Date: 26 Oct 89
Viewer: 003
Session: 001
Time: 1515-1525

Summary of Information

Impressions of a large body of water, bounded by a curving shore area, bright, mild pleasant sunlight, a slight breeze, riffled, sparkling water, and a few light clouds in the distance. Present along the shore were a gathering of interlocking, brown to dark brown shapes of differing heights and dimensions with the greatest concentration being at the land/water interface, then growing fewer in number the farther out in the water they were. The surface quality of these objects was rough and slightly yielding. Analytic responses to the site included broken down pier pilings or a group of elephant seals.
