

WORKING PAPER

Project: 8909-27 (W-2)
Date: 10 OCT 89
Time: 1401-1444
Viewer: 018
Session: 01

SUMMARY OF INFORMATION:

1. Describe the target site: The site is a group of structures near water. One manmade portion of the site is long, round, sloping vertically, and light green in color, with brown portions somehow "holding" it (see sketch, page 3). The light green portion is somehow "segmented", and has a generally round shape (see sketch, page 1). The gestalt of "segmented" appeared to be pertinent to more portions of the site than just this one.

The site is noisy with a constant "rumbling" sound, and a strange "scraping" sound, not unlike gravel in a rotating metal drum. Tastes and smells perceived were clean and fresh.

One portion of the site has a large "5" or "S" which is partially covered (see sketch, bottom of page 3).

2. Describe the key activity at the target site: Activity at the site appears to deal with the action causing the "rumble and grind" noise. There is also water falling in sheets from some segmented object, and a few people in small groups who are more concerned with each other than with the activity causing the noises within the very large structure.
