

SECRET/NOFORN

PROJECT SUN STREAK

WARNING NOTICE: INTELLIGENCE SOURCES AND METHODS INVOLVED

TNG TARGET NUMBER: 5184 SESSION NUMBER: 1 of 1

DATE OF SESSION: 17 OCT 88 DATE OF REPORT: 17 OCT 88

START: 0922 END: 1022

METHODOLOGY: CRV VIEWER IDENTIFICATION: 025

EVALUATION: *4* MONITOR: 018

1. (S/NF/SK) MISSION: To access and describe the target object and event using Stages I-VI.
2. (S/NF/SK) VIEWER CUEING: Describe the event which occurred at 12:37:08 on Oct. 3, 1988, and the object involved in it. (The event was the landing of the space shuttle Discovery).
3. (S/NF/SK) COMMENTS:
 - a. Inclemencies: None reported.
 - b. 025 quickly established that the event centered around the motion of the object, and had, by Stage III identified the object as a rocket. Having established that fact, 025 became fixed on the rocket's launch, and was not able to move to the tasked event, the landing of the shuttle. I learned later that 025 had seen the launch of Discovery, so there may have been some AI involved, though none was apparent during the session.
 - c. 025's stage VI model was basically a large round tank with side tanks (which 025 called 'boosters'), and a raised portion on the front, symbolic of the shuttle (see photos, attached). Here, again, 025 had the correct object, but the wrong portion of the flight event.
 - d. I believe that a time-line exercise would have solved the entire problem very easily, but the session was ended before this was possible, due to time constraints.

4. EVALUATION:

a. Teacher's: O25 performed each task extremely well. The fact that the safe landing (basically an unspectacular "no-event" event) was the tasked portion of the flight and O25 was fixed on the more spectacular take-off is not an unnatural occurrence. It does, however, point out a new training possibility: future attention should probably be paid to the selection of just such targets as this, for training viewers to pick out details at sites where more "attractive" objects or events are located.

b. Director's:

025

17 October 1988

Summary

A big rounded rocket with electrical energy motion uses excessive amounts of generating fuel (see sketch on page 7). This tall rocket object has electrical systems, transmitters, controls and is positioned in an open area. It has an encased or enclosed area inside with 3 or 4 people who are on a solo mission. This rocket is a project. The object has powerful motion with an orange explosive end. AOL-Signal, Discovery. Air flight utilizing projectile calibration through the air. At one time, this object was stationary yet was reactive when necessary. A satellite relay communications network was utilized (testing) (visionary). This object had separate sections and booster rockets. AOL-Signal, Flight transport vehicle plane. A monitoring station is present and people were gathered to watch the event (see sketch on page 13).
