E. SESSION SUMMARY:

There are a number of sketchy, incomplete structural features associated with height and natural rock and land components (see diagrams pages i and ii). This target was really perceived as a number of attributes rather than actual visuals. These attributes included: rubbery, dark, smooth, pulsating, ribbed, criss-crosses, jumbled up, haphazard arrangement, ripped, torn and ragged.

Additional attribute included: incomplete; metal and concrete; seemingly suspended roadways or structures; broken and confused; sense of height; precipitous; result of a natural activity; abyssal; dramatic and a sense of awe.

There was a concept of uplifting and subsequent collapse like movements which felt naturally produced. There was a churning movement of water and a jumbled mess of structures, wood, roads or pathways and at least one person. There was a prominent side-ways lying barrel with an orange-yellow glow associated with it. The scene tastes like water

The scene is reminiscent of topsy-turvy movement of both natural and manmade features which are now in a jumbled array. Objects feel broken or incomplete and some of which have broken sections/portions suspended over a great height. There is a sense of powerlessness associated with the target.
