DATA PACKAGE

A. This data package has information which may be helpful in narrowing
down search possibilities. Data is from an unproven source, is unevaluated and should
not be taken too literally. Some data may be better than others: overall sketches
may be better than specifics; scale of distances is usually of low confidence.
This data, when combined with other knowledge (local maps, etc.) may provide
additional clues for searching. It might narrow down which town, or provide a
list of several towns/areas, which might be the suspect area.

B. This data package has two aspects.

PART 1, which has possibilities in a particular city (though not identified
specifically).

PART 2, which has possibilities further from a town or city, but thought to
be 10-15 miles from a town center.

Although there are some location differences between these parts, some
of the specifics on the local area (house description, etc.) have similarities.
Part 1 and Part 2 are from different sources.

The Black Vault

The Black Vault is the largest online Freedom of Information Act (FOIA) document clearinghouse in the world. The research efforts here are responsible for the declassification of hundreds of thousands of pages released by the U.S. Government & Military.

<u>PART 1</u>

A. Page 1 - Overview of geographic location, depicting towns, roads and bodies

of water (not to scale).

Page 2 - Expansion of the area referred to on page 1 as "Cross Road Town"

(not further identified) item labeled "Traffic Circle" may actually

be located between the 2 rivers.

Page 3/4 - Expansion of area in vicinty of the "Traffic Circle" referred to

on page 2.

Page 5 - Sketch of suspect building

B. Additional information

(1) Vicinity of traffic circle (page 3) - Modern art near train station and

older art, stonework near cathedral.

(2) Suspect building (page 4) - On narrow cobblestone alley in an old section

of town. The building may be a warehouse type building, with a large wooden

door. Windows on the second floor are framed with heavy white stone which

contrasts greatly with the building. A courtyard is located behind the wooden

door. Individual may be located in a basement room.

PART 2

Additional Data which may assist in narrowing down search possibilities:

 A. Over view sketch of suspect city (see sketch attached):

  1. Scale of miles is uncertain; however suspect site could be generally 10-15 miles north of town/city center. (Possibly at edge of town boundaries)

  2. There may be a large body of water (Dam, Lake) to west.

  3. Another possibility (not as likely) is to west of town (see sketch)

  4. The main suspect area is near a river (see sketch).

  5. There may be moutains in distance (North).

  6. Uncertain as to specific city/town; but relatively sure a wide river flows through it, generally N-S direction. <u>This town may be Verona.</u>

 B. Additional specifics on possible local area of interest:

  1. Near a local high point, like a round knob hill. Maybe towers, columns on it. May be greenish/yellow in hue. Not many buildings on it. Empty fields surround it.

  2. A house of interest is located near this hill, on a road sloping up to hill. House appears white, may be 2 stories, and is on left side going up hill. Road dead-ends, or goes around this hill.

  3. This house is in a row of others. Has a flat front, and small ledges.

  4. House may be 5th or 6th one beyond a slight bend on this road. Behind house of interest may be a green area (building, or possibly a place with (in-door) plants, flowers, etc.)

  5. A market place is nearby.

 C. Overall, subject of search may experience sever difficulty on <u>22 Dec 1981.</u> Possible injury, etc.
