DT-S   23 July 1987

MEMORANDUM FOR THE ASSISTANT DEPUTY DIRECTOR FOR SCIENTIFIC AND
TECHNICAL INTELLIGENCE

SUBJECT: SUN STREAK Interim Operational Report #1 - 8711   (U)

1. (S/NF/SK) Four Sources have engaged this target during the
course of seven sessions. All perceived an area that is desert-
like with a large body of water nearby.

    a. (S/NF/SK) Source 003, during Sessions #1 and #2
described an object which was "linked and controlled". It was
associated with an "urban-located, somehow-hidden, organization
that is vying in a competitive or confrontational sense with
another, larger, more open organization. Having this object or
device, which is heavy, metal, but still moveable when necessary,
lends power or influence to those who have control of it. This
advantage is lost if it becomes known where either its
controllers or the device itself is located". At the beginning
of Session #3, the Source was made aware that the target "device"
was a missile and that its location was to be perceived. The
Source then described an oppressively hot, rundown industrial
area. Within what appears to be an old warehouse is a large room
where several disassembled missiles are located. In the near
future, perhaps a week to ten days, the missiles will be moved to
another location. This will occur at night. Two trucks, one
providing security escort only, will transport the missiles to an
area in the hills not too far from their present (23 July 87)
location. The missiles will ▓▓▓▓▓▓▓ inside an old, abandoned
structure with an underground component. This structure has an
above-ground entrance buttressed with beams and supports. There
is something resembling a "part of a house" located on top of the
structure. Source's sketch of the area is at TAB A.

WARNING NOTICE: SENSITIVE
INTELLIGENCE SOURCES AND
METHODS INVOLVED

                    HANDLE VIA SKEET CHANNELS ONLY
                       SPECIAL ACCESS REQUIRED

                              CLASSIFIED BY: DT, DIA
                              DECLASSIFY BY: OADR

   b. (S/NF/SK) Source 011 described an urban area situated on
a flat plain with moderate-size mountains to the north and
northeast. Here source perceived a structure with "an above-
ground dungeon" which in which prisoners were sometimes kept.
Connected with this area was a second location in the foothills
to the northeast. This second area was described as a large
cavern or vault located in a large hillside or mountain. There
was a large, iron, sliding door inside. On 22 July 1987 this
cavern appeared empty. The cavern appeared to have been
abandoned during the first half of the century. Source's two
sketches of the area are at TAB B and TAB C.

   c. (C/NF/SK) Source 018 described a large complex of flat-
topped building located in a hot, arid location. One "missile",
supported on a stand, was observed located in a large room on 23
July 1987. Source observed a technician working on the missile.

   d. (C/NF/SK) Source #079 described a locale in terms
similar as those used above, and went on to describe a smaller
body of water located to the west, "like a lake" with white sand
and grass where recreational activities take place. The target
missile has not moved during the period of 3 July 1987 to 21 July
1987. Source perceived that it would probably be moved to a new
location described as a "low tunnel."

2. (S/NF/SK) Based on an assessment of the data provided, the

SG1A

the single most important issue in this search.
