SUMMARY OF INFORMATION

The target is a large, four or five-storied building with a flat roof. Two separate and distinct types of areas are perceived within the building: the first houses normal staff and administrative personnel, while the second appears identifiable with perceptibly higher ceilings. The second area is conceptually dedicated to ongoing, scientific, research and development efforts culminating in the construction of one or more prototypes. The concept of "communications", and enhancement of communication capabilities, thematically dominates the reporting. The Soviet military, industrial, and intelligence complexes, particularly that of Signals Intelligence (SIGINT), appear to be the intended beneficiaries of this R&D effort.
