DATE: 26 September, 1988

REPLY TO
ATTN OF: DT-S

SUBJECT: SESSION SUMMARY (C/SS)

TO: DT-S (ATTN: 095)

1. (S-SS) STATISTICS: Viewer: 018
 Session date: 26 SEP 88
 Start time: 1118
 End time: 1151
 Mode of operation: CRV
 PI: None
 AV: None

2. (S-SS) CUING: "Describe target L".

3. (S-SS) RESULTS: A time line (see page 2 of session transcript) drawn with one end as "L when new" and the other end as "L now" produced some impressions of change. Those changes were:

a. Physcial changes: Physical changes occurred beginning at about the half-way point. They were:

1) First there was a sudden but very slight relief of pressure (almost like a tiny crack of insignificant proportions happened).

2) Further down the line, there was a sudden taste of copper or tarnish which quickly stabilized, and only grew slightly as the time line progressed.

3) Near the present time, a cool, inert feeling began to appear during those times when L was not active.

b. Activity changes: There was an impression all along the time line that L has intermittent times of activity, interspersed with times of non-activity. The differences between "when new" and "now" are:

1) During its times of non-use, L appears to be cooler and more inert now than it was when new.

2) During its times of use, there is an almost imperceptible difference, but it appears to be of no significance, whatever (see 3.c. Function changes:, below).

This document is made available through the declassification efforts
and research of John Greenewald, Jr., creator of:

The Black Vault

The Black Vault is the largest online Freedom of Information Act (FOIA)
document clearinghouse in the world. The research efforts here are
responsible for the declassification of hundreds of thousands of pages
released by the U.S. Government & Military.

Discover the Truth at: <http://www.theblackvault.com>

c. Function changes: I find no perceptible difference in L's functioning between "when new" and "now".

d. Change in Users: The circle of users in the immediate vicinity of L appears to have shrunk over the time line, but there is presently a "distant user" who was not there before. This "distant user" accesses L only by very indirect means (see allegorical sketch, page 3). There was also a strong impression that the users must schedule their usage of L, often having to "queue up", almost like waiting in line for it.

① S Z O M O T I R A S, ALS
 PRESSURE FEELING THEN WEAKER FEELING
 ALS LIKE CRACK APPARUS

② Sudden strong taste of copper or tannish, which seems to stabilize quickly + only knew slightly as time progresses.

③ COAL INERT FEELING

④ (4 1/2) REPORTED FEELING OF AN INTERMITTENT FIELD - FELT ALMOST LIKE A MAGNET.

PROBS BOTH HANDS - FIND DIFFERENCES (COOLON NOW)

(6/2)

1. DIFF IN TEMPERATURE BUT IT'S A QUESTION DIFF WITHIN THE FIELD IS NOT PRESENT. DIFF WITHIN FIELD IS PRESENT IS VERY SLIGHT

2. DIFF IN "F502" OF THE FIELD - FIELD ~~NEW~~ IS PERCEIVED AS A BLOS, FIELD NOW " " " BLOS W/A VERY SLIGHT COBBLEST TASTE + LIPS A COPPERY TASTE SENSATION TO MY HAND.

3 DIFFERENCES IN USE?
NOW: ~~FIELD~~ FIELD OF USE IS CIRCULAR AROUND L.

NOW: FIELD OF USE TO L, BUT HAS SK:

ENCIRCLED CLOSURE "ARM"
USED BY SMN AT A DISTANCE; ALMOST INDISTINCT
