Summary of Information

Site involves an open, austere, barren landscape with rolling, tundra-like terrain and hills in the background. Greenish grays and drab browns are colors that predominate. In the middle distance is a group of structures, perhaps a small hamlet or village that are gathered close together but secluded or isolated and away from any other built-up area. There are several dense, metallic, heavy, moving objects proceeding more or less in the same direction across the terrain in a dispersed manner. Associated with these objects is considerable noise, squeaking, clanking, chattering and rattling. These objects have points, edges, and corners to them. Colors are white, grey, and olive brown. There are groupings or rows of other objects that are slanting, rounded, pointed, smooth, and precise. They seem to be paler in color than the other objects. These generate AOL of SAM-6 missiles. *NO*
