SECRET/NOFORN

PROJECT SUN STREAK

WARNING NOTICE: INTELLIGENCE SOURCES AND METHODS INVOLVED

PROJECT	NUMBER: S2 TNG	SESSION NUMBER: 1
DATE OF	SESSION: 880829	DATE OF REPORT: 880830
START:	0936	END: 1000
METHODOL	OGY: CRV	VIEWER IDENTIFIER: 32

**1.** (S/NF/SK) MISSION: Access and describe in a stage two sense training target # 227, Tunguska event.

2. (S/NF/SK) VIEWER TASKING: Encrypted coordinates 0227/1908.

3. (S/NF/SK) COMMENTS: Excellent session. 032 obtained all types of stage twos in structure. Excellent graduation session, at the end of the session he had obtained a sufficient number of dimensionals and an AI and thus was ready to enter stage 3. This site represents 032's first movement in time, and the first time the target was an event (this one took place in 1908). His facility with the session showed him that these factors make no difference to the viewing process and also how coordinates can be used to represent more than just a place. Excellent performance from a very diligent student. 032 is ready for stage 3.

4. (S/NF/SK) EVALUATION:

HANDLE VIA SKEET CHANNELS ONLY SPECIAL ACCESS REQUIRED

## CPYRGHT

Approved For Fight A State B POP 10 \$1071: CHA-RD C 96-00589 R001300100 BANG IN RECORDED HISTORY?

Shortly after 7 A.M. on June 30, 1908, early rising farmers, herdsmen, and trappers in the sparsely settled vastness of the central Siberia Plateau watched in awe as a cylindrical object. glowing with an intense bluish-white light and trailing a fiery tail, raced across a clear blue sky toward the northern horizon. At 7:17, over a desolate region of bogs and low, pinecovered hills traversed by the Stony Tunguska River, it disappeared; instantly, a "pillar of fire" leaped skyward, so high it was seen hundreds of miles away; the earth shuddered under the impact of a titanic explosion, the air was wracked by thunderous claps, and a superheated wind rushed out. ward, setting parts of the taiga on his At a trading post forty miles from the blast, a man sitting on the steps of his house saw the blinding flash and ros ered his eyes; he felt scorched, as if the shirt on his back were burning, a defler next moment he was hurled from the steps by a shock wave and knock data conscious. Four hundred miles e ÷. south the ground heaved un to tracks of the recently coint in a Trans-Siberian Railway, threatter the derail an express. And above ato Tunguska region a mass of back clouds, piling up to a height of i.e. in miles, dumped a shower of "bla 3. ..... on the countryside -- dirt and . sucked up by the explosion what rumblings like heavy artillery but to verberated throughout central Etransie

Since seismographs and barographs everywhere had recorded the more the entire world knew that some dear extraordinary had occurred in the Sober an wilderness, But what? Set and conjectured that a giant menearty must have fallen, exploding from the intense heat its impact generated. the hitting the ground, such a body would theoretically, have blown out a # crater like the one in Arizona, she it quarters of a mile square, left by # mr teorite that fell fifty thousand It est ago, but the Siberian "impact site turned out to be a dismal swamp, with no trace of a meteorite to be area

Nevertheless, for want of a better explanation, scientists continued to ascribe the cataclysm to a meteorite, and Leonid Kulik, a mineralogist who headed government-sponsored expeditions to the Tunguska in the early 1920s and again in 1938–39, searched for evidence to support this view.

Although this search proved fruitless, Kulik uncovered a wealth of information about the blast. Near the swamp into which the meteorite had supposedly plummeted, scorched trees, striped of branches, still stood, but around this weird "telegraph-pole" forest, except where intervening hills had shielded them, every tree within lifty miles had been blown flat, its munk pointing away from the swamp. from this - and from his failure to find uven a small impact crater - Kulik convluded that the meteorite had never a ached the ground but had exploded two or three miles up in the air. The testimony of local herdsmen yielded ther curious details: the blast's inverse heat had melted the permafrost, I susing water trapped underground for tens of thousands of years to gush . south in fountains, and those reindeer that had not been killed had developed sursterious blisters and scabs on their Vides. Stranger still, examination of the es that had been germinating in 108 revealed that they had then sown at several times the normal rate.

During World War II Kulik was sptured by the Germans and died a prisoner. The riddle he had worked to volve was forgotten. In August 1945, however, certain Russian scientists were abruptly reminded of it by the 10m-bombings of Hiroshima and \* Lagasaki, events which seemed uncan-.ly familiar in both their manifestations (the fireball, the searing thermal incrent, the towering "mushroom" bud) and their effects (the instantarous and near-total destruction, the ridiation burns on living flesh, the acrelerated growth of new plant life, (ven the "telegraph-pole" appearance of scorched and branchless trees standing below the point at which an atom

bomb was detonated).

Could the Siberian blast have been atomic? In 1958 a Russian engineerturned-writer, Aleksander Kazantsev, published a story-article pinning that disaster on Martians killed on their way to Earth by cosmic rays or meteorite bombardment; their ship, with no one at the controls, hurtles into our atmosphere at unreduced speed and burns up from friction, triggering a chain reaction in its atomic fuel that sets off the explosion. Few informed readers by then still accepted the meteorite theory, and some, particularly younger men and women, found Kazantsev's hypothesis persuasive, but others rejected it in favor of an earlier alternate explanation, according to which the head of a comet had penetrated the atmosphere at such high velocity that the heat thus generated had caused the comet to blow up. (Skeptics pointed out, however, that a comet could hardly have approached Earth without being seen.)

Two further explanations involving natural causes have been advanced. The first is that a two "black hole"-a chunk of matter collar sed to minuscule dimensions and an dense that its gravity sucks up twen light - hit Siberia and passed in an instant through Earth, emerging in the North Atlantic. The second assesses that the "anti-rock" of antimatter plunged into the atmosphere and exploded on contact with atoms of ordinary maiter, producing a fireball of gamma rays. While this would account for the absence of residual material at the site, it is not, most experts say, compatible with observable physical charts of the blast. In the end, we do not know what caused the tuta little in Siberia. We may never have that today, fewer scientists that at any time in the past would be parate to be receive a message heating them a sone corner of the universe inquiring toto the fate of certain space versus who vanished on our planet in when we call the year 1908.
