TEXT: ABSTRACT. DOCUMENT CONTAINS GRAPHS AND DIAGRAMS.

BEHAVIOR OF NEN FIELD AS A PARANORMAL PHENOMENA DURING THE DYNAMIC MIMEOGRAPHY PROCESS HAS BEEN DETECTED BY MEANS OF THE VIDICON TV CAMERA, WHICH IS SHIELDED AGAINST LIGHT, AND IT WAS RECORDED WITH A PSI SPOT A AS A MOVING SPOT WAS A TYPICAL VIDEO TAPE RECORDER. THE DYNAMIC CHARACTERS OF NEN FIELD WHICH CONSISTED OF SEVERA NUMBER OF PSI SPOTS. IT HAD A CIRCULAR SHAPE, MOVED AROUND THE CENTER OF THE SCANNING REGION, AND ITS STRENGTH (BRIGHTNESS) RELATIVELY STRONGER THAN OTHERS. OTHER SPOTS SUBORDINATELY AND LOOKED LIKE NEARLY FIXEDNESS, BUT THE BEHAVIORS THESE PSI SPOTS HAD SOME REGULARITY. MOVEMENT OF THE PSI SPOT AMONG A LOOKED LIKE COMPLEX AND RANDOM, BUT THE PATH (RACK FIGURE) OF PSI SPOT A CONSISTED OF SOME SIMPLE MOVEMENTS WHICH TRACED STRAIGHT LINES, CURVES, PARTS OF ACUTE AND OBTUSE ANGLES. FEW OF THE PATHS SPOT ARE THE SAME. FREQUENTLY THE PSI SPOT A TURNED AROUND BY PSI TO THE LEFT AND THE RIGHT, BUT THESE A ROTATIONAL DIRECTION DID NOT FOLLOW RULE AND HAD NOT ANY SPECIAL FEATURE. THE VELOCITY OF THE PSI SPOT A HAD A TENDENCY TO VARY PULSELY. THE PSI SPOT A WHICH APPEARED UNDER HIGH SPEED STATES OF VELOCITY AT FIRST, NEXT MOVED UNDER RELATIVELY LOW SPEED, AND THEN DISAPPEARED UNDER ABOUT THE VELOCITY OF THE PSI SPOT A DISTRIBUTED DECELERATOR STATES. BETWEEN 0.1 APPROXIMATELY EQUAL TO 8 MM PER SECOND, AND ITS AVERAGE 1.8 MM PER SECOND. MOST OF FREQUENT STATE OF VELOCITY WAS 0.6 APPROXIMATELY EQUAL TO 1.0 MM PER SECOND. BUT OCCASIONALLY THE PSI A PAUSED TO MOVE FOR AN INSTANT (IT WAS WITHIN 0.6 SECOND), AND TIME OF THESE REST STATES OCCUPIED ABOUT 10 PERCENT OF THE WHOLE TIME FOR WHICH THE PSI SPOT A WAS OBSERVED. MOST OF PARTS OF THESE STATES HAD A TENDENCY TO EXIST ON THE POINT OF TURNING ITS COURSE, OR NEAR IT. THE STRENGTH OF THE PSI SPOT A HAD A TENDENCY TO VARY, AND IT WAS WEAK AND NEAR THE THRESHOLD LEVEL OF DETECTION. THERE WAS NOT ANY RULE BETWEEN THE STRENGTH AND THE VELOCITY, BUT FROM THE STANDPOINT OF THE CYCLIC CHANGE, OFTEN, ITS ONE CYCLE, WEAK STRONG WEAK, TENDED TO CORRESPOND WITH TWO CYCLE OF VELOCITY CHANGE. OF POSITIONS OF STRONGER STATE EXISTED ABOUT THE TURNING PART THE PATHS, AND RARELY IN EXISTED ON THE STRAIGHT LINE OF THE FROM THE POINT OF VIEW OF THE SCANNING REGION IN

Approved For Release 2002/05/17: CIA-RDP96-00792R000400340003-4
