AUTHOR: Zieg, P. (doctor of technical sciences, Assistant professor)

TITLE: Unidentified flying object

ABSTRACT: The author (Moscow Aviation Institute) presents several striking and reliable UFO observations and refutes the theory of U. S. astrophysicist Messel and others that until recently no scientific study of UFOs has been made in the Soviet Union. He claims that the prevailing view that UFOs are some optical phenomena in the earth's atmosphere is wrong due to the fact that there was no collection of UFO observations. The general impression was that flying saucers are fantasy. This situation is beginning to change.

In 1964 the Nauka Publishing House of the USSR Academy of Sciences is scheduled to publish a book entitled Popularized Outer Space, edited by Academician Boris Konstantinov, Vice President of the USSR Academy of Sciences, and written by distinguished Soviet and foreign contributors, including Americans.

In May 1967 a sponsoring group of scientists, the military, writers, and public figures met to form an unofficial body whose purpose would be to conduct a preliminary scientific investigation of UFOs.

The organization, set up in October 1967, is called the UFO Section of the All-Union Cosmonautics Committee, with headquarters at the Central House of Aviation and Cosmonautics in Moscow. Air Force Major General Petti Stolyarov was elected chairman of the section.

The hypothesis that UFOs originate in other worlds, that they are flying craft from planets other than Earth, merits the most serious examination. Observations show that UFOs behave "sensibly." In a group formation flight, they maintain a pattern. They are most often spotted over airports, nuclear installations, and other very new engineering installations. On encountering aircraft, they always maneuver so as to avoid direct contact. A considerable list of these seemingly intelligent actions gives the impression that UFOs are investigating, perhaps even reconnoitering.

Curiously enough, the number of UFO observations increases as Mars approaches the earth. Is this pure coincidence?
Some people think that UFOs have appeared in Earth's atmosphere only during the past two decades. This is not the case. The UFO phenomenon has been observed throughout the history of mankind. There are medieval and ancient reports strikingly similar to ours.

Among the earlier UFO reports, as an example, may be the well-documented observatory reports still exist in 1923. There

The most remarkable UFO phenomenon is the famous "Tungusky meteorite". In recent years, Soviet scientists have established that the Tungusky explosion had every (Volume 17, Nov. 4 and 9, 1911) include studies by Alexei Izotov which attempt to prove that the Tungusky body could not be a meteorite or a comet.

In the summer of 1967 the Joint Institute of Nuclear Research at Dubna published a study by Vladimir Al'perovich who concludes that the Tungusky blast left observable residual radioactivity. Finally, as recently as 1966, after analyzing the sum total of observations on the Tungusky body's flight, this writer observed that before the blast the Tungusky body described in the atmosphere a tremendous arc of about 55 miles in extent (in altitude), that is, carried out a maneuver.

All these new results warrant the conclusion that the Tungusky body seems to have a different origin from any other place.

Should this be finally confirmed by investigations now in progress, the significance of the Tungusky disaster would be incredible.

But this, incidentally, will pose new problems. If we are indeed being studied by creatures from other planets, what is their purpose? Why are they so studiously avoiding any direct contact? Is their inaccessibility the result of a high level of civilization that they study us from that "holly" just as we look upon and are born in the same Universe and obey the same laws of nature?

The study of UFOs may lead to quite different conclusions and present mankind with quite different problems.

The important thing now is for us to discard any preconceived notions about UFOs and to organize on a global scale a calm, sensation-free, and serious investigation of this strange phenomenon. The subject and aims of the investigation are so serious that they justify any efforts. It goes without saying that international cooperation is vital.
