~~SECRET~~/NOFORN - HANDLE VIA SKEET CHANNELS ONLY

PROJECT SUN STREAK (U)

WARNING NOTICE: INTELLIGENCE SOURCES AND METHODS INVOLVED

-----

PROJECT NUMBER: 8802	SESSION NUMBER: 1
DATE OF SESSION: 10 MAR 88	DATE OF REPORT: 10 MAR 88
START: 1415	END: 1440
METHODOLOGY: CRV	VIEWER IDENTIFIER: 003

-----

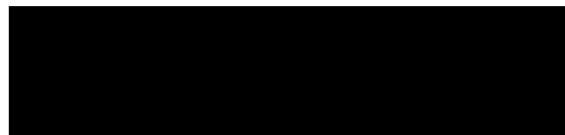

1. (S/NF/SK) MISSION: Describe the contents of a building (photo provided) in the Soviet Union (coordinates 275601/958588). Also, provide information on the dimensions and features of the target building, the immediate surroundings, general geographic location, and function and use of the contents of the building.

2. (S/NF/SK) VIEWER TASKING: Coordinates only.

3. (S/NF/SK) COMMENTS: 003 seemed to have a phenomenally good signal (target) lock-on throughout at the beginning of the session, but then slipped into AOL drive, and finally off of the target.

[Note: It has become apparent, after working with this viewer for more than 2 years, that unless a certain degree of self-doubt (vs overconfidence, as was the case in this session) is present in 003's mind, a "story line" will develop around a AOL nucleus. Therefore, a good deal of monitor scrutiny is required, particularly during the transition between Stage 3 and Stage 4. (003 has been instructed re the problem)].

~~SECRET~~/NOFORN - SKEET CHANNELS ONLY

CLASSIFIED BY: DIA-DT  
DECLASSIFY ON: OADR

This document is made available through the declassification efforts  
and research of John Greenewald, Jr., creator of:

# The Black Vault

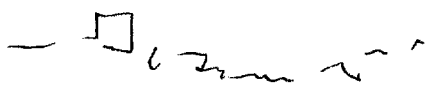

The Black Vault is the largest online Freedom of Information Act (FOIA)  
document clearinghouse in the world. The research efforts here are  
responsible for the declassification of hundreds of thousands of pages  
released by the U.S. Government & Military.

**Discover the Truth** at: <http://www.theblackvault.com>

Site involves a structure on land with "live things" present. There are significant land features also present. Surrounding terrain is rural, with large areas of fields bordered by steep, rocky, prominent stretches of hills or mountains. There are rocks, ice, and snow present currently. The people of the region are unsophisticated, close-mouthed, and pastoral, who know in generalities about what's going on in the outside world but think of it only in abstract, as if they're isolated from it and more concerned with their own affairs. The structure of interest and the enterprise it represents were located here largely for those very reasons--even if the people were curious about it they would mind their own business. Sparsity of population was also a reason for its location here. The structure itself is "more than it seems," and is somewhat unusual in its design, construction, and setting; it is oblong, rectangular in most dimensions, and with an apparently flat roof. But the sharp angles of it are rounded off, "like" faceted. And it has a major underground component. There is a sense that besides the space inside dedicated to the operational purposes of the structure, there is also living and recreation quarters, making it virtually self-contained. There seem to be "conveyances" associated with it that are housed/garaged with it, but are only used when absolutely necessary. There is a sense of figurative "tentacles" spread out in all directions, "like" communications links, which monitor, keep track of, keep abreast of current situations. It's almost an anomaly--a sophisticated "aware of what's going on" place out in the middle of a very large area that is not especially advanced or populated, where the people live life slowly from day to day. The part of the structure that shows doesn't reflect the sophistication inside, and doesn't represent the true extent of what's there. The people that occupy the place are interested, enjoying themselves, occupied, and dedicated, though not fanatically so. They're generally interested about what their doing. They intentionally located themselves in a remote area to avoid too much interference and complexity that would be present in more built-up surroundings. The inside of the structure is "snug", structurally very sound, and has somewhat the feel of an HQ/Ops central--a place from which missions are run/monitored/analyzed/dispatched. Analogically, it is "like" a ground-based submarine. There is a sense of some sort of defensive screening/early warning/communications equipment to let those inside know of exterior developments in time to decide among various courses of action to pursue. The "missions" conducted may be passive in nature--i.e., "find out about things" with little actual interventionary or interdictory authority or inclination.
