I. General Problem

For the past several months Bluebird has been endeavoring to ascertain by research, study, instruction and some practice what value (if any) can be derived from SI and H techniques when applied to war and specific Agency problems. These broad problems; using known SI and H techniques, may be classified as follows:

A. Can accurate information be obtained from willing or unwilling individuals.

B. Can Agency personnel (or persons of interest to this agency) be conditioned to prevent any outside power from obtaining information from them by any known means?

C. Can we obtain control of the future activities (physical and mental) of any given individual, willing or unwilling by application of SI and H techniques?

D. Can we prevent any outside power from gaining control of future activities (physical and mental) of agency personnel by any known means?

Bluebird believes that A (above) can be answered in the affirmative using SI and H techniques. Bluebird is not fully satisfied with results to date, but believes with continued work and study remarkable and profitable results can be obtained regularly.

However, E, C, and D (above) are as yet unanswerable although Bluebird is of the opinion that there in a worthwhile chance that all three may at some future date be answered affirmatively. This opinion is supported generally...
numerous individuals having knowledge of these techniques and by much
literature and intelligence in this field.

Since an affirmative proof of E, C and D would be of incredible value
to this agency Bluebird's general problem is to set up, conduct and carry out
research (practical - not theoretical) in this direction.

Set out below is one specific proposal aimed at achieving our ends as
rapidly as possible and with a maximum of security.

II.

Through internal agency channels, Bluebird was given the name of
an individual of extraction and not a citizen of the United States
who had been given certain operational security clearance. He was reported
to have done considerable work in SI and H and to have an unusual and interesting
general background. He was also reported as being reliable, trustworthy,
a known anti-Communist. In view of the above, and on the instructions of the
Director of I&D, he was brought to a safe area near headquarters and
interviewed, interrogated and observed by Bluebird on 19, 20 and 21 February 1951.
Personality, ability, intelligence, sincerity and apparent security
mindedness were impressive. Bluebird officers were unable to find any indications
of deviousness or pro-Soviet interests during these observations,
only apparent obvious weaknesses were his foreign background and non-United States
citizenship.

According to he was born in in...
discussed at various times his work and interest in the SI and H techniques. He claimed that most of his present work was along the lines of hypotherapy which involves post-H suggestion, but admitted that his experience with drugs, gases, etc., in conjunction with SI and H was somewhat limited, although he was familiar with much of the literature (U.S. and foreign) in these fields. 

Admitted that since he had been in the U.S. he had induced H conditions in at least several hundred individuals, male and female (in all age groups). Demonstrated successfully some of his operating methods before the B officers on the 19th, 20th and 21st.

For matter of record was briefed on the security aspects of B work and cautioned against all and any discussion outside concerning these matters. Signed the standard secrecy agreement.

III. GENERAL PROPOSALS

On the basis of apparent ability, relatively simple and easy cover, background, personality and interest, it is proposed that be either directly employed or contractually employed by ISS for the specific purpose of engaging in guided research, testing, and experimentation along SI and H lines under the general direction of the Director of ISS and under the immediate direction of B.

IV. SPECIFIC PROPOSALS

A. It is proposed that be brought to headquarters immediately and formally interviewed by (Interview to include basis of arrangements, cover, locations, salary, operational funds, and securing of PHS).

B. It is proposed that be given a full and detailed Polygraph examination by on material prepared by

C. It is proposed that immediately a full field investigation be started on to include checking of all names, places, squadrons, etc., mentioned by him (HIGH PRIORITY).
D. It is proposed that immediately after a security clearance has been given, full
security clearance he will be thoroughly briefed, given all necessary funds and instructed to begin research and testing along lines set
out in 5 (below).

E. It is proposed that after a minimum of time to permit full
opportunity to satisfactorily become operational, B officers and
trainees will (under suitable cover) participate in and assist with
the research and testing for purposes of training and experience.

V. BLUEPRINT - SPECIFIC PROBLEMS

Set out below are specific problems which can only be resolved by
experiment, testing and research as proposed in the paragraphs above. These are
not in any sense all of the problems B is considering, but are merely typical and
point up the need for practical research.

1. Can we "condition" by post-H suggestion agency employees (or persons
of interest to this agency) to prevent them from giving information to any unauthor-
ized source or for committing any act on behalf of a foreign or domestic enemy?

2. Can we in a matter of an hour, two hours, one day, etc., induce an H
condition in an unwilling subject to such an extent that he will perform an act for
our benefit? (Long range).

3. Can we create by post-H control an action contrary to an individual's
basic moral principles?

4. Could we seize a subject and in the space of an hour or two by post-H
control have him crash an airplane, wreck a train, etc.? (Short, immediate activity)
5. Can we by SI and II techniques force a subject (unwilling or otherwise) to travel long distances, commit specified acts and return to us or bring documents or materials? Can a person acting under post-H control successfully travel long distances?

6. Can we use SI and II to combat fatigue, produce extreme mental effort?

7. Can we guarantee total amnesia under any and all conditions?

8. Can we "alter" a person's Personality? How long will it hold?

9. Can we design tests to determine whether or not an enemy agent has been conditioned by SI and II or any other method?

10. Can we detect SI and II by use of SI and II (regression)?

11. Can we make a "conditioned" subject reveal by SI and II specifically how they were conditioned (drugs, torture, fatigue, hostage pressure, techniques)?

12. Can we devise a system for making unwilling subjects into willing agents and then transfer that control to untrained agency agents in the field by use of codes or identifying signs or credentials?

13. How long can we sustain a post-H suggestion-unaided-with reinforcement?

14. What would be fastest way to induce SI and II conditions — with drugs— or without any mechanical aids?

15. Can we devise a standard simple relatively fast technique for inducing SI and II conditions that can be used by untrained agents (with or without drugs)?

16. Is it possible to find a gas that can be used to gain SI control from a gas pencil; odorless, colorless; one shot, etc.?

17. What are full details on "sleep-inducing machine"?
18. How can sodium A or P or any other sleep inducing agent be best concealed in a normal or commonplace item, such as candy, cigarettes, liquor, wines, coffee, tea, beer, gum water, aspirin tablets, common medicines, coke, tooth paste?

19. How effective can the "carotid artery technique" be made? Can it be used while subject is unconscious? Is it faster than other techniques?

20. Can we, using SI and II extract complicated formula from scientists, engineers, etc., if unwilling? Can we extract details of gun emplacements, landing fields, factories, mines?

21. Can we, while a subject is under SI and II control, show them a map and have them point out specific items, locations, etc., on the map? Can we also have them make detailed drawings, sketches, plans?

Could any of the above be done under field conditions and in a very short space of time?
