COORDINATES: 589281/856562

REQUIREMENT: Access the Target Site at 589281/856562 and identify/describe the new structure(s) of high intelligence interest. Address and respond to the following EEI:

- a. Provide an overview of the Target Site and identify the structure(s) of specific intelligence interest.
- b. Describe the purpose and actual or intended use of the new/recent construction activities at the Target Site.
- c. Provide conceptual drawings in support of your findings.

SESSION SUMMARY

SESSION: 10 DEC 87, 1020HRS - 1115HRS

COORDS: 589281/856562

The basic Stage I gestalts of this site are land/structure/
water interface. There is a very strong AOL of a river, however,
there seems to be a hardness, or solid quality to the water/liquid.

The structure is tall, large, angular, and blocky. It is
also grey, hard, cold, and smooth (AOL-like poured concrete).

The land is open, flat, gently sloping, hard and cold.
There are colors of green and brown (AOL-like frozen tundra)

AVs - none
PIs - none

SESSION SUMMARY

Site consists of structures/land/water interface.

The important structure appears to be tall, angular, and blocky-looking. The surface of the structure is hard, grey, cold and smooth (AOL-like poured concrete).

The land at this site is hard, open, mostly flat, with gentle sloping.

There appears to be a body of water nearby, most likely a river. The water seems to change from hard to soft, as if it may be frozen at certain points, or maybe at different times.

There is an over-all feeling of flatness, open terrain and very cold.
