```

1. (S/NF/SK) Tasking: See attached tasking data sheet. No other instructions provided.

2. (S/NF/SK) Session: In monitor's opinion, session went well, i.e., good structure, etc. However, source experienced a great deal of self doubt/lack of confidence with regard to whether or not he was "on to" the correct site.

3. (S/NF/SK) Summary: Site involves a wide, open area and what may be a blockhouse. From this area, what seems to be a test is conducted. A person at the site is fairly satisfied with the results of the test, but anticipates minor equipment changes. (AOL's: 'MIRV' and 'Space Shuttle').

4. (S/NF/SK) Feedback: During session break, source was informed that the ops officer had expressed no negative feedback to the monitor.

Site involves wide open, austere area, w low solid structure w
windscreen + person observing. Observer is observing experimental
project + is satisfied that things have progressed according to
plan. Design modifications are involved, + evaluation of parameter
+ effects is being conducted. Project involves long,
slimy, smooth, cylindrical object. Rapid ^{vertical} movement
for a long distance is involved, while at point - becomes
a falling down + around, followed by skipping, bumping,
heat, slaking, whistling, ^{controlled} descending - not falling - which
~~is~~ culminates at a predetermined location in another flat,
austere area, w the object intact. Object seems to be
hollow, enclosing something, + suggests the smell of the
air inside an aircraft.
