Site is a cold shushy narrow city. There are many buildings, cobbled streets, traffic sounds in the background. But very few (comparatively speaking) people on the streets. There is a tall, thin circular structure near one of the buildings. The above ground structure leads to underground levels (at least three) and is directly connected to an air shaft emptying into all levels. The uppermost underground level has the feeling of being a public area, with cool air, some flow of fresh air, and a chattering, <sup>rumbling</sup> sound, - like a subway. There are many voices at the top two levels (underground). Difficult to distinguish, but the voices at the second level seem to be giving directions or talking to others at another location. The temperature in the 2<sup>nd</sup> lower level is much warmer, almost uncomfortably hot as though a thermostat were turned too high. The lowest level is damp and cold and wet. There is a very closed-in feeling - like a tunnel.

Second lower level is brightly lighted and has  
a sleek appearance. Movement is pursued at  
this level also.
