memorandum

DATE: 2 September, 1987

REPLY TO
ATTN OF: DT-SSUBJECT: SESSION SUMMARY, PROJECT 8712 (C-SS)
SG1J

TO: DT-S (ATTN: [REDACTED])

1. (S-SS) Statistics:

Project #:	8712
Viewer:	018
Session date:	1 SEP 87
Filename:	8712.L01

2. (S-SS) This session dealt with two timelines: one extending from 6 SEP 87 through 12 SEP 87, and the other from 13 SEP 87 through 19 SEP 87.

a. The perceptions gained from the 6-12 SEP 87 timeline are as follows:

- 1) 6 SEP 87: There is a strange "sour" reaction; the same reaction which takes place in your body when you suddenly bite down on a sour pickle. I have no idea what this means, and it was not further pursued.
- 2) There are no special perceptions from the area of 7 SEP 87.
- 3) 8 SEP 87: There is a perception of "Ahhhhh!", (AOL: as though you finally stopped hurting and could relax again). There was the perception of "easing off".
- 4) 9 SEP 87: Again, there was the same feeling which was described in 1) above. Again, it was not further pursued.
- 5) There are no further perceptions from the area between 9 and 12 SEP 87.

b. The perceptions gained from the 13-19 SEP 87 timeline are as follows:

- 1) There were no perceptions gained from the area of this timeline between 13 and 16 SEP 87.
- 2) 16 SEP 87: Starting about 1/4 of the way through the day, there is a quickly growing (but not sudden) sensation of extreme heat. The heat grows to its greatest intensity slightly past the middle of the day and continues, fading slowly, all the way through the 19th. This heat was perceived as being

cauliflower-like billowing clouds of very black smoke with deep red fire inside it, coming from a wide, very flat area of water (although only hinted at in the transcript, there was a good deal of [AI] amazement that the water was so entirely flat. No waves or other disturbances were perceived.). There was also the perception of some "thing" off to the side of my vision, but I could not manage to turn my attention to it.

2. (S/SS) Viewer's critique: I feel pretty good about this one, but realize that there will be a terrible temptation to AOL this fire on the water as some kind of oil tanker in the Persian Gulf, etc. The one thing which prevents me from going ahead and jumping to that conclusion is the absolute smoothness of the water's surface. It just seems too smooth to (AOLing here) fit my concept of the surface of a sea or ocean.

WARNING NOTICE: INTELLIGENCE SOURCES AND METHODS INVOLVED

Session Procedures Report (S/NF/SK)

PROJECT NUMBER: 8712	SESSION NUMBER: 1
DATE OF SESSION: 1 SEP 87	TARGET COUNTRY:
REFERENCE:	MISSION STATUS:
TECHNIQUE UTILIZED: CRV	SOURCE IDENTIFIER: 018

1. (S/NF/SK) Monitor Tasking: Refer to tasking packet; no amplifying instructions received.
2. (S/NF/SK) Source Tasking: Source was informed that the session would initiate a new project. The monitor then instructed the Source to construct a time line (6-12 Sep), to label it with the coordinates provided, and to search it specifically for an event or events keyed to these coordinates. These same procedures were applied to a second time line (13-19 Sep).
3. (S/NF/SK) Summary: Source's summary and comments are attached.
4. (S/NF/SK) Comments: Monitor terminated session when the Source got so close to the problem that AOL began to significantly effect the data. Afterwards, the Source stated that, if more work will be required on this project, AOL would most certainly remain a difficulty.
