L/W interface

Site appears to be flat and rolling land. Land water interface that is in all probability a river. There is a structure here. There is a second structure that is a service and has an up/down quality. There is a second structure which has an across quality and is also a service this is probably man made LAND.

Temperature is warm and thick and moist. There is a smell here like spearmint. There is a flat taste. There is a buzzing noise and also noises which sound like.
