoted to the analysis and discussion of the effect upon the mission of each of the enemy's air capabilities, including possible implementations through staging aircraft at advance fields. The merits of each of the capabilities are discussed, past records of the enemy's actions are gone into which might merit his adopting of a certain capability. The factors of weather conditions, enemy operational capabilities, percentages and normal sortie rates, state of training, location and disposition of units, all merit consideration in comparing each capability. The second and third sections of this paragraph cover the enemy ground forces and enemy naval forces respectively. Where analysis reveals that the capabilities of the ground forces and naval forces will not affect the mission, the reason or reasons should be given.

e. Conclusions—Summary of the Enemy Capabilities.

In this paragraph the relative probabilities of adoption of any of the possible enemy capabilities with the reasons for the choice would be enumerated. This justification must consist of definite information, which favors one or more capabilities, and militates against the others. A thorough knowledge of the enemy's tactical doctrine, deception methods, past performance, national psychology, and the character and habits of the hostile commander might indicate the enemy's adoption of a certain capability.

Short Form

a. The short form or two paragraph Air Intelligence Estimate of the Situation is used when time does not permit the use of the complete form. Verbal estimates usually follow this form. The short form is especially useful in conjunction with the formal estimate form for successive air missions where the general situation is materially unchanged and where quick decisions are required to meet the different special situations of new missions.

b. The two parts of the short form are as follows:

1. Summary of Enemy Situation. This is made up of four (4) sub-heads, and covers in order the following:

(*a*) Enemy air activities in combat zone,
(*b*) Enemy ground force activities,
(*c*) Enemy naval activities, and
(*d*) Weather.

It must be borne in mind that this short form or informal Estimate Form is not for use when there is ample time for a more complete study and a fuller report. It is a form that should be used mentally when the time does not warrant the more full and complete five-paragraph form.

5. ESTIMATE OF PROBABLE ENEMY AIR REACTION: If justified by analysis above, estimate his probable reaction to each plan under consideration. (Otherwise omit.)

a.

b.

c. etc.

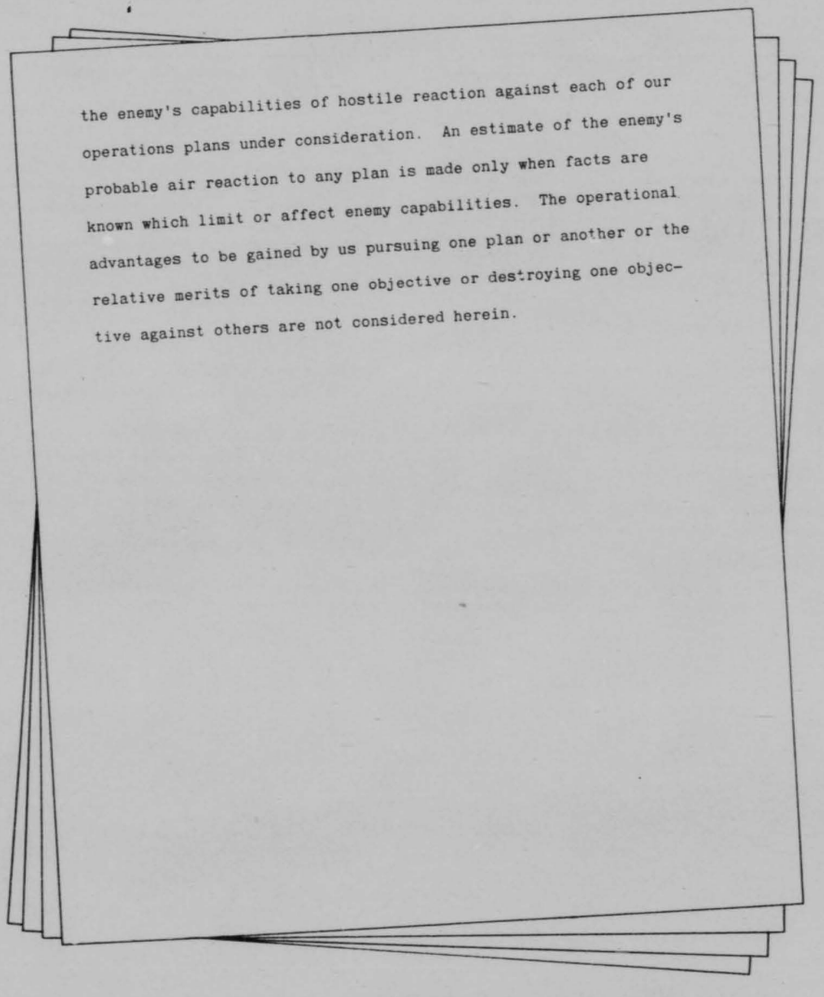
NOTE: The intelligence officer does not consider our operational capabilities nor weighs the relative merits of the various operations plans under consideration. He analyzes enemy reaction only. This analysis is primarily a careful factual analysis of

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS UNCLASSIFIED



the enemy's capabilities of hostile reaction against each of our operations plans under consideration. An estimate of the enemy's probable air reaction to any plan is made only when facts are known which limit or affect enemy capabilities. The operational advantages to be gained by us pursuing one plan or another or the relative merits of taking one objective or destroying one objective against others are not considered herein.

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS UNCLASSIFIED

2. Conclusions. This paragraph deals with conclusions just as does the fifth paragraph of the formal form. Again are listed the enemy capabilities as applied to the air, ground, and naval forces as they may affect the mission. The final sub-head that is covered is the statement of the relative probabilities of adoption of the foregoing lines of action when such conclusions can be justified.

c. Each new friendly air mission will normally be directed toward some specific enemy objective or area. In listing and evaluating enemy factors bearing on each new situation, more detailed analysis and consideration will be given to those enemy factors which normally may be expected to affect the mission directly than is given to the general situation.

Estimate of Enemy Air Reaction

This estimate, when needed, supplements the Air Intelligence Estimate. It offers to the Commander an analysis of the enemy's possible reaction to attack. This analysis is based on the enemy's past reactions to various methods employed against him as well as his immediate capabilities.

When carefully prepared, the estimate of enemy air reaction aids greatly in exposing the enemy's vulnerability and is of great aid in assisting the Commander to arrive at a decision.

CONCLUSION

The Air Intelligence Estimate of the Situation is accomplished so as to present a clear and concise summary of the enemy situation as it may affect the mission. It is obvious that the Air Intelligence Estimate is an invaluable contribution to accuracy and completeness of the Commander's own estimate, and it is further apparent that close coordination between Chief of Operations and Chief of Intelligence is necessary to assure a strong and direct focus of attention upon the most important possible lines of action open to both the enemy and ourselves. The most important job of the Intelligence Officer is to keep his Commander and other members of the staff informed as to enemy capabilities and the enemy situation. Through this logical, orderly process the Intelligence Officer accomplishes his mission. Further, through proper dissemination of Air Intelligence Estimates of the Situation, Intelligence officers in subordinate and lateral units will be assisted in carrying out this same assignment with more accuracy and completeness.

Questions and Leads for Classroom Discussion

1. What is the purpose of the intelligence estimate of the situation?
2. When are they prepared?
3. What is the objective of a staff estimate?
4. What is the "method of capabilities"?
5. What subjects are dealt with in the formal estimate and in what order?
6. What is the short form estimate and when is it used?
7. What information is contained in the estimate of enemy air reaction?

CHAPTER V

THE INTELLIGENCE PLAN

PURPOSE AND DEFINITION

The Intelligence Plan is a convenient method of tabulating the important questions that have been asked (The Essential Elements of Information); the indications or signs that tend to answer these questions; the source from which the information will come, and the methods in which these sources will report their information to the headquarters concerned. It is a guide to the intelligence necessary to the planning of an operation and a convenience in solving questions posed by the EEI.

The Intelligence Plan is designed to eliminate conflict, omission, duplication and confusion in analyzing and transforming the Essential Elements of Information into missions, in allotting the missions to collecting agencies, and in designating the time and method of reporting the information to the Intelligence officer.

The formal Intelligence Plan is a very necessary piece of work in higher headquarters, and is applicable in groups and squadrons. In lower units the most successful intelligence officers will follow some such orderly process in collecting information.

The scope of the Intelligence Plan depends upon the sphere of action of the Commander for whom it is drawn. It will be subsequently modified to conform to new decisions made by the Commander during the development of the situation. If new intelligence missions are continually being given it is clear that they must replace, supplement, or modify those previously assigned. The Intelligence Plan, unlike most other plans, is not a set piece that is started and played out like a tactical operation such as an assault on a hostile shore or an air attack on an enemy airdrome.

The Intelligence Plan results in instruction to various agencies to do specific things. These are sometimes physically independent of each other. Some are completed quickly, others take considerable time. Hence, as the operation progresses, certain of these missions are no longer possible, certain others are fully accomplished. At the same time new

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS UNCLASSIFIED

missions are necessary because new enemy capabilities have arisen.

The intelligence picture develops continuously to meet the need of new phases of the operation. There is seldom the need for preparing a complete new plan at any particular time because of the fact that intelligence presents a moving picture. The Intelligence Plan outlines a logical process through which one must go if he wishes to insure the greatest chance that all possible indications of prospective enemy action will be sought. It is also the best insurance against issuing conflicting or duplicating instructions which will create confusion among the collecting agencies. This process of analyzing intelligence requirements to produce logical missions should be followed whether a single EEI or a dozen are under consideration. Again, like the designating of the EEI, the plan does not have to take place on paper. Although that is naturally desirable, a skillful and experienced intelligence officer can do the process mentally and put only the results on paper under certain circumstances.

The situation will regulate the use of the plan. The formal announcement of the EEI and the resulting composition of a detailed Intelligence Plan is the safest procedure when a complete change in nature or scene of action takes place. This occurs when, for example, a unit moves from one theater to another, or from one scene of action to another. A fighter wing might be moved from one command where its mission had been escort to another where its job might be that of air-ground coordination. Passing from a static defense to the offensive or assignment to special operations are other examples.

COMPOSITION

The Intelligence Plan follows a set form or pattern and involves six (6) distinct steps. They are:

a. Phases or periods of Operation.

b. Essential Elements of Information.

c. Analysis of Essential Elements of Information into Indications.

d. Collecting Agencies.

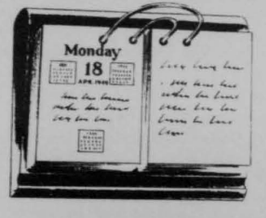
e. Time and Method of Reporting.

f. Specific Orders or Requests.

The first five (5) steps appear on the formal written Intelligence Plan in the sequence outline, and the last, "Specific Orders or Requests," represents the action which follows the composition of the plan.

First Step: Phases or Periods of Operation

The phase of the operation or the time period which it is intended the plan will embrace must be determined. The period should not be so long that drastic changes in the Essential Elements of Information are likely to be necessary, nor so short that numerous missions must be reassigned. The period might cover only a few hours or encompass an indefinite period. The situation will dictate the length of the period. When the situation renders the plan no longer practicable, the plan will be either superseded or modified. If a particular headquarters has a special target to be bombed tomorrow, the plan will cover a few hours, while if the mission is of a general nature over a large territory, the phase of the operation will be of longer duration.



Second Step: Essential Elements of Information

This is the factor which prompted the organization of the Intelligence Plan, and is the heart of the plan. The Essential Elements of Information constitute those items of enemy information concerning forces, objectives, capabilities, as well as terrain, weather conditions, lines of communications and other pertinent factors which the commander must have in order to make a sound decision, conduct an

1239

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS UNCLASSIFIED

air operation, or to formulate the details of a plan of operation. These EEI are questions which must be answered, following the assignment of a mission from higher headquarters, before final plans for execution of the mission can be made. The air commander is responsible for designating the EEI, but in determining them he is assisted by his staff, in particular his intelligence officer.

Types of Information Required

By analysis, each essential element will break down into specific items of information required by the intelligence officer. These items, if obtained, will answer the questions involved in the EEI to which they relate. Typical items are listed as follows:

a. Target Information

1. Location.

2. Character: Factories, freight yards, docks, power plants, troop concentrations, bridges, air fields, supply dumps.

3. Size and extent.

4. Activity, capacity, and importance.

5. Type and construction; sufficient information to identify the target accurately and to assist in determining the appropriate air weapon to be used against it. The amount of detail needed depends on how similar other targets are, how close they are, and how distinct the landmarks are.

6. Landmarks and identification features.

7. Vulnerability to air attack: Natural obstacles (terrain and weather), active defenses (strength and location of anti-aircraft artillery batteries and missile sites, fighter aircraft), passable defenses (dummies, decoys, smoke screens, camouflage, and balloon barrages).

b. Information of Enemy Air Forces

1. Strength, disposition, and movement.

(a) Units in operation at or near the target; designation and type of units encontered or known to be operating at given points; location and estimated serviceability of operating airdromes and aircraft; physical condition and morale of crews as indicated by air combat and interrogation of prisoners.

(b) Possible enemy reinforcements (hostile units not operating in the area but located within striking distance); designation and type of unit, location, estimated strength, and serviceability; earliest possible time units can intervene in that area.

(c) Changes in above units, including units brought into or taken from the area, movement within the area, airfields built or abandoned, alterations in defensive measures.

(d) Reaction to recent air operations.

2. Supply and equipment.

(a) Supply: Information on hostile supply arrangement, kinds and amounts available; location of supply and repair depots; location of aircraft factories and methods of delivering aircraft to combat units.

(b) Equipment: Characteristics and performance of hostile aircraft; availability of aircraft and equipment; airdrome and aircraft carrier facilities.

3. Air operations—Fighter

(a) Types and unit markings of aircraft.

(b) Operations—aggressive or cautious.

(c) Time and place of maximum concentration.

(d) Size, type, and altitude of formations.

(e) Methods of control.

(f) Methods of attack.

(g) Methods of supporting bombardment or reconnaissance.

(h) Possible missions.

4. Air operations—Bombardment

(a) Types and unit markings of aircraft.

(b) Operations—aggressive or cautious.

(c) Time and maximum concentration or attack.

(d) Size and type of formation.

(e) Methods of attack.

(f) Altitude before, during and after attack.

(g) Navigation methods.

(h) Fighter support.

(i) Sizes and types of bombs.

(j) Missions and objective.

(k) Results of attacks.

5. Air operations—Reconnaissance

(a) Types of aircraft.

(b) Operations—aggressive or cautious.

(c) Area covered, operating altitude and time.

(d) Navigation methods.

(e) Nature of missions: Close or distant, visual or photographic.

(f) Information probable obtained.

(g) Fighter support.

1240

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS UNCLASSIFIED

6. Aircraft warning service: Location, equipment methods, capabilities.

7. Anti-aircraft weapons, surface-to-air missiles, searchlights, and barrage balloons: Their location, types, methods, and capabilities.

8. Camouflage, smoke screens, decoys, dummies, and other passive defenses: Their location, types, employment, and capabilities.

9. Enemy casualties, including aircraft losses and prisoners.

10. Enemy's probable knowledge of our air situation, gained from:

(a) Operations.

(b) Reconnaissance activity.

(c) Prisoners, captured documents, and materiel.

11. Methods of communication and indentification.

12. Navigational aids: Types, location, and methods of operation.

13. Weather.

(a) Weather conditions in enemy territory and en route.

(b) Equipment and methods of operation of enemy weather service.

c. Information of Enemy Ground Forces

1. Strength, disposition, and movement of ground forces which may affect the air mission. (For air units engaged in strategic operations, only the general ground dispositions may be required. Air units engaged in ground support operations will require detailed information of front lines, location and identity of each unit, friendly and enemy, etc.)

2. Location of front lines; identification of friendly, neutral, and occupied areas.

3. Supply and equipment.

(a) Supply: Information on communication and supply lines, location of supply and repair depots.

(b) Equipment: Characteristics and identifications of ground equipment, especially transport vehicles and tanks.

4. Estimate of the Ground Situation. (As it may affect the air mission.)

d. Information of Enemy Naval Forces.

1. Strength, disposition, identity, and movement (location) of enemy naval and merchant vessels as they may affect the air mission. (Water and carrier based aircraft are reported with enemy air forces. Aircraft carriers are again reported as naval vessels.)

2. Location of enemy shipping lanes, port and dock installations, and other naval information which might affect the air missions.

Third Step: Analysis of EEI into Indications

Certain essential elements will require very little analysis by the intelligence officer in order to transform them into suitable requests for information. If the information retained gives a direct answer to the inquiry, analysis is unnecessary. Others must be subjected to careful analysis in order to determine what indications must be sought to answer the inquiries contained therein. For example, EEI relating to the existence of large permanent defense installations usually require no analysis other than a map study, supplemented by information from other sources, to determine whether or not the installation exists. But an EEI involving the capabilities of an enemy task force must be subjected to careful analysis in order to determine what indications must be sought to answer the inquiries. This analysis will be placed in the second column of the regular form opposite to the EEI to which it refers.

Fourth Step: Collecting Agencies

The intelligence officer must next determine the agency or agencies to be assigned the mission of reporting on each item of analysis. When practicable, more than one agency should be assigned missions relating to the same analysis. Thus, the intelligence officer is assured verification of reports and positive information in cases where, due to weather conditions or enemy action, one of the agencies is unable to obtain the information desired. Each agency may be assigned more than one item of analysis upon which to collect information.

To utilize properly the available collecting agencies, it is necessary that the intelligence officer be thoroughly conversant with their powers and limitations. He must coordinate closely with the operations section in planning the use of combat units as collecting agencies while on tactical assignments. The agencies at the disposal of intelligence officers will be varied and usually numerous. Utilizing the ones which are capable of performing the missions and at the same time available to perform them is a problem with which the intelligence officer is usually faced. One of the reasons for composing an Intelligence Plan now become apparent. Through this method of orderly planning, the intelligence officer knows his sources of information thoroughly.

1241

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS UNCLASSIFIED

Information collecting will already have become standard operating procedure through the planning at higher headquarters and the efforts of subordinate units. Most collecting is routine and new or modified Intelligence Plans merely require a different focus for action of a specific nature. The selection and assignment of agencies will be placed in the third column opposite each item to which they refer.

Fifth Step: Time and Method of Reporting

The Intelligence Officer must now determine the time he desires to receive the information he has requested and the method or channels by or through which it is to be transmitted. Information, to be of any value at all must be timely. Therefore, if the mission itself does not impose a time limit automatically, one is decided upon. Information might be reported in any number of different ways. It might be processed through established routine channels. It may be sent by radio, teletype or telephone. The situation and the time element will dictate the ways and means and will sometimes promote inconsistencies in methods to be employed. The fourth column of the form gives places for the method and time of reporting.

Sixth Step: Specific Orders or Requests

It is now necessary to formulate and assign specific and definite missions for each agency with respect to each item upon which that agency is to report. The orders must never be vague or distorted; they must be clear, concise and complete and never long or filled with repetitious and confusing details. They should be direct and to the point. These instructions will be drawn up in the form of orders for those agencies under the command of the Air Commander. They will be drawn in the form of requests to such agencies, civil and military, which are not under the command of the Air Commander. Generally, information required from other branches of the service and other commands will clear with a reasonable degree of speed through liaison officers whose duty is to effect the flow of information between their branches of service and that of which they are assigned for duty.

CONCLUSION

The Intelligence Plan will always be composed with simplicity and practicability as the cardinal characteristics. By its very nature it should avoid unnecessary work and duplication. It is necessary, whether the Intelligence Plan is a document written in great detail or merely organized in the mind of the intelligence officer, that the process be thorough and complete. Some items to be reported on are already standard operating procedure and require no written orders to collecting agencies. However, it is frequently a good idea to include them in the Intelligence Plan as a reminder to the intelligence officer, a guard against omission and a memorandum to the responsible party for appropriate action if the need may arise. The Intelligence Plan is designed to produce information and intelligence to be used in keeping abreast of current enemy capabilities, the current enemy situation, and for arriving at an Air Intelligence Estimate of the Situation as the need for such arises.

Questions and Leads for Classroom Discussion

1. What is the purpose of the intelligence plan?
2. When is it composed?
3. What are the six distinct steps in the preparation of the plan?
4. What do they embrace?
5. Who analyzes EEI into indications?
6. Should more than one agency be assigned missions relating to the same analysis?
7. How is information transmitted?

THIS PAGE IS UNCLASSIFIED

CHAPTER VI
COLLECTION OF INFORMATION

An air command must continuously collect intelligence information, utilizing all agencies within the Air Force and in other branches and services. Collection agencies available to the air commander vary with the size and composition of his command and the intelligence officer must vigorously employ all channels to expedite the vertical and lateral flow of information.

In the squadron and group, the intelligence officers serve as collecting agencies for Wing and Air Force Intelligence *(See Chapter XX)*. In turn, they receive information disseminated to them by higher headquarters.

The gathering of information must have direction in order to satisfy the requirements of the commander. Collecting agencies are kept informed and concentrate their search on information specified in orders, information which has a direct bearing on the essential elements of information (EEI), and additional information necessary to carry out their mission.

It must always be borne in mind that the specific aim of combat intelligence is to provide the air commander with essential intelligence on enemy capabilities at the time he needs it.

Other military information will be transmitted in periodic reports in the manner prescribed by higher headquarters.

THE COLLECTION PLAN

The Collection or special intelligence plan, as discussed in Chapter V, is a method by which the intelligence officer sets down on a chart or form, the EEI, the possible indications, and the collecting agencies to be employed.

In higher headquarters of an air command or an air force level, the intelligence officer initiates a standing operating procedure for collecting information within his own unit, as well as for reporting, processing, dissemination, and filing information. His sources of information are many and varied and are discussed in detail in Chapters X thru XVIII.

1243

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS UNCLASSIFIED

In lower echelons, items are actually collected by group and squadron intelligence officers, based on an approved collection plan instituted by higher headquarters. Such a plan is coordinated at higher headquarters with the rest of the staff, especially the operations officer, as he will know what units are available for use in the collection program. Before the plan will be put into effect, the commander will approve it. Squadrons and Groups are on the receiving end of the orders directing collection of information, either in paragraph 3X of the Operations Order or contained in the Intelligence Annex to the Operations Order. They are usually rephrased from question to directive form.

EEI can often be answered by information on hand or that already in process of collection from reconnaissance, interrogation of combat crews, or other sources available to the intelligence officer. However, the specifications of the EEI do not preclude a unit intelligence section from forwarding any and all information of the enemy which is collected. The EEI merely focuses attention on certain items that are greatly desired by the higher commander.

COLLECTION AGENCIES IN LOWER ECHELONS

Interrogation of Combat Crews

The observations that an air combat crew makes while it is on a combat mission are valuable sources of information. The intelligence sections in these combat units can focus the attention of the crews upon certain things to look for. However, attention must be directed to the EEI in a manner calculated not to detract from the importance of the mission itself.

The intelligence section establishes procedures for interrogating these crews immediately upon the completion of a mission. Procedure varies according to the aircraft, the mission, the type of unit, its location, and facilities available for questioning. Actual interrogation is done at squadron or group level, but intelligence officers of higher command should frequently visit these echelons to see that correct procedures are being followed. The importance of these visits cannot be overstressed.

Mission Reports

The reports that squadrons and groups compile on information obtained from questioning combat crews should be accurate and complete and it is important that no time be lost in preparing and forwarding them to higher echelons. In order to secure maximum information on each mission, higher echelons will outline the reporting procedure to be followed in lower echelons. Reports from lower echelons may be consolidated before being sent on to the next higher echelon. Reports normally fall within the following categories:

a. Flash reports.

b. Preliminary mission reports ("Hot News").

c. Consolidated missions reports.

d. Encounter reports and combat claims.

e. Photo and bomb damage reports.

(For a full discussion of these reports, see Chapter XXIII)

COLLECTION AGENCIES IN HIGHER ECHELONS

An Air Force or Command Intelligence Officer will have a great number of collecting agencies at his disposal. They may include any or all of the following agencies:

a. Air Force Organizations

1. Reconnaissance units.

One of the most important collectors of information is reconnaissance aviation. Those units engaged in collecting information for air, ground, and naval forces in action. Collection is accomplished by the human eye or by the camera lens. Recording is done in the human mind or on films. Analyzing is done by the photo interpreters or by intelligence officers. Dissemination is accomplished by the most expeditious means available to all interested headquarters and units simultaneously.

Reconnaissance aviation is divided operationally into strategic and tactical reconnaissance, by which division the type of information obtained is indicated. Aerial reconnaissance (strategical and tactical) is accomplished by wings or groups made up of several different types of units. The gathering units are:

(a) Photo Reconnaissance Squadrons.

(b) Tactical Reconnaissance Squadrons.

(c) Combat Mapping Squadrons.

(d) VLR (very long range) Photo Squadrons.

(e) Night Photo Squadrons.

(f) Weather Reconnaissance Squadrons.

The processing units are:

(a) Photo Intelligence Detachments.

(b) Photo Technical Units.

(c) Engineer Topograpical Units. (aviation)

1244

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS UNCLASSIFIED

It is well to remember that all collecting cannot be accomplished by reconnaissance aviation; it must be supplemented from other sources. There are usually many more requests for air reconnaissance coverage than the reconnaissance units can possibly comply with. A high degree of selectivity must be maintained. Other air force units frequently employed are:

2. Bomber units.
3. Fighter units.
4. Prisoner of war interrogation.
5. Technical Intelligence.
6. Aircraft Warning Service.
7. Signal Intelligence.

b. Ground Force Organization

Army G-2 will be able to provide reports from:

1. Ground observation posts.
2. Reconnaissance patrols.
3. P. W. I. units.
4. Reports from liaison and artillery aircraft.

c. Naval Forces

1. Office of Naval Intelligence
2. Intelligence sections of fleets, task forces and amphibious forces.
3. Air combat intelligence sections of carrier and shore based units.

In addition, the Intelligence Officer has access to reports from guerilla and underground sources, escapers and evaders, local liaison with civilians, mail censor units and the foreign press.

In the collection of data from available sources, the difference between air intelligence and air intelligence information should be clearly understood. It must always be remembered that completely processed intelligence information, ready for application to a given situation, would be classified as air intelligence. On the other hand, reports from prisoner of war interrogation units, deserters, etc., are more or less raw information, and would be classified as such until properly evaluated and interpreted.

Questions and Leads for Classroom Discussion

1. When must an air command collect information?
2. What is the specific aim of combat intelligence?
3. Who institutes the collection plan?
4. How is information collected at group and squadron level?
5. What collection agencies are available to higher headquarters?
6. What is the difference between raw information and air intelligence?

CHAPTER VII

COLLATING, RECORDING, AND FILING INFORMATION, OFFICE ORGANIZATION

Collation is the arrangement of information in a systematic manner in order to facilitate its use by an intelligence agency. This process involves the sorting and grouping of information by type in order that types of information of like kind may be conveniently grouped together for later evaluation and interpretation into usable intelligence information.

INTELLIGENCE JOURNAL AND WORKSHEET

The journal is a chronological record of the activities of the intelligence section. It is kept by the intelligence sections of wings or equivalent task forces and higher air commands. In groups and squadrons the Intelligence Journal is normally combined with those of other staff sections and the whole is bound to a unit journal.

The Intelligence Journal will contain briefs of important written and oral messages received and sent. It will also contain notations of periodic reports, orders and similar matters that pertain directly to the Intelligence Section. If the item is received or issued in oral form; entry in the journal is detailed. If it is in documentary form the entry may consist of a reference and a brief synopsis of the contents.

The journal is maintained as a permanent record and is the primary record of the operations of the intelligence section of the staff. For this essential reason, entries in the journal are made immediately upon the receipt or dispatch of reports etc. The original entries must not be altered but may be supplemented by subsequent notations.

The maintenance of the journal is comparatively simple. It is closed daily or at the end of a predetermined phase or period. One copy is normally turned into a specified office for consolidation with other journals of the headquarters. It is supported by a file of original orders, reports, special reports, studies and maps pertinent to the operations of the Intelligence section.

1247

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS UNCLASSIFIED

The intelligence worksheet is, as its name implies, an informal method of collation and is used in conjunction with the Intelligence Journal and the various situation and Order of Battle maps. Its purpose is to facilitate the arrangement of kindred types of information. It is a working aid and has no prescribed form since it is, in substance, a desk sorter or memorandum pad. While the worksheet is not a permanent record it is, at all times, kept up to date lest it lose its value. Worksheets are usually disposed of after collated information has been posted in the Journal or the situation maps.

ENEMY AIR FORCE ORDER OF BATTLE

Enemy Air Order of Battle is a list of enemy air combat units, their identification, type, equipment, location, strength, serviceability and operations. This basic knowledge of the enemy is of the utmost value to all echelons of command. From it, conclusions with respect to enemy capabilities can be derived. While Air Order of Battle usually is compiled by Air Force Headquarters, the Intelligence Division should maintain the Air Order of Battle of at least all known enemy units within striking range of the aircraft of his own organization.

A complete Enemy Air Order of Battle will include the following information about enemy air forces:

a. Identification of specific units (down as far as squadron where possible) which will be based on various items of information such as aircraft markings, unit insignia, etc.

b. Type of unit (bomber, single engine fighter, etc.).

c. Type of equipment (with respect to aircraft whether bombers, twin engine fighters etc., their performance, armament and tactics, items of air equipment).

d. Location of units (detailed disposition of all units).

e. Strength and serviceability (Initial Equipment, I. E.; Immediate Reserve, I. R.; as well as actual strength and serviceability).

f. Operations (type of operations engaged in, names and qualifications of commanding officers, combat efficiency of pilots and crews).

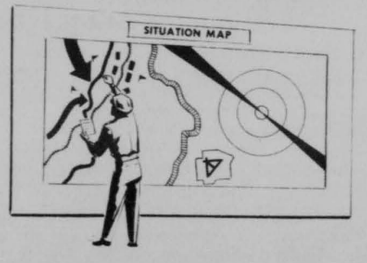
Enemy Air Order of Battle comes from information gathered and processed into intelligence from varied sources, the chief of which are:

Prisoner of War, wireless interception, photographic reconnaissance and interpretation, friendly combat crews, ground agents, crashed enemy aircraft, enemy press and radio, and captured documents.

Enemy Air Order of Battle is most effectively represented in map form. This is usually accomplished by using pins of various colors to denote exact location of various units with actual numbers and types written in. It is usually best to keep a file index of each unit containing all available information on the unit. In advance field conditions, data is best marked by grease pencil on an overlay. The overlay may consist of a sheet of acetate or, as a field expedient cleared X-ray films or aerial photo film may be used.

The complete Air Order of Battle will contain all the information available on the following subjects:

a. Organization, Strength & Disposition
b. Aircraft
c. Weapons & Equipment
d. Who's Who
e. Manpower
f. Fortification & Defense
g. Uniforms and Insignia
h. Tactics & Training
i. Logistics & Administration
j. Location of Installations



THE WAR ROOM AND SITUATION ROOMS

War rooms are centers for disseminating information, usually of the current situation in one or all theaters of operation. War rooms—sometimes called Air Rooms—are found at Air Force and Command headquarters, occasionally at Wings. Below Wings, the counterpart of the war room is the situation room.

1248

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS UNCLASSIFIED

General Procedure

Oral presentations should be:

Concise, accurate, and packed with information.

Carefully and thoroughly organized (a written outline will help clarify and emphasize points to be discussed).

Given in third person and without expressing personal opinions.

Delivered without the use of extensive notes and with the major points emphasized to provide variety and color, but never over-dramatized.

When capabilities permit the briefings should be graphically illustrated by simplified, and sometimes animated maps, and charts.

Indoctrination in Theater Geography

During training at domestic stations and in the foreign theater, it is the intelligence officer's obligation to familiarize unit personnel with the geography of the prospective combat areas. War Room lectures on theater geography should include discussions on the following points:

a. General and economic geography.

b. Historical and political background.

c. Peoples and languages.

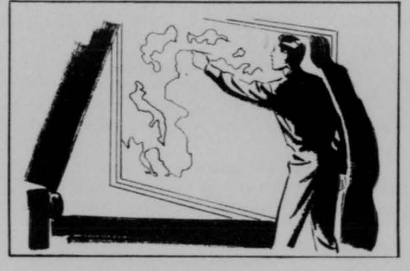
d. Customs and general living conditions.

e. Military significance of the areas with the strategic and tactical importance of each.

f. Communications.

INTELLIGENCE SITUATION MAPS

Most published maps, no matter what their scale or type, do not constitute a satisfactory background for the visual presentation of a situation as desired in a war room. The map used for such presentation should contain only information pertinent to the situation as it exists at the moment.



Situation maps for war room presentations can be made by projecting any small map—newsmap, road map, or section of a map from a balopticon onto a sheet of paper tacked to a wall. As much of the image can be traced as is required, and the map can be made as detailed as required. By this method a map in complete topographic relief can be prepared to a scale of 1:1,000,000 from a small contour map, whose scale may be 1:15,000,000.

If no balopticon is available, draw a grid of small rectangles on the map to be enlarged. A grid is then drawn proportionally on a large sheet of paper—if the second map is to be twice the size of the original, the rectangles on the second will be twice the size of those of the first. The detail appearing in each rectangle is then drawn in freehand.

Suggestions for preparing maps

Pastels or colored chalks, sprayed with fixative to prevent rubbing, are the easiest mediums with which to work. Colors are easily mixed and mistakes easily corrected. Large areas of a solid color can be done in tempera or showcard color, applied with a brush. Colored papers may be used.

Keep the background color weak in order that the colors used in posting the situation will have added strength. Dark water areas will throw the land masses into relief.

Do not clutter a map. Use location symbols for all places other than key cities. When other names are needed, they can be lettered on a strip of paper and stapled to the map.

INTELLIGENCE OFFICE ORGANIZATION

General

The office of the Intelligence officer may range from dugouts through tents to comfortable villas. His combat assignment may range from a squadron of fighter pilots to a group or groups of heavy bombers. Because of this divergence, it is impossible to prescribe the most desirable procedure for organizing and administering an intelligence office. Regardless of its location or type of unit, the office must, however, be organized for the basic functions of briefing and interrogation, maintaining the intelligence situation and providing information about the enemy.

Personnel

Ideally, the staff, in any intelligence office would have a flexible composition of officers and enlisted men who are specialists, yet capable of taking over any work of the section if called upon to do so.

1249

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS UNCLASSIFIED

While this ideal can seldom be attained, there are certain minimum personnel requirements for every intelligence office:

At least two men capable of carrying on each duty and function of the section.

All officers able to brief and interrogate; prepare flash, mission, periodic and summary reports; post friendly and enemy air-ground situation maps; maintain enemy air order of battle.

All enlisted men able to maintain intelligence journal, post friendly and enemy air-ground situation maps; keep records and files.

In selecting personnel, intelligence should be on the alert for competent enlisted men. Those with college training and typing ability are desirable. Those with special skill in mapping, drafting, editing, or with knowledge of the foreign language of Allied units in the area should prove particularly valuable.

Equipment

Professional equipment is normally drawn through group or squadron supply officers, and ordinarily is furnished the unit during its operational training.

Additional necessary equipment includes desks, tables, filing cabinets, typewriters, chairs, lockers, easels or screens, duplicating equipment (preferably mimeograph).

Training

Training and display material is desirable: Photographs, posters, silhouettes, models of airplanes, ships, armored vehicles, etc. Reference publications are invariably in demand and a dictionary of enemy languages, including air terms, is most useful. Intelligence should have as complete a collection of field and technical manuals as possible, and all pertinent intelligence bulletins and publications.

Since limitations of travel sometimes prevent the intelligence officer from carrying all he wants, he must select what is essential. The following are suggestions deserving first priority:

a. Photo interpreter's kit.

b. Note pads and typing paper, map overlay paper, and a supply of forms used in reporting, interrogation and intelligence procedure. Grease pencils and plasticele or cellulose acetate for overlays are ever in demand, and usually difficult to obtain. (Intelligence should acquire an adequate supply, one way or another.)

c. Mission, target and theater maps. (Best carried in a tubular case. Cylindrical containers for anti-aircraft searchlight carbons or for parachute flares make handy cases.)

d. Portable map board. Thumb tacks with different colored heads. Red, blue, green, yellow cord. Portable blackboard and chalk. Hammer, screwdriver, pliers and stapler.

Only slightly less necessary than the items listed above is a field desk or a small locker which can serve as a desk or table and which should contain folders, files, reference material, extra mapping and overlay paper.

This basic equipment must be with the intelligence officer at all times. It comprises the tools of his trade and without it he cannot do his job.

Office

Ideally, the intelligence section would have several rooms. Most important is the situation room with postings of friendly and enemy air-ground situation, enemy order of battle, special defense and theater maps, reports, photographs, reading matter, displays and training materials. The situation room is the center of intelligence operations and deserves most careful planning, equipping, and constant revision to keep it current and attractive. It must provide access to information about the enemy and enemy air combat. Reading tables and easy chairs should be provided. There should be clear, attractive and interesting displays: Maps, target photographs, pictures of equipment, reports, diagrams, latest information on the enemy, and, especially, pictures of target damage done by the unit on its recent operations, and the air combat box score of the unit's flying personnel.

Briefing room, large enough for briefing all crews at one time, with facilities for map display and balopticon projection.

Individual interrogation rooms, each large enough for a single crew.

Office for intelligence personnel, their files and equipment.

In certain situations it may be preferable or necessary, because of limited space, to combine the situation room with the briefing room, briefing directly from the situation map and other maps specially prepared.

Whether an intelligence officer has a number of comfortable rooms or only a hutment, he should do his utmost to maintain intelligence displays and reading matter for his crews. The following is a check list.

1250

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS UNCLASSIFIED

Detailed situation map of the immediate theater.

Situation maps of various fronts.

Naval maps.

Intelligence teletype reports.

Latest news reports and daily news bulletin.

Pertinent reports, bulletins and special studies from higher and Allied headquarters.

Enemy radar map.

Enemy flak map.

Diagrams of enemy aircraft attacks.

Box score of enemy aircraft destroyed; leading pilots, gunners, etc.

Home defense map; free bombing areas, beacons, etc.

Photographs of enemy decoys and dummies.

Stereo views and stereoscope.

Bomb impact plots.

Security posters.

First aid display.

Training posters.

Display of escape aids.

Escape literature.

Identification training devices; peep-boxes, shadowgraphs, projectors.

Ship, airplane and armored vehicle pictures and models.

Displays of enemy and friendly equipment.

Recognition publications.

Aviation publications, official and unofficial.

Pertinent field and technical manuals.

Scrapbook and photo album of unit activities.

Newspapers, news and fiction magazines, cartoons, sketches.

Since some of the material listed above will be classified, a duty officer or enlisted man should be present whenever the situation room is open for use, making sure that only authorized personnel enter. When not in use, the room must be adequately secured.

Records and Filing System

The records and filing system of an intelligence office will vary with the theater of operations and the type of unit, but the following will serve as a check list.

a. Administrative Files

1. Orders from higher headquarters.
2. Correspondence.
3. Receipts for classified material.
4. Certificates of destruction of classified material.
5. Reports: Mission reports, special periodical reports, etc.
6. Forms.

b. Informational Files

1. Intelligence publications.
2. Aircraft identification material.
3. Training text material.
4. Maps and aeronautical charts.
5. Tactical bulletins, etc.
6. Objective folders, target charts and photographs.
7. Intelligence summaries and reports from higher headquarters.
8. Enemy order of battle.

c. Records

1. Intelligence Journal—chronological record of daily occurrences.
2. Cumulative index of information—subject index to information files.
3. Combat records.
4. Secret operational intelligence records—data on restricted flying zones, etc.
5. Training program records—completed and proposed.

Questions and Leads for Classroom Discussion

1. What is meant by collation and for what purpose is it intended?
2. The Intelligence Journal and Worksheet is kept by what echelon of command?
3. What will the Intelligence Journal contain?
4. A complete Enemy Air Order of Battle will include what information?
5. Why are War and Situation rooms maintained?
6. What is the general procedure for War and Situation rooms?
7. Name some of the most essential equipment needed in an intelligence office?

CHAPTER VIII

EVALUATION AND INTERPRETATION OF INFORMATION

Evaluation and interpretation of information consists of the close, critical and informed scrutiny of items of information. This systematic analysis includes evaluation of the credibility, accuracy and importance of the item and interpretation of its military significance.

These phases of processing are essential to the conversion of raw information into intelligence which is concise, free from irrelevancies and ready for immediate application by the using agency. Such intelligence must be complete. It must convey not only facts, but their significance and the deductions drawn from considering them in connection with previous intelligence.

While accuracy is paramount, speed in processing is vital and the intelligence officer is assisted in evaluation and interpretation by members of his organic intelligence section, specialists such as Photo Interpreters, Radar Scope Photo Interpreters, Technical Intelligence Officers, etc., and other members of the staff.

Reports may run the gamut from surprise enemy offensive action to deterioration of static enemy installations. They may indicate enemy movements of potentially offensive nature or possible withdrawals. They may concern weather directly affecting operations. They may pertain to a single air unit or may concern all air units and associated ground and naval units.

The extent to which information is evaluated and interpreted depends upon its source and the urgency of the situation requiring it. As an instance, flash reports of an enemy air attack would be disseminated immediately, while a P. W. I. report would be carefully evaluated and interpreted prior to dissemination.

In evaluating information, the intelligence officer must first determine its pertinence, credibility, reliability and accuracy. Immediately upon receipt by an intelligence section, information is subjected to a preliminary examination to determine its possible use. Its pertinence is determined by answering the

1252

THIS PAGE IS DECLASSIFIED IAW EO 13526

THE AUTHORIZED SYMBOLS GIVEN ARE USED FOR THE EVALUATION OF INTELLIGENCE INFORMATION IN THE THREE SERVICES OF THE UNITED STATES ARMED FORCES AND ARE IDENTICAL WITH THOSE USED BY THE BRITISH ARMED FORCES.

EVALUATION OF INFORMATION

SOURCE	TRUTH, CREDIBILITY, OR PROBABILITY
A—COMPLETELY RELIABLE.	1—REPORT COMFIRMED BY OTHER SOURCES.
B—USUALLY RELIABLE.	2—PROBABLY TRUE REPORT.
C—FAIRLY RELIABLE.	3—POSSIBLY TRUE REPORT.
D—NOT USUALLY RELIABLE.	4—DOUBTFULLY TRUE REPORT.
E—UNRELIABLE.	5—IMPROBABLE REPORT.
F—RELIABILITY CANNOT BE JUDGED.	0—TRUTH CANNOT BE JUDGED.

1253

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS UNCLASSIFIED

following questions:

a. Is the information of the enemy or of characteristics of the area of operations?

b. Is the information needed immediately and if so, by what agency?

c. Is the information of future value, and as such, is it of value to the immediate collecting unit or higher, lower, or adjacent units?

Once its pertinence is established, information must be weighed for credibility by carefully considering it in the light of the following factors:

a. Determination of the specific sources of the information. (Air, ground or naval sources, clandestine informants, "travelers," deserters, evaders, and escapers, agents, prisoners of war, etc.)

b. A critical scrutiny of the circumstances under which the report originated in order to determine whether the information could actually have been obtained under the existing conditions by the means employed. (In visual air reconnaissance, for instance,

consideration would be given to the factors of time, space, visibility and combat conditions affecting the mission.)

c. Evaluating the accuracy and reliability of the source on the basis of past experience. In rating the reliability of the source according to the established code indicated on the chart, the intelligence officer gives careful consideration to the character of the contact. Thus, an "A" rating should be given only under most unusual circumstances; for example, when the informant is an able and experienced intelligence officer. A "B" rating would be allotted to an informant of known integrity. The ratings of "C," "D," and "E" indicate a proportionately decreasing degree of reliability of the informant and an "F" rating is assigned when nothing is known of the informant and judgment is impossible.

Once the evaluation of source has been established, the intelligence officer must consider the degree of truth, credibility, a probability of the information submitted. The numbers 1 through 5 on the chart indicate the relative value of the information. These numbers are completely divorced from the alphabetical index pertaining to the source, for a completely reliable source may submit an improbable report while a usually unreliable source may submit a report confirmed by other sources.

When the item of information has been processed to the point where its pertinence, credibility, reliability and accuracy has been established, its significance must be established.

The intelligence officer must analyze it to determine its meaning, importance and significance with respect to intelligence or information already at hand. He must determine its conformity or nonconformity with existing information and its effect on the existing estimate of the situation. He must consider it in relation to such questions as:

a. What does it mean in connection with what is already known.

b. Does it alter or add significance to previous intelligence or information.

c. Does it tend to confirm or refute existing estimates of the enemy situation.

Correct interpretation leads to accurate conclusions concerning the enemy's capabilities and as each new item of information is processed, the interpretation placed upon it affects in some way the correct intelligence estimate. Conclusions already drawn may be either altered or confirmed, new capabilities discovered, old ones discarded; or the relative probability of the adoption of the enemy capabilities may become more clear.

Once the information has been processed into applicable intelligence, it is disseminated, by whichever means is dictated by its nature, and placed in the hands of the using agencies.

Questions and Leads for Classroom Discussion

1. What constitutes evaluation and interpretation of information?
2. What type of reports are subject to evaluation and interpretation?
3. What governs the extent of evaluation and interpretation prior to dissemination?
4. What factors govern evaluation and interpretation?
5. How is the significance of the information established?

CHAPTER IX

DISSEMINATION OF INFORMATION

Nothing is colder than yesterday's news, except yesterday's intelligence. Air Intelligence, to be of value, must be placed in the hands of individuals or units concerned in time to serve their purpose. It is, therefore, of the greatest importance that air intelligence be properly and quickly disseminated in accordance with its urgency.

CLASSIFICATION

In preparing Air Intelligence for dissemination, it is first classified under the following headings:

That which should be placed without delay in the hands of the commander, other sections of the staff, higher, lower or adjacent units.

That which can wait to be included in periodic or other contemplated future reports or summaries.

METHODS

Personal Contact

It is frequently possible for the Intelligence Officer or his assistants, to transmit either in person or by telephone, items of air intelligence of immediate value.

Special Messages

When it is possible for the intelligence officer to transmit important items of air intelligence either in person or by telephone, special messages may be transmitted by teletype, radio, tone telegraph, aircraft, or whatever other means of rapid communication may be available.

Conferences

The exchange of air intelligence between the various intelligence sections of higher, lower, neighboring and cooperating units is facilitated by frequent personal conferences between intelligence personnel concerned. In no other way can a community of interest and adjustment of viewpoint be so quickly and effectively realized.

Air Intelligence Situation Map

The Air Intelligence Situation Map for each unit will be maintained in a conspicuous place, and all personnel concerned with the tactical performance of air missions will be required to keep themselves familiar with the situation as portrayed thereon.

1255

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS UNCLASSIFIED

Since the intelligence officer is continually posting the latest air intelligence on the situation map, it constitutes an important and automatic method of dissemination.

Intelligence Documents and Reports

Documents and reports utilized for the dissemination of air intelligence are:

a. Intelligence Estimate of the situation.

b. Periodic Intelligence Reports.

c. Special Intelligence Reports and Studies.

d. Intelligence Summary.

e. Objective Folders.

f. Operations Orders and Intelligence Annexes, if an intelligence Annex is used.

ESTIMATE OF THE SITUATION

An Intelligence Estimate of the Situation will be furnished the commander by the intelligence officer, either upon his own initiative or when required by the commander. The estimate may be written or oral. It will summarize the enemy situation and capabilities. Usually the intelligence officer will be able to anticipate the necessity for such estimates; however, he must be prepared at all times to furnish an estimate to the commander. *(See Chapter IV.)*

PERIODIC INTELLIGENCE REPORTS

A Periodic Intelligence Report is an intelligence document which presents the intelligence produced in a given period of time. It is issued by all higher air units, that is, wing or equivalent task forces, by directive and usually squadron and Group Intelligence Sections at the desire of the commanding officer.

The period of time to be covered by this report is prescribed by higher headquarters or by the unit commander concerned. It is distributed to higher, lower, neighboring and cooperating units, and is a convenient means for keeping these units informed of the enemy situation, as determined by the unit preparing the report. It frequently contains important intelligence which has already been disseminated by means of special messages and in this way serves as confirmation thereof. An overlay of the Intelligence Situation Map, as of the close of the period is normally included as an annex to this report.

SPECIAL INTELLIGENCE REPORTS AND STUDIES

The Commander of an air unit often will desire a special report or a detailed study on some subject affecting the enemy. These may vary from a few words delivered verbally to an elaborate study supported by maps, charts and photographs. Intelligence Officers should be prepared to conduct the study and to submit special reports on such subjects as the following:

a. Enemy air situation including location of air bases; airdromes, occupied and unoccupied, and changes therein; type, amount, characteristics of equipment; tactics; and anti-aircraft defenses, air and ground, passive and active.

b. Enemy air force capabilities and their probable affect upon us.

c. Probable reaction of the enemy to our contemplated air operations against him.

d. Areas, forces, or installations which should be photographed, reconnoitered, or kept under surveillance.

e. Location, description and importance of new potential objectives for air attack.

f. Aircraft warning service of the enemy; its extent and effectiveness; methods of avoiding it wholly or in part; and efficiency of its fighter organizations.

INTELLIGENCE SUMMARY

A brief report summarizing the enemy situation as known at the moment of reporting and as it effects our contemplated air operation is called an Intelligence Summary. The Intelligence Officer should be prepared to give orally such a summary to his commander at any time on call, or when changes in the enemy situation dictate. It is intended that it will be the briefest possible statement of facts, indicating the latest developments of the enemy situation and substantially less extensive as to volume and detail than an Intelligence Estimate of the Situation. It is particularly adapted to teletype transmission, due to its brevity. It will be used normally only from higher to lower units as a means of keeping the subordinate units advised as of the developments of the situation in cases where these units are connected by a teletype circuit to the headquarters making the report, and in lieu of issuing special intelligence messages to each subordinate commander. Intelligence summaries are numbered chronologically, beginning with number one (1) at the start of each twenty-four hour period.

THE OBJECTIVE FOLDER

As transmitted to a subordinate unit for use in planning and executing an air operation, an Objective Folder constitutes principal means of dissemi-

1256

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS UNCLASSIFIED

nating intelligence of a particular locality which might be selected as the objective of an air attack. It contains all available information on that particular place and the information is classified by subject to include the vital elements most likely to be classified as targets. *(See Chapter XVIII.)*

Changes in, or additions to, objective folders already distributed, normally will be covered in special intelligence messages and confirmed in the next periodic report.

When completed, an objective folder should include the following items, or as many of them as are needed to supply the necessary intelligence for attack of the various vital elements of the place concerned.

a. A reference for filing. Objective folders are normally filed alphabetically by place, name of the country first, and the name of the place or town within the country second. For example: U.S.A., Chicago, Illinois.

b. A general description of the place concerned including such elements as population, location, climate, food supply, water supply, rail connections and other places, highway connections with other places, signal communication with other places, medical facilities and health conditions, availability of labor, building materials and construction machinery, suitability of terrain for airport construction, local fortifications and military garrisons.

c. Vital features separated and classified according to subject to include such of the following as may be pertinent to the particular place concerned.

1. Electric power plants.
2. Aircraft factories.
3. Local refineries and oil storage facilities.
4. Steel plants.
5. Coal yards.
6. Airports and air bases and transportation thereto, and the facilities and stores at the airport.
7. Munitions factories and their source of power.
8. Rail transportation systems, yards, stations, and bridges.
9. Highway transportation systems, bridges and defiles.
10. Canal transportation systems and locks.
11. Harbor facilities, docks, waterfront warehouses, unloading facilities, etc.
12. Naval bases.
13. Military stores.
14. Harbor defenses.
15. Water supply systems.
16. Other systems by subject.

For each objective folder, the following is desired.

a. A map showing the objectives, together with adjacent terrain within approximately a 15 mile radius of the objective, in order to permit the subsequent determination of an initial point, best approaches to the objective and a rally point. This map should be sufficiently large scale to permit selection of landmarks as well as the above data.

b. An objective overlay whereon are shown the limits of the objective, important landmarks and other items for the purpose of accentuating the objective and certain terrain features to permit the proper interpretation of the unmarked map of the area.

c. An anti-aircraft defense overlay showing the location and range circles of fixed anti-aircraft artillery installations. Not only at the objective but within the 15 mile radius therefrom. Aircraft warning nets and fighter airdromes should be indicated also.

d. An aerial photographic mosaic of the objective to a large scale whereon are shown the vital points within the objective.

e. A target overlay whereon are shown the outlines of several vital points within the objective and whereon these are indicated as separate targets given lettered or numbered identification and described by appropriate legends.

f. Drawings, aerial obliques, picture post cards and commercial or amateur photographs that may be available of the target properly identified to correspond to the target designation made in *e.* above.

g. The target and weapon analysis, which is a

1257

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS UNCLASSIFIED

written analysis of each target identified as in *e* above, explaining the nature, overall dimensions, height, construction, and number and type, bombs and fuses to be employed against each to accomplish the destruction.

OPERATIONS ORDERS AND ANNEXES

A brief summary of air intelligence is disseminated by inclusion of intelligence items such as information of the enemy in paragraph *1a.* of an Operations Order, or in paragraph *1a.* in an annex to an Operations Order. When the amount of enemy information is limited or can be briefly stated, this method for the dissemination of intelligence to lower units is used. It should be noted that the dissemination of intelligence is not a primary purpose of either an operations order or an annex thereto. It is included only to show the existing enemy situation as a setting for the tactical mission ordered in the operations order and for the intelligence missions ordered in the Intelligence Annex.

TRANSMISSION OF INFORMATION

To Higher Headquarters

a. Squadrons. Information collected by operating squadrons should invariably be transmitted to higher headquarters as expeditiously as possible.

When squadrons are on the same airdrome or reasonably convenient to the wing or equivalent task force headquarters, intelligence will be delivered by messenger. When squadrons are on widely scattered airdromes it usually will be necessary for each squadron to send to higher headquarters, by teletype, a summary of the information collected on each mission forwarding to higher headquarters the different intelligence reports as required.

b. Group Headquarters. Group headquarters will not normally be concerned with the unprocessed information, collected by its squadrons, except in disseminating within the groups, critical items of enemy information and in checking points to determine the manner in which the squadrons are performing their intelligence functions. The normal methods of transmitting, to higher headquarters, intelligence produced by these units is a periodic intelligence report.

From Higher to Lower Headquarters

The means that may be employed in dissemination of information to lower echelons are those that we have just gone over; namely, the intelligence estimate periodic intelligence report, special intelligence report, etc.

Within the organization, each unit intelligence officer is charged with keeping the personnel informed of the enemy situation. This may be accomplished by means of oral summary, situation maps, and bulletin board information.

Questions and Leads for Classroom Discussion

1. How is intelligence classified for dissemination?
2. What are four methods of dissemination?
3. What is a periodic intelligence report?
3. What is an intelligence summary?
5. Where is intelligence included in the operations order?
6. How is information transmitted?

1258

THIS PAGE IS UNCLASSIFIED

CHAPTER X

SPECIAL SOURCES OF AIR INTELLIGENCE INFORMATION

It has been emphasized that intelligence information is the collected, processed and disseminated information that may give us the capabilities and vulnerabilities of an enemy or a potential enemy. Any source of ordinary information can be a source of intelligence information.

In Chapter VI it is stated that an air commander should continuously collect intelligence information, utilizing all agencies both within the Air Force and in other branches and services. It has also been stated that collection agencies vary with the size and composition of the command, with higher echelons having available to them a larger number of collection agencies.

In squadrons and groups, the intelligence officer is mainly dependent upon information secured from his own combat crews and from higher headquarters.

In higher headquarters there are many and varied sources of information, each of which serves a special purpose. Through his collection plan, the intelligence officer designates the collection agencies to be employed to secure the information called for in the EEI. Some of the more important special sources are outlined here as a general introduction to the following chapters.

THE AIR INTELLIGENCE DIVISION, USAF

The Air Intelligence Division, USAF is the primary agency for the collection, evaluation, interpretation and dissemination of air intelligence.

Its manifold functions are performed in order to insure the prevention of strategic, tactical or technological surprise from any source and provide air intelligence required for command decision and counsel upon air preparedness and air operations. The organization and functions of the Air Intelligence Directorate, USAF are fully discussed in Chapter XI.

1259

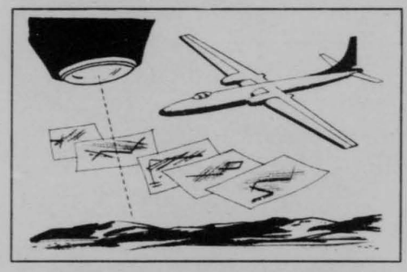
THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS UNCLASSIFIED

PHOTOGRAPHIC INTELLIGENCE



Because aerial photography is a primary, factual source of air intelligence information, all commanders and staff officers should understand how it is used. They should be familiar with the capabilities and limitations of photo interpretation. In higher echelons, photographic intelligence provides strategic and tactical information that is processed just as any other kind of information is. A full discussion of photographic intelligence will be found in Chapter XII. For information on handling photographic intelligence in lower echelons, see FM's 1-35, 30-21 and 1-20.

As discussed in Chapter VI, photographic reconnaissance units vary according to the theater and the type of mission they are to perform. The intelligence officer on the staff of the air commander outlines the requirements for photographic missions in his special intelligence plan, and also sets up the SOP for handling photographic intelligence in lower echelons, and in the processing units.

ELECTRONICS INTELLIGENCE

Electronics intelligence is derived from information concerning the following:

a. Enemy radio and wire communication systems.

b. Enemy navigational aids employing radio and radar.

c. Enemy radar detection, fighter-control, and gun-laying system.

d. Any other enemy radiation subject to intercept and analysis.

Because electronics information is technical, communications officers, particularly those specializing in radio countermeasures and radar equipment, cooperate with intelligence in collecting, collating, and evaluating it. The final interpretation of electronics information and the distribution of the resultant intelligence are functions of the intelligence officer. For further details see Chapter XIII.

CAPTURE INTELLIGENCE

Capture intelligence is gained from examining captured aircraft and equipment, analyzing captured documents, and questioning prisoners of war. Additional information is obtained from questioning deserters, our repatriates, travelers, evacuees, and the local population in occupied areas.

Technical experts, interrogators, and interpreter translators, are especially selected and trained to exploit capture intelligence.

The Capture Intelligence Branch (Command or Air Force) is headed by an assistant intelligence officer responsible for coordinating agencies collecting capture intelligence. His branch is divided into three sections:
