1. (S/NF/SK) Tasking: See original tasking data, attached. No change, intel question remains unanswered (per discussion with ops officer).

2. (S/NF/SK) Session: Virtually no time was spent in S1/S2; after describing a land/land interface, source was moved directly to S4 where he was directed to place his pen in the S2 column and resume describing the site. Shortly thereafter, source was instructed to draw a S6 time line encompassing the decade 1971-1980; (while the tasking instructions specified a different time line, monitor split this up with the intent that source would not recognize the site as the same one which he had worked during the last three sessions successively. Despite this effort at concealment, source recognized the site almost immediately and was provided confirmation by the monitor). Source description of what appeared to be much underground activity was the topic of discussion between monitor and ops officer during a break in session. Later, ops officer suggested that, since source had only been provided with the first part of the time line, perhaps source had been describing construction of the target facility. Monitor feels that this assessment is probably correct. Source was given a number of movement exercises before he actually began perceiving/describing the target. (Monitor was convinced that the source was on site but not picking up on the target). Source was instructed, at one point, to move to the "director's office" and into the "project files". This movement exercise was an experiment on the part of the monitor, the results of which can not be determined.

3. (S/NF/SK) Summary: Site is a semi-isolated place; flat. Target is both about and below ground. Site seems to have "lines" radiating

from it. The lines were composed of a series of "dots". These dots were seemed to relate to the idea of a long, round, pointed object covered with some type of "concealing" material.

4. (S/NF/SK) Feedback: Source was informed that he had probably perceived the target during its construction, (ergo, the repeated descriptions of digging, etc., activities), and that next session he would be asked to move forward in time for other target-related data.
