Subject and nearth care	
has provided the below letter since there is now key people leading the health care	effort. He's hoping to be
engaged Here's his letter:	
Our economic recovery requires that we improve the cost efficiency and quality of health care.	
Ten years after the 1993 effort to improve the situation, the US Institute of Medicine published a	book, Leadership by
Example, in 2003 that triggered a brief failed effort to upgrade direct Federal health care (with	
providers) in order to create an example of success that would be easier and faster to implement	than changing the
marketplace fundamentals of commercial health care.	
	The IOM's thesis remains
valid, but as anyone who has dealt with the interagency process knows, the barriers to progress	there can be at least as
frustrating as those of the commercial world. For the last 8 years of leadership failure we lacked	the vision to act on the IOM's
conclusions.	

В6

The obstacles to health reform haven't changed much since 1993 and 2003, but with more astute leadership the capacity to generate meaningful improvement in Federal health care, with the catalytic effect that IOM said it could have on the whole enterprise, finally exists.

ting American healt	n reform.		
nks
