E. SESSION SUMMARY:

The overall impression of this site is one of total misery and despair. There are numerous features reminiscent of broken and fallen walls and an uncontrolled movement reminiscent of water bubbling from an open hole. There is a feeling of "political activity" associated with this target.

There was a sweet natural smell. This, however, was overwhelmed by a sickening, musty smell reminiscent of rotting organic matter. It is dark and damp. Other concepts associated with this target are: death, decay, human misery, suffering, bloated bodies, mud, despair and an act of hostility. There are broken walls and bloated bodies.

There is a series of round objects which are sitting upright. The tops of these objects are almost level with the surface. They are a dark color. These are reminiscent of agricultural circles.

There is a change in the order of things at the site. Objects are being knocked down and an associated pushing motion. At this point, my throat began to tighten uncontrollably.

Three kilometers down in the Caribbean's Cayman Trough, scientists in the research submersible *Alvin* explore for the first time cliff faces that reveal deep layers of oceanic crust, which covers two-thirds of the planet. Here the craft, making an unprecedented self-portrait, triggers an underwater camera that it has carried down in the wire basket, then placed on the bottom with its mechanical arm.
