SRV ENVELSAL 12 FEBRUARY 1987

Site involves a land/structure/surface interface with a body of moving, winding dark water nearby. Blue is an important color at the site. The surface at the site is wide, flat, hard, and designed to support moving objects of considerable weight. There are several structures at the site. Inside one of the structures is a manufactured piece of equipment which seems to be designed to move. It is smooth, curving, shiny, blue, and complicated. (AOL air combat aircraft like an F-16). No people appear to be present with this object at the moment. It seems, however, that it is being prepared for some intended use in the near future. and is "ready to go," as it were. It is locked away, not intended to be observed or to be open to access by anyone not directly connected with it. The "mission" for which it will be used seems to be taking something or someone to a secure location. This action is to be accomplished without outside awareness that it is even taking place.

The climate at the site is warm at present, with significant amounts of dense, green vegetation, and the area has the feeling of having been lived in for centuries. (AOL St. Augustine, FL). There is grass, trees, and cement sidewalks crisscrossing, as well as old, weathered masonary walls, as well as the impression of a large, massive structure looking out from a significant height over a large body of water.

003
