Subject: RE: SIS Sunset Requests - CPDB

Jerry,

Please see the updated sunset request form for CPDB (Carcinogneic Potency Database). We provided a brief description of the resource. The usage has been dropping to 0.007% of total TOXNET usage. We don't think NCI would be interested in the resource since the methodology is very outdated. It was never supported by NCI. We do plan to make the archived file available on the NLM FTP server.

Let me know if you have more questions. I will sign the form once you review the updated version. Thanks!

Florence

Subject: FW: SIS Sunset Requests - CPDB

Florance,
Looking at your fourth sunset submission. . .

- Can you provide a brief description of the resource
- Can you provide some data about usage, and perhaps how its' dropped off over time
- Do we know if NCI has any interest in this resource?
- Is there any value in making it available on an NLM ftp site so that the information is still available somewhere, even if not updated.

Thanks

Jerry

REQUEST TO RETIRE CARCINOGENIC POTENCY DATABASE (CPDB)

Product owner(s) fill out sections I, III, IV and V. Include documentation with this form.
Record approvals in section II.

I. **Written justification for the retirement of an NLM resource.** Three to six months before sunsetting any NLM resource, a written justification for the retirement of the resource must be prepared. In drafting the justification, the use of statistics is often helpful. Reasons for sunsetting and/or retiring an NLM resource may include (check all that apply):

☒ Low usage

☐ Obsolescence (that is, better products have come along) – whether from NLM or another group

☐ No longer aligned with NLM priorities or mission needs

☒ Incorrect or out-of-date information. If information cannot be updated, then archive the resource

☐ Reallocation of staff to different products because resource is no longer a priority

☐ Cost in relation to value

☒ Other (Please explain) The Carcinogenic Potency Database (CPDB) is an archival database with low and decreasing usage. It provides historical information from the years 1980 - 2011. It is no longer updated. It was created at the University of California, Berkeley, and when they no longer wanted to maintain access to it after it was no longer being built, they asked us to take it. CPDB reports analyses of animal cancer tests on 1547 chemicals. CPDB includes 6540 chronic, long-term animal cancer tests, both positive and negative for carcinogenicity, from the general published literature as well as the National Cancer Institute and the National Toxicology Program (NTP). Such tests were used in support of cancer risk assessments for humans. CPDB was developed by the Carcinogenic Potency Project at the University of California, Berkeley and the Lawrence Berkeley National Laboratory. The usage of CPDB has consistently dropped over the past years to 0.007% of TOXNET usage in 2018.

II. **Approval.** This form must be signed by:

- **NLM Division head (within LHC, LO, NCBI, OCCS, SIS, OD)** HFC 11/27/2018

X

Hua Florence Chang
Acting Associate Director, SIS

- Upon approval by NLM division head, forward completed form to Kathy Cravedi, Director, OCPL (kcravedi@nlm.nih.gov), for distribution and approval by:
  - NLM Director Initial Here Date
  - NLM Deputy Director Initial Here Date
  - NLM Communications Director Initial Here Date

III. **Prepare Communications plan for sunsetting the NLM resource.** This document is developed for sharing news about the retirement of the NLM resource with relevant internal and external audiences. Please address the following key elements:

A. ***Internal communication plan*** for NLM staff

1. Identify who needs to be informed? (staff, contractors) Staff are aware of the plan. Additional groups include NNCO, NNLM, and toxicology community via our listserv.
2. Determine questions that may need to be addressed. These may include:
   - What information needs to be provided? That the CPDB was a resource taken from the University of Berkeley after they stopped supporting it and wanted an archival home for a few years.
   - When will the information be provided? 5/31/2019
   - By what method(s) will information be provided? Example: Email to all NLM staff Post on database web pages, and send to OCPL for distribution.)
   - If multiple messages are to be sent, by what method(s) and with what frequency? One round
   - Are there any potential areas for misunderstanding or concern? none
3. Establish what may need to be communicated to internal audiences. This could include:
   - Why is this program or service being retired? The way it was created at Berkeley does not lend itself to conversion to Bookshelf resource where some TOXNET databases are going. It has not been updated for many years.)
   - What content, if any, will still be available and, if so, why and where? (Options may include archived pages on the NLM website, FTP, the Wayback Machine internet archive, and tape.) The content per se will not be available, but the literature it draws from still exists. The content will be in made available in compressed files on the NLM FTP site.
   - What will happen to the staff working on the product or service? No staff resources used now
   - What staff will be involved in this transition? Florence Chang, Phil Thomas
4. Identify mechanisms to be used for communicating with internal audiences. These may include some or all of the following (Check all that apply):
   - ☒ Emails
   - ☒ Signage
   - ☒ Information delivered at staff meetings
   - ☐ Point of discussion at brown bag luncheons
   - ☐ Town Hall meetings, etc.
   - ☒ Other (Explain) listserv
5. Develop and attach a set of Talking Points for the NLM Director Resource was a labor intense one developed by Berkeley staff and when it was terminated

we were asked to house the file. Given the move of TOXNET databases to NCBI, this resource is not in a format that can be converted to run there.

6. Does the NIH Director or other IC Directors need to be informed? No

   If Yes, check all that apply:

   ☐ The service is produced jointly with another IC or serves an audience of interest to the IC

   ☐ The service has high visibility and sunsetting may result in questions, letters, emails to the NIH Director from the public, key stakeholders, Congressional staff, HHS leadership

   ☐ Other (Please elaborate) Enter other reason(s) Director(s) need to be informed

B. ***External communication plan*** for users, stakeholders, and the public

1. Who needs to be informed? (Identify stakeholders).
   - Why is this program or service being retired? Cannot be converted to new format for TOXNET move to NCBI.
   - What content, if any, will still be available and, if so, why and where? None other than journal literature on which it is based is still available.
   - What will happen to the staff working on the product or service? No staff work on this other than routine IT deployment /support issues .

2. Establish what may need to be communicated. This could include—
   - Why is this program or service being retired? Cannot be converted to new format for TOXNET move to NCBI.) Will be taken down from TOXNET end May 2019
   - What content, if any, will still be available and, if so, why and where? None other than journal literature on which it is based is still available. The archived content will be made available in compressed format on NLM FTP server.
   - What will happen to the staff working on the product or service? No staff
   - How can I or how can my group be involved in this transition? Enter possible support option(s)

3. Identify what needs to be completed:

   ☐ Deliverables Specify

   ☒ Responsible party or parties for the sunsetting process TOXNET IT

   ☒ Due date 5/31/20195/31/2019

   Identification of communication channels. These could include (Check all that apply):

   ☒ emails to stakeholders and users

   ☐ signage

   ☒ NLM homepage (public news announcement)

   ☐ speeches

☒ social media including Facebook, Twitter, LinkedIn, etc.

☒ newsletters/blogs, including *Technical Bulletin*, *NLM in Focus*, *Circulating Now*, *Musings*, etc.

☐ Other (Please Explain) Enter other possible communication channel(s)

4. Determine questions that may need to be addressed, including:
    - What information will be provided? Sunset of CPDB
    - When will the information be provided? Starting after approval
    - With what frequency? Enter frequency
    - Are there potential areas for misunderstanding or concern? no
    - After informing stakeholders that the site will no longer be accessible, where can they find information once the site is retired? Not available in its current format. The archived content will be made available in compressed format on NLM FTP server.
    - How will NLM respond to questions and comments? Email via customer service system
    - Is this an issue that may generate media interest? (If so, please include strategies for responding in the plan.) No

IV. **Posting notice on central NLM "sunsetting calendar" (coming soon) on the NLM Wiki.** A notice should be posted on the "NLM resource sunset calendar" immediately following the effective date of the retirement of the resource. The sunset calendar, which will also be found on the NLM wiki, will serve as an historical record about retired NLM products and services.

V. **Identification of primary point of contact for further information about retired NLM resource.** Provide name and contact information for primary point of contact for retired NLM resource here:

Subject: RE: ToxLearn - Sunset Request

Jerry,

We contacted SOT project lead for ToxLearn. She indicated that SOT would like to host the archived version of ToxLearn on their website. We plan to send them the archived files.

Here are the usage metrics for ToxLearn and Tox Tutor for the past 6 months. As you can see the ToxLearn usage is significantly lower than that of ToxTutor.

ToxTutor – usage for the past 6 months

Users 64,983
New Users 64,252
Sessions 91,941
Number of Sessions per User 1.41
Pageviews 325,499
Pages / Session 3.54

ToxLearn – usage for the past 6 months

Users 5,487
New Users 5,441
Sessions 6,861
Number of Sessions per User 1.25
Pageviews 11,110
Pages / Session 1.62

Attached is the updated sunset request form with your comments incorporated. Also attached is an overview slide deck for Tox Tutor. I will sign the sunset form once you review it. Thanks!

Florence

Subject: ToxLearn - Sunset Request

Florence,
I am on board with the plan to retire ToxLearn, but have a few questions and suggestions that need to be reflected in the form, with an eye toward shaping our future communications:

- Throughout, I would rephrase the main reason for retiring the research to say that ToxLearn has been supplanted by ToxTutor. The fact that some modules were never complete and it uses old technology are part of the explanation for why it's been supplanted.
- The ToxLearn site indicates that it is a joint project of NLM and SOT. We need to make sure to inform SOT well in advance – maybe we've already done so.
- The ToxLearn site also indicates the ability to get certification for completing modules. If SOT still uses the site for certification, we need to work out with them
- Does SOT have any interest in archiving the content?
- Can you provide information on the number of users of ToxLearn? Is anyone still using it, or have we already transitioned people to ToxTutor?

Thanks,
Jerry

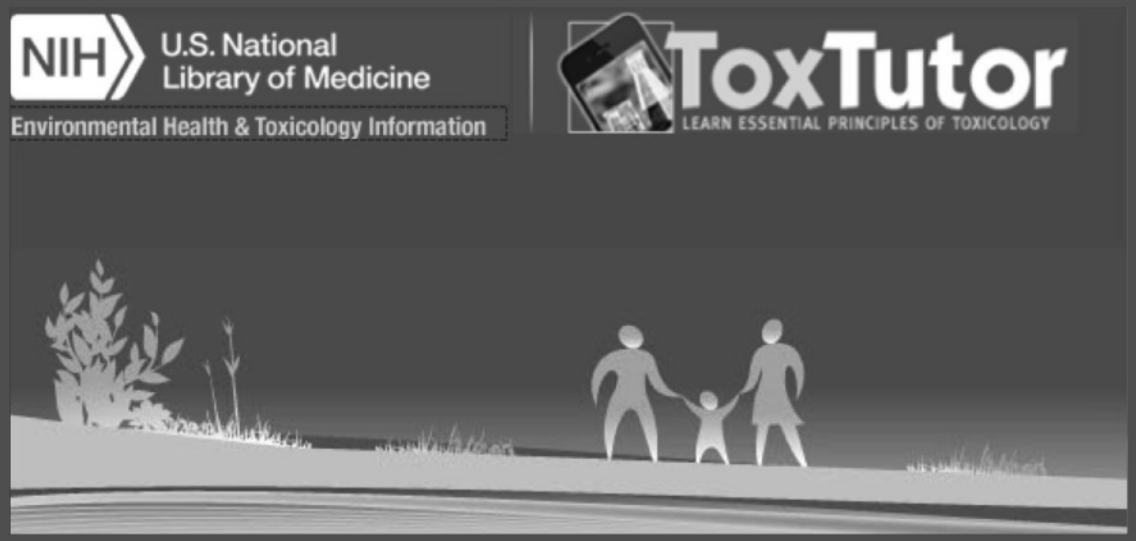
Learning Objective

Overview of ToxTutor

The updated and enhanced ToxTutor



https://toxtutor.nlm.nih.gov/

If you want a quote: “These National Library of Medicine Tutorials now cover present-day toxicology and related topics”

Quick History and Overview

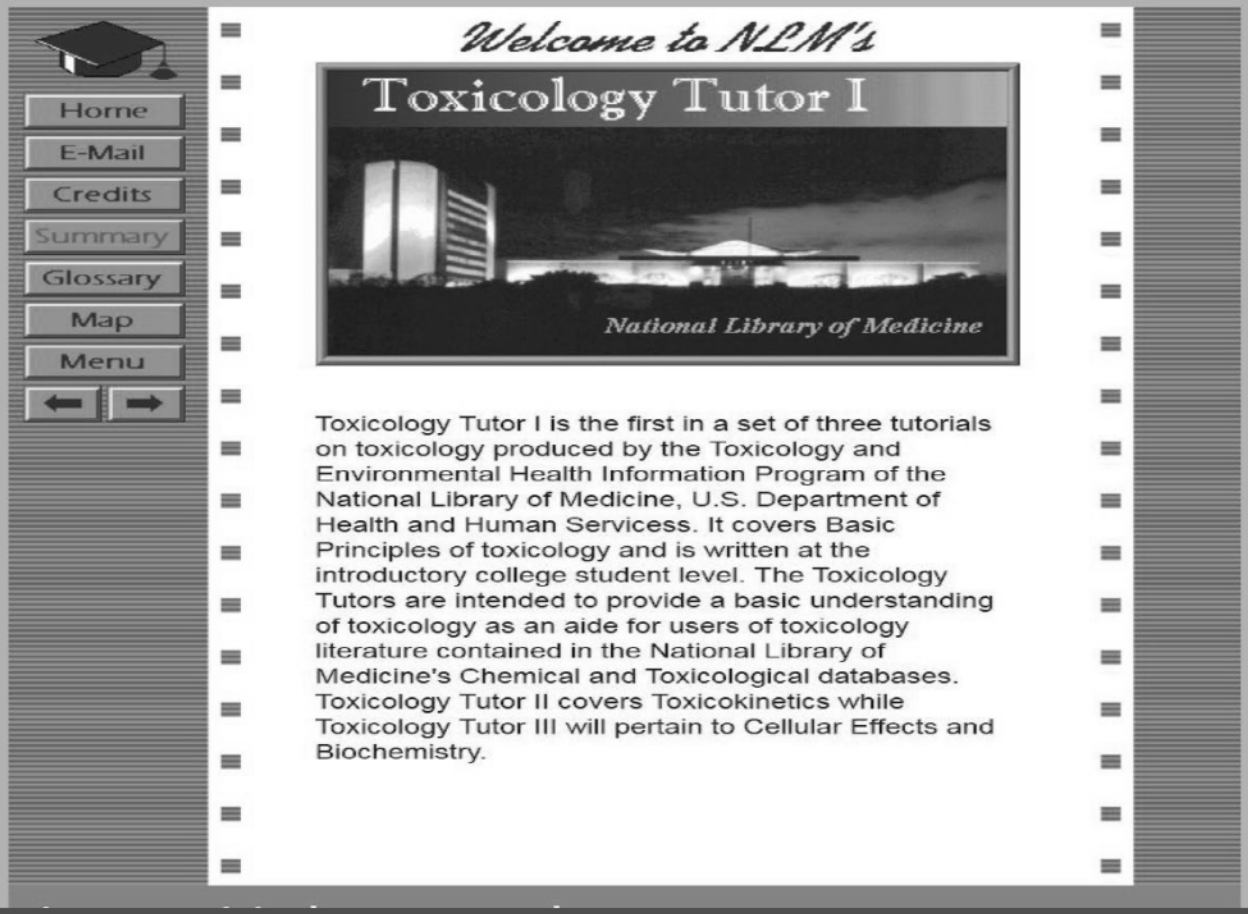
The Toxicology Tutorials (ToxTutor) were created in 1998 to help TOXNET users.

In 2016, after 18 years (!), the tutorials needed to be updated to align with current knowledge in toxicology and related areas.

We worked with subject matter experts and others to review the contents of the 1998 Toxicology Tutorials for areas to enhance and new topics to add.

We are continuing to enhance and add content.

The 1998 Version:
Do you remember this type of printer paper? ☺



The first version of the updated and enhanced ToxTutor was released in 2016.

The 2016 version included a large amount of new information on topics like:

- Alternatives to the use of animals in research and testing
- Routes of exposure, and
- Risk assessment

A Poster Presented in 2016:
"Bringing ToxTutor into the 21 Century"

TOXTUTOR: BRINGING THE NATIONAL LIBRARY OF MEDICINE TOXICOLOGY TUTORIALS INTO THE 21ST CENTURY

Pertti Hakkinen, PhD; Stephanie Publicker, MLS

Specialized Information Services, National Library of Medicine, National Institutes of Health

The (U.S.) National Library of Medicine (NLM) is the world's largest biomedical library, providing free resources to both professionals and consumers. NLM's Specialized Information Services Division (SIS) is responsible for information resources and services in toxicology, including clinical toxicology, and in environmental health, chemistry, and other topics. The TOXNET (TOXicology Data NETwork) suite of databases is one of these resources and includes the Hazardous Substance Data Bank (toxicology data), ChemIDplus (names, synonyms, and structures), LactMed (drugs and lactation database), and the Household Products Database (health and safety information on consumer products). People using TOXNET may have limited knowledge of the science behind some of the resources. The Toxicology Tutorials were created in 1998 to help TOXNET users comprehend what they are reading. The tutorials cover the basic toxic mechanisms in terms and concepts that are understandable to beginning college students. After 18 years the tutorials needed to be updated to align with current knowledge in toxicology and related areas. SIS staff worked with subject matter experts and others to review the contents of the 1998 Toxicology Tutorials for areas to enhance and new topics to add. The new (2016) version of the Toxicology Tutorials covers up-to-date information on clinical toxicology and other types of toxicology, routes of exposure, risk assessment, toxicity testing methods, and alternatives to the use of animals in research and testing. In addition, the new design lets users access the tutorials where, when, and how they want to have access, whether via desktop, smartphone, or tablet. Material on toxicokinetics and cellular toxicology will be added in 2017. ToxTutor can be found at https://toxtutor.nlm.nih.gov.

Before and After

New Content

The new web site incorporates accessibility techniques, making the tutorials usable by a broader number of people.

In addition, the new design for the tutorials lets users access them via smartphone, tablet, or desktop.

Content on toxicokinetics, basic physiology, and cellular toxicology was added in late 2017.

Additional new content was added in mid-2018.

Welcome to ToxTutor

Introduction

ToxTutor is a self-paced tutorial covering key principles of toxicology for users of the National Library of Medicine (NLM) chemical and toxicology databases. While a knowledge of anatomy and physiology is not required for viewing ToxTutor, the **Introduction to the Human Body** from the National Cancer Institute provides a good introduction to the topic.

What's New in ToxTutor?
August 2018 Release

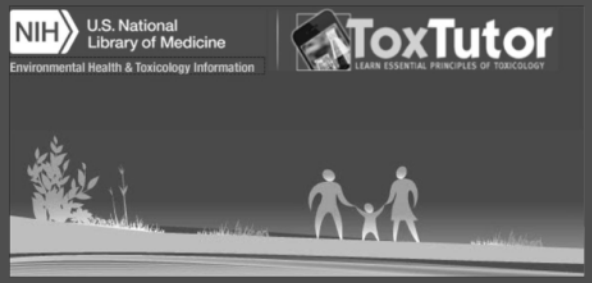
Continuing Education / Certificate of Completion

This course is approved for 3 contact hours for California Regist
Environmental Health Association's (NEHA) REHS/RSs. To take
tutorial through our free learning management system.

Topics Covered in this Course

ToxTutor is divided into the following sections:

1. Introduction to Toxicology
2. Dose and Dose Response
3. Toxic Effects
4. Interactions
5. Toxicity Testing Methods
6. Risk Assessment
7. Exposure Standards and Guidelines
8. Basic Physiology
9. Introduction to Toxicokinetics
10. Absorption
11. Distribution
12. Biotransformation
13. Excretion
14. Cellular Toxicology
15. Intuitive Toxicology and Risk Communication
16. Environmental Toxicology, Environmental Health, and One Health
17. Conclusion



As announced within ToxTutor

What's New in ToxTutor (August 2018 release)?

In Section 3 (Toxic Effects):

- Added the new topic of "The Microbiome" after the Metabolism content

In Section 5 (Toxicity Testing Methods):

- Did a change in the title of the "Future Approaches and Methods" to "Emerging Approaches and Methods."
- Added additional content in "Finding Information about Alternatives to Animal Testing."
- Added Microphysiological Systems as used in "tissue chip" and "Organs-on-chips" models.
- Added "Human-on-a-Chip" content.
- Added Induced Pluripotent Stem Cells (iPSCs) as an emerging approach.
- Added the topic of combining "chips" and iPSCs.

In Section 6 (Risk Assessment):

- Added more content on Adverse Outcome Pathways (AOPs).
- Added the new topic of "What to Consider when Reading about a New Exposure Study."

In Section 7 (Exposure Standards and Guidelines):

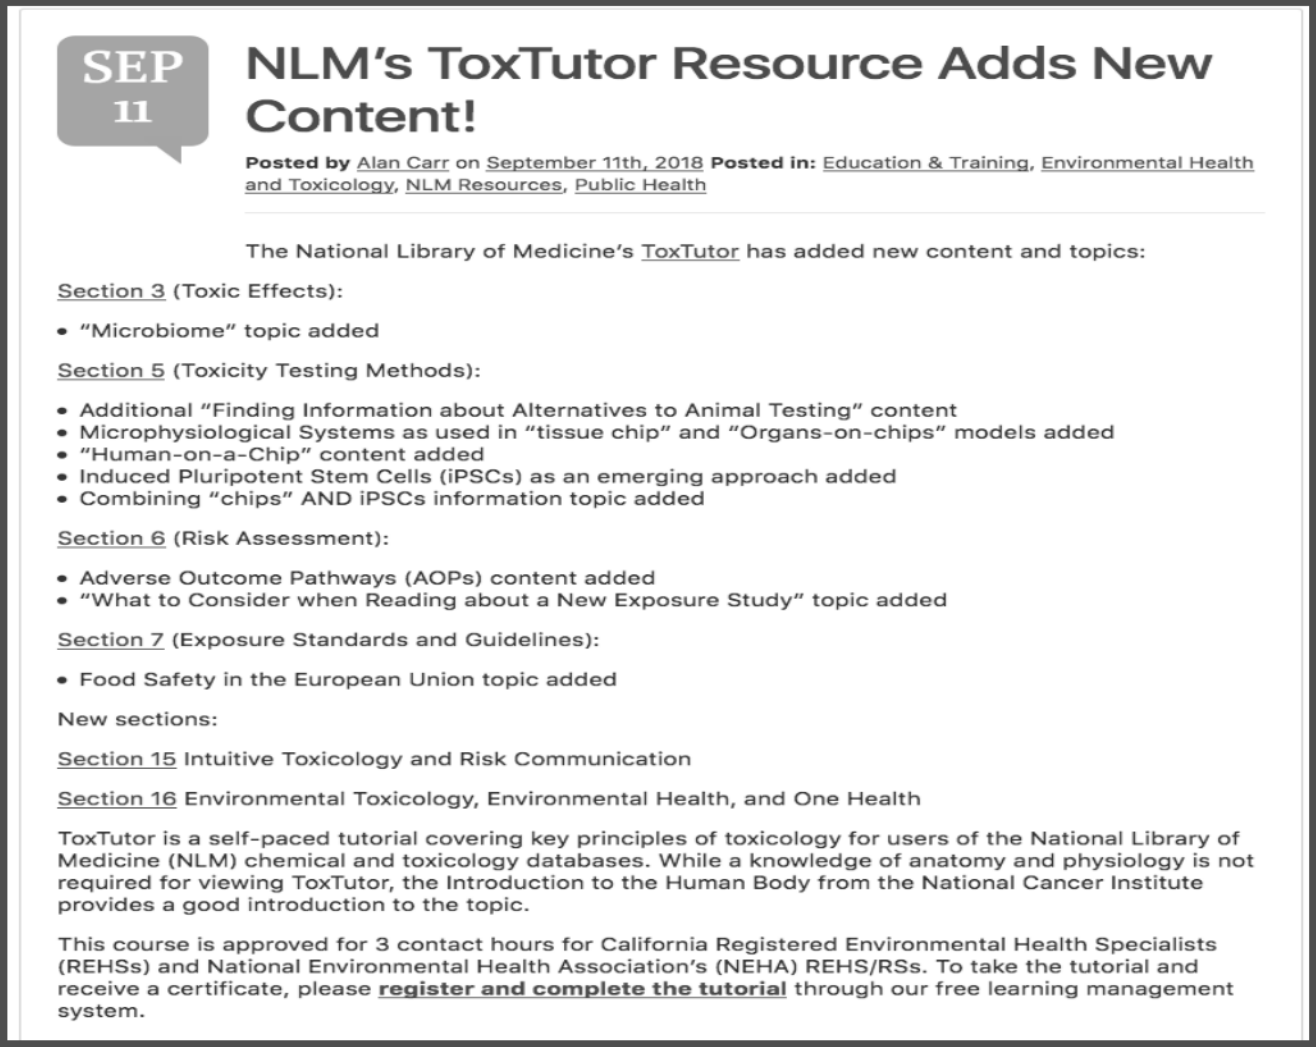
- Added the new topic of Food Safety in the European Union.

Added a new section on Intuitive Toxicology, and Risk Communication (including content on Uncertainty).

Added a new Section on Environmental Toxicology (with the examples of Microplastics and the Health of Bees as global issues), Environmental Health, and One Health.

As announced via NLM and NNLM

Thanks!



SEP 11

NLM's ToxTutor Resource Adds New Content!

Posted by Alan Carr on September 11th, 2018 **Posted in:** Education & Training, Environmental Health and Toxicology, NLM Resources, Public Health

The National Library of Medicine's ToxTutor has added new content and topics:

Section 3 (Toxic Effects):

- "Microbiome" topic added

Section 5 (Toxicity Testing Methods):

- Additional "Finding Information about Alternatives to Animal Testing" content
- Microphysiological Systems as used in "tissue chip" and "Organs-on-chips" models added
- "Human-on-a-Chip" content added
- Induced Pluripotent Stem Cells (iPSCs) as an emerging approach added
- Combining "chips" AND iPSCs information topic added

Section 6 (Risk Assessment):

- Adverse Outcome Pathways (AOPs) content added
- "What to Consider when Reading about a New Exposure Study" topic added

Section 7 (Exposure Standards and Guidelines):

- Food Safety in the European Union topic added

New sections:

Section 15 Intuitive Toxicology and Risk Communication

Section 16 Environmental Toxicology, Environmental Health, and One Health

ToxTutor is a self-paced tutorial covering key principles of toxicology for users of the National Library of Medicine (NLM) chemical and toxicology databases. While a knowledge of anatomy and physiology is not required for viewing ToxTutor, the Introduction to the Human Body from the National Cancer Institute provides a good introduction to the topic.

This course is approved for 3 contact hours for California Registered Environmental Health Specialists (REHSs) and National Environmental Health Association's (NEHA) REHS/RSs. To take the tutorial and receive a certificate, please **register and complete the tutorial** through our free learning management system.

Examples of New Content and New Image

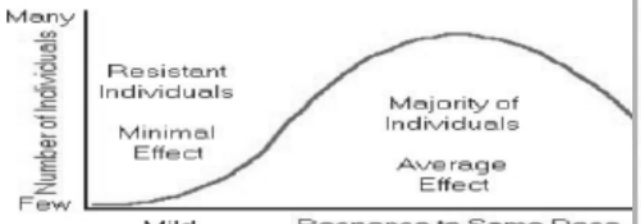
Examples of Old vs. New Animations

Dose Response

The dose-response relationship is a fundamental and essential concept in toxicology. It correlates exposures and the spectrum of induced effects. Generally, the higher the dose, the more severe the response. The dose-response relationship is based on observed data from experimental animal, human clinical, or cell studies.

Knowledge of the dose-response relationship:

- establishes causality that the chemical has in fact induced the observed effects
- establishes the lowest dose where an induced effect occurs - the threshold effect
- determines the rate at which injury bu
  slope for the dose response.



Original ToxTutor Animated Graph

Dose Response

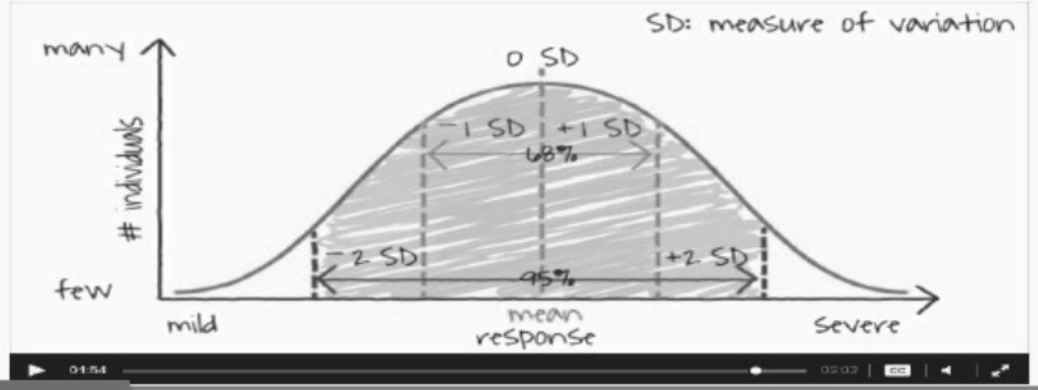
The dose-response relationship is an essential concept in toxicology. It correlates exposures with changes in body functions or health.

In general, the higher the dose, the more severe the response. The dose-response relationship is based on observed data from experimental animal, human clinical, or cell studies.

Knowledge of the dose-response relationship establishes:

- **causality** – that the chemical has induced the observed effects
- the **threshold effect** – the lowest dose where an induced effect occurs
- the **slope** for the dose response – the *rate* at which injury builds up

Within a population, the majority of responses to a toxicant are similar; however, there are differences in how responses may be encountered – some individuals are susceptible and others resistant. As demonstrated in Animation 1, a graph of the individual responses can be depicted as a bell-shaped standard distribution curve. There is a wide variance in responses as demonstrated by the mild reaction in resistant individuals, the typical response in the majority of individuals, and the severe reaction in sensitive individuals.



New ToxTutor Animated Graph

On this page...

- Finding Information about Alternatives to Animal Testing
- Animal Tests
- Emerging Approaches and Methods

Testing for and Assessing Toxicity

Alternatives to animal testing have emerged in recent years.

Since about 1990, numerous attempts have been made around the world to reduce the use of and replace laboratory animals in toxicology and other studies. These efforts have involved finding alternatives to animal testing and incorporating the "3Rs" concept (Replace, Reduce and Refine), which means using test methods that:

- **Replace** the use of animals with other types of studies and approaches.
- **Reduce** the number of animals in studies.
- **Refine** the procedures to make studies less painful or stressful to the animals.

Regulatory authorities, companies, and others have endorsed the principle of the 3Rs, and alternative testing methods have
are being developed. An international group that has played a key role is the International Cooperation on Alternative Test M
(ICATM). Established in 2009, ICATM includes representatives of organizations from various countries.

Finding Information about Alternatives to Animal Testing

Many countries including the United States, Canada, and the European Union member states, require that a comprehensive
possible alternatives be completed before some or all research involving animals is begun. Because numerous Web resource
available to provide guidance and other information on *in vitro* and other alternatives to animal testing, completing such sear
keeping current with information associated with alternatives to animal testing is much easier than it used to be.

ALTBIB, from NLM

The NLM ALTBIB ("Resources for Alternatives to the Use of Live Vertebrates in Biomedical Research and Testing") portal is a comprehensive starting point for finding information related to alternatives to animal testing. ALTBIB is available at http://toxnet.nlm.nih.gov/altbib.html.

It provides access to PubMed®/MEDLINE® citations relevant to alternatives to use of live vertebrates in biomedical research and testing.

ALTBIB's topics and subtopics are aligned with current approaches. For example, information is provided on *in silico*, *in vitro*, and improved (refined) animal testing methods and on testing strategies that incorporate these methods and other approaches.

Figure 1. NLM ALTBIB homepage

ALTBIB also provides access to news and additional resources, including information on the status of the evaluation and acc
alternative methods. Main categories include:

- Animal Alternatives News
- Additional Resources
- Evaluation/Acceptance of Test Methods

Links to Specific Resources (Sources Providing Animal Alternatives News, Key Organizations Providing Resources, and the Regulatory Acceptance of Specific Alternative Methods and Milestones in Non-animal Toxicity Testing)

Links to Specific Resources

Animal Alternatives News

Examples of New Content

Benchmark Dose Method

The **benchmark dose (BMD) method**, first proposed as an alternative in the 1980s, addresses many limitations of the NOAEL method. It is less dependent on dose selection and spacing and takes into account the shape of the dose-response curve (Figure 4). In addition, the estimation of a BMD 95% lower bound confidence limit (BMDL) results in a POD that appropriately accounts for study quality (i.e., sample size). With the availability of user-friendly BMD software programs, including the EPA's Benchmark Dose Software (BMDS), the BMD has become the method of choice for many health organizations worldwide.

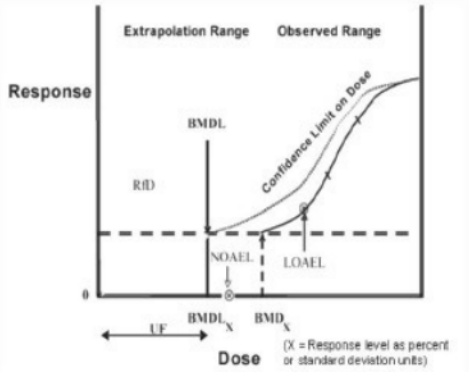

Figure 4. Extrapolated values using the benchmark dose method reflect the shape of a dose-response curve (Image Source: EPA)

New graph created to show Benchmark Dose Method

Figure 2. Exposure to a chemical used in furniture textiles (Image Source: Adapted from U.S. National Academy Press publication and iStock Photos, ©)

Examples of New Content

Future Approaches and Methods

In the future, there will likely be additional and refined *in vitro* methods, and the emergence of *in silico* and "chip" approaches.

Many current efforts are underway to refine, develop, and validate *in vitro* methods.

In Silico Methods

Also emerging are *in silico* methods, meaning "performed on computer or via computer simulation." This term was developed as an analogy to the Latin phrases *in vivo* and *in vitro*.

Advanced computer models called "Virtual Tissue Models" are being developed by the U.S. EPA's National Center for Computational Toxicology (NCCT). The EPA's Virtual Tissue Models are described as using "new computational methods to construct advanced computer models capable of simulating how chemicals may affect human development. Virtual tissue models are some of the most advanced methods being developed today. The models will help reduce dependence on animal study data and provide much faster chemical risk assessments" (source).

One example is the Virtual Embryo (v-Embryo™) research effort, aimed at developing prediction models to increase our understanding of how chemical exposure may affect unborn children. [illegible] new types of *in vitro*, *in vivo*, and *in silico* models that simulate critical steps in fetal [illegible] models simulate biological interactions observed during development and predict c[illegible] biological events in pathways that is believed to lead to adverse effects.

Figure 4. v-Embryo logo

New discussion of *In Silico* methods

Toxicology Testing in the 21st Century - A New Strategy

The High Throughput Screening (HTS) Initiative is part of the new toxicology testing strategy developed from the 2004 National Toxicology Program (NTP) Vision and Roadmap for the 21st Century.

Traditional toxicological testing is based largely on the use of laboratory animals. However, this approach suffers from low throughput, high cost, and difficulties inherent to inter-species extrapolation – making it of limited use in evaluating the very large number of chemicals with inadequate toxicological data.

NTP recognized that the dramatic technological advances in molecular biology and computer science offered an opportunity to use *in vitro* biochemical- and cell-based assays and non-rodent animal models for toxicological testing. These assays allow for much higher throughput at a much reduced cost. In some assays, many thousands of chemicals can be tested simultaneously in days.

The goal is to move toxicology from a predominantly observational science at the level of disease-specific models to a predominantly predictive science focused upon broad inclusion of target-specific, mechanism-based, biological observations.

The High Throughput Screening program represents a new paradigm in toxicological testing. The HTS program approach to toxicological testing screens for mechanistic targets active within cellular pathways considered critical to adverse health effects such as carcinogenicity, reproductive and developmental toxicity, genotoxicity, neurotoxicity, and immunotoxicity in humans.

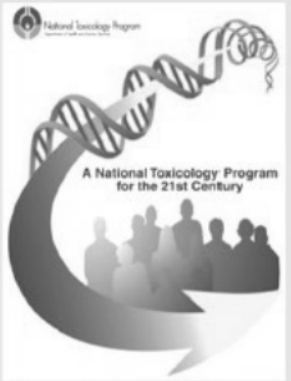

Figure 2. National Toxicology Program vision and roadmap (Image Source: National Toxicology Program)

Material added about current methods in toxicology texting

Examples of New Content

As described in the *Testing for, and Assessing Toxicity* section, the EPA is developing "Virtual Tissue Models" such as the Virtual Embryo (v-Embryo™). These types of advanced computer models are being designed to be capable of simulating how chemicals may affect human development and will help reduce dependence on animal study data. They will also provide faster ways of developing chemical risk assessments.

Finally, also noted in the *Testing for and Assessing Toxicity* section, emerging in the toxicologist's tool box are "chip" models (for example, an "organ on a chip"). One example is the "Lung-on-a-chip" that "...offers a new *in vitro* approach to drug screening by mimicking the complicated mechanical and biochemical behaviors of a human lung."

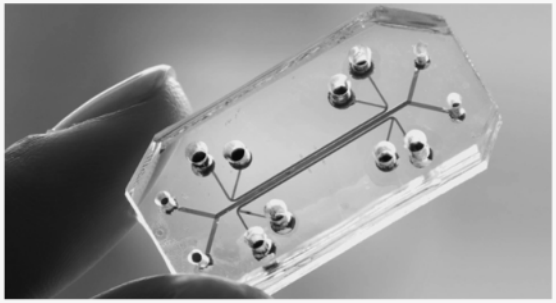

Figure 3. Lung-on-a-chip used to mimic pulmonary edema
(Image Source: The Wyss Institute for Biologically Inspired Engineering)

Did you know?

Bisphenol A (BPA) and **phthalates** are chemicals that have been widely found in consumer products. BPA has been used in some food can linings, polycarbonate food and beverage containers, tooth sealants applied to dentists, and even in cash register receipts! Examples of potential exposures to BPA include eating or drinking foods or liquids from those containers, and skin exposures from handing the cash register receipts. Workers involved in making products with BPA can be exposed during production.

Often called plasticizers, phthalates are used to make plastics more flexible. Some phthalates are used as solvents. They can be found in vinyl flooring and shower curtains, children's toys, personal care products, and as contaminants in the food supply. As with BPA, exposures can come from many sources.

Toxicologists and others are still assessing the full extent of the potential impacts on health. Studies suggest that BPA and phthalates affect the reproductive system, impacting how hormones such as estrogen and testosterone work in the body. The impact of fetal or early childhood exposures is still being assessed. Because of the ubiquity of the possible products containing these chemicals, thorough assessments of potential exposures, toxicities, and potential substitutes are essential.

Figure 4. Plastic food and beverage containers are common sources of BPA and phthalates in consumer products
(Image Source: iStock Photos, ©)

Added sidebar about current concerns in toxicology

Did you know?

During the late 1950s the drug Thalidomide was used to control nausea and vomiting in pregnancy in Canada, Europe, Australia, and parts of Asia. After the drug came on the market, reports appeared of children born with missing limbs, with upper limbs usually more affected than lower limbs. In addition to damage to arms and legs, faces, eyes, ears, and genitalia, internal organs including the heart, kidney, and gastrointestinal tract were damaged.

Thalidomide did not reach the US market due to the efforts of an astute FDA drug reviewer, Dr. Frances Oldham Kelsey, who insisted that thalidomide be fully tested before approval. In response to the episode, the Kefauver Harris Amendment to the Federal Food, Drug, and Cosmetic Act became law in 1962. The amendment requires drug manufacturers to give proof of the effectiveness and safety of a drug before it can be approved.

Thalidomide continues to be prescribed under strict supervision as a treatment for multiple myeloma, leprosy, certain complications of human immunodeficiency virus (HIV), and autoimmune disorders. In the 2000s, children with thalidomide-related birth defects were noted in Brazil due to the use of thalidomide to treat leprosy. Pregnant women were being exposed when family members took the drug.

Figure 3. Thalidomide

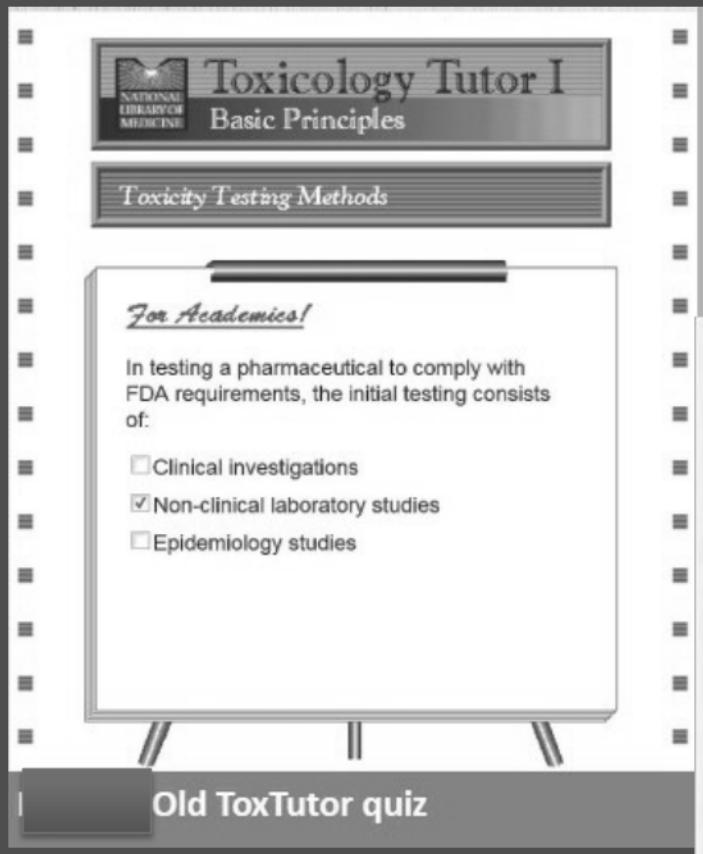
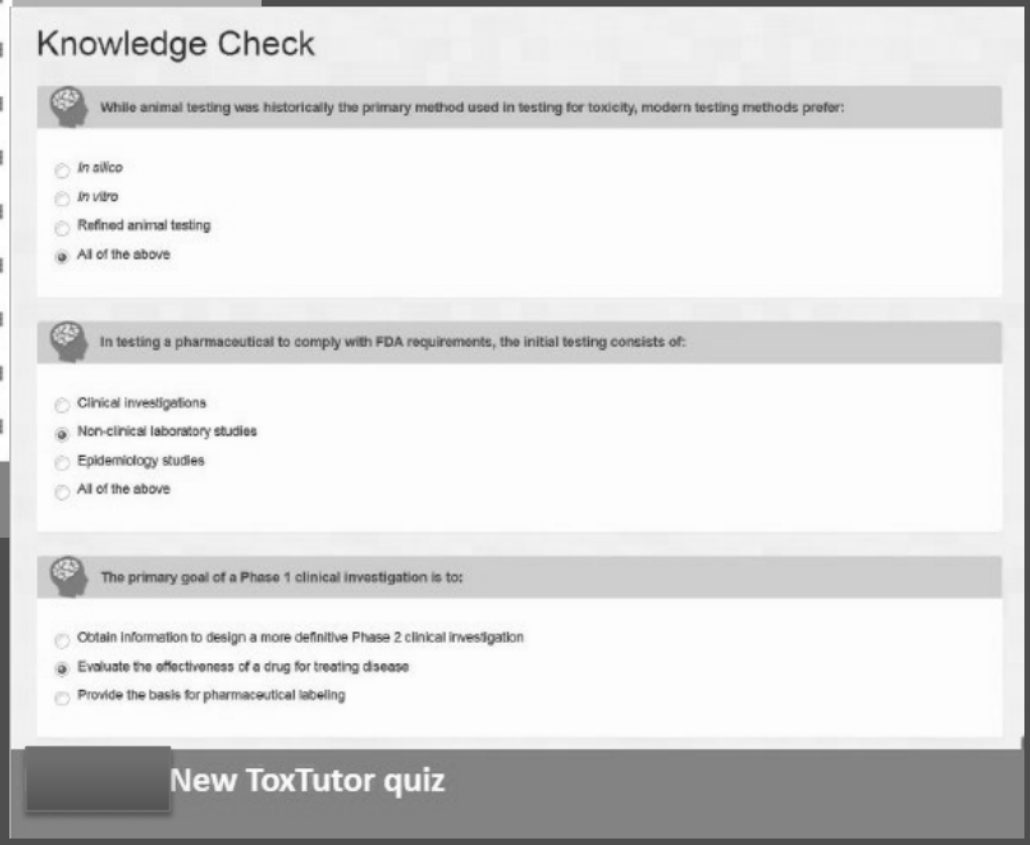
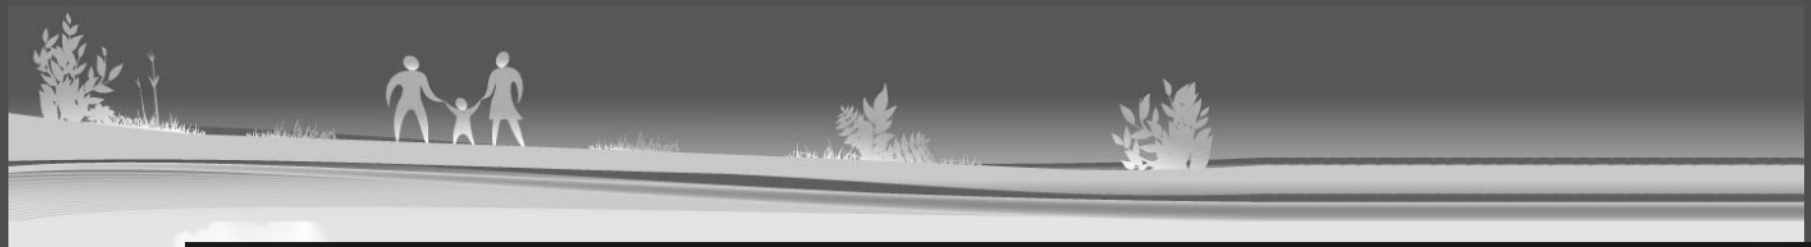
Examples of Old vs. New Quizzes



Old ToxTutor quiz



New ToxTutor quiz



Welcome to ToxTutor

Introduction

ToxTutor is a self-paced tutorial covering key principles of toxicology for users of the National Library of Medicine (NLM) chemical and toxicology databases. While a knowledge of anatomy and physiology is not required for viewing ToxTutor, the **Introduction to the Human Body** from the National Cancer Institute provides a good introduction to the topic.

What's New in ToxTutor?
August 2018 Release

Continuing Education / Certificate of Completion

This course is approved for 3 contact hours for California Registered Environmental Health Specialists (REHSs) and National Environmental Health Association's (NEHA) REHS/RSs. To take the tutorial and receive a certificate, please **register and complete the tutorial** through our free learning management system.

Topics Covered in this Course

ToxTutor is divided into the following sections:

1. Introduction to Toxicology
2. Dose and Dose Response
3. Toxic Effects
4. Interactions
5. Toxicity Testing Methods
6. Risk Assessment
7. Exposure Standards and Guidelines
8. Basic Physiology
9. Introduction to Toxicokinetics
10. Absorption
11. Distribution
12. Biotransformation
13. Excretion
14. Cellular Toxicology
15. Intuitive Toxicology and Risk Communication
16. Environmental Toxicology, Environmental Health, and One Health
17. Conclusion

Each section of ToxTutor contains one or more related content pages. *Next* and *Back* buttons are provided to allow you to navigate through these pages. For more information, see the "Getting Around" section below.

The basic principles of toxicology described in ToxTutor are similar to those taught in university programs and are well described in toxicology literature. A list of the textbooks used as the primary resources for the tutorials is found in the Bibliography.

Using ToxTutor

Getting Around

It will take approximately three hours to complete this self-paced tutorial.

There are a variety of ways you can navigate ToxTutor. You can:

- Use the *Menu* button in the upper right corner of each page to access the main sections, view the glossary or bibliography, or contact support.
- Click the links in the list above to access sections directly.
- Click the *Back* and *Next* buttons at the bottom of each page to move through the material.
- Press the left and right arrow keys on your keyboard to move through the material.
- Use a combination of the above methods to explore the course contents.

Progress

At the top of each page in ToxTutor are links indicating where the current page falls within the overall ToxTutor program. You can click these links to return to this homepage or to the section that contains the page.

Links

Throughout the course, you will encounter links. Any link with an *External Link* icon ( ) points to a resource outside of ToxTutor, which will typically open in a new tab or window. All other links are to other areas within ToxTutor. In many cases, a link will open a **small pop-up box** within the page to provide more information.

In addition, clicking on an image will open a larger view of it in a pop-up box within the page.

Getting Help

If you need help using ToxTutor or have questions or comments about any of the content presented here, please select the *About ToxTutor/Getting Help* option from the upper-right menu.

Thanks!

LEARN ESSENTIAL PRINCIPLES OF TOXICOLOGY

http://www.toxmsdt.com/

http://www.toxmsdt.com/e-modules.html

Nice to see!

Why ToxMSDT?

The Toxicology Mentoring and Skills Development Training Program is a 2 yr pilot program funded by the National Institutes of Health. The goal of the program is to support educational activities that complement and/or enhance the training of a diverse workforce to meet the nation's biomedical, behavioral and clinical research needs. Toxicology is an essential component of the nation's biomedical research enterprise. However, there is a critical lack of under-represented minorities in toxicology. Iowa State University, Tuskegee University, and the Ohio State University conceived this unique Toxicology Mentoring and Skills Development Training program targeting undergraduate underrepresented minorities in order to increase the pool of minorities entering graduate school and the toxicology workforce pipeline. Core concepts of the program are structured mentoring activities, skills development, and public outreach in toxicology.

Principles of Toxicology

ToxTutor
LEARN ESSENTIAL PRINCIPLES OF TOXICOLOGY

The e-modules use ToxTutor content to explore the fundamentals of toxicology. ToxTutor is a self-paced tutorial covering key principles of toxicology for users of the National Library of Medicine (NLM) chemical and toxicology databases. It is required that you take the sections 1 thru 6 of the first module. Sections 7 thru 15 are optional.

- Principles of Toxicology

In this module you will learn the fundamental principles of toxicology, including dose-response relationships, how chemicals enter the body and how they are metabolized and excreted, major health outcomes of intoxications, basics of physiology, toxicokinetics, and cellular toxicology.

For a certificate of sections 1 thru 6, click here. If you want a certificate of entire tutorial (sections 1 thru 15) completion, please register.

DATE

toxtutor_certificate_of_completion.pdf
Download File

In order to verify that participants have completed the e-module on *Principles of Toxicology* (sections 1 thru 6) offered by ToxTutor, please complete the following steps:

1. Download and print the certificate of completion;
2. Fill it out with full name on the top line and institution on the second line;
3. Email the certificate to to Dr. Wilson K. Rumbeiha, Program Director (rumbeiha@iastate.edu) with a copy to Jeff Wolt (jdwolt@iastate.edu).

If interested, a ToxMSDT contact is:
Dr. Wilson K. Rumbeiha at Iowa State University
https://vetmed.iastate.edu/users/rumbeiha

More than 650 certificates have been issued since ToxTutor was launched in the LMS .

There are more than 800 current active enrollments in the course. *(Some of whom may be making progress in the course, and others may have finished with the content but never downloaded a certificate (or abandoned the course for whatever reason.)*

REQUEST TO RETIRE AN NLM RESOURCE

Product owner(s) fill out sections I, III, IV and V. Include documentation with this form.
Record approvals in section II.

I. **Written justification for the retirement of an NLM resource.** Three to six months before sunsetting any NLM resource, a written justification for the retirement of the resource must be prepared. In drafting the justification, the use of statistics is often helpful. Reasons for sunsetting and/or retiring an NLM resource may include (check all that apply):

☐ Low usage

☒ Obsolescence (that is, better products have come along) – whether from NLM or another group

☒ No longer aligned with NLM priorities or mission needs

☐ Incorrect or out-of-date information. If information cannot be updated, then archive the resource

☒ Reallocation of staff to different products because resource is no longer a priority

☒ Cost in relation to value

☒ Other (Please explain) ToxLearn has been supplanted by ToxTutor. ToxLearn was a partially completed online tutorial providing an introduction to the principles of toxicology. In addition to being unfinished (several modules were never completed), it was designed in Adobe Flash. Adobe Flash is no longer being updated, or available on most internet browsers. In contrast, ToxTutor has been updated and enhanced and now serves as the online tutorial of choice. Also, ToxTutor does not use Adobe Flash and it is compatible with the devices users are expected to use.

II. **Approval.** This form must be signed by:

- NLM Division head (within LHC, LO, NCBI, OCCS, SIS, OD) HFC 11/27/2018

X _____

Hua Florence Chang
Acting Associate Director, SIS

- Upon approval by NLM division head, forward completed form to Kathy Cravedi, Director, OCPL (kcravedi@nlm.nih.gov), for distribution and approval by:
  - NLM Director Initial Here Date
  - NLM Deputy Director Initial Here Date
  - NLM Communications Director Initial Here Date

III. **Prepare Communications plan for sunsetting the NLM resource.** This document is developed for sharing news about the retirement of the NLM resource with relevant internal and external audiences. Please address the following key elements:

A. ***Internal communication plan*** for NLM staff

1. Identify who needs to be informed? (staff, contractors) Only SIS staff have been informed. We will need to inform all NLM staff, and the RMLs.
2. Determine questions that may need to be addressed. These may include:
    - What information needs to be provided? ToxLearn has been supplanted by ToxTutor. ToxLearn is retiring due to its format in Adobe Flash and because several of its modules were never completed. In contrast, ToxTutor has been updated and enhanced and is NLM's online toxicology tutorial of choice.
    - When will the information be provided? 12/1/2018
    - By what method(s) will information be provided? Example: Email to all NLM staff Digital signage within NLM. Emails to key contacts at outside organizations, e.g., Society of Toxicology. Also to be announced during NLM exhibits.
    - If multiple messages are to be sent, by what method(s) and with what frequency? One time communications are planned.
    - Are there any potential areas for misunderstanding or concern? No, because ToxTutor is a far more current and comprehensive tutorial, and does not use Adobe Flash. It is compatible with the devices users are expected to use.
3. Establish what may need to be communicated to internal audiences. This could include:
    - Why is this program or service being retired? ToxLearn has been supplanted by ToxTutor. ToxTutor has been updated and enhanced and now serves as the online tutorial of choice. It is compatible with the devices users are expected to use to access it.
    - What content, if any, will still be available and, if so, why and where? (Options may include archived pages on the NLM website, FTP, the Wayback Machine internet archive, and tape.) SOT will host the archived version of ToxLearn, provided by NLM. NLM do not plan to keep any of the content up, or available. Its unique format in Adobe Flash does not lend well to keeping the content up.
    - What will happen to the staff working on the product or service? The NLM project lead for ToxLearn retired at the end of 2017 and there has been no further work on it.
    - What staff will be involved in this transition? Pertti (Bert) Hakkinen.
4. Identify mechanisms to be used for communicating with internal audiences. These may include some or all of the following (Check all that apply):
    - ☒ Emails
    - ☒ Signage
    - ☒ Information delivered at staff meetings
    - ☒ Point of discussion at brown bag luncheons
    - ☐ Town Hall meetings, etc.
    - ☐ Other (Explain) Enter other mechanism(s)
5. Develop and attach a set of Talking Points for the NLM Director Click or tap here to enter text.

6. Does the NIH Director or other IC Directors need to be informed? No

   If Yes, check all that apply:

   ☐ The service is produced jointly with another IC or serves an audience of interest to the IC

   ☐ The service has high visibility and sunsetting may result in questions, letters, emails to the NIH Director from the public, key stakeholders, Congressional staff, HHS leadership

   ☐ Other (Please elaborate) Enter other reason(s) Director(s) need to be informed

B. ***External communication plan*** for users, stakeholders, and the public

1. Who needs to be informed? (Identify stakeholders).
   - Why is this program or service being retired? ToxLearn has been supplanted by ToxTutor. ToxLearn was a partially completed online tutorial providing an introduction to the principles of toxicology. In addition to being unfinished (several modules were never completed), it was designed in Adobe Flash. Adobe Flash is no longer being updated, or available on most internet browsers. In contrast, ToxTutor has been updated and enhanced and it is a far more current and comprehensive tutorial. ToxTutor now serves as the online tutorial of choice. ToxTutor does not use Adobe Flash and it is compatible with the devices users are expected to use. An archived version of the ToxLearn will be hosted on SOT Web site.
   - What content, if any, will still be available and, if so, why and where? None
   - What will happen to the staff working on the product or service? The NLM project lead for ToxLearn retired at the end of 2017 and there has been no further work on it.

2. Establish what may need to be communicated. This could include—
   - Why is this program or service being retired? ToxLearn has been supplanted by ToxTutor. ToxLearn was a partially completed online tutorial providing an introduction to the principles of toxicology. In addition to being unfinished (several modules were never completed), it was designed in Adobe Flash. Adobe Flash is no longer being updated, or available on most internet browsers. ToxTutor has been updated and enhanced and now serves as the online tutorial of choice. ToxTutor does not use Adobe Flash and it is compatible with the devices users are expected to use.
   - What content, if any, will still be available and, if so, why and where? SOT indicated that they will host an archived version of ToxLearn on the SOT Website.
   - What will happen to the staff working on the product or service? They have already retired
   - How can I or how can my group be involved in this transition? None

3. Identify what needs to be completed:

☐ Deliverables Specify

☒ Responsible party or parties for the sunsetting process Pertti (Bert) Hakkinen

☒ Due date 12/31/2018

Identification of communication channels. These could include (Check all that apply):

☒ emails to stakeholders and users

☒ signage

☐ NLM homepage (public news announcement)

☐ speeches

☒ social media including Facebook, Twitter, LinkedIn, etc.

☒ newsletters/blogs, including *Technical Bulletin*, *NLM in Focus*, *Circulating Now*, *Musings*, etc.

☒ Other (Please Explain) Ask the Society of Toxicology to note this in its online "news" messaging to members.

4. Determine questions that may need to be addressed, including:
   - What information will be provided? .
   - When will the information be provided? December 1, 2018
   - With what frequency? once
   - Are there potential areas for misunderstanding or concern? No once the following is explained: ToxLearn has been supplanted by ToxTutor. ToxLearn was a partially completed online tutorial providing an introduction to the principles of toxicology. In addition to being unfinished (several modules were never completed), it was designed in Adobe Flash. Adobe Flash is no longer being updated, or available on most internet browsers. ToxTutor has been updated and enhanced and now serves as the online tutorial of choice. ToxTutor does not use Adobe Flash and it is compatible with the devices users are expected to use.
   - After informing stakeholders that the site will no longer be accessible, where can they find information once the site is retired? The archived version of ToxLearn will be available on the SOT Website.
   - How will NLM respond to questions and comments? Will answer emails sent to customer service
   - Is this an issue that may generate media interest? (If so, please include strategies for responding in the plan.) No. Our explanation should be enough.

IV. **Posting notice on central NLM "sunsetting calendar" (coming soon) on the NLM Wiki.** A notice should be posted on the "NLM resource sunset calendar" immediately following the effective date of the retirement of the resource. The sunset calendar, which will also be found on the NLM wiki, will serve as an historical record about retired NLM products and services.

V. **Identification of primary point of contact for further information about retired NLM resource.** Provide name and contact information for primary point of contact for retired NLM resource here:

Hi Kathy,

I am meeting with Grace Middleton and she let me know that she will be Personal Info Personal Info. She will be providing me the name of her supervisor and there will be an ICF technical writer (Kate Youmans) who can pick up some of Grace's work.

Please provide a list of the responsibilities you have given Grace so we can transition the work to Kate and NLM OCPL staff, including her role in these sunsetting requests. I will work with Grace on a transition plan for these activities the remainder of this week.

Thanks,
Jody

Answers to the questions in red:

I have a few questions about the retirement of TOXMAP that I think are important to address in the sunsetting document and subsequent communication materials.

- Can you provide greater detail about what TOXNET functionality is and is not no provided by EPA (the document says EPA offers "some" functionality – we should be clear about what's not provided by EPA)

  The TOXMAP-Classic, developed in the early 2000, featured the ability to provide context-sensitive search to TOXNET to get to environmental health literatures related to the geo-location the users searched in TOXMAP. The TOXMAP-Classic was built on Apache-Axis platform which was no longer supported since 2006. TOXMAP-beta was the next implementation, which uses Adobe Flash, which also became an obsolete platform. The latest TOXMAP implementation uses modern technology platform. But it only has basic "out of the box" GIS features. To further develop this version to have the customized features of TOXMAP-Classic and TOXMAP-beta, i.e., the context-sensitive search into TOXNET, will take a major investment in software development. By looking at the usage of the unique searches into TOXNET from TOXMAP-classic, it only averaged about 400 searches a year. The usage does not justify the further investment in development.

  EPA has several GIS applications and a new visualization tool of TRI data that have the similar GIS features of TOXMAP. https://www.epa.gov/geospatial/epa-geospatial-applications; https://edap.epa.gov/public/extensions/TRINA_dashboard_2016/TRINA_dashboard_2016.html

- Can you provide greater detail on what TOXNET content will NOT be available from other sources? It appears that much of the data are available from other sources. We should be clear about any data that will no longer be available. Or is it just that the info won't be available from a single source and other (original) sources don't provide all the functionality we offer.

  TOXMAP collected several GIS datasets from other original sources to make the GIS application meaningful and comprehensive. TOXMAP is the one single resource that pulls these relevant datasets together.

However, these datasets are still available from their original sources. In a GIS application like the EPA's EnviroMapper, https://www.epa.gov/emefdata/em4ef.home, users can add these datasets, available from ArcGIS, or from the web, as additional layers to the map.

Thanks!

Florence

For your review and approval. Please let me know your thoughts. Kathy

REQUEST TO RETIRE NLM TOXMAP

Product owner(s) fill out sections I, III, IV and V. Include documentation with this form.
Record approvals in section II.

I. **Written justification for the retirement of an NLM resource.** Three to six months before sunsetting any NLM resource, a written justification for the retirement of the resource must be prepared. In drafting the justification, the use of statistics is often helpful. Reasons for sunsetting and/or retiring an NLM resource may include (check all that apply):

☐ Low usage

☐ Obsolescence (that is, better products have come along) – whether from NLM or another group

☒ No longer aligned with NLM priorities or mission needs

☐ Incorrect or out-of-date information. If information cannot be updated, then archive the resource

☒ Reallocation of staff to different products because resource is no longer a priority

☒ Cost in relation to value

☒ Other (Please explain) The US EPA now produces several GIS products and visualization applications (https://www.epa.gov/geospatial/epa-geospatial-applications) that have the similar GIS functionality, except the ability to search TOXNET from within the GIS tools. This was a unique feature in TOXMAP-classic, which was retired due to the obsolete technology platform. The new version of TOXMAP does not have this feature either. To make the new TOXMAP to have this feature will require major investment in software development. We cannot justify the effort because the usage of this feature was very low, averaging about 400 searches a year.

II. **Approval.** This form must be signed by:

- NLM Division head (within LHC, LO, NCBI, OCCS, SIS, OD) Initial Here Date

- Upon approval by NLM division head, forward completed form to Kathy Cravedi, Director, OCPL (kcravedi@nlm.nih.gov), for distribution and approval by:
  NLM Director Initial Here Date
  NLM Deputy Director Initial Here Date
  NLM Communications Director Initial Here Date

III. **Prepare Communications plan for sunsetting the NLM resource.** This document is developed for sharing news about the retirement of the NLM resource with relevant internal and external audiences. Please address the following key elements:

A. ***Internal communication plan*** for NLM staff. Identify who needs to be informed? (staff, contractors) SIS staff, NLM staff, NNLM staff and core set of dedicated users from the Public Health and Toxicology Communities.

1. Determine questions that may need to be addressed. These may include:
   What information needs to be provided? TOXMAP will be retired because it no longer aligns with NLM priorities and because the US EPA now

provides several GIS products that provide similar GIS functionality of TOXMAP.

- When will the information be provided? End of FY2019
- By what method(s) will information be provided? Example: Email to all NLM staff Email, GovD posts, announcement on TOXMAP web site
- If multiple messages are to be sent, by what method(s) and with what frequency? Over a three-month period.
- Are there any potential areas for misunderstanding or concern? None except that core users of TOXMAP will not have a comparable resource available.

2. Establish what may need to be communicated to internal audiences. This could include:
    - Why is this program or service being retired? TOXMAP will be retired because it no longer aligns with NLM priorities and because the US EPA now provides several GIS products that provide similar GIS functionality.
    - What content, if any, will still be available and, if so, why and where? (Options may include archived pages on the NLM website, FTP, the Wayback Machine internet archive, and tape.) US EPA GIS applications and TRI applications; possibly NLM TOXNET TRI
    - What will happen to the staff working on the product or service? Assigned to other areas and projects within NLM/SIS.
    - What staff will be involved in this transition? Colette Hochstein
3. Identify mechanisms to be used for communicating with internal audiences. These may include some or all of the following (Check all that apply):
    - ☒ Emails
    - ☒ Signage
    - ☐ Information delivered at staff meetings
    - ☐ Point of discussion at brown bag luncheons
    - ☐ Town Hall meetings, etc.
    - ☐ Other (Explain) Enter other mechanism(s)
4. Develop and attach a set of Talking Points for the NLM Director TOXMAP has helped users visually explore data primarily from the EPA's Toxics Release Inventory (TRI) and Superfund Programs. TOXMAP also features Canadian NPRI data, U.S. EPA coal plant emissions data, and U.S. commercial nuclear power plants. TOXMAP overlays U.S. Census demographic data, income figures from the U.S. Department of Commerce, and health data from the NCI SEER program. It will be retired at the end of FY2019. It no longer aligns with NLM priorities and because the US EPA now provides several GIS products that provide similar GIS functionality.
5. Does the NIH Director or other IC Directors need to be informed? No

    If Yes, check all that apply:

    ☐ The service is produced jointly with another IC or serves an audience of interest to the IC

☐ The service has high visibility and sunsetting may result in questions, letters, emails to the NIH Director from the public, key stakeholders, Congressional staff, HHS leadership

☒ Other (Please elaborate) SIS has worked for many years with the US EPA regarding the data and functionality of TOXMAP. Their staff should be informed of its status.

B. ***External communication plan*** for users, stakeholders, and the public

1. Who needs to be informed? (Identify stakeholders).
    - Why is this program or service being retired? It has been determined that TOXMAP no longer aligns with NLM priorities and The US EPA now produces several GIS products (https://www.epa.gov/geospatial/epa-geospatial-applications) that have the similar GIS functionality.
    - What content, if any, will still be available and, if so, why and where? Data used in TOXMAP will be available from other original sources. GIS application users can access them by overlaying the data in their GIS applications. TRI and NPL data: US EPA; Canadian NPRI data from Environment and Climate Change Canada; Nuclear Regulatory Commission publishes the commercial nuclear power plant data; BEA data from the US Department of Commerce; TRI lat/long info from EPA's Facility Registry System (FRS).; coal plant data from EIA Electricity Data Browser; EPA Air Markets Program Data (AMPD) data available from the EPA Clean Air Markets; Cancer and Mortality data available from the US NIH NCI.
    - What will happen to the staff working on the product or service? Assigned to other areas and projects within NLM/SIS

2. Establish what may need to be communicated. This could include—
    - Why is this program or service being retired? It has been determined that TOXMAP no longer aligns with NLM priorities and The US EPA now produces several GIS products (https://www.epa.gov/geospatial/epa-geospatial-applications) that have the similar GIS functionality.
    - What content, if any, will still be available and, if so, why and where? Data used in TOXMAP will be available from other sources. GIS application users can access them by overlaying the data to the maps. TRI and NPL data: US EPA; Canadian NPRI data from Environment and Climate Change Canada; Nuclear Regulatory Commission publishes the commercial nuclear power plant data; BEA data from the US Department of Commerce; TRI lat/long info from EPA's Facility Registry System (FRS).; coal plant data from EIA Electricity Data Browser; EPA Air Markets Program Data (AMPD) data available from the EPA Clean Air Markets; Cancer and Mortality data available from the US NIH NCI.
    - What will happen to the staff working on the product or service? Assigned to other areas and projects within NLM/SIS

- How can I or how can my group be involved in this transition? Provide related information as needed.

3. Identify what needs to be completed:

☐ Deliverables Specify

☒ Responsible party or parties for the sunsetting process Colette Hochstein, Florence Chang

☐ Due date 9/30/2019

Identification of communication channels. These could include (Check all that apply):

☒ emails to stakeholders and users

☐ signage

☐ NLM homepage (public news announcement)

☐ speeches

☒ social media including Facebook, Twitter, LinkedIn, etc.

☒ newsletters/blogs, including *Technical Bulletin*, *NLM in Focus*, *Circulating Now*, *Musings*, etc.

☐ Other (Please Explain) Enter other possible communication channel(s)

4. Determine questions that may need to be addressed, including:
   - What information will be provided? It has been determined that TOXMAP no longer aligns with NLM priorities and The US EPA now produces several GIS products (https://www.epa.gov/geospatial/epa-geospatial-applications) that have the similar GIS functionality.
   - When will the information be provided? Starting Summer 2019)
   - With what frequency? Monthly
   - Are there potential areas for misunderstanding or concern? Probably not.
   - After informing stakeholders that the site will no longer be accessible, where can they find information once the site is retired? TRI and NPL data: US EPA; Canadian NPRI data from Environment and Climate Change Canada; Nuclear Regulatory Commission publishes the commercial nuclear power plant data; BEA data from the US Department of Commerce; TRI lat/long info from EPA's Facility Registry System (FRS).; coal plant data from EIA Electricity Data Browser; EPA Air Markets Program Data (AMPD) data available from the EPA Clean Air Markets; Cancer and Mortality data available from the US NIH NCI
   - How will NLM respond to questions and comments? Staff will respond to questions received through customer service emails
   - Is this an issue that may generate media interest? (If so, please include strategies for responding in the plan.) No

IV. **Posting notice on central NLM "sunsetting calendar" (coming soon) on the NLM Wiki.** A notice should be posted on the "NLM resource sunset calendar" immediately following the effective

date of the retirement of the resource. The sunset calendar, which will also be found on the NLM wiki, will serve as an historical record about retired NLM products and services.

V. **Identification of primary point of contact for further information about retired NLM resource.** Provide name and contact information for primary point of contact for retired NLM resource here:

Hi Kathy,

I am meeting with Grace Middleton and she let me know that she will be Personal Info Personal Info. She will be providing me the name of her supervisor and there will be an ICF technical writer (Kate Youmans) who can pick up some of Grace's work.

Please provide a list of the responsibilities you have given Grace so we can transition the work to Kate and NLM OCPL staff, including her role in these sunsetting requests. I will work with Grace on a transition plan for these activities the remainder of this week.

Thanks,
Jody

Answers to the questions in red:
I have a few questions about the retirement of TOXMAP that I think are important to address in the sunsetting document and subsequent communication materials.

- Can you provide greater detail about what TOXNET functionality is and is not no provided by EPA (the document says EPA offers “some” functionality – we should be clear about what’s not provided by EPA)
  The TOXMAP-Classic, developed in the early 2000, featured the ability to provide context-sensitive search to TOXNET to get to environmental health literatures related to the geo-location the users searched in TOXMAP. The TOXMAP-Classic was built on Apache-Axis platform which was no longer supported since 2006. TOXMAP-beta was the next implementation, which uses Adobe Flash, which also became an obsolete platform. The latest TOXMAP implementation uses modern technology platform. But it only has basic “out of the box” GIS features. To further develop this version to have the customized features of TOXMAP-Classic and TOXMAP-beta, i.e., the context-sensitive search into TOXNET, will take a major investment in software development. By looking at the usage of the unique searches into TOXNET from TOXMAP-classic, it only averaged about 400 searches a year. The usage does not justify the further investment in development.

EPA has several GIS applications and a new visualization tool of TRI data that have the similar GIS features of TOXMAP. https://www.epa.gov/geospatial/epa-geospatial-applications; https://edap.epa.gov/public/extensions/TRINA_dashboard_2016/TRINA_dashboard_2016.html

- Can you provide greater detail on what TOXNET content will NOT be available from other sources? It appears that much of the data are available from other sources. We should be clear about any data that will no longer be available. Or is it just that the info won't be available from a single source and other (original) sources don't provide all the functionality we offer.
  TOXMAP collected several GIS datasets from other original sources to make the GIS application meaningful and comprehensive. TOXMAP is the one single resource that pulls these relevant datasets together.
  However, these datasets are still available from their original sources. In a GIS application like the EPA's EnviroMapper, https://www.epa.gov/emefdata/em4ef.home, users can add these datasets, available from ArcGIS, or from the web, as additional layers to the map.

Thanks!

Florence

A TOXNET database	Toxicology/Enviro Health/Chemicals	External	https://toxnet.nlm.nih.gov/newtoxnet/toxline.htm	This resource will be integrated into NCBI's PubMed.	Jeanne Goshorn (LO)	0		
Toxicology Tutorials	College-level tutorials on the basic principles of toxicology, toxicokinetics, and cellular toxicology.	Toxicology/Enviro Health/Chemicals	External	https://toxtutor.nlm.nih.gov/		Pertti Hakkinen (LO)	50,000		
Toxics Release Inventory (TRI)	Annual estimated releases of toxic chemicals into the environment by industrial facilities in the United States.	Toxicology/Enviro Health/Chemicals	External	https://toxnet.nlm.nih.gov/newtoxnet/tri.htm		Colette Hochstein (LO)	0		
ToxLearn	An online learning tool providing an introduction to toxicology fundamentals. A collaboration with the Society of Toxicology	Toxicology/Enviro Health/Chemicals	External	https://toxlearn.nlm.nih.gov	This site will retire in 2018.	Jeanne Goshorn (LO)	0		
TOXMAP	Uses maps of the United States to show the amount and location of toxic chemicals released into the environment.	Toxicology/Enviro Health/Chemicals	External	https://toxmap.nlm.nih.gov/	This site will retire in 2019.	Colette Hochstein (LO)	0		
ToxMystery	Interactive learning site on toxic substances for children 7-10 years old.	Toxicology/Enviro Health/Chemicals	External	https://toxmystery.nlm.nih.gov/	This site will retire in 2018.	Alla Keselman (LO)	0		
TOXNET (Toxicology Data Network)	A cluster of databases covering toxicology, hazardous chemicals, environmental health and related areas.	Toxicology/Enviro Health/Chemicals	External	https://toxnet.nlm.nih.gov/	This resource will be integrated into NCBI's PubChem, PubMed, and Books.	Phillip Thomas (OCCS)	330,000		IT contract for software dev, data processing, etc., Not include the IT system/infrastructure support
TOXNET API	TOXNET API offers a RESTful Web Service API that allows users to search TOXNET databases with keywords.	Toxicology/Enviro Health/Chemicals	External	https://toxnet.nlm.nih.gov/toxnetapi/TOXNETWebService.html	This service will retire after TOXNET integration with NCBI is complete.	Phillip Thomas (OCCS)	0		
TOXNET Mobile	Easy to use, mobile-optimized Web interface to the TOXNET databases, covering toxicology, hazardous chemicals, environmental health and related areas.	Toxicology/Enviro Health/Chemicals	External	https://toxnet.nlm.nih.gov/pda/	This service will retire after TOXNET integration with NCBI is complete.	Phillip Thomas (OCCS)	0		

Wireless Information System for Emergency Responders (WISER)	Assists first responders in hazardous material incidents. WISER provides a wide range of information on hazardous substances, including substance identification support, physical characteristics, human health information, and containment and suppression guidance. WISER is available as a standalone application on Windows PCs, Apple's iOS devices, and Android devices.	Disaster/Public Health Emergency	External	https://wiser.nlm.nih.gov/		Jen Pakiam (LO), Pertti Hakkinen (LO), Stacey Arnesen (LO)	SIS: $350,000 Additional fundings from DOT, ASPR	IAA fundings from DOT, ASPR, etc. Amount varies	Software dev, mobile app dev contractor; $350K from SIS base budget; additional IAA fundings from DOT, ASPR, etc. Amount varies
Working groups									
Digital communication Working Group	Social media outreach and engagement to audience groups. Twitter handles include: NLM_SIS, NLM_DIMRC, NLM_HIV, AIDSinfo. Facebook: AIDSinfo. Listservs: Granicus/GovDelivery		External	https://www.nlm.nih.gov/socialmedia/		Siobhan Champ-Blackwell (LO), David Hale (OCCS), Lucie Chen (LO), Colette Hochstein (LO)	50,000		
Visuzliation Working Group	Explores visualization platforms (e.g. Tableau), principles, best practices. Produces prototypes of visualizations using different platforms and techniques		External/ Internal	https://healthreach.nlm.nih.gov/data-viz		Colette Hochstein (LO), Jennifer Dong (OCCS), Jeanne Goshorn (LO)			
SIS Resource Working Group	Provides coordination, guidance, and oversight to all SIS information products and services		Internal			Colette Hochstein (LO), Jeanne Goshorn (LO), Stacey Arnesen (LO), Laura Bartlett (LO), Cheryl White (LO), Phillip Thomas (OCCS)			

Product Name	Product Description	Program Area	Access	Website URLs	Comments	Staffing	Contracts	IAA/DC funding source	Notes
AIDSInfo	U.S. Department of Health and Human Services (HHS) resource providing information on HIV/AIDS clinical trials and federally approved HIV treatment and prevention guidelines, information on HIV/AIDS treatment, clinical trials, and other HIV/AIDS-related research information for health care providers, researchers, people affected by HIV/AIDS, and the general public.	HIV/AIDS	External	https://aidsinfo.nih.gov/	Sponsored by OAR, NIAID, HRSA, and CDC.	Nicole Scott (LO)	SIS: 0 OAR: $2,600,000	2,600,000	Contract is fully funded by OAR
AIDSInfo API	Provides access to the AIDSinfo drug database fact sheets in XML format. The API returns information from both the professional and patient versions of the AIDSinfo drug database fact sheets based on input query strings.	HIV/AIDS	External	https://aidsinfo.nih.gov/api	Sponsored by OAR, NIAID, HRSA, and CDC.	Nicole Scott (LO)	0		
AIDSinfo HIV/AIDS Drug Database	Provides mobile access to information about drugs approved to treat HIV infection, drugs that are used to treat other infections or diseases common to people living with HIV, and also HIV/AIDS-related drugs that are being studied in clinical trials. Also available for Android	HIV/AIDS	External	https://itunes.apple.com/us/app/aidsinfo-hiv-aids-drug-database/id942509562?mt=8	Sponsored by OAR, NIAID, HRSA, and CDC.	Nicole Scott (LO)	0		
AIDSInfo HIV/AIDS Glossary	The AIDSinfo HIV/AIDS Glossary is a powerful tool that provides mobile access to over 850 pertinent HIV/AIDS glossary terms in both English and Spanish.	HIV/AIDS	External	https://itunes.apple.com/us/app/aidsinfo-hiv-aids-glossary/id397417517?mt=8	Sponsored by OAR, NIAID, HRSA, and CDC.	Nicole Scott (LO)	0		
AIDSource	AIDSource offers access to a comprehensive collection of HIV/AIDS-related resources reviewed and selected by expert information specialists and librarians.	HIV/AIDS	External	https://aids.nlm.nih.gov/		Nicole Scott (LO)	SIS: 0 OAR:$286,000	286,000	Contract is fully funded by OAR

All-Hazards Plan	All Hazards Plan is a high-level view of the actions HHS can take to assist in an emergency. HHS is the lead federal agency for the public health and medical aspects of emergency planning and response. The All-Hazards plan centralizes common steps and information needs in a single plan that is easier to learn and use as a guide. A collaboration with HHS/ASPR	Disaster/Public Health Emergency	External	https://allhazards.nlm.nih.gov/	This is an archival site. It will retire when the new HHS/ASPR Emergency Management Portal is ready.	Florence Chang (retire)	0		
Alternatives to Animal Testing Bibliography (ALTBIB)	Bibliography on alternatives to the use of live vertebrates in biomedical research and testing.	Toxicology/Enviro Health/Chemicals	External	https://toxnet.nlm.nih.gov/altbib.html		Pertti Hakkinen (LO)	0		
American Indian Health	Health and well-being of American Indians.	Special Population Outreach	External	https://americanindianhealth.nlm.nih.gov/	This site will retire in 2018.	Laura Bartlett (LO)	0		
Arctic Health	Health and well-being of our planet's northern-most inhabitants.	Special Population Outreach	External	https://arctichealth.nlm.nih.gov/	This site will retire in 2018.	Laura Bartlett (LO)	0		
Carcinogenic Potency Database (CPDB)	Standardized analyses of the results of 6,540 chronic, long-term animal cancer tests (1980-2011). A TOXNET database.	Toxicology/Enviro Health/Chemicals	External	https://toxnet.nlm.nih.gov/newtoxnet/cpdb.htm	No longer being updated. This resource will retire in 2019.	Jeanne Goshorn (LO)	0		
Chemical Carcinogenesis Research Information System (CCRIS)	Carcinogenicity, mutagenicity, tumor promotion, and tumor inhibition test results on chemicals. A TOXNET database	Toxicology/Enviro Health/Chemicals	External	https://toxnet.nlm.nih.gov/newtoxnet/ccris.htm	No longer being updated. This resource will be integrated into NCBI's PubChem.	Jeanne Goshorn (LO)	0		
Chemical Hazards Emergency Medical Management (CHEMM)	Enables first responders and other healthcare providers and planners to plan for, respond to, recover from, and mitigate the effects of mass-casualty incidents involving accidental or terrorist chemical releases. A collaboration with HHS/ASPR.	Disaster/Public Health Emergency	External	https://chemm.nlm.nih.gov/		Pertti Hakkinen (LO), Jen Pakiam (LO)	SIS: $30,000 ASPR: $170,000	170,000	$30K from SIS base budget $170K from HHS/ASPR IAA
Chemical Identification Plus Database (ChemIDplus)	Online dictionary of over 400,000 chemicals, including names, synonyms, and chemical structures.	Toxicology/Enviro Health/Chemicals	External	https://chem.nlm.nih.gov/chemidplus/chemidlite.jsp		Ying Sun (OCCS), Jeanne Goshorn (LO)	413,825		Software dev contracts, Ying Sun (OCCS) is the COR
ChemSpell Web Service API	The ChemSpell Web Service API provides chemical name spell checking and chemical name synonym look-up.	Toxicology/Enviro Health/Chemicals	External	https://chemspell.nlm.nih.gov/spell/	This site will retire in 2018.	Ying Sun (OCCS)	0		
CHIRr	CHIRr provides a resource of outcome variables and suggested measures to guide a comprehensive consumer health informatics assessment.	Special Population Outreach	External	https://chirr.nlm.nih.gov/	This site will retire in 2018.	Robert Logan	0		

Community Health Maps	Low cost and easy-to-use mapping and mobile communication tools.	Special Population Outreach	External	https://communityhealthmaps.nlm.nih.gov/		Colette Hochstein (LO), Jennifer Dong (OCCS)	60,000		
Comparative Toxicogenomics Database (CTD)	Contains manually curated data describing cross-species chemical-gene/protein interactions and chemical- and gene-disease relationships. A TOXNET database.	Toxicology/Enviro Health/Chemicals	External	https://toxnet.nlm.nih.gov/newtoxnet/ctd.htm	This resource will be integrated into NCBI's PubChem.	Pertti Hakkinen (LO), Jeanne Goshorn (LO)	0		
Data Discovery	NLM open data discovery site on the Socrata platform. Provides easy interface to view, filter, download, visualize, and explore datasets.	Data Science	External	https://datadiscovery.nlm.nih.gov		David Hale (OCCS)	77,000		
DERMaL (Dermal Exposure Risk Management and Logic) eToolkit	The goal of DERMaL is to develop informational resources and tools associated with dermal exposures to chemicals to aid in pre-event planning in addition to during an event. A collaboration with CDC/NIOSH.	Disaster/Public Health Emergency	External	https://dermal.nlm.nih.gov		Pertti Hakkinen (LO)	0		
Developmental and Reproductive Toxicology Database (DART)	References to the teratology, developmental, and reproductive toxicology literature. A TOXNET database.	Toxicology/Enviro Health/Chemicals	External	https://toxnet.nlm.nih.gov/newtoxnet/dart.htm	This resource will be integrated into NCBI's PubMed.	Jeanne Goshorn (LO)	0		
Dietary Supplement Label Database	DSLD includes full label derived information from dietary supplement products marketed in the U.S. with a Web-based user interface that provides ready access to label information. A collaboration with NIH's Office of Dietary Supplements.	Toxicology/Enviro Health/Chemicals	External	https://dsld.nlm.nih.gov		Colette Hochstien (LO), Jeanne Goshorn (LO)	0		
Dietary Supplement Ingredient Database	DSID provides estimated levels of ingredients in dietary supplement products sold in the United States. A collaboration with NIH's Office of Dietary Supplements and USDA.	Toxicology/Enviro Health/Chemicals		https://dietarysupplementdatabase.usda.nih.gov/		Colette Hochstein (LO), Jeanne Goshorn (LO)	0		
Disaster Information	The Disaster Information Management Research Center provides health information resource and informatics research related to disasters of natural, accidental, or deliberate origin.	Disaster/Public Health Emergency	External	https://disasterinfo.nlm.nih.gov		Siobhan Champ-Blackwell (LO), Jen Pakiam (LO), Stacey Arnesen (LO)	SIS: $225,000 IAA and DC: $160,000	Additional IAAs and DCs from partner agencies; amount varies; FY2018 total $160K	$225K from SIS base budget. Additional IAA and DC fundings from partner agencies;
Disaster Lit: Resource Guide for Disaster Medicine and Public Health	Guide to freely available online disaster medicine and public health literature and related information.	Disaster/Public Health Emergency	External	https://disasterlit.nlm.nih.gov/		Siobhan Champ-Blackwell (LO), Jen Pakiam (LO), Stacey Arnesen (LO)	300,000		

Drug Information Portal	Information for over 55,000 drugs. Names, usage, and structures are displayed, as well as search links to key NLM and government sites. Same backend database as ChemIDplus.	Toxicology/Enviro Health/Chemicals	External	https://druginfo.nlm.nih.gov/		Ying Sun (OCCS), Jeanne Goshorn (LO)	0		Same contracts as ChemIDplus
Drug Information Portal Mobile	A mobile interface to information for over 55,000 drugs. Names, usage, and structures are displayed, as well as search links to key NLM and government sites, using their mobile version when available. Sane backend database as ChemIDplus.	Toxicology/Enviro Health/Chemicals	External	https://druginfo.nlm.nih.gov/m.drugportal/m.drugportal.jsp		Ying Sun (OCCS), Jeanne Goshorn (LO)	0		
Environmental Health and Toxicology Information	Portal to numerous NLM databases and resource in environmental health and toxicology.	Toxicology/Enviro Health/Chemicals	External	https://sis.nlm.nih.gov/enviro.html		Colette Hochstein (LO), Vivian Chung (OCCS)	0		
Environmental Health Student Portal	Environmental Health education resources for middle school students and their teachers. A consumer health information resource.	Toxicology/Enviro Health/Chemicals	External	https://kidsenvirohealth.nlm.nih.gov/		Alla Keselman (LO)	26,000		
GeneED	Explore topics such as Cell Biology, DNA, Genes, Chromosomes, Heredity/Inheritance Patterns, Epigenetics/Inheritance and the Environment, Genetic Conditions, Evolution, Biostatistics, Biotechnology, DNA Forensics, and Top Issues in Genetics. A consumer health information resource.	Special Population Outreach	External	https://geneed.nlm.nih.gov/	This site will retire in 2019.	Alla Keselman (LO)	0		
GENE-TOX (Genetic Toxicology DataBank)	Mutagenicity test data on chemicals based on peer review of the scientific literature. A TOXNET database.	Toxicology/Enviro Health/Chemicals	External	https://toxnet.nlm.nih.gov/newtoxnet/genetox.htm	No longer being updated.This resource will be integrated into NCBI's PubChem.	Jeanne Goshorn (LO)	0		
Hazardous Substances Data Bank (HSDB)	Comprehensive, peer-reviewed toxicology data for about 5,000 chemicals. A TOXNET database.	Toxicology/Enviro Health/Chemicals	External	https://toxnet.nlm.nih.gov/newtoxnet/hsdb.htm	This resource will be integrated into NCBI's PubChem.	George Fonger (LO), Jeanne Goshorn (LO), Pertti Hakkinen (LO), Phillip Thomas (OCCS)	1,286,800		Two contracts for content building, peer-review process coordination
Haz-Map	Links jobs and hazardous tasks with occupational diseases and their symptoms. A TOXNET database.	Toxicology/Enviro Health/Chemicals	External	https://hazmap.nlm.nih.gov		Lucie Chen (LO), Quynh-Thu Nguyen (OCCS)	38,500		
HealthReach	Multilingual and multicultural health information for those working with or providing care to individuals with limited English proficiency. A consumer health information resource.	Special Population Outreach	External	https://healthreach.nlm.nih.gov/		Laura Bartlett (LO), Vivian Chung (OCCS), Jennifer Dong(OCCS), Quynh-Thu Nguyen (OCCS)	345,000		

Household Products Database	Health and safety information on household products. A TOXNET database.	Toxicology/Enviro Health/Chemicals	External	https://hpd.nlm.nih.gov/		Pertti Hakkinen (LO), Lucie Chen (LO), Vivian Chung (OCCS), Quynh-Thu Nguyen (OCCS)	60,000		
Integrated Risk Information System (IRIS)	Hazard identification and dose-response assessments on chemicals. A TOXNET database.	Toxicology/Enviro Health/Chemicals	External	https://toxnet.nlm.nih.gov/newtoxnet/iris.htm		Pertti Hakkinen (LO)	0		
International Toxicity Estimates for Risk (ITER)	Risk information on chemicals from several authoritative organizations worldwide. A TOXNET database.	Toxicology/Enviro Health/Chemicals	External	https://toxnet.nlm.nih.gov/newtoxnet/iter.htm		George Fonger (LO), Pertti Hakkinen (LO)	35,000		
LactMed (Drugs and Lactation Database)	Find information about maternal and infant drug levels, possible effects on lactation and on breastfed infants, and alternative drugs to consider. A TOXNET database.	Toxicology/Enviro Health/Chemicals	External	https://toxnet.nlm.nih.gov/newtoxnet/lactmed.htm	This resource has been integrated into NCBI's Books.	Lucie Chen (LO)	20,000		
LactMed Mobile App for iPhone/iPod Touch/Android Devices	Find information about maternal and infant drug levels, possible effects on lactation and on breastfed infants, and alternative drugs to consider. Mobile version	Toxicology/Enviro Health/Chemicals	External	https://toxnet.nlm.nih.gov/help/lactmedapp.htm		Ying Sun (OCCS), Jennifer Dong (OCCS)	0		
LiverTox	Provides up-to-date, accurate, and easily accessed information on the diagnosis, cause, frequency, patterns, and management of liver injury attributable to prescription and nonprescription medications, herbals and dietary supplements. A collaboration with NIDDK.	Toxicology/Enviro Health/Chemicals	External	https://livertox.nih.gov/		Pertti Hakkinen (LO)	SIS: $106,000 NIDDK: $90,000	90,000	$106K from SIS base budget; $90K from NIDDK DC
NIH Disaster Research Response (DR2)	DR2 is the national framework for research on the medical and public health aspects of disasters and public health emergencies. A collaboration with NIEHS.	Disaster/Public Health Emergency	External	https://dr2.nlm.nih.gov		Siobhan Champ-Blackwell (LO), Jen Pakiam (LO), Stacey Arnesen (LO)	NIEHS:$100,000	100,000	DC from NIEHS fully funds this project
Outreach Resources and Activites	Population specific Web-based resources.	Special Population Outreach	External	https://sis.nlm.nih.gov/outreach.html		Laura Bartlett (LO)	0		
Pathways for Public Health Information	Guides to Web resources on environmental health and toxicology, disasters, chemicals, drugs, and special populations.	Toxicology/Enviro Health/Chemicals	External	https://sis.nlm.nih.gov/pathway.html	This site will retire in 2018.	Colette Hochstein (LO)	0		
Pillbox	Pillbox enables rapid identification of unknown solid-dosage medications (tablets/capsules) based on physical characteristics and high-resolution images.	Toxicology/Enviro Health/Chemicals	External	https://pillbox.nlm.nih.gov/		David Hale (OCCS), Quynh-Thu Nguyen (OCCS)	40,000		

Pillbox API	Provides access to the pharmaceutical identification and reference system, data, and medication images.	Toxicology/Enviro Health/Chemicals	External	http://pillbox.nlm.nih.gov/API-documentation.html		David Hale (OCCS), Quynh-Thu Nguyen (OCCS)	0		
Radiation Emergency Medical Management (REMM)	Designed for health care providers, primarily physicians, without formal expertise in radiation safety or radiation medicine who may provide medical care during an accidental or non-accidental radiation event. A collaboration with HHS/ASPR.	Disaster/Public Health Emergency	External	https://www.remm.nlm.gov/		Jen Pakiam (LO)	ASPR: $37,000	37,000	Fully funded by IAA from ASPR
Radiation Emergency Medical Management (REMM) Mobile	Guidance for health care providers on the diagnosis and treatment of radiation injuries during radiation and nuclear emergencies via a mobile app. A collaboration with HHS/ASPR. Available on Apple's iOS devices, and Android devices	Disaster/Public Health Emergency	External	https://www.remm.nlm.gov/downloadmremm.htm		Jen Pakiam (LO)	ASPR: $10,500	10,500	Fully funded by IAA from ASPR
SIS Main Web	SIS' home page showcasing the information resources covering toxicology, environmental health, HIV/AIDS, outreach to underserved and special populations, HIV/AIDS, drugs and household products, and disaster/emergency preparedness and response.	All	External	https://sis.nlm.nih.gov		Colette Hochstein (LO)	0		
Substance Registration System (FDA)	A joint FDA/USP project to support health information technology initiatives by generating unique ingredient identifiers (UNIIs) for substances in drugs, biologics, foods, and devices. A collaboration with FDA.	Toxicology/Enviro Health/Chemicals	External	https://fdasis.nlm.nih.gov		Ying Sun (OCCS), Jeanne Goshorn (LO)	FDA: $150,000	150,000	Fully funded by IAA from FDA
Tox App	A free mobile app for iOS users based on the web-based NLM TOXMAP. Tox-App includes ~465 chemicals that were released on-site in TRI2016.	Toxicology/Enviro Health/Chemicals	External	https://itunes.apple.com/us/app/tox-app/id1227471020?mt=8		Colette Hochstein (LO), Ying Sun (OCCS)	0		
Tox Town	Interactive guide to toxic chemicals and environmental health risks. A consumer health information resource.	Toxicology/Enviro Health/Chemicals	External	https://toxtown.nlm.nih.gov/		Alla Keselman (LO)	200,000		
Toxicology Literature Online (TOXLINE)	Over 4 million references to literature on biochemical, pharmacological, physiological, and toxicological effects of drugs and other chemicals. A TOXNET database	Toxicology/Enviro Health/Chemicals	External	https://toxnet.nlm.nih.gov/newtoxnet/toxline.htm	This resource will be integrated into NCBI's PubMed.	Jeanne Goshorn (LO)	0		

Toxicology Tutorials	College-level tutorials on the basic principles of toxicology, toxicokinetics, and cellular toxicology.	Toxicology/Enviro Health/Chemicals	External	https://toxtutor.nlm.nih.gov/		Pertti Hakkinen (LO)	50,000		
Toxics Release Inventory (TRI)	Annual estimated releases of toxic chemicals into the environment by industrial facilities in the United States.	Toxicology/Enviro Health/Chemicals	External	https://toxnet.nlm.nih.gov/newtoxnet/tri.htm		Colette Hochstein (LO)	0		
ToxLearn	An online learning tool providing an introduction to toxicology fundamentals. A collaboration with the Society of Toxicology	Toxicology/Enviro Health/Chemicals	External	https://toxlearn.nlm.nih.gov	This site will retire in 2018.	Jeanne Goshorn (LO)	0		
TOXMAP	Uses maps of the United States to show the amount and location of toxic chemicals released into the environment.	Toxicology/Enviro Health/Chemicals	External	https://toxmap.nlm.nih.gov/	This site will retire in 2019.	Colette Hochstein (LO)	0		
ToxMystery	Interactive learning site on toxic substances for children 7-10 years old.	Toxicology/Enviro Health/Chemicals	External	https://toxmystery.nlm.nih.gov/	This site will retire in 2018.	Alla Keselman (LO)	0		
TOXNET (Toxicology Data Network)	A cluster of databases covering toxicology, hazardous chemicals, environmental health and related areas.	Toxicology/Enviro Health/Chemicals	External	https://toxnet.nlm.nih.gov/	This resource will be integrated into NCBI's PubChem, PubMed, and Books.	Phillip Thomas (OCCS)	330,000		IT contract for software dev, data processing, etc., Not include the IT system/infrastructure support
TOXNET API	TOXNET API offers a RESTful Web Service API that allows users to search TOXNET databases with keywords.	Toxicology/Enviro Health/Chemicals	External	https://toxnet.nlm.nih.gov/toxnetapi/TOXNETWebService.html	This service will retire after TOXNET integration with NCBI is complete.	Phillip Thomas (OCCS)	0		
TOXNET Mobile	Easy to use, mobile-optimized Web interface to the TOXNET databases, covering toxicology, hazardous chemicals, environmental health and related areas.	Toxicology/Enviro Health/Chemicals	External	https://toxnet.nlm.nih.gov/pda/	This service will retire after TOXNET integration with NCBI is complete.	Phillip Thomas (OCCS)	0		
Wireless Information System for Emergency Responders (WISER)	Assists first responders in hazardous material incidents. WISER provides a wide range of information on hazardous substances, including substance identification support, physical characteristics, human health information, and containment and suppression guidance. WISER is available as a standalone application on Windows PCs, Apple's iOS devices, and Android devices. Subject: Review of LO and SIS Offerings
Attachments: 4.b.1 NPA Phase 1 Initial Inventory of NLM Offerings[3].xlsx

HI Joyce, Diane and Florence
I understand that Florence is meeting with Wei Ma to review the technical needs following the transfer of SIS offerings. In addition, Florence and I met yesterday and determined that to make progress, we three should meet. I would like to meet to discuss the next action steps regarding the SIS-based offerings (information and outreach) so that we are able to go to the next step in planning for the implementation of the strategic plan.

Florence, you are welcome to bring Janice if you like

Please plan to meet with me on Wednesday -I've held 11-1 but we may be able to make it through more quickly.

Patti

MITRE

Project Deliverable 4.b.1

Preliminary Inventory of National Library of Medicine Public-Facing Offerings

CAMH FFRDC Strategic Support for National Library of Medicine

Task Order No. HHSN276201800082U

November 16, 2018

MITRE Point of Contact:
Beth Melby
NLM Portfolio Analysis (NPA) Task Lead
bmelby@mitre.org

The views, opinions, and/or findings contained in this document are those of The MITRE Corporation and should not be construed as official government position, policy, or decision unless so designated by other documentation.

MITRE
7515 Colshire Drive
McLean, Virginia 22102

This MITRE tutes MITRE's submission of a *preliminary inventory of National Library of Me c-facing offerings.*

Inventory data included in this deliverable was collected during NLM Portfolio Analysis (NPA) Phase 1 data collection activities from October 23rd through November 16th.

NPA data cleansing and quality review is a time intensive process. MITRE's data cleansing approach included multiple interactions with NLM Division representatives responsible for NPA submissions before and after data submissions. Interactions focused on clarifying offerings, their purpose, and other basic offering details. MITRE also compared submissions from different NLM organizations to ensure a standardized approach to the data presented. Finally, MITRE also recommended revisions to submissions, when appropriate, to ensure submissions followed the NPA data call methodology.

This preliminary NLM inventory contains data submitted from the NLM organizations listed below. Incomplete submissions are also noted in the list as blank submission dates.

Because data cleansing activities are on-going and several submissions outstanding, some offering details presented in the final NPA inventory will be different from this preliminary inventory.

NLM Division/Office	Sub-Org	Submission Date
Extramural Programs	N/A	29-Oct
Library Operations	Technical Services Div	30-Oct
Library Operations	History of Medicine	30-Oct
Library Operations	Public Service Division	2-Nov
Library Operations	National Info Center on Health Services Research	
Library Operations	Biographic Services Division	7-Nov
Library Operations	National Network Coordinating Office	
Lister Hill Center	N/A	1-Nov
NCBI	IEB	5-Nov
NCBI	CBB	
SIS	Office of Clinical Toxicology	8-Nov
SIS	Biomedical Info Services	8-Nov
SIS	Biomedical Files Implementation	8-Nov
SIS	Disaster Info Management	8-Nov
SIS	Outreach & Special Populations	8-Nov
OCPL	N/A

National Library of Medicine
Inventory of Public-Facing Offerings

NLM Portfolio Assessment (NPA) Phase 1 Data Call Preliminary Results

Distribution of Offerings by NLM Divisions

National Library of Medicine
Inventory of Public-Facing Offerings

Offering Name	Offering Short Description	Red, Yellow, Green	Offering Type	Primary Organization Name	API Access	Raw Data FTP	Software	Website Access	Print Media
AIDSinfo	NLM collaborates with the U.S. Department of Health and Human Services (HHS) to deliver AIDSinfo, a resource providing information on HIV/AIDS clinical trials and federally approved HIV treatment and prevention guidelines, information on HIV/AIDS treatment, clinical trials, and other HIV/AIDS-related research information for health care providers, researchers, people affected by HIV/AIDS, and the general public. The		Digital Service	Specialized Information Services (SIS) / Outreach and Special Populations Branch	x		x	x	
AIDSsource	AIDSource offers access to a comprehensive collection of HIV/AIDS-related resources reviewed and selected by expert information specialists and librarians. Materials are available in Spanish materials as well.		Digital Service	Specialized Information Services (SIS) / Outreach and Special Populations Branch				x	
AltBib	AltBib provides resources on Alternatives to the Use of Live Vertebrates in Biomedical Research and Testing.		Digital Service	Specialized Information Services (SIS) / Office of the Director / Office of Clinical Technology				x	
American Indian Health	American Indian Health is a source for information about the health and well being of Native Americans and Alaska Natives. Portal to be sunset in FY2019.		Digital Service	Specialized Information Services (SIS) / Outreach and Special Populations Branch				x	
Arctic Health	Arctic Health is a source for information on diverse aspects of the Arctic environment and the health of northern peoples. Portal to be sunset in FY2019.		Digital Service	Specialized Information Services (SIS) / Outreach and Special Populations Branch				x	
Chemical Hazards Emergency Medical Management (CHEMM)	Chemical Hazards Emergency Medical Management (CHEMM) provides resources to assist in the medical response to a mass-casualty chemical incident.		Digital Service	Specialized Information Services (SIS) / Office of the Director / Office of Clinical Technology			x	x	
ChemIDplus	The ChemIDplus database is a dictionary of over 400,000 chemicals (names, synonyms, and structures). ChemIDplus includes links to NLM and other databases and resources, including links to federal, state and international agencies.		Data	Specialized Information Services (SIS) / Biomedical Information Services Branch	x	x		x	
Common Data Element (CDE) Repository	The NIH Common Data Element (CDE) Repository provides access to structured human and machine-readable definitions of data elements that have been recommended or required by NIH Institutes and Centers and other organizations for use in research and		Digital Service	Library Operations (LO) / Bibliographic Services Division / MEDLARS Management Section	x	x		x	
DailyMed	DailyMed provides trustworthy information about marketed drugs in the United States. DailyMed is the official provider of FDA label information (package inserts).		Digital Service	Library Operations (LO) / Bibliographic Services Division	x	x		x	
Data Discovery	The NLM open data discovery site, presented via the Socrata platform, provides easy interface to view, filter, download, visualize, and explore datasets.		Digital Service	Specialized Information Services (SIS) / Biomedical Files Implementation Branch	x			x	
Data Distribution Program	The Data Distribution Program is an NLM program, coordinated and supported by MMS, which provides access and support to users accessing FTP files for various NLM data sets.		Human Service	Library Operations (LO) / Bibliographic Services Division / MEDLARS Management Section		x		x	
Dietary Supplement Ingredient Database	The Dietary Supplement Ingredient Database (DSID) provides estimated levels of ingredients in dietary supplement products sold in the United States. DSID is a collaboration with NIH's Office of Dietary Supplements and USDA.		Digital Service	Specialized Information Services (SIS) / Biomedical Information Services Branch				x	
Dietary Supplement Label Database	The Dietary Supplement Label Database (DSLD) includes full label derived information from dietary supplement products marketed in the U.S. with a Web-based user interface that provides ready access to label information. DSLD is a collaboration with		Digital Service	Specialized Information Services (SIS) / Biomedical Information Services Branch	x			x	
Digital Collections	NLM Digital Collections comprises texts, images, audiovisuals, maps and software. Includes both scanned and born digital items.		Digital Service	Library Operations (LO) / Technical Services Division / Library Technology Services Section	x			x	
Disaster Information Management Research Center (DIMRC) website	The Disaster Information Management Research Center (DIMRC) website is a source for health information resources and technology for disaster and public health emergency preparedness, response, and recovery. The focus is to connect people to quality disaster and public health emergency information and foster a culture of community		Digital Service	Specialized Information Services (SIS) / Disaster Information Management Research Center				x	
Disaster Lit: Database for Disaster Medicine and Public Health	Disaster Lit, the Database for Disaster Medicine and Public Health, contains links to disaster medicine and public health emergency resources available on the Internet at no cost. Resources include guidelines, research reports, training classes, fact sheets, website, databases, data sets, and similar materials.		Digital Service	Specialized Information Services (SIS) / Disaster Information Management Research Center	x			x	
DOCLINE	DOCLINE is an automated interlibrary loan (ILL) request routing system facilitating resource sharing among libraries in the National Network of Libraries of Medicine		Digital Service	Library Operations (LO) / Public Services Division / Collection Access Section				x	
Drug Information Portal	The Drug Information Portal contains information for over 55,000 drugs. Names, usage, and structures are displayed, as well as search links to key NLM and government sites. Same backend database as ChemIDplus.		Digital Service	Specialized Information Services (SIS) / Biomedical Information Services Branch				x	
Enviromental Health Student Portal	The Enviromental Health Student Portal provides educational resources for middle school students and educators.		Digital Service	Specialized Information Services (SIS) / Office of the Director				x	
Environmental Health and Toxicology Information	The Environmental Health and Toxicology Information website is a portal to numerous NLM databases and resources in environmental health and toxicology.		Digital Service	Specialized Information Services (SIS) / Biomedical Information Services Branch				x	
GeneEd	GeneEd is a portal of genetic topics such as cell biology, DNA, genes, epigenetics and more for students and teachers. Information from the site will be merged with Genetics Home Reference in spring 2019.		Digital Service	Specialized Information Services (SIS) / Office of the Director				x	
Genetics Home Reference	Genetics Home Reference is a consumer health resource that provides information for the general public about the effects of genetic variation on human health.		Digital Service	Library Operations (LO) / Public Services Division / Reference and Web Services Section	x			x	
Hazardous Substances Data Bank (HSDB)	The Hazardous Substances Data Bank (HSDB) is a comprehensive, peer-reviewed toxicology data bank for about 6,000 chemicals. A TOXNET database.		Data	Specialized Information Services (SIS) / Biomedical Information Services Branch	x	x		x	
HazMap	Haz-Map is an occupational health database designed for health and safety professionals and for consumers seeking information about the adverse effects of workplace exposures to chemical and biological agents. The main links in Haz-Map are		Data	Specialized Information Services (SIS) / Office of the Director / Office of Clinical Technology				x	

HealthReach	HealthReach is a database of easy to read, multilingual health information for those working with or providing care to individuals with limited English proficiency.		Digital Service	Specialized Information Services (SIS) / Outreach and Special Populations Branch	x			x		
HMD Circulating Now Blog	Circulating Now raises awareness of the historical collections of the National Library of Medicine and informs the public about the resources, services, events and activities of the NLM History of Medicine Division.		Digital Service	Library Operations (LO) / History of Medicine Division				x		
HMD Digital Gallery	HMD Digital Gallery is an online presentation of curated digitized content that links audiences to Digital Collections. Curated assets that comprise Digital Galleries support and enhance online exhibitions' content. Currently, every Digital Gallery is connected to		Digital Service	Library Operations (LO) / History of Medicine Division/ Exhibitions Section				x		
HMD Directory of History of Medicine Collections (DHMC)	HMD Directory of History of Medicine Collections (DHMC) is a public-facing database containing information on collections in the history of health sciences all around the		Digital Service	Library Operations (LO) / History of Medicine Division				x		
HMD FDA Notices of Judgment	HMD FDA Notices of Judgment is a public interface to the digital archive of the FDA Notices of Judgment		Digital Service	Library Operations (LO) / History of Medicine Division	x			x		
HMD Finding Aids	The HMD Finding Aids web site is a comprehensive online system that allows patrons to discover the unique personal paper and archival collections held by NLM through progressively detailed descriptions of a collection's component parts.		Digital Service	Library Operations (LO) / History of Medicine Division				x		
HMD Finding Aids Consortium	The History of Medicine Finding Aids Consortium is a discovery tool providing keyword search services across a union catalog of finding aids describing archival collections broadly related to the history of medicine and its allied sciences.		Digital Service	Library Operations (LO) / History of Medicine Division				x		
HMD IndexCat	HMD IndexCat is the public facing database which provides direct access to the digital version of the Index-Catalogue of the Library of the Surgeon General's Office, the electronic Thorndike and Kibre (eTK for medieval Latin texts), and the electronic Voigts		Digital Service	Library Operations (LO) / History of Medicine Division		x		x		
HMD Medicine on Screen	Medicine on Screen is a curated portal to selected films from the National Library of Medicine's collection of over 10,000 historic audio visual titles.		Digital Service	Library Operations (LO) / History of Medicine Division				x		
HMD Online Exhibitions	HMD Online Exhibitions is an adaptation of exhibition content to the online environment.		Digital Service	Library Operations (LO) / History of Medicine Division/ Exhibitions Section				x		
HMD Profiles in Science	Profiles in Science documents the work of leaders in biomedical research and public health using their archival collections.		Digital Service	Library Operations (LO) / History of Medicine Division				x		
HMD Web Collection	HMD Web Collection is the public facing offering which searches the internet for web		Digital Service	Library Operations (LO) / History of Medicine Division				x		
Household Products Database	The Household Products Database links consumer brands to health effects from Safety Data Sheets provided by manufacturers and allows scientists and consumers to research potential health effects of chemicals in more than 18,000 common household products. based on chemical ingredients. A TOXNET database.		Data	Specialized Information Services (SIS) / Office of the Director / Office of Clinical Technology				x		
Integrated Risk Information System (IRIS)	Integrated Risk Information System (IRIS) contains data in support of human health risk assessment, including hazard identification and dose-response assessments. It is compiled by the U.S. EPA and contains descriptive and quantitative information related to human cancer and non-cancer health effects that may result from exposure to		Data	Specialized Information Services (SIS) / Office of the Director / Office of Clinical Technology	x			x		
International Toxicity Estimates for Risk (ITER)	International Toxicity Estimates for Risk includes risk information for over 600 chemicals from authoritative groups worldwide. A TOXNET database.		Data	Specialized Information Services (SIS) / Office of the Director / Office of Clinical Technology	x			x		
Journal Donation	Journal donation provides a method for libraries to search NLM journal holdings in order to offer surplus journal issues/volumes from institutional collections to fill gaps in		Digital Service	Library Operations (LO) / Public Services Division / Preservation and Collection Management Section				x		
LactMed	LactMed, a Drugs and Lactation Database, provides information on drugs and other chemicals to which breastfeeding mothers may be exposed. Find information about maternal and infant drug levels, possible effects on lactation and on breastfed infants, and alternative drugs to consider. A TOXNET database.		Data	Specialized Information Services (SIS) / Office of the Director / Office of Clinical Technology	x	x	x	x		
LinkOut for Libraries	LinkOut is a service through NCBI/PubMed which allows users to link directly from PubMed and other NCBI databases to a wide range of information and services beyond		Digital Service	Library Operations (LO) / Bibliographic Services Division / MEDLARS Management Section			x	x		
LiverTox	LiverTox provides up-to-date, accurate, and easily accessed information on the diagnosis, cause, frequency, patterns, and management of liver injury attributable to prescription and nonprescription medications, herbals and dietary supplements. A collaboration with National Institute of Diabetes and Digestive and Kidney Diseases		Digital Service	Specialized Information Services (SIS) / Office of the Director / Office of Clinical Technology				x		
Loansome Doc	Loansome Doc allows users to order full-text copies of biomedical literature from a medical library (local fees and delivery methods may apply). Users must register with a participating library to use this service.		Digital Service	Library Operations (LO) / Public Services Division / Collection Access Section				x		
LocatorPlus	LocatorPlus is a MARC-based catalog of books, journals, audiovisuals, electronic resources, and other materials, including holdings and availability.		Digital Service	Library Operations (LO) / Technical Services Division / Cataloging and Metadata Management Section		x		x		
LSTRC Publisher Web Form	The Literature Selection Technical Review Committee (LSTRC) is a federal advisory committee that meets three times a year to review and recommend journals for inclusion in MEDLINE. The system allows publishers and editors to submit the required application for a journal to be considered for inclusion in MEDLINE.		Digital Service	Library Operations (LO) / Technical Services Division / Library Technology Services Section				x		
MEDLINE	MEDLINE is a database of citations from biomedical journal articles that have been indexed with MeSH terminology and additional metadata assigned and accessed		Data	Library Operations (LO) / Bibliographic Services Division / Index Section	x	x		x		
MedlinePlus Connect	MedlinePlus Connect (https://medlineplus.gov/connect/) helps patients and health care providers access consumer health information at the point of care in a health IT system (e.g. patient portals, patient health record systems, and electronic health record systems).		Digital Service	Library Operations (LO) / Public Services Division / Reference and Web Services Section	x			x		

MedlinePlus	MedlinePlus.gov is a consumer health resource that offers reliable, up-to-date information on a wide variety of health topics in English and Spanish for patients,		Digital Service	Library Operations (LO) / Public Services Division / Reference and Web Services Section	x			x		
MeSH RDF	Medical Subject Headings in Resource Description Format (MeSH RDF) is a linked data representation of the MeSH biomedical vocabulary. MeSH RDF includes a downloadable file in RDF N-Triples format, a SPARQL query editor, a SPARQL endpoint (API), and a		Digital Service	Library Operations (LO) / Technical Services Division / Cataloging and Metadata Management Section	x			x		
MeSH Vocabulary	The Medical Subject Headings (meSH) vocabulary is a hierarchically-organized controlled medical terminology, used for indeixng, cataloging and searching.		Product	Library Operations (LO) / Office of the Director / Medical Subject Headings Section	x	x	x	x		
MMS Outreach & Training	MMS Outreach & Training includes classes, training resources, and news sources to help users learn about a variety of NLM resources, mostly those produced outside MMS.		Human Service	Library Operations (LO) / Bibliographic Services Division / MEDLARS Management Section	x			x		
NIH Disaster Research Response Program (DR2)	The NIH NIH Disaster Research Response Program (DR2) program is a collaboration between National Institute of Environmental Health Sciences (NIEHS) and NLM with the potential for additional NIH Institutes and Centers to join. DR2 is the national framework for research on the medical and public health aspects of disasters and public		Digital Service	Specialized Information Services (SIS) / Disaster Information Management Research Center	x			x		
NLM Classification	The NLM Classification scheme allows for the arrangement of any medical library collection, created and maintained by NLM. NLM uses the Classification Editor to		Digital Service	Library Operations (LO) / Technical Services Division / Cataloging and Metadata Management Section				x		
NLM Physical Collection	NLM Physical Collection is the world's largest and most comprehensive medical library, with rich collections in a variety of physical formats spanning ten centuries and originating from nearly every part of the globe. The Library collects materials in all areas of biomedicine, health care and the history of medicine as well as works on biomedical aspects of the humanities, physical, social and life sciences.		Product	Library Operations (LO)				x	x	
NLM Main Web	The NLM Main Web hosts thousands of NLM sites providing a broad range of services to users across the globe. Over 1 million users access NLM Main Web pages quarterly to search for and access NLM products.		Digital Service	Library Operations (LO) / Public Services Division / Reference and Web Services Section				x		
NLM Products and Services Directory	The NLM Products and Services Directory is a website that provides a searchable directory of ~ 281 NLM products and services.		Digital Service	Library Operations (LO) / Bibliographic Services Division / MEDLARS Management Section	x			x		
Pillbox	Pillbox enables rapid identification of unknown solid-dosage medications (tablets/capsules) based on physical characteristics and high-resolution images.		Digital Service	Specialized Information Services (SIS) / Biomedical Files Implementation Branch	x			x		
Radiation Emergency Medical Management (REMM)	Radiation Emergency Medical Management (REMM) is a resource to assist healtcare providers diagnosis and treat a variety of radiation injuries.		Digital Service	Specialized Information Services (SIS) / Office of the Director			x	x		
RxNorm	RxNorm provides normalized names for clinical drugs and links its names to many of the drug vocabularies commonly used in pharmacy management and drug interaction		Data	Library Operations (LO) / Bibliographic Services Division	x	x	x	x		
SFX	An OpenURL link resolver that provides access to full-text based on user rights, and provides links from article citations to full text licensed and free-access journals.		Digital Service	Library Operations (LO) / Technical Services Division / Library Technology Services Section				x		
SIS main website	The SIS main website provides access to the resources offered by SIS, in the areas of toxicology and environmental heatlh, chemistry, HIV/AIDS, disaster health, and topics relevant to specific populations.		Digital Service	Specialized Information Services (SIS) / Biomedical Information Services Branch				x		
SNOMED CT	SNOMED CT is a comprehensive, multilingual health terminology, allowing health information to be shared consistently within and across healthcare settings.		Data	Library Operations (LO) / Bibliographic Services Division / MEDLARS Management Section		x		x		
Substance Registration System	The Substance Registration System is a joint FDA/USP project to support health information technology initiatives by generating unique ingredient identifiers (UNIIs) for substances in drugs, biologics, foods, and devices. A collaboration with FDA.		Digital Service	Specialized Information Services (SIS) / Biomedical Information Services Branch				x		
Tox Mystery	Tox Mystery is an interactive game about toxic substances for children ages 7-10. Site will be sunset in fall of 2018.		Digital Service	Specialized Information Services (SIS) / Office of the Director				x		
Tox Town	Tox Town provides consumer level information on everyday locations and situations where one might be exposed to toxic chemicals.		Digital Service	Specialized Information Services (SIS) / Office of the Director				x		
Tox Tutor	tox Tutor provides college-level tutorials on the basic principles of toxicology, toxicokinetics, cellular toxicology, and related topics, e.g., exposure science and risk assessment. It is a self-paced tutorial covering key principles of toxicology for users of the NLM chemical and toxicology databases.		Digital Service	Specialized Information Services (SIS) / Office of the Director / Office of Clinical Technology				x		
ToxMap	TOXMAP: Environmental Health Maps provides searchable, interactive maps of EPA TRI and Superfund data, plus US Census and NCI health data		Digital Service	Specialized Information Services (SIS) / Biomedical Information Services Branch			x	x		
TOXNET	TOXNET is a search system for a cluster of databases covering toxicology, hazardous chemicals, environmental health and related areas.		Digital Service	Specialized Information Services (SIS) / Biomedical Files Implementation Branch	x	x		x		
Unified Medical Language System (UMLS)	The Unified Medical Language System (UMLS) is a set of files and software that brings together many health and biomedical vocabularies and standards to enable interoperability between computer systems.		Data	Library Operations (LO) / Bibliographic Services Division / MEDLARS Management Section	x	x		x		
Value Set Authority Center (VSAC)	Value Set Authority Center (VSAC) is a repository and authoring tool for public value sets created by external programs. Value sets are lists of codes and corresponding terms, from NLM-hosted standard clinical vocabularies, that define clinical concepts to support effective and interoperable health information exchange.		Digital Service	Library Operations (LO) / Bibliographic Services Division / MEDLARS Management Section	x	x		x		
Wireless Information System for Emergency Responders (WISER)	Wireless Information System for Emergency Responders (WISER) is a tool to assist emergency responders, managers, and healthcare providers in hazardous materials		Product	Specialized Information Services (SIS) / Disaster Information Management Research Center			x	x

MITRE

Project Deliverable 4.b.1

Preliminary Inventory of National Library of Medicine Public-Facing Offerings

CAMH FFRDC Strategic Support for National Library of Medicine

Task Order No. HHSN276201800082U

November 16, 2018

MITRE Point of Contact:

MITRE
7515 Colshire Drive
McLean, Virginia 22102

This MITRE tutes MITRE's submission of a *preliminary inventory of National Library of Me c-facing offerings.*

Inventory data included in this deliverable was collected during NLM Portfolio Analysis (NPA) Phase 1 data collection activities from October 23rd through November 16th.

NPA data cleansing and quality review is a time intensive process. MITRE's data cleansing approach included multiple interactions with NLM Division representatives responsible for NPA submissions before and after data submissions. Interactions focused on clarifying offerings, their purpose, and other basic offering details. MITRE also compared submissions from different NLM organizations to ensure a standardized approach to the data presented. Finally, MITRE also recommended revisions to submissions, when appropriate, to ensure submissions followed the NPA data call methodology.

This preliminary NLM inventory contains data submitted from the NLM organizations listed below. Incomplete submissions are also noted in the list as blank submission dates.

Because data cleansing activities are on-going and several submissions outstanding, some offering details presented in the final NPA inventory will be different from this preliminary inventory.

NLM Division/Office	Sub-Org	Submission Date
Extramural Programs	N/A	29-Oct
Library Operations	Technical Services Div	30-Oct
Library Operations	History of Medicine	30-Oct
Library Operations	Public Service Division	2-Nov
Library Operations	National Info Center on Health Services Research	
Library Operations	Biographic Services Division	7-Nov
Library Operations	National Network Coordinating Office	
Lister Hill Center	N/A	1-Nov
NCBI	IEB	5-Nov
NCBI	CBB	
SIS	Office of Clinical Toxicology	8-Nov
SIS	Biomedical Info Services	8-Nov
SIS	Biomedical Files Implementation	8-Nov
SIS	Disaster Info Management	8-Nov
SIS	Outreach & Special Populations	8-Nov

National Library of Medicine
Inventory of Public-Facing Offerings

NLM Portfolio Assessment (NPA) Phase 1 Data Call Preliminary Results

Distribution of Offerings by NLM Divisions

National Library of Medicine
Inventory of Public-Facing Offerings

Offering Name	Offering Short Description	Red, Yellow, Green	Offering Type	Primary Organization Name	API Access	Raw Data FTP	Software	Website Access	Print Media
AIDSinfo	NLM collaborates with the U.S. Department of Health and Human Services (HHS) to deliver AIDSinfo, a resource providing information on HIV/AIDS clinical trials and federally approved HIV treatment and prevention guidelines, information on HIV/AIDS treatment, clinical trials, and other HIV/AIDS-related research information for health care providers, researchers, people affected by HIV/AIDS, and the general public. The		Digital Service	Specialized Information Services (SIS) / Outreach and Special Populations Branch	x		x	x	
AIDSsource	AIDSource offers access to a comprehensive collection of HIV/AIDS-related resources reviewed and selected by expert information specialists and librarians. Materials are available in Spanish materials as well.		Digital Service	Specialized Information Services (SIS) / Outreach and Special Populations Branch				x	
AltBib	AltBib provides resources on Alternatives to the Use of Live Vertebrates in Biomedical Research and Testing.		Digital Service	Specialized Information Services (SIS) / Office of the Director / Office of Clinical Technology				x	
American Indian Health	American Indian Health is a source for information about the health and well being of Native Americans and Alaska Natives. Portal to be sunset in FY2019.		Digital Service	Specialized Information Services (SIS) / Outreach and Special Populations Branch				x	
Arctic Health	Arctic Health is a source for information on diverse aspects of the Arctic environment and the health of northern peoples. Portal to be sunset in FY2019.		Digital Service	Specialized Information Services (SIS) / Outreach and Special Populations Branch				x	
Chemical Hazards Emergency Medical Management (CHEMM)	Chemical Hazards Emergency Medical Management (CHEMM) provides resources to assist in the medical response to a mass-casualty chemical incident.		Digital Service	Specialized Information Services (SIS) / Office of the Director / Office of Clinical Technology			x	x	
ChemIDplus	The ChemIDplus database is a dictionary of over 400,000 chemicals (names, synonyms, and structures). ChemIDplus includes links to NLM and other databases and resources, including links to federal, state and international agencies.		Data	Specialized Information Services (SIS) / Biomedical Information Services Branch	x	x		x	
Common Data Element (CDE) Repository	The NIH Common Data Element (CDE) Repository provides access to structured human and machine-readable definitions of data elements that have been recommended or required by NIH Institutes and Centers and other organizations for use in research and		Digital Service	Library Operations (LO) / Bibliographic Services Division / MEDLARS Management Section	x	x		x	
DailyMed	DailyMed provides trustworthy information about marketed drugs in the United States. DailyMed is the official provider of FDA label information (package inserts).		Digital Service	Library Operations (LO) / Bibliographic Services Division	x	x		x	
Data Discovery	The NLM open data discovery site, presented via the Socrata platform, provides easy interface to view, filter, download, visualize, and explore datasets.		Digital Service	Specialized Information Services (SIS) / Biomedical Files Implementation Branch	x			x	
Data Distribution Program	The Data Distribution Program is an NLM program, coordinated and supported by MMS, which provides access and support to users accessing FTP files for various NLM data sets.		Human Service	Library Operations (LO) / Bibliographic Services Division / MEDLARS Management Section		x		x	
Dietary Supplement Ingredient Database	The Dietary Supplement Ingredient Database (DSID) provides estimated levels of ingredients in dietary supplement products sold in the United States. DSID is a collaboration with NIH's Office of Dietary Supplements and USDA.		Digital Service	Specialized Information Services (SIS) / Biomedical Information Services Branch				x	
Dietary Supplement Label Database	The Dietary Supplement Label Database (DSLD) includes full label derived information from dietary supplement products marketed in the U.S. with a Web-based user interface that provides ready access to label information. DSLD is a collaboration with		Digital Service	Specialized Information Services (SIS) / Biomedical Information Services Branch	x			x	
Digital Collections	NLM Digital Collections comprises texts, images, audiovisuals, maps and software. Includes both scanned and born digital items.		Digital Service	Library Operations (LO) / Technical Services Division / Library Technology Services Section	x			x	
Disaster Information Management Research Center (DIMRC) website	The Disaster Information Management Research Center (DIMRC) website is a source for health information resources and technology for disaster and public health emergency preparedness, response, and recovery. The focus is to connect people to quality disaster and public health emergency information and foster a culture of community		Digital Service	Specialized Information Services (SIS) / Disaster Information Management Research Center				x	
Disaster Lit: Database for Disaster Medicine and Public Health	Disaster Lit, the Database for Disaster Medicine and Public Health, contains links to disaster medicine and public health emergency resources available on the Internet at no cost. Resources include guidelines, research reports, training classes, fact sheets, website, databases, data sets, and similar materials.		Digital Service	Specialized Information Services (SIS) / Disaster Information Management Research Center	x			x	
DOCLINE	DOCLINE is an automated interlibrary loan (ILL) request routing system facilitating resource sharing among libraries in the National Network of Libraries of Medicine		Digital Service	Library Operations (LO) / Public Services Division / Collection Access Section				x	
Drug Information Portal	The Drug Information Portal contains information for over 55,000 drugs. Names, usage, and structures are displayed, as well as search links to key NLM and government sites. Same backend database as ChemIDplus.		Digital Service	Specialized Information Services (SIS) / Biomedical Information Services Branch				x	
Enviromental Health Student Portal	The Enviromental Health Student Portal provides educational resources for middle school students and educators.		Digital Service	Specialized Information Services (SIS) / Office of the Director				x	
Environmental Health and Toxicology Information	The Environmental Health and Toxicology Information website is a portal to numerous NLM databases and resources in environmental health and toxicology.		Digital Service	Specialized Information Services (SIS) / Biomedical Information Services Branch				x	
GeneEd	GeneEd is a portal of genetic topics such as cell biology, DNA, genes, epigenetics and more for students and teachers. Information from the site will be merged with Genetics Home Reference in spring 2019.		Digital Service	Specialized Information Services (SIS) / Office of the Director				x	
Genetics Home Reference	Genetics Home Reference is a consumer health resource that provides information for the general public about the effects of genetic variation on human health.		Digital Service	Library Operations (LO) / Public Services Division / Reference and Web Services Section	x			x	
Hazardous Substances Data Bank (HSDB)	The Hazardous Substances Data Bank (HSDB) is a comprehensive, peer-reviewed toxicology data bank for about 6,000 chemicals. A TOXNET database.		Data	Specialized Information Services (SIS) / Biomedical Information Services Branch	x	x		x	
HazMap	Haz-Map is an occupational health database designed for health and safety professionals and for consumers seeking information about the adverse effects of workplace exposures to chemical and biological agents. Subject: SUNSETTING UPDATE

Jody.

Sorry. I recall now that Grace was working on creating a sunset calendar for SIS, etc. I am uncertain where this stands [Personal Info]

Also, I need to review the automated sunsetting system Wei Ma and her team developed for sunsetting NLM services. Patti should know that it has been developed and is ready for us to demo as soon as we can next week. I will go ahead and schedule a time to do so today. If the system works well, we can (Alise?) start imputing the sunset requests that we have pending.

Attached are documents that will provide you with a status of the Sunsetting Process to date. You will find:

- 2 SIS Calendars of Services to be sunset, as well as background information received by OCPL to date. It includes SIS's external communications plan.
- A revised set of "Guidelines for Sunsetting NLM Products and Services" prepared by Candy Sagon

- Request to sunset CHIRR by SIS – to be taken down May 31, 2019
- Request to sunset UniGene by SIS – to be taken down May, 2019
- Request to sunset ToxLearn by SIS – Retired end of 2018
- Request to sunset ToxMap by SIS – to be retired at the end of FY2019
- Request to sunset NLM Exhibit System (NLM-only internal system)
- Request to sunset CPDB by SIS– to be taken down on May, 2019
- Request to sunset Tox Mystery by SIS – taken down on December 31, 2018
- Request to sunset GeneEd by SIS – to be taken down on March 31, 2019

Lastly, for your files, I am sending you my file on SUNSET which includes draft announcements about services that have been sunset and background materials on the sunsetting process.

SIS offering chart updated with purple outreach.

From: Chang, Florence (NIH/NLM) [E]
Sent: Tuesday, February 5, 2019 1:52 PM
To: Backus, Joyce (NIH/NLM) [E] <backusj@mail.nlm.nih.gov>; Brennan, Patti (NIH/NLM) [E] <patti.brennan@nih.gov>
Subject: RE: Offerings summary

Purple it is. We didn't discuss outreach as it was not in the earlier version of the NPA inventory that we used.

I thought to add "high quality information" to this bullet, like having an advisory board or peer reviewed content.

- Give priority to resources that are unique, that are highly connected to an NLM offering, or clearly contribute to furthering the strategic plan

Subject: RE: Offerings summary

Love the chart, Florence. I think that maybe Outreach to special populations should be purple? We're not committing to continue the entire offering.

I drafted these considerations for our decisions following our reviews in your office, Patti. I think they need to be reviewed and edited by us and then shared with staff when we give them the decisions so they have an .

Considerations for maintaining, evolving or keeping an NLM offering

- NLM needs to end offerings to free resources to fund our new data direction for the Strategic Plan. Consider every offering and justify keeping it, or sunset it.
- NLM should consolidate information into as few platforms as practical for improved user experience, discoverability, and efficiency
- NLM is committed to support key offerings in toxicology and environmental health
- Give priority to resources that are unique, that are highly connected to an NLM offering, or clearly contribute to furthering the strategic plan
- Sunset offerings that don't have a clear sustainability or succession plan
- Sunset offerings if a sufficiently-equivalent offering is available from another organization

- Sunset offerings that have low or declining use
- Consider staff and contractor cost to sustain and upgrade the content and technology - nothing is free
- NLM shouldn't be a web provider for another agency/entity just because they pay
- Consider appropriate level of NLM commitment to disaster preparation information and K-12

Whether it is or not, this process is feeling very top down to me. Perhaps some staff are resigned to that and perhaps it's the best way to go, given the lack of time.

We talked about the next step would be to create the first working group to review and implement the changes to the chem/tox offerings.

Joyce

Subject: RE: Offerings summary

Patti,
We worked on the offering summary last week, but we plan to meet again this Thursday to continue. I attached the draft version of the offering summary, please note that we may make some changes to the data in the spreadsheet.

I also made a chart for my SIS update at the BOR. It shows:

1. The program area
2. The offering/cost
3. Status – red, green, yellow, purple

Please give us your feedback.

Florence

Subject: Offerings summary

Hi Joyce and Florence

I understand from Troy that you are still working through the offerings list and we don't have a full timeline for resources that will be sunset or modified in some way.

I am going to meet with SIS next Wednesday and would appreciate having as much info as you have available by Monday. I realize that these decisions are hard to make, and I don't want to rush complex decisions. However, staff are seeking some certainty and your decisions are important here.

Please let me know if I can be of assistance.

Patti

To: Pfister, Troy (NIH/NLM/LHC) [E];Babski, Dianne (NIH/NLM) [E];Chang, Florence (NIH/NLM) [E];Babski, Dianne (NIH/NLM) [E];Kelly, Janice (NIH/NLM) [E]
Subject: SIS and LO offerings with colors and working groups.xlsx
Attachments: SIS and LO offerings with colors and working groups.xlsx

Troy,
This is our current version, but not a complete sunset plan yet. The working groups are draft and staff haven't been informed. We need to assign consistent working group names in the offerings tab from the working groups tab. If you can do that, it will move things along.

Thanks, Joyce

From: Pfister, Troy (NIH/NLM/LHC) [E]
Sent: 12 Feb 2019 14:05:10 +0000
To: Brennan, Patti (NIH/NLM) [E]
Subject: Re: When will I get the sunset plans from Joyce and Florence?
Attachments: SIS and LO offerings with colors and working groups[1].xlsx

Joyce just sent the following:

Troy,
This is our current version, but not a complete sunset plan yet. The working groups are draft and staff haven't been informed. We need to assign consistent working group names in the offerings tab from the working groups tab. If you can do that, it will move things along.

Thanks, Joyce

Attached is a new(er) worksheet. I'll work w/Joyce on cleaning the sheet up a bit. Note that in the spreadsheet, sunsetting timelines are populated in column F.

Thanks,

T.

From: "Brennan, Patti (NIH/NLM) [E]" <patti.brennan@nih.gov>

Patti,
After this morning's excellent presentation by Florence, I think you can share these specifics of the "donut" diagram this afternoon. It has draft dates for the actions, whether red, yellow, green or purple. Happy to answer any questions.

Joyce

National Library of Medicine
Inventory of Public-Facing Offerings

Red - Sunset, Yellow - evaluate for sunset/transition, Green - maintain, recommend efficiencies, Purple - Sunset delivery platform, integrate info consolidated platforms				
Offering Name	**Red, Yellow, Green, Purple**	**page views 2018**	**Timeline for Review/action FY2019/FY2020**	**Offering Short Description**
AIDSinfo	yellow	8,573,046	May 2019 - Q4 2020	NLM collaborates with the U.S. Department of Health and Human Services (HHS) to deliver AIDSinfo, a resource providing information on HIV/AIDS clinical trials and federally approved HIV treatment and prevention guidelines, information on HIV/AIDS treatment, clinical trials, and other HIV/AIDS-related research information for health care providers, researchers, people affected by HIV/AIDS, and the general public. The Spanish version is called infoSIDA.
AIDSsource	yellow	95,155	May 2019 - Q4 2020	AIDSource offers access to a comprehensive collection of HIV/AIDS-related resources reviewed and selected by expert information specialists and librarians. Materials are available in Spanish materials as well.
AltBib	green		Q3 FY2019	AltBib provides resources on Alternatives to the Use of Live Vertebrates in Biomedical Research and Testing.
American Indian Health	Red		Q3 FY2019	American Indian Health is a source for information about the health and well being of Native Americans and Alaska Natives. Portal to be sunset in FY2019.
Arctic Health	Red		Q3 FY2019	Arctic Health is a source for information on diverse aspects of the Arctic environment and the health of northern peoples. Portal to be sunset in FY2019.
Chemical Hazards Emergency Medical Management	yellow	595,249	Q1 FY2020	Chemical Hazards Emergency Medical Management (CHEMM) provides resources to assist in the medical response to a mass-casualty chemical incident.
ChemIDplus	yellow	4,450,320	Q4 FY2019	The ChemIDplus database is a dictionary of over 400,000 chemicals (names, synonyms, and structures). ChemIDplus includes links to NLM and other databases and resources, including links to federal, state and international agencies.
Dietary Supplement Ingredient Database	Yellow		Q2-Q3 FY2020	The Dietary Supplement Ingredient Database (DSID) provides estimated levels of ingredients in dietary supplement products sold in the United States. DSID is a collaboration with NIH's Office of Dietary Supplements and USDA.
Dietary Supplement Label Database	Yellow	393,797	Q2-Q3 FY2020	The Dietary Supplement Label Database (DSLD) includes full label derived information from dietary supplement products marketed in the U.S. with a Web-based user interface that provides ready access to label information. DSLD is a collaboration with NIH's Office of Dietary Supplements.
Disaster Information Management Research Center (DIMRC) website	Yellow	65,375	Q2 FY2020	The Disaster Information Management Research Center (DIMRC) website is a source for health information resources and technology for disaster and public health emergency preparedness, response, and recovery. The focus is to connect people to quality disaster and public health emergency information and foster a culture of community resiliency.
Disaster Lit: Database for Disaster Medicine and Public Health	Yellow	74,751	Q2 FY2020	Disaster Lit, the Database for Disaster Medicine and Public Health, contains links to disaster medicine and public health emergency resources available on the Internet at no cost. Resources include guidelines, research reports, training classes, fact sheets, website, databases, data sets, and similar materials.
Drug Information Portal	purple	1,078,965	Q3 - Q4 FY2019	The Drug Information Portal contains information for over 55,000 drugs. Names, usage, and structures are displayed, as well as search links to key NLM and government sites. Same backend database as ChemIDplus.
Enviromental Health Student Portal	Red	95,155	Q3 FY2019	The Enviromental Health Student Portal provides educational resources for middle school students and educators.
Environmental Health and Toxicology Information	Red	77,096	Q3 - Q4 FY2019	The Environmental Health and Toxicology Information website is a portal to numerous NLM databases and resources in environmental health and toxicology.
GeneEd	Red	622,670	Q3 FY2019(March 31, 2019)	GeneEd is a portal of genetic topics such as cell biology, DNA, genes, epigenetics and more for students and teachers. Information from the site will be merged with Genetics Home Reference in spring 2019.
Genetics Home Reference	purple		Q3 FY2019	Genetics Home Reference is a consumer health resource that provides information for the general public about the effects of genetic variation on human health.
Hazardous Substances Data Bank (HSDB)	purple		Q4 FY2019	The Hazardous Substances Data Bank (HSDB) is a comprehensive, peer-reviewed toxicology data bank for about 6,000 chemicals. A TOXNET database.

National Library of Medicine
Inventory of Public-Facing Offerings

HazMap	Red	447,253	Q3 - Q4 FY2019	Haz-Map is an occupational health database designed for health and safety professionals and for consumers seeking information about the adverse effects of workplace exposures to chemical and biological agents. The main links in Haz-Map are between chemicals and occupational diseases.
HealthReach	purple	250,791	Q4 - FY2019 - Q1 FY2020	HealthReach is a database of easy to read, multilingual health information for those working with or providing care to individuals with limited English proficiency.
Household Products Database	yellow	2,290,447	Q3 - Q4 FY2019	The Household Products Database links consumer brands to health effects from Safety Data Sheets provided by manufacturers and allows scientists and consumers to research potential health effects of chemicals in more than 18,000 common household products. based on chemical ingredients. A TOXNET database.
Integrated Risk Information System (IRIS)	purple		Q4 FY2019	Integrated Risk Information System (IRIS) contains data in support of human health risk assessment, including hazard identification and dose-response assessments. It is compiled by the U.S. EPA and contains descriptive and quantitative information related to human cancer and non-cancer health effects that may result from exposure to substances in the environment. A TOXNET database.
International Toxicity Estimates for Risk (ITER)	purple		Q4 FY2019	International Toxicity Estimates for Risk includes risk information for over 600 chemicals from authoritative groups worldwide. A TOXNET database.
LactMed	purple		Completed	LactMed, a Drugs and Lactation Database, provides information on drugs and other chemicals to which breastfeeding mothers may be exposed. Find information about maternal and infant drug levels, possible effects on lactation and on breastfed infants, and alternative drugs to consider. A TOXNET database.
LiverTox	yellow	3,740,565	Q3 - Q4 FY2019	LiverTox provides up-to-date, accurate, and easily accessed information on the diagnosis, cause, frequency, patterns, and management of liver injury attributable to prescription and nonprescription medications, herbals and dietary supplements. A collaboration with National Institute of Diabetes and Digestive and Kidney Diseases (NIDDK).
NIH Disaster Research Response Program (DR2)	Red	15,355	Q3 - Q4 FY2019	The NIH NIH Disaster Research Response Program (DR2) program is a collaboration between National Institute of Environmental Health Sciences (NIEHS) and NLM with the potential for additional NIH Institutes and Centers to join. DR2 is the national framework for research on the medical and public health aspects of disasters and public health emergencies.
Pillbox	Yellow	921,103	Q3 - Q4 FY2019	Pillbox enables rapid identification of unknown solid-dosage medications (tablets/capsules) based on physical characteristics and high-resolution images.
Radiation Emergency Medical Management (REMM)	Yellow	388,653	Q1 FY2020	Radiation Emergency Medical Management (REMM) is a resource to assist healtcare providers diagnosis and treat a variety of radiation injuries.
SIS main website	Red		Q3 FY2019	The SIS main website provides access to the resources offered by SIS, in the areas of toxicology and environmental heatlh, chemistry, HIV/AIDS, disaster health, and topics relevant to specific populations.
Substance Registration System	Green	520,379	Q3 - Q4 FY2019	The Substance Registration System is a joint FDA/USP project to support health information technology initiatives by generating unique ingredient identifiers (UNIIs) for substances in drugs, biologics, foods, and devices. A collaboration with FDA.
Toxline	purple		Underway	
Tox Mystery	Red		Gone already	Tox Mystery is an interactive game about toxic substances for children ages 7-10. Site will be sunset in fall of
Tox Town	Green	1,129,615	Q1 FY2020	Tox Town provides consumer level information on everyday locations and situations where one might be exposed to toxic chemicals.
Tox Tutor	Yellow	549,607	Q1 FY2020	tox Tutor provides college-level tutorials on the basic principles of toxicology, toxicokinetics, cellular toxicology, and related topics, e.g., exposure science and risk assessment. It is a self-paced tutorial covering key principles of toxicology for users of the NLM chemical and toxicology databases.
ToxMap	Red		Q4 fy2019	TOXMAP: Environmental Health Maps provides searchable, interactive maps of EPA TRI and Superfund data, plus US Census and NCI health data
TOXNET	purple	7,957,267	Q4 FY2019	TOXNET is a search system for a cluster of databases covering toxicology, hazardous chemicals, environmental health and related areas.

Wireless Information System for Emergency Responders (WISER)	Yellow	624,253	Q1 FY2020	Wireless Information System for Emergency Responders (WISER) is a tool to assist emergency responders, managers, and healthcare providers in hazardous materials incidents.

To: Gillikin, David (NIH/NLM) [E]
Subject: Draft charter template for working group?
Attachments: SIS and LO offerings with colors and working groups.xlsx

David – this is still confidential although Patti did share an SIS only version with that Division this afternoon.

Could you see if you can draft a charter for your group that we can turn in to a template to charter the others?

Here's some material that every group should consider.
We should probably talk to clarify these 5 pm thoughts.
Thank you!
Joyce

Red - Sunset, Yellow - evaluate for sunset/transition, Green - maintain, recommend efficiencies, Purple - Sunset delivery platform, integrate info consolidated platforms

Considerations for maintaining, evolving or keeping an NLM offering

NLM is committed to support key offerings in toxicology and environmental health

NLM should consolidate information into as few platforms as practical for improved user experience and discoverability

Consider every offering and justify keeping it or sunset it.

Give priority to resources that are unique, that are highly connected to an NLM offering, or clearly contribute to furthering the strategic plan

Sunset offerings that don't have a clear sustainability or succession plan

Sunset offerings that have low or declining use

Consider staff and contractor cost to sustain and upgrade the content and technology - nothing is free

NLM shouldn't be a web provider for another agency/entity just because they pay

Consider appropriate level of NLM commitment to disaster preparation information and K-12

Subject: Information Request for Glossary of NLM Divisions
Attachments: Division of Specialized Information Services (SIS) Programs.docx

Hi Joyce and Florence,

I'm working in Mike Huerta's group putting together a glossary with summaries of each of NLM's Divisions to act as an internal reference guide for NLM staff to get a sense for what different divisions do across the library. Kathel Dunn mentioned that because SIS programs are being phased out or absorbed by OCCS and LO soon, I should write the glossary to reflect these changes. I was wondering if you might have information to share on where SIS programs and products are going so that I can update the glossary accordingly? Alternatively, if it's easier, I've attached a document with summaries of the branches and programs I had under SIS if you'd like to have a look to tell me what is going where.

If you have any questions, please let me know.

Thanks so much,
Maryam

Division of Specialized Information Services (SIS)

The Division of Specialized Information Services creates information resources and services covering toxicology, environmental health, HIV/AIDS, outreach to underserved and special populations, HIV/AIDS, drugs and dietary supplements, household products, and disaster/emergency preparedness and response.

TOXICOLOGY AND ENVIRONMENTAL HEALTH INFORMATION PROGRAM (TEHIP)

The SIS Toxicology and Environmental Health Information Program produces an integrated database, TOXNET, with information on hazardous chemicals, toxic releases and environmental health. The Program produces several products to relay information related to toxicology and environmental health to the public, including TOXMAP®, Haz-Map®, Tox Town®, and the Household Products Database. TEHIP has also produced games to engage students in learning about environmental health concerns.

OUTREACH AND SPECIAL POPULATIONS BRANCH (OSPB)

The Outreach and Special Populations Branch (OSPB)manages and develops programs to eliminate disparities in health information access by providing community outreach support, training health professionals on NLM's health information databases, and designing websites that discuss the concerns of various racial and ethnic groups. These programs reach health professionals, public health workers and the general public, especially about health issues that disproportionately impact minorities such as environmental exposures and HIV/AIDS. OSPB also has a growing program to reach K-12 teachers and students, including the Environmental Health Student Portal and GeneEd.

DISASTER INFORMATION MANAGEMENT RESEARCH CENTER (DIMRC)

The Disaster Information Management Research Center (DIMRC) develops and provides access to health information resources and technology for disaster and public health emergency preparedness, response, and recovery. DIMRC focuses on maintaining access to health information at all phases of disasters and public health emergencies, developing innovative products and services for emergency personnel, conducting research to support disaster health information management, and collaborating with other agencies and communities.

OFFICE OF CLINICAL TOXICOLOGY

The Office of Clinical Toxicology (OCT) develops new resources and enhances existing NLM resources for professionals in toxicology and related fields.

Subject: Re: Updated

Hi Allison,

You did a fantastic job with this. I made one suggested edit to the new clinical trials message (no big deal if it isn't changed) and recommend we do not message on Toxnet – see comment box about it and two new messages I recommend adding that cover Open-I and BLAST. Please feel free to change them around.

THANKS! THANKS! THANKS!

Subject: Updated

Hi there,

Ok so I beefed this up a bit, took their edits and re-hashed a bit. Please take a look at let me know what you think!

Just for reference here were the notes that I took from their edits where we needed improvement:

- Clear mission & purpose
- More on clinicaltrials.gov (I added another post about this)
- Consistent font/font size (All Calibri body 12 pt font)
- Collaborations with other IC's (I used the reference in the most recent MedlinePlus Magazine, we collaborate with NIAMS and the website seems to be in good shape!)
- Only spell out NLM 1 time on the first day
- Reference Open-I, BLAST, Toxnet (I think they pointed to these because they are the main databases on NLM's homepage, I added a post about TOXNET but Open-I and BLAST aren't familiar territory for me and I think we're ok leaving them out)

Please let me know what you think!

Allison

Subject: Status of SIS sunset requests
Attachments: RE: Four SIS Sunset Requests, FORM REQUEST TO RETIRE NLM TOXMAP Nov 2019rev.docx

Jerry,

You approved sunset plan for CHIRR, ToxMystery, and GeneEd. We are working on Letter of Agreement with Society of Toxicology for them to take the archived version of ToxLearn. There are two remaining ones, ToxMap, and CPDB. We provided additional information and revised sunset plan, attached with this email. There will be two more plans, one for Arctic Health, and another one for American Indian Health, ready for you to review. Let us know if you want to wait for the new sunset system to go live to process these two new ones.

Thanks!

Florence

Answers to the questions in red:

I have a few questions about the retirement of TOXMAP that I think are important to address in the sunsetting document and subsequent communication materials.

- Can you provide greater detail about what TOXNET functionality is and is not no provided by EPA (the document says EPA offers “some” functionality – we should be clear about what’s not provided by EPA)

  The TOXMAP-Classic, developed in the early 2000, featured the ability to provide context-sensitive search to TOXNET to get to environmental health literatures related to the geo-location the users searched in TOXMAP. The TOXMAP-Classic was built on Apache-Axis platform which was no longer supported since 2006. TOXMAP-beta was the next implementation, which uses Adobe Flash, which also became an obsolete platform. The latest TOXMAP implementation uses modern technology platform. But it only has basic “out of the box” GIS features. To further develop this version to have the customized features of TOXMAP-Classic and TOXMAP-beta, i.e., the context-sensitive search into TOXNET, will take a major investment in software development. By looking at the usage of the unique searches into TOXNET from TOXMAP-classic, it only

averaged about 400 searches a year. The usage does not justify the further investment in development.

EPA has several GIS applications and a new visualization tool of TRI data that have the similar GIS features of TOXMAP. https://www.epa.gov/geospatial/epa-geospatial-applications; https://edap.epa.gov/public/extensions/TRINA_dashboard_2016/TRINA_dashboard_2016.html

- Can you provide greater detail on what TOXNET content will NOT be available from other sources? It appears that much of the data are available from other sources. We should be clear about any data that will no longer be available. Or is it just that the info won't be available from a single source and other (original) sources don't provide all the functionality we offer.

  TOXMAP collected several GIS datasets from other original sources to make the GIS application meaningful and comprehensive. TOXMAP is the one single resource that pulls these relevant datasets together.

  However, these datasets are still available from their original sources. In a GIS application like the EPA's EnviroMapper, https://www.epa.gov/emefdata/em4ef.home, users can add these datasets, available from ArcGIS, or from the web, as additional layers to the map.

Thanks!

Florence

REQUEST TO RETIRE NLM TOXMAP

Product owner(s) fill out sections I, III, IV and V. Include documentation with this form.
Record approvals in section II.

I. **Written justification for the retirement of an NLM resource.** Three to six months before sunsetting any NLM resource, a written justification for the retirement of the resource must be prepared. In drafting the justification, the use of statistics is often helpful. Reasons for sunsetting and/or retiring an NLM resource may include (check all that apply):

☐ Low usage

☐ Obsolescence (that is, better products have come along) – whether from NLM or another group

☒ No longer aligned with NLM priorities or mission needs

☐ Incorrect or out-of-date information. If information cannot be updated, then archive the resource

☒ Reallocation of staff to different products because resource is no longer a priority

☒ Cost in relation to value

☒ Other (Please explain) The US EPA now produces several GIS products and visualization applications (https://www.epa.gov/geospatial/epa-geospatial-applications) that have the similar GIS functionality, except the ability to search TOXNET from within the GIS tools. This was a unique feature in TOXMAP-classic, which was retired due to the obsolete technology platform. The new version of TOXMAP does not have this feature either. To make the new TOXMAP to have this feature will require major investment in software development. We cannot justify the effort because the usage of this feature was very low, averaging about 400 searches a year.

II. **Approval.** This form must be signed by:

- NLM Division head (within LHC, LO, NCBI, OCCS, SIS, OD) Initial Here Date

- Upon approval by NLM division head, forward completed form to Kathy Cravedi, Director, OCPL (kcravedi@nlm.nih.gov), for distribution and approval by:
  NLM Director Initial Here Date
  NLM Deputy Director Initial Here Date
  NLM Communications Director Initial Here Date

III. **Prepare Communications plan for sunsetting the NLM resource.** This document is developed for sharing news about the retirement of the NLM resource with relevant internal and external audiences. Please address the following key elements:

A. ***Internal communication plan*** for NLM staff. Identify who needs to be informed? (staff, contractors) SIS staff, NLM staff, NNLM staff and core set of dedicated users from the Public Health and Toxicology Communities.

1. Determine questions that may need to be addressed. These may include:
   What information needs to be provided? TOXMAP will be retired because it no longer aligns with NLM priorities and because the US EPA now

provides several GIS products that provide similar GIS functionality of TOXMAP.

- When will the information be provided? End of FY2019
- By what method(s) will information be provided? Example: Email to all NLM staff Email, GovD posts, announcement on TOXMAP web site
- If multiple messages are to be sent, by what method(s) and with what frequency? Over a three-month period.
- Are there any potential areas for misunderstanding or concern? None except that core users of TOXMAP will not have a comparable resource available.

2. Establish what may need to be communicated to internal audiences. This could include:
    - Why is this program or service being retired? TOXMAP will be retired because it no longer aligns with NLM priorities and because the US EPA now provides several GIS products that provide similar GIS functionality.
    - What content, if any, will still be available and, if so, why and where? (Options may include archived pages on the NLM website, FTP, the Wayback Machine internet archive, and tape.) US EPA GIS applications and TRI applications; possibly NLM TOXNET TRI
    - What will happen to the staff working on the product or service? Assigned to other areas and projects within NLM/SIS.
    - What staff will be involved in this transition? Colette Hochstein
3. Identify mechanisms to be used for communicating with internal audiences. These may include some or all of the following (Check all that apply):
    - ☒ Emails
    - ☒ Signage
    - ☐ Information delivered at staff meetings
    - ☐ Point of discussion at brown bag luncheons
    - ☐ Town Hall meetings, etc.
    - ☐ Other (Explain) Enter other mechanism(s)
4. Develop and attach a set of Talking Points for the NLM Director TOXMAP has helped users visually explore data primarily from the EPA's Toxics Release Inventory (TRI) and Superfund Programs. TOXMAP also features Canadian NPRI data, U.S. EPA coal plant emissions data, and U.S. commercial nuclear power plants. TOXMAP overlays U.S. Census demographic data, income figures from the U.S. Department of Commerce, and health data from the NCI SEER program. It will be retired at the end of FY2019. It no longer aligns with NLM priorities and because the US EPA now provides several GIS products that provide similar GIS functionality.
5. Does the NIH Director or other IC Directors need to be informed? No

    If Yes, check all that apply:

    ☐ The service is produced jointly with another IC or serves an audience of interest to the IC

☐ The service has high visibility and sunsetting may result in questions, letters, emails to the NIH Director from the public, key stakeholders, Congressional staff, HHS leadership

☒ Other (Please elaborate) SIS has worked for many years with the US EPA regarding the data and functionality of TOXMAP. Their staff should be informed of its status.

B. ***External communication plan*** for users, stakeholders, and the public

1. Who needs to be informed? (Identify stakeholders).
    - Why is this program or service being retired? It has been determined that TOXMAP no longer aligns with NLM priorities and The US EPA now produces several GIS products (https://www.epa.gov/geospatial/epa-geospatial-applications) that have the similar GIS functionality.
    - What content, if any, will still be available and, if so, why and where? Data used in TOXMAP will be available from other original sources. GIS application users can access them by overlaying the data in their GIS applications. TRI and NPL data: US EPA; Canadian NPRI data from Environment and Climate Change Canada; Nuclear Regulatory Commission publishes the commercial nuclear power plant data; BEA data from the US Department of Commerce; TRI lat/long info from EPA's Facility Registry System (FRS).; coal plant data from EIA Electricity Data Browser; EPA Air Markets Program Data (AMPD) data available from the EPA Clean Air Markets; Cancer and Mortality data available from the US NIH NCI.
    - What will happen to the staff working on the product or service? Assigned to other areas and projects within NLM/SIS

2. Establish what may need to be communicated. This could include—
    - Why is this program or service being retired? It has been determined that TOXMAP no longer aligns with NLM priorities and The US EPA now produces several GIS products (https://www.epa.gov/geospatial/epa-geospatial-applications) that have the similar GIS functionality.
    - What content, if any, will still be available and, if so, why and where? Data used in TOXMAP will be available from other sources. GIS application users can access them by overlaying the data to the maps. TRI and NPL data: US EPA; Canadian NPRI data from Environment and Climate Change Canada; Nuclear Regulatory Commission publishes the commercial nuclear power plant data; BEA data from the US Department of Commerce; TRI lat/long info from EPA's Facility Registry System (FRS).; coal plant data from EIA Electricity Data Browser; EPA Air Markets Program Data (AMPD) data available from the EPA Clean Air Markets; Cancer and Mortality data available from the US NIH NCI.
    - What will happen to the staff working on the product or service? Assigned to other areas and projects within NLM/SIS

- How can I or how can my group be involved in this transition? Provide related information as needed.

3. Identify what needs to be completed:

☐ Deliverables Specify

☒ Responsible party or parties for the sunsetting process Colette Hochstein, Florence Chang

☐ Due date 9/30/2019

Identification of communication channels. These could include (Check all that apply):

☒ emails to stakeholders and users

☐ signage

☐ NLM homepage (public news announcement)

☐ speeches

☒ social media including Facebook, Twitter, LinkedIn, etc.

☒ newsletters/blogs, including *Technical Bulletin*, *NLM in Focus*, *Circulating Now*, *Musings*, etc.

☐ Other (Please Explain) Enter other possible communication channel(s)

4. Determine questions that may need to be addressed, including:
   - What information will be provided? It has been determined that TOXMAP no longer aligns with NLM priorities and The US EPA now produces several GIS products (https://www.epa.gov/geospatial/epa-geospatial-applications) that have the similar GIS functionality.
   - When will the information be provided? Starting Summer 2019)
   - With what frequency? Monthly
   - Are there potential areas for misunderstanding or concern? Probably not.
   - After informing stakeholders that the site will no longer be accessible, where can they find information once the site is retired? TRI and NPL data: US EPA; Canadian NPRI data from Environment and Climate Change Canada; Nuclear Regulatory Commission publishes the commercial nuclear power plant data; BEA data from the US Department of Commerce; TRI lat/long info from EPA's Facility Registry System (FRS).; coal plant data from EIA Electricity Data Browser; EPA Air Markets Program Data (AMPD) data available from the EPA Clean Air Markets; Cancer and Mortality data available from the US NIH NCI
   - How will NLM respond to questions and comments? Staff will respond to questions received through customer service emails
   - Is this an issue that may generate media interest? (If so, please include strategies for responding in the plan.) No

IV. **Posting notice on central NLM "sunsetting calendar" (coming soon) on the NLM Wiki.** A notice should be posted on the "NLM resource sunset calendar" immediately following the effective

date of the retirement of the resource. The sunset calendar, which will also be found on the NLM wiki, will serve as an historical record about retired NLM products and services.

V. **Identification of primary point of contact for further information about retired NLM resource.** Provide name and contact information for primary point of contact for retired NLM resource here:

Name	Colette Hochstein, Florence Chang

Subject: Re: OneNLM Glossary of NLM Divisions/Sections
Attachments: NLM Divisions at a Glance v3.docx

Hi Mike and Kathel,

Attached is the updated draft with changes tracked. I asked Forence and Joyce about incorporating the SIS programs into LO and OCCS, but they both thought it would be premature for me to update their divisions before June when SIS staff are reassigned so asked if I could hold off until then. I also wasn't sure if I should remove the offices listed below NNLM. If there are other changes you'd like me to make or if there's anything I missed, let me know!

Thanks,
Maryam

Subject: RE: OneNLM Glossary of NLM Divisions/Sections

Maryam,

You're welcome. It's possible you might be able to make use of Florence's presentation today to the Board of Regents (last presentation; should shortly be archived for re-viewing). But otherwise, yes, Florence and Joyce should be able to give some information, even if limited.

Kathel

Subject: Re: OneNLM Glossary of NLM Divisions/Sections

Thank you for the feedback Kathel! I've incorporated most of the updates, but am waiting on Jeff and Rebecca at HMD to give me some copy on the Images & Archives Section since there isn't much on their website. As for SIS, do you have any thoughts on how I should proceed with including SIS programs and products, or should I just hold off on making changes until that information comes through from Joyce and Florence?

Hopefully I'll have this done by tomorrow!

Best,
Maryam

Subject: RE: OneNLM Glossary of NLM Divisions/Sections

Mike and Maryam:

Great compilation of NLM writ large. :--) A few notes:

- Specialized Information Services is going away soon enough that listing them separately is not useful:
    - SIS staff are to be notified in March where they are going (LO, OCCS)
    - The org chart's already been changed
- But! Super useful to have information about where SIS programs and products are going; that information should be shortly available
    - Contact: Joyce Backus, Florence Chang
- Audiovisual Program Development Branch (APDB) – same – moving up and integrating with OCPL soon
    - Contact: Jody Nurik
- History of Medicine Division has 3 sections and they'd most likely expect to be identified individually as other organizational units are:
    - Exhibition Program Section
    - Images & Archives Section
    - Rare Books & Early Manuscripts Section
- NNLM – this one is tricky; none of the offices listed below it – docline, evaluation, public health coordination, training, web services are staffed by either Feds or contractors; they are all grantees so shouldn't be listed if it's an organizational document; could be listed if you were taking a program approach

Comments within the document as well.

Kathel

Subject: OneNLM Glossary of NLM Divisions/Sections

Hi Mike,

I just finished pulling together summaries for the divisions across NLM. If there was anything I left out, or if this isn't quite what you were envisioning, let me know!

Best,
Maryam

Office of the Director (OD)

OFFICE OF STRATEGIC INITIATIVES (OSI)

The Office of Strategic Initiatives (OSI) serves as principal advisor to the NLM Director for matters and programs concerning strategic directions of NLM, including open science, as well as analysis, evaluation, and reporting of and on NLM programs and activities. OSI staff lead development of strategic plans and coordinates their implementation and evaluation, serving as the NLM lead for programmatic evaluation and formal reporting, as well as the NLM point of contact and liaison with external stakeholders and organizations. Additionally, OSI develops, communicates, and coordinates, plans for trans-NLM and NIH data science and open science initiatives, activities, and interests ~~as well as activities in the areas of open science and the intersection of open science and data science~~. OSI also coordinates technology transfer for NLM and supports NLM policy development and legislative tracking. In addition, OSI manages and oversees NLM's international programs.

Comment []: I really liked the one page (double-sided) information on OSI that Mike shared with the Associate Fellows; is it possible to expand on OSI's work at this point; or link to a web page with that information? Do you have a web page?

Comment []: We don't have a webpage yet, but I tried expanding this out.

OFFICE OF COMMUNICATIONS & PUBLIC LIAISON (OCPL)

The Office of Communications & Public Liaison (OCPL) is a point of contact for a variety of information about NLM programs in written, electronic, and graphic forms. OCPL staff answer requests for information about the NLM, create brochures and fact sheets, printing procurements, coordinate publicity for NLM events, and arrange tours.

AUDIOVISUAL PROGRAM DEVELOPMENT BRANCH (APDB)

The Audiovisual Program Development Branch (APDB) is housed within OCPL and conducts media development for LHNCBC's research, development, and demonstration projects; provides consultation and materials development for NLM information programs; and engineers technical improvements for media production. Staff provide high quality video, audio, imaging, and graphics materials for LHNCBC's research and demonstration projects, often collaborating on initial project conception, implementation, and final evaluation.

OFFICE OF ADMINISTRATION (OA)

The Office of Administration (OA) houses the Office of Acquisitions, which awards NLM's effective contracts and oversees acquisitions. OA also encompasses the Executive Office, the Office of Administrative Management Services, and the Office of Financial Management.

Division of Extramural Programs (EP)

The Division of Extramural Programs (EP) offers grants for research projects, research training, and career development in biomedical informatics and data science. In addition, EP runs a special

collaborative program with other NIH ICs to support bringing informationists (e.g., librarians and other information specialists) into NIH-funded research teams to enhance data management and sharing. Grants are also made to U.S. small businesses to support informatics research and development that may lead to commercialization. EP also has two unique programs to support resource projects in the history and philosophy of medicine and public health and for developing information resources to help reduce health disparities. All active grant programs of NLM, lists of recent awardees, and contact information for grant staff are provided at nlm.nih.gov/ep.

Division of Library Operations (LO)

The Division of Library Operations (LO) ensures access to biomedical and health sciences literature, while supporting NLM's outreach activities to range of stakeholders—from the biomedical research community to clinicians to librarians to the general public. LO's activities include curation, preservation, and dissemination of NLM's collection of literature; developing and disseminating vocabularies and a library classification scheme; conducting research related to current operations, products, and services; training and recruiting health sciences librarians; producing historical exhibitions; and conducting in the history of medicine. LO also coordinates the National Network of Libraries of Medicine to equalize access to health information across the United States.

BIBLIOGRAPHIC SERVICES DIVISION (BSD)

The Bibliographic Services Division (BSD) is responsible for the creation and maintenance of MEDLINE®, the NLM's citation database for biomedical literature references that fosters expanded access of health information to researchers, health professionals, and the general public. BSD divided into the Office of the Chief and two sections: the Index Section and the MEDLARS Management Section (MMS).

THE OFFICE OF THE CHIEF

The Office of the Chief interacts with publishers and editors of biomedical journals and assists the Literature Selection Technical Review Committee in their review of journals for inclusion in MEDLINE. They also produce and manage drug information found in DailyMed and RxNorm.

INDEX SECTION

The Index Section creates and maintains the MEDLINE database of articles from biomedical research journals and coordinates the data review, indexing, and commentary content. Index Section staff also undertake research to generate more efficient forms of indexing and metadata application, as well as maintain the Medical Subject Headings (MeSH) vocabulary, which describe the content of a given citation in the biomedical research literature.

MEDLARS MANAGEMENT SECTION (MMS)

The MEDLARS Management Section coordinates the development and management activities for terminology products (e.g., UMLS, VSAC, and SNOMED CT) and provides training and outreach services to librarians for NLM's projects and services, including providing support for the Linkout for Libraries program to link PubMed citations to a given library's online holdings.

~~MEDICAL SUBJECT HEADINGS (MESH) SECTION~~

~~The MeSH Section provides a hierarchically-organized terminology for indexing and cataloging biomedical information such as MEDLINE/Pubmed and other NLM databases. The Section also distributes pharmaceutical information through our RxNorm database, and manage the curation of the UMLS and SnoMed database.~~

HISTORY OF MEDICINE DIVISION (HMD)

The History of Medicine Division collects, preserves, makes available, and interprets for diverse audiences one of the world's richest collections of historical material related to health and disease. HMD makes its collection available through a number of formats including its Exhibition Program, illustrated books, a blog, and the NLM Digital Collections.

EXHIBITION PROGRAM

The Exhibition Program creates lively and informative exhibitions and educational resources that enhance awareness of and appreciation for NLM's collections. Staff provide traveling banner exhibitions free of charge to public, university, and medical libraries, as well as cultural centers across the country. The Program's permanent online exhibitions act as educational resources to aid librarians and exhibition audiences in connecting to NLM's collection and health information resources.

RARE BOOKS AND EARLY MANUSCRIPTS PROGRAM

The Rare Books and Early Manuscripts Program collects, preserves, and makes NLM'S historical collection available to researchers and the public through a wide array of printed monographs, serials, and manuscript texts dating from the eleventh century. The historical collection includes more than 600,000 printed works, covering every area of the history of medicine and health sciences in the United States and Europe, as well as substantial collections of Latin American and Asian publications.

IMAGES & ARCHIVES SECTION

The Images and Archives Section has four archival areas: (1) the Archives and Modern Manuscripts Collection consists of personal papers and organizational records documenting predominantly American medical practitioners, biomedical scientists, health policy planners, and medical societies from about 1850 to the present; (2) the Historic Audio Visuals Collection is a principal repository for biomedical moving images in the U.S. and around the world; (3) the Prints and Photographs collection includes portraits, photographs, caricatures, genre scenes, posters, and graphic art illustrating the social and historical aspects of medicine; (4) the Digital Manuscripts Program manages Profiles in Science making

Comment []: Technically they exist but practically speaking they've been folded into Bibliographic Services Division. Maybe ask David Gillikin, Chief, Bibliographic Services Division how to treat this section?

the archival collections of leaders in biomedical research and public health available on its Profiles in Science® web site.

~~MEDICAL SUBJECT HEADINGS (MESH) SECTION~~

~~The MeSH Section provides a hierarchically-organized terminology for indexing and cataloging biomedical information such as MEDLINE/Pubmed and other NLM databases. The Section also distributes pharmaceutical information through our RxNorm database, and manage the curation of the UMLS and SnoMed database.~~

NATIONAL INFORMATION CENTER ON HEALTH SERVICES RESEARCH (NICHSR)

NICHSR works to improve the collection, storage, analysis, retrieval, and dissemination of information on health services research, clinical practice guidelines, and on health care technology, including the assessment of such technology. The Center also collaborates with other NLM divisions and members of the National Network of Libraries of Medicine to exhibit NLM products and services, as well as providing training opportunities for medical librarians to improve their ability to support health services research.

NATIONAL NETWORK OF LIBRARIES OF MEDICINE (NNLM)

The National Network of Libraries of Medicine (NNLM) works to advance the progress of medicine and improve public health by providing U.S. health professionals with equal access to biomedical and health information. The Network is comprised of over ~~6,500~~7,000 organizations throughout the country, including academic health sciences libraries, public and community college libraries, as well as community information centers and other organizations. NNLM offers funding for projects that improve access to health information, increase engagement with research and data, expand professional knowledge, and support outreach that promotes awareness and use of NLM resources in local communities.

NNLM DOCLINE COORDINATION OFFICE (NDCO)

DOCLINE is NLMS automated interlibrary loan request routing and referral system, which ensures the efficient delivery of documents among libraries in the NNLM. NDCO provides day-to-day customer support for DOCLINE participants and provides DOCLINE training and LinkOut assistance

NNLM EVALUATION OFFICE (NEO)

The NEO supports the evaluation and assessment needs of the National Network Steering Committee (NNSC) by providing consultation and resource services to assist NNLM members in planning and measuring the process and impact of all their activities, services, and resources.

NNLM PUBLIC HEALTH COORDINATION OFFICE (NPHCO)

The NPHCO manages, improves, and expands the Public Health Digital Library (PHDL) to achieve a cost-effective, sustainable model of providing access to information services for public health workers.

NNLM TRAINING OFFICE (NTO)

The NTO plans, creates, shares, delivers, and coordinates an instructional program and educational materials based on key NLM products and services for a variety of audiences throughout the NNLM.

NNLM WEB SERVICES OFFICE (NWSO)

The NWSO develops and maintains reliable Web services for NNLM public and internal needs, while ensuring that services are compliant with the U.S. Department of Health & Human Services Information Policies.

Comment []: Potentially delete if the document is organizationally focused; could include if it's programmatically focused.

PUBLIC SERVICES DIVISION

The Public Services Division (PSD) is responsible for providing access to, maintaining, digitizing, and preserving print and nonprint material in the NLM collection. PSD staff develop and maintain MedlinePlus and MedlinePlus Connect, which are consumer health information resources available on the NLM website.

COLLECTION ACCESS SECTION

The Collection Access Section provides patrons with access to the library's collection through the library's reading room and interlibrary loan system. The section also manages DOCLINE®, NLM's automated interlibrary loan request, routing, and referral system for sending and receiving document requests.

PRESERVATION AND COLLECTION MANAGEMENT SECTION

The Preservation and Collection Management Section works to extend the life of and expand access to NLM's collections through an active binding, digitization, and preservation program. Digitized titles are available online via NLM's Digital Collections. The section also digitizes backfiles of biomedical journal literature, which are made freely available online in PubMed Central (PMC).

REFERENCE AND WEB SERVICES

The Reference and Web Services Section helps to meet the biomedical information needs of U.S. health professionals, scientists, health sciences librarians, and the public, through both online and onsite support. Staff also maintain the NLM website, advise medical librarians in the United States, and create and maintain selected Topic-Specific Queries. The Section also manages MedlinePlus and

MedlinePlus Connect, which links health IT systems, patient portals, and electronic health record (EHR) systems to relevant, authoritative patient health information from MedlinePlus.gov.

TECHNICAL SERVICES DIVISION (TSD)

The Technical Services Division is responsible for building and organizing the modern collection of biomedical literature and other resources in support of research, health care, and the community of health sciences libraries. The division coordinates the Library's collection development guidelines and administers the library systems used to support the selection, acquisitions, cataloging and preservation of the NLM collection. TSD participates in national and international bibliographic control programs and standards development, including the new library standard, BIBFRAME.

~~The Technical Services Division is responsible for the selection, acquisition and cataloging of all materials for the NLM modern collection. TSD coordinates technical services programs and projects with the greater library community, and staff participate in the Program for Cooperative Cataloging (PCC), a coalition of libraries organized to promote effective cooperative cataloging.~~

OFFICE OF THE CHIEF

In addition to focusing on Division-wide planning, administration, and evaluation, the Office of the Chief periodically reviews and revises the Collection Development Manual of the NLM to ensure it reflects the ever evolving fields of healthcare, biomedical research, and new standards.

COLLECTION DEVELOPMENT AND ACQUISITIONS SECTION

The Collection Development and Acquisitions Section builds the NLM modern biomedical literature collection, including print and electronic resources and other digital content. Staff also assist in the selection of materials to digitize from the NLM collection, content for PubMed Central and the Bookshelf, foreign language support for MedlinePlus, and the Literature Selection Technical Review Committee (LSTRC).

CATALOGING AND METADATA MANAGEMENT SECTION

The Cataloging and Metadata Management Section reviews and develops cataloging policies. The Section creates and maintains the bibliographic records resident in NLM's public access catalogs, LocatorPlus and the NLM Catalog. Staff also maintain and develop the NLM Classification, a scheme for the shelf arrangement of medical literature in libraries.

LIBRARY TECHNOLOGY SERVICES SECTION

The Library Technology Services Section manages the bibliographic and digital library systems used to support the Division's collection development, electronic resources management, and cataloging operations, as well as coordinating the maintenance, development, testing, training, and documentation for numerous NLM systems. The Section leads the development of NLM's repository, Digital Collections.

Division of Specialized Information Services (SIS)

Comment []: Programs to be either maintained or eliminated. Staff going to LO or OCCS.

The Division of Specialized Information Services creates information resources and services covering toxicology, environmental health, HIV/AIDS, outreach to underserved and special populations, HIV/AIDS, drugs and dietary supplements, household products, and disaster/emergency preparedness and response.

TOXICOLOGY AND ENVIRONMENTAL HEALTH INFORMATION PROGRAM (TEHIP)

The SIS Toxicology and Environmental Health Information Program produces an integrated database, TOXNET, with information on hazardous chemicals, toxic releases and environmental health. The Program produces several products to relay information related to toxicology and environmental health to the public, including TOXMAP®, Haz-Map®, Tox Town®, and the Household Products Database. TEHIP has also produced games to engage students in learning about environmental health concerns.

OUTREACH AND SPECIAL POPULATIONS BRANCH (OSPB)

The Outreach and Special Populations Branch (OSPB)manages and develops programs to eliminate disparities in health information access by providing community outreach support, training health professionals on NLM's health information databases, and designing websites that discuss the concerns of various racial and ethnic groups. These programs reach health professionals, public health workers and the general public, especially about health issues that disproportionately impact minorities such as environmental exposures and HIV/AIDS. OSPB also has a growing program to reach K-12 teachers and students, including the Environmental Health Student Portal and GeneEd.

DISASTER INFORMATION MANAGEMENT RESEARCH CENTER (DIMRC)

The Disaster Information Management Research Center (DIMRC) develops and provides access to health information resources and technology for disaster and public health emergency preparedness, response, and recovery. DIMRC focuses on maintaining access to health information at all phases of disasters and public health emergencies, developing innovative products and services for emergency personnel, conducting research to support disaster health information management, and collaborating with other agencies and communities.

OFFICE OF CLINICAL TOXICOLOGY

The Office of Clinical Toxicology (OCT) develops new resources and enhances existing NLM resources for professionals in toxicology and related fields.

Lister Hill National Center for Biomedical Communications (LHNCBC)

The Lister Hill Center for Biomedical Communications (LHNCBC) develops advanced information resources and software tools for biomedical research used by health IT professionals, health care providers, and consumers. LHNCBC also leads the development, enhancement, and adoption of clinical vocabulary standards to facilitate interoperability between producers and receivers of health care data, as well as developing many projects related to Natural Language Processing and biomedical terminologies. The Center also provides training opportunities through the Biomedical Informatics Training Program.

AUDIOVISUAL PROGRAM DEVELOPMENT BRANCH (APDB)

The Audiovisual Program Development Branch (APDB) conducts media development for LHNCBC's research, development, and demonstration projects; provides consultation and materials development for NLM information programs; and engineers technical improvements for media production. Staff provide high quality video, audio, imaging, and graphics materials for LHNCBC's research and demonstration projects, often collaborating on initial project conception, implementation, and final evaluation.

COGNITIVE SCIENCE BRANCH (CGSB)

The Cognitive Science Branch (CgSB) applies linguistic, statistical, and knowledge-based research and development in the investigation of techniques for improving access to biomedical information. Additionally, Branch members actively participate in developing and maintaining the Unified Medical Language System and collaborate with research staff to develop automated and semi-automated techniques for indexing biomedical literature.

COMMUNICATIONS ENGINEERING BRANCH (CEB)

The Communications Engineering Branch (CEB) conducts research and development in a range of areas, with an emphasis on image engineering, such as image processing, compression and enhancement, as well as text and data mining using machine learning and natural language processing techniques. Research is directed towards a range of applications, including cancer research, document delivery, digital preservation, and automated ways of building resources such as MEDLINE.

COMPUTER SCIENCE BRANCH (CSB)

The Computer Science Branch (CSB) applies techniques of computer science and information science to problems in the representation, retrieval, and manipulation of biomedical knowledge. CSB projects

involve both basic and applied research, including development of clinical vocabulary standards and terminologies and deriving discoveries from clinical data.

National Center for Biotechnology Information (NCBI)

The National Center for Biotechnology Information (NCBI) creates and maintains over 40 databases for the medical and scientific communities, as well as the general public, including literature, molecular, and genomic databases, such as PubMed, GenBank, and dbGaP. NCBI also has a multi-disciplinary research group composed of molecular biologists, biochemists, computer scientists, mathematicians, research physicians, and structural biologists concentrating on basic and applied research in computational molecular biology.

COMPUTATIONAL BIOLOGY BRANCH (CBB)

Research in the NCBI Computational Biology Branch (CBB) focuses on theoretical, analytical, and applied computational approaches to a broad range of fundamental problems in molecular biology and medicine. The expertise of the group is concentrated in sequence analysis, protein structure/function analysis, chemical informatics, and genome analysis. Research interests further cover a wide range of topics in computational biology and information science.

INFORMATION ENGINEERING BRANCH (IEB)

The Information Engineer Branch (IEB) performs applied research in data representation and analysis, including the development of computer-based systems for the storage, management, and retrieval of knowledge relating to molecular biology, genetics, and biochemistry. IEB also coordinates public access to these information resources by building curated and integrated databases. Staff share their expertise by consulting with and advising other governmental agencies and research laboratories on advanced methods of software and database design.

INFORMATION RESOURCES BRANCH (IRB)

The Information Resources Branch (IRB) plans, directs, and manages the technical operations of NCBI, including the computer systems used for internal research and development, as well as systems used to access public databases. IRB staff also organize educational demonstrations and workshops for the external biomedical community to promote use of NCBI's resources. IRB also plans, develops, and manages contracts and cooperative agreements to procure equipment and services in support of NCBI's functions.

Office of Computer and Communication Systems (OCCS)

The Office of Computer & Communications Systems (OCCS) provides information technology services and technical advice to support the research and management programs offered through NLM. OCCS provides customer support, training, and documentation for computer and network users. In addition, OCCS develops standards and guidance for managing and using information technology in accordance with industry best practices and applicable federal government mandates. The director of OCCS serves as NLM's chief information officer.

APPLICATIONS BRANCH

The Applications Branch is composed of two sections. The Online Health Information Support Section oversees the research, development, and implementation of online health information applications, and provides consulting and technical support services to NLM divisions and external organizations. The Library Business Technology Support Section oversees the research, development, and implementation of systems and technologies to support library business and operations.

MEDICAL LANGUAGE BRANCH

The Medical Language Branch develops and maintains software applications, such as the Unified Medical Language System, the RxNorm system, and the Medical Subject Headings system.

SYSTEMS TECHNOLOGY BRANCH

The Systems Technology Branch is composed of four sections. The Systems Services Section plans, evaluates, designs, and maintains computing and storage environments, and ensures the security and reliability of NLM production systems and development environments. The Facilities Management Section designs, operates, and maintains NLM's computing platforms, networking equipment, security apparatuses, storage devices, and backup systems. The Network Engineering Section evaluates, designs, deploys, and maintains networking and data communications technologies, products, and services to meet NLM's internal and external connectivity requirements. The Desktop Services Section evaluates, procures, and deploys personal computing capabilities and services and manages security and access control.

Subject: FW: Sunsetting Plan and Dates
Attachments: Sunset_Status_Dates.xlsx

FYI – are you working with Florence on these plans? Is there anything LO specific to report on here? I'm going to clean it up and send to Patti today/early tomorrow.
Patti made it clear that there should be communication between you and Florence regarding the sunsetting…
Thanks,
T.

Subject: Sunsetting Plan and Dates

Florence,
Attached is the last document I received from Joyce regarding the sunsetting plans for SIS and LO. Patti wants to know dates when items will be sunset. I understand that you have started the process with OCPL. Can you indicate when the red items will be sunsetting and/or if you have submitted sunsetting paperwork?
Patti wants this by Thursday. Perhaps a matrix of what has been submitted to OCPL for sunsetting w/close-out dates? I'm willing to provide assistance as needed.

Inventory of Public-Facing Offerings

Red - Sunset, Yellow - evaluate for sunset/transition, Green - maintain, recommend efficiencies, Purple - Sunset delivery platform, integrate info consolidated platforms					
Offering Name	**Red, Yellow, Green, Purple**	**Sunset status & date**	**page views 2018**	**Timeline for Review/action FY2019/FY2020**	**Offering Short Description**
AIDSinfo	yellow		8,573,046	May 2019 - Q4 2020	NLM collaborates with the U.S. Department of Health and Human Services (HHS) to deliver AIDSinfo, a resource providing information on HIV/AIDS clinical trials and federally approved HIV treatment and prevention guidelines, information on HIV/AIDS treatment, clinical trials, and other HIV/AIDS-related research information for health care providers, researchers, people affected by HIV/AIDS, and the general public. The Spanish version is called infoSIDA.
AIDSsource	yellow		95,155	May 2019 - Q4 2020	AIDSource offers access to a comprehensive collection of HIV/AIDS-related resources reviewed and selected by expert information specialists and librarians. Materials are available in Spanish materials as well.
AltBib	green			Q3 FY2019	AltBib provides resources on Alternatives to the Use of Live Vertebrates in Biomedical Research and Testing.
American Indian Health	Red	Plan in progress June, 2019		Q3 FY2019	American Indian Health is a source for information about the health and well being of Native Americans and Alaska Natives. Portal to be sunset in FY2019.
Arctic Health	Red	Plan in progress June, 2019		Q3 FY2019	Arctic Health is a source for information on diverse aspects of the Arctic environment and the health of northern peoples. Portal to be sunset in FY2019.
Chemical Hazards Emergency Medical Management (CHEMM)	yellow		595,249	Q1 FY2020	Chemical Hazards Emergency Medical Management (CHEMM) provides resources to assist in the medical response to a mass-casualty chemical incident.
ChemIDplus	yellow		4,450,320	Q4 FY2019	The ChemIDplus database is a dictionary of over 400,000 chemicals (names, synonyms, and structures). ChemIDplus includes links to NLM and other databases and resources, including links to federal, state and international agencies.
Dietary Supplement Ingredient Database	Yellow			Q2-Q3 FY2020	The Dietary Supplement Ingredient Database (DSID) provides estimated levels of ingredients in dietary supplement products sold in the United States. DSID is a collaboration with NIH's Office of Dietary Supplements and USDA.
Dietary Supplement Label Database	Yellow		393,797	Q2-Q3 FY2020	The Dietary Supplement Label Database (DSLD) includes full label derived information from dietary supplement products marketed in the U.S. with a Web-based user interface that provides ready access to label information. DSLD is a collaboration with NIH's Office of Dietary Supplements.
Disaster Information Management Research Center (DIMRC) website	Yellow		65,375	Q2 FY2020	The Disaster Information Management Research Center (DIMRC) website is a source for health information resources and technology for disaster and public health emergency preparedness, response, and recovery. The focus is to connect people to quality disaster and public health emergency information and foster a culture of community resiliency.
Disaster Lit: Database for Disaster Medicine and Public Health	Yellow		74,751	Q2 FY2020	Disaster Lit, the Database for Disaster Medicine and Public Health, contains links to disaster medicine and public health emergency resources available on the Internet at no cost. Resources include guidelines, research reports, training classes, fact sheets, website, databases, data sets, and similar materials.
Drug Information Portal	purple		1,078,965	Q3 - Q4 FY2019	The Drug Information Portal contains information for over 55,000 drugs. Names, usage, and structures are displayed, as well as search links to key NLM and government sites. Same backend database as ChemIDplus.
Enviromental Health Student Portal	Red	Plan - submit in March; Sunset in Sept, 2019	95,155	Q3 FY2019	The Enviromental Health Student Portal provides educational resources for middle school students and educators.

Environmental Health and Toxicology Information	Red	Plan - submit in March; Sunset in Sept, 2019; Content will move to appropriate pages on NLM Main site	77,096	Q3 - Q4 FY2019	The Environmental Health and Toxicology Information website is a portal to numerous NLM databases and resources in environmental health and toxicology.
GeneEd	Red	Plan approved; Sunset March 31, 2019	622,670	Q3 FY2019(March 31, 2019)	GeneEd is a portal of genetic topics such as cell biology, DNA, genes, epigenetics and more for students and teachers. Information from the site will be merged with Genetics Home Reference in spring 2019.
Genetics Home Reference	purple			Q3 FY2019	Genetics Home Reference is a consumer health resource that provides information for the general public about the effects of genetic variation on human health.
Hazardous Substances Data Bank (HSDB)	purple			Q4 FY2019	The Hazardous Substances Data Bank (HSDB) is a comprehensive, peer-reviewed toxicology data bank for about 6,000 chemicals. A TOXNET database.
HazMap	Red	Plan - submit in April; Sunset at the end of July, 2019	447,253	Q3 - Q4 FY2019	Haz-Map is an occupational health database designed for health and safety professionals and for consumers seeking information about the adverse effects of workplace exposures to chemical and biological agents. The main links in Haz-Map are between chemicals and occupational diseases.
HealthReach	purple		250,791	Q4 - FY2019 - Q1 FY2020	HealthReach is a database of easy to read, multilingual health information for those working with or providing care to individuals with limited English proficiency.
Household Products Database	yellow		2,290,447	Q3 - Q4 FY2019	The Household Products Database links consumer brands to health effects from Safety Data Sheets provided by manufacturers and allows scientists and consumers to research potential health effects of chemicals in more than 18,000 common household products. based on chemical ingredients. A TOXNET database.
Integrated Risk Information System (IRIS)	purple			Q4 FY2019	Integrated Risk Information System (IRIS) contains data in support of human health risk assessment, including hazard identification and dose-response assessments. It is compiled by the U.S. EPA and contains descriptive and quantitative information related to human cancer and non-cancer health effects that may result from exposure to substances in the environment. A TOXNET database.
International Toxicity Estimates for Risk (ITER)	purple			Q4 FY2019	International Toxicity Estimates for Risk includes risk information for over 600 chemicals from authoritative groups worldwide. A TOXNET database.
LactMed	purple			Completed	LactMed, a Drugs and Lactation Database, provides information on drugs and other chemicals to which breastfeeding mothers may be exposed. Find information about maternal and infant drug levels, possible effects on lactation and on breastfed infants, and alternative drugs to consider. A TOXNET database.
LiverTox	yellow		3,740,565	Q3 - Q4 FY2019	LiverTox provides up-to-date, accurate, and easily accessed information on the diagnosis, cause, frequency, patterns, and management of liver injury attributable to prescription and nonprescription medications, herbals and dietary supplements. A collaboration with National Institute of Diabetes and Digestive and Kidney Diseases (NIDDK).
NIH Disaster Research Response Program (DR2)	Red	Plan submit in April; Sunset at the end of Sept, 2019	15,355	Q3 - Q4 FY2019	The NIH NIH Disaster Research Response Program (DR2) program is a collaboration between National Institute of Environmental Health Sciences (NIEHS) and NLM with the potential for additional NIH Institutes and Centers to join. DR2 is the national framework for research on the medical and public health aspects of disasters and public health emergencies.
Pillbox	Yellow		921,103	Q3 - Q4 FY2019	Pillbox enables rapid identification of unknown solid-dosage medications (tablets/capsules) based on physical characteristics and high-resolution images.
Radiation Emergency Medical Management (REMM)	Yellow		388,653	Q1 FY2020	Radiation Emergency Medical Management (REMM) is a resource to assist healtcare providers diagnosis and treat a variety of radiation injuries.

SIS main website	Red	Plan submit in March; Sunset at the end of June, 2019		Q3 FY2019	The SIS main website provides access to the resources offered by SIS, in the areas of toxicology and environmental heatlh, chemistry, HIV/AIDS, disaster health, and topics relevant to specific populations.
Substance Registration System	Green		520,379	Q3 - Q4 FY2019	The Substance Registration System is a joint FDA/USP project to support health information technology initiatives by generating unique ingredient identifiers (UNIIs) for substances in drugs, biologics, foods, and devices. A collaboration with FDA.
Toxline	purple			Underway	
Tox Mystery	Red	Plan approved; Site sunsetted		Gone already	Tox Mystery is an interactive game about toxic substances for children ages 7-10. Site will be sunset in fall of 2018.
Tox Town	Green		1,129,615	Q1 FY2020	Tox Town provides consumer level information on everyday locations and situations where one might be exposed to toxic chemicals.
Tox Tutor	Yellow		549,607	Q1 FY2020	tox Tutor provides college-level tutorials on the basic principles of toxicology, toxicokinetics, cellular toxicology, and related topics, e.g., exposure science and risk assessment. It is a self-paced tutorial covering key principles of toxicology for users of the NLM chemical and toxicology databases.
ToxMap	Red	Plan approval in progress; Sunset at the end of Sept, 2019		Q4 fy2019	TOXMAP: Environmental Health Maps provides searchable, interactive maps of EPA TRI and Superfund data, plus US Census and NCI health data
TOXNET	purple		7,957,267	Q4 FY2019	TOXNET is a search system for a cluster of databases covering toxicology, hazardous chemicals, environmental health and related areas.
Wireless Information System for Emergency Responders (WISER)	Yellow		624,253	Q1 FY2020	Wireless Information System for Emergency Responders (WISER) is a tool to assist emergency responders, managers, and healthcare providers in hazardous materials incidents.

Subject: sunset information for Dr. Tabak

Florence, Mark,
Attached is the summary information I plan to send to Dr. Tabak to inform him of the most recent sunset proposals. Can you please review the content and add in the highlighted information (proposed dates for sunsetting).

I will review the updated information Florence provided me about ToxMap and CPDB

Thanks
Jerry

Subject: RE: [EXT] Metamodel for terms
Attachments: NLM Customer List Mapping 122018.xlsx, 4.a.2 NPA NLM Portfolio Metamodel v1.0.docx

Hi Mike,

I've attached MITRE's deliverable which elaborates the portfolio metamodel data elements and definitions which were prioritized for the initial work. I'm not sure if you've received this document previously; I hope it will help on the definitions front.

Then, here is some general information about the process to help answer your questions:

1. **Target customer types** – Customer list was initially developed with NLM NPA advisory team working with MITRE. We did not specifically define the customer types for the metamodel documentation. This is an improvement area. For example, we learned during the data call that there had been an NLM outreach functional analysis in the past year during which a customer type list had been produced. MITRE took that list, merged it with the original NPA list and additional customers that were submitted for the NPA. We then came up with a consolidated list that should be considered going forward. I've attached the consolidated list for your reference. We have not brought the list to the Divisions yet to discuss. The idea behind the merged list is to come to consensus that it covers all the necessary customer types. Then, each should be defined and included in the metamodel documentation.
2. **Mandate types** – The list of mandates types was originally brainstormed with the NPA advisory team. Specific definitions of each are not yet in the metamodel definitions file . This is another improvement area.
3. **Alignment to strategic plan** – Offering owners aligned offerings to SP elements based on their own perspective. There was not guidance for this at the time of the data call. This is another improvement area.

I would be very glad to set up time with you and your team to go into detail about the NLM portfolio metamodel, how definitions for data attributes were arrived at, and how MITRE set up the data calls to capture the customers, mandates, alignment and other details. We can describe the whole process to bring you up to speed. I understand that last week's NLM senior leadership meeting produced some recommended next steps in terms of normalizing terms so the timing seems to be right for us to partner with your team to refine the metamodel terms and work to improve the process overall.

Please let me know your thoughts on scheduling a meeting.

Thank you
Beth

Subject: [EXT] Metamodel for terms

Hi Beth – In the NPA tool, we are interested figuring out how you got the responses you did for: 1) target customer types, 2) mandate types, and 3) alignment to strategic plan. So, please let me know how these were defined, or guidance given in soliciting this info and/or the metamodel used. Thanks much – Mike

Executive Summary

The National Institutes of Health (NIH) National Library of Medicine (NLM) Portfolio Metamodel aims to provide information to NLM decision makers to understand the mix of products and services—called offerings—that NLM provides to customer constituencies. The metamodel is a *future-state illustration* of features that are most critical to a holistic understanding of NLM's portfolio. The metamodel is populated with information sourced from NLM Division management records as well as from NLM financial management systems and processes. It is designed to help answer key management questions that are fundamental to understanding NLM's portfolio both at a high-level and at the individual offering level.

Broadly, NLM management desires to seeks information about:

- What is the number, type, and complete list of offerings available to the public? How do NLM offerings relate to each other and to NLM's mission?
- What federal or NIH mandates and/or NLM Strategic Plan elements compel NLM to support specific offerings?
- How are different customer constituencies served by NLM's diverse portfolio?
- What NLM resources (i.e., business processes and functions, technology, and data) and external resources are used in combination to deliver offerings to customers?
- What are the dependencies between offerings and their underlying resources?
- How is NLM's annual budget allocated and expended in support of individual offerings?
- What projects and activities does NLM support with federal investments to produce, operate, and maintain NLM offerings?

Scope of Document

This document consists of two sections:

- **NLM Portfolio Metamodel Components.** A common taxonomy for describing the NLM portfolio components is necessary for cross-portfolio analyses and transparent decision-making processes. This section defines each item appearing in the metamodel as well as data attributes associated with each item. Attribute values and examples are also provided to facilitate metamodel adoption.
- **NLM Portfolio Key Management Questions.** Different data points associated with the portfolio metamodel can be analyzed together to answer key management questions identified by NLM leadership. Answers support more informed decision-making about how to direct NLM's limited resources to effectively and efficiently execute NLM's mission and position NLM well for the future. This section enumerates each key management question and shows the lines of sight between different metamodel components that can provide data points to help answer each question.

Methodology

The MITRE Corporation (MITRE) collaborated with NLM leadership to develop the portfolio metamodel. To address the key management questions, the NLM portfolio metamodel collects information from internal sources and incorporates the information into a decision support environment. To create NLM's baseline portfolio inventory, portfolio data is organized into an Excel-based master data file (.xlsx) and visualized using Tableau software (.twbx). As NLM continues to develop its portfolio management (PfM) capability, NLM may opt to convert its Excel master data file to a database system to make data maintenance and expansion less cumbersome. MITRE developed metamodel definitions, data attributes and values, which were vetted by NLM leadership to ensure all aspects of the metamodel meet leadership's current reporting needs as well as some future reporting aspirations.

Intended Audience

This report is intended for NLM executive leadership, division leadership, and offering, resource, business, and technical owners.

1. Introduction

1.1 Background

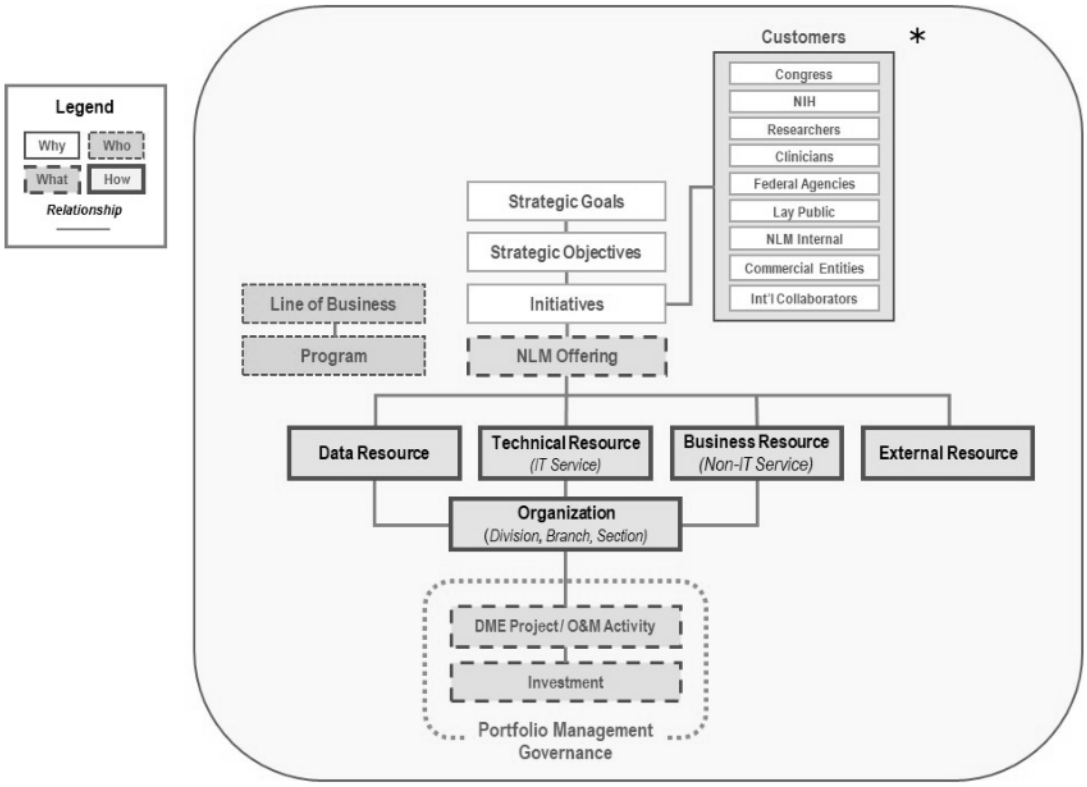
The National Library of Medicine (NLM) requested assistance from the CMS Alliance to Modernize Healthcare (CAMH), a Federally Funded Research and Development Center (FFDRC) operated by The MITRE Corporation (MITRE), to undertake an objective, unbiased, and comprehensive inventory of the entire NLM portfolio and develop portfolio analysis tools. NLM requested that MITRE propose a portfolio framework with cross-NLM applicability to facilitate standardized reporting, enable visualizations to evaluate alignment between NLM strategic priorities and offerings, and provide more robust data for planning and decision-making about NLM's future direction. This effort was the first of its kind to systematically catalog offerings (i.e., products/applications and services) delivered by individual NLM's divisions and centers in a cross-NLM portfolio framework.

By adopting portfolio management (PfM) discipline, federal agencies are equipped with more robust tools to better understand the scope, size, and impact of their business activities. PfM combines strategic, operational, financial, and performance data in a meaningful way that enables agencies to make better decisions about where to invest and to regularly evaluate the results of those investments.

1.2 Purpose

The objective of the NLM portfolio metamodel is to provide NLM a decision analysis capability that answers key management questions about how NLM fulfills its mission. The metamodel was developed using the following approach:

- Determine stakeholders for portfolio management information.
- Survey stakeholders to understand their information needs, capturing the initial set of management questions to answer.
- Parse information from discussions with leadership and interviews with NLM staff to develop a "metamodel" illustrating categories of information and their relationships.
- Evaluate data management and visualization requirements and identify a tool to support reporting based on metamodel categories.
- Determine how to compile, structure, and link information from portfolio data calls completed by key NLM stakeholders to support the relationships defined in the metamodel.
- Develop prototype NLM portfolio dashboards with different views to support answers to NLM management questions.



* The following additional customers were identified during the NPA Phase 1 data call and may be included in a future metamodel version: Educators, Students, Libraries/Librarians, and Press/Publishers.

Figure 1. NLM Portfolio Metamodel

The metamodel is designed to help NLM answer the following broad questions:

- What is the number, type, and complete list of offerings available to the public? How do NLM offerings relate to each other and to NLM's mission?
- What federal or NIH mandates and/or NLM Strategic Plan elements compel NLM to fund specific offerings?
- How are different customer constituencies served by NLM's diverse portfolio?
- What internal NLM resources (i.e., business processes and functions, technology, and data) and external resources are used in combination to deliver offerings to customers?
- What are the dependencies between offerings and their underlying resources?
- How is NLM's annual budget allocated and expended in support of individual offerings?
- What projects does NLM support with federal investments to produce, operate, and maintain NLM offerings?

2. Metamodel Definitions and Attributes

This section defines all metamodel components that comprise the types of data needed to answer key management questions. The five components are:

- **ITEM–** indicates the different components of the NLM Portfolio Metamodel.
- **ATTRIBUTES –** are the qualities or features that are regarded as a characteristic or inherent part of each ITEM. ATTRIBUTES are additional data points pertaining to ITEMS. In information management, an attribute is a piece of information that determines the properties of a field or tag in a database or a string of characters in a display.
- **VALUE –** provides possible options for the attribute based on either a predetermined list of NLM data or user-driven input.
- **EXAMPLES –** are provided to put the definitions for ITEM and ATTRIBUTE in the NLM context.

Attributes are grouped to indicate the type of information to which they relate (basic offering information or financial information). An additional distinction is made to identify attributes that are an aspirational part of the future-state NLM metamodel. These attributes were identified as important to future portfolio analyses; however, NLM leadership determined that standardized definitions for this set of attributes were not important for meaningful baseline portfolio analyses.

2.1 Attribute Group: NLM Offering Information

2.1.1 NLM Offering

Definition: The product and/or service offered to satisfy a want or need of an existing or target user constituency.

Table 1. NLM Offering Attributes

Attribute Name	Definition	Possible Values	Examples
Offering Name	The full name of the offering without information truncated by acronyms.	• List (Large Number of Possible Values) • Manual Data Entry	• Common Data Element Repository • National Health and Nutrition Examination Survey Database • PubMed
Offering Name (Short)	"Brand name," the name used to take the offering to market.	• List (Large Number of Possible Values) • Manual Data Entry	• CDE Repository • NHANES • PubMed
Offering Short Description	A succinct description of the value provided to customers.	Manual Data Entry	• CDE Repository – The NIH Common Data Element (CDE) Repository provides access to structured human and machine-readable definitions of data elements that have been recommended or required by NIH Institutes and Centers and other organizations for use in research and for other purposes. • NHANES – NHANES is a database of materials related to the second and third National Health and Nutrition Examination Surveys (NHANES II and III), carried out during the years 1976-1980 and 1988-1994, respectively. • PubMed – - PubMed is a digital collection of biomedical literature journal article abstracts.

Attribute Name	Definition	Possible Values	Examples
Offering Group	The category indicating the common purpose or characteristic that relates multiple offerings.	• Databases • Analytic Tools • Library Physical and Digital Collections • Training & Career Development • Outreach • Research • Library Science Platforms/Operations	

Attribute Name	Definition	Possible Values	Examples
Offering Type	The category indicating the form in which an offering is delivered to customers.	• Data • Digital Service • Human Service • Product	• **Product** – A system or raw materials combined and made available to users (customers). For the NLM context, a product generally refers to a physical asset or commodity provided to users. Examples: Books, exhibitions assets, training materials. • **Human Service –**Interaction between providers and users where the provider has a direct or indirect interaction with the user. Examples: Data Distribution Program, Library Operations MMS Outreach & Training. • **Digital Service –** A valuable action performed to satisfy customer need that has been delivered using IT infrastructure. Examples: Pathogen surveillance service, genome annotation service, contamination screening service. • **Data –** Information that has been translated or organized into a form that is efficient for movement, processing or consumption. Information may be housed within a database. Examples: PubMed, GenBank.
Offering Mechanism Type	The different mechanism(s) or means by which an NLM offering is provided to customers.	• API Access • Curated Data FTP • Software • Website Access • Media (Print, Video)	CDE Repository Mechanisms: 1. API Access 2. Website Access 3. Curated Data FTP

Attribute Name	Definition	Possible Values	Examples
		• Interpersonal	PubMed Offering Mechanisms: 1. API Access 2. Website Access (PubMed interactive web site) 3. Curated Data FTP NHANES Mechanisms: 1. Website Access (including controlled access) 2. Curated Data FTP 3. Software
Mandate Source Type	The primary source of NLM's mandate to provide a specific offering.	• Congress • NIH Policy • NLM Policy/ Strategic Plan • Other (e.g., historical) • Unknown	
Mandate Reference	The primary reference citation for the authorizing source legislation, policy, or regulation obligating NLM to provide resources and support for an offering or group of offerings.	Manual Data Entry	Sec. 301 of the PUBLIC HEALTH SERVICE ACT, PART D—NATIONAL LIBRARY OF MEDICINE, Subpart 1—General Provisions "PURPOSE, ESTABLISHMENT, AND FUNCTIONS OF THE NATIONAL LIBRARY OF MEDICINE"
Primary Offering Owner Name	Person accountable for delivering value to customers via a specific offering.	Manual Data Entry	Jane Smith
Critical Success Factor	Refer to specific activities, procedures, or areas that a business or organization depends on for its continued survival. (Technopedia)	Manual Data Entry	Example categories for CSF include cost, innovation, quality, speed, and size of consumer base.
Sunsetting Planned	Indicator that a plan is in place to sunset the offering in the future.	Yes	

2.1.2 Organization

Definition: The group of persons organized within NLM with responsibility to deliver a specific NLM offering. Provide NPA Organization information at the Section level or lowest level available when the Section organizational construct is not used.

Table 2. Organization Attribute

Attribute Name	Definition	Possible Values	Examples
Primary Organization Name	Name of the NLM organizational unit.	List (Large Number of Possible Values)	• Exhibitions Section • E-Health Information Support Section

2.1.3 Customers

Definition: Constituencies, including individuals, groups, or organizations, that are intended to use the project's product or service or result.

Table 3. Customer Attributes

Attribute Name	Definition	Possible Values	Examples
Customer Name	Short name for the customer constituency that uses the offering.	• Clinicians • Commercial Entities • Congress • Educators • Federal Agencies • International Collaborators • Lay Public • Libraries/Librarians • Manual Data Entry • NIH • NLM Internal • Press/Publishers • Researchers • Students	

2.1.4 NLM Initiative

Definition: A broadly defined objective that an organization must achieve to make its strategy succeed *(Association of Strategic Planning Body of Knowledge 2.0*). Initiatives are aligned to NLM Strategic Plan Goals and Objectives through the plan's hierarchical numbering framework.

Table 4. NLM Strategic Initiative Attribute

Attribute Name	Definition	Possible Values	Examples
Initiative Name	Strategic initiatives impact the organization as a whole and have enterprise-wide significance *(Association of Strategic Planning Body of Knowledge 2.0)*. If an offering is aligned to an Initiative, its alignment to the associated Strategic Objective and Goal will occur.	• List (see examples) • No alignment • Unknown	1.1b MEDLINE 2022 1.1c NLM Portfolio Assessment by MITRE 1.1d DATaset Metadata Model (DATMM) Initiative 2.1a Outreach planning 2.1d User Experience / User Development Initiative 2.1e External Communications Plans & Information Resources 2.1f Informatics Professionals Outreach, Training and Development 3.2b1 Reproducibility for Intramural Scientists Workshop 3.2b2 Second Reproducibility for Intramural Scientists Workshop 3.2c Data Science for Librarian Workforce Workshop 3.2d Assessment of extramural staff data science training needs

2.1.5 NLM Strategic Objective

Definition: A broadly defined objective that an organization must achieve to make its strategy succeed (*Association of Strategic Planning Body of Knowledge 2.0*). Objectives are aligned to NLM Strategic Plan Goals through the plan's hierarchical numbering framework.

Table 5. NLM Strategic Objective Attribute

Attribute Name	Definition	Possible Values	Examples
Strategic Objective Number	Number indicating the NLM Strategic Objective to which the offering is expected to contribute and help achieve. When an offering is aligned to a Strategic Objective, its alignment to the associated Strategic Goal will occur.	• List (see examples) • No alignment • Unknown	1.1 Connect the resources of a digital research enterprise 2.1 Know NLM users and engage with persistence 3.2 Assure data science and open science proficiency

2.1.6 NLM Strategic Goal

Definition: Encompasses the organization's vision, mission, and objectives (*Association of Strategic Planning Body of Knowledge 2.0*). High-level strategic goals have the following characteristics:

- Describe a future end-state that is supportive of the mission and vision.
- Describe actions in actionable terms.
- Relate to the expectations/requirements of all the major stakeholders and employees and reveal the underlying reasons for running the business.
- Imply a completion date at some point in the future but not defined at this point.
- Can be divided into milestones that, in turn, can be translated into achievable, assignable, and measurable objectives.

Table 6. NLM Strategic Goal Attribute

Attribute Name	Definition	Possible Values	Examples
Strategic Goal Number	Number indicating the NLM Strategic Goal to which the offering is expected to contribute and help achieve.	• Goal 1 • Goal 2 • Goal 3 • No alignment • Unknown	Goal 1 – Accelerate Discovery and advance health through data-driven research Goal 2 – Reach more people in more ways through enhanced dissemination and engagement Goal 3 – Build a workforce for data-driven research and health

2.1.7 Business Resources

Definition: Services associated with business process execution. Business resources support planning, implementation, operation, maintenance, and/or delivery of an offering. Business resources are often used in combination with technical resources and either indirectly or directly support offerings.

Table 7. Business Resource Attributes

Attribute Name	Definition	Possible Values	Examples
Business Resource Name	Short name for the business services that contribute to the delivery of an offering. The resource name given should describe the type of support provided (e.g., Content Management of RxNorm).	• List (Large Number of Possible Values) • Manual Data Entry	• Parature / Dynamics Support Portal and Ticketing System • PHPartners HSRIC curation • Prokaryotic Genome Annotation Curation • SNOMED CT US Edition Production
Business Resource Owner Name	Person responsible for managing the business resource inputs to an offering.	Manual Data Entry	Jane Smith

Attribute Name	Definition	Possible Values	Examples
Business Resource Type	Categories of business resource that distinguish the business function provided to an offering.	• Customer Service • Data • Management • Research • Other (with Manual Data Entry to add additional values)	

2.1.8 Data Resource

Definition: An organized collection of data. Data resources specify the data set that is leveraged when delivering an offering. May also be provided as an offering.

Table 8. Data Resource Attribute

Attribute Name	Definition	Possible Values	Examples
Data Resource Name	Short name for the data collection that contributes to the delivery of an offering.	• List (Large Number of Possible Values) • Manual Data Entry	• Anatquest images • PubMed Central Data Collection • VSAC data
Data Resource Owner Name	Person responsible for managing the data resource inputs to an offering.	Manual Data Entry	Jane Smith
Data Resource Owner Organization	Name of the NLM organizational unit responsible for providing the resource.	List (Large Number of Possible Values)	• Exhibitions Section • E-Health Information Support Section

2.1.9 External Resource

Definition: An input to an NLM offering that is obtained from a provider(s) outside the NLM organization.

Table 9. External Resource Attributes

Attribute Name	Definition	Possible Values	Examples
External Resource Name	Short name for the external resources that contribute to the delivery of an offering.	Manual Data Entry	eRA – public access compliance report
External Resource Provider Name	Name of external agency or organization providing the external resource.	Manual Data Entry	• NIH • EPA
External Resource Business Owner Name	Person responsible for managing the external resource inputs to an offering.	Manual Data Entry	John Smith

2.1.10 Technical Resource

Definition: Services as well as tangible assets supporting the technology needed to deliver an offering. Technical resources combine technical processes and functions of software, hardware, networks, telecommunications, and electronics as well as facilities and equipment. Includes software development, integration, and maintenance; hardware; networking integration, management and maintenance; information security (IS); IT management consultants; mobile services; web applications; and infrastructure.

Table 10. Technical Resource Attributes

Attribute Name	Definition	Possible Values	Examples
Technical Resource Name	Short name for the technical resources that contribute to the delivery of an offering.	• List (Large Number of Possible Values) • Manual Data Entry	• Annotation pipeline software • BioProject Archive • Entrez • Lexical Tools • SFX • Task Manager
Technical Resource Owner Name	Person responsible for managing the technical inputs	Manual Data Entry	Jane Smith

Attribute Name	Definition	Possible Values	Examples
	to the offering.		

3. Attribute Group: Financial Information

3.1 Expenditure

Definition: The actual spending of money; an outlay (*GAO-05-734SP Budget Glossary*).

Table 11. Annual Expenditures Attributes

Attribute Name	Definition	Possible Values[1]	Examples
Expenditure Type	The definitive breakdown of expenditures into groups that classify or summarize the type of cost.	• Division Federal Salaries (Programmatic/Operational) • Contract Salaries (Programmatic/Operational) • Service Contracts (Offering-Specific) • Other Support Costs (e.g., Administrative Overhead, Supplies, Travel, Training) • IT Services (Division-Specific) • IT Services – IT Management (Division-Specific) • IT Services – Security & Compliance (Division-Specific) • IT Services – Delivery (Division-Specific) • IT Services – Application (Division-Specific) • IT Services – Storage (Division-Specific) • IT Services – Compute (Division-Specific) • IT Services –Platform (Division-Specific) • IT Services – Network (Division-Specific) • IT Services – Data Center (Division-Specific) • NLM-wide IT Shared Services	

[1] For definitions, please refer to the **Glossary of Select Terms and Data Values**.

Attribute Name	Definition	Possible Values[1]	Examples
Cost Pool	Low-level categories that are often aligned easily to general ledger accounts. (*TBM Council*[2])	• Internal – Labor • External – Labor • External – Expenses • Internal –Other • Internal Services – IT	
Expenditure Total	Total amount of money expended to support a business activity.	Manual Data Entry (USD)	$1,234,567.89

[2] https://www.tbmcouncil.org/sites/default/files/tbmc_tbm_taxonomy_3.0.pdf

4. Proposed Future Attributes

4.1 Attribute Group: NLM Offering Information

4.1.1 Offering Information

Definition: Please refer to subsection *2.1.1*.

Table 12. Future-State NLM Offering Attributes

Attribute Name	Definition	Possible Values	Examples
Flagship Indicator	Indicator that the offering belongs to the finest, largest, or most important group of NLM offerings. *(https://www.merriam-webster.com/dictionary/flagship)*	Yes	
Key Performance Indicator (KPI)	Name of the metric most indicative of the offering's value to customers. Selected by offering business owner.	Manual Data Entry	
KPI Measurement Unit	The quantity used as the standard of measurement.	Manual Data Entry	Webpage hits
KPI Measurement Value	The measured KPI quantity at a moment in time.	Manual Data Entry	123,456
KPI Measurement Period	The predetermined time between two scheduled KPI measurements.	• Weekly • Monthly • Quarterly • Semi-annually • Annually	
KPI Measurement Date	The date on which the KPI measurement value is generated for reporting.	Manual Data Entry	YYYYMMDD

Attribute Name	Definition	Possible Values	Examples
KPI Measurement Target	The desired or benchmark KPI measurement value at any given time.	Manual Data Entry	123,456
KPI Data Source Name	Primary location (i.e., database, application, website, etc.) where current and historical KPI data are stored.	Manual Data Entry	Amazon Web Services
NLM Function	Derived from 8 functional statements describing the NLM's key functions.	• Biomedical collections/archives • Medical library development • Training • Outreach • Research • Tools development • Technical consultation	
NLM Core Operations	The range of activities that serve NLM's mission. Per the NLM Strategic Plan Implementation FAQs, NLM core operations are: • Acquire, preserve, and disseminate information • Conduct research about the information substrate of health • Workforce development • Provide training and use on how to make NLM's materials more accessible to others	• Archives & Collections • Outreach • Research • Training • Workforce Development	
Program	An organization subdivision focused on a single product or family of products (*Gartner IT Glossary*).		
Line of Business (LOB)	Related projects, subsidiary		

Attribute Name	Definition	Possible Values	Examples
	programs, and program activities that are managed in a coordinated manner to obtain benefits not available from managing them individually. (*PMBOK*®; used by NCBI). A collection of organizational resources that is geared to accomplish a certain major goal or set of goals (*www.managementhelp.org*).		

4.1.2 Technical Resource

Definition: Please refer to subsection *2.1.9*.

Table 13. Technical Resource Attributes

Attribute Name	Definition	Possible Values	Examples
FISMA System	Indicator of the NLM system designated as a part of the Federal Information Security Management Act of 2002 (FISMA) to which the technical resource is a part.	• List • Undocumented	• Access GUDID • BLAST • Clinical Trials • DailyMed • dbGaP • Digital Repository • DOCLINE • GenBank • Genetic Testing Registry (GTR) • Genetics Home Reference (GHR) • Images from the History of Medicine • Index Management System (IMS) • LPF • MEDLARS Application • MedlinePlus • MeSH • NLM Biomedical Terminology System (NBTS) • NLM Data Center • PubChem • PubMed/PubMed Central • RxNorm Editing System • Serials Extract File • TOXNET • Unified Medical Language System (UMLS) • Value Set Authority Center (VSAC) • Voyager

4.2 Attribute Group: Investment and Expenditure Information

4.2.1 DME Project

Definition: A project is a temporary endeavor undertaken to create a unique product or service. A project has a beginning and an end. (*Project Management Institute®*). A DME (Development, Modernization and Enhancement) project is the portion of an IT investment/project that deals with developing and implementing new or enhanced technology in support of an agency's mission (*48 CFR 1034.001 – Definitions*).

Table 14. Future-State DME Project Attributes

Attribute Name	Definition	Possible Values	Examples
DME Project – Resource Name	Name of the resource supported by the DME project.	Manual Data Entry	
DME Project Name	Short name for a DME project undertaken to develop a business or technical resource.	Manual Data Entry	• PubMed 2.0 • SEF Redesign
DME Project Investment Amount	Total amount invested to complete a DME project.	Manual Data Entry (USD)	$1,234,567.89
DME Project Expenditures Amount	Total expenditures incurred for a DME project to a specified point in time.	Manual Data Entry (USD)	$1,234,567.89

Attribute Name	Definition	Possible Values	Examples
DME Project Associated Investment Name	Name of HHS-reported NLM investment lines from which funding is directed to a project.	• NLM Biomedical Terminology System (NBTS) • NLM BLAST • NLM Entrez Molecular Biology Website • NLM Genome Assembly and Annotation (GenBank) • NLM Molecular Biology IT Support • NLM TOXICOLOGY DATA NETWORK • NLM Clinical Trials • NLM Health Information Resources • NLM PubChem • NLM Human Variation Resources • NLM Medical Library Heath Info Systems and Services • NLM Literature Resources • NLM Clinical Informatics and Data Standards and Analytics Research • NLM Medical Imaging and Visualization Research	

4.2.2 Operations and Maintenance (O&M) Activity

Definition: Appropriations that traditionally finance those things whose benefits are derived for a limited period (e.g., expenses rather than investments) (*Defense Acquisition University*).

Table 15. Future-State O&M Activity Attributes

Attribute Name	Definition	Possible Values	Examples
O&M Activity – Resource Name	Name of resource supported by the O&M activity.	Manual Data Entry	

Attribute Name	Definition	Possible Values	Examples
O&M Activity Name	Short name for the O&M activity supporting the operation and maintenance of a business or technical resource.	Manual Data Entry	• OCCS Application Branch Operations and Maintenance • Format R/W Maintenance Total FY • GBench Editing Total FY • SMART/SMUPD Maintenance 2018 • Sub Portal Maintenance Total FY • SuperBankIt-Maintenance-2018 • Foosh-Genbank Automation
O&M Activity Investment Amount	Total amount invested to perform an O&M activity.	Manual Data Entry (USD)	$1,234,567.89
O&M Activity Expenditure Amount	Total expenditures incurred for the O&M activity to a specified point in time.	Manual Data Entry (USD)	$1,234,567.89
O&M Activity Associated Investment Name	Name of reported NLM Investment lines from which funding is directed to an activity.	• NLM Biomedical Terminology System (NBTS) • NLM BLAST • NLM Entrez Molecular Biology Website • NLM Genome Assembly and Annotation (GenBank) • NLM Molecular Biology IT Support • NLM TOXICOLOGY DATA NETWORK • NLM Clinical Trials • NLM Health Information Resources • NLM PubChem • NLM Human Variation Resources • NLM Medical Library Heath Info Systems and Services • NLM Literature Resources • NLM Clinical Informatics and Data Standards and Analytics Research • NLM Medical Imaging and Visualization Research	

4.2.3 IT Infrastructure

Definition: Investments in IT Infrastructure reported to HHS. Includes NIH End User Devices, Tools, and Support; NIH Computational Infrastructure and Services; NIH IT Security and Compliance; and NIH Network & Telecommunications Infrastructure.

Table 16. Future-State IT Infrastructure Investment Attributes

Attribute Name	Definition	Possible Values	Examples
IT Infrastructure Investment Project Name	Short name for the IT infrastructure project investment reported to HHS.	Manual Data Entry	
IT Infrastructure Investment Amount	Total amount invested in IT infrastructure.	Manual Data Entry (USD)	$1,234,567.89

Appendix A. Key Management Questions Answered Through the NLM Portfolio Metamodel

A.1 Portfolio View: Alignment

The ***Alignment*** portfolio analysis view seeks to evaluate the linkage between an organization's business unit activities and its business goals and objectives and, in the case of federal agencies, also their mandated mission. With these guidelines, NLM's baseline alignment analyses enable drilling down to understand how singular NLM offerings (or groups of NLM offerings) support the realization of NLM strategic plan elements and fulfillment of NLM's responsibilities mandated by law, regulation, or other authoritative source. In the future, NLM should specify the desired outcomes (e.g., performance targets) for each offering and incorporate views into alignment analyses that examine the extent to which NLM is achieving its desired outcomes.

A.1.1 What offerings does NLM provide to user constituencies?

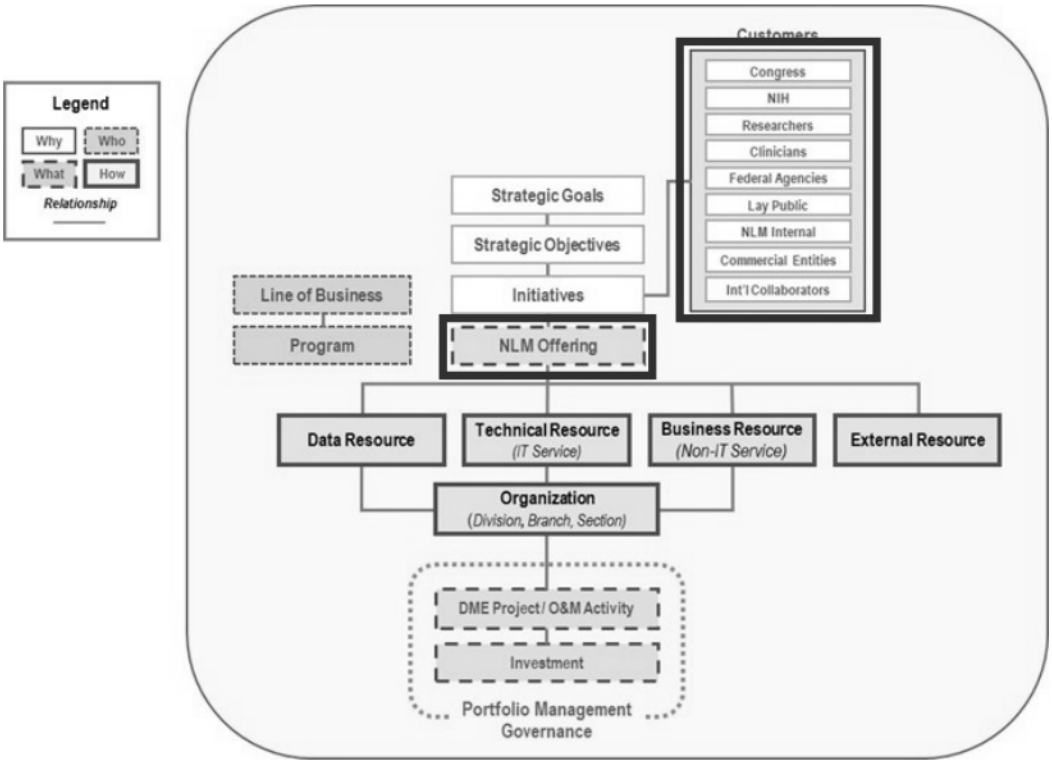


Figure 2. Alignment Question 1.1 – Line of Sight

Metamodel Items and Attributes:

Item	Attribute
NLM Offering	• Offering Name (Short) • Offering Short Description • Offering Type
Customers	• Customer Name

Outputs:

1.1.1 Count of NLM offerings

1.1.2 Comprehensive, descriptive list of NLM offerings

1.1.3 Count of NLM offerings serving different customer types

A.1.2 How do NLM offerings relate to each other?

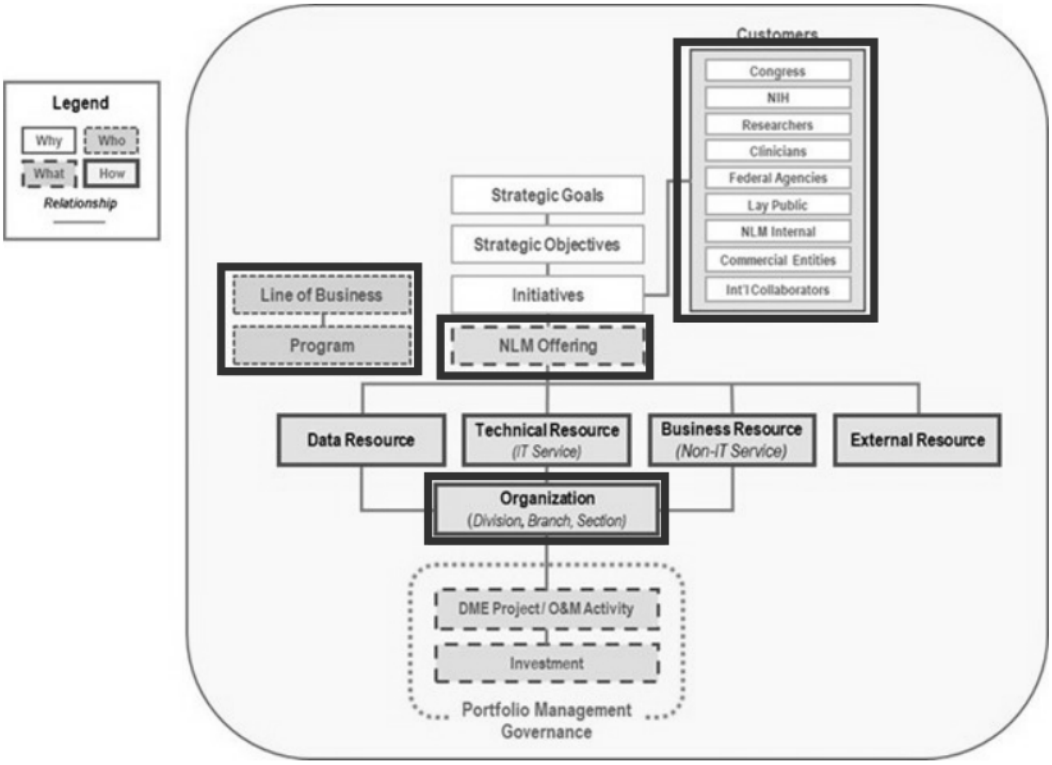

Figure 3. Alignment Question 1.2 – Line of Sight

Metamodel Items and Attributes:

Item	Attribute
NLM Offering	• Offering Name (Short) • Offering Type • Offering Group
Customers	• Customer Name
Line of Business	• LOB Name
Program	• Program Name
NLM Organization	• Organization Name

Outputs:

1.2.1 Count of NLM offerings by NLM organization (i.e., Division, Branch, Section)

1.2.2 Count of NLM offerings differentiated by offering type

1.2.3 Count of offerings by offering group

1.2.4 *(Future PfM Report)* Count of NLM offerings by NLM lines of business

1.2.5 *(Future PfM Report)* Count of NLM offerings by NLM program

A.1.3 How are NLM's current offerings directed by law, regulation, policy, or other mandate?

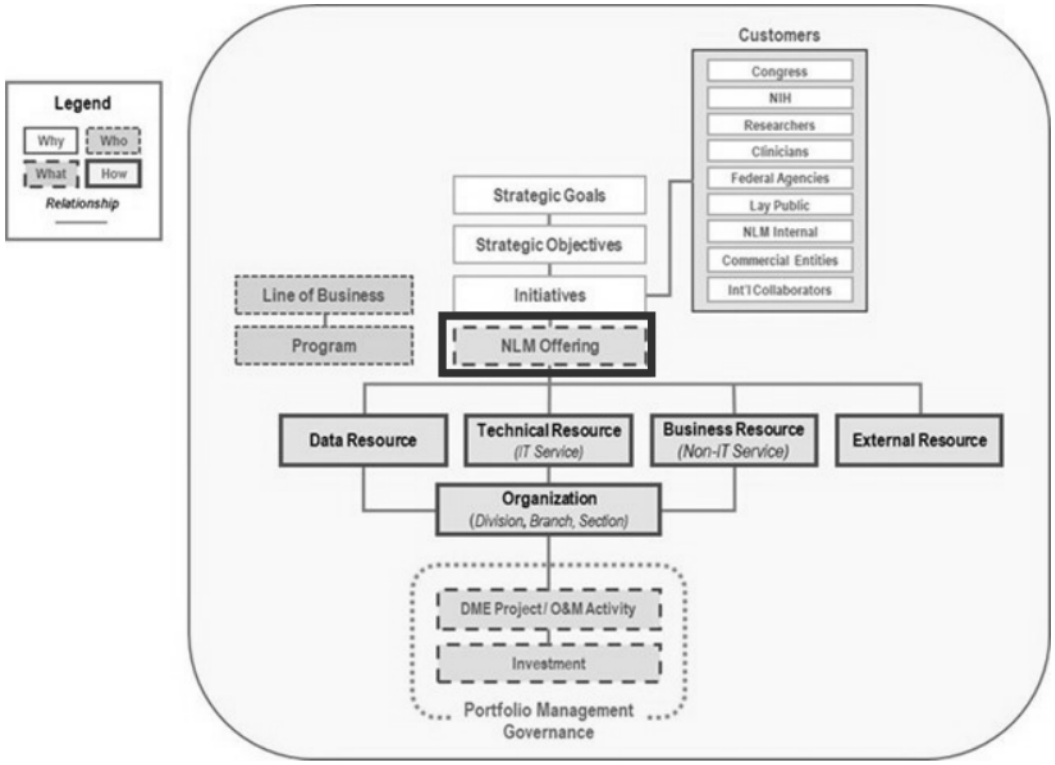

Figure 4. Alignment Questions 1.3 – Line of Sight

Metamodel Items and Attributes:

Item	Attribute
NLM Offering	• Offering Name (Short) • Mandate Source Type • Mandate Reference

Outputs:

1.3.1 Count of NLM offerings by mandate source type

1.3.2 List of NLM offerings with mandate reference citation

A.1.4 How do NLM offerings align to NLM strategic goals, objectives, and initiatives?

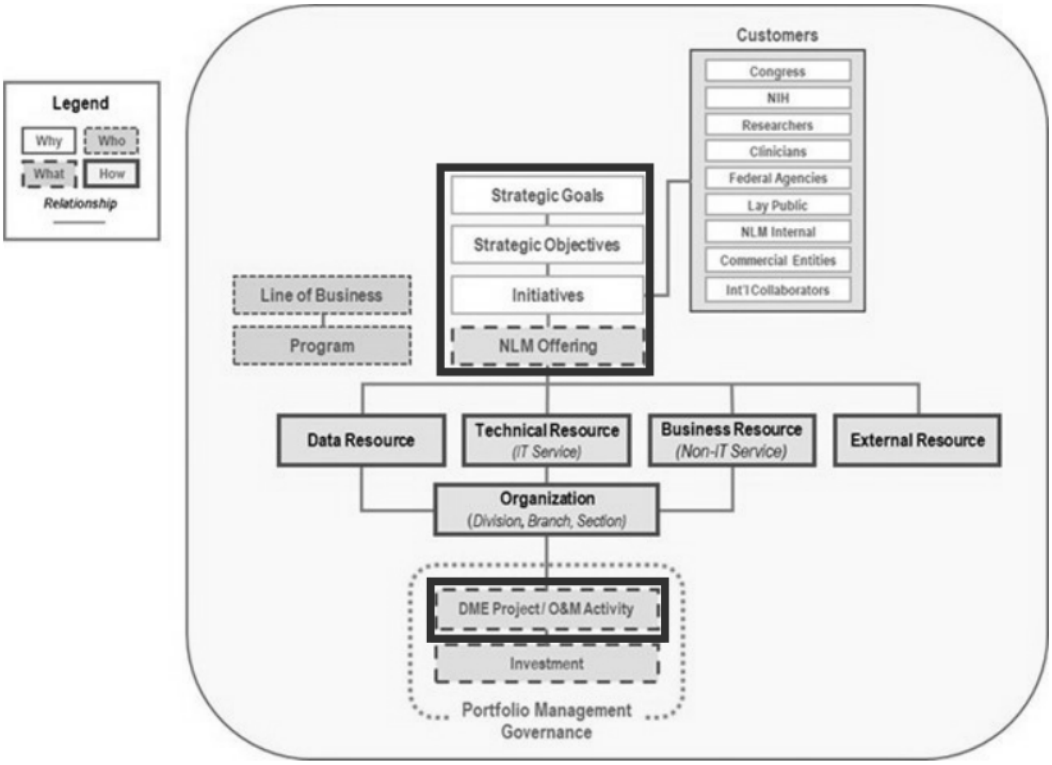

Figure 5. Alignment Question 1.4 – Line of Sight

Metamodel Items and Attributes:

Item	Attribute
NLM Offering	• Offering Name (Short)
Strategic Goal	• Strategic Goal Name
Strategic Objective	• Strategic Objective Name
Initiative	• Initiative Name
DME Project	• DME Project Name

Outputs:

1.4.1 Count of offerings aligned to each strategic goal

1.4.2 Count of offerings aligned to each strategic objective (per goal)

1.4.3 Count of offerings aligned to each 2018 strategic initiative (per objective)

1.4.4 (*Future PfM Report*) List of DME projects aligned to NLM initiatives

1.4.5 (*Future PfM Report*) Grouping(s) of DME projects identified by NLM to address specific initiatives associated with NLM strategic plan implementation and aligned to NLM offerings

A.2 Portfolio View: Fiscal Balance

The ***Fiscal Balance*** view typically presents actual operational expenditures versus expected benefits. Mature organizations will also evaluate expenditures against risk and benefits. For NLM's baseline PfM capability, NLM's diverse, public-facing offerings are the primary benefit in focus. The current-state view visualizes the allocation of fiscal year expenditure totals among offerings and by expenditure category, such as federal and contractor labor, service contracts, and IT services.

Investment information, when available within the portfolio database in the future, will further enhance NLM's ability to understand the results of specific federal investments. It may also highlight opportunities to eliminate or consolidate similar investments and be more operationally efficient.

A.2.1 What is the cost of making and maintaining NLM offerings?

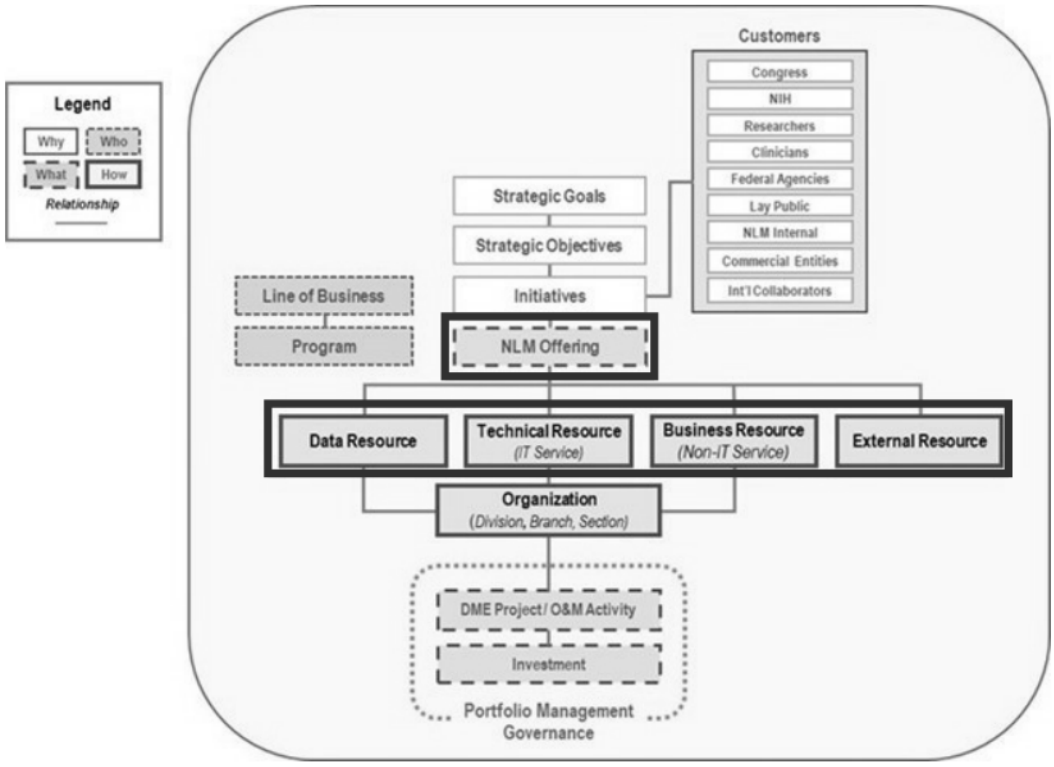

Figure 6. Fiscal Balance Question 2.1 – Line of Sight

Metamodel Items and Attributes:

Item	Attribute
NLM Offering	• Offering Name (Short)
Business Resource	• Business Resource Name
Data Resource	• Data Resource Name • Data Resource Expenditure Amount ($US; FY Total to Date)

Item	Attribute
External Resource	• External Resource Name • External Resource Expenditure Amount ($US; FY Total to Date)
Technical Resource	• Technical Resource Name • Technical Resource Expenditure Amount ($US; FY Total to Date)

Outputs:

Offering Expenditure Information

2.1.1 Total expenditures for offerings

2.1.2 A list of the "top-n" offerings with the highest expenditures

2.1.3 The breakdown of offering total expenditures among Division activities, IT services, and NLM shared services

2.1.4 The breakdown of Division expenditures for an offering by expenditure type

2.1.5 A list of the "top-n" offerings by total expenditures for IT shared services

2.1.6 A list of the "top-n" offerings by total expenditures for NLM shared services

Resource Expenditure Information

2.1.7 (*Future PfM Report*) Total expenditures by resource type (i.e., business, data, technical, and external[3])

2.1.8 (*Future PfM Report*) The breakdown of offering expenditures attributable to resource type (i.e., business, data, technical, and external)

2.1.9 (*Future PfM Report*) A list of the "top-n" resource expenditures by resource type (i.e., business, data, technical, and external)

2.1.10 (*Future PfM Report*) A list of the "top-n" offerings with the highest expenditures for each resource type (i.e., business, data, technical, and external)

2.1.11 (*Future PfM Report*) The breakdown of total expenditures by offering attributable to resource business, data, technical, and external resources against risk and resource type

[3] Determining the costs of shared resources requires a transparent, repeatable, and reasonable cost allocation approach. In addition, capturing the cost of specific external resources requires that charge-back mechanisms be in place to quantify the support NLM received from those resources.

A.2.2 How much does NLM spend on offerings with a similar purpose?

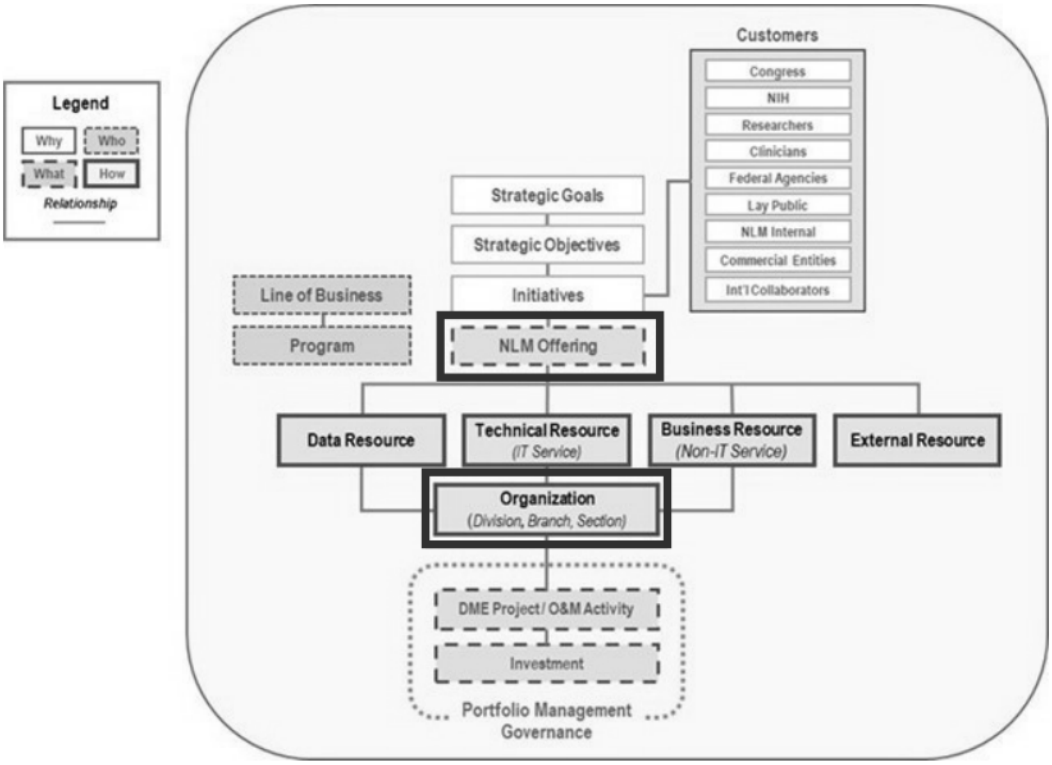

Figure 7. Fiscal Balance Question 2.2 – Line of Sight

Metamodel Items and Attributes:

Item	Attribute
NLM Offering	• Offering Name (Short) • Offering Group
Expenditures	• Expenditure Category • Expenditure Type • Expenditure Total ($US; FY Total to Date)

Outputs:

2.2.1 Total expenditures by offering group

2.2.2 Breakdown of offering group expenditures by expenditure type

A.2.3 What is the composition of NLM Investments?

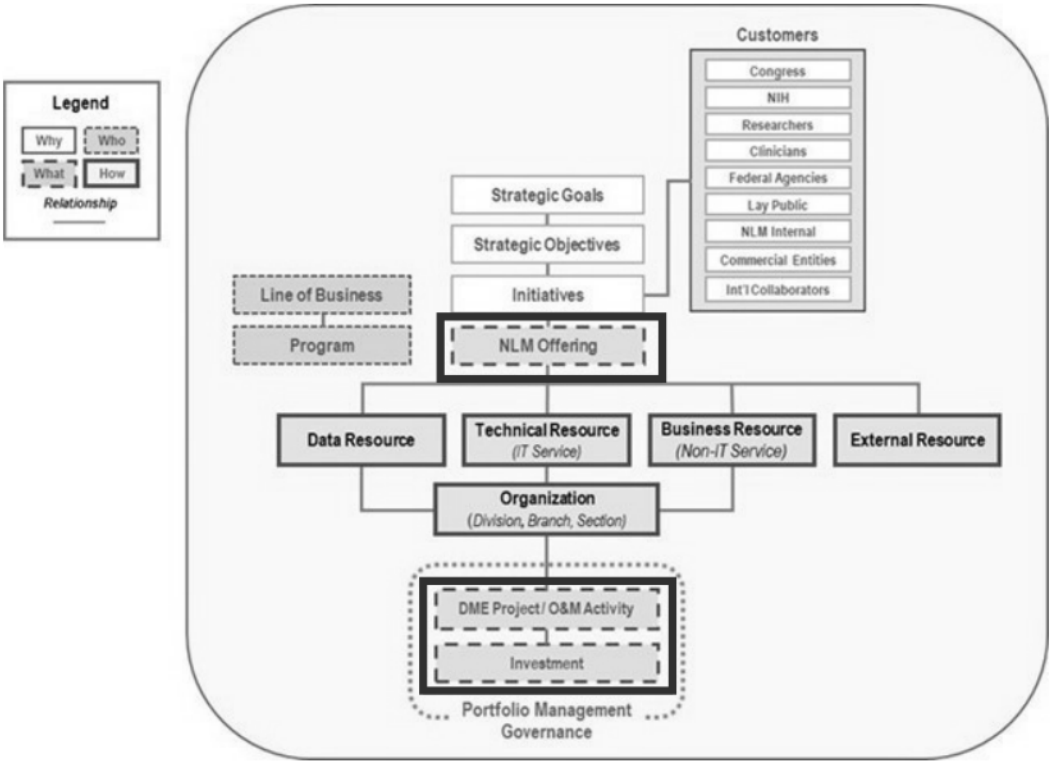

Figure 8. Fiscal Balance Question 2.3 – Line of Sight

Metamodel Items and Attributes:

Item	Attribute
NLM Offering	• Offering Name (Short)
Investment	• Investment Name • Investment Amount ($US; FY Total to Date
Investment Line	• Investment Line Name • Investment Line Investment ($US; FY Total to Date)
DME Projects	• DME Project Name • DME Project Expenditure Amount ($US; FY Total to Date)
O&M Activity	• O&M Activity Name • O&M Activity Expenditure Amount ($US; FY Total to Date)
IT Infrastructure	• IT Infrastructure Project Name • IT Infrastructure Investment Amount ($US; FY Total to Date)

Outputs:

2.3.1 (*Future PfM Report*) Total of investments

2.3.2 (*Future PfM Report*) The breakdown of total investments by investment category (i.e., DME, O&M, and IT infrastructure)

2.3.3 (*Future PfM Report*) A list of the "top-n" investments by investment category (i.e., DME, O&M, and IT infrastructure)

2.3.4 (*Future PfM Report*) The breakdown of investments by offering according to investment category (i.e., DME, O&M, and IT infrastructure)

2.3.5 (*Future PfM Report*) Total of investments by NLM organization

2.3.6 (*Future PfM Report*) Breakdown of investments for DME projects and O&M activities by NLM organization

2.3.7 (*Future PfM Report*) A list of the "top-n" offerings with the highest total investment amount

2.3.8 (*Future PfM Report*) A list of the "top-n" offerings with the highest total investment amount by investment category (i.e., DME, O&M, and IT infrastructure)

A.2.4 How much funding has NLM invested to implement strategic initiatives?

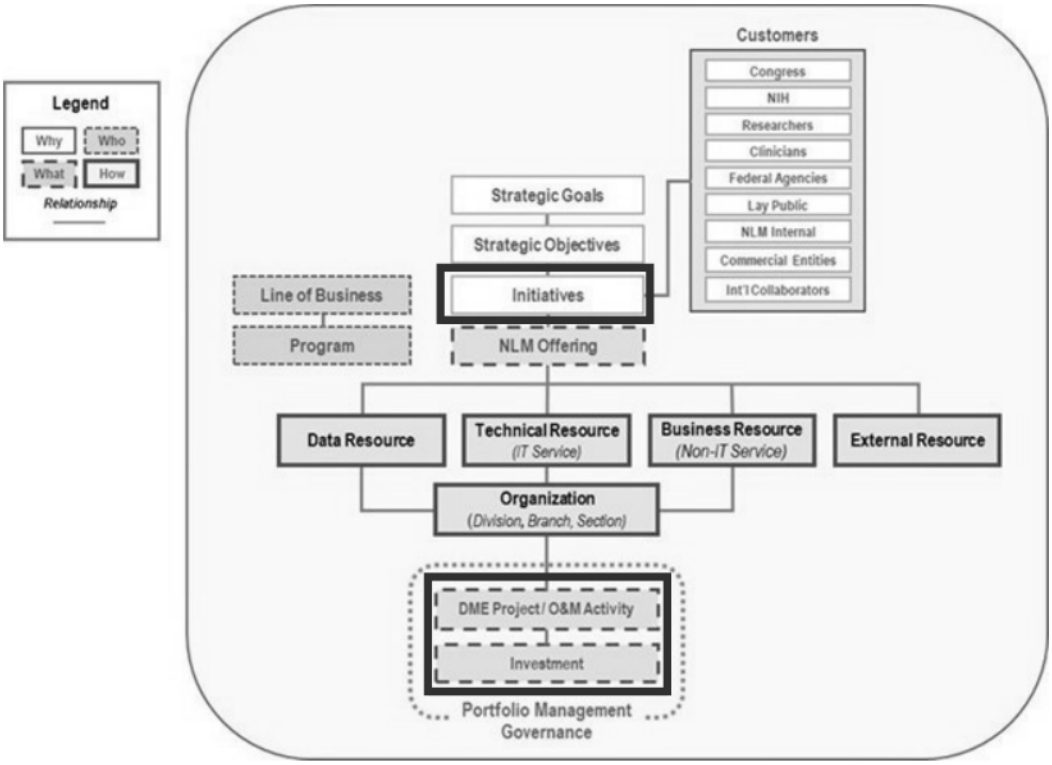

Figure 9. Fiscal Balance Question 2.4 – Line of Sight

Metamodel Items and Attributes:

Item	Attribute
Offering	• Offering Name (Short)
Initiative	• Initiative Name
Investment	• Investment Name • Investment Expenditure Amount ($US; FY Total)
DME Projects	• DME Project Name • DME Project Expenditure Amount ($US; FY Total)
O&M Activity	• O&M Activity Name • O&M Activity Expenditure Amount ($US; FY Total)

Outputs:

2.4.1 *(Future PfM Report)* The total investments in dollars allocated to address specific NLM initiatives

2.4.2 *(Future PfM Report)* A list of all investments, designated either DME project or O&M activity, allocated to offerings aligned with specific NLM initiatives

2.4.3 *(Future PfM Report)* A list of the "top-n" initiatives with the highest total dollar investment amount

2.4.4 *(Future PfM Report)* The total investments in dollars allocated to organizations responsible for resources implicated in achieving NLM initiatives

2.4.5 *(Future PfM Report)* The total expenditures in dollars allocated to address specific NLM initiatives

2.4.6 *(Future PfM Report)* A list of all expenditures, designated either DME project or O&M activity, allocated to offerings aligned with specific NLM initiatives

2.4.7 *(Future PfM Report)* A list of the "top-n" expenditures with the highest total dollar amount

2.4.8 *(Future PfM Report)* The total expenditures in dollars allocated to organizations responsible for resources implicated in achieving NLM initiatives

A.3 Portfolio View: Constraints and Dependencies

The ***Constraints and Dependencies*** portfolio view examines general constraints and dependencies that affect portfolio and portfolio component performance. NLM's current-state metamodel provides a preliminary view of dependencies among offerings as well as between offerings and NLM resources owned by NLM Divisions. Potential constraints that may be added to NLM portfolio view include funding, technology, NLM mandate, and complexity. More research is needed to identify the important management questions related to operational constraints and dependencies that the portfolio metamodel may be configured to answer.

A.3.1 How are NLM resources allocated to deliver NLM offerings?

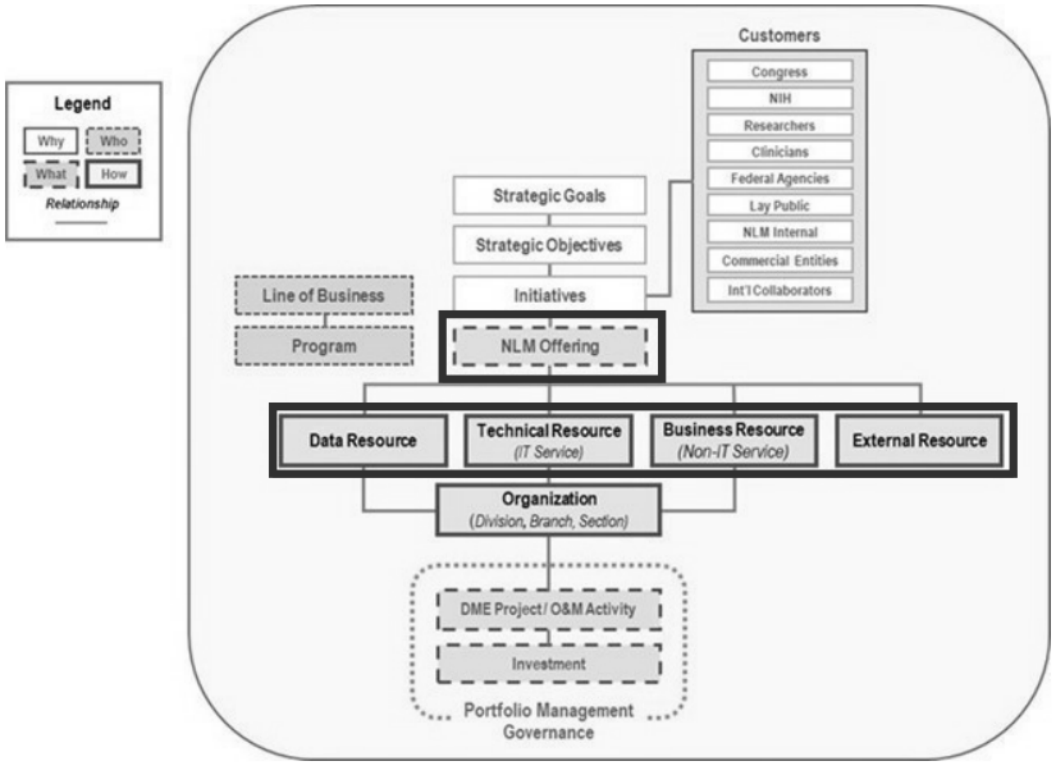

Figure 10. Constraints and Dependencies Question 3.1 – Line of Sight

Metamodel Items and Attributes:

Item	Attribute
Offering	• Offering Name (Short)
Business Resource	• Business Resource Name
Data Resource	• Data Resource Name
Technical Resource	• Technical Resource Name • DME Project Expenditure Amount ($US; FY Total)
External Resource	• External Resource Name

Outputs:

3.1.1 A list of resources (i.e., business, data, technical, and external) utilized by each NLM offering

3.1.2 A list of "top-n" resources (i.e., business, data, technical, and external) utilized by NLM offerings

3.1.3 (*Future PfM Report*) The total approximate expenditures in dollars attributable to the "top-n" shared resources (i.e., business, data, technical, and external)

3.1.4 (*Future PfM Report*) The total approximate expenditures in dollars attributable to the "top-n" shared resources (i.e., business, data, technical, and external) as a percentage of total resource costs

A.4 Portfolio View: Value

The ***Value*** portfolio view combines different indicators related to the organization's cost and funding profile, effectiveness, delivery timeline, and risks to produce a composite data point that indicates value delivered. NLM's portfolio is very diverse; for this reason, a singular value indicator cannot be applied to all portfolio components. Further work is needed to identify key value indicators. In some instances, volume and/or demand may be good indicators of customers' appreciation of NLM offerings. These types of indicators serve as a rough indicator of usefulness (e.g., low demand equates to low usefulness); however, for some offerings with a small customer constituency or specific delivery mandate, neither volume nor demand may suffice to answer the value question. Other value indicators would be required. Future work to build NLM PfM capabilities should include developing a strategy to identify value indicators for each offering or for similar offerings.

Possible strategies for determining value measures include:

1. Conduct customer surveys and analyze feedback to understand customers' perspectives
2. Select key performance indicators based on success criteria determined for an offering or a group of offerings
3. Determine a means to evaluate whether an individual offering (or a group of offerings) fulfills a mandate from Congress, NIH, NLM, or other authoritative source
4. Determine the offering's relevance and uniqueness in the market

The following are examples of value-related management questions:

- 3.1 What is the demand (usage) for NLM offerings? How has demand changed over a defined time period ("n")?
- 3.2 What is the volume of customers (total and by customer type) for each NLM offering? How has customer volume and composition changed over a defined time period ("n")?
- 3.3 How are NLM's flagship offerings performing against key performance indicators measured over a defined time period ("n")?
- 3.4 What identifiable value do offerings provide users/customers?
- 3.5 What value do customers receive from NLM offerings, as conveyed through their feedback?
- 3.6 How does offering value compare with offering total expenditures?
- 3.7 How do offerings act as a support or foundation to external outcomes (e.g., development of apps and other industry technologies, lives saved, and student/research development)?

A.5 Portfolio View: Health

The ***Health*** portfolio view provides information to help an organization understand how well it is executing against its plans for investing, expending, and accomplishing key activities. The Health view analyzes the state of individual investments against the portfolio: how many investments are on track, over budget, under budget, on or behind schedule, etc. As NLM's PfM maturity progresses, NLM may consider expanding the portfolio metamodel to capture information to respond to the following management questions, which are offered as examples only:

5.1 What is the fiscal year budget variance (planned vs. actual)?

5.2 What is the fiscal year budget variance (planned vs. actual) by Division?

5.3 What is the fiscal year variance (planned vs. actual) for NLM projects?

5.4 What is the time estimated to finish the NLM budget?

5.5 What is the workplan variance for NLM initiatives?

5.6 What is the workplan variance for 2018 DME projects?

5.7 What is the workplan variance for 2018 O&M activities?

5.8 What is the fiscal year budget variance (planned vs. actual)?

5.9 What is the budget variance between successive fiscal years?

A.6 Portfolio View: Risk

The ***Risk*** portfolio view associates a risk indicator or score to portfolio components to enable an organization to ensure the amount of risk is commensurate with the potential benefits across the short, medium, and long term. Risk can be examined from multiple perspectives, including investment function/execution, organizational reputation, operational, and competitive position. The level of risk acceptable to an organization depends on its priorities. Therefore, understanding those priorities and potential tradeoffs are paramount. A portfolio risk view is indicative of more a mature PfM approach. Some risk-related management questions are:

6.1 What level of risk does NLM assume by providing the offering?

6.2 How does an offering compare to similar offerings in the marketplace?

Glossary of Select Terms and Data Values

Expenditure Types

Division Programmatic and Operational Activities

Division Federal Salaries	For example, staff executing programmatic/operational roles in support of specific offerings or multiple offerings; includes IT developer time when supporting specific offerings.
Contract Salaries	For example, external contractors hired to support specific offerings or multiple offerings; works alongside federal staff.
Service Contracts	For example, contracts established to purchase a specific service in support of NLM Offering delivery.
Other Support Costs	For example, cost that is potentially allocable across all offerings and not generally offering-specific, such as administrative / management overhead, supplies, travel, and training.
Division-Specific IT Services	IT services provided by an NLM provider (e.g., OCCS) that are specific to a Division (i.e., software, applications, etc.).
NLM-Wide IT Shared Service Costs	IT services that are provided across all of NLM (e.g., data center and network).

Technology Business Management IT Tower Definitions[4]

IT Management	The IT Management tower includes the costs to manage, administer, and plan IT for the enterprise. It includes executive management, strategic management, enterprise architecture, IT finance, and vendor management.
Security and Compliance	The Security & Compliance tower includes service costs related to IT security compliance and disaster recovery. The scope includes costs to define, establish, enforce, and measure security, compliance, and disaster recovery readiness for the enterprise.
Delivery	The delivery tower includes the costs to monitor, support, manage, and run IT operations for the enterprise and includes the IT Service Management (ITSM) functions.
Application	The Application tower includes costs related to applications in the

[4] https://www.tbmcouncil.org/sites/default/files/tbmc_tbm_taxonomy_3.0.pdf

	enterprise. The scope includes the cost of business software and the costs to develop, manage and run applications for the enterprise.
Storage	Storage provides centralized data storage and securely holds information and data to be retrieved later. Storage may hold data for application programs and code, databases, files, media, email and many other forms of information. The storage tower includes distributed and mainframe storage that provides on-line storage for real-time access and archival storage solutions that may enable near-term retrieval or long-term archival. The storage tower excludes the internal storage included with a typical server configuration or end-user device such as a laptop, desktop or mobile phone, or tablet.
Compute	Compute refers to both general and special-purpose devices and software that are programmed to carry out a set of arithmetic or logical operations. In essence, it provides the "brains" to process application and user requests. Compute includes a wide range of physical and virtual servers differentiated by platform and operating system. The Compute tower should include all direct hardware, software, labor, and outside service costs.
Platform	Platform includes all costs associated with distributed and mainframe databases and middleware systems. Costs include DBMS software and tools, labor, and outside services.
Network	Network includes the data and voice equipment along with the transport methods to connect systems and people and to enable people to converse. Networks provide core connectivity within the enterprise data centers as well as connectivity to and access within office building and remote locations.
Data Center	Data centers are purpose-built facilities to securely house computer equipment. Data centers provide racks/cabinets and cabling; clean and redundant power; data connectivity; environmental controls, including temperature, humidity, and fire suppression; physical security; and the people to run and operate the facility and its infrastructure.

Subject: Tracking Progress

Hi all – We would appreciate your help with two items.

Last summer we started talking about identifying indicators of success of our implementation of the strategic plan, and we have continued talking about this from time to time; those ideas are reflected in the attached Word document. In the document, leadership owners have been identified by their initials in parentheses in the initiative column. While these ideas are more or less the results of brainstorming, we would like to advance the conversation by asking you to think carefully about your respective initiatives and identify concrete the success goal of each initiative and how you will measure how close the initiative is to that goal (the goal and metrics should be stated in the third column). These initiatives will ultimately be entered into the ESM tool. We plan to present our September 2018 to September 2019 progress on these initiatives in our September meeting of the Board of Regents. It will be helpful to hear from you at tomorrow's Leadership Meeting about how much time you think it might take to do this.

Speaking of ESM, most implementation initiatives listed there have more than one leadership member as an owner. We would like to identify one owner as the point of contact for each initiative in ESM. For your convenience, attached is a spreadsheet with initiative names, leadership owners, and project managers. For each initiative of which you are a leadership owner, please consult with leadership co-owners and decide which of you will serve as the point of contact for that initiative. Again, it would be good to get a sense of how long you might need to do this at tomorrow's meeting.

Your help with this is much appreciated - Mike

METRICS FOR MEASURING IMPLEMENTATION OF THE STRATEGIC PLAN
[Need to add in activities from the ESM tool]

STRATEGIC PLAN GOAL/OBJECTIVE	INITIATIVE	METRICS – INITIATIVE TARGET
1-Accelerate discovery and advance health through data-driven research		
1.1 Connect the resources of a digital research enterprise	Link articles to associated data sets - JO	Number of articles in PubMed linked to data sets – xxxx articles w/ linked data by 2022 (???)
1.2 Advance R&D in biomedical informatics and data science	Expand funding for intramural research – MC, JO (with Eddie)	Intramural research program budget (growth from baseline)/ % of total NLM budget.
	Hire NLM-wide scientific director (MH)	Lay out timeline and process - Hire by end of CY2019
	Hire more intramural investigators (JO)	Number of investigators in NLM IRP – get 3 more by end of CY2019
	Expand funding for extramural research to support new biomedical data-science initiatives (RPG and SBIR) (VF)	Number of new initiatives Number of RPG grants funded from new initiatives Number of SBIR grants funded from new initiatives
	Expand collaboration with other ICs and agencies on data science oriented FOAs (VF)	Number of multi-IC or agency FOAs joined Number of new grants funded from joint FOAs in data science areas
	Persistent unique IDs w/in NLM systems (MH)	
	BMIC criteria for data repositories (MH)	
	OSTP criteria for data repositories OSTP data management plan guidance	

	(JS/MH)	
1.4 Create sustainable institutional, physical, and computational infrastructure	Migrate high availability resources to the cloud (JO/ID)	Number of resources in the cloud % of resources migrated
2—Reach more people in more ways through enhanced dissemination and engagement		
NOTE: establishment of centralized Outreach organization in NLM advances all of the below		
2.3 Support research in biomedical and health information access methods and information dissemination strategies	Increase support for G08 resource grants by expanding funding to one FOA per year (VF)	Number of applications funded
	Support scholarly works G13 grants relating to interests of primary NLM audiences (VF)	Number of applications funded
2.4 Enhance information delivery	MITRE Assessment ? (ID/JO)	Implement a digital scorecard platform for measuring customer experience; establish performance indicators for **at least five** major NLM public-facing information resources.
	Support NN/LM activities to enhance understanding of data science and advanced data management (JB)	Number of NN/LM initiatives with data science focus Number of participants in data-science focused NN/LM initiatives
3--Build a workforce for data-driven research and health		
3.1 Expand and enhance research training for biomedical informatics and data science	Expand extramural training grant support for predoctoral biomedical data science (Ts) - VF	Number of predoctoral trainees in NLM-supported programs in data-science tracks
	Increase funding for postdoctoral fellowships in data science for mid-career researchers (Fs) - VF	Number of postdoctoral trainees in NLM-supported fellowships
	Increase funding for career transition awards in biomedical data science (Ks) - VF	Number of data-science focused K awards

3.2 Assure data science and open science proficiency	Support partnerships to share NLM curriculum materials in biomedical data science with other NIH training programs	Number of partnerships supported
	NLM Data science assessment/training (JB)	
3.3 Increase workforce diversity	Increase support for training partnerships with MSIs - VF	Number of projects supported Evidence of biomedical data science in curricula of MSI partners
	Increase support for partnerships with I-schools - VF	Number of projects supported Evidence of biomedical data science in curricula of I-school partners

Project Manager	Leadership Team Owners	Initiative name
Dina Demner-Fushman	NA	1.1a Assessment of MeSH and Auto-Indexing
Deborah Ozga	Jim Ostell Joyce Backus	1.1b MEDLINE 2022
Beth Melby	Ivor D'Souza Jim Ostell	1.1c NLM Portfolio Assessment by MITRE
Peter Seibert	Mike Huerta Joyce Backus	1.1d DATaset Metadata Model (DATMM) Initiative
Anna Ripple Dianne Babski	NA	1.1e CDE Repository Study
Elizabeth Kittrie	Jerry Sheehan Valerie Florance	1.2a Blue Ribbon Panel Review of NLM Intramural Research Program
Hua-Chuan Sim Jane Ye	Mike Huerta Valerie Florance	1.2b NLM-NSF MOU Innovative Mathematical, Statistical, and Computational Approaches to Biomedical Data Science
Hua-Chuan Sim	Valerie Florance	1.2c FOA on at-scale curation approaches
NA	Jerry Sheehan Mike Huerta	1.2d Data Science & Open Science Workshop
Alicia Ross Hua-Chuan Sim	Valerie Florance	1.2e Expand funding for extramural research to support new biomedical data-science initiatives (RPG and SBIR)
Alicia Ross	Valerie Florance	1.2f Expand collaboration with other ICs and agencies on data science oriented FOAs
Evgeny Kireev	Florence Chang	1.4a TOXNet platform migration
Janice Kelly	Jim Ostell	1.4a TOXNet platform migration
Rajesh Bhandari	Florence Chang Ivor D'Souza Jim Ostell	1.4b1 IT Assessment - Team 1
Rajesh Bhandari	Florence Chang Ivor D'Souza Jim Ostell	1.4b2 IT Assessment - Team 2
Rajesh Bhandari	Florence Chang Ivor D'Souza Jim Ostell	1.4b3 IT Assessment - Team 3
Rajesh Bhandari	Florence Chang Ivor D'Souza Jim Ostell	1.4b4 IT Assessment - Team 4
Rajesh Bhandari	Florence Chang Ivor D'Souza Jim Ostell	1.4b5 IT Assessment - Team 5
NA	Mike Huerta	1.4f Assessment of Trans-NLM Central Functions
Lisa Federer	Mike Huerta	1.4g Project Management for Implementation Initiative
Mark Ziomek	Joyce Backus Todd Danielson	1.4h Workspace Initiative-Redesign First Floor of Building 38
Kathel Dunn Kathy Cravedi	Mike Huerta	1.4i NLM Strategic Plan Communication (internal)
Michael Simpson	Ivor D'Souza	1.4j Data Center Reliability Project
Elizabeth Kittrie	Mike Huerta Patti Brennan	1.4k NAS Study on Forecasting Costs of Data Preservation and Management
NA	Mike Huerta Todd Danielson	2.1a Outreach planning
Fred Wood	Mike Huerta	2.1b Assessment of Tools used for NLM Resource Evaluation
Fred Wood	Mike Huerta	2.1c Assessment of Comparative Web Metrics
NA	Jim Ostell	2.1d User Experience / User Development Initiative
Kathy Cravedi	Mike Huerta	2.1e External Communications Plans & Information Resources
Alicia Ross	Valerie Florance	2.1f Informatics Professionals Outreach, Training and Development
Kathy Cravedi	Joyce Backus	2.2a Branding of NLM
Alicia Ross	Valerie Florance	2.3a Expand support for research grants that address user needs through the Personal Health Libraries FOA
Alicia Ross	Valerie Florance	2.3b Increase support for G08 Resource Grants
Alicia Ross	Valerie Florance	2.4a Support NN/LM activities to enhance understanding of data science and advanced data management
Lisa Federer	Mike Huerta	3.1a Data Science Core Skills Analysis
Alicia Ross	Valerie Florance	3.1b Expand extramural training grant support for predoctoral biomedical data science (Ts)
Alicia Ross	Valerie Florance	3.1c Increase funding for postdoctoral fellowships in data science for mid-career researchers (Fs)
Lisa Federer	Mike Huerta	3.2a Report on State of Data Science Training
Maryam Zaringhalam	Mike Huerta	3.2b1 Reproducibility for Intramural Scientists Workshop
Maryam Zaringhalam	Mike Huerta	3.2b2 Second Reproducibility for Intramural Scientists Workshop
Lisa Federer	Mike Huerta	3.2c Data Science for Librarian Workforce Workshop
Lisa Federer Maryam Zaringhalam	Mike Huerta	3.2d Assessment of extramural staff data science training needs
Alicia Ross	Valerie Florance	3.2e Support partnerships to share NLM curriculum materials in biomedical data science with other NIH training programs
Alicia Ross	Valerie Florance	3.3a Increase support for training partnerships with MSIs
Hua-Chuan Sim	Valerie Florance	3.3b Increase support for partnerships with I-schools
Alicia Ross	Valerie Florance	3.4b Expand support for summer research training at NLM training programs for high school and undergraduate students

Subject: RE: Check-In Questions

Thanks Stacy these are helpful updates and questions.

A few thoughts and Dina may want to chime in also:

1. It doesn't seem like there is one date or time everyone can meet for the Open Science report. The top option right now is April 1 at 1pm – 2pm, but I see Dina might have a meeting at that time. Should we move into the second week of April?
    a. Seemed like Mar 29th everyone was avail and that would be ideal.
    b. April 1 is the monthly Copyright Group mtg but we could shift to Noon-1 if needed
2. MLA Fact Sheets: I posted the drafts thus far on the Wiki. The public access sheet should be done on our end. I remember Mary said she was going to update the federal agencies, and I updated the images and databox section. The main fact sheet has also been updated with new logos and numbers. I need to delete all the comments. However, I will leave them for now in case there are questions on sources for statistics and figures.
    a. Great thanks will review
3. In Susan Gregorick's presentation at the NASEM meeting yesterday, she mentioned an RFI on repositories for data sharing. Is this a separate RFI from others we have talked about previously?
    a. I don't think there is a separate RFI. I think she was referencing the BMIC list of repositories and the lowercase not formal process request for info that Tony, Fred, Mike, and Elizabeth sent to BMIC members and to data repos owners
4. Tracking bills: Are there some key facts or figures to look at to see if a reintroduced bill will go anywhere? Does the number of co-sponsors on previous iterations provide any insight?
    a. No clear test, and historical experience w bill in prev sessions might be informative but not the whole story. A bill can still go even with few cosponsors, but a lot of cosponsors is a good indication it might have some momentum

5. There is one "maybe" bill I have left in the legislative inbox. It is related to CDC and EPA programs: National Air Toxics Assessment, Integrated Risk Information System, and Agency for Toxic Substances and Disease Registry. I can see how this might relate to ToxNet/ToxTown or other public and environmental health work of NLM. Would you track it?
    a. Yes I would track that
6. I thought the copyright group's brown bag today was great! I remember seeing in a recent slide deck from NJ about the Supreme Court's previous and upcoming cases a few about copyright and patentability. Are any of these on the radar of NLM and/or the NLM copyright group?
    a. Thanks – no the copyright group doesn't really tend to track pending cases. Please do track Supreme Court cases related to copyright, patent, licensing… can't put them in CQ, so just in the wiki

Best regards,
Rebecca

Subject: Check-In Questions

Hi,

I know we have the CQ training tomorrow, but I wanted to send some check-in questions that we might be able to address via email or before or after the demo.

1. It doesn't seem like there is one date or time everyone can meet for the Open Science report. The top option right now is April 1 at 1pm – 2pm, but I see Dina might have a meeting at that time. Should we move into the second week of April?
2. MLA Fact Sheets: I posted the drafts thus far on the Wiki. The public access sheet should be done on our end. I remember Mary said she was going to update the federal agencies, and I updated the images and databox section. The main fact sheet has also been updated with new logos and numbers. I need to delete all the comments. However, I will leave them for now in case there are questions on sources for statistics and figures.
3. In Susan Gregorick's presentation at the NASEM meeting yesterday, she mentioned an RFI on repositories for data sharing. Is this a separate RFI from others we have talked about previously?

4. Tracking bills: Are there some key facts or figures to look at to see if a reintroduced bill will go anywhere? Does the number of co-sponsors on previous iterations provide any insight?
5. There is one “maybe” bill I have left in the legislative inbox. It is related to CDC and EPA programs: National Air Toxics Assessment, Integrated Risk Information System, and Agency for Toxic Substances and Disease Registry. I can see how this might relate to ToxNet/ToxTown or other public and environmental health work of NLM. Would you track it?
6. I thought the copyright group’s brown bag today was great! I remember seeing in a recent slide deck from NJ about the Supreme Court’s previous and upcoming cases a few about copyright and patentability. Are any of these on the radar of NLM and/or the NLM copyright group?

I think that is all for now.

Thank you!

Attachments: FORM REQUEST TO RETIRE NLM TOXMAP Nov 2019rev.docx

Florence,
I'm OK with sunsetting TOXMAP. One item to clarify on the form. Will we post information on the NLM (Toxmap) website directing users to the EPA and other sources of the underlying information. I'd suggest we do so during some transition time.

Thanks
Jerry

Subject: Status of SIS sunset requests

Jerry,

You approved sunset plan for CHIRR, ToxMystery, and GeneEd. We are working on Letter of Agreement with Society of Toxicology for them to take the archived version of ToxLearn. There are two remaining ones, ToxMap, and CPDB. We provided additional information and revised sunset plan, attached with this email. There will be two more plans, one for Arctic Health, and another one for American Indian Health, ready for you to review. Let us know if you want to wait for the new sunset system to go live to process these two new ones.

Thanks!

Florence

REQUEST TO RETIRE NLM TOXMAP

Product owner(s) fill out sections I, III, IV and V. Include documentation with this form.
Record approvals in section II.

I. **Written justification for the retirement of an NLM resource.** Three to six months before sunsetting any NLM resource, a written justification for the retirement of the resource must be prepared. In drafting the justification, the use of statistics is often helpful. Reasons for sunsetting and/or retiring an NLM resource may include (check all that apply):

☐ Low usage

☐ Obsolescence (that is, better products have come along) – whether from NLM or another group

☒ No longer aligned with NLM priorities or mission needs

☐ Incorrect or out-of-date information. If information cannot be updated, then archive the resource

☒ Reallocation of staff to different products because resource is no longer a priority

☒ Cost in relation to value

☒ Other (Please explain) The US EPA now produces several GIS products and visualization applications (https://www.epa.gov/geospatial/epa-geospatial-applications) that have the similar GIS functionality, except the ability to search TOXNET from within the GIS tools. This was a unique feature in TOXMAP-classic, which was retired due to the obsolete technology platform. The new version of TOXMAP does not have this feature either. To make the new TOXMAP to have this feature will require major investment in software development. We cannot justify the effort because the usage of this feature was very low, averaging about 400 searches a year.

II. **Approval.** This form must be signed by:

- NLM Division head (within LHC, LO, NCBI, OCCS, SIS, OD) Initial Here Date

- Upon approval by NLM division head, forward completed form to Kathy Cravedi, Director, OCPL (kcravedi@nlm.nih.gov), for distribution and approval by:
  NLM Director Initial Here Date
  NLM Deputy Director Initial Here Date
  NLM Communications Director Initial Here Date

III. **Prepare Communications plan for sunsetting the NLM resource.** This document is developed for sharing news about the retirement of the NLM resource with relevant internal and external audiences. Please address the following key elements:

A. ***Internal communication plan*** for NLM staff. Identify who needs to be informed? (staff, contractors) SIS staff, NLM staff, NNLM staff and core set of dedicated users from the Public Health and Toxicology Communities.

1. Determine questions that may need to be addressed. These may include:
   What information needs to be provided? TOXMAP will be retired because it no longer aligns with NLM priorities and because the US EPA now

provides several GIS products that provide similar GIS functionality of TOXMAP.

- When will the information be provided? End of FY2019
- By what method(s) will information be provided? Example: Email to all NLM staff Email, GovD posts, announcement on TOXMAP web site
- If multiple messages are to be sent, by what method(s) and with what frequency? Over a three-month period.
- Are there any potential areas for misunderstanding or concern? None except that core users of TOXMAP will not have a comparable resource available.

2. Establish what may need to be communicated to internal audiences. This could include:
    - Why is this program or service being retired? TOXMAP will be retired because it no longer aligns with NLM priorities and because the US EPA now provides several GIS products that provide similar GIS functionality.
    - What content, if any, will still be available and, if so, why and where? (Options may include archived pages on the NLM website, FTP, the Wayback Machine internet archive, and tape.) US EPA GIS applications and TRI applications; possibly NLM TOXNET TRI
    - What will happen to the staff working on the product or service? Assigned to other areas and projects within NLM/SIS.
    - What staff will be involved in this transition? Colette Hochstein
3. Identify mechanisms to be used for communicating with internal audiences. These may include some or all of the following (Check all that apply):
    - ☒ Emails
    - ☒ Signage
    - ☐ Information delivered at staff meetings
    - ☐ Point of discussion at brown bag luncheons
    - ☐ Town Hall meetings, etc.
    - ☐ Other (Explain) Enter other mechanism(s)
4. Develop and attach a set of Talking Points for the NLM Director TOXMAP has helped users visually explore data primarily from the EPA's Toxics Release Inventory (TRI) and Superfund Programs. TOXMAP also features Canadian NPRI data, U.S. EPA coal plant emissions data, and U.S. commercial nuclear power plants. TOXMAP overlays U.S. Census demographic data, income figures from the U.S. Department of Commerce, and health data from the NCI SEER program. It will be retired at the end of FY2019. It no longer aligns with NLM priorities and because the US EPA now provides several GIS products that provide similar GIS functionality.
5. Does the NIH Director or other IC Directors need to be informed? No

    If Yes, check all that apply:

    ☐ The service is produced jointly with another IC or serves an audience of interest to the IC

☐ The service has high visibility and sunsetting may result in questions, letters, emails to the NIH Director from the public, key stakeholders, Congressional staff, HHS leadership

☒ Other (Please elaborate) SIS has worked for many years with the US EPA regarding the data and functionality of TOXMAP. Their staff should be informed of its status.

B. ***External communication plan*** for users, stakeholders, and the public

1. Who needs to be informed? (Identify stakeholders).
    - Why is this program or service being retired? It has been determined that TOXMAP no longer aligns with NLM priorities and The US EPA now produces several GIS products (https://www.epa.gov/geospatial/epa-geospatial-applications) that have the similar GIS functionality.
    - What content, if any, will still be available and, if so, why and where? Data used in TOXMAP will be available from other original sources. GIS application users can access them by overlaying the data in their GIS applications. TRI and NPL data: US EPA; Canadian NPRI data from Environment and Climate Change Canada; Nuclear Regulatory Commission publishes the commercial nuclear power plant data; BEA data from the US Department of Commerce; TRI lat/long info from EPA's Facility Registry System (FRS).; coal plant data from EIA Electricity Data Browser; EPA Air Markets Program Data (AMPD) data available from the EPA Clean Air Markets; Cancer and Mortality data available from the US NIH NCI.
    - What will happen to the staff working on the product or service? Assigned to other areas and projects within NLM/SIS

2. Establish what may need to be communicated. This could include—
    - Why is this program or service being retired? It has been determined that TOXMAP no longer aligns with NLM priorities and The US EPA now produces several GIS products (https://www.epa.gov/geospatial/epa-geospatial-applications) that have the similar GIS functionality.
    - What content, if any, will still be available and, if so, why and where? Data used in TOXMAP will be available from other sources. GIS application users can access them by overlaying the data to the maps. TRI and NPL data: US EPA; Canadian NPRI data from Environment and Climate Change Canada; Nuclear Regulatory Commission publishes the commercial nuclear power plant data; BEA data from the US Department of Commerce; TRI lat/long info from EPA's Facility Registry System (FRS).; coal plant data from EIA Electricity Data Browser; EPA Air Markets Program Data (AMPD) data available from the EPA Clean Air Markets; Cancer and Mortality data available from the US NIH NCI.
    - What will happen to the staff working on the product or service? Assigned to other areas and projects within NLM/SIS

- How can I or how can my group be involved in this transition? Provide related information as needed.

3. Identify what needs to be completed:

☐ Deliverables Specify

☒ Responsible party or parties for the sunsetting process Colette Hochstein, Florence Chang

☐ Due date 9/30/2019

Identification of communication channels. These could include (Check all that apply):

☒ emails to stakeholders and users

☐ signage

☐ NLM homepage (public news announcement)

☐ speeches

☒ social media including Facebook, Twitter, LinkedIn, etc.

☒ newsletters/blogs, including *Technical Bulletin*, *NLM in Focus*, *Circulating Now*, *Musings*, etc.

☐ Other (Please Explain) Enter other possible communication channel(s)

4. Determine questions that may need to be addressed, including:
   - What information will be provided? It has been determined that TOXMAP no longer aligns with NLM priorities and The US EPA now produces several GIS products (https://www.epa.gov/geospatial/epa-geospatial-applications) that have the similar GIS functionality.
   - When will the information be provided? Starting Summer 2019)
   - With what frequency? Monthly
   - Are there potential areas for misunderstanding or concern? Probably not.
   - After informing stakeholders that the site will no longer be accessible, where can they find information once the site is retired? TRI and NPL data: US EPA; Canadian NPRI data from Environment and Climate Change Canada; Nuclear Regulatory Commission publishes the commercial nuclear power plant data; BEA data from the US Department of Commerce; TRI lat/long info from EPA's Facility Registry System (FRS).; coal plant data from EIA Electricity Data Browser; EPA Air Markets Program Data (AMPD) data available from the EPA Clean Air Markets; Cancer and Mortality data available from the US NIH NCI
   - How will NLM respond to questions and comments? Staff will respond to questions received through customer service emails
   - Is this an issue that may generate media interest? (If so, please include strategies for responding in the plan.) No

IV. **Posting notice on central NLM "sunsetting calendar" (coming soon) on the NLM Wiki.** A notice should be posted on the "NLM resource sunset calendar" immediately following the effective

date of the retirement of the resource. The sunset calendar, which will also be found on the NLM wiki, will serve as an historical record about retired NLM products and services.

V. **Identification of primary point of contact for further information about retired NLM resource.** Provide name and contact information for primary point of contact for retired NLM resource here:

> Florence,
> I'm also OK with sunsetting CPDB. The statements about continued availability of the information are confusing and should be revised. They say the content will not be available but will be made available in compressed format on the FTP site. That sounds to me like the content itself will continue to be available in a compressed format on the FTP site. If that is correct, can you please update the form? I also understand that the literature underlying the database will continue to be available, but I don't believe we will do anything special to provide access to that literature, right?

Yes, I agree.. But I still think it will help us to be explicit about this just to avoid confusion.

Would you be willing to prepare a list of the SIS offerings so we can all work off the same list?

While we all need to discuss what we think the state of each one is, if you think you can tell from Wiki or whatever, as a bonus it would help if you could also add the decision, as far as you can tell, on ones where it seems a decision has been made? Again, not expecting perfection on that, but it will help focus discussion.

I talked to Joyce a little more this morning. Based on some info from Florence this week, as well as getting to look at the info in the Toxnet Working Group wiki, I agree that a good deal of work and decision have already been done, and that we should be able to narrow our focus. Probably we could include Evan and Stacy as consultants and get their input as needed.

Subject: RE: chem/tox working group

Hi Folks,

I added Kim to this, to keep her in the loop.

We agree, of course, that we want an organized way to work through the SIS resources. However, we have some concerns, at least the way we read this proposed charter..

1. I don't think we can spare Evan and Stacy for 1-2 days a week. They have a lot on their plates, and the ToxNet stuff is actually a small part of it.
2. I "think" we have already made some decisions about a number of the SIS resources, and have consolidated more over the course of this year. If we are not repeating all that, I think we should be clear, and perhaps map out what is really left to decide on. There is a long tail of smaller projects we left hanging, but if that's mainly what we are talking about it seems a smaller task.. but also dependent somewhat on (3).
3. As I mentioned, with the benefit of experience now, Stacy and Evan are putting together some new proposals for the dataflows for the projects we already decided were moving to NCBI. This significantly affects how we might do the curation side for those. Evan is supposed to have his side documented by Monday, and Stacy already has hers, so I would suggest we look at those and discuss them first, in case that may affect some parts of the scope of this charter as well.
4. Finally, I think the disaster literature group may also cover some of this, so we'd want to take that into account as well.

I know this is a lot of moving targets, but it comes with the territory on a change as big as this.

Perhaps on your side you might explicitly list the Chem/Tox NPA offerings you want this charter to cover.

Next week, when we have the other dataflow proposals, we could all meet and map offerings to proposals and see what's left and how we want to handle those?

Subject: chem/tox working group

Jim, Florence,
In reviewing the NPA offerings, especially those from SIS, we can see we need to review in several areas. We've just started a disaster literature group (Jim, Jeff put himself and Stacy Lathrop on it today in the quarterly literature meeting)
Others that will be needed include chem/tox databanks, drug/pharma information, consumer health and maybe others.

I propose we sponsor the attached charter to get chem/tox off the ground now. David Gillikin has agreed to chair. I expect his division will be responsible for the functions of content management for databank-type information we decide to maintain from sources such as ChemIDPlus and HSDB.

Looking for your recommendations on any changes, especially membership, but send any changes to the charter you recommend.

In all of this work, I don't believe there has been much done towards a public communications plan – is that right or did I miss it? I think creating a communications plan to our stakeholders, once we have a roadmap we're comfortable with, would be a key step. Should probably involve Jody and Amanda for the Network when that time comes.

Yes, I agree.. But I still think it will help us to be explicit about this just to avoid confusion.

Would you be willing to prepare a list of the SIS offerings so we can all work off the same list?

While we all need to discuss what we think the state of each one is, if you think you can tell from Wiki or whatever, as a bonus it would help if you could also add the decision, as far as you can tell, on ones where it seems a decision has been made? Again, not expecting perfection on that, but it will help focus discussion.

I talked to Joyce a little more this morning. Based on some info from Florence this week, as well as getting to look at the info in the Toxnet Working Group wiki, I agree that a good deal of work and decision have already been done, and that we should be able to narrow our focus. Probably we could include Evan and Stacy as consultants and get their input as needed.

Subject: RE: chem/tox working group

Hi Folks,

I added Kim to this, to keep her in the loop.

We agree, of course, that we want an organized way to work through the SIS resources. However, we have some concerns, at least the way we read this proposed charter..

1. I don't think we can spare Evan and Stacy for 1-2 days a week. They have a lot on their plates, and the ToxNet stuff is actually a small part of it.
2. I "think" we have already made some decisions about a number of the SIS resources, and have consolidated more over the course of this year. If we are not repeating all that, I think we should be clear, and perhaps map out what is really left to decide on. There is a long tail of smaller projects we left hanging, but if that's mainly what we are talking about it seems a smaller task.. but also dependent somewhat on (3).
3. As I mentioned, with the benefit of experience now, Stacy and Evan are putting together some new proposals for the dataflows for the projects we already decided were moving to NCBI. This significantly affects how we might do the curation side for those. Evan is supposed to have his side documented by Monday, and Stacy already has hers, so I would suggest we look at those and discuss them first, in case that may affect some parts of the scope of this charter as well.
4. Finally, I think the disaster literature group may also cover some of this, so we'd want to take that into account as well.

I know this is a lot of moving targets, but it comes with the territory on a change as big as this.

Perhaps on your side you might explicitly list the Chem/Tox NPA offerings you want this charter to cover.

Next week, when we have the other dataflow proposals, we could all meet and map offerings to proposals and see what's left and how we want to handle those?

Subject: chem/tox working group

Jim, Florence,
In reviewing the NPA offerings, especially those from SIS, we can see we need to review in several areas.
We've just started a disaster literature group (Jim, Jeff put himself and Stacy Lathrop on it today in the quarterly literature meeting)
Others that will be needed include chem/tox databanks, drug/pharma information, consumer health and maybe others.

I propose we sponsor the attached charter to get chem/tox off the ground now. David Gillikin has agreed to chair. I expect his division will be responsible for the functions of content management for databank-type information we decide to maintain from sources such as ChemIDPlus and HSDB.

Looking for your recommendations on any changes, especially membership, but send any changes to the charter you recommend.

Subject: Status of SIS sunset requests

Jerry,

You approved sunset plan for CHIRR, ToxMystery, and GeneEd. We are working on Letter of Agreement with Society of Toxicology for them to take the archived version of ToxLearn. There are two remaining ones, ToxMap, and CPDB. We provided additional information and revised sunset plan, attached with this email. There will be two more plans, one for Arctic Health, and another one for American Indian Health, ready for you to review. Let us know if you want to wait for the new sunset system to go live to process these two new ones.

Thanks!

Florence

REQUEST TO RETIRE NLM TOXMAP

Product owner(s) fill out sections I, III, IV and V. Include documentation with this form.
Record approvals in section II.

I. **Written justification for the retirement of an NLM resource.** Three to six months before sunsetting any NLM resource, a written justification for the retirement of the resource must be prepared. In drafting the justification, the use of statistics is often helpful. Reasons for sunsetting and/or retiring an NLM resource may include (check all that apply):

☐ Low usage

☐ Obsolescence (that is, better products have come along) – whether from NLM or another group

☒ No longer aligned with NLM priorities or mission needs

☐ Incorrect or out-of-date information. If information cannot be updated, then archive the resource

☒ Reallocation of staff to different products because resource is no longer a priority

☒ Cost in relation to value

☒ Other (Please explain) The US EPA now produces several GIS products and visualization applications (https://www.epa.gov/geospatial/epa-geospatial-applications) that have the similar GIS functionality, except the ability to search TOXNET from within the GIS tools. This was a unique feature in TOXMAP-classic, which was retired due to the obsolete technology platform. The new version of TOXMAP does not have this feature either. To make the new TOXMAP to have this feature will require major investment in software development. We cannot justify the effort because the usage of this feature was very low, averaging about 400 searches a year.

II. **Approval.** This form must be signed by:

- NLM Division head (within LHC, LO, NCBI, OCCS, SIS, OD) Initial Here Date

- Upon approval by NLM division head, forward completed form to Kathy Cravedi, Director, OCPL (kcravedi@nlm.nih.gov), for distribution and approval by:
  NLM Director Initial Here Date
  NLM Deputy Director Initial Here Date
  NLM Communications Director Initial Here Date

III. **Prepare Communications plan for sunsetting the NLM resource.** This document is developed for sharing news about the retirement of the NLM resource with relevant internal and external audiences. Please address the following key elements:

A. ***Internal communication plan*** for NLM staff. Identify who needs to be informed? (staff, contractors) SIS staff, NLM staff, NNLM staff and core set of dedicated users from the Public Health and Toxicology Communities.

1. Determine questions that may need to be addressed. These may include:
   What information needs to be provided? TOXMAP will be retired because it no longer aligns with NLM priorities and because the US EPA now

provides several GIS products that provide similar GIS functionality of TOXMAP.

- When will the information be provided? **End of FY2019**
- By what method(s) will information be provided? Example: Email to all NLM staff Email, GovD posts, announcement on TOXMAP web site
- If multiple messages are to be sent, by what method(s) and with what frequency? Over a three-month period.
- Are there any potential areas for misunderstanding or concern? None except that core users of TOXMAP will not have a comparable resource available.

2. Establish what may need to be communicated to internal audiences. This could include:
    - Why is this program or service being retired? TOXMAP will be retired because it no longer aligns with NLM priorities and because the US EPA now provides several GIS products that provide similar GIS functionality.
    - What content, if any, will still be available and, if so, why and where? (Options may include archived pages on the NLM website, FTP, the Wayback Machine internet archive, and tape.) US EPA GIS applications and TRI applications; possibly NLM TOXNET TRI
    - What will happen to the staff working on the product or service? Assigned to other areas and projects within NLM/SIS.
    - What staff will be involved in this transition? Colette Hochstein
3. Identify mechanisms to be used for communicating with internal audiences. These may include some or all of the following (Check all that apply):
    - ☒ Emails
    - ☒ Signage
    - ☐ Information delivered at staff meetings
    - ☐ Point of discussion at brown bag luncheons
    - ☐ Town Hall meetings, etc.
    - ☐ Other (Explain) Enter other mechanism(s)
4. Develop and attach a set of Talking Points for the NLM Director TOXMAP has helped users visually explore data primarily from the EPA's Toxics Release Inventory (TRI) and Superfund Programs. TOXMAP also features Canadian NPRI data, U.S. EPA coal plant emissions data, and U.S. commercial nuclear power plants. TOXMAP overlays U.S. Census demographic data, income figures from the U.S. Department of Commerce, and health data from the NCI SEER program. It will be retired at the end of FY2019. It no longer aligns with NLM priorities and because the US EPA now provides several GIS products that provide similar GIS functionality.
5. Does the NIH Director or other IC Directors need to be informed? No

    If Yes, check all that apply:

    ☐ The service is produced jointly with another IC or serves an audience of interest to the IC

☐ The service has high visibility and sunsetting may result in questions, letters, emails to the NIH Director from the public, key stakeholders, Congressional staff, HHS leadership

☒ Other (Please elaborate) SIS has worked for many years with the US EPA regarding the data and functionality of TOXMAP. Their staff should be informed of its status.

B. ***External communication plan*** for users, stakeholders, and the public

1. Who needs to be informed? (Identify stakeholders).
    - Why is this program or service being retired? It has been determined that TOXMAP no longer aligns with NLM priorities and The US EPA now produces several GIS products (https://www.epa.gov/geospatial/epa-geospatial-applications) that have the similar GIS functionality.
    - What content, if any, will still be available and, if so, why and where? Data used in TOXMAP will be available from other original sources. GIS application users can access them by overlaying the data in their GIS applications. TRI and NPL data: US EPA; Canadian NPRI data from Environment and Climate Change Canada; Nuclear Regulatory Commission publishes the commercial nuclear power plant data; BEA data from the US Department of Commerce; TRI lat/long info from EPA's Facility Registry System (FRS).; coal plant data from EIA Electricity Data Browser; EPA Air Markets Program Data (AMPD) data available from the EPA Clean Air Markets; Cancer and Mortality data available from the US NIH NCI.
    - What will happen to the staff working on the product or service? Assigned to other areas and projects within NLM/SIS

2. Establish what may need to be communicated. This could include—
    - Why is this program or service being retired? It has been determined that TOXMAP no longer aligns with NLM priorities and The US EPA now produces several GIS products (https://www.epa.gov/geospatial/epa-geospatial-applications) that have the similar GIS functionality.
    - What content, if any, will still be available and, if so, why and where? Data used in TOXMAP will be available from other sources. GIS application users can access them by overlaying the data to the maps. TRI and NPL data: US EPA; Canadian NPRI data from Environment and Climate Change Canada; Nuclear Regulatory Commission publishes the commercial nuclear power plant data; BEA data from the US Department of Commerce; TRI lat/long info from EPA's Facility Registry System (FRS).; coal plant data from EIA Electricity Data Browser; EPA Air Markets Program Data (AMPD) data available from the EPA Clean Air Markets; Cancer and Mortality data available from the US NIH NCI.
    - What will happen to the staff working on the product or service? Assigned to other areas and projects within NLM/SIS

- How can I or how can my group be involved in this transition? Provide related information as needed.

3. Identify what needs to be completed:

☐ Deliverables Specify

☒ Responsible party or parties for the sunsetting process Colette Hochstein, Florence Chang

☐ Due date 9/30/2019

Identification of communication channels. These could include (Check all that apply):

☒ emails to stakeholders and users

☐ signage

☐ NLM homepage (public news announcement)

☐ speeches

☒ social media including Facebook, Twitter, LinkedIn, etc.

☒ newsletters/blogs, including *Technical Bulletin*, *NLM in Focus*, *Circulating Now*, *Musings*, etc.

☐ Other (Please Explain) Enter other possible communication channel(s)

4. Determine questions that may need to be addressed, including:
   - What information will be provided? It has been determined that TOXMAP no longer aligns with NLM priorities and The US EPA now produces several GIS products (https://www.epa.gov/geospatial/epa-geospatial-applications) that have the similar GIS functionality.
   - When will the information be provided? Starting Summer 2019)
   - With what frequency? Monthly
   - Are there potential areas for misunderstanding or concern? Probably not.
   - After informing stakeholders that the site will no longer be accessible, where can they find information once the site is retired? TRI and NPL data: US EPA; Canadian NPRI data from Environment and Climate Change Canada; Nuclear Regulatory Commission publishes the commercial nuclear power plant data; BEA data from the US Department of Commerce; TRI lat/long info from EPA's Facility Registry System (FRS).; coal plant data from EIA Electricity Data Browser; EPA Air Markets Program Data (AMPD) data available from the EPA Clean Air Markets; Cancer and Mortality data available from the US NIH NCI. Links to direct users to these external data sources will be provided on the TOXMAP home page for 6 months prior to the sunset.
   - How will NLM respond to questions and comments? Staff will respond to questions received through customer service emails
   - Is this an issue that may generate media interest? (If so, please include strategies for responding in the plan.) No

IV. **Posting notice on central NLM "sunsetting calendar" (coming soon) on the NLM Wiki.** A notice should be posted on the "NLM resource sunset calendar" immediately following the effective date of the retirement of the resource. The sunset calendar, which will also be found on the NLM wiki, will serve as an historical record about retired NLM products and services.

V. **Identification of primary point of contact for further information about retired NLM resource.** Provide name and contact information for primary point of contact for retired NLM resource here:

Name	Colette Hochstein, Florence Chang

REQUEST TO RETIRE CARCINOGENIC POTENCY DATABASE (CPDB)

Product owner(s) fill out sections I, III, IV and V. Include documentation with this form.
Record approvals in section II.

I. **Written justification for the retirement of an NLM resource.** Three to six months before sunsetting any NLM resource, a written justification for the retirement of the resource must be prepared. In drafting the justification, the use of statistics is often helpful. Reasons for sunsetting and/or retiring an NLM resource may include (check all that apply):

☒ Low usage

☐ Obsolescence (that is, better products have come along) – whether from NLM or another group

☐ No longer aligned with NLM priorities or mission needs

☒ Incorrect or out-of-date information. If information cannot be updated, then archive the resource

☐ Reallocation of staff to different products because resource is no longer a priority

☐ Cost in relation to value

☒ Other (Please explain) The Carcinogenic Potency Database (CPDB) is an archival database with low and decreasing usage. It provides historical information from the years 1980 - 2011. It is no longer updated. It was created at the University of California, Berkeley, and when they no longer wanted to maintain access to it after it was no longer being built, they asked us to take it. CPDB reports analyses of animal cancer tests on 1547 chemicals. CPDB includes 6540 chronic, long-term animal cancer tests, both positive and negative for carcinogenicity, from the general published literature as well as the National Cancer Institute and the National Toxicology Program (NTP). Such tests were used in support of cancer risk assessments for humans. CPDB was developed by the Carcinogenic Potency Project at the University of California, Berkeley and the Lawrence Berkeley National Laboratory. The usage of CPDB has consistently dropped over the past years to 0.007% of TOXNET usage in FY2018. Of TOXNET's 27,582,034 page views in FY2018, only 1930 page views were for CPDB.

II. **Approval.** This form must be signed by:

- **NLM Division head (within LHC, LO, NCBI, OCCS, SIS, OD)** HFC 11/27/2018

X

Hua Florence Chang
Acting Associate Director, SIS

- Upon approval by NLM division head, forward completed form to Kathy Cravedi, Director, OCPL (kcravedi@nlm.nih.gov), for distribution and approval by:
  - NLM Director Initial Here Date
  - NLM Deputy Director Initial Here Date
  - NLM Communications Director Initial Here Date

III. **Prepare Communications plan for sunsetting the NLM resource.** This document is developed for sharing news about the retirement of the NLM resource with relevant internal and external audiences. Please address the following key elements:

A. ***Internal communication plan*** for NLM staff

1. Identify who needs to be informed? (staff, contractors) Staff are aware of the plan. Additional groups include NNCO, NNLM, and toxicology community via our listserv.
2. Determine questions that may need to be addressed. These may include:
    - What information needs to be provided? That the CPDB was a resource taken from the University of Berkeley after they stopped supporting it and wanted an archival home for a few years.
    - When will the information be provided? 5/31/2019
    - By what method(s) will information be provided? Example: Email to all NLM staff Post on database web pages, and send to OCPL for distribution.)
    - If multiple messages are to be sent, by what method(s) and with what frequency? One round
    - Are there any potential areas for misunderstanding or concern? none
3. Establish what may need to be communicated to internal audiences. This could include:
    - Why is this program or service being retired? The way it was created at Berkeley does not lend itself to conversion to Bookshelf resource where some TOXNET databases are going. It has not been updated for many years.)
    - What content, if any, will still be available and, if so, why and where? (Options may include archived pages on the NLM website, FTP, the Wayback Machine internet archive, and tape.) The evaluated and annotated content, currently searchable on TOXNET, will no longer be available on TOXNET. The data files (PDFs, text, and web pages) will be compressed as zip files available as downloads on the NLM FTP site. The citations of referenced literatures are available on PubMed.
    - What will happen to the staff working on the product or service? No staff resources used now
    - What staff will be involved in this transition? Florence Chang, Phil Thomas
4. Identify mechanisms to be used for communicating with internal audiences. These may include some or all of the following (Check all that apply):
    - ☒ Emails
    - ☒ Signage
    - ☒ Information delivered at staff meetings
    - ☐ Point of discussion at brown bag luncheons
    - ☐ Town Hall meetings, etc.
    - ☒ Other (Explain) listserv

5. Develop and attach a set of Talking Points for the NLM Director Resource was a labor intense one developed by Berkeley staff and when it was terminated we were asked to house the file. Given the move of TOXNET databases to NCBI, this resource is not in a format that can be converted to run there.
6. Does the NIH Director or other IC Directors need to be informed? No

   If Yes, check all that apply:

   ☐ The service is produced jointly with another IC or serves an audience of interest to the IC

   ☐ The service has high visibility and sunsetting may result in questions, letters, emails to the NIH Director from the public, key stakeholders, Congressional staff, HHS leadership

   ☐ Other (Please elaborate) Enter other reason(s) Director(s) need to be informed

B. ***External communication plan*** for users, stakeholders, and the public

1. Who needs to be informed? (Identify stakeholders).
   - Why is this program or service being retired? Cannot be converted to new format for TOXNET move to NCBI.
   - What content, if any, will still be available and, if so, why and where? None other than journal literature on which it is based is still available.
   - What will happen to the staff working on the product or service? No staff work on this other than routine IT deployment /support issues .

2. Establish what may need to be communicated. This could include—
   - Why is this program or service being retired? Cannot be converted to new format for TOXNET move to NCBI.) Will be taken down from TOXNET end May 2019
   - What content, if any, will still be available and, if so, why and where? None other than journal literature on which it is based is still available. The archived content will be made available in compressed format on NLM FTP server.
   - What will happen to the staff working on the product or service? No staff
   - How can I or how can my group be involved in this transition? Enter possible support option(s)

3. Identify what needs to be completed:

   ☐ Deliverables Specify

   ☒ Responsible party or parties for the sunsetting process TOXNET IT

   ☒ Due date 5/31/20195/31/2019

   Identification of communication channels. These could include (Check all that apply):

   ☒ emails to stakeholders and users

   ☐ signage

☒ NLM homepage (public news announcement)

☐ speeches

☒ social media including Facebook, Twitter, LinkedIn, etc.

☐ Other (Please Explain) Enter other possible communication channel(s)

4. Determine questions that may need to be addressed, including:
   - What information will be provided? Sunset of CPDB
   - When will the information be provided? Starting after approval
   - With what frequency? Enter frequency
   - Are there potential areas for misunderstanding or concern? no
   - After informing stakeholders that the site will no longer be accessible, where can they find information once the site is retired? Not available in its current format. The archived content will be made available in compressed format on NLM FTP server.
   - How will NLM respond to questions and comments? Email via customer service system
   - Is this an issue that may generate media interest? (If so, please include strategies for responding in the plan.) No

IV. **Posting notice on central NLM "sunsetting calendar" (coming soon) on the NLM Wiki.** A notice should be posted on the "NLM resource sunset calendar" immediately following the effective date of the retirement of the resource. The sunset calendar, which will also be found on the NLM wiki, will serve as an historical record about retired NLM products and services.

V. **Identification of primary point of contact for further information about retired NLM resource.** Provide name and contact information for primary point of contact for retired NLM resource here:

Subject: NLM SP ImpCncl
Attachments: NLM Divisions at a Glance v5.docx, NLM SP ImpCncl Notes 2019-03-07v2.docx

Hi all – Attached are the minutes of our last meeting and the document we discussed at the meeting that briefly describes NLM organization units. Please have a look at both and remember that for the latter document, we sought to provide readers with a sense of what the various units do, we did not try to comprehensively describe them.

It would be great if you could send your comments to me and Maryam (cced) by COB Thursday, March 21 (if you need more time, please let us know). Thanks much - Mike

Michael F. Huerta, Ph.D.

Office of the Director (OD)

OFFICE OF STRATEGIC INITIATIVES (OSI)

The Office of Strategic Initiatives (OSI) serves as principal advisor to the NLM Director for matters and programs concerning strategic directions of NLM, including data science and open science, as well as analysis, evaluation, and reporting of and on NLM programs and activities. OSI staff lead development of episodic strategic plans and coordinates their implementation and evaluation, serving as the NLM lead for programmatic evaluation and formal reporting. Additionally, OSI develops, communicates, and coordinates, plans for trans-NLM and NIH data science and open science initiatives, activities, and interests. OSI also coordinates technology transfer for NLM and supports NLM policy development and legislative tracking. In addition, OSI manages and oversees NLM's international programs.

OFFICE OF COMMUNICATIONS & PUBLIC LIAISON (OCPL)

The Office of Communications & Public Liaison (OCPL) is a point of contact for a variety of information about NLM programs in written, electronic, and graphic forms. OCPL staff answer requests for information about the NLM, create brochures and fact sheets, printing procurements, coordinate publicity for NLM events, and arrange tours.

AUDIOVISUAL PROGRAM DEVELOPMENT BRANCH (APDB)

The Audiovisual Program Development Branch (APDB) is housed within OCPL and conducts media development for LHNCBC's research, development, and demonstration projects; provides consultation and materials development for NLM information programs; and engineers technical improvements for media production. Staff provide high quality video, audio, imaging, and graphics materials for LHNCBC's research and demonstration projects, often collaborating on initial project conception, implementation, and final evaluation.

OFFICE OF ADMINISTRATION (OA)

The Office of Administration (OA) houses the Office of Acquisitions, which awards NLM's effective contracts and oversees acquisitions. OA also encompasses the Executive Office, the Office of Administrative Management Services, and the Office of Financial Management.

Division of Extramural Programs (EP)

The Division of Extramural Programs (EP) offers grants for research projects, research training, and career development in biomedical informatics and data science. In addition, EP runs a special collaborative program with other NIH ICs to support bringing informationists (e.g., librarians and other information specialists) into NIH-funded research teams to enhance data management and sharing.

Grants are also made to U.S. small businesses to support informatics research and development that may lead to commercialization. EP also has two unique programs to support resource projects in the history and philosophy of medicine and public health and for developing information resources to help reduce health disparities. All active grant programs of NLM, lists of recent awardees, and contact information for grant staff are provided at nlm.nih.gov/ep.

Division of Library Operations (LO)

The Division of Library Operations (LO) ensures access to biomedical and health sciences literature, while supporting NLM's outreach activities to range of stakeholders—from the biomedical research community to clinicians to librarians to the general public. LO's activities include curation, preservation, and dissemination of NLM's collection of literature; developing and disseminating vocabularies and a library classification scheme; conducting research related to current operations, products, and services; training and recruiting health sciences librarians; producing historical exhibitions; and conducting in the history of medicine. LO also coordinates the National Network of Libraries of Medicine to equalize access to health information across the United States.

BIBLIOGRAPHIC SERVICES DIVISION (BSD)

The Bibliographic Services Division (BSD) is responsible for the creation and maintenance of MEDLINE®, the NLM's citation database for biomedical literature references that fosters expanded access of health information to researchers, health professionals, and the general public. BSD divided into the Office of the Chief and two sections: the Index Section and the MEDLARS Management Section (MMS).

THE OFFICE OF THE CHIEF

The Office of the Chief interacts with publishers and editors of biomedical journals and assists the Literature Selection Technical Review Committee in their review of journals for inclusion in MEDLINE. They also produce and manage drug information found in DailyMed and RxNorm.

INDEX SECTION

The Index Section creates and maintains the MEDLINE database of articles from biomedical research journals and coordinates the data review, indexing, and commentary content. Index Section staff also undertake research to generate more efficient forms of indexing and metadata application, as well as maintain the Medical Subject Headings (MeSH) vocabulary, which describe the content of a given citation in the biomedical research literature.

MEDLARS MANAGEMENT SECTION (MMS)

The MEDLARS Management Section coordinates the development and management activities for terminology products (e.g., UMLS, VSAC, and SNOMED CT) and provides training and outreach services to librarians for NLM's projects and services, including providing support for the Linkout for Libraries program to link PubMed citations to a given library's online holdings.

HISTORY OF MEDICINE DIVISION (HMD)

The History of Medicine Division collects, preserves, makes available, and interprets for diverse audiences one of the world's richest collections of historical material related to health and disease. HMD makes its collection available through a number of formats including its Exhibition Program, illustrated books, a blog, and the NLM Digital Collections.

EXHIBITION PROGRAM

The Exhibition Program creates lively and informative exhibitions and educational resources that enhance awareness of and appreciation for NLM's collections. Staff provide traveling banner exhibitions free of charge to public, university, and medical libraries, as well as cultural centers across the country. The Program's permanent online exhibitions act as educational resources to aid librarians and exhibition audiences in connecting to NLM's collection and health information resources.

RARE BOOKS AND EARLY MANUSCRIPTS PROGRAM

The Rare Books and Early Manuscripts Program collects, preserves, and makes NLM'S historical collection available to researchers and the public through a wide array of printed monographs, serials, and manuscript texts dating from the eleventh century. The historical collection includes more than 600,000 printed works, covering every area of the history of medicine and health sciences in the United States and Europe, as well as substantial collections of Latin American and Asian publications.

IMAGES & ARCHIVES SECTION

The Images and Archives Section has four archival areas: (1) the Archives and Modern Manuscripts Collection consists of personal papers and organizational records documenting predominantly American medical practitioners, biomedical scientists, health policy planners, and medical societies from about 1850 to the present; (2) the Historic Audio Visuals Collection is a principal repository for biomedical moving images in the U.S. and around the world; (3) the Prints and Photographs collection includes portraits, photographs, caricatures, genre scenes, posters, and graphic art illustrating the social and historical aspects of medicine; (4) the Digital Manuscripts Program manages Profiles in Science making the archival collections of leaders in biomedical research and public health available on its Profiles in Science® web site.

NATIONAL INFORMATION CENTER ON HEALTH SERVICES RESEARCH (NICHSR)

NICHSR works to improve the collection, storage, analysis, retrieval, and dissemination of information on health services research, clinical practice guidelines, and on health care technology, including the assessment of such technology. The Center also collaborates with other NLM divisions and members of the National Network of Libraries of Medicine to exhibit NLM products and services, as well as providing training opportunities for medical librarians to improve their ability to support health services research.

NATIONAL NETWORK OF LIBRARIES OF MEDICINE (NNLM)

The National Network of Libraries of Medicine (NNLM) works to advance the progress of medicine and improve public health by providing U.S. health professionals with equal access to biomedical and health information. The Network is comprised of over 7,000 organizations throughout the country, including academic health sciences libraries, public and community college libraries, as well as community information centers and other organizations. NNLM offers funding for projects that improve access to health information, increase engagement with research and data, expand professional knowledge, and support outreach that promotes awareness and use of NLM resources in local communities.

PUBLIC SERVICES DIVISION

The Public Services Division (PSD) is responsible for providing access to, maintaining, digitizing, and preserving print and nonprint material in the NLM collection. PSD staff develop and maintain MedlinePlus and MedlinePlus Connect, which are consumer health information resources available on the NLM website.

COLLECTION ACCESS SECTION

The Collection Access Section provides patrons with access to the library's collection through the library's reading room and interlibrary loan system. The section also manages DOCLINE®, NLM's automated interlibrary loan request, routing, and referral system for sending and receiving document requests.

PRESERVATION AND COLLECTION MANAGEMENT SECTION

The Preservation and Collection Management Section works to extend the life of and expand access to NLM's collections through an active binding, digitization, and preservation program. Digitized titles are available online via NLM's Digital Collections. The section also digitizes backfiles of biomedical journal literature, which are made freely available online in PubMed Central (PMC).

REFERENCE AND WEB SERVICES

The Reference and Web Services Section helps to meet the biomedical information needs of U.S. health professionals, scientists, health sciences librarians, and the public, through both online and onsite support. Staff also maintain the NLM website, advise medical librarians in the United States, and create and maintain selected Topic-Specific Queries. The Section also manages MedlinePlus and MedlinePlus Connect, which links health IT systems, patient portals, and electronic health record (EHR) systems to relevant, authoritative patient health information from MedlinePlus.gov.

TECHNICAL SERVICES DIVISION (TSD)

The Technical Services Division is responsible for building and organizing the modern collection of biomedical literature and other resources in support of research, health care, and the community of health sciences libraries. The division coordinates the Library's collection development guidelines and administers the library systems used to support the selection, acquisitions, cataloging and preservation of the NLM collection. TSD participates in national and international bibliographic control programs and standards development, including the new library standard, BIBFRAME.

OFFICE OF THE CHIEF

In addition to focusing on Division-wide planning, administration, and evaluation, the Office of the Chief periodically reviews and revises the Collection Development Manual of the NLM to ensure it reflects the ever evolving fields of healthcare, biomedical research, and new standards.

COLLECTION DEVELOPMENT AND ACQUISITIONS SECTION

The Collection Development and Acquisitions Section builds the NLM modern biomedical literature collection, including print and electronic resources and other digital content. Staff also assist in the selection of materials to digitize from the NLM collection, content for PubMed Central and the Bookshelf, foreign language support for MedlinePlus, and the Literature Selection Technical Review Committee (LSTRC).

CATALOGING AND METADATA MANAGEMENT SECTION

The Cataloging and Metadata Management Section reviews and develops cataloging policies. The Section creates and maintains the bibliographic records resident in NLM's public access catalogs, LocatorPlus and the NLM Catalog. Staff also maintain and develop the NLM Classification, a scheme for the shelf arrangement of medical literature in libraries.

LIBRARY TECHNOLOGY SERVICES SECTION

The Library Technology Services Section manages the bibliographic and digital library systems used to support the Division's collection development, electronic resources management, and cataloging operations, as well as coordinating the maintenance, development, testing, training, and

documentation for numerous NLM systems. The Section leads the development of NLM's repository, Digital Collections.

Division of Specialized Information Services (SIS)

The Division of Specialized Information Services creates information resources and services covering toxicology, environmental health, HIV/AIDS, outreach to underserved and special populations, HIV/AIDS, drugs and dietary supplements, household products, and disaster/emergency preparedness and response.

TOXICOLOGY AND ENVIRONMENTAL HEALTH INFORMATION PROGRAM (TEHIP)

The SIS Toxicology and Environmental Health Information Program produces an integrated database, TOXNET, with information on hazardous chemicals, toxic releases and environmental health. The Program produces several products to relay information related to toxicology and environmental health to the public, including TOXMAP®, Haz-Map®, Tox Town®, and the Household Products Database. TEHIP has also produced games to engage students in learning about environmental health concerns.

OUTREACH AND SPECIAL POPULATIONS BRANCH (OSPB)

The Outreach and Special Populations Branch (OSPB)manages and develops programs to eliminate disparities in health information access by providing community outreach support, training health professionals on NLM's health information databases, and designing websites that discuss the concerns of various racial and ethnic groups. These programs reach health professionals, public health workers and the general public, especially about health issues that disproportionately impact minorities such as environmental exposures and HIV/AIDS. OSPB also has a growing program to reach K-12 teachers and students, including the Environmental Health Student Portal and GeneEd.

DISASTER INFORMATION MANAGEMENT RESEARCH CENTER (DIMRC)

The Disaster Information Management Research Center (DIMRC) develops and provides access to health information resources and technology for disaster and public health emergency preparedness, response, and recovery. DIMRC focuses on maintaining access to health information at all phases of disasters and public health emergencies, developing innovative products and services for emergency personnel, conducting research to support disaster health information management, and collaborating with other agencies and communities.

OFFICE OF CLINICAL TOXICOLOGY

The Office of Clinical Toxicology (OCT) develops new resources and enhances existing NLM resources for professionals in toxicology and related fields.

Lister Hill National Center for Biomedical Communications (LHNCBC)

The Lister Hill Center for Biomedical Communications (LHNCBC) develops advanced information resources and software tools for biomedical research used by health IT professionals, health care providers, and consumers. LHNCBC also leads the development, enhancement, and adoption of clinical vocabulary standards to facilitate interoperability between producers and receivers of health care data, as well as developing many projects related to Natural Language Processing and biomedical terminologies. The Center also provides training opportunities through the Biomedical Informatics Training Program.

COGNITIVE SCIENCE BRANCH (CGSB)

The Cognitive Science Branch (CgSB) applies linguistic, statistical, and knowledge-based research and development in the investigation of techniques for improving access to biomedical information. Additionally, Branch members actively participate in developing and maintaining the Unified Medical Language System and collaborate with research staff to develop automated and semi-automated techniques for indexing biomedical literature.

COMMUNICATIONS ENGINEERING BRANCH (CEB)

The Communications Engineering Branch (CEB) conducts research and development in a range of areas, with an emphasis on image engineering, such as image processing, compression and enhancement, as well as text and data mining using machine learning and natural language processing techniques. Research is directed towards a range of applications, including cancer research, document delivery, digital preservation, and automated ways of building resources such as MEDLINE.

COMPUTER SCIENCE BRANCH (CSB)

The Computer Science Branch (CSB) applies techniques of computer science and information science to problems in the representation, retrieval, and manipulation of biomedical knowledge. CSB projects involve both basic and applied research, including development of clinical vocabulary standards and terminologies and deriving discoveries from clinical data.

National Center for Biotechnology Information (NCBI)

The National Center for Biotechnology Information (NCBI) creates and maintains over 40 databases for the medical and scientific communities, as well as the general public, including literature, molecular, and genomic databases, such as PubMed, GenBank, and dbGaP. NCBI also has a multi-disciplinary research group composed of molecular biologists, biochemists, computer scientists,

mathematicians, research physicians, and structural biologists concentrating on basic and applied research in computational molecular biology.

COMPUTATIONAL BIOLOGY BRANCH (CBB)

Research in the NCBI Computational Biology Branch (CBB) focuses on theoretical, analytical, and applied computational approaches to a broad range of fundamental problems in molecular biology and medicine. The expertise of the group is concentrated in sequence analysis, protein structure/function analysis, chemical informatics, and genome analysis. Research interests further cover a wide range of topics in computational biology and information science.

INFORMATION ENGINEERING BRANCH (IEB)

The Information Engineer Branch (IEB) performs applied research in data representation and analysis, including the development of computer-based systems for the storage, management, and retrieval of knowledge relating to molecular biology, genetics, and biochemistry. IEB also coordinates public access to these information resources by building curated and integrated databases. Staff share their expertise by consulting with and advising other governmental agencies and research laboratories on advanced methods of software and database design.

INFORMATION RESOURCES BRANCH (IRB)

The Information Resources Branch (IRB) plans, directs, and manages the technical operations of NCBI, including the computer systems used for internal research and development, as well as systems used to access public databases. IRB staff also organize educational demonstrations and workshops for the external biomedical community to promote use of NCBI's resources. IRB also plans, develops, and manages contracts and cooperative agreements to procure equipment and services in support of NCBI's functions.

Office of Computer and Communication Systems (OCCS)

The Office of Computer & Communications Systems (OCCS) provides information technology services and technical advice to support the research and management programs offered through NLM. OCCS provides customer support, training, and documentation for computer and network users. In addition, OCCS develops standards and guidance for managing and using information technology in accordance with industry best practices and applicable federal government mandates. The director of OCCS serves as NLM's chief information officer.

APPLICATIONS BRANCH

The Applications Branch is composed of two sections. The Online Health Information Support Section oversees the research, development, and implementation of online health information applications, and provides consulting and technical support services to NLM divisions and external organizations. The Library Business Technology Support Section oversees the research, development, and implementation of systems and technologies to support library business and operations.

MEDICAL LANGUAGE BRANCH

The Medical Language Branch develops and maintains software applications, such as the Unified Medical Language System, the RxNorm system, and the Medical Subject Headings system.

SYSTEMS TECHNOLOGY BRANCH

The Systems Technology Branch is composed of four sections. The Systems Services Section plans, evaluates, designs, and maintains computing and storage environments, and ensures the security and reliability of NLM production systems and development environments. The Facilities Management Section designs, operates, and maintains NLM's computing platforms, networking equipment, security apparatuses, storage devices, and backup systems. The Network Engineering Section evaluates, designs, deploys, and maintains networking and data communications technologies, products, and services to meet NLM's internal and external connectivity requirements. The Desktop Services Section evaluates, procures, and deploys personal computing capabilities and services and manages security and access control.

NLM Strategic Plan Implementation Council

Thursday, March 7, 2019 // 4 - 5pm
Conference Room B, Mezzanine, Building 38

Communicating Across NLM — Mike Huerta

- OneNLM — Organizational Summary as Context
    - Put together a summary of different divisions and subdivisions of NLM
        - Maryam Zaringhalam put together a summary document
        - The document will be sent around to Council members after this meeting to ensure accuracy before broader dissemination
    - The document contains brief description of each of NLM's divisions, subdivisions, and sections. The document is just meant to be a quick reference guide, rather than containing comprehensive descriptions of each NLM division and what activities, programs, and projects they're undertaking.
        - Internal reference guide for staff to quickly look up what the different parts of NLM are. This will be especially useful once we start having presentations and talks about more specific projects happening across NLM.
    - **Action Item**: Council members should look at the document, make any corrections of major, glaring errors, and indicate who should be listed as the point of contact for each unit listed in the guide.
        - Once this document is out, Council members can volunteer to start thinking about projects that might be of interest across NLM that could be topics for a OneNLM lecture or discussion series

- Podcasts — With Whom Do We Start?
    - Maryam is currently working on a OneNLM podcast that will interview NLM staff, asking about their day-to-day roles, responsibilities, and projects they're excited about
    - Don't want to start the interviews with leadership; instead, thinking of this as an opportunity to highlight staff whose responsibilities are less obvious, but nevertheless crucial for NLM's operations and mission
        - A Council member also noted that the series shouldn't start with profiles from those featured in NLM in Focus to ensure that new people are covered through the podcast
    - Possible suggestions from Council members for whom to interview first
        - Photographer for MEDLINE Plus
        - People who have hit their multiyear milestones for NLM service (5 years, 10 years, etc.)
        - Someone who works in the Preservation room, who preserves NLM's collection
        - Tara Mowery, Chief of Visitor Operations

        - People who have come to work at NLM through the Associate Fellowship Program, the Pathways Program, internships, as students, etc.
        - Perhaps interview people randomly encountered around NLM - in elevators or by selecting one person from each floor of an NLM building
        - People in the contracts office, indexers, facilities people
    - Jody Nurik noted that in order for this podcast to be externally facing, we'll need to be more intentional about a communications strategy for what the podcast should accomplish, and a plan that ensures fair representation across NLM

- Council Facilitating Machine Learning Community of Practice
    - Machine or deep learning was brought up as a possible topic for creating a community of practice (COP). Want to now think about how the Implementation Council can help facilitate formation of that COP.
        - In general, the Council can be used as the conduit by which NLM staff identifies possible topics and experts across NLM, and then let formed COPs move on their own
        - Can also give them ideas about what a COP can do because there are a lot of different kinds of COPs
            - Can bring in people across NLM who have experience being in a community of practice to participate
        - Can facilitate a conversation with participants about what they would want to get out of a community of practice to match the goals with how the community is set up and structured
    - **Action Item**: Sameer Antani will put together a description of what this machine and/or deep learning group would focus on, what they might do as activities, and what might be accomplished to help people understand why they might want to participate, and will send that to Mike
    - A lot of people interested in deep learning, especially with the emphasis around data science across NLM. There are many disparate groups around the campus and various groups across NLM working on deep learning
        - A COP would promote greater cross-fertilization across NLM
        - Sameer did note, however, that when you have a range of backgrounds, unless there's a real problem to solve, you end up just talking rather than *doing* something

Update on National Academies Study on Forecasting Costs Associated with Open Science — Elizabeth Kittrie and Maryam Zaringhalam

- Elizabeth Kittrie provided an overview of the NASEM Study on Forecasting Costs for Preserving, Archiving, and Promoting Access to Biomedical Data
    - The activity is in support of Objective 1.4 of NLM's Strategic Plan
    - Elizabeth has been serving as task manager, which is a responsibility now being taken over by Maryam as Elizabeth moves on to a position at HRSA
    - More information about the study can be found on the study's page here

- Goals of the study:
    - Develop an econometric model or framework for modelling the long-term cost of data across the lifecycle
    - Develop tools to help us anticipate the future value of investments we make today
    - As biomedical data across the campus continue to grow, how can we forecast what the cost will be so we can better prepare?

- Because NASEM has pulled together an outside committee, we'll have the benefit of getting an independent perspective
    - The committee members come from different domains, not just from biomedical and health research, so we can think about the modeling not just from biomedical perspective; the models are the same, but the data are just different

- Three factors are motivating our interest in the development of an econometric model for understanding future data cost:
    - From the NLM perspective, how does the Library responsibly prepare for NIH-directed data management and sharing policies, when the amount of data that is that is to be managed exceeds resources. We have a unique situation in that we have a national commitment to storing data and to making it available, but we operate under a fixed budget and don't control the volume or data coming to us or usage.
    - For the NIH Community at Large: How do we help NIH understand the cost consequences of decisions it makes around data management? ICs are spending an increasing percentage of their budgets on data management so this is becoming very relevant across NIH
    - For the Greater Research Community: And how do we help individual investigators know as they are planning their studies about downstream costs about the generation, preservation and accessibility of their data

- In terms of the study's objectives, we have asked the Committee to evaluate the following:
    - Factors that should be examined when examining life cycle costs
    - Cost consequences of accessioning and de-accessioning data
    - Whether there are economic factors that can help us to determine the value of data
    - Assumptions that need to be considered in building the models
    - Anticipated technological disruptors that should be consider or would affect models
    - Factors important for the adoption of a forecasting model by researchers/program management staff

- The deliverables of this study will be a consensus report outlining the framework

    - A consensus report is one of the many products of NAS; and what is interesting is that a consensus report is peer-reviewed.
    - We are asking the Committee to apply the model to two case studies relevant to NLM.

- To carry out this study, the committee will hold:
    - Six meetings, which will all be public, including a workshop in July
    - They will also do 10 site visits to understand how data forecasting is done in different industries

- NAS studies are led by volunteer committees of Subject Matter Experts
    - There are 14 members on this Committee – chosen independently by the National Academies.
    - The Committee Chair is David Woo, who is an economist at by training.
    - There is a wide range of expertise including those with backgrounds in decision making, computer science, computational biology, library science, research ethics among other areas. There are several members who are very familiar with the Library such as Alexa McCray, a former director of Lister Hill Center.
    - For more on committee and their backgrounds, the full foster is available on the website.

- The first public meeting of the Committee occurred on Feb 27, and was quite successful
    - The focus of the first meeting was to provide NLM's perspectives on the study, and to help the Committee understand some of the challenges and constraints that we face in our role as a National Library – with a key theme being that we have responsibilities to preserve data, but we do this on a fixed budget with no control over the inputs upstream or the uses of the data downstream.
        - Patti presented the charge and gave a broad overview of NLM's in the data ecosystem
        - Jim Ostell provided an overview of how the data cycle for NCBI resources
        - Susan Gregurick gave an NIH perspective as it relates to the NIH Strategic Plan
        - Kim Pruitt, Dina Paltoo and Ivor D'Souza were part of a panel each providing different perspectives on the challenges and constraints we are facing.
    - We had representatives from many of the ICs in participate in the room or on line

- Next steps
    - The Committee will meet again on March 12-13, and again on May 6-7
    - The public workshop will be held on July 11 and 12, and we'll have more information on that in the coming weeks and months

Round Robin

- MEDLINE Team 6: The group hasn't met recently, but there have been a lot of independent interactions between indexers and the NCBI Gene group in terms of doing some clean up, managing data flow, that ultimately should lead to better annotations on the record on both sides

- The NLM Portfolio Assessment is going forward, and Mike is going to be picking up some activities related to this
    - NLM leadership is very interested in seeing whether and how the NLM Portfolio Assessment tool (NPA) developed by MITRE might be used to monitor, understand, and manage NLM's portfolio offerings (products and services, broadly defined). The tool is at a reasonable prototype stage
    - The problem is that the data from data calls that are in the NPA are not very consistent, so Mike is putting together a group of people across NLM who will help improve the quality and utility of the information in the tool, including
        - Starting with reconsidering offerings in terms of granularity
        - Come up with more solid definitions for terms of interest
        - Identify how to consistently collect data around definitions across NLM
        - Council members should let their divisions know that they will likely see more data calls coming

- Update from Anne Altemus about APDB
    - With respect to the realignment and implementation of the strategic plan, within the next month APDB will be joining with OCPL
    - Hope that the overall NLM communication strategy will be far more beneficial to all of NLM with respect to branding and visual communications

- SIS met today with the new contractor who was hired to do the workforce analysis assessment, who gave an overview of what their first task is
    - Starting interviews with staff in the next couple weeks to identify optimal transition plans
    - A little challenging since some there are still some fine-grain uncertainties

From: Leonard, Mary Ann (NIH/NLM) [E]

To: Brennan, Patti (NIH/NLM) [E]
Subject: IMPT: new NLM products slide
Attachments: NLMProductsServices_update.pptx

Hi, Patti.

Folks recently brought to my attention that the montage slide featuring NLM products and services included some things that had been sunsetted (e.g., PubMed Health).

I have updated the slide to remove any sunsetted offerings, and in other cases, I've updated images to reflect the current look.

Therefore, from this point forward, please use the attached slide in your presentations. If the PowerPoint comes through me, I'll make sure we're using the current version of this slide, but on those occasions when you develop your own slides, I wanted you to have the current content.

Please let me know if you have any questions.

M.A.

Do we need to meet face to face? Or are there other conversations going on perhaps?

Subject: RE: SIS/NCBI proposals

I appreciate that there is overlap in activities, and also that this suggestion includes a number of changes of direction for both specific staff members and also for the existing contracts. I also know a lot is up in the air about the future of MeSH, it's application to retrieval, and the relative roles of machine data extraction and human curation.. so a lot of fluidity around the whole activity. I wouldn't be surprised if a solution that seemed like a good fit last year or this year or next year might seem like a less good fit in three years as all this develops.. so I think LO, NCBI, LHC, OCCS will need to work together on all this in a flexible, collegial, and probably evolving way.

That said, adopting all or parts of these two proposals does mean we need to agree on some decisions about the scope of contract renewals, and the focus of staff member efforts no matter where they sit. So perhaps the next step is to try and get concrete about that, and map out a timeline over the next year with the milestones that we have to meet in order to move in this direction.

My understanding here, so correct me if I'm wrong, is that you like the overall directions in these proposals, and would like to move ahead with implementation generally, and that we are now only discussing specifics like timing, goals, and staff assignments.

Subject: RE: SIS/NCBI proposals

Thanks, Jim. We haven't gotten to the decisions for each individual SIS staff member and matching them with the effort needed for the offerings that will continue. The plan is to have the chem/tox expertise in the same unit as the MeSH chemical expertise and drug info as there will be synergies there. We were, of course, intending to support key offerings that we concur need to continue.

I recommend we continue with the plan to move the SIS staff to LO and OCCS and work to ensure the staff and products are sufficiently supported and work together.

Subject: RE: SIS/NCBI proposals

In terms of personnel,

"I do expect that the SIS staff and the SIS content staff and any contractors needed to maintain the information needed going forward will be part of LO, BSD. We'll have to be sure to set up structures to ensure efficient and effective work."

Was certainly the plan developed at the NLM and toward which people have been working the last year.

If those folks, as well as the contract support, will remain in LO, but we will otherwise adopt some of Evan's proposal, then this will, indeed, require regular and careful coordination. That will probably require some face to face discussion, but to start, it might be good to share assumptions. Obviously moving those people into NCBI as Evan suggests, would imply they work 100% on the ToxNet aspects of PubChem. If they remain in LO, would it be under the same assumption of 100% time? If not, then what were your assumptions about the time they would have available for ToxNet aspects of PubChem? That might help set some realistic expectations here.

Subject: RE: SIS/NCBI proposals

Evan,
Thanks for the quick clarifications on the proposed organizational, software and advisory structure of the document. Clearly a lot to consider as far as cost, meeting the goals of the strategic plan and procurement and government advisory rules and regulations.

I do expect that the SIS staff and the SIS content staff and any contractors needed to maintain the information needed going forward will be part of LO, BSD. We'll have to be sure to set up structures to ensure efficient and effective work.

Subject: RE: SIS/NCBI proposals

Joyce,

Here are some quick answers to your questions.

Evan

--

Re: Proposed Management Structure
This proposal envisions the five personnel from the SIS HSDB/ChemID teams (including Hakkinen, Goshorn, and Hochstein) would be moved into the NCBI Chemistry Data Service Division as opposed to LO. While not explicitly stated,

a ToxNet line of business would be created therein to house the HSDB and ChemID data generation projects. This would put ChemID/HSDB teams in lockstep with the PubChem teams and provide a very tight organizational integration of the workflows between the three projects.

RE: Phase 2
It is believed that no matter where HSDB/ChemID ends up one or both of the workflow management software packages will need to be 'reimagined'. The proposal would simplify the workflow. If ChemID/HSDB are merged into the NCBI Chemistry, NCBI would build this system as a workflow extension to the existing PubChem Upload system.

Re: SAC vs. SRP
Yes, the SAC replaces the SRP. Essentially, the SRP meets twice a year for three days at a time and peer reviews each added/modified record in HSDB (a very slow process involving a lot of prework prior to a meeting). Instead, the SAC would advise HSDB on the prioritization of data sources and data types that should be added to HSDB and help HSDB perfect the content and form needed to expand the utility and impact of the HSDB content. The SAC would be made up of community representatives/stakeholders knowledgeable in their respective fields and in the content, the workflows and the end-user use cases they represent. It would be organized much like any advisory committee with a chair and members. The SAC is envisioned to meet virtually and in person by collocating at key conferences. The exception to this would be the first SAC meeting where the thought is to have a one day meeting at NIH to complete the transition from the SRP and orient the SAC to get it started/oriented on good footing.

Subject: RE: SIS/NCBI proposals

Just took a quick scan of these and am already impressed with the time, effort and thoughtful work that went into making these recommendations.

I have a few initial questions that might be answered by email or in a discussion we could schedule later this month.

The HSDB/PubChem/ChemID integration ends with this recommendation, "Proposed Management Structure - Having the three project teams in one organization will be optimal."
Since the SIS staff named, Hakkinen, Goshorn, and Hochstein will be based in Library Operations, is LO the "one organization?" What are the "three project teams" envisioned?

In "Phase 2" a system is discussed. Will NCBI build that system? OCCS?

Does the Scientific Advisory Committee (SAC) replace the Scientific Review Panel (SRP). How would the SAC differ and how would it be organized?

I'm sure I'll have more questions after we review these proposals more thoroughly.

These proposals are a terrific step in providing sustained support for chemical information and publications for Books.

Subject: SIS/NCBI proposals

Joyce, Ivor, Florence,

Attached are two proposals from NCBI about the suggested changes to the ToxNet dataflows for the end state after the transition. My understanding is that the authors, Stacy and Evan, have discussed these with Florence and her team, but I don't think we've really talked about this yet in our bigger group of affected divisions.

I think it's important for all of us to look these over, and see if this looks like a promising and reasonable direction to you all. Obviously there are plenty of details to still be worked out, but we didn't want to spend more time on it unless it looked like the direction you all wanted to go.

Attachments: ToxNet_Books_Recommendations_03052019.docx, HSDB PubChem ChemID intergration proposal.docx

I hope we can meet in person before Personal Info. I know David Gillikin will not be able to attend. I can fill him in when he returns.

You are welcome to send me agenda items that you'd like to include.

Florence

SIS Full-Text Resources identified for Books

SIS has identified the six resources below as priorities to migrate to Bookshelf. The recommendations modified since February 2018 as well as the status of migrating the content follow:

Resource	Status
AIDSInfo Guidelines	Add pending technical quality of XML sample awaiting from contractors
IRIS	Add pending technical quality of XML directly from EPA – legacy data migrated through PDF conversion using interagency agreement and new and updated content deposited via EPA's own eXtyles configuration
ITER	Add pending legal issues concerning ownership of the content and that ITER can submit directly to Bookshelf using Books Word conversion workflow. NCBI will do a one-time conversion for legacy data, either by XSLT script if we can receive well-formed, valid data or by sending to a vendor. Books is also working directly with TERA collaborators to have them submit their full text toxicological reviews (summarized / compared in ITER) directly to Books as XML. – IARC and NTP currently submitting; ATSDR developing software to submit XML; RIVM exploring how to submit XML directly.
LactMed	Already in production in Books via FTP submission of XML from SIS. If SIS CMS is retired, new and updated files should be submitted directly by NLM-contracted author to Books using Word workflow.
LiverTox	NIDDK has agreed to take on ownership of this content and to submit new and updated files to Bookshelf using Word workflow. NCBI will do a one-time HTML to BITS XML conversion for legacy data. The agreement is currently being discussed so work can begin.
PubMed / PubChem Integration Tasks	**Status**
Provider text extraction of chemical information	Initial discussions with some content providers and tagging vendors about ideal markup of chemical data; ability to implement dependent on content providers and tagging vendor negotiations of level of effort to vendor and costs to content owner, and Books technical review of any resulting XML submissions
Books text extraction of chemical information	Scripting developed for SIS CMS-Books LactMed workflow. Discussions with PubChem about their text extraction and tagging tools
Data indexing in PubMed / PubChem of chemical information	Initial planning discussions for possible implementation starting in summer 2019, dependent on level of effort and developer resources

AIDSInfo Guidelines

This is excellent content and we are in the process of migrating it to Bookshelf. ICF, the contractor responsible for maintaining the SIS site, has provided Books with XML samples. Books has provided structural feedback on these samples that ICF is in the process of addressing.

IRIS

EPA's Integrated Risk Information System publishes assessments of health hazards of chemicals found in the environment as PDFs. SIS is currently copying and pasting the content in these PDFs into their website, with large delays (2 years or more) between the time the assessments are released and updated and the time they are made available or are updated in the TOXNET version of the EPA site. The source data in the TOXNET database is SGML of unusable quality with no DTD included. To address the issue of delay and poor data quality, Bookshelf is in discussions with EPA to directly submit XML for their toxicological reviews. They are working to adapt an eXtyles software configuration to produce BITS XML for their content. We are also discussing a pilot to convert their legacy content from PDF to XML so that there is a target XML sample for the eXtyles software development. To pay for those conversions, we are looking to adapt the current interagency agreement with EPA to process manuscripts to also include this book content. If EPA is unwilling to cover the conversion costs, to migrate the entire collection of 550 assessments by converting from PDF, would be approximately $44,000 (11,000 pages/$4page). I expect it would take 3-6 months to migrate the content using this process, and at least 1 or 2 FTE to QA it over this period. It appears there are 20 assessments under development, so future conversion costs would be roughly $1600 a year (400 pages/$4page) if EPA is unable to develop their own conversion software.

ITER

ITER (International Toxicity Estimates for Risk) is a free Internet database of human health risk values and cancer classifications for over 680 chemicals of environmental concern from multiple organizations worldwide. It is managed by TERA (Toxicology Excellence for Risk Assessment) currently based at the University of Cincinnati. Our scientific reviewer identified some past ethical concerns about TERA regarding legal ownership of the content, that should be fully addressed by NLM and the University of Cincinnati before we accept this content. We also need to address technical and workflow issues before we agree to migrate this content, including an assurance that the content is being regularly maintained and updated, and that we can BITS XML directly from the content owner using the Books Word workflow. If the content owner provides new and updated content via Word, NCBI will do a one-time conversion for legacy data, either by XSLT script if we can receive well-formed, valid data (which will take a technical specialist approximately six weeks or possibly by sending to a vendor if they can convert HTML or text to BITS (~800 records/$4page at $3,600). The current XML generated from the SIS CMS does not meet Books technical standards (including that it does not validate and is not well-formed). In addition to migrating the SIS ITER content, Books has or will work directly with TERA collaborators to have them directly submit their full text toxicological reviews directly to Books in XML. This includes IARC (all monographs are currently included in Books), NTP (all six of their series including the Report on Carcinogens), ATSDR (a portion of their legacy profiles are in Books and they are developing software to submit the rest of their content), RIVM (exploring the ability to submit their ConsExpo Fact Sheets as XML).

LactMed

LactMed contains information on drugs and other chemicals to which breastfeeding mothers may be exposed. This content was migrated to Books in the spring 2018 by building an XSLT converter to transform the SIS XML output from a CMS shared with HSDB to BITS. This process was time-consuming particularly as we needed to add scripting for content not included in the XML but generated via other processes. If the HSDB SIS CMS is retired, we should modify the existing contract with Phil Anderson

who authors the content to directly submit new and updated records to Bookshelf using Books Word template and conversion tools. If possible, this would include the additional data provided only in the SIS CMS, such as chemical structure image, related drug records, and synonyms.

LiverTox

LiverTox, produced in partnership with NIDDK, is a website aiming to provide a comprehensive resource for physicians and clinical / academic researchers who specialize in idiosyncratic drug induced hepatoxicity. After discussion with NIDDK and NLM leadership, NIDDK agreed to address scientific issues with the content and take complete ownership of it, including developing an advisory board and peer review process. NLM and NIDDK are working on a LitArch agreement to include this content in Bookshelf using Books Word workflow. NCBI will do a one-time HTML to XML conversion of legacy data that will take two to three months to complete.

Data Integration with PubMed and PubChem

1) Provider text extraction of chemical information

As possible work with content providers and their vendors to extract chemical information (such as CAS RN and synonyms) and tag it in structured keywords or other relevant elements to ease discoverability and integration of resources. Books has had discussions with Inera, the vendor many toxicology agencies are contracting with to modify a BITS eXtyles configuration for their content, to extract and tag this information per best practices. As other content providers onboard to the Books Word workflow, we will discuss if providers can easily add any of this additional data in our Word templates.

2) Books text extraction of chemical information

Adapt PubChem's text extraction and mapping tools for chemical, drug and disease names for toxicological and chemical resources in Books. As reasonable and reliable, modify XSLT converter scripts to add additional content type markup for key data tables or other such content so these data are machine readable.

3) Data indexing in PubMed / PubChem of chemical information

As necessary modify Books-PubMed scripting and PubMed DTD to support indexing of chemical information (e.g., keywords / MeSH, etc) in PubMed. Where feasible, work with PubChem as necessary, to build related links from these records to PubChem.

HSDB, ChemIDplus, PubChem Integration Proposal

Introduction

The National Library of Medicine (NLM) PubChem, ChemIDplus, and HSDB provide free and reliable chemical and toxicological information for a wide audience.

PubChem is an open chemistry database providing information from over 600 data sources on over 97 million compounds. The data collected in PubChem includes chemical structures, identifiers, chemical and physical properties, biological activities, patents, health, safety, toxicity data and more.

HSDB contains over 6,000 records focusing on the toxicology of potentially hazardous substances, including nanomaterials. It is enhanced with information on human exposure, industrial hygiene, emergency handling procedures, environmental fate, regulatory requirements, and related areas. All data in HSDB are referenced and are derived from a core set of books, government documents, technical reports, selected online databases, and selected primary journal literature. HSDB is peer-reviewed by the Scientific Review Panel (SRP), a committee of experts in the major subject areas within the data bank's scope.

ChemIDplus is a chemical dictionary of over 400,000 chemicals (names, synonyms, and chemical structures). It includes links to NLM and other databases and resources, including federal, state and international agencies.

The integration of HSDB and ChemIDplus into PubChem was initiated in 2018 as part of implementation of the NLM Strategic Plan. PubChem provides a robust and scalable platform for HSDB and ChemIDplus data. Further cooperation amongst these projects related to content creation and review should be explored.

PubChem Challenge

PubChem has powerful computational engines which efficiently and effectively harvest large amounts of data. However, as an aggregator, PubChem must retain original data from its sources. Errors or inconsistencies in that data cannot be corrected. Hence, maintenance of data quality is a substantial challenge for PubChem.

HSDB Challenge

The HSDB content building and review process is arduous. HSDB contains voluminous, comprehensive, and peer-reviewed content; it must continuously contend with:

- A costly content building process requiring manual extraction of data
- Slow growth of data: only 100-200 new chemical records are added yearly
- Slow update of content: just 3-5% of the records are reviewed and updated yearly

- An SRP review process which is costly and inefficient, and which urgently needs to be reimagined. The services NLM requires of HSDB contractors should also be re-evaluated.

ChemIDplus Challenge

ChemIDplus provides high quality original chemical structures for 80% of its chemicals. The collection currently contains 420,000 chemical records, including over 335,000 structures.

- Expanding the coverage of chemical structures to 100% and achieving accuracy and consistency of the chemical structures can be exceedingly difficult.

A Win-Win Proposal: HSDB, ChemIDplus, and PubChem Working Together

In the new paradigm for HSDB content curation, instead of building very large chemical records with many data from many sources (see Appendix 1) one chemical at a time, the Team of HSDB/ChemIDplus/PubChem will extract data, by machine or manually, from data sources and push the data to many chemicals all at once (see Figure 1). Contracts will be needed to curate chemical name/structure relationships (e.g., benzene is c1ccccc1), to add chemical name/classification relationships (e.g., fentanyl is on the DEA Schedule II list), and to curate chemical data/name relationships (e.g., the boiling point of benzene is 88.08 deg C at 760mm Hg). The chemical data will need to have appropriate 'structure' to the content (e.g., controlled vocabulary and consistent data representation) as well as appropriate provenance trail (e.g., citation that includes an appropriate machine-readable identifier such as PMID, DOI, ISSN, ISBN, ORCID, etc., when possible).

Proposed New HSDB Data Flow

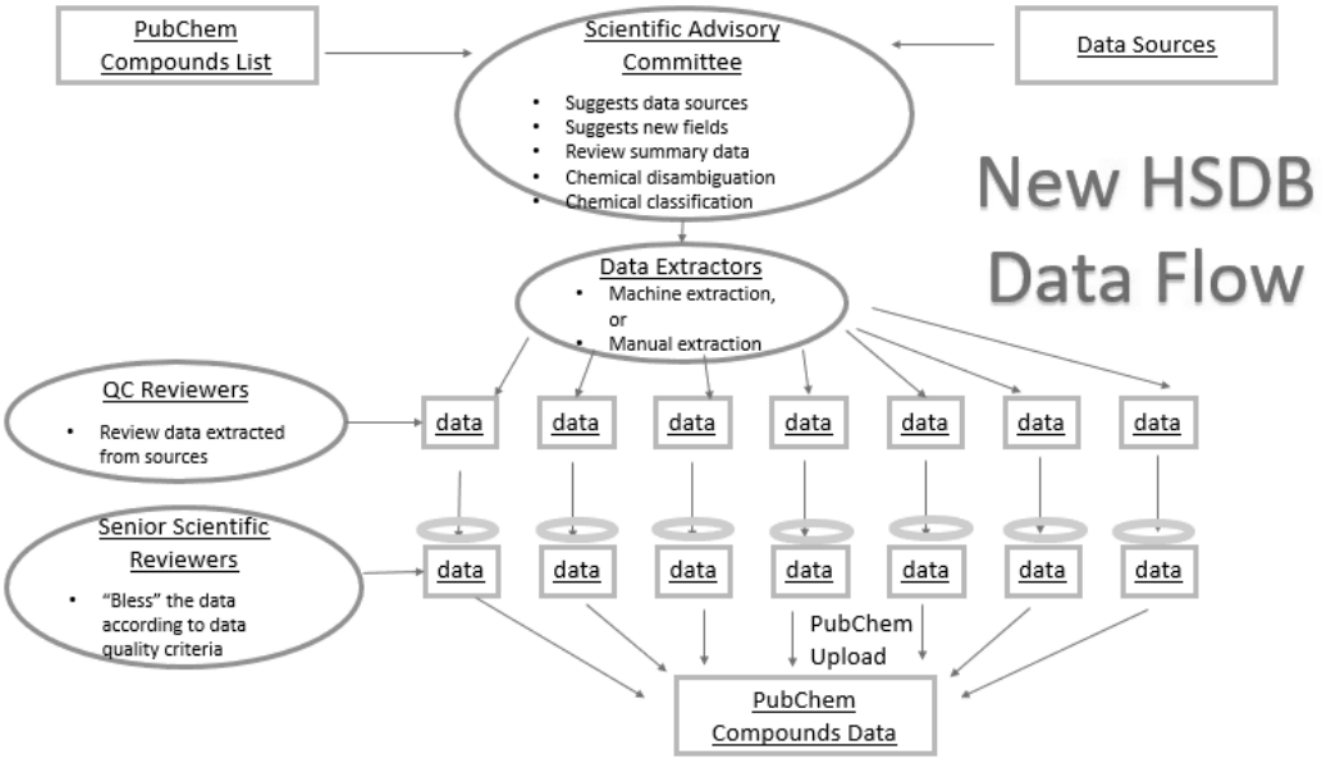

Figure 1. Proposed new HSDB data flow

New HSDB Data Flow Overview

- Establish a new Scientific Advisory Committee (SAC) whose key role is to identify data sources, data types, and data points for inclusion
- Extract data from sources identified by SAC, with data extraction programs, manually, or in conjunction with PubChem
- Data are extracted for all chemicals from that source
- Ensure data are extracted with controlled representation and appropriate provenance trails
- QC Reviewers check the extracted data
- Senior Scientific Reviewers with subject matter expertise reviews the content to meet quality standards
- Submit the new content to PubChem using PubChem Upload System
- Contractor may need to create and maintain a data entry/management system to manage the data and content building process
- NLM will build a tracking system to track, manage, and report the chemical records and fields, data sources, timestamps of updates, etc.

SIS staff working on HSDB

1. Dr. Bert Hakkinen – Senior Toxicologist, GS15, COR Level 2 certified, current COR of HSDB curation contracts, Acting Head of Office of Clinical Toxicology
2. Jeanne Goshorn – Supervisory Tech Info Specialist, GS15, Chief of Biomedical Information Services Branch at SIS, COR Level 2 certified

3. Colette Hochstein – Tech Info Specialist, GS13, responsible for many SIS toxicology and environmental health offerings, COR Level 2 certified

Implementation Details

We propose a phased implementation that spans FY2019 to the end of FY2020.

1. Phase 1 (FY2019 – FY2020): Bridge between the old and the new paradigm
    a. Recompete the two contracts for HSDB content building and peer review
    b. Maintain the SSEUS content management system for data input
    c. Conduct 2-3 Scientific Review Panel (SRP) meetings
    d. Establish the Scientific Advisory Committee (SAC) charter, recruit members
    e. Begin curation using the new paradigm – building data across many chemical records. In HSDB lingo, it is called "data source update" which HSDB team is familiar with.
    f. System requirement: SSEUS content management system is needed in this "bridge" year
2. Phase 2 (after completion of Phase 1, FY2020 on)
    a. Establish a new contract to support the new data building paradigm and data flow
    b. System requirements:
        i. Sunset the SSEUS system
        ii. Data entry system will be the responsibility of the contractor. Functionalities could be partially provided by PubChem.
        iii. NLM will build an administrative module to keep track of the chemical records, status of updates, and other housekeeping data to manage the curation process. This module may also be built into the PubChem Upload System.

Cost Saving Considerations

	Status quo		**New HSDB Data Flow**	
Year 1	SSEUS CMS maintenance	$30,000	SSEUS CMS maintenance	$30,000
	NLM develops a new CMS to support the old process. One-time cost.	$500,000		
	Contract 1 for content curation and scientific review panel meetings	$900,000	Contract 1 for content curation and scientific review panel meetings	$900,000
	Contract 2 for environmental content curation	$420,000	Contract 2 for environmental content curation	$420,000
Year 1 Total		**$1,850,000**		**$1,350,000**
Year 2	Contract 1 for content curation and scientific review panel meetings	$900,000	Contract 1 for content curation	$900,000
	Contract 2 for environmental content curation	$420,000	Scientific Advisory Committee meeting	$70,000

			NLM build a tracking system for managing the curation progress. One-time cost.	$150,000
			Contract 2 for constructing normalized data structure to curate machine readable data	$200,000
Year 2 Total		**$1,320,000**		**$1,320,000**
Year 1-2 Total		**$3,170,000**		**$2,670,000**

Year 3 Total		**$1,320,000**		**$1,170,000**

ChemIDplus Data Flow to Support PubChem

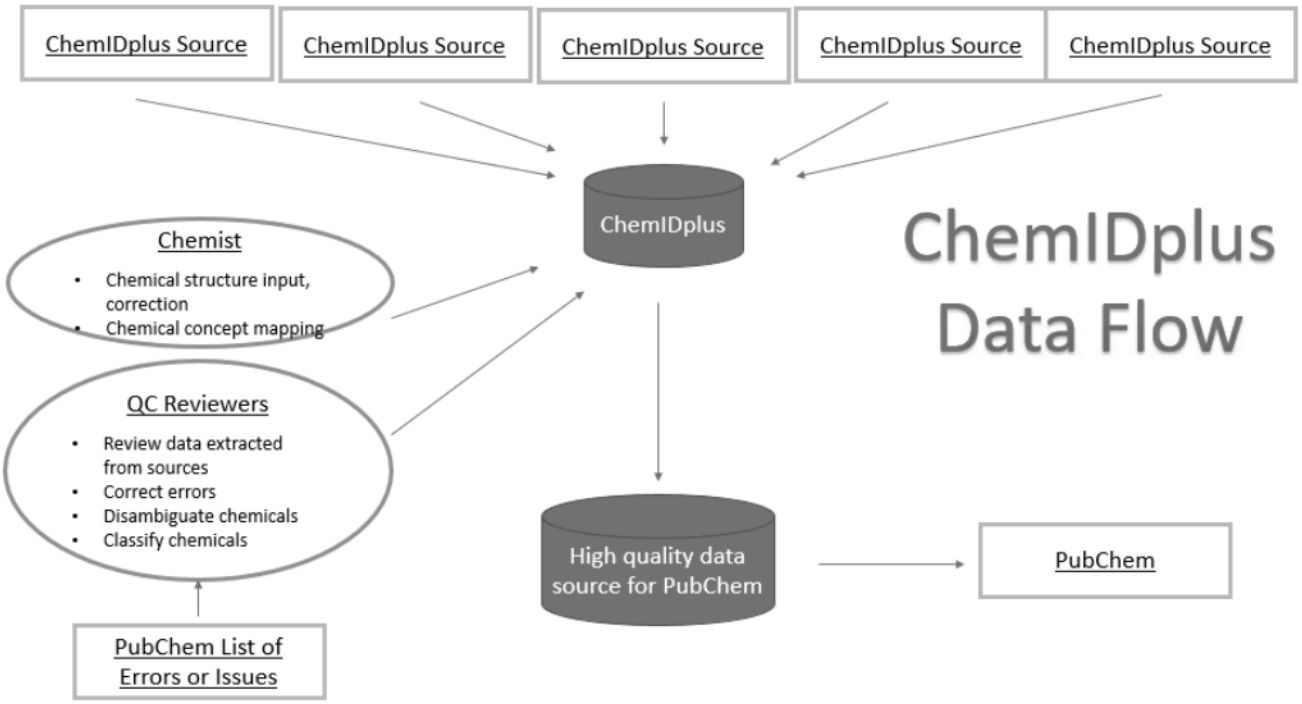

Figure 2. ChemIDplus data flow to support PubChem

ChemIDplus Data Flow Overview

- ChemIDplus uses mostly machine processing for data ingestion, normalization, term mapping, and batch conversion. In the new data flow, the machine processing will continue.
- The ChemID Team and PubChem Team will review the current backend data management system, DB-Maint, to improve efficiency, and eliminate unnecessary or under-utilized functions.
- ChemIDplus will get chemical structures from PubChem. Subject Matter Experts will perform quality control, correct errors, improve structure quality, and classify chemical concepts.
- System requirements:
    - DB-Maint, a java web-based system, allows efficient management of data flow.
    - PubChem and ChemIDplus team shall evaluate the replacement of Oracle database, for example, with PostgreSQL.

SIS Staff working on ChemIDplus

1. Jeanne Goshorn – Supervisory Tech Info Specialist, GS15, Chief of Biomedical Information Services Branch at SIS, COR Level 2 certified
2. Ying Sun – Computer Scientist, GS13, MS in chemistry, and computer science, current COR of ChemIDplus contracts, COR Level 2 certified
3. Meng Cheng (new hire) – Chemist, GS12, PhD in chemistry, MS in computer science, 15-year experience working on ChemIDplus

Cost Saving Considerations

	Status quo		New ChemID data flow	
Year 1	Contract 1 Interface software development database development	$235,000	Contract 1 Interface software development database development	$235,000
	Contract 2 Data & structure curation	$198,000	Contract 2 Data & structure curation	$198,000
	Contract 3 Database development	$20,000	Contract 3 Database development	$20,000
	Biovia	$10,000	Biovia	$10,000
	Oracle	$5,262	Oracle	$5,262
Year 1 Total		**$468,262**		**$468,262**
Year 2	Contract 1 software development	$235,000	Contract 1 data, structure curation, Subject matter experts (chemists)	$420,000
	Contract 2 Data & structure curation	$198,000	Contract 2 Database development	$20,000
	Contract 3 Database development	$20,000		
	Biovia	$10,000	Biovia	$10,000
	Oracle	$5,262	PostgreSQL	$0
Year 2 Total		**$468,262**		**$450,000**
Year 1-2 Total		**$936,524**		**$918,262**

Conclusion

Outcome for PubChem

- ✓ ChemIDplus serves as the “curated arm” of PubChem
- ✓ Inconsistent and erroneous PubChem data is corrected/validated in ChemIDplus, allowing the latter to serve as PubChem’s vetted core data, thus improving PubChem’s overall data quality.
- ✓ Inconsistent and erroneous PubChem data is corrected/validated in HSDB, thus expanding and improving PubChem’s overall data quality

Outcome for HSDB

- ✓ More efficient and effective record building process via a new approach to support from contractors
- ✓ More efficient and effective record building process via a retooled scientific advisory process that advises solely on "data sources" and "data types"
- ✓ Significantly more data reviewed by senior subject matter expert reviewers
- ✓ Content becomes "branded"
- ✓ Technology and chemical informatics knowledge transfer from PubChem, replacing manual data extraction with machine data harvesting
- ✓ Collection exponentially expanded.

Outcome for ChemIDplus

- ✓ Collaborating with PubChem will improve the accuracy and consistency of the chemical structures
- ✓ Increase the collection of chemical records and structures
- ✓ Content becomes "branded"

Benefits for NLM

As noted by NLM Director Dr. Patricia Brennan, "The National Library of Medicine takes seriously the enormous public trust awarded us worldwide for the quality and integrity of our data and information."

Focused collaboration amongst these three widely-known and used NLM resources will contribute to the Library's Strategic Goal to "connect the resources of a digital research enterprise," to "accelerate the speed and precision of discovery," and to "become a platform for biomedical discovery and data-powered health."

Streamlining and modernizing how these offerings are built and maintained will appreciably benefit both the Library and its many users.

https://www.nlm.nih.gov/pubs/plan/lrp17/NLM_StrategicReport2017_2027.pdf

Proposed Management Structure

Having the three project teams in one organization will be optimal.

- ✓ Ease of management for contracts and employees
- ✓ Shared vision
- ✓ Shared resources
- ✓ Common technology platform
- ✓ Outreach and promotion to the same audience groups

Appendix 1. Current HSDB Workflow

Florence,
I'm ready to approve the CPDB sunset plan with the edits I made in the document (attached).

I added a couple of questions/comments to TOXMAP that need to be addressed.

Thank you,
Jerry

Subject: RE: Status of SIS sunset requests

Jerry,

Please find the 2 attached revisions of the TOXMAP and CPDB sunset plans. The additional explanations in sections are highlighted in yellow. If you are OK with the revisions, we will start implementing the sunset protocols for these 2 resources.

Going forward, we will submit new sunset plans through the new web interface.

Thanks!

Florence

Subject: Re: Status of SIS sunset requests

Jerry,

Thanks for the feedback on TOXMAP sunset plan. We will post information on the home page now to direct users to the sources such as EPA.

It will be posted for the next 6 months. I think it is ample time before the planned sunset date.

Florence

Subject: RE: Status of SIS sunset requests

Florence,
I'm OK with sunsetting TOXMAP. One item to clarify on the form. Will we post information on the NLM (Toxmap) website directing users to the EPA and other sources of the underlying information. I'd suggest we do so during some transition time.

Thanks
Jerry

Subject: Status of SIS sunset requests

Jerry,

You approved sunset plan for CHIRR, ToxMystery, and GeneEd. We are working on Letter of Agreement with Society of Toxicology for them to take the archived version of ToxLearn. There are two remaining ones, ToxMap, and CPDB. We provided additional information and revised sunset plan, attached with this email. There will be two more plans, one for Arctic Health, and another one for American Indian Health, ready for you to review. Let us know if you want to wait for the new sunset system to go live to process these two new ones.

Thanks!

Florence

REQUEST TO RETIRE NLM TOXMAP

Product owner(s) fill out sections I, III, IV and V. Include documentation with this form.
Record approvals in section II.

I. **Written justification for the retirement of an NLM resource.** Three to six months before sunsetting any NLM resource, a written justification for the retirement of the resource must be prepared. In drafting the justification, the use of statistics is often helpful. Reasons for sunsetting and/or retiring an NLM resource may include (check all that apply):

☐ Low usage

☐ Obsolescence (that is, better products have come along) – whether from NLM or another group

☒ No longer aligned with NLM priorities or mission needs

☐ Incorrect or out-of-date information. If information cannot be updated, then archive the resource

☒ Reallocation of staff to different products because resource is no longer a priority

☒ Cost in relation to value

☒ Other (Please explain) The US EPA now produces several GIS products and visualization applications (https://www.epa.gov/geospatial/epa-geospatial-applications) that have the similar GIS functionality, except the ability to search TOXNET from within the GIS tools. This was a unique feature in TOXMAP-classic, which was retired due to the obsolete technology platform. The new version of TOXMAP does not have this feature either. To make the new TOXMAP to have this feature will require major investment in software development. We cannot justify the effort because the usage of this feature was very low, averaging about 400 searches a year.

II. **Approval.** This form must be signed by:

- NLM Division head (within LHC, LO, NCBI, OCCS, SIS, OD) Initial Here Date

- Upon approval by NLM division head, forward completed form to Kathy Cravedi, Director, OCPL (kcravedi@nlm.nih.gov), for distribution and approval by:
  NLM Director Initial Here Date
  NLM Deputy Director Initial Here Date
  NLM Communications Director Initial Here Date

III. **Prepare Communications plan for sunsetting the NLM resource.** This document is developed for sharing news about the retirement of the NLM resource with relevant internal and external audiences. Please address the following key elements:

A. ***Internal communication plan*** for NLM staff. Identify who needs to be informed? (staff, contractors) SIS staff, NLM staff, NNLM staff and core set of dedicated users from the Public Health and Toxicology Communities.

1. Determine questions that may need to be addressed. These may include:
   What information needs to be provided? TOXMAP will be retired because it no longer aligns with NLM priorities and because the US EPA now

provides several GIS products that provide similar GIS functionality of TOXMAP.

- When will the information be provided? End of FY2019
- By what method(s) will information be provided? Example: Email to all NLM staff Email, GovD posts, announcement on TOXMAP web site
- If multiple messages are to be sent, by what method(s) and with what frequency? Over a three-month period.
- Are there any potential areas for misunderstanding or concern? None except that core users of TOXMAP will not have a comparable resource available. PLEASE EXPLAIN – YOU SAY ELSEWHERE THAT THE INFORMATION IN TOXNET IS AVAILABLE FROM OTHER SOURCES, AS IS MOST FUNCTIONALITY.

2. Establish what may need to be communicated to internal audiences. This could include:
   - Why is this program or service being retired? TOXMAP will be retired because the US EPA now provides several GIS products that provide similar GIS functionality.
   - What content, if any, will still be available and, if so, why and where? (Options may include archived pages on the NLM website, FTP, the Wayback Machine internet archive, and tape.) US EPA GIS applications and TRI applications; possibly NLM TOXNET TRI
   - What will happen to the staff working on the product or service? Assigned to other areas and projects within NLM/SIS.
   - What staff will be involved in this transition? Colette Hochstein
3. Identify mechanisms to be used for communicating with internal audiences. These may include some or all of the following (Check all that apply):
   - ☒ Emails
   - ☒ Signage
   - ☐ Information delivered at staff meetings
   - ☐ Point of discussion at brown bag luncheons
   - ☐ Town Hall meetings, etc.
   - ☐ Other (Explain) Enter other mechanism(s)
4. Develop and attach a set of Talking Points for the NLM Director TOXMAP has helped users visually explore data primarily from the EPA's Toxics Release Inventory (TRI) and Superfund Programs. TOXMAP also features Canadian NPRI data, U.S. EPA coal plant emissions data, and U.S. commercial nuclear power plants. TOXMAP overlays U.S. Census demographic data, income figures from the U.S. Department of Commerce, and health data from the NCI SEER program. It will be retired at the end of FY2019. the US EPA now provides several GIS products that provide similar GIS functionality.
5. Does the NIH Director or other IC Directors need to be informed? No

   If Yes, check all that apply:

   ☐ The service is produced jointly with another IC or serves an audience of interest to the IC

Comment [SJ([]: Do we need to provide any advanced warning to NIEHS? Are they or their stakeholder communities users of this resource?

☐ The service has high visibility and sunsetting may result in questions, letters, emails to the NIH Director from the public, key stakeholders, Congressional staff, HHS leadership

☒ Other (Please elaborate) SIS has worked for many years with the US EPA regarding the data and functionality of TOXMAP. Their staff should be informed of its status.

B. ***External communication plan*** for users, stakeholders, and the public

1. Who needs to be informed? (Identify stakeholders).
    - Why is this program or service being retired? The US EPA now produces several GIS products (https://www.epa.gov/geospatial/epa-geospatial-applications) that have the similar GIS functionality.
    - What content, if any, will still be available and, if so, why and where? Data used in TOXMAP will be available from other original sources. GIS application users can access them by overlaying the data in their GIS applications. TRI and NPL data: US EPA; Canadian NPRI data from Environment and Climate Change Canada; Nuclear Regulatory Commission publishes the commercial nuclear power plant data; BEA data from the US Department of Commerce; TRI lat/long info from EPA's Facility Registry System (FRS).; coal plant data from EIA Electricity Data Browser; EPA Air Markets Program Data (AMPD) data available from the EPA Clean Air Markets; Cancer and Mortality data available from the US NIH NCI.
    - What will happen to the staff working on the product or service? Assigned to other areas and projects within NLM/SIS

2. Establish what may need to be communicated. This could include—
    - Why is this program or service being retired? The US EPA now produces several GIS products (https://www.epa.gov/geospatial/epa-geospatial-applications) that have the similar GIS functionality.
    - What content, if any, will still be available and, if so, why and where? Data used in TOXMAP will be available from other sources. GIS application users can access them by overlaying the data to the maps. TRI and NPL data: US EPA; Canadian NPRI data from Environment and Climate Change Canada; Nuclear Regulatory Commission publishes the commercial nuclear power plant data; BEA data from the US Department of Commerce; TRI lat/long info from EPA's Facility Registry System (FRS).; coal plant data from EIA Electricity Data Browser; EPA Air Markets Program Data (AMPD) data available from the EPA Clean Air Markets; Cancer and Mortality data available from the US NIH NCI.
    - What will happen to the staff working on the product or service? Assigned to other areas and projects within NLM/SIS
    - How can I or how can my group be involved in this transition? Provide related information as needed.

3. Identify what needs to be completed:
   - ☐ Deliverables Specify
   - ☒ Responsible party or parties for the sunsetting process Colette Hochstein, Florence Chang
   - ☐ Due date 9/30/2019

   Identification of communication channels. These could include (Check all that apply):
   - ☒ emails to stakeholders and users
   - ☐ signage
   - ☐ NLM homepage (public news announcement)
   - ☐ speeches
   - ☒ social media including Facebook, Twitter, LinkedIn, etc.
   - ☒ newsletters/blogs, including *Technical Bulletin*, *NLM in Focus*, *Circulating Now*, *Musings*, etc.
   - ☐ Other (Please Explain) Enter other possible communication channel(s)

4. Determine questions that may need to be addressed, including:
   - What information will be provided? The US EPA now produces several GIS products (https://www.epa.gov/geospatial/epa-geospatial-applications) that have the similar GIS functionality.
   - When will the information be provided? Starting Summer 2019)
   - With what frequency? Monthly
   - Are there potential areas for misunderstanding or concern? Probably not.
   - After informing stakeholders that the site will no longer be accessible, where can they find information once the site is retired? TRI and NPL data: US EPA; Canadian NPRI data from Environment and Climate Change Canada; Nuclear Regulatory Commission publishes the commercial nuclear power plant data; BEA data from the US Department of Commerce; TRI lat/long info from EPA's Facility Registry System (FRS).; coal plant data from EIA Electricity Data Browser; EPA Air Markets Program Data (AMPD) data available from the EPA Clean Air Markets; Cancer and Mortality data available from the US NIH NCI. Links to direct users to these external data sources will be provided on the TOXMAP home page for 6 months prior to the sunset.
   - How will NLM respond to questions and comments? Staff will respond to questions received through customer service emails
   - Is this an issue that may generate media interest? (If so, please include strategies for responding in the plan.) No

IV. **Posting notice on central NLM "sunsetting calendar" (coming soon) on the NLM Wiki.** A notice should be posted on the "NLM resource sunset calendar" immediately following the effective

date of the retirement of the resource. The sunset calendar, which will also be found on the NLM wiki, will serve as an historical record about retired NLM products and services.

V. **Identification of primary point of contact for further information about retired NLM resource.** Provide name and contact information for primary point of contact for retired NLM resource here:

Name	Colette Hochstein, Florence Chang

REQUEST TO RETIRE CARCINOGENIC POTENCY DATABASE (CPDB)

Product owner(s) fill out sections I, III, IV and V. Include documentation with this form.
Record approvals in section II.

I. **Written justification for the retirement of an NLM resource.** Three to six months before sunsetting any NLM resource, a written justification for the retirement of the resource must be prepared. In drafting the justification, the use of statistics is often helpful. Reasons for sunsetting and/or retiring an NLM resource may include (check all that apply):

☒ Low usage

☒ Obsolescence (that is, better products have come along) – whether from NLM or another group

☐ No longer aligned with NLM priorities or mission needs

☒ Incorrect or out-of-date information. If information cannot be updated, then archive the resource

☐ Reallocation of staff to different products because resource is no longer a priority

☐ Cost in relation to value

☒ Other (Please explain) The Carcinogenic Potency Database (CPDB) is an archival database with low and decreasing usage. It provides historical information from the years 1980 - 2011. It is no longer updated. It was created at the University of California, Berkeley, and when they no longer wanted to maintain access to it after it was no longer being built, they asked us to take it. CPDB reports analyses of animal cancer tests on 1547 chemicals. CPDB includes 6540 chronic, long-term animal cancer tests, both positive and negative for carcinogenicity, from the general published literature as well as the National Cancer Institute and the National Toxicology Program (NTP). Such tests were used in support of cancer risk assessments for humans. CPDB was developed by the Carcinogenic Potency Project at the University of California, Berkeley and the Lawrence Berkeley National Laboratory. The usage of CPDB has consistently dropped over the past years to 0.007% of TOXNET usage in FY2018. Of TOXNET's 27,582,034 page views in FY2018, only 1930 page views were for CPDB.

II. **Approval.** This form must be signed by:

- **NLM Division head (within LHC, LO, NCBI, OCCS, SIS, OD)** HFC 11/27/2018

X

Hua Florence Chang
Acting Associate Director, SIS

- Upon approval by NLM division head, forward completed form to Kathy Cravedi, Director, OCPL (kcravedi@nlm.nih.gov), for distribution and approval by:
  - NLM Director Initial Here Date
  - NLM Deputy Director Initial Here Date
  - NLM Communications Director Initial Here Date

III. **Prepare Communications plan for sunsetting the NLM resource.** This document is developed for sharing news about the retirement of the NLM resource with relevant internal and external audiences. Please address the following key elements:

A. ***Internal communication plan*** for NLM staff

1. Identify who needs to be informed? (staff, contractors) Staff are aware of the plan. Additional groups include NNCO, NNLM, and toxicology community via our listserv.
2. Determine questions that may need to be addressed. These may include:
    - What information needs to be provided? ~~That the CPDB was a resource taken from the University of Berkeley after they stopped supporting it and wanted an archival home for a few years.~~ That the CPDB was a resource taken from the University of Berkeley after they stopped supporting it and wanted an archival home for a few years. That the information will be available on NLM's ftp site for 6 months after sunsetting.
    - When will the information be provided? 5/31/2019
    - By what method(s) will information be provided? Example: Email to all NLM staff Post on database web pages, and send to OCPL for distribution.)
    - If multiple messages are to be sent, by what method(s) and with what frequency? One round
    - Are there any potential areas for misunderstanding or concern? none
3. Establish what may need to be communicated to internal audiences. This could include:
    - Why is this program or service being retired? ~~The way it was created at Berkeley does not lend itself to conversion to Bookshelf resource where some TOXNET databases are going. It has not been updated for many years.)~~ The information is outdated and little used. It is not in a form that lends itself to conversion to Bookshelf)
    - What content, if any, will still be available and, if so, why and where? (Options may include archived pages on the NLM website, FTP, the Wayback Machine internet archive, and tape.) The evaluated and annotated content, currently searchable on TOXNET, will no longer be available on TOXNET. The data files (PDFs, text, and web pages) will be compressed as zip files available as downloads on the NLM FTP site. The citations of referenced literatures are available on PubMed.
    - What will happen to the staff working on the product or service? No staff resources used now
    - What staff will be involved in this transition? Florence Chang, Phil Thomas
4. Identify mechanisms to be used for communicating with internal audiences. These may include some or all of the following (Check all that apply):

    ☒ Emails

☒ Signage

☒ Information delivered at staff meetings

☐ Point of discussion at brown bag luncheons

☐ Town Hall meetings, etc.

☒ Other (Explain) listserv

5. Develop and attach a set of Talking Points for the NLM Director ~~Resource was a labor intense one developed by Berkeley staff and when it was terminated we were asked to house the file. Given the move of TOXNET databases to NCBI, this resource is not in a format that can be converted to run there.~~The information is outdated and little used. It is not in a form that lends itself to conversion to Bookshelf). The resource was a labor intensive one developed by Berkeley staff and transitioned to NLM when UC Berkley terminated the project. This resource is not in a format that can be converted to another NLM database or Bookshelf. The data will remain available on NLM's ftp site.
6. Does the NIH Director or other IC Directors need to be informed? No

   If Yes, check all that apply:

   ☐ The service is produced jointly with another IC or serves an audience of interest to the IC

   ☐ The service has high visibility and sunsetting may result in questions, letters, emails to the NIH Director from the public, key stakeholders, Congressional staff, HHS leadership

   ☐ Other (Please elaborate) Enter other reason(s) Director(s) need to be informed

B. ***External communication plan*** for users, stakeholders, and the public

1. Who needs to be informed? (Identify stakeholders).
   - Why is this program or service being retired? ~~Cannot be converted to new format for TOXNET move to NCBI.~~ The information is outdated and little used. Cannot be converted to new format for TOXNET move to NCBI.
   - What content, if any, will still be available and, if so, why and where? ~~None other than journal literature on which it is based is still available.~~ The data will remain available on NLM's ftp site. Journal literature on which it is based is still available via PubMed.
   - What will happen to the staff working on the product or service? No staff work on this other than routine IT deployment /support issues .

2. Establish what may need to be communicated. This could include—
   - Why is this program or service being retired? ~~Cannot be converted to new format for TOXNET move to NCBI.)~~ ~~Will be taken down from TOXNET end May 2019~~ The resource is outdated and little used. It cannot be converted to a new format for other NLM databases or Bookshelf. The resource will be taken down from TOXNET end May 2019

- What content, if any, will still be available and, if so, why and where? ~~None other than journal literature on which it is based is still available. The archived content will be made available in compressed format on NLM FTP server.~~ Journal literature on which it is based is still available in PubMed. The archived content will be made available in compressed format on NLM FTP server.
- What will happen to the staff working on the product or service? No staff
- How can I or how can my group be involved in this transition? Enter possible support option(s)

3. Identify what needs to be completed:
   ☐ Deliverables Specify
   ☒ Responsible party or parties for the sunsetting process TOXNET IT
   ☒ Due date 5/31/20195/31/2019
   Identification of communication channels. These could include (Check all that apply):
   ☒ emails to stakeholders and users
   ☐ signage
   ☒ NLM homepage (public news announcement)
   ☐ speeches
   ☒ social media including Facebook, Twitter, LinkedIn, etc.
   ☒ newsletters/blogs, including *Technical Bulletin*, *NLM in Focus*, *Circulating Now*, *Musings*, etc.
   ☐ Other (Please Explain) Enter other possible communication channel(s)
4. Determine questions that may need to be addressed, including:
   - What information will be provided? Sunset of CPDB
   - When will the information be provided? Starting after approval
   - With what frequency? Enter frequency
   - Are there potential areas for misunderstanding or concern? no
   - After informing stakeholders that the site will no longer be accessible, where can they find information once the site is retired? ~~Not available in its current format. The archived content will be made available in compressed format on NLM FTP server.~~ Journal literature on which it is based is still available in PubMed. The archived content will be made available in compressed format on NLM FTP server.
   - How will NLM respond to questions and comments? Email via customer service system
   - Is this an issue that may generate media interest? (If so, please include strategies for responding in the plan.) No

IV. **Posting notice on central NLM "sunsetting calendar" (coming soon) on the NLM Wiki.** A notice should be posted on the "NLM resource sunset calendar" immediately following the effective

date of the retirement of the resource. The sunset calendar, which will also be found on the NLM wiki, will serve as an historical record about retired NLM products and services.

V. **Identification of primary point of contact for further information about retired NLM resource.** Provide name and contact information for primary point of contact for retired NLM resource here:

Jeanne Gosohorn	Jeanne.goshorn@nih.hhs.govJeanne.goshorn@nih.hhs.gov

From: Chang, Florence (NIH/NLM) [E]
Sent: 22 Mar 2019 14:24:13 +0000
To: Tybaert, Sara (NIH/NLM) [E]
Subject: FW: SIS/NCBI proposal discussions
Attachments: ToxNet_Books_Recommendations_03052019.docx, HSDB PubChem ChemID intergration proposal.docx

Sara,
With David on leave, I'd like you to attend this meeting. Glad to talk abut it on Monday, too.

-----Original Appointment-----
From: Chang, Florence (NIH/NLM) [E]
Sent: Thursday, March 21, 2019 10:17 AM
To: Chang, Florence (NIH/NLM) [E]; Goshorn, Jeanne (NIH/NLM) [E]; Hakkinen, Pertti (NIH/NLM) [E]; Ostell, Jim (NIH/NLM/NCBI) [E]; Backus, Joyce (NIH/NLM) [E]; Gillikin, David (NIH/NLM) [E]; Bolton, Evan (NIH/NLM/NCBI) [E]; Lathrop, Stacy (NIH/NLM/NCBI) [C]; Pruitt, Kim (NIH/NLM/NCBI) [E]; D'Souza, Ivor (NIH/NLM) [E]
Cc: Ma, Wei (NIH/NLM) [E]
Subject: SIS/NCBI proposal discussions
When: Monday, March 25, 2019 3:00 PM-4:00 PM (UTC-05:00) Eastern Time (US & Canada).
Where: Conference room B

I hope we can meet in person before Personal Info I know David Gillikin will not be able to attend. I can fill him in when he returns.

You are welcome to send me agenda items that you'd like to include.

Florence

SIS Full-Text Resources identified for Books

SIS has identified the six resources below as priorities to migrate to Bookshelf. The recommendations modified since February 2018 as well as the status of migrating the content follow:

Resource	Status
AIDSInfo Guidelines	Add pending technical quality of XML sample awaiting from contractors
IRIS	Add pending technical quality of XML directly from EPA – legacy data migrated through PDF conversion using interagency agreement and new and updated content deposited via EPA's own eXtyles configuration
ITER	Add pending legal issues concerning ownership of the content and that ITER can submit directly to Bookshelf using Books Word conversion workflow. NCBI will do a one-time conversion for legacy data, either by XSLT script if we can receive well-formed, valid data or by sending to a vendor. Books is also working directly with TERA collaborators to have them submit their full text toxicological reviews (summarized / compared in ITER) directly to Books as XML. – IARC and NTP currently submitting; ATSDR developing software to submit XML; RIVM exploring how to submit XML directly.
LactMed	Already in production in Books via FTP submission of XML from SIS. If SIS CMS is retired, new and updated files should be submitted directly by NLM-contracted author to Books using Word workflow.
LiverTox	NIDDK has agreed to take on ownership of this content and to submit new and updated files to Bookshelf using Word workflow. NCBI will do a one-time HTML to BITS XML conversion for legacy data. The agreement is currently being discussed so work can begin.
PubMed / PubChem Integration Tasks	**Status**
Provider text extraction of chemical information	Initial discussions with some content providers and tagging vendors about ideal markup of chemical data; ability to implement dependent on content providers and tagging vendor negotiations of level of effort to vendor and costs to content owner, and Books technical review of any resulting XML submissions
Books text extraction of chemical information	Scripting developed for SIS CMS-Books LactMed workflow. Discussions with PubChem about their text extraction and tagging tools
Data indexing in PubMed / PubChem of chemical information	Initial planning discussions for possible implementation starting in summer 2019, dependent on level of effort and developer resources

AIDSInfo Guidelines

This is excellent content and we are in the process of migrating it to Bookshelf. ICF, the contractor responsible for maintaining the SIS site, has provided Books with XML samples. Books has provided structural feedback on these samples that ICF is in the process of addressing.

IRIS

EPA's Integrated Risk Information System publishes assessments of health hazards of chemicals found in the environment as PDFs. SIS is currently copying and pasting the content in these PDFs into their website, with large delays (2 years or more) between the time the assessments are released and updated and the time they are made available or are updated in the TOXNET version of the EPA site. The source data in the TOXNET database is SGML of unusable quality with no DTD included. To address the issue of delay and poor data quality, Bookshelf is in discussions with EPA to directly submit XML for their toxicological reviews. They are working to adapt an eXtyles software configuration to produce BITS XML for their content. We are also discussing a pilot to convert their legacy content from PDF to XML so that there is a target XML sample for the eXtyles software development. To pay for those conversions, we are looking to adapt the current interagency agreement with EPA to process manuscripts to also include this book content. If EPA is unwilling to cover the conversion costs, to migrate the entire collection of 550 assessments by converting from PDF, would be approximately $44,000 (11,000 pages/$4page). I expect it would take 3-6 months to migrate the content using this process, and at least 1 or 2 FTE to QA it over this period. It appears there are 20 assessments under development, so future conversion costs would be roughly $1600 a year (400 pages/$4page) if EPA is unable to develop their own conversion software.

ITER

ITER (International Toxicity Estimates for Risk) is a free Internet database of human health risk values and cancer classifications for over 680 chemicals of environmental concern from multiple organizations worldwide. It is managed by TERA (Toxicology Excellence for Risk Assessment) currently based at the University of Cincinnati. Our scientific reviewer identified some past ethical concerns about TERA regarding legal ownership of the content, that should be fully addressed by NLM and the University of Cincinnati before we accept this content. We also need to address technical and workflow issues before we agree to migrate this content, including an assurance that the content is being regularly maintained and updated, and that we can BITS XML directly from the content owner using the Books Word workflow. If the content owner provides new and updated content via Word, NCBI will do a one-time conversion for legacy data, either by XSLT script if we can receive well-formed, valid data (which will take a technical specialist approximately six weeks or possibly by sending to a vendor if they can convert HTML or text to BITS (~800 records/$4page at $3,600). The current XML generated from the SIS CMS does not meet Books technical standards (including that it does not validate and is not well-formed). In addition to migrating the SIS ITER content, Books has or will work directly with TERA collaborators to have them directly submit their full text toxicological reviews directly to Books in XML. This includes IARC (all monographs are currently included in Books), NTP (all six of their series including the Report on Carcinogens), ATSDR (a portion of their legacy profiles are in Books and they are developing software to submit the rest of their content), RIVM (exploring the ability to submit their ConsExpo Fact Sheets as XML).

LactMed

LactMed contains information on drugs and other chemicals to which breastfeeding mothers may be exposed. This content was migrated to Books in the spring 2018 by building an XSLT converter to transform the SIS XML output from a CMS shared with HSDB to BITS. This process was time-consuming particularly as we needed to add scripting for content not included in the XML but generated via other processes. If the HSDB SIS CMS is retired, we should modify the existing contract with Phil Anderson

who authors the content to directly submit new and updated records to Bookshelf using Books Word template and conversion tools. If possible, this would include the additional data provided only in the SIS CMS, such as chemical structure image, related drug records, and synonyms.

LiverTox

LiverTox, produced in partnership with NIDDK, is a website aiming to provide a comprehensive resource for physicians and clinical / academic researchers who specialize in idiosyncratic drug induced hepatoxicity. After discussion with NIDDK and NLM leadership, NIDDK agreed to address scientific issues with the content and take complete ownership of it, including developing an advisory board and peer review process. NLM and NIDDK are working on a LitArch agreement to include this content in Bookshelf using Books Word workflow. NCBI will do a one-time HTML to XML conversion of legacy data that will take two to three months to complete.

Data Integration with PubMed and PubChem

1) Provider text extraction of chemical information

As possible work with content providers and their vendors to extract chemical information (such as CAS RN and synonyms) and tag it in structured keywords or other relevant elements to ease discoverability and integration of resources. Books has had discussions with Inera, the vendor many toxicology agencies are contracting with to modify a BITS eXtyles configuration for their content, to extract and tag this information per best practices. As other content providers onboard to the Books Word workflow, we will discuss if providers can easily add any of this additional data in our Word templates.

2) Books text extraction of chemical information

Adapt PubChem's text extraction and mapping tools for chemical, drug and disease names for toxicological and chemical resources in Books. As reasonable and reliable, modify XSLT converter scripts to add additional content type markup for key data tables or other such content so these data are machine readable.

3) Data indexing in PubMed / PubChem of chemical information

As necessary modify Books-PubMed scripting and PubMed DTD to support indexing of chemical information (e.g., keywords / MeSH, etc) in PubMed. Where feasible, work with PubChem as necessary, to build related links from these records to PubChem.

HSDB, ChemIDplus, PubChem Integration Proposal

Introduction

The National Library of Medicine (NLM) PubChem, ChemIDplus, and HSDB provide free and reliable chemical and toxicological information for a wide audience.

PubChem is an open chemistry database providing information from over 600 data sources on over 97 million compounds. The data collected in PubChem includes chemical structures, identifiers, chemical and physical properties, biological activities, patents, health, safety, toxicity data and more.

HSDB contains over 6,000 records focusing on the toxicology of potentially hazardous substances, including nanomaterials. It is enhanced with information on human exposure, industrial hygiene, emergency handling procedures, environmental fate, regulatory requirements, and related areas. All data in HSDB are referenced and are derived from a core set of books, government documents, technical reports, selected online databases, and selected primary journal literature. HSDB is peer-reviewed by the Scientific Review Panel (SRP), a committee of experts in the major subject areas within the data bank's scope.

ChemIDplus is a chemical dictionary of over 400,000 chemicals (names, synonyms, and chemical structures). It includes links to NLM and other databases and resources, including federal, state and international agencies.

The integration of HSDB and ChemIDplus into PubChem was initiated in 2018 as part of implementation of the NLM Strategic Plan. PubChem provides a robust and scalable platform for HSDB and ChemIDplus data. Further cooperation amongst these projects related to content creation and review should be explored.

PubChem Challenge

PubChem has powerful computational engines which efficiently and effectively harvest large amounts of data. However, as an aggregator, PubChem must retain original data from its sources. Errors or inconsistencies in that data cannot be corrected. Hence, maintenance of data quality is a substantial challenge for PubChem.

HSDB Challenge

The HSDB content building and review process is arduous. HSDB contains voluminous, comprehensive, and peer-reviewed content; it must continuously contend with:

- A costly content building process requiring manual extraction of data
- Slow growth of data: only 100-200 new chemical records are added yearly
- Slow update of content: just 3-5% of the records are reviewed and updated yearly

- An SRP review process which is costly and inefficient, and which urgently needs to be reimagined. The services NLM requires of HSDB contractors should also be re-evaluated.

ChemIDplus Challenge

ChemIDplus provides high quality original chemical structures for 80% of its chemicals. The collection currently contains 420,000 chemical records, including over 335,000 structures.

- Expanding the coverage of chemical structures to 100% and achieving accuracy and consistency of the chemical structures can be exceedingly difficult.

A Win-Win Proposal: HSDB, ChemIDplus, and PubChem Working Together

In the new paradigm for HSDB content curation, instead of building very large chemical records with many data from many sources (see Appendix 1) one chemical at a time, the Team of HSDB/ChemIDplus/PubChem will extract data, by machine or manually, from data sources and push the data to many chemicals all at once (see Figure 1). Contracts will be needed to curate chemical name/structure relationships (e.g., benzene is c1ccccc1), to add chemical name/classification relationships (e.g., fentanyl is on the DEA Schedule II list), and to curate chemical data/name relationships (e.g., the boiling point of benzene is 88.08 deg C at 760mm Hg). The chemical data will need to have appropriate 'structure' to the content (e.g., controlled vocabulary and consistent data representation) as well as appropriate provenance trail (e.g., citation that includes an appropriate machine-readable identifier such as PMID, DOI, ISSN, ISBN, ORCID, etc., when possible).

Proposed New HSDB Data Flow

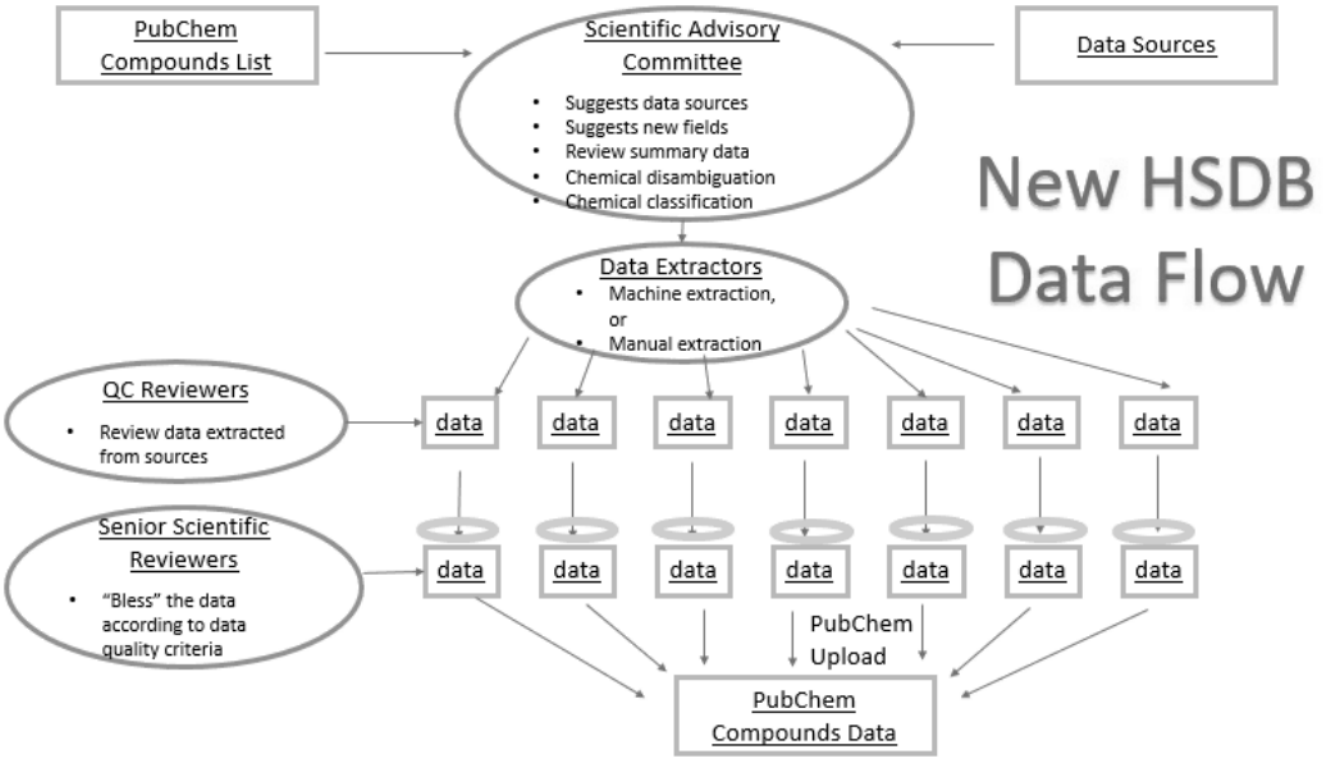

Figure 1. Proposed new HSDB data flow

New HSDB Data Flow Overview

- Establish a new Scientific Advisory Committee (SAC) whose key role is to identify data sources, data types, and data points for inclusion
- Extract data from sources identified by SAC, with data extraction programs, manually, or in conjunction with PubChem
- Data are extracted for all chemicals from that source
- Ensure data are extracted with controlled representation and appropriate provenance trails
- QC Reviewers check the extracted data
- Senior Scientific Reviewers with subject matter expertise reviews the content to meet quality standards
- Submit the new content to PubChem using PubChem Upload System
- Contractor may need to create and maintain a data entry/management system to manage the data and content building process
- NLM will build a tracking system to track, manage, and report the chemical records and fields, data sources, timestamps of updates, etc.

SIS staff working on HSDB

1. Dr. Bert Hakkinen – Senior Toxicologist, GS15, COR Level 2 certified, current COR of HSDB curation contracts, Acting Head of Office of Clinical Toxicology
2. Jeanne Goshorn – Supervisory Tech Info Specialist, GS15, Chief of Biomedical Information Services Branch at SIS, COR Level 2 certified

3. Colette Hochstein – Tech Info Specialist, GS13, responsible for many SIS toxicology and environmental health offerings, COR Level 2 certified

Implementation Details

We propose a phased implementation that spans FY2019 to the end of FY2020.

1. Phase 1 (FY2019 – FY2020): Bridge between the old and the new paradigm
    a. Recompete the two contracts for HSDB content building and peer review
    b. Maintain the SSEUS content management system for data input
    c. Conduct 2-3 Scientific Review Panel (SRP) meetings
    d. Establish the Scientific Advisory Committee (SAC) charter, recruit members
    e. Begin curation using the new paradigm – building data across many chemical records. In HSDB lingo, it is called "data source update" which HSDB team is familiar with.
    f. System requirement: SSEUS content management system is needed in this "bridge" year
2. Phase 2 (after completion of Phase 1, FY2020 on)
    a. Establish a new contract to support the new data building paradigm and data flow
    b. System requirements:
        i. Sunset the SSEUS system
        ii. Data entry system will be the responsibility of the contractor. Functionalities could be partially provided by PubChem.
        iii. NLM will build an administrative module to keep track of the chemical records, status of updates, and other housekeeping data to manage the curation process. This module may also be built into the PubChem Upload System.

Cost Saving Considerations

	Status quo		**New HSDB Data Flow**	
Year 1	SSEUS CMS maintenance	$30,000	SSEUS CMS maintenance	$30,000
	NLM develops a new CMS to support the old process. One-time cost.	$500,000		
	Contract 1 for content curation and scientific review panel meetings	$900,000	Contract 1 for content curation and scientific review panel meetings	$900,000
	Contract 2 for environmental content curation	$420,000	Contract 2 for environmental content curation	$420,000
Year 1 Total		**$1,850,000**		**$1,350,000**
Year 2	Contract 1 for content curation and scientific review panel meetings	$900,000	Contract 1 for content curation	$900,000
	Contract 2 for environmental content curation	$420,000	Scientific Advisory Committee meeting	$70,000

			NLM build a tracking system for managing the curation progress. One-time cost.	$150,000
			Contract 2 for constructing normalized data structure to curate machine readable data	$200,000
Year 2 Total		**$1,320,000**		**$1,320,000**
Year 1-2 Total		**$3,170,000**		**$2,670,000**

Year 3 Total		**$1,320,000**		**$1,170,000**

ChemIDplus Data Flow to Support PubChem

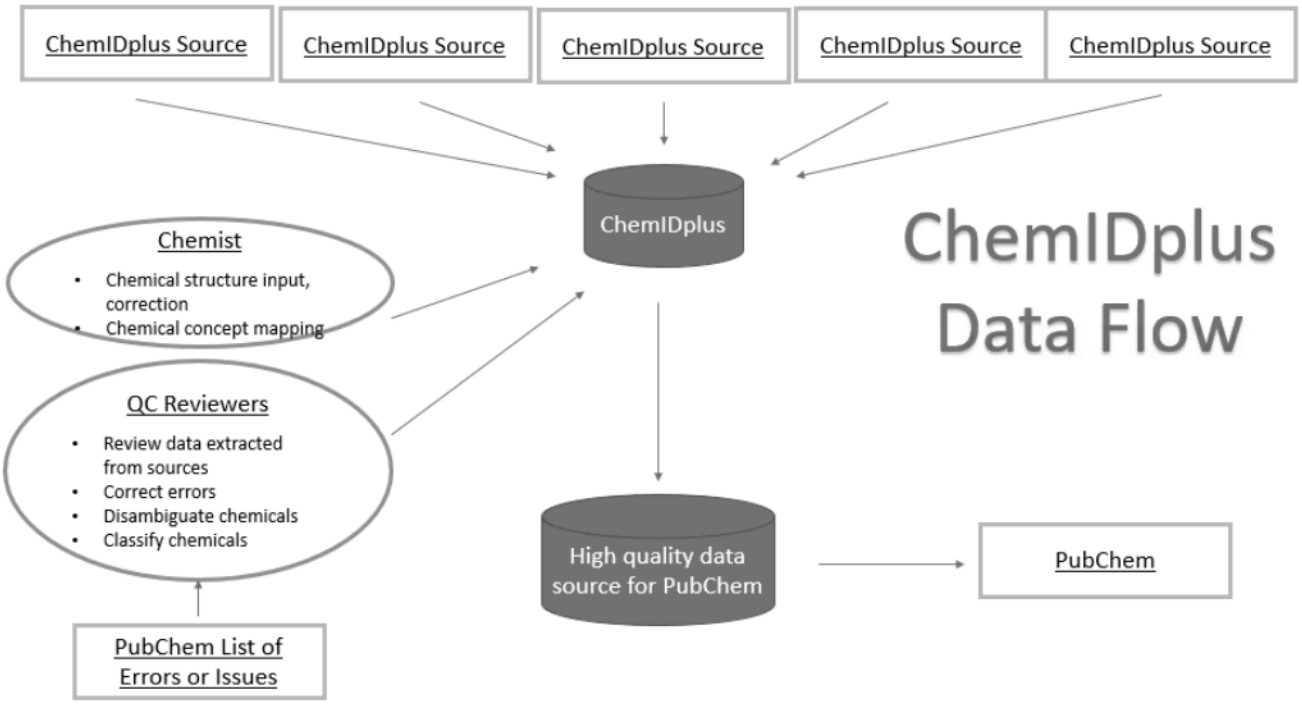

Figure 2. ChemIDplus data flow to support PubChem

ChemIDplus Data Flow Overview

- ChemIDplus uses mostly machine processing for data ingestion, normalization, term mapping, and batch conversion. In the new data flow, the machine processing will continue.
- The ChemID Team and PubChem Team will review the current backend data management system, DB-Maint, to improve efficiency, and eliminate unnecessary or under-utilized functions.
- ChemIDplus will get chemical structures from PubChem. Subject Matter Experts will perform quality control, correct errors, improve structure quality, and classify chemical concepts.
- System requirements:
    - DB-Maint, a java web-based system, allows efficient management of data flow.
    - PubChem and ChemIDplus team shall evaluate the replacement of Oracle database, for example, with PostgreSQL.

SIS Staff working on ChemIDplus

1. Jeanne Goshorn – Supervisory Tech Info Specialist, GS15, Chief of Biomedical Information Services Branch at SIS, COR Level 2 certified
2. Ying Sun – Computer Scientist, GS13, MS in chemistry, and computer science, current COR of ChemIDplus contracts, COR Level 2 certified
3. Meng Cheng (new hire) – Chemist, GS12, PhD in chemistry, MS in computer science, 15-year experience working on ChemIDplus

Cost Saving Considerations

	Status quo		New ChemID data flow	
Year 1	Contract 1 Interface software development database development	$235,000	Contract 1 Interface software development database development	$235,000
	Contract 2 Data & structure curation	$198,000	Contract 2 Data & structure curation	$198,000
	Contract 3 Database development	$20,000	Contract 3 Database development	$20,000
	Biovia	$10,000	Biovia	$10,000
	Oracle	$5,262	Oracle	$5,262
Year 1 Total		**$468,262**		**$468,262**
Year 2	Contract 1 software development	$235,000	Contract 1 data, structure curation, Subject matter experts (chemists)	$420,000
	Contract 2 Data & structure curation	$198,000	Contract 2 Database development	$20,000
	Contract 3 Database development	$20,000		
	Biovia	$10,000	Biovia	$10,000
	Oracle	$5,262	PostgreSQL	$0
Year 2 Total		**$468,262**		**$450,000**
Year 1-2 Total		**$936,524**		**$918,262**

Conclusion

Outcome for PubChem

- ✓ ChemIDplus serves as the “curated arm” of PubChem
- ✓ Inconsistent and erroneous PubChem data is corrected/validated in ChemIDplus, allowing the latter to serve as PubChem’s vetted core data, thus improving PubChem’s overall data quality.
- ✓ Inconsistent and erroneous PubChem data is corrected/validated in HSDB, thus expanding and improving PubChem’s overall data quality

Outcome for HSDB

- ✓ More efficient and effective record building process via a new approach to support from contractors
- ✓ More efficient and effective record building process via a retooled scientific advisory process that advises solely on "data sources" and "data types"
- ✓ Significantly more data reviewed by senior subject matter expert reviewers
- ✓ Content becomes "branded"
- ✓ Technology and chemical informatics knowledge transfer from PubChem, replacing manual data extraction with machine data harvesting
- ✓ Collection exponentially expanded.

Outcome for ChemIDplus

- ✓ Collaborating with PubChem will improve the accuracy and consistency of the chemical structures
- ✓ Increase the collection of chemical records and structures
- ✓ Content becomes "branded"

Benefits for NLM

As noted by NLM Director Dr. Patricia Brennan, "The National Library of Medicine takes seriously the enormous public trust awarded us worldwide for the quality and integrity of our data and information."

Focused collaboration amongst these three widely-known and used NLM resources will contribute to the Library's Strategic Goal to "connect the resources of a digital research enterprise," to "accelerate the speed and precision of discovery," and to "become a platform for biomedical discovery and data-powered health."

Streamlining and modernizing how these offerings are built and maintained will appreciably benefit both the Library and its many users.

https://www.nlm.nih.gov/pubs/plan/lrp17/NLM_StrategicReport2017_2027.pdf

Proposed Management Structure

Having the three project teams in one organization will be optimal.

- ✓ Ease of management for contracts and employees
- ✓ Shared vision
- ✓ Shared resources
- ✓ Common technology platform
- ✓ Outreach and promotion to the same audience groups

Subject: SIS/NCBI proposals

Joyce, Ivor, Florence,

Attached are two proposals from NCBI about the suggested changes to the ToxNet dataflows for the end state after the transition. My understanding is that the authors, Stacy and Evan, have discussed these with Florence and her team, but I don't think we've really talked about this yet in our bigger group of affected divisions.

I think it's important for all of us to look these over, and see if this looks like a promising and reasonable direction to you all. Obviously there are plenty of details to still be worked out, but we didn't want to spend more time on it unless it looked like the direction you all wanted to go.

HSDB, ChemIDplus, PubChem Integration Proposal

Introduction

The National Library of Medicine (NLM) PubChem, ChemIDplus, and HSDB provide free and reliable chemical and toxicological information for a wide audience.

PubChem is an open chemistry database providing information from over 600 data sources on over 97 million compounds. The data collected in PubChem includes chemical structures, identifiers, chemical and physical properties, biological activities, patents, health, safety, toxicity data and more.

HSDB contains over 6,000 records focusing on the toxicology of potentially hazardous substances, including nanomaterials. It is enhanced with information on human exposure, industrial hygiene, emergency handling procedures, environmental fate, regulatory requirements, and related areas. All data in HSDB are referenced and are derived from a core set of books, government documents, technical reports, selected online databases, and selected primary journal literature. HSDB is peer-reviewed by the Scientific Review Panel (SRP), a committee of experts in the major subject areas within the data bank's scope.

ChemIDplus is a chemical dictionary of over 400,000 chemicals (names, synonyms, and chemical structures). It includes links to NLM and other databases and resources, including federal, state and international agencies.

The integration of HSDB and ChemIDplus into PubChem was initiated in 2018 as part of implementation of the NLM Strategic Plan. PubChem provides a robust and scalable platform for HSDB and ChemIDplus data. Further cooperation amongst these projects related to content creation and review should be explored.

PubChem Challenge

PubChem has powerful computational engines which efficiently and effectively harvest large amounts of data. However, as an aggregator, PubChem must retain original data from its sources. Errors or inconsistencies in that data cannot be corrected. Hence, maintenance of data quality is a substantial challenge for PubChem.

HSDB Challenge

The HSDB content building and review process is arduous. HSDB contains voluminous, comprehensive, and peer-reviewed content; it must continuously contend with:

- A costly content building process requiring manual extraction of data
- Slow growth of data: only 100-200 new chemical records are added yearly
- Slow update of content: just 3-5% of the records are reviewed and updated yearly

- An SRP review process which is costly and inefficient, and which urgently needs to be reimagined. The services NLM requires of HSDB contractors should also be re-evaluated.

ChemIDplus Challenge

ChemIDplus provides high quality original chemical structures for 80% of its chemicals. The collection currently contains 420,000 chemical records, including over 335,000 structures.

- Expanding the coverage of chemical structures to 100% and achieving accuracy and consistency of the chemical structures can be exceedingly difficult.

A Win-Win Proposal: HSDB, ChemIDplus, and PubChem Working Together

In the new paradigm for HSDB content curation, instead of building very large chemical records with many data from many sources (see Appendix 1) one chemical at a time, the Team of HSDB/ChemIDplus/PubChem will extract data, by machine or manually, from data sources and push the data to many chemicals all at once (see Figure 1). Contracts will be needed to curate chemical name/structure relationships (e.g., benzene is c1ccccc1), to add chemical name/classification relationships (e.g., fentanyl is on the DEA Schedule II list), and to curate chemical data/name relationships (e.g., the boiling point of benzene is 88.08 deg C at 760mm Hg). The chemical data will need to have appropriate 'structure' to the content (e.g., controlled vocabulary and consistent data representation) as well as appropriate provenance trail (e.g., citation that includes an appropriate machine-readable identifier such as PMID, DOI, ISSN, ISBN, ORCID, etc., when possible).

Proposed New HSDB Data Flow

Conclusion

Outcome for PubChem

- ✓ ChemIDplus serves as the “curated arm” of PubChem
- ✓ Inconsistent and erroneous PubChem data is corrected/validated in ChemIDplus, allowing the latter to serve as PubChem’s vetted core data, thus improving PubChem’s overall data quality.
- ✓ Inconsistent and erroneous PubChem data is corrected/validated in HSDB, thus expanding and improving PubChem’s overall data quality

Outcome for HSDB

- ✓ More efficient and effective record building process via a new approach to support from contractors
- ✓ More efficient and effective record building process via a retooled scientific advisory process that advises solely on "data sources" and "data types"
- ✓ Significantly more data reviewed by senior subject matter expert reviewers
- ✓ Content becomes "branded"
- ✓ Technology and chemical informatics knowledge transfer from PubChem, replacing manual data extraction with machine data harvesting
- ✓ Collection exponentially expanded.

Outcome for ChemIDplus

- ✓ Collaborating with PubChem will improve the accuracy and consistency of the chemical structures
- ✓ Increase the collection of chemical records and structures
- ✓ Content becomes "branded"

Benefits for NLM

As noted by NLM Director Dr. Patricia Brennan, "The National Library of Medicine takes seriously the enormous public trust awarded us worldwide for the quality and integrity of our data and information."

Focused collaboration amongst these three widely-known and used NLM resources will contribute to the Library's Strategic Goal to "connect the resources of a digital research enterprise," to "accelerate the speed and precision of discovery," and to "become a platform for biomedical discovery and data-powered health."

Streamlining and modernizing how these offerings are built and maintained will appreciably benefit both the Library and its many users.

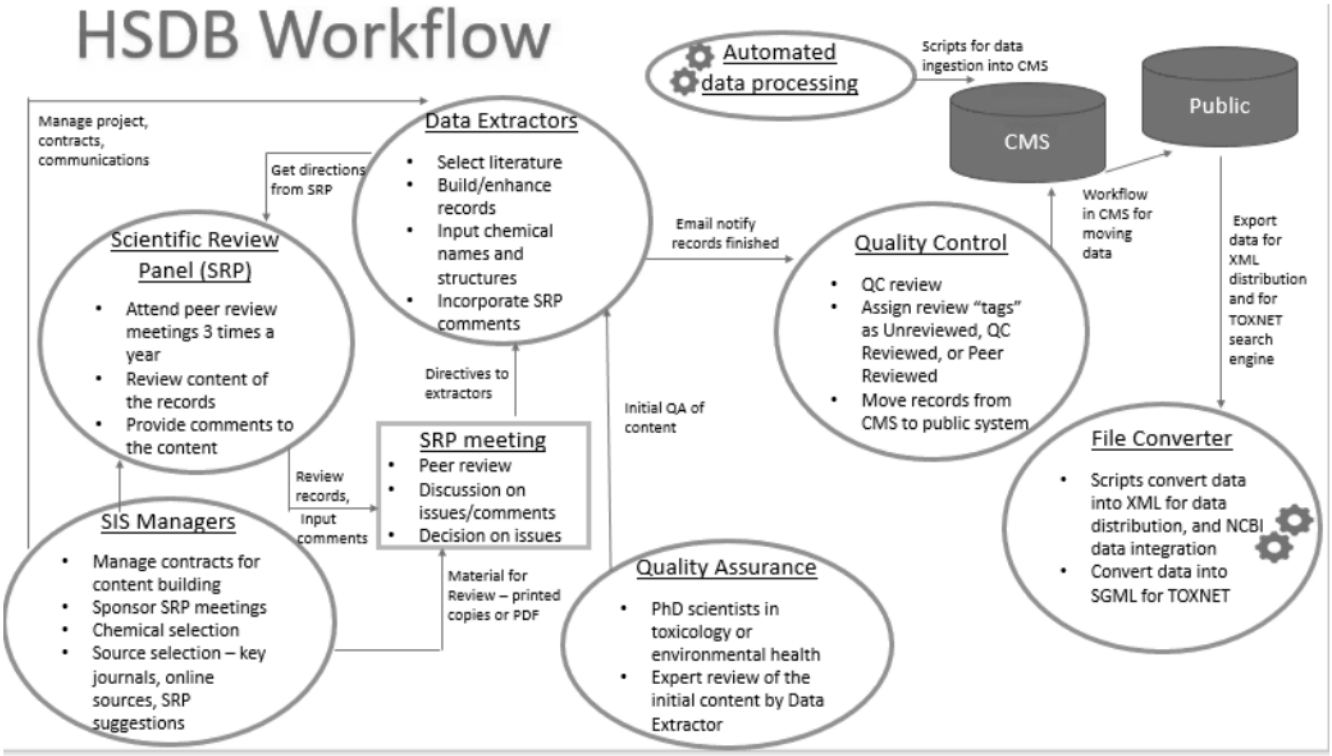
https://www.nlm.nih.gov/pubs/plan/lrp17/NLM_StrategicReport2017_2027.pdf

Proposed Management Structure

Having the three project teams in one organization will be optimal.

- ✓ Ease of management for contracts and employees
- ✓ Shared vision
- ✓ Shared resources
- ✓ Common technology platform
- ✓ Outreach and promotion to the same audience groups

Appendix 1. Current HSDB Workflow



SIS Full-Text Resources identified for Books

SIS has identified the six resources below as priorities to migrate to Bookshelf. The recommendations modified since February 2018 as well as the status of migrating the content follow:

Resource	Status
AIDSInfo Guidelines	Add pending technical quality of XML sample awaiting from contractors
IRIS	Add pending technical quality of XML directly from EPA – legacy data migrated through PDF conversion using interagency agreement and new and updated content deposited via EPA's own eXtyles configuration
ITER	Add pending legal issues concerning ownership of the content and that ITER can submit directly to Bookshelf using Books Word conversion workflow. NCBI will do a one-time conversion for legacy data, either by XSLT script if we can receive well-formed, valid data or by sending to a vendor. Books is also working directly with TERA collaborators to have them submit their full text toxicological reviews (summarized / compared in ITER) directly to Books as XML. – IARC and NTP currently submitting; ATSDR developing software to submit XML; RIVM exploring how to submit XML directly.
LactMed	Already in production in Books via FTP submission of XML from SIS. If SIS CMS is retired, new and updated files should be submitted directly by NLM-contracted author to Books using Word workflow.
LiverTox	NIDDK has agreed to take on ownership of this content and to submit new and updated files to Bookshelf using Word workflow. NCBI will do a one-time HTML to BITS XML conversion for legacy data. The agreement is currently being discussed so work can begin.
PubMed / PubChem Integration Tasks	**Status**
Provider text extraction of chemical information	Initial discussions with some content providers and tagging vendors about ideal markup of chemical data; ability to implement dependent on content providers and tagging vendor negotiations of level of effort to vendor and costs to content owner, and Books technical review of any resulting XML submissions
Books text extraction of chemical information	Scripting developed for SIS CMS-Books LactMed workflow. Discussions with PubChem about their text extraction and tagging tools
Data indexing in PubMed / PubChem of chemical information	Initial planning discussions for possible implementation starting in summer 2019, dependent on level of effort and developer resources

AIDSInfo Guidelines

This is excellent content and we are in the process of migrating it to Bookshelf. ICF, the contractor responsible for maintaining the SIS site, has provided Books with XML samples. Books has provided structural feedback on these samples that ICF is in the process of addressing.

IRIS

EPA's Integrated Risk Information System publishes assessments of health hazards of chemicals found in the environment as PDFs. SIS is currently copying and pasting the content in these PDFs into their website, with large delays (2 years or more) between the time the assessments are released and updated and the time they are made available or are updated in the TOXNET version of the EPA site. The source data in the TOXNET database is SGML of unusable quality with no DTD included. To address the issue of delay and poor data quality, Bookshelf is in discussions with EPA to directly submit XML for their toxicological reviews. They are working to adapt an eXtyles software configuration to produce BITS XML for their content. We are also discussing a pilot to convert their legacy content from PDF to XML so that there is a target XML sample for the eXtyles software development. To pay for those conversions, we are looking to adapt the current interagency agreement with EPA to process manuscripts to also include this book content. If EPA is unwilling to cover the conversion costs, to migrate the entire collection of 550 assessments by converting from PDF, would be approximately $44,000 (11,000 pages/$4page). I expect it would take 3-6 months to migrate the content using this process, and at least 1 or 2 FTE to QA it over this period. It appears there are 20 assessments under development, so future conversion costs would be roughly $1600 a year (400 pages/$4page) if EPA is unable to develop their own conversion software.

ITER

ITER (International Toxicity Estimates for Risk) is a free Internet database of human health risk values and cancer classifications for over 680 chemicals of environmental concern from multiple organizations worldwide. It is managed by TERA (Toxicology Excellence for Risk Assessment) currently based at the University of Cincinnati. Our scientific reviewer identified some past ethical concerns about TERA regarding legal ownership of the content, that should be fully addressed by NLM and the University of Cincinnati before we accept this content. We also need to address technical and workflow issues before we agree to migrate this content, including an assurance that the content is being regularly maintained and updated, and that we can BITS XML directly from the content owner using the Books Word workflow. If the content owner provides new and updated content via Word, NCBI will do a one-time conversion for legacy data, either by XSLT script if we can receive well-formed, valid data (which will take a technical specialist approximately six weeks or possibly by sending to a vendor if they can convert HTML or text to BITS (~800 records/$4page at $3,600). The current XML generated from the SIS CMS does not meet Books technical standards (including that it does not validate and is not well-formed). In addition to migrating the SIS ITER content, Books has or will work directly with TERA collaborators to have them directly submit their full text toxicological reviews directly to Books in XML. This includes IARC (all monographs are currently included in Books), NTP (all six of their series including the Report on Carcinogens), ATSDR (a portion of their legacy profiles are in Books and they are developing software to submit the rest of their content), RIVM (exploring the ability to submit their ConsExpo Fact Sheets as XML).

LactMed

LactMed contains information on drugs and other chemicals to which breastfeeding mothers may be exposed. This content was migrated to Books in the spring 2018 by building an XSLT converter to transform the SIS XML output from a CMS shared with HSDB to BITS. This process was time-consuming particularly as we needed to add scripting for content not included in the XML but generated via other processes. If the HSDB SIS CMS is retired, we should modify the existing contract with Phil Anderson

who authors the content to directly submit new and updated records to Bookshelf using Books Word template and conversion tools. If possible, this would include the additional data provided only in the SIS CMS, such as chemical structure image, related drug records, and synonyms.

LiverTox

LiverTox, produced in partnership with NIDDK, is a website aiming to provide a comprehensive resource for physicians and clinical / academic researchers who specialize in idiosyncratic drug induced hepatoxicity. After discussion with NIDDK and NLM leadership, NIDDK agreed to address scientific issues with the content and take complete ownership of it, including developing an advisory board and peer review process. NLM and NIDDK are working on a LitArch agreement to include this content in Bookshelf using Books Word workflow. NCBI will do a one-time HTML to XML conversion of legacy data that will take two to three months to complete.

Data Integration with PubMed and PubChem

1) Provider text extraction of chemical information

As possible work with content providers and their vendors to extract chemical information (such as CAS RN and synonyms) and tag it in structured keywords or other relevant elements to ease discoverability and integration of resources. Books has had discussions with Inera, the vendor many toxicology agencies are contracting with to modify a BITS eXtyles configuration for their content, to extract and tag this information per best practices. As other content providers onboard to the Books Word workflow, we will discuss if providers can easily add any of this additional data in our Word templates.

2) Books text extraction of chemical information

Adapt PubChem's text extraction and mapping tools for chemical, drug and disease names for toxicological and chemical resources in Books. As reasonable and reliable, modify XSLT converter scripts to add additional content type markup for key data tables or other such content so these data are machine readable.

3) Data indexing in PubMed / PubChem of chemical information

As necessary modify Books-PubMed scripting and PubMed DTD to support indexing of chemical information (e.g., keywords / MeSH, etc) in PubMed. Where feasible, work with PubChem as necessary, to build related links from these records to PubChem.

Subject: RE: sis chem/tox products and Bookshelf review.

David,
All very good questions! Many of them came up in the meeting yesterday to which I invited Sara so she could hear the debate. You can talk to her about it, but the main outcome is that Evan, with help from the team I'm sure, will be coming up with a new proposal to address many of the concerns you mention.

I clearly stated that the SIS staff are going to be part of LO and OCCS, not NCBI.

I would like more information about HSDB and what other similar products are out there. Bert said that we've done it for 40 years and there are other products, but was vague about overlap. Jim and I and others tried to overcome the "more is always better" approach clearly favored by some in the room who haven't had to manage resources very closely.

Dianne has a list of SIS contracts and is looking to map them to this chem/tox draft.

As far as bookshelf, we agreed with the recommendations in general, with emphasis that NLM isn't going to pay for content or technical work for bookshelf items.

Subject: RE: sis chem/tox products and Bookshelf review.

Joyce

Attached is a copy of the HSDB/CHEMIDPLUS/PUBCHEM proposal from Evan. It has comments I've made – really questions that struck me as I read it.

In case you need some input from me while I'm on leave, here are some thoughts. Current emails sound like a meeting may be set up while I'm out.

1. LO needs a much better understanding of the current HSDB and ChemIdPlus workflows and systems in place. In particular, we need to understand the current systems in place and the contracts that support them.
    - The proposal suggests that both input systems need to be overhauled. LO needs to know the implications of having a contractor do this work, and how/if it fits into security and cloud issues.
2. There is a need for a timeline to identify how long the current HSDB and ChemIdPlus presentations systems are needed.
    - If PubChem is to be the primary presentation system in the long term, we need to know if HSDB and ChemIdPlus data can be easily filtered in order for users of these products to get to that specific data (since it is different from other data in PubChem).
    - It's not clear if ChemIdPlus will presented only by PubChem or if it's user interface will still be needed.
3. Background on the current HSDB contracts (there seem to be 2) and the ChemIdPlus contract is needed.
    - Long term we could see if these contracts need to be separate, and if any of them could include chemical data support for MeSH.
4. The scope of the current HSDB Scientific Review Panel (SRP) needs to be understood and how it is different from the proposed Scientific Advisory Committee (SAC), which sounds like a FACA. The idea of setting up a new FACA would require some serious review, and is probably not a simple thing to do (and definitely not simple to administer). There should probably be an LO/NCIB/SIS discussion about what is really needed and therefore what vehicle would serve this purpose.
    - We also need to know what the current review process is for recommending data sources to HSDB, what type of agreements must be put in place, and how any current agreement documentation is maintained.
5. The reporting structure for SIS staff still needs to be sorted out. I've tried looking at the SIS staff directory online (web version and SharePoint version). None of them are up to date, so I can't tell how many SIS staff are really involved in the chemical data or if the 5 mentioned in the proposal is it. For BSD, I also need to know what products and staff on the drug information side could be coming to BSD.

Very helpful. Your early sense that we need to pivot to just grow this work, have you join, and not launch another group is right on.

After talking with Florence this morning for 45 min, I'm going to recommend that Jim, Florence and I have a meeting. Cold involve you and others. I think we will need a written response to their chem/tox proposal, so it would be great if you could think about what you would consider putting in that, considering the email conversation. I think Books is fine.

Subject: sis chem/tox products and Bookshelf review.

I talked with Stacy Lathrop today about the Bookshelf review work that had been by NCBI in the past year. This work is mentioned in the reports on the NCBI/SIS Toxnet working group wiki.

They did a full review, including the concept of whether they should take the content at all for each SIS Tox/Chem product. Basically, they determined if BookShelf should take the retrospective content (already in the SIS product and would need to be converted) and if they should take the content prospectively. The review identified that the SIS products had useful content, and determined the issues and/problems that would need resolution.

The prospective content idea requires that the source provided be responsible to meeting the standard BookShelf requirements, including providing acceptable XML data at the provider's cost. The source provider is treated like any other standard BookShelf content provider. This part wasn't clear stated in the documents on the wiki site, and clears up the potential costs for future content – the data provider has to carry that burden.

Subject: Status of SIS sunset requests

Jerry,

You approved sunset plan for CHIRR, ToxMystery, and GeneEd. We are working on Letter of Agreement with Society of Toxicology for them to take the archived version of ToxLearn. There are two remaining ones, ToxMap, and CPDB. We provided additional information and revised sunset plan, attached with this email. There will be two more plans, one for Arctic Health, and another one for American Indian Health, ready for you to review. Let us know if you want to wait for the new sunset system to go live to process these two new ones.

Thanks!

Florence

REQUEST TO RETIRE NLM TOXMAP

Product owner(s) fill out sections I, III, IV and V. Include documentation with this form.
Record approvals in section II.

I. **Written justification for the retirement of an NLM resource.** Three to six months before sunsetting any NLM resource, a written justification for the retirement of the resource must be prepared. In drafting the justification, the use of statistics is often helpful. Reasons for sunsetting and/or retiring an NLM resource may include (check all that apply):

☐ Low usage

☐ Obsolescence (that is, better products have come along) – whether from NLM or another group

☒ No longer aligned with NLM priorities or mission needs

☐ Incorrect or out-of-date information. If information cannot be updated, then archive the resource

☒ Reallocation of staff to different products because resource is no longer a priority

☒ Cost in relation to value

☒ Other (Please explain) The US EPA now produces several GIS products and visualization applications (https://www.epa.gov/geospatial/epa-geospatial-applications) that have the similar GIS functionality, except the ability to search TOXNET from within the GIS tools. This was a unique feature in TOXMAP-classic, which was retired due to the obsolete technology platform. The new version of TOXMAP does not have this feature either. To make the new TOXMAP to have this feature will require major investment in software development. We cannot justify the effort because the usage of this feature was very low, averaging about 400 searches a year.

II. **Approval.** This form must be signed by:

- NLM Division head (within LHC, LO, NCBI, OCCS, SIS, OD) HFC 3/26/2019

- Upon approval by NLM division head, forward completed form to Kathy Cravedi, Director, OCPL (kcravedi@nlm.nih.gov), for distribution and approval by:
  NLM Director Initial Here Date
  NLM Deputy Director JS 3/27/2019
  NLM Communications Director Initial Here Date

III. **Prepare Communications plan for sunsetting the NLM resource.** This document is developed for sharing news about the retirement of the NLM resource with relevant internal and external audiences. Please address the following key elements:

A. ***Internal communication plan*** for NLM staff. Identify who needs to be informed? (staff, contractors) SIS staff, NLM staff, NNLM staff and core set of dedicated users from the Public Health and Toxicology Communities.

1. Determine questions that may need to be addressed. These may include:
   What information needs to be provided? TOXMAP will be retired because it no longer aligns with NLM priorities and because the US EPA now

provides several GIS products that provide similar GIS functionality of TOXMAP.

- When will the information be provided? **End of FY2019**
- By what method(s) will information be provided? Example: Email to all NLM staff Email, GovD posts, announcement on TOXMAP web site
- If multiple messages are to be sent, by what method(s) and with what frequency? Over a three-month period.
- Are there any potential areas for misunderstanding or concern? None except the non-technical users of TOXMAP may have a high learning curve to transition to the EPA GIS tools.

2. Establish what may need to be communicated to internal audiences. This could include:
    - Why is this program or service being retired? TOXMAP will be retired because the US EPA now provides several GIS products that provide similar GIS functionality.
    - What content, if any, will still be available and, if so, why and where? (Options may include archived pages on the NLM website, FTP, the Wayback Machine internet archive, and tape.) US EPA GIS applications and TRI applications; possibly NLM TOXNET TRI
    - What will happen to the staff working on the product or service? Assigned to other areas and projects within NLM/SIS.
    - What staff will be involved in this transition? Colette Hochstein
3. Identify mechanisms to be used for communicating with internal audiences. These may include some or all of the following (Check all that apply):

    ☒ Emails

    ☒ Signage

    ☐ Information delivered at staff meetings

    ☐ Point of discussion at brown bag luncheons

    ☐ Town Hall meetings, etc.

    ☐ Other (Explain) Enter other mechanism(s)
4. Develop and attach a set of Talking Points for the NLM Director TOXMAP has helped users visually explore data primarily from the EPA's Toxics Release Inventory (TRI) and Superfund Programs. TOXMAP also features Canadian NPRI data, U.S. EPA coal plant emissions data, and U.S. commercial nuclear power plants. TOXMAP overlays U.S. Census demographic data, income figures from the U.S. Department of Commerce, and health data from the NCI SEER program. It will be retired at the end of FY2019. the US EPA now provides several GIS products that provide similar GIS functionality.
5. Does the NIH Director or other IC Directors need to be informed? Yes

    If Yes, check all that apply:

    ☒ The service is produced jointly with another IC or serves an audience of interest to the IC

☐ The service has high visibility and sunsetting may result in questions, letters, emails to the NIH Director from the public, key stakeholders, Congressional staff, HHS leadership

☒ Other (Please elaborate) NIEHS Director should be notified as NIEHS serves user communities that have interest in TOXMAP. SIS has also worked for many years with the US EPA regarding the data and functionality of TOXMAP. Their staff should be informed of its status.

B. ***External communication plan*** for users, stakeholders, and the public

1. Who needs to be informed? (Identify stakeholders).
    - Why is this program or service being retired? The US EPA now produces several GIS products (https://www.epa.gov/geospatial/epa-geospatial-applications) that have the similar GIS functionality.
    - What content, if any, will still be available and, if so, why and where? Data used in TOXMAP will be available from other original sources. GIS application users can access them by overlaying the data in their GIS applications. TRI and NPL data: US EPA; Canadian NPRI data from Environment and Climate Change Canada; Nuclear Regulatory Commission publishes the commercial nuclear power plant data; BEA data from the US Department of Commerce; TRI lat/long info from EPA's Facility Registry System (FRS).; coal plant data from EIA Electricity Data Browser; EPA Air Markets Program Data (AMPD) data available from the EPA Clean Air Markets; Cancer and Mortality data available from the US NIH NCI.
    - What will happen to the staff working on the product or service? Assigned to other areas and projects within NLM/SIS

2. Establish what may need to be communicated. This could include—
    - Why is this program or service being retired? The US EPA now produces several GIS products (https://www.epa.gov/geospatial/epa-geospatial-applications) that have the similar GIS functionality.
    - What content, if any, will still be available and, if so, why and where? Data used in TOXMAP will be available from other sources. GIS application users can access them by overlaying the data to the maps. TRI and NPL data: US EPA; Canadian NPRI data from Environment and Climate Change Canada; Nuclear Regulatory Commission publishes the commercial nuclear power plant data; BEA data from the US Department of Commerce; TRI lat/long info from EPA's Facility Registry System (FRS).; coal plant data from EIA Electricity Data Browser; EPA Air Markets Program Data (AMPD) data available from the EPA Clean Air Markets; Cancer and Mortality data available from the US NIH NCI.
    - What will happen to the staff working on the product or service? Assigned to other areas and projects within NLM/SIS
    - How can I or how can my group be involved in this transition? Provide related information as needed.

3. Identify what needs to be completed:

☐ Deliverables Specify

☒ Responsible party or parties for the sunsetting process Colette Hochstein, Florence Chang

☐ Due date 9/30/2019

Identification of communication channels. These could include (Check all that apply):

☒ emails to stakeholders and users

☐ signage

☐ NLM homepage (public news announcement)

☐ speeches

☒ social media including Facebook, Twitter, LinkedIn, etc.

☒ newsletters/blogs, including *Technical Bulletin*, *NLM in Focus*, *Circulating Now*, *Musings*, etc.

☐ Other (Please Explain) Enter other possible communication channel(s)

4. Determine questions that may need to be addressed, including:
   - What information will be provided? The US EPA now produces several GIS products (https://www.epa.gov/geospatial/epa-geospatial-applications) that have the similar GIS functionality.
   - When will the information be provided? Starting Summer 2019)
   - With what frequency? Monthly
   - Are there potential areas for misunderstanding or concern? Probably not.
   - After informing stakeholders that the site will no longer be accessible, where can they find information once the site is retired? TRI and NPL data: US EPA; Canadian NPRI data from Environment and Climate Change Canada; Nuclear Regulatory Commission publishes the commercial nuclear power plant data; BEA data from the US Department of Commerce; TRI lat/long info from EPA's Facility Registry System (FRS).; coal plant data from EIA Electricity Data Browser; EPA Air Markets Program Data (AMPD) data available from the EPA Clean Air Markets; Cancer and Mortality data available from the US NIH NCI. Links to direct users to these external data sources will be provided on the TOXMAP home page for 6 months prior to the sunset.
   - How will NLM respond to questions and comments? Staff will respond to questions received through customer service emails
   - Is this an issue that may generate media interest? (If so, please include strategies for responding in the plan.) No

IV. **Posting notice on central NLM "sunsetting calendar" (coming soon) on the NLM Wiki.** A notice should be posted on the "NLM resource sunset calendar" immediately following the effective

date of the retirement of the resource. The sunset calendar, which will also be found on the NLM wiki, will serve as an historical record about retired NLM products and services.

V. **Identification of primary point of contact for further information about retired NLM resource.** Provide name and contact information for primary point of contact for retired NLM resource here:

Name	Colette Hochstein, Florence Chang

REQUEST TO RETIRE CARCINOGENIC POTENCY DATABASE (CPDB)

Product owner(s) fill out sections I, III, IV and V. Include documentation with this form.
Record approvals in section II.

I. **Written justification for the retirement of an NLM resource.** Three to six months before sunsetting any NLM resource, a written justification for the retirement of the resource must be prepared. In drafting the justification, the use of statistics is often helpful. Reasons for sunsetting and/or retiring an NLM resource may include (check all that apply):

☒ Low usage

☒ Obsolescence (that is, better products have come along) – whether from NLM or another group

☐ No longer aligned with NLM priorities or mission needs

☒ Incorrect or out-of-date information. If information cannot be updated, then archive the resource

☐ Reallocation of staff to different products because resource is no longer a priority

☐ Cost in relation to value

☒ Other (Please explain) The Carcinogenic Potency Database (CPDB) is an archival database with low and decreasing usage. It provides historical information from the years 1980 - 2011. It is no longer updated. It was created at the University of California, Berkeley, and when they no longer wanted to maintain access to it after it was no longer being built, they asked us to take it. CPDB reports analyses of animal cancer tests on 1547 chemicals. CPDB includes 6540 chronic, long-term animal cancer tests, both positive and negative for carcinogenicity, from the general published literature as well as the National Cancer Institute and the National Toxicology Program (NTP). Such tests were used in support of cancer risk assessments for humans. CPDB was developed by the Carcinogenic Potency Project at the University of California, Berkeley and the Lawrence Berkeley National Laboratory. The usage of CPDB has consistently dropped over the past years to 0.007% of TOXNET usage in FY2018. Of TOXNET's 27,582,034 page views in FY2018, only 1930 page views were for CPDB.

II. **Approval.** This form must be signed by:

- **NLM Division head (within LHC, LO, NCBI, OCCS, SIS, OD)** HFC 3/26/2019

- Upon approval by NLM division head, forward completed form to Kathy Cravedi, Director, OCPL (kcravedi@nlm.nih.gov), for distribution and approval by:

  NLM Director Initial Here Date

  NLM Deputy Director JS 3/27/2019

  NLM Communications Director Initial Here Date

III. **Prepare Communications plan for sunsetting the NLM resource.** This document is developed for sharing news about the retirement of the NLM resource with relevant internal and external audiences. Please address the following key elements:

A. ***Internal communication plan*** for NLM staff

1. Identify who needs to be informed? (staff, contractors) Staff are aware of the plan. Additional groups include NNCO, NNLM, and toxicology community via our listserv.
2. Determine questions that may need to be addressed. These may include:
    - What information needs to be provided? That the CPDB was a resource taken from the University of Berkeley after they stopped supporting it and wanted an archival home for a few years. That the information will be available on NLM's ftp site for 6 months after sunsetting.
    - When will the information be provided? 5/31/2019
    - By what method(s) will information be provided? Example: Email to all NLM staff Post on database web pages, and send to OCPL for distribution.)
    - If multiple messages are to be sent, by what method(s) and with what frequency? One round
    - Are there any potential areas for misunderstanding or concern? none
3. Establish what may need to be communicated to internal audiences. This could include:
    - Why is this program or service being retired? The information is outdated and little used. It is not in a form that lends itself to conversion to Bookshelf)
    - What content, if any, will still be available and, if so, why and where? (Options may include archived pages on the NLM website, FTP, the Wayback Machine internet archive, and tape.) The evaluated and annotated content, currently searchable on TOXNET, will no longer be available on TOXNET. The data files (PDFs, text, and web pages) will be compressed as zip files available as downloads on the NLM FTP site. The citations of referenced literatures are available on PubMed.
    - What will happen to the staff working on the product or service? No staff resources used now
    - What staff will be involved in this transition? Florence Chang, Phil Thomas
4. Identify mechanisms to be used for communicating with internal audiences. These may include some or all of the following (Check all that apply):
    - ☒ Emails
    - ☒ Signage
    - ☒ Information delivered at staff meetings
    - ☐ Point of discussion at brown bag luncheons
    - ☐ Town Hall meetings, etc.
    - ☒ Other (Explain) listserv
5. Develop and attach a set of Talking Points for the NLM Director The information is outdated and little used. It is not in a form that lends itself to

conversion to Bookshelf). The resource was a labor intensive one developed by Berkeley staff and transitioned to NLM when UC Berkley terminated the project. This resource is not in a format that can be converted to another NLM database or Bookshelf. The data will remain available on NLM's ftp site.

6. Does the NIH Director or other IC Directors need to be informed? No

   If Yes, check all that apply:

   ☐ The service is produced jointly with another IC or serves an audience of interest to the IC

   ☐ The service has high visibility and sunsetting may result in questions, letters, emails to the NIH Director from the public, key stakeholders, Congressional staff, HHS leadership

   ☐ Other (Please elaborate) Enter other reason(s) Director(s) need to be informed

B. ***External communication plan*** for users, stakeholders, and the public

1. Who needs to be informed? (Identify stakeholders).
   - Why is this program or service being retired? The information is outdated and little used. Cannot be converted to new format for TOXNET move to NCBI.
   - What content, if any, will still be available and, if so, why and where? The data will remain available on NLM's ftp site. Journal literature on which it is based is still available via PubMed.
   - What will happen to the staff working on the product or service? No staff work on this other than routine IT deployment /support issues .

2. Establish what may need to be communicated. This could include—
   - Why is this program or service being retired? The resource is outdated and little used. It cannot be converted to a new format for other NLM databases or Bookshelf. The resource will be taken down from TOXNET end May 2019
   - What content, if any, will still be available and, if so, why and where? Journal literature on which it is based is still available in PubMed. The archived content will be made available in compressed format on NLM FTP server.
   - What will happen to the staff working on the product or service? No staff
   - How can I or how can my group be involved in this transition? Enter possible support option(s)

3. Identify what needs to be completed:

   ☐ Deliverables Specify

   ☒ Responsible party or parties for the sunsetting process TOXNET IT

   ☒ Due date 5/31/20195/31/2019

   Identification of communication channels. These could include (Check all that apply):

☒ emails to stakeholders and users

☐ signage

☒ NLM homepage (public news announcement)

☐ speeches

☒ social media including Facebook, Twitter, LinkedIn, etc.

☒ newsletters/blogs, including *Technical Bulletin*, *NLM in Focus*, *Circulating Now*, *Musings*, etc.

☐ Other (Please Explain) Enter other possible communication channel(s)

4. Determine questions that may need to be addressed, including:
    - What information will be provided? Sunset of CPDB
    - When will the information be provided? Starting after approval
    - With what frequency? Enter frequency
    - Are there potential areas for misunderstanding or concern? no
    - After informing stakeholders that the site will no longer be accessible, where can they find information once the site is retired? Journal literature on which it is based is still available in PubMed. The archived content will be made available in compressed format on NLM FTP server.
    - How will NLM respond to questions and comments? Email via customer service system
    - Is this an issue that may generate media interest? (If so, please include strategies for responding in the plan.) No

IV. **Posting notice on central NLM "sunsetting calendar" (coming soon) on the NLM Wiki.** A notice should be posted on the "NLM resource sunset calendar" immediately following the effective date of the retirement of the resource. The sunset calendar, which will also be found on the NLM wiki, will serve as an historical record about retired NLM products and services.

V. **Identification of primary point of contact for further information about retired NLM resource.** Provide name and contact information for primary point of contact for retired NLM resource here:

Version	Date	Author / Owner	Description of Change
1.0	March XX, 2019	M. Ijagbemi, B. Melby / CAMH	Version 1.0 for release to Sponsor

Executive Summary

Between July 2018 and February 2019, the MITRE Corporation was engaged by the National Library of Medicine (NLM) to conduct an initial NLM portfolio analysis (NPA) to help understand the scope and diversity of NLM's public-facing offerings (i.e., products and services). This document provides recommendations for future NLM portfolio analyses with a focus on improving data collection. This document also describes stakeholders' perspectives about the effort.

The NPA was designed to achieve the following goals:

- Establish baseline presentation of NLM offerings.
- Ensure alignment between NLM offerings and strategic priorities.
- Create a framework for standardizing reporting on performance of distinct offerings.
- Provide performance data to support organizational planning and informed decision-making.
- Enable presentation of NLM's value and performance inside and outside NIH.

The NPA methodology for collecting baseline portfolio data involved executing portfolio data requests to key stakeholders within NLM organizations[1] (e.g., Divisions, Offices). Information sought was intended to fulfill NLM executive leadership's initial need for an inventory of all NLM offerings and a dashboard presenting basic offering information such as each offering's name, division ownership, total approximate delivery costs, and alignment to the NLM Strategic Plan.

The MITRE team employed a collaborative process to design and execute NPA data calls. Stakeholders were prepared through introductory briefings describing NPA goals, objectives, and methodology. Furthermore, data call planning meetings were held during which stakeholders provided their input regarding proposed data call attributes, tools and templates. Close stakeholder involvement enabled MITRE to design a viable baseline process for gathering initial portfolio information.

The NPA produced the following notable results:

- Assembled the first complete inventory of all NLM public-facing offerings.
- Estimated NLM expenditures by offering.
- Designed and populated a prototype NLM dashboard to visualize novel views of NLM's portfolio.
- Designed a flexible portfolio framework that NLM can evolve with its PfM priorities.
- Developed recommendations for immediate and long-term NLM actions to continue building NLM portfolio management capability.

After initial NPA activities concluded in February 2019, MITRE evaluated the overall NPA approach for the purpose of documenting lessons learned and formulating recommendations from its facilitator perspective. MITRE also engaged stakeholders again to gather their perspectives on NPA benefits and challenges. Integrating this learning into future NLM portfolio

[1] NPA data covers the following NLM organizations: Division of Extramural Programs, Division of Library Operations, Division of Specialized Information Services, Lister Hill Center for Biomedical Communications, National Center for Biotechnology Information, Office of Computer and Communication Systems, Office of Communications and Public Liaison

analysis activities will improve portfolio dashboard data quality, accuracy, comparability, and usefulness.

Recommendations to Improve Future NLM Portfolio Analyses

1. **Validate NLM Portfolio Dashboard value to providing essential information for important, recurring management decisions.**

Continuing efforts to improve dashboard usefulness should start by validating whether the data currently presented helps address leadership's most pressing management questions.

2. **Address problematic data attribute definitions and values in order of priority; determine priority based on their importance to recurring management discussions and decisions.**

Additional NLM discussions across NLM are needed to standardize the definition and application of portfolio data attributes. More certainty about the attributes' validity will increase the dashboard's utility. Work in this area should prioritize the attributes in direct support of management decision-making. Non-essential data should be set aside until its value has been confirmed with leadership.

3. **Increase the time allotted for the next portfolio data call to acknowledge the complexity and still experimental nature of the activity.**

Turnaround times for future data calls should be determined in consultation with stakeholders. Stakeholders' can draw upon their baseline experience when advising NPA managers on the level of effort and time needed to respond completely and accurately.

4. **Adapt the Technology Business Framework (TBM) to NLM to facilitate data collection about IT and non-IT costs in a way that meets NLM's information and reporting needs.**

More comprehensive, logical TBM sub-Towers will enable stakeholders to more easily assign costs and minimize data inconsistencies. In addition, TBM modifications can provide a method for capturing expenditure data about NIH Taps which is not accounted for in the baseline NPA.

Stakeholder Perspectives on NPA Outcomes and Recommendations for NPA Modifications

Stakeholders overwhelmingly expressed that the NPA was valuable for its potential to help support management decisions such as:

- Conducting cross-NLM organizational consolidation and streamlining.
- Undertaking functional analyses. In allocating staff time to activities, divisions gave thought to how staff split their time and this information may highlight opportunities for functional efficiency.
- Identifying opportunities to consolidate or group similar offerings.

Stakeholders suggested several improvements to the prototype NLM portfolio dashboard such as including other views, incorporating existing offering metrics such as usage information, elaborating on customer information, and grouping similar offerings. Stakeholders also offered minor dashboard design suggestions to improve usability such as adding totals to bar charts, a Clear All button to remove applied filters, and a search box option to search for words.

1. Recommendations to Improve Future Portfolio Analyses

The following are recommendations to improve future portfolio analysis execution. Recommendations address methodology steps provide ripe for improvement based on MITRE observations and stakeholders' feedback. For an overview of the NPA methodology and steps, please refer to Appendix A.

1. **Validate NLM portfolio dashboard value to providing essential information for important, recurring management decisions.**

Improves NPA Execution Steps…
❑ *Confirm assessment priorities* ❑ *Determine key business information to be derived from portfolio metrics* ❑ *Research portfolio metrics and attributes (aligned to key information needs)*

Continuing efforts to improve the dashboard should start by validating whether the data currently presented helps address NLM leadership's most pressing management questions. NLM Portfolio Dashboard Version 1.0 is designed to visualize general offering overview information. Baseline data collected helps leadership answer fundamental questions about the scope, cost, and characteristics of NLM's portfolio. NPA stakeholder feedback revealed their interest in having access to additional offering data to support strategic management such as improving operational efficiency by identifying opportunities to consolidate or sunset offerings. For more information on this feedback category, please refer to Section 3.3.1.

2. **Address problematic data attribute definitions and values in order of priority; determine priority based on their importance to recurring management decision-making.**

Improves NPA Execution Steps…
❑ *Develop inventory attributes (e.g., NLM portfolio metamodel)* ❑ *Develop proposed set of portfolio metrics and attributes* ❑ *Test, modify (as needed) and finalize portfolio framework and attributes*

While the baseline dashboard successfully presents a common data set data across all NLM offerings, data consistency and comparability are deficient. Stakeholders' differing interpretations of data attributes and/or their values produced non-normalized data that is not reliable for decision-making purposes. Consequently, more work is needed to standardize the definitions for and application of data attributes. More certainty about attributes' validity will increase the dashboard's utility.

Based on baseline NPA experience, collaboratively defining and testing attribute definitions and values is time-consuming and requires input from many parts of the organization. Work in this area should therefore prioritize the attributes directly related to supporting management decision-making. Required federal agency reporting should also be considered in the event portfolio reporting should relate to these requirements. Non-essential data should be set aside until its value has been confirmed with leadership. Consensus on management needs should drive changes to attributes used for future portfolio analyses.

When NLM takes up the work to reexamine NPA attributes, the following specific recommendations by attribute should be considered:

- *Offering Name* – Improve the definition of what constitutes an offering, define the expected level of granularity of an offering, and standardize the criteria by which divisions identify offerings.
- *Offering Type Name and Values* – Review the Offering Type attribute to confirm if the attribute and its values are useful for understanding NLM's portfolio and making management decisions.
- *Offering Mechanism Type Name and Values* – Review the Offering Mechanism Type attribute and its values to determine: (1) Is the information is helpful to answering NLM portfolio questions?; and (2) If Yes, should values be modified to reflect other forms in which NLM offerings are provided to users?
- *Customer Type Values* – Standardize the list of Customer Type Name values bringing in other NLM working groups' discussions on this topic. In addition, account for specific customer types needed to meet federal reporting requirements.
- *NLM Strategic Plan Alignment* – Establish criteria for aligning offerings to the NLM Strategic Plan as well as a process for validating the proposed alignment.
- *Resource Type Name* – Elaborate on, define, and communicate the resources concept to data call stakeholders to minimize confusion.
- *Mandate Type Values* – Establish a standardized values list for Mandate Type as well as the formats to be used for submitting mandate references.

For more information on issues with attribute definitions and their use, please refer to Section 2.

3. Adapt the Technology Business Framework (TBM) to the NLM to facilitate data collection about IT and non-IT costs in a way that meets NLM's information and reporting needs.

Improves NPA Execution Steps…
❑ *Develop data call inventory tools*
❑ *Analyze portfolio data*

TBM originated in the commercial world, and the Office of Budget and Management has yet to issue guidance on how federal agencies should apply the framework to account for expenditures specific to the federal world. If applied As-Is, the framework's Towers and Cost Pools exclude some types of federal expenditures. The NPA exposed this problem firsthand, and the financial data call expenditure categories tried to overcome the mismatch by adding expenditure types outside the scope of the TBM Towers. For more information about how IT costs were estimated and allocated to TBM IT Towers, please refer to Section 2.2.3.

With new knowledge about how federal agencies are adapting TBM to capture the costs of meeting their mission, NLM can likewise modify how TBM is used to improve future portfolio expenditure data calls. More comprehensive, logical sub-Towers will enable stakeholders to more easily assign costs and avoid data inconsistencies. In addition, modifications can be made to capture NIH Taps which were not accounted for in the baseline NPA. Including NIH Taps in the future is important to establishing a more complete financial expenditure picture that shows the total cost of delivering NLM offerings.

4. Increase the time allotted for the next portfolio data call which acknowledges the complexity and experimental nature of the activity.

Baseline portfolio data was obtained via two, consecutive data calls – the first to gather general offering information, the second focused on collecting offering estimated expenditure

information. Stakeholders were given approximately 3 weeks to complete each data call. For both data calls, additional time was needed to answer stakeholders' questions and conduct extensive quality reviews.

Improves NPA Execution Steps…
❑ *Disseminate phased data calls*

Turnaround times for future data calls should be determined in consultation with stakeholders. Stakeholders' can draw upon their baseline experience when advising NPA managers on the level of effort and time needed to respond completely and accurately using the templates provided. For more information on stakeholders' feedback on NPA data call processes, please refer to Section 3.3.3.

2. NPA Execution Challenges

The NLM portfolio metamodel construct was the starting point for identifying data attributes for data calls. While the general construct met the needs of the NLM leaders involved in its development, data call respondents drew attention to data quality issues and raised questions about the significance of some attributes. These issues are summarized below:

- Data Quality – The lack of both a shared understanding and consistent application of attribute definitions across NLM organizations resulted in non-normalized data. This issue impacts NLM's ability to compare portfolio data from different NLM organizations.
- Data Significance – Data call results for some attributes revealed that the information collected was less important than expected and, in some cases, not needed to understand NLM's portfolio. These results highlight some attributes that could potentially be excluded or replaced in future portfolio data calls.

2.1 Data Attribute Quality

Overwhelmingly, representatives stated that the purpose of and definitions for data attributes need to be clarified going forward. Challenges *by attribute* are described in this section.

2.1.1 Offering Identification

Challenges

- Use of "public-facing" within the definition of an "offering" excludes offerings that serve a narrower, NIH-only community.
    - Several potential OCCS offerings were excluded because they do not serve the public. For example, Scientific Collection is not public-facing but the tool is used outside of NLM.
- EP Extramural Grant Program did not fit the definition in any way.
- Divisions internally used different criteria to identify their offerings, resulting in offerings with differing granularity levels. Stakeholders noted that results might have been improved by first 'sampling' the offerings from each division and assessing how each division defines its offerings. Table 1 below summarizes the different criterion used by divisions to identify their offerings.[2]

Table 1. Offering Identification Criteria Used by Divisions

Criteria	EP	LO	LHC	NCBI	OCCS	SIS
Core to what NLM does; important to explaining NLM's mission to key stakeholders				X		
Distinguishes different lifecycle phases serving different customers (i.e., different use case)				X		
Identifies activities that are part of the same research				X		
Indicates a group of tools that are complementary				X		
Level of priority/criticality to NLM mission				X		
Magnitude of cost/level of delivery effort		X				
Customer volume/usage						X
Name or "brand" recognition				X		
Political reasons		X		X		
Public-facing		X	X		X	
Provided through a website domain name						X
Similar customer constituencies served by similar/related services				X		
Similar or same metadata/source data used (e.g., dbSNP and dbVAR)				X		X
Similar resources used (e.g., digital collections)			X			X
Specific policy mandates for NLM or mandates resulting in specific funding allocations to NLM				X		

Other Considerations

- A separate offering should not be created for a tool that provides additional functionality for another offering.
- NLM's Continuity of Operations (COOP) list may need to be considered in the offering determination criteria.
- It may be more appropriate to treat some products/services as a resource instead of an offering so their importance to the delivery process is not overlooked.

2.1.2 Offering Types Name and Offering Mechanism Name

Challenges

- Respondents had trouble distinguishing between the Offering Type Name values and found definitions unclear or too broad. For example, there is a grey area between what is data and what is a digital service.
- Some felt that the names of the Offering Type Name values resembled the Mechanism Type Name values so it appeared the data was redundant.
- Respondents highlighted the need for additional Mechanism Type Name values beyond website access, API access, curated data FTP, and software. Two additional mechanisms, print media and interpersonal, were added to account for non-digital offerings. Examples include printed outreach materials and the library's physical collections of books and

[2] Criteria applied by OCPL are unknown due to the transition in OCPL leadership.

journals. MITRE was able to adjust during the NPA data call but the two new types identified during the NPA raise the question of whether the existing values for Mechanism Type Name are exhaustive.

2.1.3 Customer Type Name Values

Challenges

- For some offerings, it is not possible to know who customers are. Those offerings do not have API keys or require a user to register prior to using the offering.
- Existing methods for determining customers are problematic:
    - Annual user surveys only capture part of the picture of who is using offerings.
    - Using IP addresses is a flawed method for understanding customer composition. Information about a user attached to an IP address is assumed based on the address alone.
    - Customer information is not readily available. Sometimes, information is only gathered if the customer reaches out to NLM for assistance and NLM uses the interaction to learn more about the user and his/her use case.
- Respondents did not adhere to the Customer Type Name values originally identified for the NPA. New types were proposed, sometimes overlapping with one or more NPA values or a sub-category within a value. Standardization and normalization were therefore low for this attribute.
- MITRE learned only in the course of data call execution that a past NLM outreach functional analysis work group had worked on standardizing customer groups. The outreach customer list may have been a better launch point for developing the final NPA Customer Type Name values.

2.1.4 Resources (i.e., Business, Data, External, and Technical)

Challenges

- Terminology used to distinguish resource types evokes a different understanding of the resource depending on respondents' backgrounds. Examples:
    - Business: Many stakeholders equated a business resource with a functional group or organizational team whereas the intent was to identify key business processes involved in producing offerings.
    - Resource: In the project management discipline, a resource generally refers to one or more staff.
    - Technical:
        - "Technical services" is a library discipline and not associated with IT.
        - Using "technological" versus "technical" implies a focus on the technology rather than systems, IT processes, etc.
        - Adding "IT" to "Technical Resources" may be confusing for some because IT is thought of in terms of IT operations.
- Respondents were unable to categorize key resources (e.g., books) using the resources categories and definitions provided.

- Respondents also described that it was difficult to think of the technical resources from other divisions to which their offerings tied. For example, while a list of technical resources was provided, respondents did not always know which values to select.
- Definitions did not specify the level of granularity needed.

2.1.5 NLM Strategic Plan Alignment

Challenges

- Aligning individual offerings to NLM Strategic Plan elements (i.e., goals, objectives, and initiatives) was a subjective process for data call respondents.
    - Alignment criteria was not provided and there is a not a process in place to validate alignment results.
    - Guidance is needed regarding whether an offering can align to more than one goal, objective, and initiative at a time (i.e., not mutually exclusive).
    - Guidance should further cover whether offering alignment should be made to the lowest element of the plan (i.e., initiatives) or can remain at a higher level (e.g., goal) without attribution to an objective or initiative.
- The quality of strategic alignment selections is not consistent across NLM organizations. For some organizations, it was easy to align their activities to the NLM Strategic Plan because they had been asked to do so for other NLM data calls. For others, the NPA data call was the first time the question had been posed and respondents did not have the benefit of time to research and validate the alignment.

2.1.6 Mandate Alignment

Challenges

- Some offerings do not fall under one specific Congressional mandate other than a Congressional mandate for the existence of an NLM activity (e.g., Lister Hill Center).
- The short turnaround time for the NPA data call did not allow enough time to research an offering's mandate source. As a result, respondents provided broad authoritative references, used the "unknown" category, or left this section blank when completing the data call. The dashboard illustrates this problem because "Unknown" and blank responses were combined under the category "Unknown or Not Identified".
- Mandate references provided by respondents were not always vetted by division leadership to ensure accuracy. Consequently, in some cases, the information was incomplete or incorrect making it difficult to trace an offering back to an actual mandate.
- The Mandate Type Name values did not distinguish between Congressional mandates and federal regulations. The difference between these two categories needs to be accounted for.
- The "NLM Internal" Mandate Type Name value is too broad. As a result, final data is too high-level to be useful.
- Respondents did not have a way to indicate when an offering was mandated by a previous strategic plan that is no longer being executed.

2.1.7 General Comments – Attribute Values

Challenges

- Attribute value lists were inconsistent in terms of level of detail (i.e., Technical Resources), did not exist (i.e., Business Resources), or not aligned to lists already in use (i.e., Customer Types).
- The lack of definitions for attribute values created "grey areas" for those trying to respond to data calls.
- Offering attribute values (i.e., final inventory list of Offering Names) changed multiple times after the data call deadline, resulting in rework. Rework was particularly acute for OCCS, which weighted cost allocations using the total number of OCCS-supported offerings.

2.2 Financial Information (FY18 Estimated Expenditures)

2.2.1 General Comments – Data Call Execution

- Divisions reported a balanced budget though were not required to do so for the data call. Reported estimated FY18 expenditures roughly equaled each division/office's FY18 budget. The budget included external funds received through interagency agreements, etc.
- Divisions used a separate spreadsheet to record their allocation percentages and calculate totals.
- Representatives felt the turnaround time proposed for the financial data call did not account for its complexity. The level of effort was particularly high for OCCS and NCBI, which not only reported estimated expenditures by type but further broke down expenditures by TBM Towers. The added layers of reporting required significant research and effort within those organizations.
- One respondent pointed out that NLM contracts are usually tracked by CAN. Assigning a CAN or other financial code to each offering would facilitate associating costs to offerings. Then, it would be possible to run a budget report on each offering.
- The methodology for distributing OCCS shared IT costs to all divisions was not equitable or understood fully by division stakeholders.

2.2.2 Expenditure Types

The expenditures data call asked respondents to allocate estimated total division costs for non-IT expenditures, and then IT expenditures based on the TBM IT Towers[3].

Table 2. NPA Non-IT and IT Expenditure Categories

Non-IT Expenditures	• Federal Salaries (Programmatic/Operational) • Contract Salaries (Programmatic/Operational) • Service Contracts (Offering-Specific)

[3] NLM modified the TBM IT Towers for the NPA data call by adding "Platform" and omitting "End User" and "Output."

	• Other Support Costs (e.g., Administrative Overhead, Supplies, Travel, Training) • Grants
IT Expenditures – Modified TBM Towers	• Application • Compute • Data Center • Delivery • IT Management • Network • Platform • Security & Compliance • Storage

Approaches

MITRE collected feedback from data call respondents regarding the approaches they implemented to provide financial data for the abovementioned expenditure categories. Implementation approaches varied across divisions. Approaches are summarized in the table below.

Table 3. Cost Allocation Approaches Employed by Divisions

COST CATEGORIZATION APPROACH	EP	LO	LHC	NCBI	OCCS	SIS
Estimated Non-IT Expenditures						
Actual federal and contractor salary costs used; individuals' salaries mapped to offerings using approximate percentages, or actuals when available	X	X	X	X	X	X
Administrative staff salary allocated cost equally across offerings		X	X			
Other Support Costs allocated to all offerings according to total offering expenditures as a percentage of total expenditures			X			
RMS cost included in *Other Support Costs*[4]	X					
Admin staff included in *Other Support Costs* and divided equally across the division's offerings						X
Core operations included in *Other Support Costs* and divided equally across the division's offerings						X
Estimated IT Expenditures						
IT salaries split between *Federal Salaries* and *IT Tower totals*					X	
IT salaries included only in IT costs		X				
Federal programmers excluded from IT services and included in the *Federal Salaries*. Salary costs then allocated across offerings based on an approximate percentage of programmers' LOE						X

Challenges

[4] EP was the only Division to include RMS expenditures in their totals.

Non-IT Expenditures

- The cost build-up excluded the cost of external systems though they are important to getting the work done (e.g., EP reliance on NIH systems). These costs do contribute to NLM's investment in offering delivery and should be accounted for.
- Inconsistencies appeared in how divisions treated RMS costs. These costs were accounted by EP in their totals but not by any other division.

IT Expenditures

- The definition of "IT Internal Services" did not include labor costs. Respondents reported that this caused confusion when completing the data call. Labor associated with an IT service was sometimes accounted for in the non-IT expenditure lines for *Federal or Contractor Salaries* but, in other instances, it was included in an IT Tower total.
    - *OCCS Approach*:
        - Labor is included in IT Towers and allocated to offerings using a rough percentages approach for the following Towers:
            - Data Center
            - Network
            - Compute (inclusive of End User costs)
        - Labor was reported in the *Salaries* totals for all other IT Towers.

2.2.3 TBM IT Tower Allocations

In the situation where a division manages IT services, the division independently determined its approach to estimating expenditures by IT Towers and then allocating Tower costs to individual offerings. Overall, divisions made their best cost estimations given the data available to them, their understanding of the IT Towers, and time constraints.

The following sections outline the principal approaches used to allocate costs first to IT Towers and then to offerings.

Application

Challenges

- No labor is included in OCCS-reported Application costs because of confusion about IT Tower definitions previously described in this report.

Application

Challenges

- No costs appear in Application because labor hours appeared separately in Labor lines.

Services and Software

OCCS Approach – Actual mapping of software cost to the offerings that use the software

Compute (including Desktop and Systems Compute)

OCCS Approach – Allocation across OCCS-supported Divisions based on number of computers/devices assigned to those Divisions.[5]

[5] OCCS supports desktop applications for many NLM organizations but does not support LHC and NCBI.

Comment [A]: For OCCS (Rex) – To which Tower does this feedback apply

Challenges (OCCS Perspective)

- NLM's adaption of the IT Towers excluded the End User IT Tower. This Tower is needed to distinguish between types of IT costs.

Data Center

OCCS Approach – Allocation based on power consumed by each Division.

Challenges (OCCS perspective):

- Calculating total power consumption for LHC, NCBI and OCCS was not complicated. However, because other Divisions are a part of overall OCCS usage, an allocation had to be approximated for each Division. The result is that costs allocated to SIS, EP, LO, and OCPL (all OCCS-supported Divisions) were somewhat determined more arbitrarily. OCCS calculated the total data center cost for all OCCS-supported Divisions. An allocation was then calculated for each Division according to each Division's proportion of the total number of OCCS-supported offerings (i.e., weighting).
- The total number of offerings for OCCS-supported Divisions was in flux in the final stages of the financial data call. Because OCCS calculations relied on the total number of offerings, last minute changes to the offering list required a significant amount of OCCS rework to calculate allocations for OCCS-supported Divisions.
- EP was not directly allocated costs for the data center. The original rationale applied was that EP is not a direct consumer of the data center, but a subordinate consumer of such things as file storage.
- EP consumes a significant amount of NIH services. The cost of those services is found in the NIH "tap" but the NIH tap was excluded from the NPA.

Delivery

Approach – Unknown

Challenges – Unknown

IT Management

Approach – Unknown

Challenges – Unknown

Network

OCCS Approach – Allocation according to bandwidth consumption and number of firewall requests as the consumable

Challenges

- OCCS faced the same issues when allocating networking costs as were encountered in allocating data center costs. LHC, NCBI and OCCS power usage information was readily available whereas other Divisions' bandwidth consumption was a part of OCCS' total consumption. Ultimately, networking costs were assigned equally across offerings for OCCS and LO, while SIS, LHC, EP, and NCBI were done on a Divisions basis.
- Changes to the offering list during the financial data call resulted in more work for OCCS staff who needed the final number of offerings to allocate costs to OCCS-supported Divisions. Allocations were made in the same was as for Data Center costs: allocation

Comment [A]: For OCCS (Rex) – Confirm statement

according to each Division's proportion of the total number of OCCS-supported offerings (i.e., weighting).

- The name of the Division responsible for making a firewall request was not always available. The request is generally made by OCCS staff in response to a request from another Division staff. In the future, a methodology is needed for charging the cost of the firewall request to a specific offering, or to the technical resource that enables an offering.
- EP file and print usage were included in networking costs which may not be the appropriate IT Tower.

Platform

3. NPA Stakeholder Feedback

3.1 NPA Outcomes Achieved

Feedback from NPA stakeholders overwhelmingly documented positive outcomes from the initial NPA, listed below.

- Brought everyone together to think about the costs of delivering NLM offerings.
- Helps overcome organizational stovepipes.
- Exposes need for describing products and services consistently to enable comparisons.
- Introduced cost transparency where it did not previously exist.
    - Enables everyone to see how different divisions contribute to the cost of an offering. This cross-divisional perspective was not previously available, and the real cost of offerings was unknown. NPA provides relative cost information for the first time.
    - For the intramural research program, for example, produced an approximation of research costs because NPA forced managers to look at how staff split their time.
    - Provides cost information that is useful in planning the transition of an offering from one division to another.

- Provides a good overall view of divisions' activities through the list of offerings. This type of analysis should be regularly carried out by each division.
- Demonstrates Tableau-style reporting which has prompted some adoption of the reporting style at the division-level. For example, NCBI is using the cost allocations and further breaking them down to more granular levels.
- Provides a fuller picture of the value of divisions' offerings through NLM Strategic Plan alignment and target customer data.
- Provides the first easy to understand and navigate, visual, user-friendly presentation of NLM activities.

3.2 Portfolio Analysis Value

Stakeholders recognized the value of portfolio data for its potential to help support management decisions such as:

- Conducting cross-NLM organizational consolidation and streamlining.
- Undertaking functional analyses. In allocating staff time to activities, divisions gave thought to how staff split their time and this information may highlight opportunities for functional efficiency.
- Identifying opportunities to consolidate or group similar offerings.

Stakeholders also expressed support for sharing the dashboard with a wider group of NLM staff, the Board of Regents, and the research community. Stakeholders felt that the new viewpoint on NLM's portfolio would be of great value because nothing like it has previously existed. Its user-friendly format can augment these constituencies' understanding of NLM's mission and activities.

3.3 Stakeholder Recommendations

3.3.1 NLM Leadership and Management Information Priorities/Needs

Stakeholders provided the following suggestions for refining the scope of data for future portfolio data calls:

- Ensure that information requested does not duplicate existing reporting efforts (i.e., NIH Reporter).
- Align NPA IT expenditures data call with annual IT budget data call so that NPA supports this reporting need. This may require expanding some aspects of the data call in addition to improving NLM TBM implementation.
- Determine the granularity needed for reporting research activities:
    - Intramural versus extramural, including whether extramural grants should be further subcategorized (e.g., by subprograms).
    - NLM research areas/programs, possibly using the research categories as the Blue Ribbon Panel.

- Research versus application development versus operations and maintenance (O&M). The differences are highly "grey;" staff efforts often touch on all these activities.

3.3.2 Future Dashboard Improvements

MITRE documented stakeholder feedback on the baseline NLM portfolio dashboard tool to gain insights about desirable future dashboard modifications. Dashboard changes requests are summarized below.

Additional Views

- Offering-centric view – This view would show all the information about a given offering as opposed to having the information scattered across five different portfolio view tabs.
- Transitive dependencies view – This view would depict all the resources shared between offerings. For example, such a view would show that RefSeq and Sequence Tools are dependent on GenBank and, by extension, these offerings are dependent on all the resources on which GenBank.
- Portfolio health view – This view would show the difference between budgeted and actual expenditures.
- Division-specific view – This view would present data by NLM Division only.

Additional Information

- Usage measures (e.g., unique visitors), including possibly a compound metric for cost per usage. Usage information can help get a sense of an offering's "value."
- Information about how the offerings serve customers.
- Linkage between metrics from the outreach database and NLM offerings.
- Depiction of "like" offerings, e.g., programs containing similar offerings.

User Interface/Design Changes

- Add totals to the end of bar charts.
- Add a button that clears all filters with one click.
- Add a search box that allows users to search for specific keywords in the dashboard.

3.3.3 Other NPA Execution Feedback

Representatives voiced very few negative outcomes from the portfolio analysis. Concerns primarily relate to two execution issues:

- The amount of time and effort required to respond to the data call was insufficient given stakeholders' other priorities and responsibilities. Since the NPA required data not previously organized in the method requested, divisions needed more time to do complete their work.
- Background information on the portfolio metamodel components or guidance on how to apply the data attributes was not provided or explained in enough depth before kicking

off the data calls. Additional explanations would have shortened the learning curve and rework.

Stakeholders provided suggestions for improving communication during the planning and execution of future data calls and for sharing the results.

- Use Outlook for scheduling meetings by comparing proposed date/time with managers' schedule. It is important to get the right people together and sometimes those individuals were not present for the recurring NPA check-in calls.
- Consider alternative ways to share files instead of email. Options such as NIHbox.com or Confluence may be viable. Slack might be an option for alerting stakeholders about changes to a file, such as a change in a data call template or to the offering inventory list that impacts all NPA stakeholders.

Appendix A. NLM Initial Portfolio Analysis Methodology Overview

At a high-level, the NLM Initial Portfolio Analysis (NPA) followed the execution steps listed below. MITRE's review of these steps at NPA completion identified opportunities to improve how the methodology is executed in the future. Bolded, italicized steps indicate the areas for improvement.

Review NLM Strategy and Existing Service/Product Information
❑ Review NLM Strategic Plan and current portfolio management-related activities
❑ ***Confirm assessment priorities***
❑ Identify stakeholders
❑ Compile publicly available and internal information on NLM offerings
Conduct Inventory Assessment
❑ ***Determine key business information to be derived from portfolio metrics***
❑ ***Develop inventory attributes (e.g., NLM portfolio metamodel)***
❑ Conduct stakeholder interviews to get preliminary picture of NLM offerings
❑ ***Develop data call inventory tools and disseminate phased data calls***
❑ Conduct stakeholder follow up to validate/augment inventory data
❑ Produce baseline inventory
Develop NLM Portfolio Framework
❑ Develop portfolio framework (metamodel)
❑ ***Research portfolio metrics and attributes (aligned to key information needs)***
❑ ***Develop proposed set of portfolio metrics and attributes***
Analyze Portfolio Data
❑ Conduct data cleansing (offering basic information and FY18 cost information)
❑ ***Test, modify (as needed) and finalize portfolio framework and attributes***
❑ Develop dashboard presentation mockups and confirm dashboard presentation
❑ Integrate current portfolio data and provide final NLM portfolio dashboard
Communicate Analysis Findings
❑ Prepare recommendations and Executive Briefing (Briefing Audiences: NLM Executive Leadership)

Executive Summary

The National Institutes of Health (NIH) National Library of Medicine (NLM) Portfolio Metamodel aims to provide information to NLM decision makers to understand the mix of products and services—called offerings—that NLM provides to customer constituencies. The metamodel is a *future-state illustration* of features that are most critical to a holistic understanding of NLM's portfolio. The metamodel is populated with information sourced from NLM Division management records as well as from NLM financial management systems and processes. It is designed to help answer key management questions that are fundamental to understanding NLM's portfolio both at a high-level and at the individual offering level.

Broadly, NLM management desires to seeks information about:

- What is the number, type, and complete list of offerings available to the public? How do NLM offerings relate to each other and to NLM's mission?
- What federal or NIH mandates and/or NLM Strategic Plan elements compel NLM to support specific offerings?
- How are different customer constituencies served by NLM's diverse portfolio?
- What NLM resources (i.e., business processes and functions, technology, and data) and external resources are used in combination to deliver offerings to customers?
- What are the dependencies between offerings and their underlying resources?
- How is NLM's annual budget allocated and expended in support of individual offerings?
- What projects and activities does NLM support with federal investments to produce, operate, and maintain NLM offerings?

Scope of Document

This document consists of two sections:

- **NLM Portfolio Metamodel Components.** A common taxonomy for describing the NLM portfolio components is necessary for cross-portfolio analyses and transparent decision-making processes. This section defines each item appearing in the metamodel as well as data attributes associated with each item. Attribute values and examples are also provided to facilitate metamodel adoption.
- **NLM Portfolio Key Management Questions.** Different data points associated with the portfolio metamodel can be analyzed together to answer key management questions identified by NLM leadership. Answers support more informed decision-making about how to direct NLM's limited resources to effectively and efficiently execute NLM's mission and position NLM well for the future. This section enumerates each key management question and shows the lines of sight between different metamodel components that can provide data points to help answer each question.

Methodology

The MITRE Corporation (MITRE) collaborated with NLM leadership to develop the portfolio metamodel. To address the key management questions, the NLM portfolio metamodel collects information from internal sources and incorporates the information into a decision support environment. To create NLM's baseline portfolio inventory, portfolio data is organized into an Excel-based master data file (.xlsx) and visualized using Tableau software (.twbx). As NLM continues to develop its portfolio management (PfM) capability, NLM may opt to convert its Excel master data file to a database system to make data maintenance and expansion less cumbersome. MITRE developed metamodel definitions, data attributes and values, which were vetted by NLM leadership to ensure all aspects of the metamodel meet leadership's current reporting needs as well as some future reporting aspirations.

Intended Audience

This report is intended for NLM executive leadership, division leadership, and offering, resource, business, and technical owners.

1. Introduction

1.1 Background

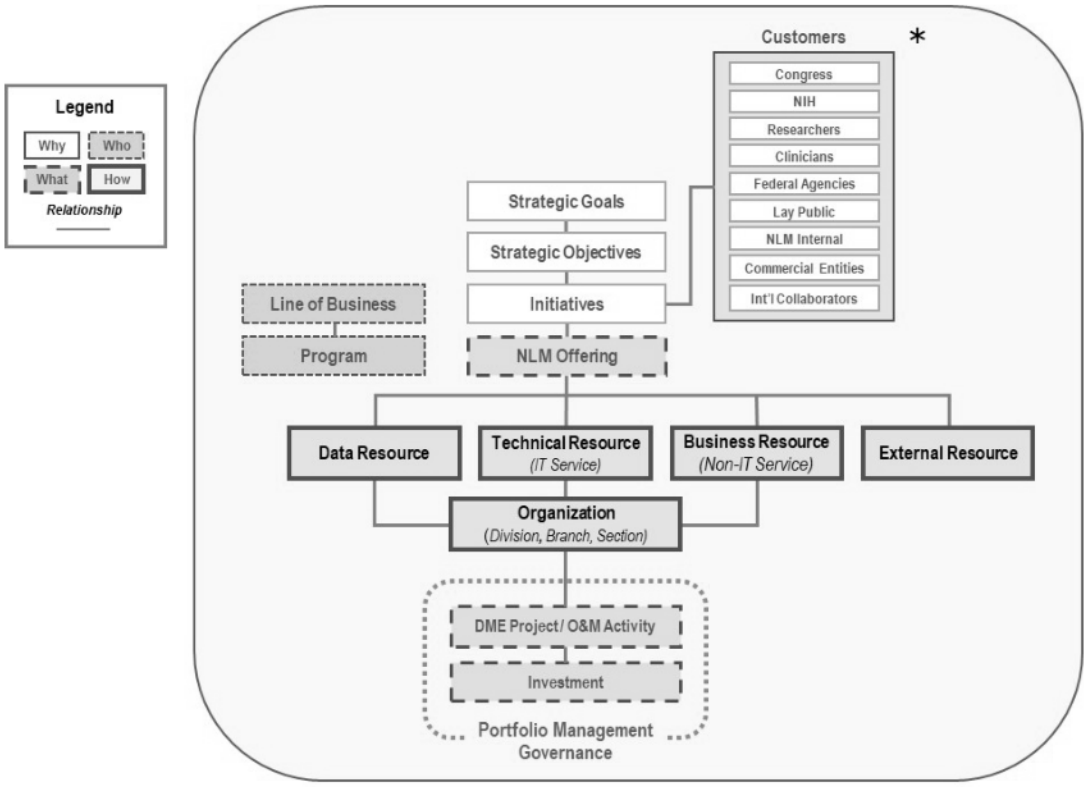
The National Library of Medicine (NLM) requested assistance from the CMS Alliance to Modernize Healthcare (CAMH), a Federally Funded Research and Development Center (FFDRC) operated by The MITRE Corporation (MITRE), to undertake an objective, unbiased, and comprehensive inventory of the entire NLM portfolio and develop portfolio analysis tools. NLM requested that MITRE propose a portfolio framework with cross-NLM applicability to facilitate standardized reporting, enable visualizations to evaluate alignment between NLM strategic priorities and offerings, and provide more robust data for planning and decision-making about NLM's future direction. This effort was the first of its kind to systematically catalog offerings (i.e., products/applications and services) delivered by individual NLM's divisions and centers in a cross-NLM portfolio framework.

By adopting portfolio management (PfM) discipline, federal agencies are equipped with more robust tools to better understand the scope, size, and impact of their business activities. PfM combines strategic, operational, financial, and performance data in a meaningful way that enables agencies to make better decisions about where to invest and to regularly evaluate the results of those investments.

1.2 Purpose

The objective of the NLM portfolio metamodel is to provide NLM a decision analysis capability that answers key management questions about how NLM fulfills its mission. The metamodel was developed using the following approach:

- Determine stakeholders for portfolio management information.
- Survey stakeholders to understand their information needs, capturing the initial set of management questions to answer.
- Parse information from discussions with leadership and interviews with NLM staff to develop a "metamodel" illustrating categories of information and their relationships.
- Evaluate data management and visualization requirements and identify a tool to support reporting based on metamodel categories.
- Determine how to compile, structure, and link information from portfolio data calls completed by key NLM stakeholders to support the relationships defined in the metamodel.
- Develop prototype NLM portfolio dashboards with different views to support answers to NLM management questions.



* The following additional customers were identified during the NPA Phase 1 data call and may be included in a future metamodel version: Educators, Students, Libraries/Librarians, and Press/Publishers.

Figure 1. NLM Portfolio Metamodel

The metamodel is designed to help NLM answer the following broad questions:

- What is the number, type, and complete list of offerings available to the public? How do NLM offerings relate to each other and to NLM's mission?
- What federal or NIH mandates and/or NLM Strategic Plan elements compel NLM to fund specific offerings?
- How are different customer constituencies served by NLM's diverse portfolio?
- What internal NLM resources (i.e., business processes and functions, technology, and data) and external resources are used in combination to deliver offerings to customers?
- What are the dependencies between offerings and their underlying resources?
- How is NLM's annual budget allocated and expended in support of individual offerings?
- What projects does NLM support with federal investments to produce, operate, and maintain NLM offerings?

2. Metamodel Definitions and Attributes

This section defines all metamodel components that comprise the types of data needed to answer key management questions. The five components are:

- **ITEM–** indicates the different components of the NLM Portfolio Metamodel.
- **ATTRIBUTES –** are the qualities or features that are regarded as a characteristic or inherent part of each ITEM. ATTRIBUTES are additional data points pertaining to ITEMS. In information management, an attribute is a piece of information that determines the properties of a field or tag in a database or a string of characters in a display.
- **VALUE –** provides possible options for the attribute based on either a predetermined list of NLM data or user-driven input.
- **EXAMPLES –** are provided to put the definitions for ITEM and ATTRIBUTE in the NLM context.

Attributes are grouped to indicate the type of information to which they relate (basic offering information or financial information). An additional distinction is made to identify attributes that are an aspirational part of the future-state NLM metamodel. These attributes were identified as important to future portfolio analyses; however, NLM leadership determined that standardized definitions for this set of attributes were not important for meaningful baseline portfolio analyses.

2.1 Attribute Group: NLM Offering Information

2.1.1 NLM Offering

Definition: The product and/or service offered to satisfy a want or need of an existing or target user constituency.

Table 1. NLM Offering Attributes

Attribute Name	Definition	Possible Values	Examples
Offering Name	The full name of the offering without information truncated by acronyms.	• List (Large Number of Possible Values) • Manual Data Entry	• Common Data Element Repository • National Health and Nutrition Examination Survey Database • PubMed
Offering Name (Short)	"Brand name," the name used to take the offering to market.	• List (Large Number of Possible Values) • Manual Data Entry	• CDE Repository • NHANES • PubMed
Offering Short Description	A succinct description of the value provided to customers.	Manual Data Entry	• CDE Repository – The NIH Common Data Element (CDE) Repository provides access to structured human and machine-readable definitions of data elements that have been recommended or required by NIH Institutes and Centers and other organizations for use in research and for other purposes. • NHANES – NHANES is a database of materials related to the second and third National Health and Nutrition Examination Surveys (NHANES II and III), carried out during the years 1976-1980 and 1988-1994, respectively. • PubMed – - PubMed is a digital collection of biomedical literature journal article abstracts.

Attribute Name	Definition	Possible Values	Examples
Offering Group	The category indicating the common purpose or characteristic that relates multiple offerings.	• Databases • Analytic Tools • Library Physical and Digital Collections • Training & Career Development • Outreach • Research • Library Science Platforms/Operations	

Attribute Name	Definition	Possible Values	Examples
Offering Type	The category indicating the form in which an offering is delivered to customers.	• Data • Digital Service • Human Service • Product	• **Product** – A system or raw materials combined and made available to users (customers). For the NLM context, a product generally refers to a physical asset or commodity provided to users. Examples: Books, exhibitions assets, training materials. • **Human Service –**Interaction between providers and users where the provider has a direct or indirect interaction with the user. Examples: Data Distribution Program, Library Operations MMS Outreach & Training. • **Digital Service –** A valuable action performed to satisfy customer need that has been delivered using IT infrastructure. Examples: Pathogen surveillance service, genome annotation service, contamination screening service. • **Data –** Information that has been translated or organized into a form that is efficient for movement, processing or consumption. Information may be housed within a database. Examples: PubMed, GenBank.
Offering Mechanism Type	The different mechanism(s) or means by which an NLM offering is provided to customers.	• API Access • Curated Data FTP • Software • Website Access • Media (Print, Video)	CDE Repository Mechanisms: 1. API Access 2. Website Access 3. Curated Data FTP

Attribute Name	Definition	Possible Values	Examples
		• Interpersonal	PubMed Offering Mechanisms: 1. API Access 2. Website Access (PubMed interactive web site) 3. Curated Data FTP NHANES Mechanisms: 1. Website Access (including controlled access) 2. Curated Data FTP 3. Software
Mandate Source Type	The primary source of NLM's mandate to provide a specific offering.	• Congress • NIH Policy • NLM Policy/ Strategic Plan • Other (e.g., historical) • Unknown	
Mandate Reference	The primary reference citation for the authorizing source legislation, policy, or regulation obligating NLM to provide resources and support for an offering or group of offerings.	Manual Data Entry	Sec. 301 of the PUBLIC HEALTH SERVICE ACT, PART D—NATIONAL LIBRARY OF MEDICINE, Subpart 1—General Provisions "PURPOSE, ESTABLISHMENT, AND FUNCTIONS OF THE NATIONAL LIBRARY OF MEDICINE"
Primary Offering Owner Name	Person accountable for delivering value to customers via a specific offering.	Manual Data Entry	Jane Smith
Critical Success Factor	Refer to specific activities, procedures, or areas that a business or organization depends on for its continued survival. (Technopedia)	Manual Data Entry	Example categories for CSF include cost, innovation, quality, speed, and size of consumer base.
Sunsetting Planned	Indicator that a plan is in place to sunset the offering in the future.	Yes	

2.1.2 Organization

Definition: The group of persons organized within NLM with responsibility to deliver a specific NLM offering. Provide NPA Organization information at the Section level or lowest level available when the Section organizational construct is not used.

Table 2. Organization Attribute

Attribute Name	Definition	Possible Values	Examples
Primary Organization Name	Name of the NLM organizational unit.	List (Large Number of Possible Values)	• Exhibitions Section • E-Health Information Support Section

2.1.3 Customers

Definition: Constituencies, including individuals, groups, or organizations, that are intended to use the project's product or service or result.

Table 3. Customer Attributes

Attribute Name	Definition	Possible Values	Examples
Customer Name	Short name for the customer constituency that uses the offering.	• Clinicians • Commercial Entities • Congress • Educators • Federal Agencies • International Collaborators • Lay Public • Libraries/Librarians • Manual Data Entry • NIH • NLM Internal • Press/Publishers • Researchers • Students	

2.1.4 NLM Initiative

Definition: A broadly defined objective that an organization must achieve to make its strategy succeed *(Association of Strategic Planning Body of Knowledge 2.0*). Initiatives are aligned to NLM Strategic Plan Goals and Objectives through the plan's hierarchical numbering framework.

Table 4. NLM Strategic Initiative Attribute

Attribute Name	Definition	Possible Values	Examples
Initiative Name	Strategic initiatives impact the organization as a whole and have enterprise-wide significance *(Association of Strategic Planning Body of Knowledge 2.0)*. If an offering is aligned to an Initiative, its alignment to the associated Strategic Objective and Goal will occur.	• List (see examples) • No alignment • Unknown	1.1b MEDLINE 2022 1.1c NLM Portfolio Assessment by MITRE 1.1d DATaset Metadata Model (DATMM) Initiative 2.1a Outreach planning 2.1d User Experience / User Development Initiative 2.1e External Communications Plans & Information Resources 2.1f Informatics Professionals Outreach, Training and Development 3.2b1 Reproducibility for Intramural Scientists Workshop 3.2b2 Second Reproducibility for Intramural Scientists Workshop 3.2c Data Science for Librarian Workforce Workshop 3.2d Assessment of extramural staff data science training needs

2.1.5 NLM Strategic Objective

Definition: A broadly defined objective that an organization must achieve to make its strategy succeed (*Association of Strategic Planning Body of Knowledge 2.0*). Objectives are aligned to NLM Strategic Plan Goals through the plan's hierarchical numbering framework.

Table 5. NLM Strategic Objective Attribute

Attribute Name	Definition	Possible Values	Examples
Strategic Objective Number	Number indicating the NLM Strategic Objective to which the offering is expected to contribute and help achieve. When an offering is aligned to a Strategic Objective, its alignment to the associated Strategic Goal will occur.	• List (see examples) • No alignment • Unknown	1.1 Connect the resources of a digital research enterprise 2.1 Know NLM users and engage with persistence 3.2 Assure data science and open science proficiency

2.1.6 NLM Strategic Goal

Definition: Encompasses the organization's vision, mission, and objectives (*Association of Strategic Planning Body of Knowledge 2.0*). High-level strategic goals have the following characteristics:

- Describe a future end-state that is supportive of the mission and vision.
- Describe actions in actionable terms.
- Relate to the expectations/requirements of all the major stakeholders and employees and reveal the underlying reasons for running the business.
- Imply a completion date at some point in the future but not defined at this point.
- Can be divided into milestones that, in turn, can be translated into achievable, assignable, and measurable objectives.

Table 6. NLM Strategic Goal Attribute

Attribute Name	Definition	Possible Values	Examples
Strategic Goal Number	Number indicating the NLM Strategic Goal to which the offering is expected to contribute and help achieve.	• Goal 1 • Goal 2 • Goal 3 • No alignment • Unknown	Goal 1 – Accelerate Discovery and advance health through data-driven research Goal 2 – Reach more people in more ways through enhanced dissemination and engagement Goal 3 – Build a workforce for data-driven research and health

2.1.7 Business Resources

Definition: Services associated with business process execution. Business resources support planning, implementation, operation, maintenance, and/or delivery of an offering. Business resources are often used in combination with technical resources and either indirectly or directly support offerings.

Table 7. Business Resource Attributes

Attribute Name	Definition	Possible Values	Examples
Business Resource Name	Short name for the business services that contribute to the delivery of an offering. The resource name given should describe the type of support provided (e.g., Content Management of RxNorm).	• List (Large Number of Possible Values) • Manual Data Entry	• Parature / Dynamics Support Portal and Ticketing System • PHPartners HSRIC curation • Prokaryotic Genome Annotation Curation • SNOMED CT US Edition Production
Business Resource Owner Name	Person responsible for managing the business resource inputs to an offering.	Manual Data Entry	Jane Smith

Attribute Name	Definition	Possible Values	Examples
Business Resource Type	Categories of business resource that distinguish the business function provided to an offering.	• Customer Service • Data • Management • Research • Other (with Manual Data Entry to add additional values)	

2.1.8 Data Resource

Definition: An organized collection of data. Data resources specify the data set that is leveraged when delivering an offering. May also be provided as an offering.

Table 8. Data Resource Attribute

Attribute Name	Definition	Possible Values	Examples
Data Resource Name	Short name for the data collection that contributes to the delivery of an offering.	• List (Large Number of Possible Values) • Manual Data Entry	• Anatquest images • PubMed Central Data Collection • VSAC data
Data Resource Owner Name	Person responsible for managing the data resource inputs to an offering.	Manual Data Entry	Jane Smith
Data Resource Owner Organization	Name of the NLM organizational unit responsible for providing the resource.	List (Large Number of Possible Values)	• Exhibitions Section • E-Health Information Support Section

2.1.9 External Resource

Definition: An input to an NLM offering that is obtained from a provider(s) outside the NLM organization.

Table 9. External Resource Attributes

Attribute Name	Definition	Possible Values	Examples
External Resource Name	Short name for the external resources that contribute to the delivery of an offering.	Manual Data Entry	eRA – public access compliance report
External Resource Provider Name	Name of external agency or organization providing the external resource.	Manual Data Entry	• NIH • EPA
External Resource Business Owner Name	Person responsible for managing the external resource inputs to an offering.	Manual Data Entry	John Smith

2.1.10 Technical Resource

Definition: Services as well as tangible assets supporting the technology needed to deliver an offering. Technical resources combine technical processes and functions of software, hardware, networks, telecommunications, and electronics as well as facilities and equipment. Includes software development, integration, and maintenance; hardware; networking integration, management and maintenance; information security (IS); IT management consultants; mobile services; web applications; and infrastructure.

Table 10. Technical Resource Attributes

Attribute Name	Definition	Possible Values	Examples
Technical Resource Name	Short name for the technical resources that contribute to the delivery of an offering.	• List (Large Number of Possible Values) • Manual Data Entry	• Annotation pipeline software • BioProject Archive • Entrez • Lexical Tools • SFX • Task Manager
Technical Resource Owner Name	Person responsible for managing the technical inputs	Manual Data Entry	Jane Smith

Attribute Name	Definition	Possible Values	Examples
	to the offering.		

3. Attribute Group: Financial Information

3.1 Expenditure

Definition: The actual spending of money; an outlay (*GAO-05-734SP Budget Glossary*).

Table 11. Annual Expenditures Attributes

Attribute Name	Definition	Possible Values[1]	Examples
Expenditure Type	The definitive breakdown of expenditures into groups that classify or summarize the type of cost.	• Division Federal Salaries (Programmatic/Operational) • Contract Salaries (Programmatic/Operational) • Service Contracts (Offering-Specific) • Other Support Costs (e.g., Administrative Overhead, Supplies, Travel, Training) • IT Services (Division-Specific) • IT Services – IT Management (Division-Specific) • IT Services – Security & Compliance (Division-Specific) • IT Services – Delivery (Division-Specific) • IT Services – Application (Division-Specific) • IT Services – Storage (Division-Specific) • IT Services – Compute (Division-Specific) • IT Services –Platform (Division-Specific) • IT Services – Network (Division-Specific) • IT Services – Data Center (Division-Specific) • NLM-wide IT Shared Services	

[1] For definitions, please refer to the **Glossary of Select Terms and Data Values**.

Attribute Name	Definition	Possible Values[1]	Examples
Cost Pool	Low-level categories that are often aligned easily to general ledger accounts. (*TBM Council*[2])	• Internal – Labor • External – Labor • External – Expenses • Internal –Other • Internal Services – IT	
Expenditure Total	Total amount of money expended to support a business activity.	Manual Data Entry (USD)	$1,234,567.89

[2] https://www.tbmcouncil.org/sites/default/files/tbmc_tbm_taxonomy_3.0.pdf

4. Proposed Future Attributes

4.1 Attribute Group: NLM Offering Information

4.1.1 Offering Information

Definition: Please refer to subsection *2.1.1*.

Table 12. Future-State NLM Offering Attributes

Attribute Name	Definition	Possible Values	Examples
Flagship Indicator	Indicator that the offering belongs to the finest, largest, or most important group of NLM offerings. *(https://www.merriam-webster.com/dictionary/flagship)*	Yes	
Key Performance Indicator (KPI)	Name of the metric most indicative of the offering's value to customers. Selected by offering business owner.	Manual Data Entry	
KPI Measurement Unit	The quantity used as the standard of measurement.	Manual Data Entry	Webpage hits
KPI Measurement Value	The measured KPI quantity at a moment in time.	Manual Data Entry	123,456
KPI Measurement Period	The predetermined time between two scheduled KPI measurements.	• Weekly • Monthly • Quarterly • Semi-annually • Annually	
KPI Measurement Date	The date on which the KPI measurement value is generated for reporting.	Manual Data Entry	YYYYMMDD

Attribute Name	Definition	Possible Values	Examples
KPI Measurement Target	The desired or benchmark KPI measurement value at any given time.	Manual Data Entry	123,456
KPI Data Source Name	Primary location (i.e., database, application, website, etc.) where current and historical KPI data are stored.	Manual Data Entry	Amazon Web Services
NLM Function	Derived from 8 functional statements describing the NLM's key functions.	• Biomedical collections/archives • Medical library development • Training • Outreach • Research • Tools development • Technical consultation	
NLM Core Operations	The range of activities that serve NLM's mission. Per the NLM Strategic Plan Implementation FAQs, NLM core operations are: • Acquire, preserve, and disseminate information • Conduct research about the information substrate of health • Workforce development • Provide training and use on how to make NLM's materials more accessible to others	• Archives & Collections • Outreach • Research • Training • Workforce Development	
Program	An organization subdivision focused on a single product or family of products (*Gartner IT Glossary*).		
Line of Business (LOB)	Related projects, subsidiary		

Attribute Name	Definition	Possible Values	Examples
	programs, and program activities that are managed in a coordinated manner to obtain benefits not available from managing them individually. (*PMBOK*®; used by NCBI). A collection of organizational resources that is geared to accomplish a certain major goal or set of goals (*www.managementhelp.org*).		

4.1.2 Technical Resource

Definition: Please refer to subsection *2.1.9*.

Table 13. Technical Resource Attributes

Attribute Name	Definition	Possible Values	Examples
FISMA System	Indicator of the NLM system designated as a part of the Federal Information Security Management Act of 2002 (FISMA) to which the technical resource is a part.	• List • Undocumented	• Access GUDID • BLAST • Clinical Trials • DailyMed • dbGaP • Digital Repository • DOCLINE • GenBank • Genetic Testing Registry (GTR) • Genetics Home Reference (GHR) • Images from the History of Medicine • Index Management System (IMS) • LPF • MEDLARS Application • MedlinePlus • MeSH • NLM Biomedical Terminology System (NBTS) • NLM Data Center • PubChem • PubMed/PubMed Central • RxNorm Editing System • Serials Extract File • TOXNET • Unified Medical Language System (UMLS) • Value Set Authority Center (VSAC) • Voyager

4.2 Attribute Group: Investment and Expenditure Information

4.2.1 DME Project

Definition: A project is a temporary endeavor undertaken to create a unique product or service. A project has a beginning and an end. (*Project Management Institute®*). A DME (Development, Modernization and Enhancement) project is the portion of an IT investment/project that deals with developing and implementing new or enhanced technology in support of an agency's mission (*48 CFR 1034.001 – Definitions*).

Table 14. Future-State DME Project Attributes

Attribute Name	Definition	Possible Values	Examples
DME Project – Resource Name	Name of the resource supported by the DME project.	Manual Data Entry	
DME Project Name	Short name for a DME project undertaken to develop a business or technical resource.	Manual Data Entry	• PubMed 2.0 • SEF Redesign
DME Project Investment Amount	Total amount invested to complete a DME project.	Manual Data Entry (USD)	$1,234,567.89
DME Project Expenditures Amount	Total expenditures incurred for a DME project to a specified point in time.	Manual Data Entry (USD)	$1,234,567.89

Attribute Name	Definition	Possible Values	Examples
DME Project Associated Investment Name	Name of HHS-reported NLM investment lines from which funding is directed to a project.	• NLM Biomedical Terminology System (NBTS) • NLM BLAST • NLM Entrez Molecular Biology Website • NLM Genome Assembly and Annotation (GenBank) • NLM Molecular Biology IT Support • NLM TOXICOLOGY DATA NETWORK • NLM Clinical Trials • NLM Health Information Resources • NLM PubChem • NLM Human Variation Resources • NLM Medical Library Heath Info Systems and Services • NLM Literature Resources • NLM Clinical Informatics and Data Standards and Analytics Research • NLM Medical Imaging and Visualization Research	

4.2.2 Operations and Maintenance (O&M) Activity

Definition: Appropriations that traditionally finance those things whose benefits are derived for a limited period (e.g., expenses rather than investments) (*Defense Acquisition University*).

Table 15. Future-State O&M Activity Attributes

Attribute Name	Definition	Possible Values	Examples
O&M Activity – Resource Name	Name of resource supported by the O&M activity.	Manual Data Entry	

Attribute Name	Definition	Possible Values	Examples
O&M Activity Name	Short name for the O&M activity supporting the operation and maintenance of a business or technical resource.	Manual Data Entry	• OCCS Application Branch Operations and Maintenance • Format R/W Maintenance Total FY • GBench Editing Total FY • SMART/SMUPD Maintenance 2018 • Sub Portal Maintenance Total FY • SuperBankIt-Maintenance-2018 • Foosh-Genbank Automation
O&M Activity Investment Amount	Total amount invested to perform an O&M activity.	Manual Data Entry (USD)	$1,234,567.89
O&M Activity Expenditure Amount	Total expenditures incurred for the O&M activity to a specified point in time.	Manual Data Entry (USD)	$1,234,567.89
O&M Activity Associated Investment Name	Name of reported NLM Investment lines from which funding is directed to an activity.	• NLM Biomedical Terminology System (NBTS) • NLM BLAST • NLM Entrez Molecular Biology Website • NLM Genome Assembly and Annotation (GenBank) • NLM Molecular Biology IT Support • NLM TOXICOLOGY DATA NETWORK • NLM Clinical Trials • NLM Health Information Resources • NLM PubChem • NLM Human Variation Resources • NLM Medical Library Heath Info Systems and Services • NLM Literature Resources • NLM Clinical Informatics and Data Standards and Analytics Research • NLM Medical Imaging and Visualization Research	

4.2.3 IT Infrastructure

Definition: Investments in IT Infrastructure reported to HHS. Includes NIH End User Devices, Tools, and Support; NIH Computational Infrastructure and Services; NIH IT Security and Compliance; and NIH Network & Telecommunications Infrastructure.

Table 16. Future-State IT Infrastructure Investment Attributes

Attribute Name	Definition	Possible Values	Examples
IT Infrastructure Investment Project Name	Short name for the IT infrastructure project investment reported to HHS.	Manual Data Entry	
IT Infrastructure Investment Amount	Total amount invested in IT infrastructure.	Manual Data Entry (USD)	$1,234,567.89

Appendix A. Key Management Questions Answered Through the NLM Portfolio Metamodel

A.1 Portfolio View: Alignment

The ***Alignment*** portfolio analysis view seeks to evaluate the linkage between an organization's business unit activities and its business goals and objectives and, in the case of federal agencies, also their mandated mission. With these guidelines, NLM's baseline alignment analyses enable drilling down to understand how singular NLM offerings (or groups of NLM offerings) support the realization of NLM strategic plan elements and fulfillment of NLM's responsibilities mandated by law, regulation, or other authoritative source. In the future, NLM should specify the desired outcomes (e.g., performance targets) for each offering and incorporate views into alignment analyses that examine the extent to which NLM is achieving its desired outcomes.

A.1.1 What offerings does NLM provide to user constituencies?

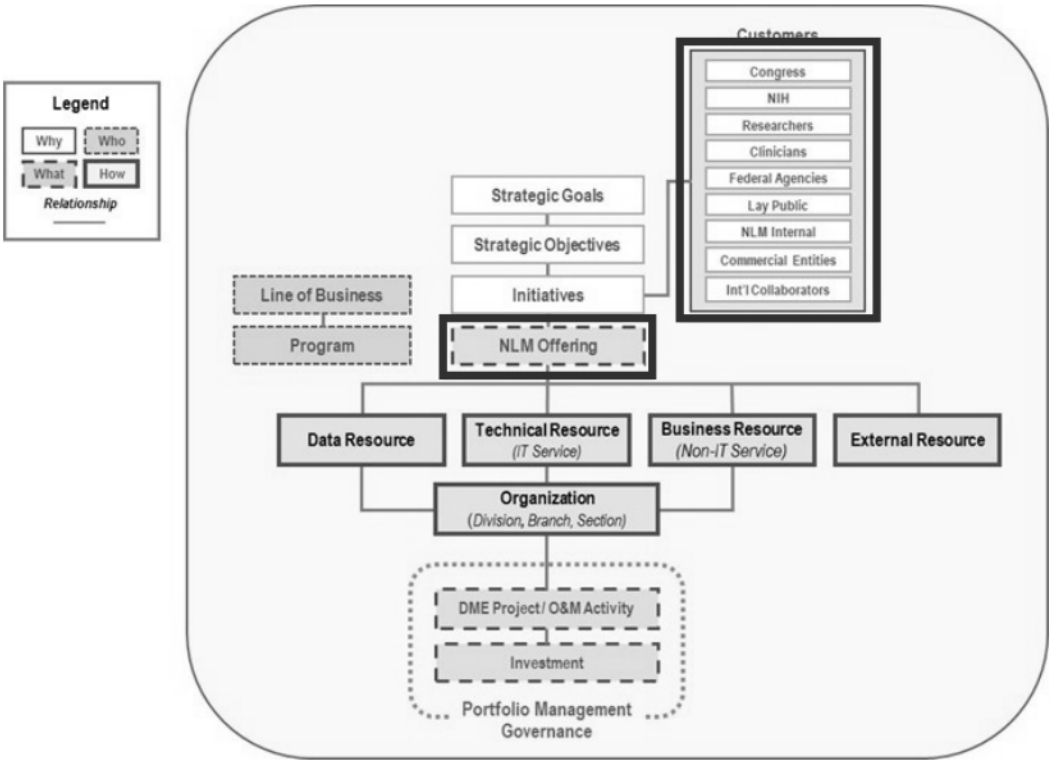


Figure 2. Alignment Question 1.1 – Line of Sight

Metamodel Items and Attributes:

Item	Attribute
NLM Offering	• Offering Name (Short) • Offering Short Description • Offering Type
Customers	• Customer Name

Outputs:

1.1.1 Count of NLM offerings

1.1.2 Comprehensive, descriptive list of NLM offerings

1.1.3 Count of NLM offerings serving different customer types

A.1.2 How do NLM offerings relate to each other?

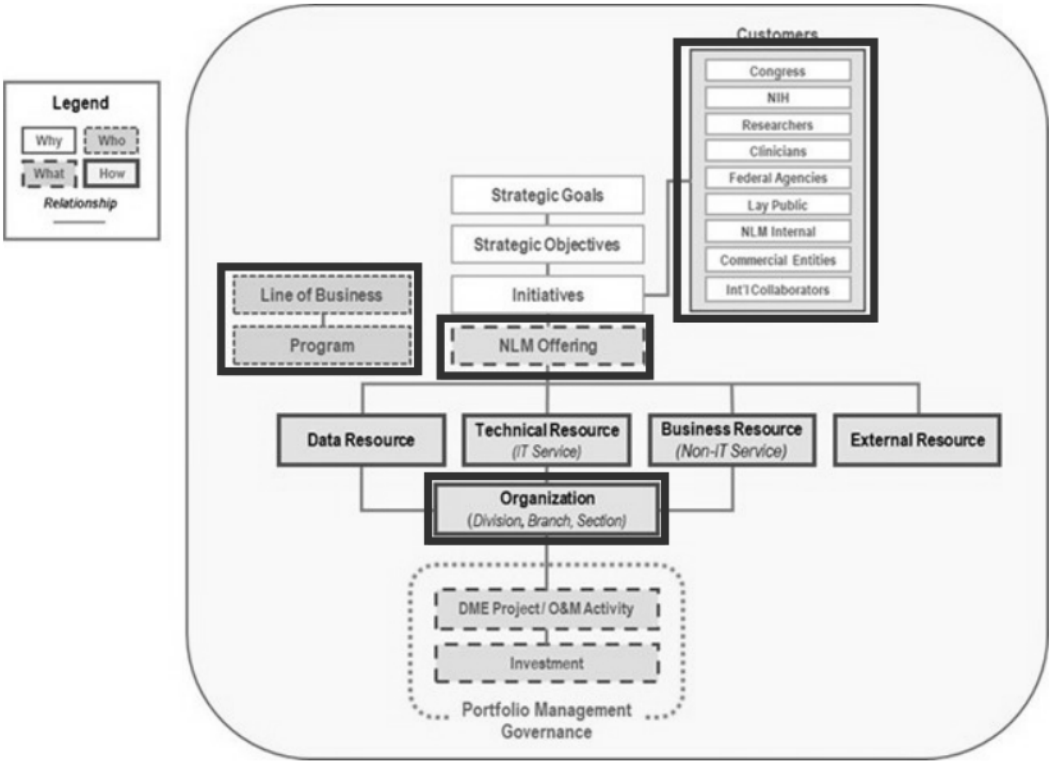

Figure 3. Alignment Question 1.2 – Line of Sight

Metamodel Items and Attributes:

Item	Attribute
NLM Offering	• Offering Name (Short) • Offering Type • Offering Group
Customers	• Customer Name
Line of Business	• LOB Name
Program	• Program Name
NLM Organization	• Organization Name

Outputs:

1.2.1 Count of NLM offerings by NLM organization (i.e., Division, Branch, Section)

1.2.2 Count of NLM offerings differentiated by offering type

1.2.3 Count of offerings by offering group

1.2.4 *(Future PfM Report)* Count of NLM offerings by NLM lines of business

1.2.5 *(Future PfM Report)* Count of NLM offerings by NLM program

A.1.3 How are NLM's current offerings directed by law, regulation, policy, or other mandate?

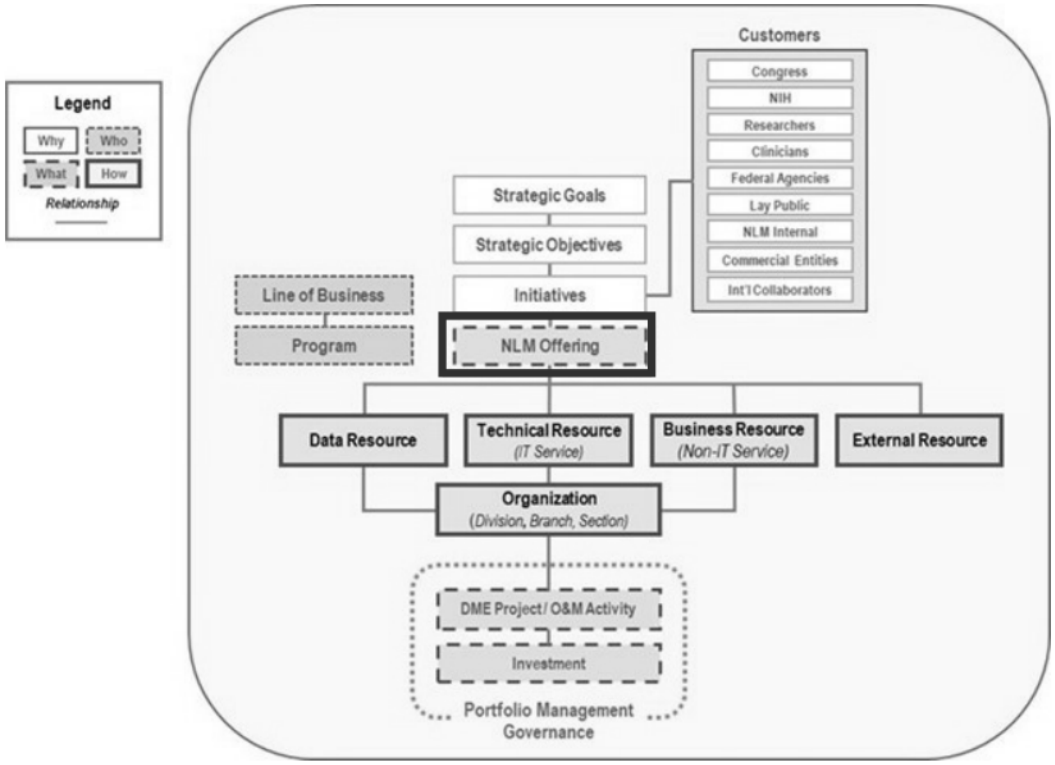

Figure 4. Alignment Questions 1.3 – Line of Sight

Metamodel Items and Attributes:

Item	Attribute
NLM Offering	• Offering Name (Short) • Mandate Source Type • Mandate Reference

Outputs:

1.3.1 Count of NLM offerings by mandate source type

1.3.2 List of NLM offerings with mandate reference citation

A.1.4 How do NLM offerings align to NLM strategic goals, objectives, and initiatives?

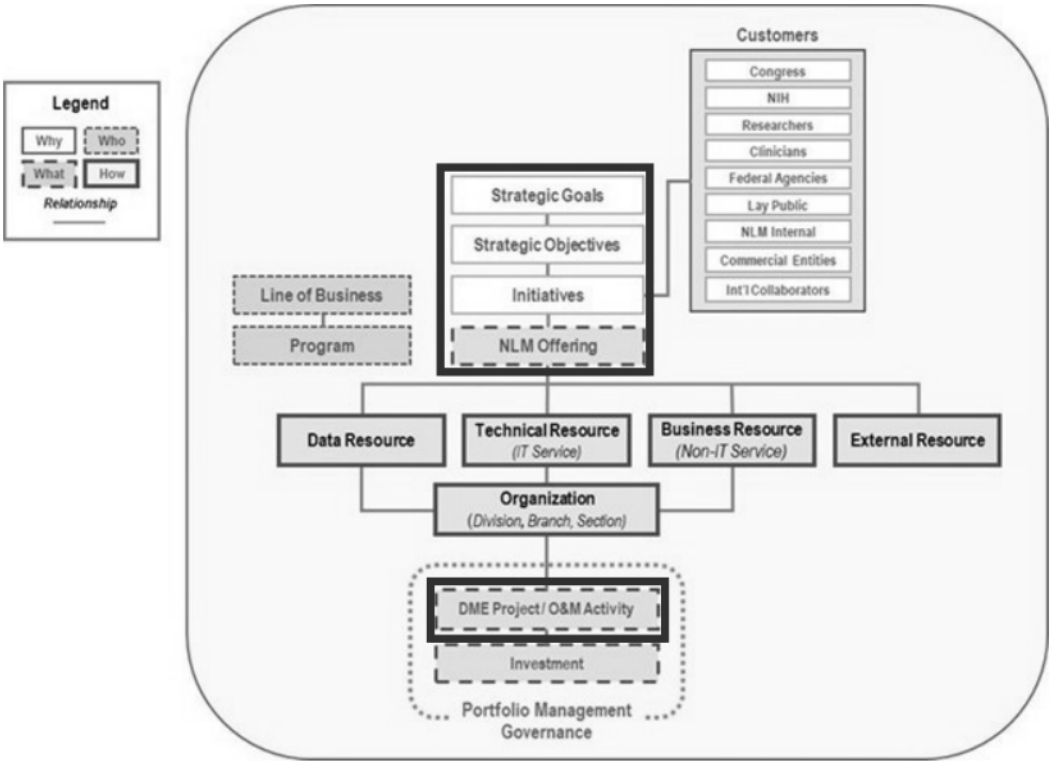

Figure 5. Alignment Question 1.4 – Line of Sight

Metamodel Items and Attributes:

Item	Attribute
NLM Offering	• Offering Name (Short)
Strategic Goal	• Strategic Goal Name
Strategic Objective	• Strategic Objective Name
Initiative	• Initiative Name
DME Project	• DME Project Name

Outputs:

1.4.1 Count of offerings aligned to each strategic goal

1.4.2 Count of offerings aligned to each strategic objective (per goal)

1.4.3 Count of offerings aligned to each 2018 strategic initiative (per objective)

1.4.4 (*Future PfM Report*) List of DME projects aligned to NLM initiatives

1.4.5 (*Future PfM Report*) Grouping(s) of DME projects identified by NLM to address specific initiatives associated with NLM strategic plan implementation and aligned to NLM offerings

A.2 Portfolio View: Fiscal Balance

The ***Fiscal Balance*** view typically presents actual operational expenditures versus expected benefits. Mature organizations will also evaluate expenditures against risk and benefits. For NLM's baseline PfM capability, NLM's diverse, public-facing offerings are the primary benefit in focus. The current-state view visualizes the allocation of fiscal year expenditure totals among offerings and by expenditure category, such as federal and contractor labor, service contracts, and IT services.

Investment information, when available within the portfolio database in the future, will further enhance NLM's ability to understand the results of specific federal investments. It may also highlight opportunities to eliminate or consolidate similar investments and be more operationally efficient.

A.2.1 What is the cost of making and maintaining NLM offerings?

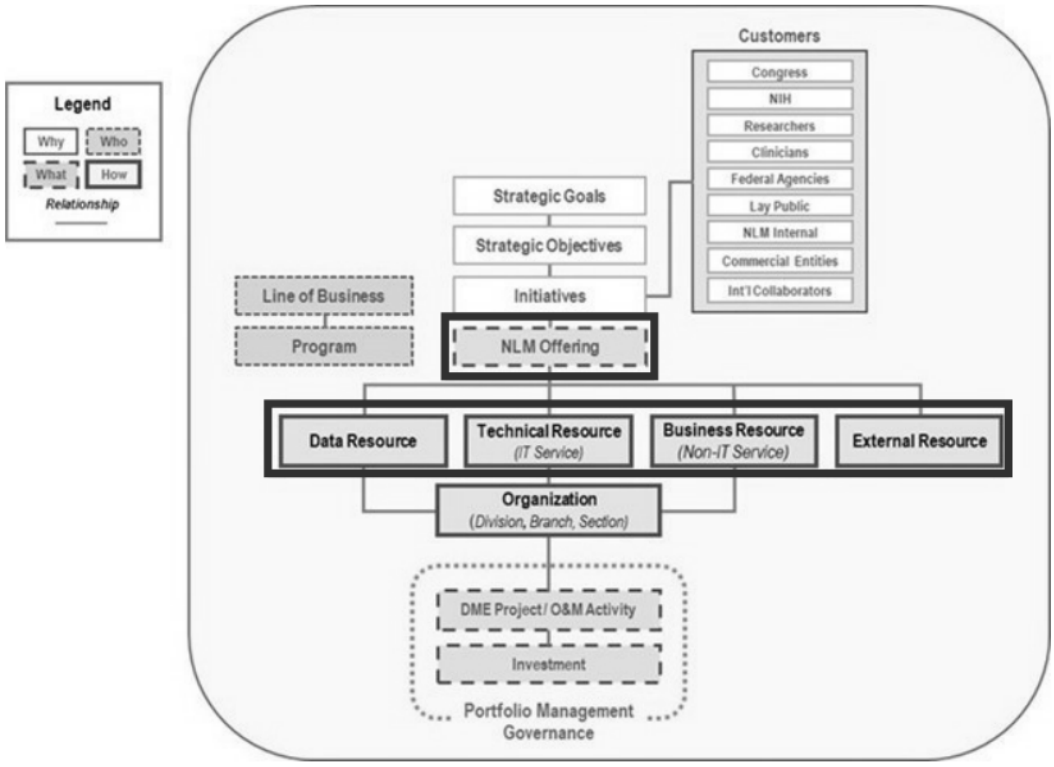

Figure 6. Fiscal Balance Question 2.1 – Line of Sight

Metamodel Items and Attributes:

Item	Attribute
NLM Offering	• Offering Name (Short)
Business Resource	• Business Resource Name
Data Resource	• Data Resource Name • Data Resource Expenditure Amount ($US; FY Total to Date)

Item	Attribute
External Resource	• External Resource Name • External Resource Expenditure Amount ($US; FY Total to Date)
Technical Resource	• Technical Resource Name • Technical Resource Expenditure Amount ($US; FY Total to Date)

Outputs:

Offering Expenditure Information

2.1.1 Total expenditures for offerings

2.1.2 A list of the "top-n" offerings with the highest expenditures

2.1.3 The breakdown of offering total expenditures among Division activities, IT services, and NLM shared services

2.1.4 The breakdown of Division expenditures for an offering by expenditure type

2.1.5 A list of the "top-n" offerings by total expenditures for IT shared services

2.1.6 A list of the "top-n" offerings by total expenditures for NLM shared services

Resource Expenditure Information

2.1.7 (*Future PfM Report*) Total expenditures by resource type (i.e., business, data, technical, and external[3])

2.1.8 (*Future PfM Report*) The breakdown of offering expenditures attributable to resource type (i.e., business, data, technical, and external)

2.1.9 (*Future PfM Report*) A list of the "top-n" resource expenditures by resource type (i.e., business, data, technical, and external)

2.1.10 (*Future PfM Report*) A list of the "top-n" offerings with the highest expenditures for each resource type (i.e., business, data, technical, and external)

2.1.11 (*Future PfM Report*) The breakdown of total expenditures by offering attributable to resource business, data, technical, and external resources against risk and resource type

[3] Determining the costs of shared resources requires a transparent, repeatable, and reasonable cost allocation approach. In addition, capturing the cost of specific external resources requires that charge-back mechanisms be in place to quantify the support NLM received from those resources.

A.2.2 How much does NLM spend on offerings with a similar purpose?

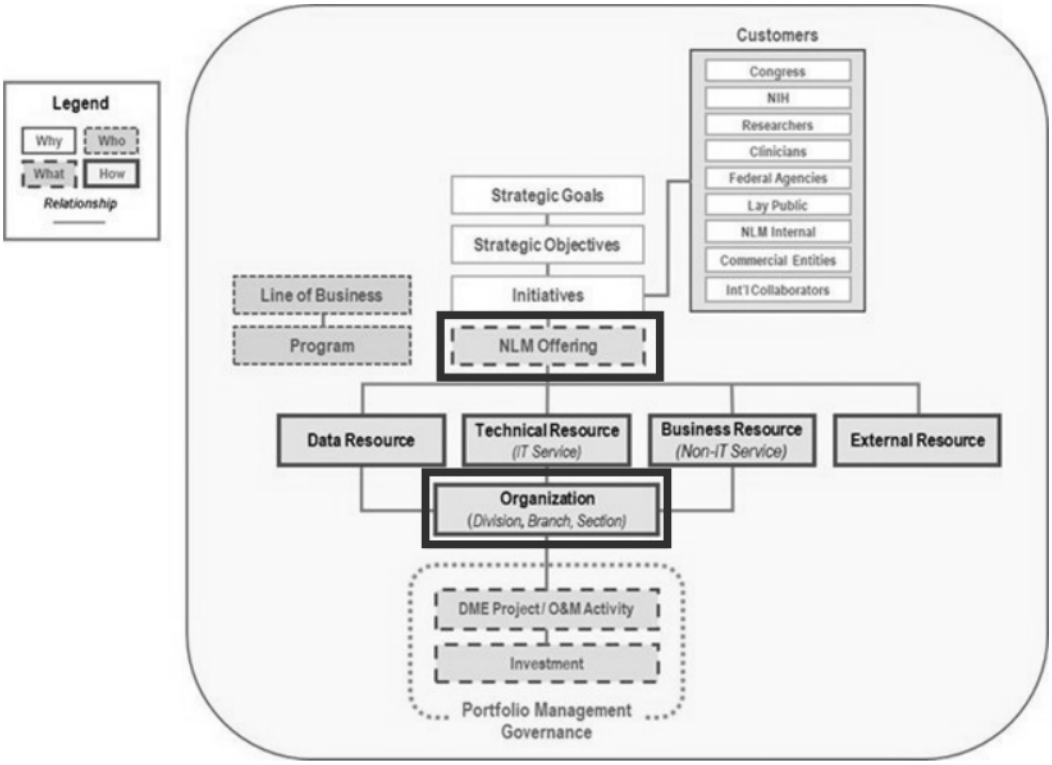

Figure 7. Fiscal Balance Question 2.2 – Line of Sight

Metamodel Items and Attributes:

Item	Attribute
NLM Offering	• Offering Name (Short) • Offering Group
Expenditures	• Expenditure Category • Expenditure Type • Expenditure Total ($US; FY Total to Date)

Outputs:

2.2.1 Total expenditures by offering group

2.2.2 Breakdown of offering group expenditures by expenditure type

A.2.3 What is the composition of NLM Investments?

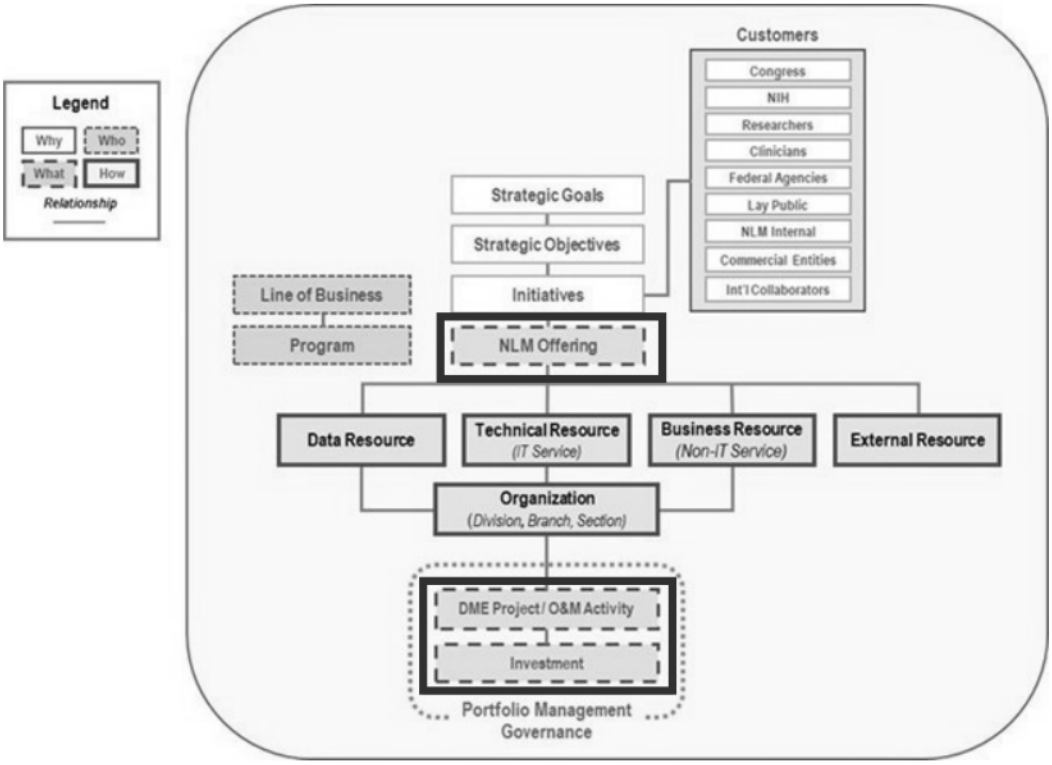

Figure 8. Fiscal Balance Question 2.3 – Line of Sight

Metamodel Items and Attributes:

Item	Attribute
NLM Offering	• Offering Name (Short)
Investment	• Investment Name • Investment Amount ($US; FY Total to Date
Investment Line	• Investment Line Name • Investment Line Investment ($US; FY Total to Date)
DME Projects	• DME Project Name • DME Project Expenditure Amount ($US; FY Total to Date)
O&M Activity	• O&M Activity Name • O&M Activity Expenditure Amount ($US; FY Total to Date)
IT Infrastructure	• IT Infrastructure Project Name • IT Infrastructure Investment Amount ($US; FY Total to Date)

Outputs:

2.3.1 (*Future PfM Report*) Total of investments

2.3.2 (*Future PfM Report*) The breakdown of total investments by investment category (i.e., DME, O&M, and IT infrastructure)

2.3.3 (*Future PfM Report*) A list of the "top-n" investments by investment category (i.e., DME, O&M, and IT infrastructure)

2.3.4 (*Future PfM Report*) The breakdown of investments by offering according to investment category (i.e., DME, O&M, and IT infrastructure)

2.3.5 (*Future PfM Report*) Total of investments by NLM organization

2.3.6 (*Future PfM Report*) Breakdown of investments for DME projects and O&M activities by NLM organization

2.3.7 (*Future PfM Report*) A list of the "top-n" offerings with the highest total investment amount

2.3.8 (*Future PfM Report*) A list of the "top-n" offerings with the highest total investment amount by investment category (i.e., DME, O&M, and IT infrastructure)

A.2.4 How much funding has NLM invested to implement strategic initiatives?

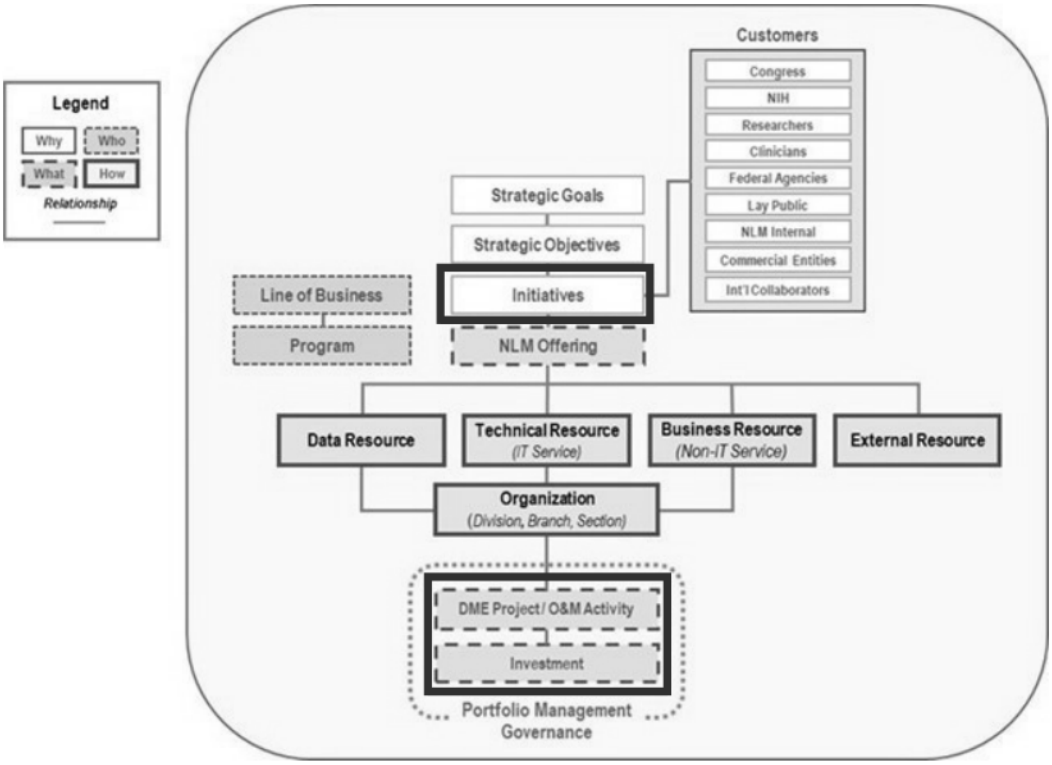

Figure 9. Fiscal Balance Question 2.4 – Line of Sight

Metamodel Items and Attributes:

Item	Attribute
Offering	• Offering Name (Short)
Initiative	• Initiative Name
Investment	• Investment Name • Investment Expenditure Amount ($US; FY Total)
DME Projects	• DME Project Name • DME Project Expenditure Amount ($US; FY Total)
O&M Activity	• O&M Activity Name • O&M Activity Expenditure Amount ($US; FY Total)

Outputs:

2.4.1 *(Future PfM Report)* The total investments in dollars allocated to address specific NLM initiatives

2.4.2 *(Future PfM Report)* A list of all investments, designated either DME project or O&M activity, allocated to offerings aligned with specific NLM initiatives

2.4.3 *(Future PfM Report)* A list of the "top-n" initiatives with the highest total dollar investment amount

2.4.4 *(Future PfM Report)* The total investments in dollars allocated to organizations responsible for resources implicated in achieving NLM initiatives

2.4.5 *(Future PfM Report)* The total expenditures in dollars allocated to address specific NLM initiatives

2.4.6 *(Future PfM Report)* A list of all expenditures, designated either DME project or O&M activity, allocated to offerings aligned with specific NLM initiatives

2.4.7 *(Future PfM Report)* A list of the "top-n" expenditures with the highest total dollar amount

2.4.8 *(Future PfM Report)* The total expenditures in dollars allocated to organizations responsible for resources implicated in achieving NLM initiatives

A.3 Portfolio View: Constraints and Dependencies

The ***Constraints and Dependencies*** portfolio view examines general constraints and dependencies that affect portfolio and portfolio component performance. NLM's current-state metamodel provides a preliminary view of dependencies among offerings as well as between offerings and NLM resources owned by NLM Divisions. Potential constraints that may be added to NLM portfolio view include funding, technology, NLM mandate, and complexity. More research is needed to identify the important management questions related to operational constraints and dependencies that the portfolio metamodel may be configured to answer.

A.3.1 How are NLM resources allocated to deliver NLM offerings?

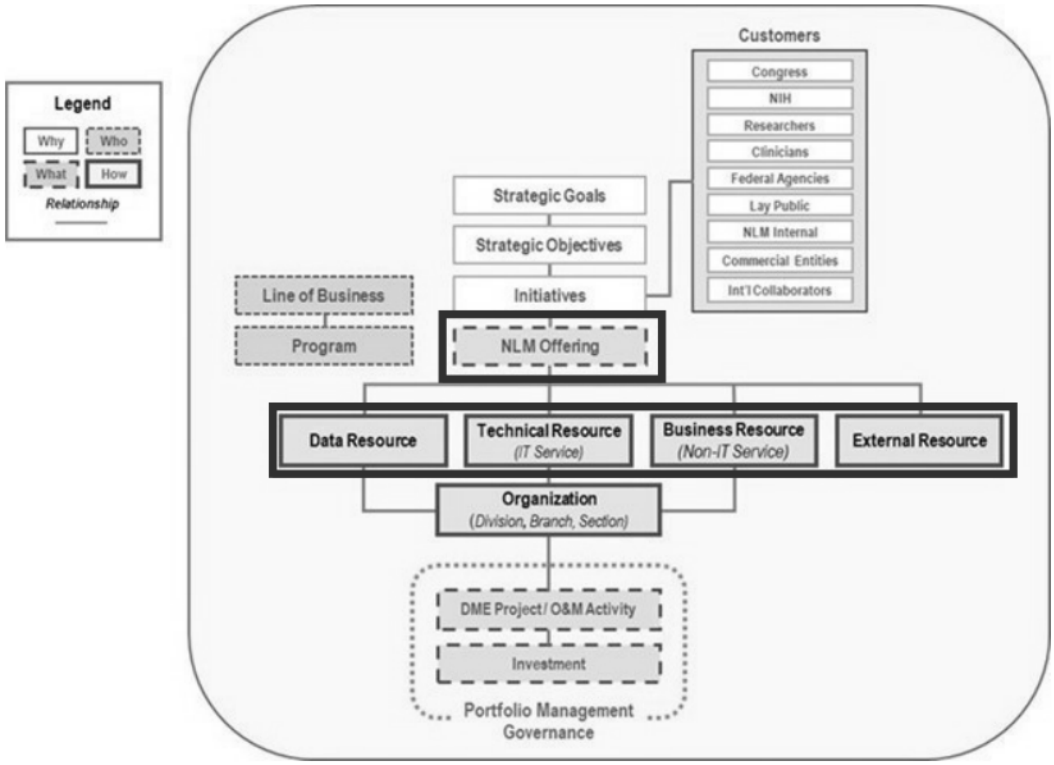

Figure 10. Constraints and Dependencies Question 3.1 – Line of Sight

Metamodel Items and Attributes:

Item	Attribute
Offering	• Offering Name (Short)
Business Resource	• Business Resource Name
Data Resource	• Data Resource Name
Technical Resource	• Technical Resource Name • DME Project Expenditure Amount ($US; FY Total)
External Resource	• External Resource Name

Outputs:

3.1.1 A list of resources (i.e., business, data, technical, and external) utilized by each NLM offering

3.1.2 A list of "top-n" resources (i.e., business, data, technical, and external) utilized by NLM offerings

3.1.3 (*Future PfM Report*) The total approximate expenditures in dollars attributable to the "top-n" shared resources (i.e., business, data, technical, and external)

3.1.4 (*Future PfM Report*) The total approximate expenditures in dollars attributable to the "top-n" shared resources (i.e., business, data, technical, and external) as a percentage of total resource costs

A.4 Portfolio View: Value

The ***Value*** portfolio view combines different indicators related to the organization's cost and funding profile, effectiveness, delivery timeline, and risks to produce a composite data point that indicates value delivered. NLM's portfolio is very diverse; for this reason, a singular value indicator cannot be applied to all portfolio components. Further work is needed to identify key value indicators. In some instances, volume and/or demand may be good indicators of customers' appreciation of NLM offerings. These types of indicators serve as a rough indicator of usefulness (e.g., low demand equates to low usefulness); however, for some offerings with a small customer constituency or specific delivery mandate, neither volume nor demand may suffice to answer the value question. Other value indicators would be required. Future work to build NLM PfM capabilities should include developing a strategy to identify value indicators for each offering or for similar offerings.

Possible strategies for determining value measures include:

1. Conduct customer surveys and analyze feedback to understand customers' perspectives
2. Select key performance indicators based on success criteria determined for an offering or a group of offerings
3. Determine a means to evaluate whether an individual offering (or a group of offerings) fulfills a mandate from Congress, NIH, NLM, or other authoritative source
4. Determine the offering's relevance and uniqueness in the market

The following are examples of value-related management questions:

- 3.1 What is the demand (usage) for NLM offerings? How has demand changed over a defined time period ("n")?
- 3.2 What is the volume of customers (total and by customer type) for each NLM offering? How has customer volume and composition changed over a defined time period ("n")?
- 3.3 How are NLM's flagship offerings performing against key performance indicators measured over a defined time period ("n")?
- 3.4 What identifiable value do offerings provide users/customers?
- 3.5 What value do customers receive from NLM offerings, as conveyed through their feedback?
- 3.6 How does offering value compare with offering total expenditures?
- 3.7 How do offerings act as a support or foundation to external outcomes (e.g., development of apps and other industry technologies, lives saved, and student/research development)?

A.5 Portfolio View: Health

The ***Health*** portfolio view provides information to help an organization understand how well it is executing against its plans for investing, expending, and accomplishing key activities. The Health view analyzes the state of individual investments against the portfolio: how many investments are on track, over budget, under budget, on or behind schedule, etc. As NLM's PfM maturity progresses, NLM may consider expanding the portfolio metamodel to capture information to respond to the following management questions, which are offered as examples only:

5.1 What is the fiscal year budget variance (planned vs. actual)?

5.2 What is the fiscal year budget variance (planned vs. actual) by Division?

5.3 What is the fiscal year variance (planned vs. actual) for NLM projects?

5.4 What is the time estimated to finish the NLM budget?

5.5 What is the workplan variance for NLM initiatives?

5.6 What is the workplan variance for 2018 DME projects?

5.7 What is the workplan variance for 2018 O&M activities?

5.8 What is the fiscal year budget variance (planned vs. actual)?

5.9 What is the budget variance between successive fiscal years?

A.6 Portfolio View: Risk

The ***Risk*** portfolio view associates a risk indicator or score to portfolio components to enable an organization to ensure the amount of risk is commensurate with the potential benefits across the short, medium, and long term. Risk can be examined from multiple perspectives, including investment function/execution, organizational reputation, operational, and competitive position. The level of risk acceptable to an organization depends on its priorities. Therefore, understanding those priorities and potential tradeoffs are paramount. A portfolio risk view is indicative of more a mature PfM approach. Some risk-related management questions are:

6.1 What level of risk does NLM assume by providing the offering?

6.2 How does an offering compare to similar offerings in the marketplace?

Glossary of Select Terms and Data Values

Expenditure Types

Division Programmatic and Operational Activities

Division Federal Salaries	For example, staff executing programmatic/operational roles in support of specific offerings or multiple offerings; includes IT developer time when supporting specific offerings.
Contract Salaries	For example, external contractors hired to support specific offerings or multiple offerings; works alongside federal staff.
Service Contracts	For example, contracts established to purchase a specific service in support of NLM Offering delivery.
Other Support Costs	For example, cost that is potentially allocable across all offerings and not generally offering-specific, such as administrative / management overhead, supplies, travel, and training.
Division-Specific IT Services	IT services provided by an NLM provider (e.g., OCCS) that are specific to a Division (i.e., software, applications, etc.).
NLM-Wide IT Shared Service Costs	IT services that are provided across all of NLM (e.g., data center and network).

Technology Business Management IT Tower Definitions[4]

IT Management	The IT Management tower includes the costs to manage, administer, and plan IT for the enterprise. It includes executive management, strategic management, enterprise architecture, IT finance, and vendor management.
Security and Compliance	The Security & Compliance tower includes service costs related to IT security compliance and disaster recovery. The scope includes costs to define, establish, enforce, and measure security, compliance, and disaster recovery readiness for the enterprise.
Delivery	The delivery tower includes the costs to monitor, support, manage, and run IT operations for the enterprise and includes the IT Service Management (ITSM) functions.
Application	The Application tower includes costs related to applications in the

[4] https://www.tbmcouncil.org/sites/default/files/tbmc_tbm_taxonomy_3.0.pdf

	enterprise. The scope includes the cost of business software and the costs to develop, manage and run applications for the enterprise.
Storage	Storage provides centralized data storage and securely holds information and data to be retrieved later. Storage may hold data for application programs and code, databases, files, media, email and many other forms of information. The storage tower includes distributed and mainframe storage that provides on-line storage for real-time access and archival storage solutions that may enable near-term retrieval or long-term archival. The storage tower excludes the internal storage included with a typical server configuration or end-user device such as a laptop, desktop or mobile phone, or tablet.
Compute	Compute refers to both general and special-purpose devices and software that are programmed to carry out a set of arithmetic or logical operations. In essence, it provides the "brains" to process application and user requests. Compute includes a wide range of physical and virtual servers differentiated by platform and operating system. The Compute tower should include all direct hardware, software, labor, and outside service costs.
Platform	Platform includes all costs associated with distributed and mainframe databases and middleware systems. Costs include DBMS software and tools, labor, and outside services.
Network	Network includes the data and voice equipment along with the transport methods to connect systems and people and to enable people to converse. Networks provide core connectivity within the enterprise data centers as well as connectivity to and access within office building and remote locations.
Data Center	Data centers are purpose-built facilities to securely house computer equipment. Data centers provide racks/cabinets and cabling; clean and redundant power; data connectivity; environmental controls, including temperature, humidity, and fire suppression; physical security; and the people to run and operate the facility and its infrastructure.

Attachments: Metrics - Strategic Plan Implementation - Feb2019 clean.docx, ESM initiative owners Feb2019.xlsx

Hi all – We would appreciate your help with two items.

Last summer we started talking about identifying indicators of success of our implementation of the strategic plan, and we have continued talking about this from time to time; those ideas are reflected in the attached Word document. In the document, leadership owners have been identified by their initials in parentheses in the initiative column. While these ideas are more or less the results of brainstorming, we would like to advance the conversation by asking you to think carefully about your respective initiatives and identify concrete the success goal of each initiative and how you will measure how close the initiative is to that goal (the goal and metrics should be stated in the third column). These initiatives will ultimately be entered into the ESM tool. We plan to present our September 2018 to September 2019 on these initiatives in our September meeting of the Board of Regents. It will be helpful to hear from you at tomorrow's Leadership Meeting about how much time you think it might take to do this.

Speaking of ESM, most implementation initiatives listed there have more than one leadership member as an owner. We would like to identify one owner as the point of contact for each initiative in ESM (for your convenience initiative names, leadership owners, and project managers are listed in the attached spreadsheet). For each initiative of which you are a leadership owner, please consult with leadership co-owners and decide which of you will serve as the point of contact for that initiative. Again, it would be good to get a sense of how long you might need to do this at tomorrow's meeting.

Your help with this is much appreciated - Mike

METRICS FOR MEASURING IMPLEMENTATION OF THE STRATEGIC PLAN
[Need to add in activities from the ESM tool]

STRATEGIC PLAN GOAL/OBJECTIVE	INITIATIVE	METRICS – INITIATIVE TARGET
1-Accelerate discovery and advance health through data-driven research		
1.1 Connect the resources of a digital research enterprise	Link articles to associated data sets - JO	Number of articles in PubMed linked to data sets – xxxx articles w/ linked data by 2022 (???)
1.2 Advance R&D in biomedical informatics and data science	Expand funding for intramural research – MC, JO (with Eddie)	Intramural research program budget (growth from baseline)/ % of total NLM budget.
	Hire NLM-wide scientific director (MH)	Lay out timeline and process - Hire by end of CY2019
	Hire more intramural investigators (JO)	Number of investigators in NLM IRP – get 3 more by end of CY2019
	Expand funding for extramural research to support new biomedical data-science initiatives (RPG and SBIR) (VF)	Number of new initiatives Number of RPG grants funded from new initiatives Number of SBIR grants funded from new initiatives
	Expand collaboration with other ICs and agencies on data science oriented FOAs (VF)	Number of multi-IC or agency FOAs joined Number of new grants funded from joint FOAs in data science areas
	Persistent unique IDs w/in NLM systems (MH)	
	BMIC criteria for data repositories (MH)	
	OSTP criteria for data repositories OSTP data management plan guidance	

	(JS/MH)	
1.4 Create sustainable institutional, physical, and computational infrastructure	Migrate high availability resources to the cloud (JO/ID)	Number of resources in the cloud % of resources migrated
2—Reach more people in more ways through enhanced dissemination and engagement		
NOTE: establishment of centralized Outreach organization in NLM advances all of the below		
2.3 Support research in biomedical and health information access methods and information dissemination strategies	Increase support for G08 resource grants by expanding funding to one FOA per year (VF)	Number of applications funded
	Support scholarly works G13 grants relating to interests of primary NLM audiences (VF)	Number of applications funded
2.4 Enhance information delivery	MITRE Assessment ? (ID/JO)	Implement a digital scorecard platform for measuring customer experience; establish performance indicators for **at least five** major NLM public-facing information resources.
	Support NN/LM activities to enhance understanding of data science and advanced data management (JB)	Number of NN/LM initiatives with data science focus Number of participants in data-science focused NN/LM initiatives
3--Build a workforce for data-driven research and health		
3.1 Expand and enhance research training for biomedical informatics and data science	Expand extramural training grant support for predoctoral biomedical data science (Ts) - VF	Number of predoctoral trainees in NLM-supported programs in data-science tracks
	Increase funding for postdoctoral fellowships in data science for mid-career researchers (Fs) - VF	Number of postdoctoral trainees in NLM-supported fellowships
	Increase funding for career transition awards in biomedical data science (Ks) - VF	Number of data-science focused K awards

3.2 Assure data science and open science proficiency	Support partnerships to share NLM curriculum materials in biomedical data science with other NIH training programs	Number of partnerships supported
	NLM Data science assessment/training (JB)	
3.3 Increase workforce diversity	Increase support for training partnerships with MSIs - VF	Number of projects supported Evidence of biomedical data science in curricula of MSI partners
	Increase support for partnerships with I-schools - VF	Number of projects supported Evidence of biomedical data science in curricula of I-school partners

Project Manager	Leadership Team Owners	Initiative name

Subject: March meeting: Toxnet integration into NCBI databases

Joyce
I went to the March meeting today for the Toxnet integration into NCBI databases group. Florence was the only SIS staff member there. Kim Pruitt, Bart Trawick, Jeff Beck and other NCBI staff were there. The topics were primarily about the progress being made on data sources. We also saw how content has been included in the new PubChem interface.

Florence brought up the issue about how will toxicology users easily get to data previously found in Toxnet. This isn't easy for PubMed and even less easy for PubChem.

It was my impression that the NCBI staff is still not focused on providing a Toxicology focused interface, which is different from what Florence and Jean G. have expressed or what I've heard you talk about from the Director's Office. I did bring up that I understood that there is an expectation from Patti's office, but didn't pursue it since this was my first meeting.

From the NCBI point of view, Evan pointed out that not all content in PubChem (the content not from SIS) is properly tagged to provide a filter for toxicology content. And there was concern about setting up interim pages that could get lost later. We did determine that Florence and David Arndt would try to get some usage data about different SIS pages to more clearly understand which pages are used heavily or lightly.

I think it would be worthwhile to have Kim P and probably Bart on board with the idea of a Toxicology focus, if that is truly what Patti is expecting. I came away with the impression that there is a disconnect by the different parties involved, and it needs to be cleared up one way or another.

David

++++++++++++
Toxnet integration into NCBI databases
March 28, 2019
1:00 pm

Confluence page: https://wiki.nlm.nih.gov/confluence/display/TWG/TOXNET+Working+Group+Home

Monthly progress check meeting with Florence / NLM SIS and PubChem / Bookshelf product owners to review Toxnet project status against the goals as stated by Florence below:

- Get all the HSDB and ChemID data into PubChem
- Get some of the TOXLINE subsets into Literature databases (PubMed? PMC?)
- Get some datasets such as LactMed into Books
- Make sure there are APIs to query the data and get the results through API
- Document the requirements
- Work on the “tox” interface design (NCBI)
- Do some user testing
- Develop the “tox” interface, search, and “tox” view (NCBI)
- Testing
- Deployment

Subject: Sunset offerings that have been approved by Jerry

Jody,

Here are all the sunset requests that we submitted on the paper form. GeneEd and ToxMystery are already taken down. ToxLearn is still in process as we are waiting for an Letter of Intent with Society of Toxicology to be completed. We will process CPDB, CHIRR, and TOXMAP in the next couple of weeks.

The next batch of sunset requests will be through the sunset portal interface. Thanks!

Florence

REQUEST TO RETIRE NLM TOXMAP

Product owner(s) fill out sections I, III, IV and V. Include documentation with this form.
Record approvals in section II.

I. **Written justification for the retirement of an NLM resource.** Three to six months before sunsetting any NLM resource, a written justification for the retirement of the resource must be prepared. In drafting the justification, the use of statistics is often helpful. Reasons for sunsetting and/or retiring an NLM resource may include (check all that apply):

☐ Low usage

☐ Obsolescence (that is, better products have come along) – whether from NLM or another group

☒ No longer aligned with NLM priorities or mission needs

☐ Incorrect or out-of-date information. If information cannot be updated, then archive the resource

☒ Reallocation of staff to different products because resource is no longer a priority

☒ Cost in relation to value

☒ Other (Please explain) The US EPA now produces several GIS products and visualization applications (https://www.epa.gov/geospatial/epa-geospatial-applications) that have the similar GIS functionality, except the ability to search TOXNET from within the GIS tools. This was a unique feature in TOXMAP-classic, which was retired due to the obsolete technology platform. The new version of TOXMAP does not have this feature either. To make the new TOXMAP to have this feature will require major investment in software development. We cannot justify the effort because the usage of this feature was very low, averaging about 400 searches a year.

II. **Approval.** This form must be signed by:

- NLM Division head (within LHC, LO, NCBI, OCCS, SIS, OD) HFC 3/26/2019

- Upon approval by NLM division head, forward completed form to Kathy Cravedi, Director, OCPL (kcravedi@nlm.nih.gov), for distribution and approval by:
  NLM Director Initial Here Date
  NLM Deputy Director JS 3/27/2019
  NLM Communications Director Initial Here Date

III. **Prepare Communications plan for sunsetting the NLM resource.** This document is developed for sharing news about the retirement of the NLM resource with relevant internal and external audiences. Please address the following key elements:

A. ***Internal communication plan*** for NLM staff. Identify who needs to be informed? (staff, contractors) SIS staff, NLM staff, NNLM staff and core set of dedicated users from the Public Health and Toxicology Communities.

1. Determine questions that may need to be addressed. These may include:
   What information needs to be provided? TOXMAP will be retired because it no longer aligns with NLM priorities and because the US EPA now

provides several GIS products that provide similar GIS functionality of TOXMAP.

- When will the information be provided? **End of FY2019**
- By what method(s) will information be provided? Example: Email to all NLM staff Email, GovD posts, announcement on TOXMAP web site
- If multiple messages are to be sent, by what method(s) and with what frequency? Over a three-month period.
- Are there any potential areas for misunderstanding or concern? None except the non-technical users of TOXMAP may have a high learning curve to transition to the EPA GIS tools.

2. Establish what may need to be communicated to internal audiences. This could include:
    - Why is this program or service being retired? TOXMAP will be retired because the US EPA now provides several GIS products that provide similar GIS functionality.
    - What content, if any, will still be available and, if so, why and where? (Options may include archived pages on the NLM website, FTP, the Wayback Machine internet archive, and tape.) US EPA GIS applications and TRI applications; possibly NLM TOXNET TRI
    - What will happen to the staff working on the product or service? Assigned to other areas and projects within NLM/SIS.
    - What staff will be involved in this transition? Colette Hochstein
3. Identify mechanisms to be used for communicating with internal audiences. These may include some or all of the following (Check all that apply):

    ☒ Emails

    ☒ Signage

    ☐ Information delivered at staff meetings

    ☐ Point of discussion at brown bag luncheons

    ☐ Town Hall meetings, etc.

    ☐ Other (Explain) Enter other mechanism(s)
4. Develop and attach a set of Talking Points for the NLM Director TOXMAP has helped users visually explore data primarily from the EPA's Toxics Release Inventory (TRI) and Superfund Programs. TOXMAP also features Canadian NPRI data, U.S. EPA coal plant emissions data, and U.S. commercial nuclear power plants. TOXMAP overlays U.S. Census demographic data, income figures from the U.S. Department of Commerce, and health data from the NCI SEER program. It will be retired at the end of FY2019. the US EPA now provides several GIS products that provide similar GIS functionality.
5. Does the NIH Director or other IC Directors need to be informed? Yes

    If Yes, check all that apply:

    ☒ The service is produced jointly with another IC or serves an audience of interest to the IC

☐ The service has high visibility and sunsetting may result in questions, letters, emails to the NIH Director from the public, key stakeholders, Congressional staff, HHS leadership

☒ Other (Please elaborate) NIEHS Director should be notified as NIEHS serves user communities that have interest in TOXMAP. SIS has also worked for many years with the US EPA regarding the data and functionality of TOXMAP. Their staff should be informed of its status.

B. ***External communication plan*** for users, stakeholders, and the public

1. Who needs to be informed? (Identify stakeholders).
    - Why is this program or service being retired? The US EPA now produces several GIS products (https://www.epa.gov/geospatial/epa-geospatial-applications) that have the similar GIS functionality.
    - What content, if any, will still be available and, if so, why and where? Data used in TOXMAP will be available from other original sources. GIS application users can access them by overlaying the data in their GIS applications. TRI and NPL data: US EPA; Canadian NPRI data from Environment and Climate Change Canada; Nuclear Regulatory Commission publishes the commercial nuclear power plant data; BEA data from the US Department of Commerce; TRI lat/long info from EPA's Facility Registry System (FRS).; coal plant data from EIA Electricity Data Browser; EPA Air Markets Program Data (AMPD) data available from the EPA Clean Air Markets; Cancer and Mortality data available from the US NIH NCI.
    - What will happen to the staff working on the product or service? Assigned to other areas and projects within NLM/SIS

2. Establish what may need to be communicated. This could include—
    - Why is this program or service being retired? The US EPA now produces several GIS products (https://www.epa.gov/geospatial/epa-geospatial-applications) that have the similar GIS functionality.
    - What content, if any, will still be available and, if so, why and where? Data used in TOXMAP will be available from other sources. GIS application users can access them by overlaying the data to the maps. TRI and NPL data: US EPA; Canadian NPRI data from Environment and Climate Change Canada; Nuclear Regulatory Commission publishes the commercial nuclear power plant data; BEA data from the US Department of Commerce; TRI lat/long info from EPA's Facility Registry System (FRS).; coal plant data from EIA Electricity Data Browser; EPA Air Markets Program Data (AMPD) data available from the EPA Clean Air Markets; Cancer and Mortality data available from the US NIH NCI.
    - What will happen to the staff working on the product or service? Assigned to other areas and projects within NLM/SIS
    - How can I or how can my group be involved in this transition? Provide related information as needed.

3. Identify what needs to be completed:

☐ Deliverables Specify

☒ Responsible party or parties for the sunsetting process Colette Hochstein, Florence Chang

☐ Due date 9/30/2019

Identification of communication channels. These could include (Check all that apply):

☒ emails to stakeholders and users

☐ signage

☐ NLM homepage (public news announcement)

☐ speeches

☒ social media including Facebook, Twitter, LinkedIn, etc.

☒ newsletters/blogs, including *Technical Bulletin*, *NLM in Focus*, *Circulating Now*, *Musings*, etc.

☐ Other (Please Explain) Enter other possible communication channel(s)

4. Determine questions that may need to be addressed, including:
   - What information will be provided? The US EPA now produces several GIS products (https://www.epa.gov/geospatial/epa-geospatial-applications) that have the similar GIS functionality.
   - When will the information be provided? Starting Summer 2019)
   - With what frequency? Monthly
   - Are there potential areas for misunderstanding or concern? Probably not.
   - After informing stakeholders that the site will no longer be accessible, where can they find information once the site is retired? TRI and NPL data: US EPA; Canadian NPRI data from Environment and Climate Change Canada; Nuclear Regulatory Commission publishes the commercial nuclear power plant data; BEA data from the US Department of Commerce; TRI lat/long info from EPA's Facility Registry System (FRS).; coal plant data from EIA Electricity Data Browser; EPA Air Markets Program Data (AMPD) data available from the EPA Clean Air Markets; Cancer and Mortality data available from the US NIH NCI. Links to direct users to these external data sources will be provided on the TOXMAP home page for 6 months prior to the sunset.
   - How will NLM respond to questions and comments? Staff will respond to questions received through customer service emails
   - Is this an issue that may generate media interest? (If so, please include strategies for responding in the plan.) No

IV. **Posting notice on central NLM "sunsetting calendar" (coming soon) on the NLM Wiki.** A notice should be posted on the "NLM resource sunset calendar" immediately following the effective

date of the retirement of the resource. The sunset calendar, which will also be found on the NLM wiki, will serve as an historical record about retired NLM products and services.

V. **Identification of primary point of contact for further information about retired NLM resource.** Provide name and contact information for primary point of contact for retired NLM resource here:

Name	Colette Hochstein, Florence Chang

REQUEST TO RETIRE CARCINOGENIC POTENCY DATABASE (CPDB)

Product owner(s) fill out sections I, III, IV and V. Include documentation with this form.
Record approvals in section II.

I. **Written justification for the retirement of an NLM resource.** Three to six months before sunsetting any NLM resource, a written justification for the retirement of the resource must be prepared. In drafting the justification, the use of statistics is often helpful. Reasons for sunsetting and/or retiring an NLM resource may include (check all that apply):

☒ Low usage

☒ Obsolescence (that is, better products have come along) – whether from NLM or another group

☐ No longer aligned with NLM priorities or mission needs

☒ Incorrect or out-of-date information. If information cannot be updated, then archive the resource

☐ Reallocation of staff to different products because resource is no longer a priority

☐ Cost in relation to value

☒ Other (Please explain) The Carcinogenic Potency Database (CPDB) is an archival database with low and decreasing usage. It provides historical information from the years 1980 - 2011. It is no longer updated. It was created at the University of California, Berkeley, and when they no longer wanted to maintain access to it after it was no longer being built, they asked us to take it. CPDB reports analyses of animal cancer tests on 1547 chemicals. CPDB includes 6540 chronic, long-term animal cancer tests, both positive and negative for carcinogenicity, from the general published literature as well as the National Cancer Institute and the National Toxicology Program (NTP). Such tests were used in support of cancer risk assessments for humans. CPDB was developed by the Carcinogenic Potency Project at the University of California, Berkeley and the Lawrence Berkeley National Laboratory. The usage of CPDB has consistently dropped over the past years to 0.007% of TOXNET usage in FY2018. Of TOXNET's 27,582,034 page views in FY2018, only 1930 page views were for CPDB.

II. **Approval.** This form must be signed by:

- **NLM Division head (within LHC, LO, NCBI, OCCS, SIS, OD)** HFC 3/26/2019

- Upon approval by NLM division head, forward completed form to Kathy Cravedi, Director, OCPL (kcravedi@nlm.nih.gov), for distribution and approval by:

  NLM Director Initial Here Date

  NLM Deputy Director JS 3/27/2019

  NLM Communications Director Initial Here Date

III. **Prepare Communications plan for sunsetting the NLM resource.** This document is developed for sharing news about the retirement of the NLM resource with relevant internal and external audiences. Please address the following key elements:

A. ***Internal communication plan*** for NLM staff

1. Identify who needs to be informed? (staff, contractors) Staff are aware of the plan. Additional groups include NNCO, NNLM, and toxicology community via our listserv.
2. Determine questions that may need to be addressed. These may include:
    - What information needs to be provided? That the CPDB was a resource taken from the University of Berkeley after they stopped supporting it and wanted an archival home for a few years. That the information will be available on NLM's ftp site for 6 months after sunsetting.
    - When will the information be provided? 5/31/2019
    - By what method(s) will information be provided? Example: Email to all NLM staff Post on database web pages, and send to OCPL for distribution.)
    - If multiple messages are to be sent, by what method(s) and with what frequency? One round
    - Are there any potential areas for misunderstanding or concern? none
3. Establish what may need to be communicated to internal audiences. This could include:
    - Why is this program or service being retired? The information is outdated and little used. It is not in a form that lends itself to conversion to Bookshelf)
    - What content, if any, will still be available and, if so, why and where? (Options may include archived pages on the NLM website, FTP, the Wayback Machine internet archive, and tape.) The evaluated and annotated content, currently searchable on TOXNET, will no longer be available on TOXNET. The data files (PDFs, text, and web pages) will be compressed as zip files available as downloads on the NLM FTP site. The citations of referenced literatures are available on PubMed.
    - What will happen to the staff working on the product or service? No staff resources used now
    - What staff will be involved in this transition? Florence Chang, Phil Thomas
4. Identify mechanisms to be used for communicating with internal audiences. These may include some or all of the following (Check all that apply):
    - ☒ Emails
    - ☒ Signage
    - ☒ Information delivered at staff meetings
    - ☐ Point of discussion at brown bag luncheons
    - ☐ Town Hall meetings, etc.
    - ☒ Other (Explain) listserv
5. Develop and attach a set of Talking Points for the NLM Director The information is outdated and little used. It is not in a form that lends itself to

conversion to Bookshelf). The resource was a labor intensive one developed by Berkeley staff and transitioned to NLM when UC Berkley terminated the project. This resource is not in a format that can be converted to another NLM database or Bookshelf. The data will remain available on NLM's ftp site.

6. Does the NIH Director or other IC Directors need to be informed? No

   If Yes, check all that apply:

   ☐ The service is produced jointly with another IC or serves an audience of interest to the IC

   ☐ The service has high visibility and sunsetting may result in questions, letters, emails to the NIH Director from the public, key stakeholders, Congressional staff, HHS leadership

   ☐ Other (Please elaborate) Enter other reason(s) Director(s) need to be informed

B. ***External communication plan*** for users, stakeholders, and the public

1. Who needs to be informed? (Identify stakeholders).
   - Why is this program or service being retired? The information is outdated and little used. Cannot be converted to new format for TOXNET move to NCBI.
   - What content, if any, will still be available and, if so, why and where? The data will remain available on NLM's ftp site. Journal literature on which it is based is still available via PubMed.
   - What will happen to the staff working on the product or service? No staff work on this other than routine IT deployment /support issues .

2. Establish what may need to be communicated. This could include—
   - Why is this program or service being retired? The resource is outdated and little used. It cannot be converted to a new format for other NLM databases or Bookshelf. The resource will be taken down from TOXNET end May 2019
   - What content, if any, will still be available and, if so, why and where? Journal literature on which it is based is still available in PubMed. The archived content will be made available in compressed format on NLM FTP server.
   - What will happen to the staff working on the product or service? No staff
   - How can I or how can my group be involved in this transition? Enter possible support option(s)

3. Identify what needs to be completed:

   ☐ Deliverables Specify

   ☒ Responsible party or parties for the sunsetting process TOXNET IT

   ☒ Due date 5/31/20195/31/2019

   Identification of communication channels. These could include (Check all that apply):

☒ emails to stakeholders and users

☐ signage

☒ NLM homepage (public news announcement)

☐ speeches

☒ social media including Facebook, Twitter, LinkedIn, etc.

☒ newsletters/blogs, including *Technical Bulletin*, *NLM in Focus*, *Circulating Now*, *Musings*, etc.

☐ Other (Please Explain) Enter other possible communication channel(s)

4. Determine questions that may need to be addressed, including:
    - What information will be provided? Sunset of CPDB
    - When will the information be provided? Starting after approval
    - With what frequency? Enter frequency
    - Are there potential areas for misunderstanding or concern? no
    - After informing stakeholders that the site will no longer be accessible, where can they find information once the site is retired? Journal literature on which it is based is still available in PubMed. The archived content will be made available in compressed format on NLM FTP server.
    - How will NLM respond to questions and comments? Email via customer service system
    - Is this an issue that may generate media interest? (If so, please include strategies for responding in the plan.) No

IV. **Posting notice on central NLM "sunsetting calendar" (coming soon) on the NLM Wiki.** A notice should be posted on the "NLM resource sunset calendar" immediately following the effective date of the retirement of the resource. The sunset calendar, which will also be found on the NLM wiki, will serve as an historical record about retired NLM products and services.

V. **Identification of primary point of contact for further information about retired NLM resource.** Provide name and contact information for primary point of contact for retired NLM resource here:

Jeanne Goshorn Jeanne.goshorn@nih.hhs.govJeanne.goshorn@nih.hhs.gov

REQUEST TO RETIRE GeneED

Product owner(s) fill out sections I, III, IV and V. Include documentation with this form.
Record approvals in section II.

I. **Written justification for the retirement of an NLM resource.** Three to six months before sunsetting any NLM resource, a written justification for the retirement of the resource must be prepared. In drafting the justification, the use of statistics is often helpful. Reasons for sunsetting and/or retiring an NLM resource may include (check all that apply):

☐ Low usage

☒ Obsolescence (that is, better products have come along) – whether from NLM or another group

☐ No longer aligned with NLM priorities or mission needs

☐ Incorrect or out-of-date information. If information cannot be updated, then archive the resource

☒ Reallocation of staff to different products because resource is no longer a priority

☐ Cost in relation to value

☒ Other (Please explain) Some content will be emerged into Genetics Home Reference

II. **Approval.** This form must be signed by:

- NLM Division head (within LHC, LO, NCBI, OCCS, SIS, OD) Florence Chang 10/26/2018

X

Hua Florence Chang
Acting Associate Director, SIS

- Upon approval by NLM division head, forward completed form to Kathy Cravedi, Director, OCPL (kcravedi@nlm.nih.gov), for distribution and approval by:

NLM Director Initial Here Date

NLM Deputy Director Initial Here Date

X

Jerry Sheehan
NLM Deputy Director

NLM Communications Director Initial Here Date

III. **Prepare Communications plan for sunsetting the NLM resource.** This document is developed for sharing news about the retirement of the NLM resource with relevant internal and external audiences. Please address the following key elements:

A. ***Internal communication plan*** for NLM staff

1. Identify who needs to be informed? (staff, contractors) Staff that work on the project have been informed. SIS has already met with Genetics Home Reference and begun the process of determining what content to take. Additional groups include LHS staff, consumer health meet-up group, NNCO, NNLM, NSTA and NBT associations. Our contractor that works on programming and development of the platform have already been informed, but we will notify them again once this plan has been approved.
2. Determine questions that may need to be addressed. These may include:
    - What information needs to be provided? That some GeneEd content will be merged into Genetics Home Reference. GeneED will shut down on March 31, 2019.
    - When will the information be provided? Enter date
    - By what method(s) will information be provided? Example: Email to all NLM staff It is already posted on the website that it will shut down on March 31, 2019. Email to NLM staff, OCPL for social media distribution, NNCO and NNLM, post to K-12 listserv, and SIS Twitter accounts
    - If multiple messages are to be sent, by what method(s) and with what frequency? One round of messaging is sufficient. It has been posted on the site since August 2018 that the site will be shutting down March 31, 2019.
    - Are there any potential areas for misunderstanding or concern? A benefit will be that consumers and educators will have one place to access consumer level genetics information.
3. Establish what may need to be communicated to internal audiences. This could include:
    - Why is this program or service being retired? SIS is consolidating its efforts for genetic information with GHR for efficiency. The focus of GeneEd – gene resources for teachers, will easily fold into Genetics Home Reference. GHR is widely used so it will give more visibility to the teacher resources.
    - What content, if any, will still be available and, if so, why and where? (Options may include archived pages on the NLM website, FTP, the Wayback Machine internet archive, and tape.) Content from GeneEd that is widely used will be transferred to Genetics Home Reference. A survey was added to the GeneEd home page in August asking which content users access the most and want to see transferred. Metrics from GeneEd are also being used to determine which content to move. It is important to note that GeneEd is a “link site” and there is no original content other than lesson plans developed by NLM. Some content was provided by the NHGRI may be moved to GHR – NHGRI also makes this same content available on their websites.
    - What will happen to the staff working on the product or service? Primary staff were contractors that have retired. The only work currently being done on this resource is link checking.

- What staff will be involved in this transition? Laura Bartlett from SIS and Kate Greenberg and Heather Collins from Genetics Home Reference.

4. Identify mechanisms to be used for communicating with internal audiences. These may include some or all of the following (Check all that apply):

   ☒ Emails

   ☐ Signage

   ☒ Information delivered at staff meetings

   ☒ Point of discussion at brown bag luncheons

   ☐ Town Hall meetings, etc.

   ☒ Other (Explain) A notice on the site indicates GeneEd will be shutting down March 31, 2019. This decision was made before NLM had resource retirement guidelines in place.

5. Develop and attach a set of Talking Points for the NLM Director GeneEd, an educator's resource for genetics education materials for grades 9 to 12, will be retired as of March 31, 2019. Some content will be merged with Genetics Home Reference to create a single access point for the Library's genetics information for the public. We have found that many students and educators are already using Genetics Home Reference, so this merger increases efficiency to reach these audiences. GeneEd is conducting a survey, available on the site, to determine which content is most important to regular users. We are also analyzing usage metrics to determine which areas of GeneEd have the highest traffic. These data will help us decide which materials from GeneEd are most appropriate to transfer to Genetics Home Reference.

6. Does the NIH Director or other IC Directors need to be informed? No

   If Yes, check all that apply:

   ☐ The service is produced jointly with another IC or serves an audience of interest to the IC

   ☐ The service has high visibility and sunsetting may result in questions, letters, emails to the NIH Director from the public, key stakeholders, Congressional staff, HHS leadership

   ☒ Other (Please elaborate) When GeneEd was first created, SIS worked with NHGRI for advice and obtain content produced by NHGRI. We will need to inform them of our decision and "pass off" the relationship to Genetics Home Reference.

B. ***External communication plan*** for users, stakeholders, and the public

1. Who needs to be informed? (Identify stakeholders).
   - Why is this program or service being retired? GeneEd is merging with Genetics Home Reference to create one access point for genetics information for the public.
   - What content, if any, will still be available and, if so, why and where? GeneEd is conducting a survey, available on the site, to determine

which areas are most important to current users. We are also looking at the usage metrics to determine which are the most popular areas.

- What will happen to the staff working on the product or service? They were contractors and they have already departed NLM.

2. Establish what may need to be communicated. This could include—
   - Why is this program or service being retired? GeneEd website will be sunset March 31, 2019.
   - What content, if any, will still be available and, if so, why and where? We are shutting down GeneEd March 31, 2019, and relevant content will be moved to Genetics Home Reference.
   - What will happen to the staff working on the product or service?
   - How can I or how can my group be involved in this transition? Take the survey on the site.

3. Identify what needs to be completed:

   ☐ Deliverables Specify

   ☒ Responsible party or parties for the sunsetting process Laura Bartlett and Janice Kelly

   ☒ Due date 3/31/2019

   Identification of communication channels. These could include (Check all that apply):

   ☒ emails to stakeholders and users

   ☐ signage

   ☒ NLM homepage (public news announcement)

   ☐ speeches

   ☒ social media including Facebook, Twitter, LinkedIn, etc.

   ☒ newsletters/blogs, including *Technical Bulletin*, *NLM in Focus*, *Circulating Now*, *Musings*, etc.

   ☒ Other (Please Explain) We typically exhibit at the annual National Science Teachers Association meeting in spring – and occasionally at the National Biology Teachers Association. We will announce it at our booth and potentially send an announcement for their newsletters and listservs.

   Determine questions that may need to be addressed, including:
   - What information will be provided? The sunsetting of GeneEd and the information additions to GHR.
   - When will the information be provided? Jan 2019
   - With what frequency? Enter frequency
   - Are there potential areas for misunderstanding or concern? Likely not – NLM considers k-12 an audience and we have many resources. Letting people know content will be going to Genetics Home Reference will likely curb anxiety, if any exists.

- After informing stakeholders that the site will no longer be accessible, where can they find information once the site is retired? Genetics Home Reference
- How will NLM respond to questions and comments? Staff will directly respond to questions received through customer service emails.
- Is this an issue that may generate media interest? (If so, please include strategies for responding in the plan.) No – the resource had a limited audience of teachers and students. They will gain access to more information by using Genetics Home Reference.

IV. **Posting notice on central NLM "sunsetting calendar" (coming soon) on the NLM Wiki.** A notice should be posted on the "NLM resource sunset calendar" immediately following the effective date of the retirement of the resource. The sunset calendar, which will also be found on the NLM wiki, will serve as an historical record about retired NLM products and services.

V. **Identification of primary point of contact for further information about retired NLM resource.** Provide name and contact information for primary point of contact for retired NLM resource here:

Laura Bartlett bartlettl@mail.nih.gov

REQUEST TO RETIRE AN NLM RESOURCE

Product owner(s) fill out sections I, III, IV and V. Include documentation with this form.
Record approvals in section II.

I. **Written justification for the retirement of an NLM resource.** Three to six months before sunsetting any NLM resource, a written justification for the retirement of the resource must be prepared. In drafting the justification, the use of statistics is often helpful. Reasons for sunsetting and/or retiring an NLM resource may include (check all that apply):

☐ Low usage

☒ Obsolescence (that is, better products have come along) – whether from NLM or another group

☒ No longer aligned with NLM priorities or mission needs

☐ Incorrect or out-of-date information. If information cannot be updated, then archive the resource

☒ Reallocation of staff to different products because resource is no longer a priority

☒ Cost in relation to value

☒ Other (Please explain) ToxLearn has been supplanted by ToxTutor. ToxLearn was a partially completed online tutorial providing an introduction to the principles of toxicology. In addition to being unfinished (several modules were never completed), it was designed in Adobe Flash. Adobe Flash is no longer being updated, or available on most internet browsers. In contrast, ToxTutor has been updated and enhanced and now serves as the online tutorial of choice. Also, ToxTutor does not use Adobe Flash and it is compatible with the devices users are expected to use.

II. **Approval.** This form must be signed by:

- NLM Division head (within LHC, LO, NCBI, OCCS, SIS, OD) HFC 11/27/2018

X _____

Hua Florence Chang
Acting Associate Director, SIS

- Upon approval by NLM division head, forward completed form to Kathy Cravedi, Director, OCPL (kcravedi@nlm.nih.gov), for distribution and approval by:
  - NLM Director Initial Here Date
  - NLM Deputy Director Initial Here Date
  - NLM Communications Director Initial Here Date

III. **Prepare Communications plan for sunsetting the NLM resource.** This document is developed for sharing news about the retirement of the NLM resource with relevant internal and external audiences. Please address the following key elements:

A. ***Internal communication plan*** for NLM staff

1. Identify who needs to be informed? (staff, contractors) Only SIS staff have been informed. We will need to inform all NLM staff, and the RMLs.
2. Determine questions that may need to be addressed. These may include:
    - What information needs to be provided? ToxLearn has been supplanted by ToxTutor. ToxLearn is retiring due to its format in Adobe Flash and because several of its modules were never completed. In contrast, ToxTutor has been updated and enhanced and is NLM's online toxicology tutorial of choice.
    - When will the information be provided? 12/1/2018
    - By what method(s) will information be provided? Example: Email to all NLM staff Digital signage within NLM. Emails to key contacts at outside organizations, e.g., Society of Toxicology. Also to be announced during NLM exhibits.
    - If multiple messages are to be sent, by what method(s) and with what frequency? One time communications are planned.
    - Are there any potential areas for misunderstanding or concern? No, because ToxTutor is a far more current and comprehensive tutorial, and does not use Adobe Flash. It is compatible with the devices users are expected to use.
3. Establish what may need to be communicated to internal audiences. This could include:
    - Why is this program or service being retired? ToxLearn has been supplanted by ToxTutor. ToxTutor has been updated and enhanced and now serves as the online tutorial of choice. It is compatible with the devices users are expected to use to access it.
    - What content, if any, will still be available and, if so, why and where? (Options may include archived pages on the NLM website, FTP, the Wayback Machine internet archive, and tape.) SOT will host the archived version of ToxLearn, provided by NLM. NLM do not plan to keep any of the content up, or available. Its unique format in Adobe Flash does not lend well to keeping the content up.
    - What will happen to the staff working on the product or service? The NLM project lead for ToxLearn retired at the end of 2017 and there has been no further work on it.
    - What staff will be involved in this transition? Pertti (Bert) Hakkinen.
4. Identify mechanisms to be used for communicating with internal audiences. These may include some or all of the following (Check all that apply):
    - ☒ Emails
    - ☒ Signage
    - ☒ Information delivered at staff meetings
    - ☒ Point of discussion at brown bag luncheons
    - ☐ Town Hall meetings, etc.
    - ☐ Other (Explain) Enter other mechanism(s)
5. Develop and attach a set of Talking Points for the NLM Director Click or tap here to enter text.

6. Does the NIH Director or other IC Directors need to be informed? No

   If Yes, check all that apply:

   ☐ The service is produced jointly with another IC or serves an audience of interest to the IC

   ☐ The service has high visibility and sunsetting may result in questions, letters, emails to the NIH Director from the public, key stakeholders, Congressional staff, HHS leadership

   ☐ Other (Please elaborate) Enter other reason(s) Director(s) need to be informed

B. ***External communication plan*** for users, stakeholders, and the public

1. Who needs to be informed? (Identify stakeholders).
   - Why is this program or service being retired? ToxLearn has been supplanted by ToxTutor. ToxLearn was a partially completed online tutorial providing an introduction to the principles of toxicology. In addition to being unfinished (several modules were never completed), it was designed in Adobe Flash. Adobe Flash is no longer being updated, or available on most internet browsers. In contrast, ToxTutor has been updated and enhanced and it is a far more current and comprehensive tutorial. ToxTutor now serves as the online tutorial of choice. ToxTutor does not use Adobe Flash and it is compatible with the devices users are expected to use. An archived version of the ToxLearn will be hosted on SOT Web site.
   - What content, if any, will still be available and, if so, why and where? None
   - What will happen to the staff working on the product or service? The NLM project lead for ToxLearn retired at the end of 2017 and there has been no further work on it.

2. Establish what may need to be communicated. This could include—
   - Why is this program or service being retired? ToxLearn has been supplanted by ToxTutor. ToxLearn was a partially completed online tutorial providing an introduction to the principles of toxicology. In addition to being unfinished (several modules were never completed), it was designed in Adobe Flash. Adobe Flash is no longer being updated, or available on most internet browsers. ToxTutor has been updated and enhanced and now serves as the online tutorial of choice. ToxTutor does not use Adobe Flash and it is compatible with the devices users are expected to use.
   - What content, if any, will still be available and, if so, why and where? SOT indicated that they will host an archived version of ToxLearn on the SOT Website.
   - What will happen to the staff working on the product or service? They have already retired
   - How can I or how can my group be involved in this transition? None

3. Identify what needs to be completed:

☐ Deliverables Specify

☒ Responsible party or parties for the sunsetting process Pertti (Bert) Hakkinen

☒ Due date 12/31/2018

Identification of communication channels. These could include (Check all that apply):

☒ emails to stakeholders and users

☒ signage

☐ NLM homepage (public news announcement)

☐ speeches

☒ social media including Facebook, Twitter, LinkedIn, etc.

☒ newsletters/blogs, including *Technical Bulletin*, *NLM in Focus*, *Circulating Now*, *Musings*, etc.

☒ Other (Please Explain) Ask the Society of Toxicology to note this in its online "news" messaging to members.

4. Determine questions that may need to be addressed, including:
   - What information will be provided? .
   - When will the information be provided? December 1, 2018
   - With what frequency? once
   - Are there potential areas for misunderstanding or concern? No once the following is explained: ToxLearn has been supplanted by ToxTutor. ToxLearn was a partially completed online tutorial providing an introduction to the principles of toxicology. In addition to being unfinished (several modules were never completed), it was designed in Adobe Flash. Adobe Flash is no longer being updated, or available on most internet browsers. ToxTutor has been updated and enhanced and now serves as the online tutorial of choice. ToxTutor does not use Adobe Flash and it is compatible with the devices users are expected to use.
   - After informing stakeholders that the site will no longer be accessible, where can they find information once the site is retired? The archived version of ToxLearn will be available on the SOT Website.
   - How will NLM respond to questions and comments? Will answer emails sent to customer service
   - Is this an issue that may generate media interest? (If so, please include strategies for responding in the plan.) No. Our explanation should be enough.

IV. **Posting notice on central NLM "sunsetting calendar" (coming soon) on the NLM Wiki.** A notice should be posted on the "NLM resource sunset calendar" immediately following the effective date of the retirement of the resource. The sunset calendar, which will also be found on the NLM wiki, will serve as an historical record about retired NLM products and services.

V. **Identification of primary point of contact for further information about retired NLM resource.** Provide name and contact information for primary point of contact for retired NLM resource here:

Pertti (Bert) J. Hakkinen, Ph.D..	P: 301-827-4222. Pertti.hakkinen@nih.gov

REQUEST TO RETIRE Toxmystery

Product owner(s) fill out sections I, III, IV and V. Include documentation with this form.
Record approvals in section II.

I. **Written justification for the retirement of an NLM resource.** Three to six months before sunsetting any NLM resource, a written justification for the retirement of the resource must be prepared. In drafting the justification, the use of statistics is often helpful. Reasons for sunsetting and/or retiring an NLM resource may include (check all that apply):

☐ Low usage

☒ Obsolescence (that is, better products have come along) – whether from NLM or another group

☐ No longer aligned with NLM priorities or mission needs

☐ Incorrect or out-of-date information. If information cannot be updated, then archive the resource

☒ Reallocation of staff to different products because resource is no longer a priority

☒ Cost in relation to value

☒ Other (Please explain) Toxmystery is a game website that was designed in Adobe Flash. Adobe Flash is no longer being updated, or available on most internet browsers. The cost to update the game to another format is prohibitive.

II. **Approval.** This form must be signed by:

- NLM Division head (within LHC, LO, NCBI, OCCS, SIS, OD Florence Chang) 10/26/2018

  Invalid signature

  X Hua Florence Chang

  Hua Florence Chang
  Acting Associate Director, SIS
  Signed by: Hua F. Chang -S
- Upon approval by NLM division head, forward completed form to Kathy Cravedi, Director, OCPL (kcravedi@nlm.nih.gov), for distribution and approval by:

  NLM Director Initial Here Date
  NLM Deputy Director Initial Here Date
  NLM Communications Director Initial Here Date

III. **Prepare Communications plan for sunsetting the NLM resource.** This document is developed for sharing news about the retirement of the NLM resource with relevant internal and external audiences. Please address the following key elements:

A. ***Internal communication plan*** for NLM staff

1. Identify who needs to be informed? (staff, contractors) Only SIS staff have been informed. We will need to inform all NLM staff, OCPL, RMLs, and teachers.
2. Determine questions that may need to be addressed. These may include:

- What information needs to be provided? Toxmystery is retiring because it is in Adobe Flash and cannot be used effectively on Web browsers including tablets, desktops, and other educational devices.
- When will the information be provided? 11/1/2018
- By what method(s) will information be provided? Example: Email to all NLM staff Digital signage. It was announced at the NLM consumer health meet-up over the summer. Another announcement will be made at that group when we have shutdown approval.
- If multiple messages are to be sent, by what method(s) and with what frequency? A notice on the website for two months and one notice to all user groups
- Are there any potential areas for misunderstanding or concern? Because Toxmystery contains information on chemicals, the shutdown may potentially inhibit this very basic information about chemicals for those with low reading levels. More up to date materials can be found on the CDC, NIEHS and EPA websites. The uniqueness of the resource was the game-like interface with certificate for completion of the game.

3. Establish what may need to be communicated to internal audiences. This could include:
    - Why is this program or service being retired? Toxmystery is a game website designed in Adobe Flash that is not used on tablets, desktops, or other educational devices.
    - What content, if any, will still be available and, if so, why and where? (Options may include archived pages on the NLM website, FTP, the Wayback Machine internet archive, and tape.) We do not plan to keep any of the content up, or available. Its unique format in Adobe Flash does not lend well to keeping the content up. Transferring it to another format is expensive.
    - What will happen to the staff working on the product or service? This resource has been in "maintenance mode" by IT staff at SIS. Those IT staff have other work assigned.
    - What staff will be involved in this transition? Laura Bartlett and Janice Kelly
4. Identify mechanisms to be used for communicating with internal audiences. These may include some or all of the following (Check all that apply):
    - ☒ Emails
    - ☒ Signage
    - ☒ Information delivered at staff meetings
    - ☒ Point of discussion at brown bag luncheons
    - ☐ Town Hall meetings, etc.
    - ☒ Other (Explain) Enter other mechanism(s)
5. Develop and attach a set of Talking Points for the NLM Director ToxMystery, a game about chemicals in the household, will be retired on December 31,

2018. The game was built in the Adobe Flash, a format not supported tablets, most Web browsers, and other educational devices. Although the game has provided years of fun and entertainment, we have decided to retire the resource. NIEHS and EPA have built several learning activities for youth that can teach them about chemicals and environmental health.

6. Does the NIH Director or other IC Directors need to be informed? No

   If Yes, check all that apply:

   ☐ The service is produced jointly with another IC or serves an audience of interest to the IC

   ☐ The service has high visibility and sunsetting may result in questions, letters, emails to the NIH Director from the public, key stakeholders, Congressional staff, HHS leadership

   ☒ Other (Please elaborate) Enter other reason(s) Director(s) need to be informed

B. ***External communication plan*** for users, stakeholders, and the public

1. Who needs to be informed? (Identify stakeholders).
   - Why is this program or service being retired? ToxMystery, a game about chemicals in the household, will be retired on December 31, 2018. The game was built in Adobe Flash. Although the game has provided years of fun and entertainment, we have decided to retire the resource. NIEHS and EPA have built several learning activities for youth that can teach them about chemicals and environmental health.
   - What content, if any, will still be available and, if so, why and where? None
   - What will happen to the staff working on the product or service? This resource has been in "maintenance mode" for years by SIS IT staff. They are now assigned to new projects.

2. Establish what may need to be communicated. This could include—
   - Why is this program or service being retired? ToxMystery, a game about chemicals in the household, will be retired on December 31, 2018. The game was built in Adobe Flash, a format not supported by tablets, most Web browsers, or educational devices. Although the game has provided years of fun and entertainment, we have decided to retire the resource. NIEHS and EPA have built several learning activities for youth that can teach them about chemicals and environmental health.
   - What content, if any, will still be available and, if so, why and where? None.
   - What will happen to the staff working on the product or service? IT support staff work on other assignments.
   - How can I or how can my group be involved in this transition? None

3. Identify what needs to be completed:

☐ Deliverables Specify

☒ Responsible party or parties for the sunsetting process Laura Bartlett and Janice Kelly

☒ Due date 12/31/2018

Identification of communication channels. These could include (Check all that apply):

☒ emails to stakeholders and users

☒ signage

☒ NLM homepage (public news announcement)

☐ speeches

☒ social media including Facebook, Twitter, LinkedIn, etc.

☒ newsletters/blogs, including *Technical Bulletin*, *NLM in Focus*, *Circulating Now*, *Musings*, etc.

☐ Other (Please Explain) Enter other possible communication channel(s)

4. Determine questions that may need to be addressed, including:
   - What information will be provided? ToxMystery, a game about chemicals in the household, will be retired on December 31, 2018. The game was built in Adobe Flash, not supported on tablets, most Web browsers, and other educational devices. Although the game has provided years of fun and entertainment, we have decided to retire the resource. NIEHS and EPA have built several learning activities for youth that can teach them about chemicals and environmental health.
   - When will the information be provided? November 1, 2018
   - With what frequency? once
   - Are there potential areas for misunderstanding or concern? Because Toxmystery contains basic, general information on chemicals, the shutdown may potentially inhibit information about chemicals for those with low reading level. This information can be found at CDC, NIEHS, and EPA websites. The uniqueness of the resource is its game-like interface with certificate of completion. Its Adobe Flash format is now outdated for educational devices and users of Chrome and Firefox Web browsers.
   - After informing stakeholders that the site will no longer be accessible, where can they find information once the site is retired? Other government websites
   - How will NLM respond to questions and comments? Will answer emails sent to customer service
   - Is this an issue that may generate media interest? (If so, please include strategies for responding in the plan.) No. Our explanation is legit.

IV. **Posting notice on central NLM "sunsetting calendar" (coming soon) on the NLM Wiki.** A notice should be posted on the "NLM resource sunset calendar" immediately following the effective

date of the retirement of the resource. The sunset calendar, which will also be found on the NLM wiki, will serve as an historical record about retired NLM products and services.

V. **Identification of primary point of contact for further information about retired NLM resource.** Provide name and contact information for primary point of contact for retired NLM resource here:

Laura Bartlett bartlettl@mail.nlm.nih.gov

REQUEST TO RETIRE AN NLM RESOURCE

Product owner(s) fill out sections I, III, IV and V. Include documentation with this form.
Record approvals in section II.d

I. **Written justification for the retirement of an NLM resource.** Three to six months before sunsetting any NLM resource, a written justification for the retirement of the resource must be prepared. In drafting the justification, the use of statistics is often helpful. Reasons for sunsetting and/or retiring an NLM resource may include (check all that apply):

☐ Low usage

☐ Obsolescence (that is, better products have come along) – whether from NLM or another group

☒ No longer aligned with NLM priorities or mission needs

☐ Incorrect or out-of-date information. If information cannot be updated, then archive the resource

☒ Reallocation of staff to different products because resource is no longer a priority

☐ Cost in relation to value

☐ Other (Please explain) Other Justification(s)

II. **Approval.** This form must be signed by:

- NLM Division head (within LHC, LO, NCBI, OCCS, SIS, OD) Initial Here Date

- Upon approval by NLM division head, forward completed form to Kathy Cravedi, Director, OCPL (kcravedi@nlm.nih.gov), for distribution and approval by:
  NLM Director Initial Here Date
  NLM Deputy Director Initial Here Date
  NLM Communications Director Initial Here Date

III. **Prepare Communications plan for sunsetting the NLM resource.** This document is developed for sharing news about the retirement of the NLM resource with relevant internal and external audiences. Please address the following key elements:

A. ***Internal communication plan*** for NLM staff

1. Identify who needs to be informed? (staff, contractors) The CHIRr website assists external customers, namely health communication and consumer health informatics researchers -- not NLM employees. Similar content is being developed through NIH and NLM Common Data Element initiatives should NLM staff need a resource.
2. Determine questions that may need to be addressed. These may include:
   - What information needs to be provided? Not applicable
   - When will the information be provided? 1/28/2019
   - By what method(s) will information be provided? Example: Email to all NLM staff Staff will be informed through the Technical Bulletin notice and NLM social media posts. If requested, a separate email can b sent to customer service staff .

- If multiple messages are to be sent, by what method(s) and with what frequency? Technical Bulletin, NLM/OCPL social media outlets, notice on website and email to customer service staff
- Are there any potential areas for misunderstanding or concern? Not applicable

3. Establish what may need to be communicated to internal audiences. This could include:
    - Why is this program or service being retired? CHIRr provides a resource of outcome variables and suggested measures to guide a comprehensive consumer health informatics assessment. In 2018, there were 36,600 unique visitors, 46,609 visits, and 693,000 pages. NLM's priorities regarding consumer health informatics is to focus on health literacy research, not consumer health informatics. Therefore, it no longer aligns with NLM priorities. Similar content to CHIRR is being developed through NIH and NLM Common Data Elements initiatives.
    - What content, if any, will still be available and, if so, why and where? (Options may include archived pages on the NLM website, FTP, the Wayback Machine internet archive, and tape.) NLM may wish to archive this resource
    - What will happen to the staff working on the product or service? The few, impacted NLM staff have transferred to other NLM divisions to to work on other NLM priorities.
    - What staff will be involved in this transition? Staff responsible for the sunsetting and possible archiving if required
4. Identify mechanisms to be used for communicating with internal audiences. These may include some or all of the following (Check all that apply):

    ☐ Emails
    ☒ Signage
    ☐ Information delivered at staff meetings
    ☐ Point of discussion at brown bag luncheons
    ☐ Town Hall meetings, etc.
    ☒ Other (Explain) The website was not used internally, so internal outreach regarding its cancellation is not needed. Staff will be informed through social media posts and the Technical Bulletin.
5. Develop and attach a set of Talking Points for the NLM Director The Consumer Health Informatics Research Resource (CHIRr) provides a resource of outcome variables and suggested measures to guide a comprehensive consumer health informatics assessment. It explains 19 health communication research conceptual frameworks. It does not affect the work of NLM staff. NLM's emphasis has shifted in recent years from consumer health informatics and health communication research professionals to health literacy researchers. In addition, similar content is being developed through NIH and NLM Common Data Elements initiatives.
6. Does the NIH Director or other IC Directors need to be informed? No

    If Yes, check all that apply:

☐ The service is produced jointly with another IC or serves an audience of interest to the IC

☐ The service has high visibility and sunsetting may result in questions, letters, emails to the NIH Director from the public, key stakeholders, Congressional staff, HHS leadership

☐ Other (Please elaborate) ?

B. ***External communication plan*** for users, stakeholders, and the public

1. Who needs to be informed? (Identify stakeholders).
    - Why is this program or service being retired? CHIRr is a resource of outcome variables and suggested measures to guide a comprehensive consumer health informatics assessment. It explains 19 health communication research conceptual frameworks. In 2018, there were 36,600 unique visitors, 46,609 visits, and 693,000 pages. NLM's priorities regarding consumer health informatics is to focus on health literacy research, not consumer health informatics. Therefore, it no longer aligns with NLM priorities. Similar content to CHIRr is being developed through NIH and NLM Common Data Elements initiatives. Click or tap here to enter text.
    - What content, if any, will still be available and, if so, why and where? NLM may want to archive this resource
    - What will happen to the staff working on the product or service? The NLM staff working on CHIRr have been reassigned to other NLM divisions and NLM priorities.

2. Establish what may need to be communicated. This could include—
    - Why is this program or service being retired? Although the website explains 19 health communication research conceptual frameworks and had moderate use, NLM's emphasis has shifted in recent years from consumer health informatics and health communication research professionals to health literacy researchers. Similar content to CHIRr is being developed through NIH and NLM Common Data Elements initiatives.
    - What content, if any, will still be available and, if so, why and where? NLM leadership should determine if it should be archived
    - What will happen to the staff working on the product or service? The staff have transferred to other NLM divisions to work on other NLM priorities. The co-authors will be informed of the sunset plan. Transfer of the site them will be discussed.
    - How can I or how can my group be involved in this transition? NLM leadership should decide if the site should be sunset. OCPL will need to send social media posts about its sunset. The co-authors will need to decide if they want the site transferred to them.

3. Identify what needs to be completed:

☒ Deliverables Dependent on whether the site is transferred to the co-authors, sunsetted or archived

☒ Responsible party or parties for the sunsetting process SIS, OCPL, co-authors of webpage

☒ Due date 5/31/2019

Identification of communication channels. These could include (Check all that apply):

☒ emails to stakeholders and users

☒ signage

☒ NLM homepage (public news announcement)

☐ speeches

☒ social media including Facebook, Twitter, LinkedIn, etc.

☒ newsletters/blogs, including *Technical Bulletin*, *NLM in Focus*, *Circulating Now*, *Musings*, etc.

☐ Other (Please Explain) ?

4. Determine questions that may need to be addressed, including:
   - What information will be provided? The date of sunsetting will be listed on the webpage, in a Tech Bulletin article and on NLM social media outlets.
   - When will the information be provided? Starting in Jan, 2019
   - With what frequency? The website notice will be live at the end of Jan., an email and Technical Bulletin article will be done two months prior to sunsetting. Social media posts will be sent again in May, the month it will be sunset.
   - Are there potential areas for misunderstanding or concern? Highly unlikely
   - After informing stakeholders that the site will no longer be accessible, where can they find information once the site is retired? To be determined. Will offer to transfer the webpage to the co-authors or will find NIH resources for communications planned
   - How will NLM respond to questions and comments? It is suggested OCPL explain the Consumer Health Informatics Research Resource website was cancelled due to change in NLM consumer informatics priorities. Customer Service should receive a pre-formulated response to give.
   - Is this an issue that may generate media interest? (If so, please include strategies for responding in the plan.) Highly unlikely

IV. **Posting notice on central NLM "sunsetting calendar" (coming soon) on the NLM Wiki.** A notice should be posted on the "NLM resource sunset calendar" immediately following the effective date of the retirement of the resource. The sunset calendar, which will also be found on the NLM wiki, will serve as an historical record about retired NLM products and services.

V. **Identification of primary point of contact for further information about retired NLM resource.** Provide name and contact information for primary point of contact for retired NLM resource here:

FY 2019 Full Year Funding Request

PROGRAM: ____SIS_____

Your Program Priority	Alignment to the NLM Strategic plans and Functional Statements	Service / Project / Activity Provided	Base Funding	New Funding Request	Outside NLM Funding	Expected outcome / projected service delivery	Impact to your program operations if the additional funding requested (column F) is not available?
1	1.4a, 2.1, 2.2, 2.3, 2.4, HNL 65/66/614	**Toxicology and Environmental Health, including:** • TOXNET, HSDB, ChemIDplus content building • Integration with NCBI • LactMed • Household Products Database, HazMap • Risk assessment databases: ITER, IRIS • Consumer databases: Pillbox, ToxTown • New toxicology databases	5,045,999	0	100,000	At this level we will be able to: • Continue HSDB and ChemIDplus content building and updating • Proceed with integration of TOXNET with NCBI • Sustain the content creation for LactMed • Fund the licenses of Houshold Products DB, HazMap, and TruvenHealth • Continue the risk assessment databases: ITER and IRIS • Maintain the currency of Pillbox and ToxTown • Support the development or improvement of new TOXNET • Support new activity of making HSDB data more machine readable	
2	1.3, 2.1, 2.2, 2.3, 2.4, HNL 68	**Public Health, Disaster/Emerging Health, including:** • DIMRC, DisasterLit, • CBRNE/HazMat tools: WISER, REMM, CHEMM, • New voice-activated assisstant • HealthReach • NASEM Forum • Data sharing project	2,771,487		392,000	At this level we will be able to: • Continue Disaster Lit content building and updating • Continue maintenance of the DIMRC website and update the topic pages • Sustain the content for WISER, REMM, CHEMM • Sustain all the platforms for WISER, CHEMM, REMM • Sustain the existing courses and webinars for the Disaster Information Specialist Program • Sustain the content of HealthReach • Continue data science initiatives including data sharing study • Continue WISER voice activated assistant prototype development • Continue participation in the NASEM forums	

3	**2.1, 3.4 HNL 67**	**Public Engagement and Awareness, including:** • Promoting awareness and access of NLM resources through training and outreach • Minority health community engagement, such as EnHIP, Native American outreach projects, Community Health Maps, etc. • Evaluation of SIS programs • American Indian high school students' data literacy project	2,146,796			At this level we will be able to: • Maintain and update currently developed tutorials • Exhibit at 5-10 meetings • Provide logistics for EnHIP annual meeting and fund 2-3 outreach projects • Maintain Community Health Maps program with 4-5 workshops, update blog and tutorial • Fund Native American outreach projects including Chickasaw Health Information Network • Fund 1-2 small Minority or tribal focused outreach projects • Perform one user evaluation study • Implement a health data literacy project at 2 American Indian high schools based on completed pilot project	
4	**1.3, 1.4, 3.2, HNL6/66**	**SIS core operations and divisional support:** • Administrative cost, parking, supplies • Equipment, desktops/laptops, servers • Travel, training • Socrata Open Data pilot • IT support contract	2,135,718			At this level we will be able to: • Maintain administrative operations • Support the desktop/laptop/equipment refresh for staff • Fund staff training, data science competency skill development, and travel • Sustain the Data Discovery Platform at Socrata • Fund the IT support contract for SIS contractors transitioned to OCCS • Refresh servers and equipment	
5	**?**	**One-Time funding for (...activity)**					
		Activity terminated - Knowledge River Scholar Program	(60,000)		Funds will be redirected to other outreach activities		
		Activity terminated - American Idnian Health Curation	(30,000)		Funds will be redirected to Native American Outreach		
		Activity terminated - Teen/Emerging Adult Health Literacy Projects	(50,000)		Funds will be redirected to other outreach activities		
			$12,100,000	**$0**	**$492,000**		

Forward Funding:

	Funding
FY 2018 funds used for FY 2019 activities	**$5,787,990**
FY 2019 funds needed to forward fund FY 2020 activities	**$4,845,541**

NOTE: Please use the worksheet "Contracts Listing" to enter your data.
AIDS contracts are listed but not included in the Sum.

Outside Funding from:

	FDA	The funding of $100K helps NLM to obtain data and UNII code from FDA. The FDA UNII code Substance Registry System is hosted on the ChemIDplus platform.		
	DOT	This funding of $27K will help NLM to get the DOT Emergency Response Guide (ERG) data into the WISER app. NLM develops the ERG app for DOT.		
	HHS/ASPR	This funding of $200K will help NLM to develop the REMM/CHEMM CBRNE tools.		
	NIEHS	This funding of $100K will help NLM to develop information resources and website for disaster response research.		
NCI/FIC/N	ICHD/NIEHS/NIA	This funding of $165K will co-fund the National Academy of Sciences forum and action collaboratives in disaster research.		

Staffing Issues:

We plan to hire # 3 new positions in support of ...

			NOTE:
	#1.	Chemist	#1. This position is already approved but not hired in FY2018.
	#2.	Technical information specialist (toxicology)	#2 is new position that need to approval by the NLM Director
	#3.	Technical information specialist (public health)	#3 is new position that need to approval by the NLM Director

Other Issues:

Any operational issues you would like the NLM Director to be aware.

1. Handling of the existing SIS contracts in the transition process
2. Branding of TOXNET in the NCBI platform; System owner in reporting
3. Personnel/hiring needs
4. Communication with external partners/collaborators
5. NLM's plan for improved efficiency in data curation/content creation

Contract (Vendor)	Description	Period of Performance	Completion Date of Recompetition in FY2019	FY2018 fund obligated to contract for FY2019 work	FY2019 fund for FY2019 work	FY2019 fund to be obligated to contract for FY2020 work	impact if not funded	Contract mechanism	% IT in cost	COR
HSDB content building (TRI)	TRI funding to add new and update existing HSDB records and for database enhancement including adding new data, features, fields, and more. Funding includes management of Scientific Review Panel meetings (2x/year).	7/2019 - 7/2020	Jul-2019	$200,000	$790,000	$230,000	content creation for HSDB would not continue. PubChem and TOXNET would be impacted for not having the high quality content.	GSA	0%	TBD
HSDB content building (Syracuse Research)	SRC funding to add new and existing HSDB records for environmental fate section and support database enhancement for related fields.	5/2019 - 5/2020	May-2019	$100,000	$365,000	$35,000	content creation for HSDB would not continue. PubChem and TOXNET would be impacted for not having the high quality content.	GSA	0%	TBD
ChemID system development (DS Federal)	DSFederal funding to support continued development and maintenance of applications and database maintenance.	9/2019-9/2020	Sep-2019	$234,994	$0	$234,994	Content creation for ChemIDplus would not continue. PubChem and TOXNET would be impacted for not having the high quality content.	A8 Small business	100%	Ying Sun
ChemID content building (Cygnus)	Cygnus funding to support chemical structure, data integration and updates for ChemIDplus	5/2019-5/2020	Apr-2019	$0	$159,500	$38,500	Content and chemical structures creation for ChemIDplus would not continue. PubChem and TOXNET would be impacted for not having the high quality content.	GSA	82%	Ying Sun
New toxicology data curation and data quality enhancement (ICF)	Supports new content curation by human and/or machine, data tranformation into machine-readable form.	9/2018-9/2019	Sep-2019	$0	$0	$350,000	New toxicology databases would not have contents. Data from existing tox databases would not be improved for machine-readability.	BPA	TBD	Bert Hakkinen
SIS and TOXNET computer system/IT support (ICF)	Contract for the main IT contract with ICF International for providing SIS computer system administration and information system development support.	9/2019 - 9/2020	Sep-2019	$880,000	$0	$800,000	TOXNET, before transition to NCBI, would not be maintained for operation. TOXNET data would not be properly transformed for data users such as NCBI.	NITAAC	100%	Florence Chang
Data science initiative	Supports new data science related initiatives, including Socrata license, and data sharing study, etc.	9/2019 - 9/2020	Sep-2019	$567,000	$0	$307,000	New data science initiatives would not continue	BPA	7%	Stacey Arnesen
DIMRC Enhancement (ICF)	Supports the DR2 and DisasterLit system enhancement and technology and innovation activities	9/17/2018-3/31/2020	Sep-2019	$165,000	$0	$0	FY2018 funding; 18 months period of performance to complete the task	BPA	80%	Stacey Arnesen
Disaster Info Support (ICF)	Includes support for librarian and computer programmer to support Disaster Lit, DIMRC web site, Disaster health informatics and communication innovation initiatives (training, communication)	9/2019 - 9/2020	Sep-2019	$525,000	$0	$525,000	DIMRC and DisasterLit would not continue	BPA	50%	Stacey Arnesen
WISER (Next Century)	To support the development of the tool for responding to hazardous material incidents. For maintenance for all platforms with minor enhancements and data (content) updates, and prototyping of voice-activated assistant.	9/2019 - 9/2020	Sep-2019	$650,000	$0	$550,000	Lots of upset first responders? WISER the app would not get updated with the current data on all platforms.	GSA	100%	Jen Pakiam

Special Population Resources Maintenance (ICF)	Staffing, IT support for HealthReach, American Indian Health, Arctic Health	9/2018-9/2019	Sep-2019	$112,000	$0		$0	HealthReach progress would slow due to lack of contract personnel support.	BPA	0.01%	Laura Bartlett
Consumer Health Resources: Maintenance (ICF)	Provide subject matter and IT expertise to support Tox Town's, Kids portal, and GeneEd	9/2018-9/2019	Sep-2019	$200,000	$0		$226,500	Tox Town would not continue	BPA	47%	Alla Keselman
AIDSinfo and AIDSource (ICF)	Manage daily operations of the AIDSinfo, infoSIDA and AIDSource services - the AIDSinfo website, guidelines and panels, and treatment information	9/2018-9/2019	Sep-2019	$2,372,362	$0	TBD		AIDSinfo and AIDSource would end, guidelines panels work and clinical practice guidelines would end and the AIDSinfo service would end.	BPA	9%	Nicole Scott
Special Population Resources Enhancement and Outreach (ICF)	Support special population resources including HealthReach, Arctic Health, and American Indian Health.	9/2018-9/2019	Sep-2019	$592,993	$0		320,000	Would end HealthReach materials translations and multiple formats to meet the NIH language access policy, development and evaluation of low literacy materials, and specialized IT support. Also would end the American Indian Data Literacy Project support.	BPA	3%	Laura Bartlett
Technical and Programmatic Support for Specific Population Projects (ICF)	Support services for outreach projects such as CHIC, Community Health Maps, etc	9/2018-9/2019	Sep-2019	$279,979	$0		$460,000	NLM would lose many of its minority based outreach projects - CHIC project, Community health maps, Knowledge River program, along with data collection and analysis projects, and user experience analysis projects.	BPA	2%	Janice Kelly
AIDSinfo and AIDSource: Supplemental Tasks (ICF)	Support for content development, outreach, training, evaluation, user studies, etc	9/2018-3/2020	Sep-2019	$1,327,596	$0	TBD		Would end: AIDSinfo and AIDSource resources; information dissemination, outreach and training activities in support of the resources; redesign and adaptations of website content; evaluation and usability studies; and technical assistance for webinars, consultations or promotional strategies.	BPA	17.00%	Nicole Scott
Maintenace and Development Support for SIS Programs Projects (ICF)	Provide comprehensive management and staffing services to the National Library of Medicine Specialized Information Services to support websites, services and activities	9/2018-9/2019	Sep-2019	$300,000	$0	TBD		Would lose subject matter experts for SIS resources and programs, health writers and editors, communication expertise, project coordinators and other staffing assistance	BPA	1%	Nicole Scott
Training and Outreach Support Services for NLM (ICF)	Subaward to ORAU for training and outreach support, promotion and logistical support to SIS	9/2018-9/2019	Sep-2019	$809,524	$0		$600,000	No exhibits, training courses would not be updated or maintained, learning management system support would end, no EnHIP technical and logistica support	BPA	0%	Nicole Scott
SUM of contracts > $100K (not include AIDS)				$5,616,490	$1,314,500		$4,676,994				
Sum of contracts <$100K				$171,500	$333,900		$168,547				
Total				$5,787,990	$1,648,400		$4,845,541

SheehanJR@nlm.nih.gov
http://nlm.nih.gov

Larry,

Below is a summary of four more NLM services that we plan to sunset in coming months. We continue to review our portfolio and refine our procedures for sunsetting services. I expect to send you additional sunset updates in coming weeks.

Thanks,
Jerry

1. Probe Database (Probe DB) – Proposed sunset date: August 1, 2019

Original purpose: Probe DB was originally implemented as a registry of nucleic acid reagents for biomedical research applications at a time when array-based arrays were prevalent.

Why no longer needed: With the advent of short read sequencing, the need for these technologies has declined. Sequence submissions to the Probe database have dwindled to only a couple of submissions per month. Additionally, to maintain the resource, the submission interface would need to be updated to accommodate a code library update. Given the exceedingly low submission and use rate, and evolving research trends, investing in redeveloping the submission interface is not cost-effective.

Critical issues: The content of the database will continue to be available on NLM/NCBI's FTP site.

2. TOXMAP – Proposed sunset date: October 1, 2019

Original purpose: TOXMAP has helped users visually explore data primarily from the EPA's Toxics Release Inventory (TRI) and Superfund Programs. TOXMAP also features Canadian NPRI data, U.S. EPA coal plant emissions data, and U.S. commercial nuclear power plants. TOXMAP overlays U.S. Census demographic data, income figures from the U.S. Department of Commerce, and health data from the NCI SEER program.

Why no longer needed: The US Environmental Protection Agency now produces several GIS products and visualization applications that have similar data and GIS functionality. Use of unique TOXMAP features (e.g., the ability to search TOXNET from within the GIS tools) has declined to a level too low to justify continued NLM investment in technological upgrades necessary.

Critical issues: Data used in TOXMAP will be available from their original sources (EPA, Canada, Nuclear Regulatory Commission, etc.), and GIS application users can overlay the data in their GIS applications. NLM will inform EPA and NIEHS of the proposed sunset, in addition to TOXMAP users.

3. Carcinogenic Potency Database (CPDB) – Proposed sunset date: DATE

Original purpose: CPDB is an archival database with historical information from the years 1980-2011 reporting on the analyses of animal cancer tests on 1547 chemicals. CPDB was developed by the Carcinogenic Potency Project at the University of California, Berkeley and the Lawrence Berkeley National Laboratory and transitioned to NLM at the end of the project.

Why no longer needed: Information in CPDB has not been updated so the information is increasingly out-of-date. In addition, usage has dropped considerably to fewer than 2000 page views in FY2018. The information is not structured in a way that lends itself to integration with other NLM resources.

Critical issues: The evaluated and annotated content will no longer be available on TOXNET. Data files will continue to be available for download from the NLM FTP site. Cited literature will continue to be available via PubMed.

4. Consolidation of three LinkOut for Libraries programs into a single service: Library LinkOut Outside Tool – Proposed sunset date: December 31, 2019

Original purpose: *LinkOut for Libraries* provides PubMed users with access to full text journal content through their institutional subscriptions via three separate tools: LinkOut via Submission Utility, LinkOut Local, and Outside Tool. NLM proposes to consolidate the functionality into a single Linkout Outside Tool.

Why the consolidation is warranted: Consolidating LinkOut services will allow use of more robust technology that provide a more streamlined and efficient approach for linking to full text journal content from PubMed and for daily PubMed indexing. The LinkOut Outside Tool service has important advantages for libraries and their patrons, such as placing their icon on every PubMed citation. Today, these icons are not available on mobile devices and will become available on Library LinkOut using Outside Tool. When NLM launches the new, responsive PubMed site (by the end of 2019) libraries will no longer need to generate and maintain their extensive holdings records.

Critical issues: For Library LinkOut Outside Tool libraries must purchase a link revolver software, and the cost may vary. Library users will not lose access to their library's journal subscriptions during the consolidation process. Libraries will no longer need to generate and maintain their extensive holdings records in our system. NLM has developed a list of FAQs about the transition to LinkOut using Outside Tool and has begun holding webinars with affected communities to answer questions about the transition.

Subject: Sunsetting Talking Points for Review

Hi, All,
OCPL is finalizing some brief talking points on the sunsetting of Probe DB, TOXMAP, CPDB and the LinkOut consolidation, which are attached for your review. This communication is from Jerry Sheehan to Dr. Tabek, alerting him of the plans and dates.
We would appreciate input and edits, if necessary, for each of your respective offerings. Specifically, there are a couple of required updates for sunset dates where we did not have one or were unsure. Please return the document with track changes to me *by noon on Friday, April 12*. I will incorporate the changes into one final document to send on to Jerry by COB on Friday. We appreciate your help.
Thank you,
Grace

Larry,

Below is a summary of four more NLM services that we plan to sunset in coming months. We continue to review our portfolio and refine our procedures for sunsetting services. I expect to send you additional sunset updates in coming weeks.

Thanks,
Jerry

1. Probe Database (Probe DB) – Proposed sunset date: August 1, 2019

Original purpose: Probe DB was originally implemented as a registry of nucleic acid reagents for biomedical research applications at a time when array-based arrays were prevalent.

Why no longer needed: With the advent of short read sequencing, the need for these technologies has declined. Sequence submissions to the Probe database have dwindled to only a couple of submissions per month. Additionally, to maintain the resource, the submission interface would need to be updated to accommodate a code library update. Given the exceedingly low submission and use rate, and evolving research trends, investing in redeveloping the submission interface is not cost-effective.

Critical issues: The content of the database will continue to be available on NLM/NCBI's FTP site.

2. TOXMAP – Proposed sunset date: October 1, 2019

Original purpose: TOXMAP has helped users visually explore data primarily from the EPA's Toxics Release Inventory (TRI) and Superfund Programs. TOXMAP also features Canadian NPRI data, U.S. EPA coal plant emissions data, and U.S. commercial nuclear power plants. TOXMAP overlays U.S. Census demographic data, income figures from the U.S. Department of Commerce, and health data from the NCI SEER program.

Why no longer needed: The US Environmental Protection Agency now produces several GIS products and visualization applications that have similar data and GIS functionality. Use of unique TOXMAP features (e.g., the ability to search TOXNET from within the GIS tools) has declined to a level too low to justify continued NLM investment in technological upgrades necessary.

Critical issues: Data used in TOXMAP will be available from their original sources (EPA, Canada, Nuclear Regulatory Commission, etc.), and GIS application users can overlay the data in their GIS applications. NLM will inform EPA and NIEHS of the proposed sunset, in addition to TOXMAP users.

3. Carcinogenic Potency Database (CPDB) – Proposed sunset date: October 1, 2019

Original purpose: CPDB is an archival database with historical information from the years 1980-2011 reporting on the analyses of animal cancer tests on 1547 chemicals. CPDB was developed by the Carcinogenic Potency Project at the University of California, Berkeley and the Lawrence Berkeley National Laboratory and transitioned to NLM at the end of the project.

Why no longer needed: Information in CPDB has not been maintained, so the information is increasingly out-of-date. In addition, usage has dropped considerably to fewer than 2000 page views in FY2018. The information is not structured in a way that lends itself to integration with other NLM resources.

Critical issues: The evaluated and annotated content will no longer be available on TOXNET. Data files will continue to be available for download from the NLM FTP site. Cited literature will continue to be available via PubMed.

4. Consolidation of three LinkOut for Libraries programs into a single service: Library LinkOut Outside Tool – Proposed sunset date: December 31, 2019

Original purpose: *LinkOut for Libraries* provides PubMed users with access to full text journal content through their institutional subscriptions via three separate tools: LinkOut via Submission Utility, LinkOut Local, and Outside Tool. NLM proposes to consolidate the functionality into a single Linkout Outside Tool.

Why the consolidation is warranted: Consolidating LinkOut services will allow use of more robust technology that provide a more streamlined and efficient approach for linking to full text journal content from PubMed and for daily PubMed indexing. The LinkOut Outside Tool service has important advantages for libraries and their patrons, such as placing their icon on every PubMed citation. Today, these icons are not available on mobile devices and will become available on Library LinkOut using Outside Tool. When NLM launches the new, responsive PubMed site (by the end of 2019) libraries will no longer need to generate and maintain their extensive holdings records.

Critical issues: For Library LinkOut Outside Tool libraries must purchase a link revolver software, and the cost may vary. Library users will not lose access to their library's journal subscriptions during the consolidation process. Libraries will no longer need to generate and maintain their extensive holdings records in our system. NLM has developed a list of FAQs about the transition to LinkOut using Outside Tool and has begun holding webinars with affected communities to answer questions about the transition.

Jody,

Everyone's edits are incorporated and attached for your review.

Thanks,
Grace

Larry,

Below is a summary of four more NLM services that we plan to sunset in coming months. We continue to review our portfolio and refine our procedures for sunsetting services. I expect to send you additional sunset updates in coming weeks.

Thanks,
Jerry

1. Probe Database (Probe DB) – Proposed sunset date: August 1, 2019

Original purpose: Probe DB was originally implemented as a registry of nucleic acid reagents for biomedical research applications at a time when array-based assrrays were prevalent.

Why no longer needed: With the advent of short read sequencing, the need for these technologies has declined. Sequence submissions to the Probe database have dwindled to only a couple of submissions per month. Additionally, to maintain the resource, the submission interface would need to be updated to accommodate a code library update. Given the exceedingly low submission and use rate, and evolving research trends, investing in redeveloping the submission interface is not cost-effective.

Critical issues: The content of the database will continue to be available on NLM/NCBI's FTP site.

2. TOXMAP – Proposed sunset date: October 1, 2019

Original purpose: TOXMAP has helped users visually explore data primarily from the EPA's Toxics Release Inventory (TRI) and Superfund Programs. TOXMAP also features Canadian NPRI data, U.S. EPA coal plant emissions data, and U.S. commercial nuclear power plants. TOXMAP overlays U.S. Census demographic data, income figures from the U.S. Department of Commerce, and health data from the NCI SEER program.

Why no longer needed: The US Environmental Protection Agency now produces several GIS products and visualization applications that have similar data and GIS functionality. Use of unique TOXMAP features (e.g., the ability to search TOXNET from within the GIS tools) has declined to a level too low to justify continued NLM investment in technological upgrades necessary.

Critical issues: Data used in TOXMAP will be available from their original sources (EPA, Canada, Nuclear Regulatory Commission, etc.), and GIS application users can overlay the data in their GIS applications. NLM will inform EPA and NIEHS of the proposed sunset, in addition to TOXMAP users.

3. Carcinogenic Potency Database (CPDB) – Proposed sunset date: ~~DATE~~October 1, 2019

Original purpose: CPDB is an archival database with historical information from the years 1980-2011 reporting on the analyses of animal cancer tests on 1547 chemicals. CPDB was developed by the Carcinogenic Potency Project at the University of California, Berkeley and the Lawrence Berkeley National Laboratory and transitioned to NLM at the end of the project.

Why no longer needed: Information in CPDB has not been maintained, so the information is increasingly out-of-date. In addition, usage has dropped considerably to fewer than 2000 page views in FY2018. The information is not structured in a way that lends itself to integration with other NLM resources.

Critical issues: The evaluated and annotated content will no longer be available on TOXNET. Data files will continue to be available for download from the NLM FTP site. Cited literature will continue to be available via PubMed.

4. Consolidation of three LinkOut for Libraries programs into a single service: Library LinkOut Outside Tool – Proposed sunset date: December 31, 2019

Original purpose: *LinkOut for Libraries* provides PubMed users with access to full text journal content through their institutional subscriptions via three separate tools: LinkOut via Submission Utility, LinkOut Local, and Outside Tool. NLM proposes to consolidate the functionality into a single service Library LinkOut using Outside Tool.

Why the consolidation is warranted: To continue providing excellent Library LinkOut service, it became evident that upgrading and consolidating the systems would be beneficial and more robust technology would be necessary. The new technological approach will allow for more efficient, effective, and reliable daily PubMed indexing. The LinkOut Outside Tool service has important advantages for libraries and their patrons, such as placing their icon on every PubMed citation. Today, library icons are not available on mobile devices; however, by late 2019, PubMed Mobile will be replaced by the new, responsive PubMed site that will display Library LinkOut using Outside Tool icons. Libraries will no longer need to generate and maintain their extensive holdings records.

Critical issues: Library LinkOut using Outside Tool libraries must purchase a link revolver software, and the cost may vary. Library users will not lose access to their library's journal subscriptions during the consolidation process, as the publisher supplied icons typically link to the same full text content. NLM has developed a list of FAQs about the transition to LinkOut using Outside Tool and has begun holding webinars with affected communities to answer questions about the transition.

Hi Jerry,

Please find attached an updated draft "sunsets" email for you to send to Dr. Tabak. Grace worked with the relevant program staff for their review - the attached incorporates their edits. Let us know if you need anything else on this. Thanks!

Regards,
Jody

Jody,
Can you and relevant program staff give the attached document a quick review before I send it to Dr. Tabak? I've added ToxMap and CPDB.
Thanks
Jerry

Subject: SIS web contents need a new home on NLM main website

Jody,

While we are busy sunsetting many SIS resources, a few – mostly those consisting of small collections of web pages-- need a new home on the NLM main site. Patti has asked us to work with you on these integrations.

We would like to discuss the logistics of migrating the following pages:

1. NLM Environmental Health & Toxicology is the "Toxicology & Environmental Health Information Program (TEHIP)" portal website. It consists of about 50 pages that maintained via Teamsite. We expect it to be sunsetted approximately by July - September 2019 timeframe. SIS staff moving to LO will continue to check links and work with OCPL when corrections and new links are needed.

2. Bibliography on Alternatives to Animal Testing (ALTBIB) is an important resource for a number of reasons (political, mostly). It is currently hosted as a part of TOXNET. However, when TOXNET is integrated into NCBI platforms and the current SIS servers for TOXNET is decommissioned, ALTBIB will need a new home. We can easily move the handful of web pages and PDFs to the NLM main site.

3. TOXNET home page –TOXNET is currently being integrated into NCBI offerings. The icon for TOXNET on the NLM home page will link to a transitional TOXNET home page providing help/explanatory text to assist TOXNET users with the transition. Patti let me know that she expects this transitional page to live on the NLM main site for approximately 1-2 years after the SIS TOXNET server is decommissioned. SIS and NCBI are currently working on the help text and appropriate links to NCBI resources. We will be testing the page with current TOXNET users before its release. We expect this process to take another few months.

We appreciate your help with these changes. We do not see the need for the development support of these pages. If we need help with editing the content, the SIS staff transferred to LO and OCCS can work on them.

May I check your calendar for a good time to meet next week so we can discuss how we can move ahead with this effort? Please let me know if anyone from LO or OCCS needs to be involved.

Thank you so much!

Florence

Cc: Mazerik, Jessica (NIH/OD) [E]
Subject: Additional NLM resources planned for sunsetting

Larry,
Below is a summary of four more services that NLM plans to sunset in coming months. We have a few more sunsets in the pipeline. I'll send them to you in coming weeks.

Thanks,
Jerry
==========

1. Probe Database (Probe DB) – Proposed sunset date: August 1, 2019

Original purpose: Probe DB was originally implemented as a registry of nucleic acid reagents for biomedical research applications at a time when array-based assays were prevalent.

Why no longer needed: With the advent of short read sequencing, the need for these technologies has declined. Sequence submissions to the Probe database have dwindled to only a couple of submissions per month. Additionally, to maintain the resource, the submission interface would need to be updated to accommodate a code library update. Given the exceedingly low submission and use rate, and evolving research trends, investing in redeveloping the submission interface is not cost-effective.

Critical issues: The content of the database will continue to be available on NLM/NCBI's FTP site.

2. TOXMAP – Proposed sunset date: October 1, 2019

Original purpose: TOXMAP helps users visually explore toxicology data primarily from the EPA's Toxics Release Inventory (TRI) and Superfund Programs. TOXMAP also features Canada's National Pollutant Release Inventory data, U.S. EPA coal plant emissions data, and U.S. commercial nuclear power plant data. TOXMAP overlays U.S. Census demographic data, income figures from the U.S. Department of Commerce, and health data from the NCI SEER program.

Why no longer needed: The US Environmental Protection Agency now produces several GIS products and visualization applications that have similar data and GIS functionality. Use of unique TOXMAP features (e.g., the ability to search TOXNET from within the GIS tools) has declined to a level too low to justify continued NLM investment in technological upgrades necessary.

Critical issues: Data used in TOXMAP will be available from their original sources (EPA, Canada, Nuclear Regulatory Commission, etc.), and GIS application users can overlay the data in their GIS applications. NLM will inform EPA and NIEHS of the proposed sunset, in addition to TOXMAP users.

3. Carcinogenic Potency Database (CPDB) – Proposed sunset date: October 1, 2019

Original purpose: CPDB is an archival database with historical information from the years 1980-2011 reporting on the analyses of animal cancer tests on 1547 chemicals. CPDB was developed by the Carcinogenic Potency Project at the University of California, Berkeley and the Lawrence Berkeley National Laboratory and transitioned to NLM at the end of the project.

Why no longer needed: Information in CPDB has not been maintained, so the information is increasingly out-of-date. In addition, usage has dropped considerably to fewer than 2000 page-views in FY2018. The information is not structured in a way that lends itself to integration with other NLM resources.

Critical issues: While the evaluated and annotated content will no longer be available on TOXNET, data files will continue to be available for download from the NLM FTP site. Cited literature will continue to be available via PubMed.

4. Consolidation of three LinkOut for Libraries programs into a single service: Library LinkOut Outside Tool – Proposed sunset date: December 31, 2019

Original purpose: *LinkOut for Libraries* provides PubMed users with access to full text journal content through their institutional subscriptions via three separate tools: LinkOut via Submission Utility, LinkOut Local, and Outside Tool. NLM proposes to consolidate the functionality into a single service Library LinkOut using Outside Tool and to discontinue support of the other two tools.

Why the consolidation is warranted: Consolidating the systems is necessary to allow the upgrading that will enable NLM to continue providing effective link-out service. It will also make daily PubMed indexing of link-out capabilities more efficient, effective, and reliable. The LinkOut Outside Tool service has important advantages for libraries and their patrons, such as placing their icon on every PubMed citation and enabling link-out from mobile devices. Libraries will no longer need to generate and maintain their extensive holdings records to determine which resources their patrons can link to.

Critical issues: To use the consolidated link-out tool, libraries that do not already have it will need to purchase link revolver software, the cost of which will vary (open source versions are available, as are proprietary solutions). Library users will not lose access to their library's journal subscriptions during the consolidation process, as the publisher supplied icons typically link to the same full text content. NLM has developed a list of FAQs about the consolidation and has begun holding webinars with affected communities to answer questions about the transition.

Subject: NLM resources planned for sunsetting

Larry,
Below is a summary of three NLM services that we plan to sunset in coming months. We continue to review our portfolio and refine our procedures for sunsetting services. I expect to send you additional sunset updates in coming weeks.

Thanks,
Jerry

1. Loansome Doc – Proposed sunset date: July 1, 2019

Original purpose: Loansome Doc was originally developed for use by health professionals unaffiliated with a medical library as an easy way to obtain journal articles from a local library. The system allows registered users to select a medical library in their vicinity and electronically request copies of physical or electronic materials. Some libraries later expanded use to affiliated staff and paying customers. A few dozen international libraries use it for obtaining materials for their patrons from a US hosting library. The NLM Library also uses the system.

Why no longer needed: Loansome Doc has shown a steady decline in use, from 924,538 requests in FY2002 to 150,136 in FY2018. Much of that use is no longer for unaffiliated users, who can now access medical literature through services, such as PubMed's link-out feature or PubMed Central, which contains more than 5 million full-text journal articles. As NLM prepares to redesign its information systems, it no longer makes sense to develop a new instantiation of Loansome Doc.

Critical issues: NLM is working closely with its Regional Medical Libraries and the NIH Library to help them transition to other systems. Recent interactions demonstrate that these libraries understand the reasoning for the transition and do not anticipate a significant impact on their operations.

2. Consumer Health Informatics Research Resource (CHIRr) [https://chirr.nlm.nih.gov/] – Proposed sunset date: May 31, 2019

Original purpose: CHIRr provides a resource of outcome variables and suggested measures to guide a comprehensive consumer health informatics assessment.

Why no longer needed: CHIRr no longer aligns with NLM priorities, usage remains low (36,600 unique visitors in 2018), content is out-dated, and improved content of a similar type is being developed through NIH and NLM Common Data Elements initiatives.

Critical issues: NLM will either transition the content to its archive site or transfer it to collaborators at the University of Missouri and University of South Dakota.

3. ToxLearn [https://toxlearn.nlm.nih.gov/] – Proposed sunset date: May 31, 2019

Original purpose: ToxLearn is an online tutorial developed by NLM's Specialized Information Services Division to provide an introduction to the principles of toxicology. It was developed in collaboration with the Society of Toxicology.

Why no longer needed: ToxLearn has been supplanted by NLM's ToxTutor [https://toxtutor.nlm.nih.gov/], which provides more comprehensive information about toxicology. In addition, ToxLearn is technologically outdated. It was developed in Adobe Flash, which is no longer being updated, or available on most internet browsers.

Critical issues: The Society of Toxicology has agreed to archive ToxLearn on its website. NLM is developing a letter of agreement to clarify the terms of the transfer. NLM will direct current users to the archived version and to the more up-to-date and comprehensive ToxTutor system.

Can you and relevant program staff give the attached document a quick review before I send it to Dr. Tabak? I've added ToxMap and CPDB.
Thanks
Jerry

Subject: FW: Moving SIS web pages to NLM Main

Hoping this invite forwarded correctly so you have the date/time.

Regards,
Jody

Jody Nurik
Director, Office of Communications and Public Liaison (OCPL)
National Library of Medicine, National Institutes of Health
Office phone: 301-827-7615

From: changf@mail.nlm.nih.gov
When: 2:00 PM - 3:00 PM April 30, 2019
Subject: Moving SIS web pages to NLM Main
Location: Conference room B

While we are busy sunsetting many SIS resources, a few – mostly those consisting of small collections of web pages-- need a new home on the NLM main site. Patti has asked us to work with you on these integrations.

We would like to discuss the logistics of migrating the following pages:

1. NLM Environmental Health & Toxicology is the "Toxicology & Environmental Health Information Program (TEHIP)" portal website. It consists of about 50 pages that maintained via Teamsite. We expect it to be sunsetted approximately by July - September 2019 timeframe. SIS staff moving to LO will continue to check links and work with OCPL when corrections and new links are needed.

2. Bibliography on Alternatives to Animal Testing (ALTBIB) is an important resource for a number of reasons (political, mostly). It is currently hosted as a part of TOXNET. However, when TOXNET is integrated into NCBI platforms and the current SIS servers for TOXNET is decommissioned, ALTBIB will need a new home. We can easily move the handful of web pages and PDFs to the NLM main site.

3. TOXNET home page –TOXNET is currently being integrated into NCBI offerings. The icon for TOXNET on the NLM home page will link to a transitional TOXNET home page providing help/explanatory text to assist TOXNET users with the transition. Patti let me know that she expects this transitional page to live on the NLM main site for approximately 1-2 years after the SIS TOXNET server is decommissioned. SIS and NCBI are currently working on the help text and appropriate links to NCBI resources. We will

be testing the page with current TOXNET users before its release. We expect this process to take another few months.

We appreciate your help with these changes. We do not see the need for the development support of these pages. If we need help with editing the content, the SIS staff transferred to LO and OCCS can work on them.

I am in the process of reserving Conference B. I will send out reminder as we get closer to the meeting date.

Florence

Subject: Moving SIS web pages to NLM Main
When: Tuesday, April 30, 2019 6:00 PM-7:00 PM.
Where: Conference room B

While we are busy sunsetting many SIS resources, a few – mostly those consisting of small collections of web pages-- need a new home on the NLM main site. Patti has asked us to work with you on these integrations.

We would like to discuss the logistics of migrating the following pages:

1. NLM Environmental Health & Toxicology is the "Toxicology & Environmental Health Information Program (TEHIP)" portal website. It consists of about 50 pages that maintained via Teamsite. We expect it to be sunsetted approximately by July - September 2019 timeframe. SIS staff moving to LO will continue to check links and work with OCPL when corrections and new links are needed.

2. Bibliography on Alternatives to Animal Testing (ALTBIB) is an important resource for a number of reasons (political, mostly). It is currently hosted as a part of TOXNET. However, when TOXNET is integrated into NCBI platforms and the current SIS servers for TOXNET is decommissioned, ALTBIB will need a new home. We can easily move the handful of web pages and PDFs to the NLM main site.

3. TOXNET home page –TOXNET is currently being integrated into NCBI offerings. The icon for TOXNET on the NLM home page will link to a transitional TOXNET home page providing help/explanatory text to assist TOXNET users with the transition. Patti let me know that she expects this transitional page to live on the NLM main site for approximately 1-2 years after the SIS TOXNET server is decommissioned. SIS and NCBI are currently working on the help text and appropriate links to NCBI resources. We will be testing the page with current TOXNET users before its release. We expect this process to take another few months.

We appreciate your help with these changes. We do not see the need for the development support of these pages. If we need help with editing the content, the SIS staff transferred to LO and OCCS can work on them.

I am in the process of reserving Conference B. I will send out reminder as we get closer to the meeting date.

Subject: Offerings w colors_working groups_contracts.xlsx
Attachments: Offerings w colors_working groups_contracts.xlsx

OK, Florence and I put this workbook together that ties offerings, working groups and contracts together by category. I guess we need to share it with current working groups (chem/tox and maybe DIMRIC, although they are doing Dis Lit).
I am brain dead. I might have more thoughts on this tomorrow.

Subject: When dust settles a bit, would be great to get back to this

When dust settles a bit, it would be great to get back to this set recommendations and other content. From April 2018.

Bert

Re-envisioning NLM's Toxicology and Environmental Health Resources – Stakeholder Workshop

Sarah Thorne[1], Dan Kovacs[1], Laurel Austin[1,3], Zach Collier[1], Lucie Chen[2], Florence Chang[2], Pertti Hakkinen[2]

[1]Decision • Partners, Inc.; [2]National Library of Medicine; [3]Ivey Business School at Western University

The Challenge

For over 50 years, the National Library of Medicine's Specialized Information Services (NLM SIS) has been providing leading toxicology and environmental resources to numerous users throughout the US and internationally. Given the pace of change and technological advances in toxicology, environmental health and information, NLM is committed to maintaining its relevancy and value to its ever-expanding universe of users.

A Platform for Biomedical Discovery and Data-Powered Health
NLM Strategic Plan 2017-2027

The NLM Strategic Plan 2017 – 2027 envisions NLM as a platform for biomedical discovery and data-powered health, integrating streams of complex and interconnected research outputs that can be readily translated into scientific insights, clinical care, public health practices, and personal wellness.

NLM envisions three pillars as the foundation for such a platform:

1. Innovate, create, and maintain a sustainable digital ecosystem to keep pace with the data demands of the research enterprise.
2. Engage a wide range of audiences to ensure the right information gets delivered to them at the right time
3. Inspire and empower the data-driven workforce of the future.

Our Approach – Mental Modeling Insight™

As a first step, through discussions with NLM personnel and review of background materials, we developed an Expert Model characterizing influences on Users' Judgments of the effectiveness of NLM Resources for Toxicology and Environmental Health.

This model informed design of an all-day workshop, held on April 6, 2018, with a diverse set of users of NLM resources to explore, through in depth dialogue, opportunities for NLM to expand the content, value, use and usability of electronic resources in the areas of toxicology and environmental health, aligned with the direction of NLM's new 2017 – 2027 Strategic Plan.

Workshop Participants' Priority Opportunities for NLM

Content and Information

Provide a database of databases:
- Create a portal; Curating, indexing, cross-referencing data on other sites

Enable access to data not currently available:
- Negative, and un-published results and data; population- and organ-specific toxicity data

Ensure the data are high quality, available, computable, and can be integrated:
- Establish an "NLM Good Housekeeping Seal of Approval" setting minimum reporting requirements, standardization of data sets and label the quality and uncertainty of data
- Enable input data that is machine readable to support machine learning

Provide tools to improve data accessibility and use:
- Provide training resources, TOX 101 for non-experts
- Publish guidance on how to organize data

Continue ongoing two-way interaction and dialogue with the broader user community:
- ***Understand the needs of the various types of users, on an ongoing basis***
- Communicate how to contact NLM, leveraging social media

Focus on building partnerships (Collaboration, Communication, and Coordination):
- Work closely with NSF, journals, and journal editors to support standards, data sharing, reporting practices, etc.
- Recognize that this is a global effort

Access and User Interface

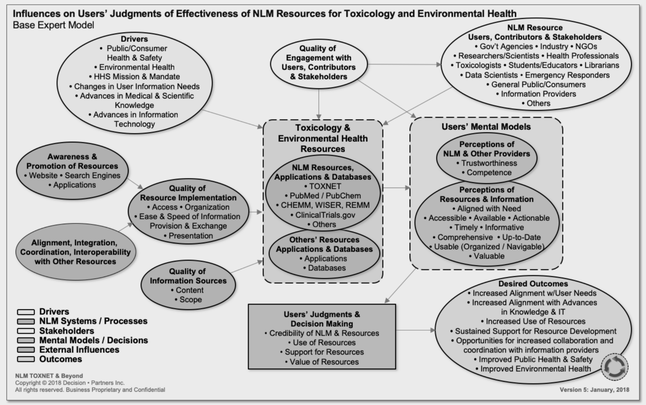
Improve access through user tools – (e.g., Apps, interface devices):
- Provide a customizable database dashboard with starter kits based on user, or data type
- Establish an "app store"; widgets; or browser extensions
- Improve interfaces based on end-user needs
- Enable or support distributed user networks and public user forums

Identify the target audiences, now, in 10 years, and in 40 years:
- Emergency responders, toxicologists, pharmacologists, the public, consumers, students, etc.
- Each user group will have specific use cases that will drive usability and functionality needs

Ensure machine accessibility of the data and deep data integration:
- APIs; processes and standards for deep data integration; Computable data
- Provide links between databases that have related data

Improve usability of electronic resources:
- Data should be finable, accessible, interpretable, reusable (FAIR)
- Use flexible, decision-tree search structures
- ***If data issues aren't addressed now, they will only increase as the volume of data increases***

Provide a person and/or an avatar to answer basic questions:
- Leverage experience and historical use data to determine frequently asked questions (FAQs)
- Have one person per key government agency that NLM can direct questions to and/or who can direct questions to NLM



General Recommendations to NLM from Workshop Participants

- **Understand this is a new world with a massive, and ongoing growth of information and information technology**
- **Build on existing partnerships, including outside of the US**
- **Open up the gateway, make databases more welcoming to users; engage them to participate and contribute**
- **Connect with and engage the next generation science students to enable them to become future users – case studies and other training as part of STEM education**
- **Caution: *Don't fix what isn't broken!* NLM has a really solid foundation to build on. Users appreciate and value the current toxicology and environmental health resources. The key is to preserve and enhance these databases. *Don't try to recreate the wheel!***

Key Considerations from Decision Partners

- **NLM is the trusted curator of toxicology and environmental health resources: NLM must continue to earn the trust and respect of users**
- **Toxicology and environmental health information and technologies are expanding at an unprecedented rate: Engage partners and factor future technological capabilities into NLM's near-term plans**
- **Future resource content and access must be user-centric: Engage critical users on an ongoing basis and collaborate to create needed tools**
- **Build on NLM success: Communicate the value case**

The full Workshop Summary Report is available from Bert Hakkinen at: hakkinenp@mail.nlm.nih.gov.

Subject: Press Inquiry: TOXMAP Website Retirement

Dear Kathryn and Alise,

I am a freelance science writer with an interest in environmental stories. I was exploring a Superfund/NPL story when I noticed that the TOXMAP website now has a banner that the webpage will be retired in the Fall of 2019.

I did not see any press releases related to this announcement. Will it just be the map's webpage that will be retired or will the whole entire interactive map? Will the TOXNET databases still be maintained? Or is the plan to move the project elsewhere?

I would be grateful for a response from the Toxicology and Environmental Health Information Program at the National Library of Medicine. I may be interested in conducting an interview related to this matter.

Best,

Saheel Mehta

Subject: Discussion about SIS contracts with Receiving
Attachments: Offerings w colors_working groups_contracts.xlsx

All,
Now that we have a staff reassignments, it's time to start thinking about where products/programs/contracts/IAAs/DCCs (direct CAN Citations) we transfer to. Attached is a copy of the latest spreadsheet to help us begin this discussion.

Because the conflict with Data Science Basic Training, we rescheduled this meeting to **Thursday, May 2, 12:30 – 1:30 at the NLM Conf Rm LO Billings B1E08**. Please note the room change from Conf room B to Billings.

Florence
==========

While we are busy sunsetting many SIS resources, a few – mostly those consisting of small collections of web pages-- need a new home on the NLM main site. Patti has asked us to work with you on these integrations.

We would like to discuss the logistics of migrating the following pages:

1. NLM Environmental Health & Toxicology is the "Toxicology & Environmental Health Information Program (TEHIP)" portal website. It consists of about 50 pages that maintained via Teamsite. We expect it to be sunsetted approximately by July - September 2019 timeframe. SIS staff moving to LO will continue to check links and work with OCPL when corrections and new links are needed.

2. Bibliography on Alternatives to Animal Testing (ALTBIB) is an important resource for a number of reasons (political, mostly). It is currently hosted as a part of TOXNET. However, when TOXNET is integrated into NCBI platforms and the current SIS servers for TOXNET is decommissioned, ALTBIB will need a new home. We can easily move the handful of web pages and PDFs to the NLM main site.

3. TOXNET home page –TOXNET is currently being integrated into NCBI offerings. The icon for TOXNET on the NLM home page will link to a transitional TOXNET home page providing help/explanatory text to assist TOXNET users with the transition. Patti let me know that she expects this transitional page to live on the NLM main site for approximately 1-2 years after the SIS TOXNET server is decommissioned. SIS and NCBI are currently working on the help text and appropriate links to NCBI resources. We will be testing the page with current TOXNET users before its release. We expect this process to take another few months.

We appreciate your help with these changes. We do not see the need for the development support of these pages. If we need help with editing the content, the SIS staff transferred to LO and OCCS can work on them.

Florence

Subject: Re: Moving SIS web pages to NLM Main

Thanks for the reminder. I just found out I need to meet with Patti and Jerry at 12:30pm so will be late.

Regards,

Jody

>
> While we are busy sunsetting many SIS resources, a few – mostly those consisting of small collections of web pages-- need a new home on the NLM main site. Patti has asked us to work with you on these integrations.
>
> We would like to discuss the logistics of migrating the following pages:
>
>
> 1. NLM Environmental Health & Toxicology <https://envirotoxinfo.nlm.nih.gov/> is the "Toxicology & Environmental Health Information Program (TEHIP)" portal website. It consists of about 50 pages that maintained via Teamsite. We expect it to be sunsetted approximately by July - September 2019 timeframe. SIS staff moving to LO will continue to check links and work with OCPL when corrections and new links are needed.
>
>
> 1. Bibliography on Alternatives to Animal Testing (ALTBIB)<https://toxnet.nlm.nih.gov/html/altbib.html> is an important resource for a number of reasons (political, mostly). It is currently hosted as a part of TOXNET. However, when TOXNET is integrated into NCBI platforms and the current SIS servers for TOXNET is decommissioned, ALTBIB will need a new home. We can easily move the handful of web pages and PDFs to the NLM main site.
>
>
> 1. TOXNET home page<https://toxnet.nlm.nih.gov/index.html> –TOXNET is currently being integrated into NCBI offerings. The icon for TOXNET on the NLM home page will link to a transitional TOXNET home page providing help/explanatory text to assist TOXNET users with the transition. Patti let me know that she expects this transitional page to live on the NLM main site for approximately 1-2 years after the SIS TOXNET server is decommissioned. SIS and NCBI are currently working on the help text and appropriate links to NCBI resources. We will be testing the page with current TOXNET users before its release. We expect this process to take another few months.
>
> We appreciate your help with these changes. We do not see the need for the development support of these pages. If we need help with editing the content, the SIS staff transferred to LO and OCCS can work on them.

Importance: High

Hi Stacey and Janice,

We received the below inquiry regarding the sunsetting of TOXNET. The customer stated he/she may be interested in conducting an interview relating to this.

Please see the below.

Thank you,
Alise Crutchman

Good morning Saheel,

Thank you for reaching out to the National Library of Medicine regarding TOXNET. I am forwarding your inquiry to the TOXNET team who can shed some light on the upcoming sunset of the database.

Someone should be in touch with you shortly.

Thank you,
Alise Crutchman

Subject: Press Inquiry: TOXMAP Website Retirement

Dear Kathryn and Alise,

I am a freelance science writer with an interest in environmental stories. I was exploring a Superfund/NPL story when I noticed that the TOXMAP website now has a banner that the webpage will be retired in the Fall of 2019.

I did not see any press releases related to this announcement. Will it just be the map's webpage that will be retired or will the whole entire interactive map? Will the TOXNET databases still be maintained? Or is the plan to move the project elsewhere?

I would be grateful for a response from the Toxicology and Environmental Health Information Program at the National Library of Medicine. I may be interested in conducting an interview related to this matter.

Best,

Saheel Mehta

To: Sheehan, Jerry (NIH/NLM) [E]
Subject: Draft TOXNET transition timeline
Attachments: TOXNET Transition Page implementation v2.docx

Jerry,

Here is the Word document. I need to work with NCBI team to finalize the final tasks for transition. So this version is still a draft.

Thanks!

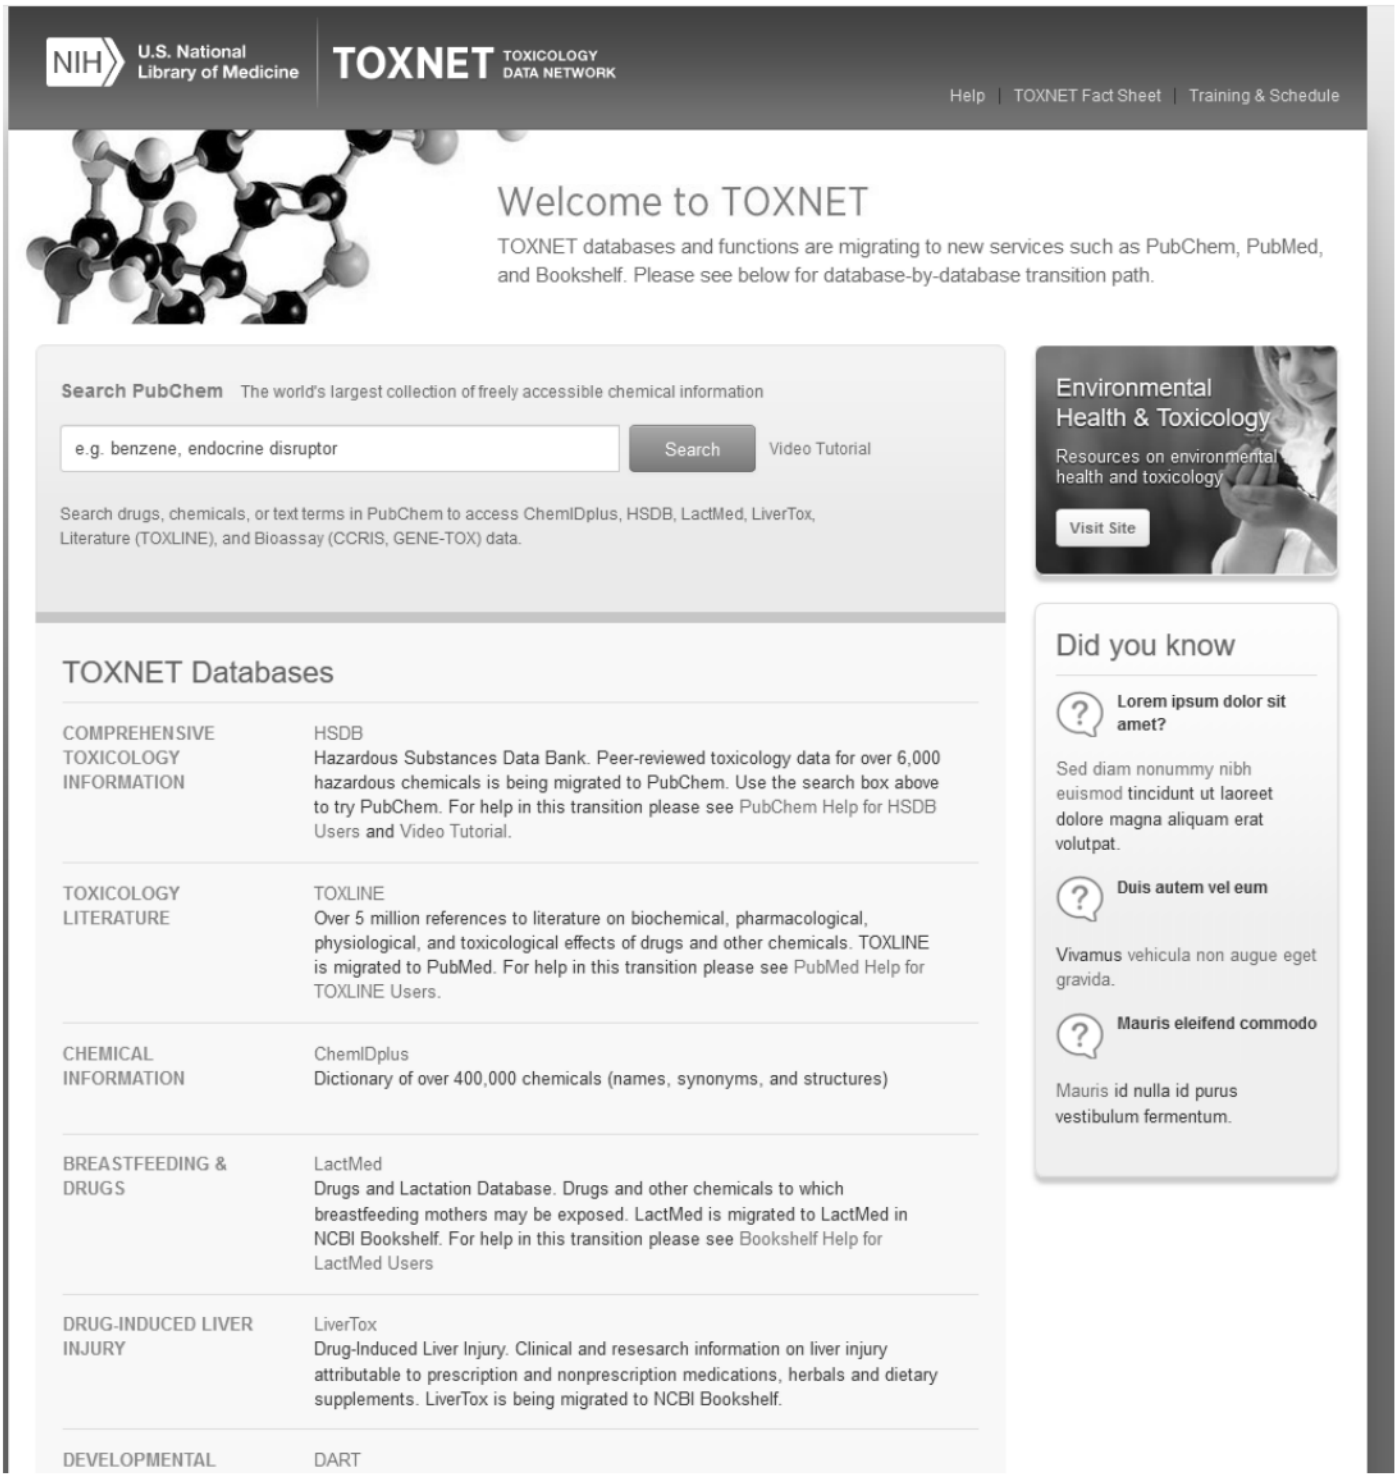
Florence

TOXNET TRANSITION TIMELINE

Develop TOXNET transition page:	April – May 2019
Iterative user testing and refinement of the transition page:	May – August 2019
NCBI platforms continue with integration (see transition plans below):	May – September 2019
Transition page goes live:	June – September 2019
Communicate TOXNET Transition in NLM Technical Bulletin:	June – September 2019
Invite users to check out Transition page from current TOXNET:	June – September 2019
Current TOXNET server shut down:	September – December 2019
Redirect TOXNET URL to the transition page:	September – December 2019
Transition page remains active and linked from NLM home page:	January 2020 – August 2021
Transition page removal:	September 2021

TOXNET TRANSITION PAGE IMPLEMENTATION

Transition page (TOXNET home page) will be enabled in September 2019 and remain on through September 2021. A link from the current TOXNET home page will direct uses to check out the TOXNET transition page for 3 months before the current TOXNET sunset. The page will be staged in dev with multiple usability sessions to test messages and user workflows. Currently, the transition page has the following look and will be adjusted per each element. User testing will begin in May 2019. All TOXNET urls will be directed to this page in December 2019 when the current TOXNET server is decommissioned. Preview this Transition Page at https://sis4.nlm.nih.gov/changPage/newtoxnet/ (sis4user/4sis2use)



1. Mobile link will be removed
    a. Current “mobile app” users will be redirected to Transition page
    b. Transition page will incorporate message “The mobile site is being transitioned to other NLM services by databases.”
2. Help will go to a revised help page to help designed with content around finding information on the new pages, i.e. PubChem, Bookshelf, etc.

    a. Page will be static with links to PDFs and YouTube videos
    b. These help links will also be integrated into database structure in section 13
    c. Page will also include a link to the help center
    d. Links on the page will be consistent with TOXNET transition page
3. FAQs link will be removed
    a. Essential information will be put into Help page
4. TOXNET Fact Sheet will be updated to just contain database facts and a link to the help center
5. Training Manual & Schedule link will be replaced with link to the NNLM training page
6. Share link will be removed
7. Welcome text will include info on transition
    a. "TOXNET databases and functions are migrating to new services such as PubChem, PubMed, and Bookshelf. Please see below for database-by-database transition plan"
8. Text will be altered to say "SEARCH PubChem - the world's largest collection of freely accessible chemical information. Search drugs, chemicals, or text terms in PubChem to access ChemIDplus, HSDB, LactMed, LiverTox, Literature (TOXLINE), and Bioassay (CCRIS, GENE-TOX) data.
9. BROWSE and associated box will be removed
10. ADVANCED SEARCH and associated box will be removed
11. Environmental Health & Toxicology will be directed to: https://envirotoxinfo.nlm.nih.gov/
    a. This page will have to be updated to remove TOXNET Search and other features being transitioned
12. This page will be modified to contain tips on migration, content to be driven by usability and user feedback
13. Each database will have its own transition message
    a. HSDB - Hazardous Substances Data Bank. Peer-reviewed toxicology data for over 6,000 hazardous **chemicals is being migrated to PubChem. Use the search box above to try PubChem. For help in this transition please see PubChem Help for HSDB Users and Video Tutorial.**
    b. TOXLINE - Over 5 million references to literature on biochemical, pharmacological, physiological, and toxicological effects of drugs and other chemicals. **TOXLINE is migrated to PubMed. For help in this transition please see PubMed Help for TOXLINE Users.**
    c. ChemIDplus - Dictionary of over 400,000 chemicals (names, synonyms, and structures). **The site will be maintained as a site for approximately until September 2020.**
    d. LactMed - Drugs and Lactation Database. Drugs and other chemicals to which breastfeeding mothers may be exposed. **LactMed is migrated to LactMed in NCBI Bookshelf. For help in this transition please see Bookshelf Help for LactMed Users.**
    e. LiverTox - Drug-Induced Liver Injury. Clinical and research information on liver injury attributable to prescription and nonprescription medications, herbals and dietary supplements. **LiverTox is being migrated to NCBI Bookshelf.**
    f. DART - Developmental and Reproductive Toxicology Database. References to developmental and reproductive toxicology literature. **DART is migrated to PubMed.**
    g. TOXMAP - Environmental Health Maps provides searchable, interactive maps of EPA TRI and Superfund data, plus US Census and NCI health data. **TOXMAP website will be retired in the Fall of 2019.**

h. TRI - Toxics Release Inventory. Annual environmental releases of over 600 toxic chemicals by U.S. facilities. **TOXNET's TRI will be retired in the Fall of 2019. For TRI 2017 information, visit 2017 TRI National Analysis Dashboard at EPA.**

i. CTD - Comparative Toxicogenomics Database. Access to scientific data describing relationships between chemicals, genes and human diseases. **TOXNET's CTD will be retired in the Fall of 2019. Visit CTD hosted at the North Carolina State University.**

j. Household Products Database - Potential health effects of chemicals in more than 20,000 common household products
   i. This is a separate url: https://hpd.nlm.nih.gov/
   ii. The offering will be evaluated by the working group
   iii. Sample data will go into PubChem, and link back to the records in Household Products Database

k. Haz-Map - Links jobs and hazardous tasks with occupational diseases and their symptoms. **Haz-Map website will be retired in the Fall of 2019.**

l. IRIS - Integrated Risk Information System. Hazard identification and dose-response assessment for over 500 chemicals. **IRIS status is TBD.**

m. ITER - International Toxicity Estimates for Risk. Risk information for over 600 chemicals from authoritative groups worldwide. **ITER status is TBD.**

n. ALTBIB - Resources on Alternatives to the Use of Live Vertebrates in Biomedical Research and Testing. **ALTBIB will be migrated to NLM Main Website.**

o. CCRIS - Chemical Carcinogenesis Research Information System. Carcinogenicity and mutagenicity test results for over 8,000 chemicals (1985-2011). **CCRIS is being migrated to PubChem.**

p. CPDB - Carcinogenic Potency Database. Standardized analyses of the results of 6,540 chronic, long-term animal cancer tests (1980-2011). **CPDB will be retired by the Fall of 2019.**

q. GENE-TOX - Genetic Toxicology Data Bank. Peer-reviewed genetic toxicology test data for over 3,000 chemicals (1991-1998**). GENE-TOX is being migrated to PubChem.**

Footer will remain unchanged

Attachments: TOXNET Transition Page implementation v2.docx

Thanks, Florence. This plan looks well thought-out (no surprise there). Although we do not want to "announce" these changes at MLA next week, I do think it would be helpful for Janice to highlight that we are making well-informed decisions about how to migrate important SIS content, such as TOXNET, to other NLM systems and services that will allow the information to be maintained and distributed in what we hope will be a more efficient manner that integrates it with related NLM information.
I'm cc'ing Joyce so she is also aware of the current plans.
Thanks,
Jerry

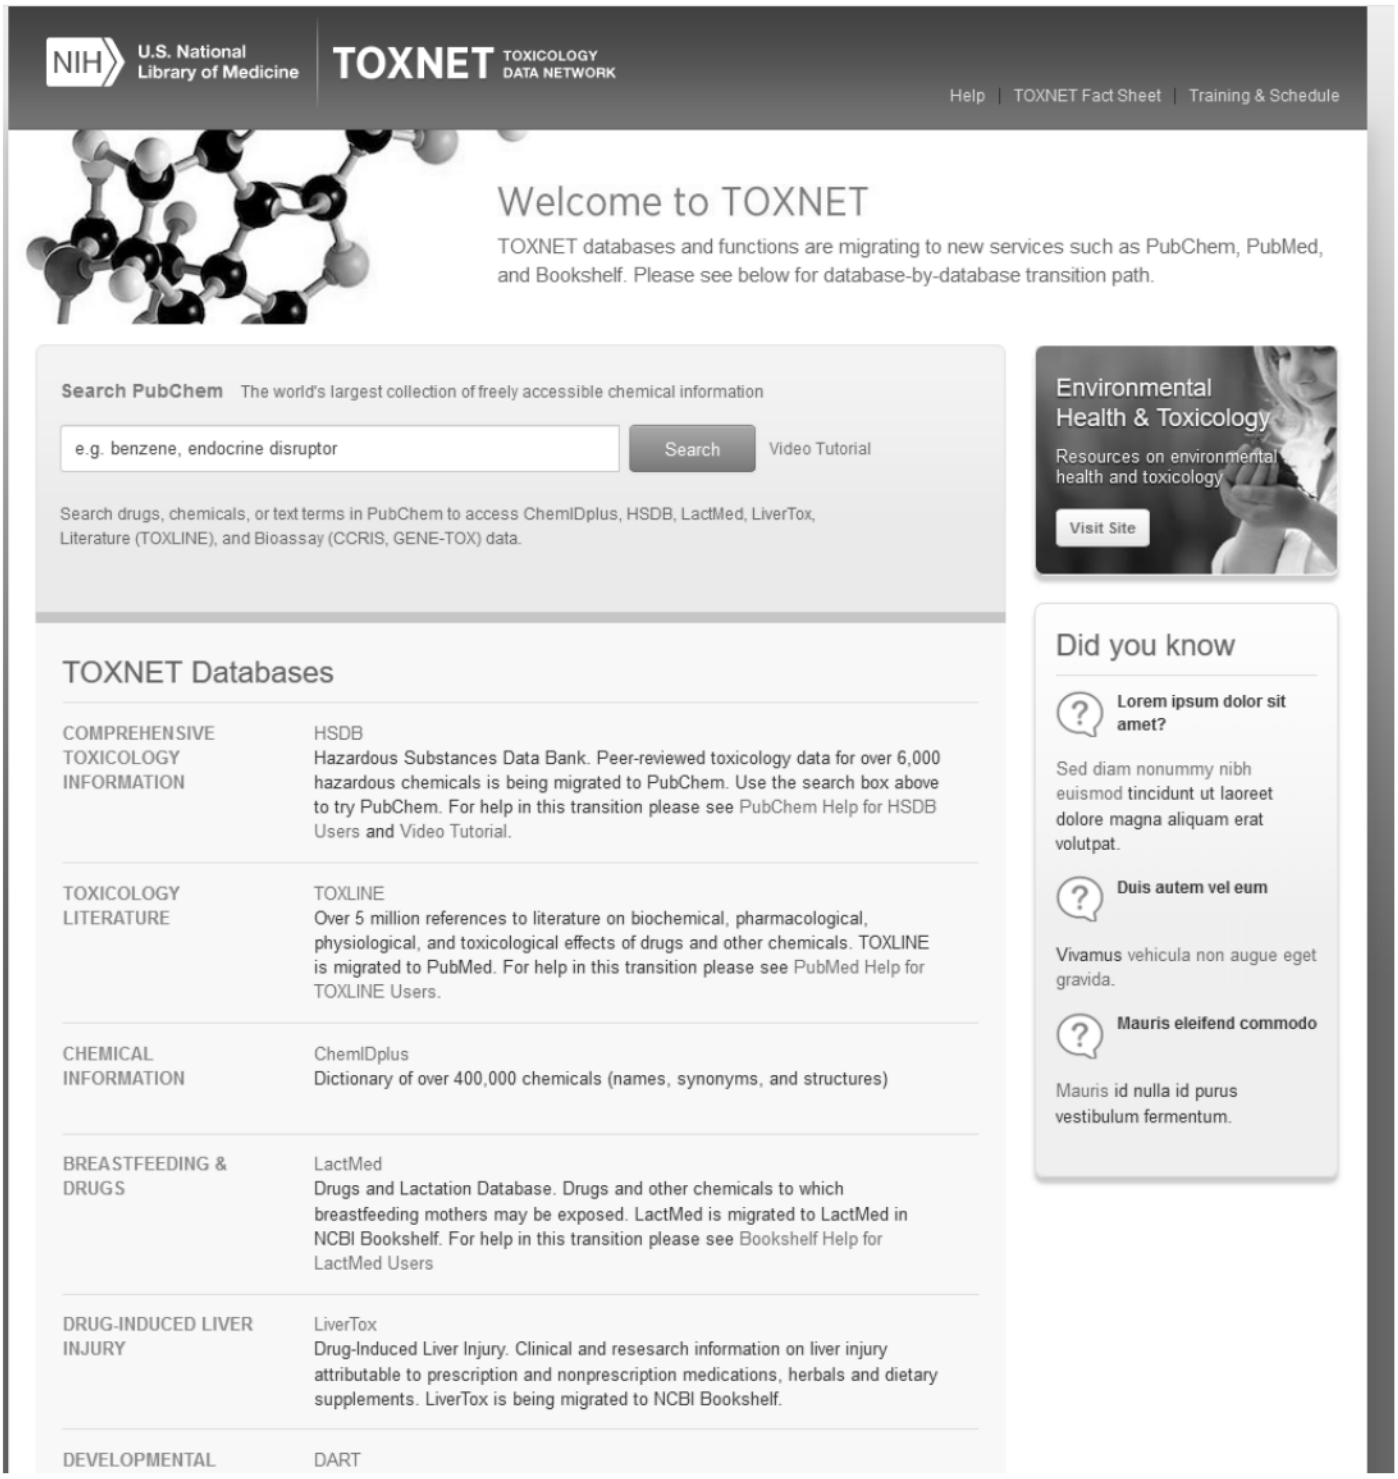
Communicate TOXNET Transition in NLM Technical Bulletin:	June – September 2019
Invite users to check out Transition page from current TOXNET:	June – September 2019
Current TOXNET server shut down:	September – December 2019
Redirect TOXNET URL to the transition page:	September – December 2019
Transition page remains active and linked from NLM home page:	January 2020 – August 2021
Transition page removal:	September 2021

TOXNET TRANSITION PAGE IMPLEMENTATION

Transition page (TOXNET home page) will be enabled in September 2019 and remain on through September 2021. A link from the current TOXNET home page will direct uses to check out the TOXNET transition page for 3 months before the current TOXNET sunset. The page will be staged in dev with multiple usability sessions to test messages and user workflows. Currently, the transition page has the following look and will be adjusted per each element. User testing will begin in May 2019. All TOXNET urls will be directed to this page in December 2019 when the current TOXNET server is decommissioned. Preview this Transition Page at https://sis4.nlm.nih.gov/changPage/newtoxnet/ (sis4user/4sis2use)



1. Mobile link will be removed
    a. Current “mobile app” users will be redirected to Transition page
    b. Transition page will incorporate message “The mobile site is being transitioned to other NLM services by databases.”
2. Help will go to a revised help page to help designed with content around finding information on the new pages, i.e. PubChem, Bookshelf, etc.

    a. Page will be static with links to PDFs and YouTube videos
    b. These help links will also be integrated into database structure in section 13
    c. Page will also include a link to the help center
    d. Links on the page will be consistent with TOXNET transition page
3. FAQs link will be removed
    a. Essential information will be put into Help page
4. TOXNET Fact Sheet will be updated to just contain database facts and a link to the help center
5. Training Manual & Schedule link will be replaced with link to the NNLM training page
6. Share link will be removed
7. Welcome text will include info on transition
    a. "TOXNET databases and functions are migrating to new services such as PubChem, PubMed, and Bookshelf. Please see below for database-by-database transition plan"
8. Text will be altered to say "SEARCH PubChem - the world's largest collection of freely accessible chemical information. Search drugs, chemicals, or text terms in PubChem to access ChemIDplus, HSDB, LactMed, LiverTox, Literature (TOXLINE), and Bioassay (CCRIS, GENE-TOX) data.
9. BROWSE and associated box will be removed
10. ADVANCED SEARCH and associated box will be removed
11. Environmental Health & Toxicology will be directed to: https://envirotoxinfo.nlm.nih.gov/
    a. This page will have to be updated to remove TOXNET Search and other features being transitioned
12. This page will be modified to contain tips on migration, content to be driven by usability and user feedback
13. Each database will have its own transition message
    a. HSDB - Hazardous Substances Data Bank. Peer-reviewed toxicology data for over 6,000 hazardous **chemicals is being migrated to PubChem. Use the search box above to try PubChem. For help in this transition please see PubChem Help for HSDB Users and Video Tutorial.**
    b. TOXLINE - Over 5 million references to literature on biochemical, pharmacological, physiological, and toxicological effects of drugs and other chemicals. **TOXLINE is migrated to PubMed. For help in this transition please see PubMed Help for TOXLINE Users.**
    c. ChemIDplus - Dictionary of over 400,000 chemicals (names, synonyms, and structures). **The site will be maintained as a site for approximately until September 2020.**
    d. LactMed - Drugs and Lactation Database. Drugs and other chemicals to which breastfeeding mothers may be exposed. **LactMed is migrated to LactMed in NCBI Bookshelf. For help in this transition please see Bookshelf Help for LactMed Users.**
    e. LiverTox - Drug-Induced Liver Injury. Clinical and research information on liver injury attributable to prescription and nonprescription medications, herbals and dietary supplements. **LiverTox is being migrated to NCBI Bookshelf.**
    f. DART - Developmental and Reproductive Toxicology Database. References to developmental and reproductive toxicology literature. **DART is migrated to PubMed.**
    g. TOXMAP - Environmental Health Maps provides searchable, interactive maps of EPA TRI and Superfund data, plus US Census and NCI health data. **TOXMAP website will be retired in the Fall of 2019.**

h. TRI - Toxics Release Inventory. Annual environmental releases of over 600 toxic chemicals by U.S. facilities. **TOXNET's TRI will be retired in the Fall of 2019. For TRI 2017 information, visit 2017 TRI National Analysis Dashboard at EPA.**

i. CTD - Comparative Toxicogenomics Database. Access to scientific data describing relationships between chemicals, genes and human diseases. **TOXNET's CTD will be retired in the Fall of 2019. Visit CTD hosted at the North Carolina State University.**

j. Household Products Database - Potential health effects of chemicals in more than 20,000 common household products
   i. This is a separate url: https://hpd.nlm.nih.gov/
   ii. The offering will be evaluated by the working group
   iii. Sample data will go into PubChem, and link back to the records in Household Products Database

k. Haz-Map - Links jobs and hazardous tasks with occupational diseases and their symptoms. **Haz-Map website will be retired in the Fall of 2019.**

l. IRIS - Integrated Risk Information System. Hazard identification and dose-response assessment for over 500 chemicals. **IRIS status is TBD.**

m. ITER - International Toxicity Estimates for Risk. Risk information for over 600 chemicals from authoritative groups worldwide. **ITER status is TBD.**

n. ALTBIB - Resources on Alternatives to the Use of Live Vertebrates in Biomedical Research and Testing. **ALTBIB will be migrated to NLM Main Website.**

o. CCRIS - Chemical Carcinogenesis Research Information System. Carcinogenicity and mutagenicity test results for over 8,000 chemicals (1985-2011). **CCRIS is being migrated to PubChem.**

p. CPDB - Carcinogenic Potency Database. Standardized analyses of the results of 6,540 chronic, long-term animal cancer tests (1980-2011). **CPDB will be retired by the Fall of 2019.**

q. GENE-TOX - Genetic Toxicology Data Bank. Peer-reviewed genetic toxicology test data for over 3,000 chemicals (1991-1998**). GENE-TOX is being migrated to PubChem.**

Footer will remain unchanged

Subject: RE: Draft TOXNET transition timeline

Thanks, Jerry. Patti suggested that I do a blog post about this change.

Also, we are working very closely with Dave Gillikin.

Florence

Subject: RE: Draft TOXNET transition timeline

Thanks, Florence. This plan looks well thought-out (no surprise there). Although we do not want to "announce" these changes at MLA next week, I do think it would be helpful for Janice to highlight that we are making well-informed decisions about how to migrate important SIS content, such as TOXNET, to other NLM systems and services that will allow the information to be maintained and distributed in what we hope will be a more efficient manner that integrates it with related NLM information.

I'm cc'ing Joyce so she is also aware of the current plans.

Thanks,
Jerry

Subject: Draft TOXNET transition timeline

Jerry,

Here is the Word document. I need to work with NCBI team to finalize the final tasks for transition. So this version is still a draft.

Thanks!

Florence

Jerry,
We updated based on what is offered in the agreement. Think we got it right. See what you think. My interpretation of the provisional letter is each TT is offered package of about $550K.
Todd

Cc: NIH IT Data Call <nihitdatacall@mail.nih.gov>
Subject: ACTION: NLM FY 2021 IT Budget Data Call - Due on May 1, 2019

Colleagues,

We are requesting your assistance in preparing NIH's response to the upcoming OMB FY 2021 IT Budget data call. The following materials will be required from each IC:

1. Planned and actual IT costs for your IC's information systems and applications and infrastructure, including FY 2018 actuals and planned IT costs for FY 2019, FY 2020, and FY 2021
2. Explanation of any significant budget increases/decreases

3. Narrative responses to IT management related questions *(These will be sent out to you in a separate data-call)*
4. IC Director Submission Memo

Under the FITARA legislation, the NIH CIO is required to review, approve and submit the NIH IT budget for HHS CIO approval. The information you submit will be used as part of the HHS FY 2021 budget formulation process.

Your IC Director should submit your IC's response, using the attached materials, to NIH IT Data Call (nihitdatacall@mail.nih.gov) no later than May 1,2019.

Attachments:

- FY 2021 IT Investment Budget Request spreadsheet, which contains two worksheets: *Systems and Applications, and Infrastructure*. The worksheets have been prepopulated with last year's submission.
- IC FY 2021 IT Budget Submission Definitions
- Explanation of Significant IT Budget Changes Template
- IC Director Submission Memo Example

Note: *In early Summer, OCIO will be requesting additional detailed budget information to meet OMB's requirement to report IT Towers and IT Cost Pools. We will provide you the necessary guidance, definitions and templates at this time.*

Please send any questions to NIH IT Data Call (nihitdatacall@mail.nih.gov).

Thank you!

FY 2021 IT Budget Narrative Data Call

1. Describe your IT organization, including the roles and responsibilities of your IC's CIO (or equivalent), IT organization reporting structure (please include an org chart), and scope of responsibilities.

   Mr. Ivor D'Souza, the NLM's Chief Information Officer (CIO), is also Director, Information Systems and Director, Office of Computer and Communication Systems, NLM. The NLM Organizational Chart shows the formal division structure of the NLM. Mr. D'Souza reports directly to Dr. Patricia Flatley Brennan, NLM Director, and is a member of the NLM Leadership team comprised of the NLM Director, Deputy Directors, Executive Officer, Divisional Directors, and other key program leaders. The NLM Leadership Team meets bi-weekly to review and discuss NLM-wide initiatives, including IT related matters that have NLM-wide impact.

   The NLM CIO is responsible for setting NLM-wide standards and priorities for implementation of information technology in support of NLM's mission. He coordinates activities to achieve compliance with NIH and federal government guidance/policy related to information technology, and serves as the single point of contact with NIH for all IT matters related to NLM.

2. Please describe how you incorporate risk as part of your IT investment governance/strategy.

   NLM follows the NIST Risk Management Framework to include security and risk management across our system development lifecycle, including approvals, authorization, and investment reviews, consistent with FITARA requirements.

3. Describe any specific situations where your IC expects to have a significant IT related cost avoidance or cost savings. Please provide an estimated dollar amount and year(s) the savings or avoidance has been or will be saved.

   Some software publishers offer that the NLM, as a public library, qualifies to acquire their products using academic price schedules, which usually often offer deeper discounts than federal price schedules. As an example, The NLM has participated for many years with the Maryland Educational Enterprise Consortium (MEEC) to acquire Microsoft licensing under both academic price schedules and Maryland-wide educational volume levels. As the Microsoft academic and federal licensing models differ substantially, it is challenging to describe specific cost savings, but cost savings from this one agreement alone easily total over $1 million a year. The NLM is participating with the MEEC/Microsoft agreement again this year.

4. For any new, major IT-related acquisitions your IC expects to award over the next three years, please provide a description of the effort, including scope, estimated dollar value, anticipated award time-frame, and the document number for the associated FITARA Acquisition Strategy.

   No new, major IT acquisitions planned for next three years. (Renewals of existing support contracts are planned).

5. What processes and tools does your IC use:

   a. To manage/track your IC's software inventory?

   We primarily use Altiris and BigFix to track and manage our IC software inventory.

   b. To manage/track your IC's hardware/asset inventory?

   Our IT Asset Management (ITAM) solution integrates our enterprise property system's physical inventory and acquisition records (Sunflower) with our internal network discovery tools (BigFix and Tenable). Together, our ITAM tool provides a comprehensive dataset including basic device information, unique NIH property tag number, device ownership/accountable user, network device identification, device location, device port configuration, and scanning timestamps.

6. What are your IC's plans (short term and long term) for data storage needs?

   At around 40 PB today, tactically the NLM continues to see modest ongoing incremental growth in content and associated data storage requirements (~2 PB/yr.). Strategically, the NLM is assessing its data storage needs consistent with taking on an expanded Data Science mission scope.

7. IT hosting infrastructure approach:

   a. What percentage of your current IT hosting infrastructure (servers & storage) resides in:

IC Owned Data Center(s):	**80**	**%**
Commercially Owned, Government Operated(s):		%
Commercially Owned, Commercially Operated(s):	**17**	**%**
Cloud Provider(s):	**3**	**%**

b. In three years, what percentage of your IT hosting infrastructure (servers & storage) do you anticipate will reside in:

IC Owned Data Center(s):	**80**	**%**
Commercially Owned, Government Operated(s):		%
Commercially Owned, Commercially Operated(s):	**10**	**%**
Cloud Provider(s):	**10**	**%**

c. In five years, what percentage of your IT hosting infrastructure (servers & storage) do you anticipate will reside in:

IC Owned Data Center(s):	**75**	**%**
Commercially Owned, Government Operated(s):		%
Commercially Owned, Commercially Operated(s):		
Cloud Provider(s):	**25**	**%**

8. Describe how your IC manages the secure use of cloud services (IaaS, PaaS, SaaS)?

NLM adopts secure use of cloud services and deals with the Authority to Operate (ATO) process by implementing FedRAMP security controls including Federal mandates and requirements. All NLM cloud-based systems go through the ATO review process which includes risk assessment, security control documentation, vulnerability scanning and continuous monitoring. This process ensures a high level security posture for our cloud-based systems.

9. Please describe any processes your IC uses for blacklisting or whitelisting SW?

Our 'supported software' (whitelist) includes both mandated and standard software titles, which have been evaluated and approved for use on NLM systems. Our processes restrict user behavior and our enforcement of version and patching levels further control the variation in known software releases. User accounts are not privileged to install software, so requests for supported software installs are reviewed and processed following policy, where new titles are evaluated and reviewed for adoption into this qualified whitelist. We follow DHS, CIAC, NIH and other malware reporting (AV, for instance) to eliminate and block known blacklist items.

10. Describe how your IC acquires, governs, and manages Mac computers within your environment.

We acquire Mac computers through standard PC acquisition processes, but Macs are an exception and we purchase them only on an as-needed basis. We manage Mac computers using Altiris and BigFix (with FireEye, SEP, and FourScout agents). All Mac computers are bound to Active Directory. PIV authentication is enabled on all Mac computers.

11. Does your IC **provide** any significant shared services to other ICs, to HHS OPDIVS, or to other federal agencies (shared services may include systems or applications used by multiple ICs as well as contract vehicles used to acquire IT equipment or services)? If yes, please provide specifics.

NLM has assisted the Office of Extramural Research, NIH, in developing a tool for applicants to create biosketches, a standard format for including biographical and publication information in grant applications. The software utility has been widely deployed within granting agencies of the Federal government who developed it as a cooperative project of the Federal Demonstration Partnership, an association of academic research institutions and federal agencies, including the National Science Foundation, Department of Defense, and Department of Energy.

12. Does your IC **leverage** any significant shared services provided by other ICs, HHS OPDIVS, or other federal agencies (shared services may include systems or applications used by multiple ICs as well as contract vehicles used to acquire IT equipment or services)? If yes, please provide specifics.

We rely on the NIH Center for Information Technology, ERA, NIH/OD and other teams at the NIH for the operation and maintenance of NIH enterprise solutions for services such as email, web conferencing, grants management, HR, acquisitions, and the NIH Global Directory. NLM also uses POTS from NIDDK and MERLIN (for contracts management) from NIDCD.

13. What are your top three significant challenges or opportunities where an NIH sponsored policy, practice or IT initiative (system, capability, or approach) could improve your IC's ability to support its mission priorities?

CyberArk: We are very interested in implementing CyberArk for privileged access management, but we are concerned that the CDM CyberArk initiative will fall short of meeting NLM requirements that were identified as weaknesses in recent penetration test reports. We recommend a high-level meeting with OCIO leadership to discuss alternative approaches to bridge the gap.

																	Labor costs need to be included in either DME Planned costs, Operations Planned costs or across both

ATTENTION: The following Sunsetting Request requires your approval.

Please review the request below and select "APPROVE", "REJECT" or "RETURN". Selecting "RETURN" will return this request to its submitter for resubmission.

NLM Service/Product (Offering) Details	
NLM Service/Product (Offering)	TOXLINE
Description	TOXLINE is a bibliographic database currently part of TOXNET that is created by merging currently bibliographic data from PubMed, technical report data from NTIS, grant information from NIH's RePorter, and other archival data from various sources.
Document(s) Supporting Justification	TOXLINE retirement.docx
Justification	Other: When TOXLINE was first developed (in 1972) the science of toxicology was just emerging as a recognized field for research involving several different scientific disciplines such as biochemistry, pharmacology, physiology, etc. Some of the toxicology literature was covered by MEDLINE, but much of it was not, so other relevant abstracting and indexing services were used to obtain additional literature in toxicology to merge with MEDLINE in order to create the "more complete computer-based file of toxicological information" called for by the President's Scientific Advisory Committee in 1967. Since then, MEDLINE has expanded its journal coverage significantly and other online

	sources of toxicology information are readily available. It is no longer necessary for NLM to create a merged database of this information. we will continue to maintain a subset filter in PubMed to make searching for toxicology information easy for users. In addition, the archived parts of TOXLINE will be available on the NLM FTP site.
Retirement Date	12/01/2019
Organization	LO
Key Staff Involved	Jeanne Goshorn Phillip Thomas David Gillikin

Internal Communication Plan	
Staff to be Informed	David Gillikin
Communicated Message	Part of the TOXNET transition to NCBI involves retiring TOXLINE and directing users to the toxicology subset on PubMed
Date the Message will be Sent	06/03/2019
Communication Channel(s)	Emails Information delivered at staff meetings
Retained Content	FTP
Additional Information	---

External Communication Plan	
External Stakeholders to be Informed	Users who license TOXLINE and get it in xml from our FTP site Online users
Communicated Message	TOXLINE will be retired on 1 December 2019. The toxicology subset will be available on PubMed, and older archived parts of TOXLINE will be available on the FTP site.
Date the Message will be Sent	06/03/2019
Communication Channel(s)	Technical Bulletin Newsletter
Communication Frequency	One time message
Retained Content	FTP Other: toxicology subset of PubMed
Page Redirected	No

NLM Service/Product (Offering) Details

NLM Service/Product (Offering)	TOXLINE
Description	TOXLINE is a bibliographic database currently part of TOXNET that is created by merging currently bibliographic data from PubMed, technical report data from NTIS, grant information from NIH's RePorter, and other archival data from various sources.
Document(s) Supporting Justification	TOXLINE retirement.docx
Justification	Other: When TOXLINE was first developed (in 1972) the science of toxicology was just emerging as a recognized field for research involving several different scientific disciplines such as biochemistry,

	pharmacology, physiology, etc. Some of the toxicology literature was covered by MEDLINE, but much of it was not, so other relevant abstracting and indexing services were used to obtain additional literature in toxicology to merge with MEDLINE in order to create the "more complete computer-based file of toxicological information" called for by the President's Scientific Advisory Committee in 1967. Since then, MEDLINE has expanded its journal coverage significantly and other online sources of toxicology information are readily available. It is no longer necessary for NLM to create a merged database of this information. we will continue to maintain a subset filter in PubMed to make searching for toxicology information easy for users. In addition, the archived parts of TOXLINE will be available on the NLM FTP site.
Retirement Date	12/01/2019
Organization	LO
Key Staff Involved	Jeanne Goshorn Phillip Thomas David Gillikin

Internal Communication Plan

Staff to be Informed	David Gillikin
Communicated Message	Part of the TOXNET transition to NCBI involves retiring TOXLINE and directing users to the toxicology subset on PubMed

NLM Service/Product (Offering) Details	
NLM Service/Product (Offering)	TOXNET Toxics Release Inventory (TRI)
Description	The Toxics Release Inventory (TRI), a resource of the U.S. Environmental Protection Agency, is a set of publicly available databases containing information on releases of specific toxic chemicals and their management as waste, as reported annually by U.S. industrial and federal facilities. This inventory was established under the Emergency Planning and Community Right to Know Act of 1986 (EPCRA). TRI's data, beginning with the 1987 reporting year, covers air, water, land, and underground injection releases, as well as transfers to waste sites. In agreement with the Pollution Prevention Act of 1990, source reduction and recycling data is also included in TRI. The Toxicology and Environmental Health Information Program (TEHIP) in the Division of Specialized Information Services (SIS) of the National Library of Medicine (NLM) has provided access to TRI as part of its TOXNET® (TOXicology Data NETwork) databases, which cover toxicology, hazardous chemicals, environmental health and related areas.

Subject: Talking Points for forwarding?
Attachments: TalkingPoints_Sunsetting_GM_041219.docx

Is this what you would like me to send?

Larry,

Below is a summary of four more NLM services that we plan to sunset in coming months. We continue to review our portfolio and refine our procedures for sunsetting services. I expect to send you additional sunset updates in coming weeks.

Thanks,
Jerry

1. Probe Database (Probe DB) – Proposed sunset date: August 1, 2019

Original purpose: Probe DB was originally implemented as a registry of nucleic acid reagents for biomedical research applications at a time when array-based assays were prevalent.

Why no longer needed: With the advent of short read sequencing, the need for these technologies has declined. Sequence submissions to the Probe database have dwindled to only a couple of submissions per month. Additionally, to maintain the resource, the submission interface would need to be updated to accommodate a code library update. Given the exceedingly low submission and use rate, and evolving research trends, investing in redeveloping the submission interface is not cost-effective.

Critical issues: The content of the database will continue to be available on NLM/NCBI's FTP site.

2. TOXMAP – Proposed sunset date: October 1, 2019

Original purpose: TOXMAP has helped users visually explore data primarily from the EPA's Toxics Release Inventory (TRI) and Superfund Programs. TOXMAP also features Canadian NPRI data, U.S. EPA coal plant emissions data, and U.S. commercial nuclear power plants. TOXMAP overlays U.S. Census demographic data, income figures from the U.S. Department of Commerce, and health data from the NCI SEER program.

Why no longer needed: The US Environmental Protection Agency now produces several GIS products and visualization applications that have similar data and GIS functionality. Use of unique TOXMAP features (e.g., the ability to search TOXNET from within the GIS tools) has declined to a level too low to justify continued NLM investment in technological upgrades necessary.

Critical issues: Data used in TOXMAP will be available from their original sources (EPA, Canada, Nuclear Regulatory Commission, etc.), and GIS application users can overlay the data in their GIS applications. NLM will inform EPA and NIEHS of the proposed sunset, in addition to TOXMAP users.

3. Carcinogenic Potency Database (CPDB) – Proposed sunset date: October 1, 2019

Original purpose: CPDB is an archival database with historical information from the years 1980-2011 reporting on the analyses of animal cancer tests on 1547 chemicals. CPDB was developed by the Carcinogenic Potency Project at the University of California, Berkeley and the Lawrence Berkeley National Laboratory and transitioned to NLM at the end of the project.

Why no longer needed: Information in CPDB has not been maintained, so the information is increasingly out-of-date. In addition, usage has dropped considerably to fewer than 2000 page views in FY2018. The information is not structured in a way that lends itself to integration with other NLM resources.

Critical issues: The evaluated and annotated content will no longer be available on TOXNET. Data files will continue to be available for download from the NLM FTP site. Cited literature will continue to be available via PubMed.

4. Consolidation of three LinkOut for Libraries programs into a single service: Library LinkOut Outside Tool – Proposed sunset date: December 31, 2019

Original purpose: *LinkOut for Libraries* provides PubMed users with access to full text journal content through their institutional subscriptions via three separate tools: LinkOut via Submission Utility, LinkOut Local, and Outside Tool. NLM proposes to consolidate the functionality into a single service Library LinkOut using Outside Tool.

Why the consolidation is warranted: To continue providing excellent Library LinkOut service, it became evident that upgrading and consolidating the systems would be beneficial and more robust technology would be necessary. The new technological approach will allow for more efficient, effective, and reliable daily PubMed indexing. The LinkOut Outside Tool service has important advantages for libraries and their patrons, such as placing their icon on every PubMed citation. Today, library icons are not available on mobile devices; however, by late 2019, PubMed Mobile will be replaced by the new, responsive PubMed site that will display Library LinkOut using Outside Tool icons. Libraries will no longer need to generate and maintain their extensive holdings records.

Critical issues: Library LinkOut using Outside Tool libraries must purchase a link revolver software, and the cost may vary. Library users will not lose access to their library's journal subscriptions during the consolidation process, as the publisher supplied icons typically link to the same full text content. NLM has developed a list of FAQs about the transition to LinkOut using Outside Tool and has begun holding webinars with affected communities to answer questions about the transition.

Subject: SIS sunsetting communication

Jody,

This is my BOR talk. I think there are messages in the talk that can be used for external communication.

Thanks! Talk to you at 4 pm today.

Florence

Patti announced in the Director's Report yesterday the organizational change that is taking place at NLM. My division, the specialized information services division, will be merged with other parts of NLM as a result of the reorganization. I am here today to bring you up to date on what will happen to SIS, the people, the projects, and the process. But first, I would like to give an overview from the historical perspective on SIS' contributions to NLM.

The 1960s were a decade of change. The 60s were also an era of growing environmental awareness. In 1962, Rachel Carson's book Silent Spring prompted the American public and the Congress to take action to protect the environment. In addition, the Amendment to the Federal Food, Drug, Cosmetic Act that required more toxicological testing on drugs led to a huge increase in publications. In 1966, a report by the President's Science Advisory Committee outlined issues related to the effects of hazardous chemicals on the environment and human health. The report suggested that the Department of Health, Education, and Welfare was the appropriate agency to develop an information program in this area. President Johnson accepted the recommendations, as a result, the National Library of Medicine was directed to establish the Toxicology Information Program.

Specialized Information Services (SIS) was established at NLM in 1967, with the Toxicology Information Program being a major element. The program was designed to fulfill recommendations made by the President's Science Advisory Committee; with the objectives to create computerized toxicology information and data banks from the literature, and from the data sources of collaborating agencies.

TOXLINE, the first online bibliographic system for toxicology, was developed in 1972 as a one-stop shop for toxicology information. During this period, CHEMLINE was also built as a chemical dictionary that contained chemical names and molecular structures. The first comprehensive factual database, Toxicology Data Bank, was released in 1978. This Data Bank later evolved into the Hazardous Substances Data Bank aka HSDB, a peer-reviewed database with a wide range of toxicology information.

In the early 1980s when the records of the factual toxicology databases became too large for the NLM ELHILL mainframe computer system, it was determined that a new system was needed. TOXNET was developed in 1985 and was a system of networked microcomputers used for database building, updates, and online searching.

By the end of 1980s, the SIS Toxicology Information Program was collaborating with many federal agencies. For example, the Agency for Toxic Substances and Disease Registry (aka ATSDR) provided substantial support for the HSDB. In addition, the Toxicology Information Program provided a public platform for online databases such as NIOSH' Registry of Toxic Effects of Chemical Substances (aka RTECS), and EPA's Toxics Release Inventory (TRI), and NCI's Chemical Carcinogenesis Research Information System (CCRIS).

Another notable SIS accomplishment for the 1980's was the release of the AIDS Clinical Trials Information Service (ACTIS). It was a collaborative effort with NIAID, and FDA in response to the HOPE Act in 1988. It was a needed service for the AIDS patients because most antiviral agents were still in the development stage. HIV-positive individual's access to potential treatments was only through clinical trials. AIDSTRIALS and AIDSDRUGS databases at NLM were the only way to get this information. The AIDSTRIALS later becomes the basis of Clinical Trials.gov. The AIDS Clinical Trials Information Service later becomes AIDSInfo, coordinated by NLM to provide access to the treatment guidelines. Today SIS manages the expanded AIDSinfo and coordinates NLM AIDS activities.

With the advent of the Internet, a web-based TOXNET was released in the late 1990s, following the footstep of NLM's Internet Grateful Med.

The Toxicology Information Program was rebranded as Toxicology and Environmental Health information Program with a new focus on environmental health information in response to the 1993 NLM Long Range Plan recommendation.

The Office of Outreach to Special Populations started in 2000 in response to the creation of the NIH National Center on Minority Health and Health Disparities and the beginning of the environmental justice movement. At that time, because SIS was already working in HIV/AIDS information services and HIV/AIDS community outreach that involved minority populations, and had information resources to address environmental justice questions, NLM placed the responsibility for outreach to minority populations in SIS.

One of our early outreach projects was the development of the Toxicology Information Outreach project (today known as Environmental Health Information Partnership or EnHIP.) This program recognized that minority communities were disproportionately exposed to toxic emissions and hazardous materials causing adverse health effects for the citizens within these communities. Outreach efforts with partnering Historically black colleges and universities and minority serving institutions around use of SIS resources were helpful in bringing attention to these environmental and health disparities issues. Another ongoing outreach activity is providing training on NLM information resources to the minority health professionals.

One of the questions we frequently get asked, was what's NLM's business in emergency response? Actually, our role in responding to chemical emergencies started way back in the 1980s. NLM's TIP, with ATSDR, built a portable microcomputer-based workstation, that provided information assistance to emergency response teams working on accidents involving hazardous chemicals. One of the recommendations from the 1993 NLM Long Range plan was that NLM should work with ATSDR, EPA, CDC, and other organizations with responsibility for emergency preparedness and response, and NLM should continue its research to improve access to information helpful for these organizations in managing emergencies such as chemical spills.

Early in the 2000's ATSDR reached out to SIS to make a case for developing a tool that puts HSDB on hand-held devices for the emergency HAZMAT responders. Subsequently in 2005, the Wireless Information System for Emergency Responders (WISER) was released. Since then, WISER has moved from Palm Pilot to iOS and Android platforms. With millions of downloads it has been one of the favorite mobile apps for the HAZMAT/emergency responder community.

With the memory of 911 and Katrina still fresh in our mind, NLM's role in disaster and public health emergency response was solidified in the 2006 NLM Long Range Plan: Charting the Course for the 21st Century: NLMs Long Range Plan 2006 to 2016. It called for NLM to ensure continuous access to health information and effective use of libraries and librarians when disasters occur and to establish a Disaster Information Management Research Center to make a strong commitment to disaster remediation and to provide a platform for demonstrating how libraries and librarians can be part of the solution. It also called for the Center to maintain close collaboration with appropriate federal agencies and initiatives and to operate across NLM. All NLM divisions have participated in a variety of disaster management activities, coordinated by SIS, which houses the Disaster center.

Originally, the target audiences for our toxicology information services were the researchers and professionals, SIS focused on expanding its audience base to the public in the past 10 years. Several consumer level resources were developed. For example, ToxTown provides consumer-level non-technical information about connections between chemicals, the environment, and the public's health. Since children are a special population, we also developed resources for the K-12 audience, such as the ToxMystery, Environmental Student Portal, and GeneEd.

In the past 52 years since the inception of SIS, we have accomplished a great deal, contributed to the health of the nation in many distinct and meaningful ways. We are an arm of NLM that are quick to respond to the needs of the communities. I want to acknowledge the SIS leadership and staff throughout the years, for their dedication and commitment.

As we step into the new era of data-driven discovery, NLM is transitioning to a new organizational structure that enables us to make the best use of our talents and resources. We are currently at Phase one of the plan, which focuses on consolidating NLM staff and related programs into a smaller number of divisions and offices to improve efficiency and our overall effectiveness. By eliminating unnecessary boundaries between units, NLM is striving to create a more collaborative environment for our curation teams and a universal infrastructure for our technical teams, ensuring the integrity and sustainability of our key products and creating a common technical platform for delivering products and services.

With the reorganization, our Division, SIS, will be incorporated into other parts of NLM. SIS staff who are responsible for Outreach, Toxicology/environmental health content curation, and disaster information will be reassigned to Library Operations. The staff that provide technical support will move

to the Office of Computer and Communications Systems. Some staff will maintain their current responsibilities, others will take on new responsibilities. We plan to complete the transition by the end of June.

The important aspects of SIS will continue to be supported by NLM. All key products and services are currently being evaluated. Some will continue, others will be discontinued, and some will be integrated with other NLM products.

Here are some key considerations when we evaluate the products, services, or offerings:

- First of all, NLM should consolidate information into a few platforms for improved user experience, discoverability, and efficiency
- Priority are given to resources that are unique, high quality, and that are highly connected to NLM offerings, or clearly contribute to furthering the strategic plan
- In addition, NLM is committed to support key offerings in toxicology and environmental health
- Consider Sunsetting an offering if a sufficiently-equivalent offering is available from another agency or organization
    - For example, NLM has provided the public search interface for EPA's Toxics Release Inventory since 1985. But over the years EPA has developed its own tools for exploring this data. NLM should discontinue the version on TOXNET.
- Similarly, consider sunsetting offerings that don't have a clear sustainability or succession plan
- And consider sunsetting offerings that have low or declining use
- Furthermore, consider the cost to sustain and upgrade
- And finally, NLM shouldn't be a web provider for another agency/entity just because they pay

Next, I would like to use TOXNET as an example of integration that we have been working on.

TOXNET is SIS' major information system. It consists of a group of databases covering chemicals and drugs, toxicology, and environmental health. Among these are ChemIDplus, Hazardous Substances Data Bank, and TOXLINE, the three most accessed TOXNET databases. The latest version of the TOXNET search system is optimized for chemical searching, it is stable and performs well. But the TOXNET search engine is long overdue for a technology refresh. So, in the spirit of "One NLM", instead of developing a new search system, we have chosen to integrate TOXNET with the existing NCBI products.

Of all the NCBI information products, PubChem is probably the one most similar to the TOXNET chemical databases.

PubChem has already incorporated almost all of the ChemIDplus data and more than 90% of the information from the Hazardous Substances Data Bank.

In addition, PubMed is the major source of new data for our bibliographic databases such as TOXLINE.

Furthermore, the NCBI Bookshelf already has a large collection of digitized toxicology and chemical books and documents. Having NCBI support the next generation TOXNET seems like a natural evolution.

We envision the functions for the future TOXNET as being separated into content creation and content delivery.

The SIS team of toxicologists and chemists will continue with content creation – to enhance the content, and expand the collection.

The TOXNET data will be part of the PubMed, PubChem and NCBI Bookshelf. The web search interface and API of the new TOXNET will be delivered by these NCBI platforms.

We anticipate major benefits of this integration, many of which align with the goals and objectives of the new NLM strategic plan:

1. First, NLM will have a newer, more robust technology platform to support TOXNET
2. Secondly, We can look forward to an expansion of the TOXNET user base
3. Most importantly, with fully developed APIs and better curation procedures, we anticipate that new TOXNET data will be machine-readable and thus be suitable for machine learning and predictive modeling to advance scientific discovery

---

The leadership from SIS, Library Operations, OCCS (Office of Computer and Communications Systems), NCBI, and Dr. Brennan have been working together in the past few months to evaluate SIS programs, considering what can be continued, or discontinued.

In this SIS Offering diagram, the inner ring of the donut shows the major SIS programs. The outer ring of the donut are offerings grouped under each program. The size of the area correlates with the cost of the offerings. [Explain the diagram, starting from the bottom right, the toxicology program, AIDS, public health or disaster information, and special population outreach]

In this next view of the diagram, the results of the first phase of program evaluation are shown here by using the different colors to represent the status of the offerings.

Red color represents sunset, green represents continue and yellow represents further evaluation required by focused working groups. Purple represents offerings that will be integrated with other NLM offerings, or programs that will be consolidated. For example, TOXNET and HSDB will be integrated with NCBI's platforms. Special population and AIDS outreach will be consolidated into the new NLM Home for Outreach.

As we sunset SIS offerings, we need to make sure there is a well-planned communication strategy. We are working closely with NLM OCPL (Office of Communication and Public Liaison) to establish a sunset protocol to help us to communicate with stakeholders and end users through the various communication channels.

To summarize, SIS' accomplishment spanned over 52 years from 1967 – 2019. The major program areas include toxicology and environmental health, outreach to special populations, AIDS/HIV, and disaster and public health information services.

The latest NLM Strategic Plan called for a more efficient organizational structure. The Division of SIS will be merged with other parts of NLM. The staff working in toxicology/environmental health, disaster information, and outreach will be reassigned to the Library Operations, the staff who provide technical support will be reassigned to the Office of Computer and Communications Systems.

All Key SIS offerings are under review. Some will continue, others will be discontinued, and some will be integrated with other NLM products. Our flagship offering, the TOXNET, was an example of integration into the NCBI platforms.

I would like to conclude this presentation by saying, it has not been easy to retire a division that has been around for over 50 years. We grieve over the closing of our division, but in the meantime, we shall put our hope in the future. I want to thank the staff at SIS for carrying out the incredible work they have been doing despite uncertainty during the time of the transition.

ATTENTION: The following Sunsetting Request requires your approval.

Please review the request below and select "APPROVE", "REJECT" or "RETURN". Selecting "RETURN" will return this request to its submitter for resubmission.

NLM Service/Product (Offering) Details	
NLM Service/Product (Offering)	TOXLINE
Description	TOXLINE is a bibliographic database currently part of TOXNET that is created by merging currently bibliographic data from PubMed, technical report data from NTIS, grant information from NIH's RePorter, and other archival data from various sources.
Document(s) Supporting Justification	TOXLINE retirement.docx
Justification	Other: When TOXLINE was first developed (in 1972) the science of toxicology was just emerging as a recognized field for research involving several different scientific disciplines such as biochemistry, pharmacology, physiology, etc. Some of the toxicology literature was covered by MEDLINE, but much of it was not, so other relevant abstracting and indexing services were used to obtain additional literature in toxicology to merge with MEDLINE in order to create the "more complete computer-based file of toxicological information" called for by the President's Scientific Advisory Committee in 1967. Since then, MEDLINE has expanded its journal coverage significantly and other online

	sources of toxicology information are readily available. It is no longer necessary for NLM to create a merged database of this information. we will continue to maintain a subset filter in PubMed to make searching for toxicology information easy for users. In addition, the archived parts of TOXLINE will be available on the NLM FTP site.
Retirement Date	12/01/2019
Organization	LO
Key Staff Involved	Jeanne Goshorn Phillip Thomas David Gillikin

Internal Communication Plan	
Staff to be Informed	David Gillikin
Communicated Message	Part of the TOXNET transition to NCBI involves retiring TOXLINE and directing users to the toxicology subset on PubMed
Date the Message will be Sent	06/03/2019
Communication Channel(s)	Emails Information delivered at staff meetings
Retained Content	FTP
Additional Information	---

External Communication Plan	
External Stakeholders to be Informed	Users who license TOXLINE and get it in xml from our FTP site Online users
Communicated Message	TOXLINE will be retired on 1 December 2019. The toxicology subset will be available on PubMed, and older archived parts of TOXLINE will be available on the FTP site.
Date the Message will be Sent	06/03/2019
Communication Channel(s)	Technical Bulletin Newsletter
Communication Frequency	One time message
Retained Content	FTP Other: toxicology subset of PubMed
Page Redirected	No

Subject: Follow-up: SIS Sunset Plans (Programs, Offerings, and Social Media)

Hi Janice (SIS Team),

As a follow-up to the meeting with SIS and OCPL held on 5/28, there were a few takeaways for consideration:

- SIS still needs to decide which programs are going to sunset vs. move to other NLM programs. *Jody advised to enter this information into the sunsetting system for tracking and so that these "sunset plans" are not lost once Janice and Florence retire at the end of June.*
- Program audiences (Outreach to Specific Populations, K-12 Science and Health Education, and NLM Toxicology and Environmental Health) have their own messages for each audience. *Jody advised SIS to enter this info in the sunsetting system as well so that OCPL can determine what assistance is needed*.
- In addition to social media and offerings, there's a need to include "programs" in the sunsetting system and include details about the offerings and social media accounts associated with each program. Including program information will be helpful to align the offerings and social media accounts with the appropriate information that is relevant to the audience(s).
- SIS still needs to identify, by offering and program, what government and government-funded resources can be provided or pointed to for an offering and program that is being sunset. *Again, include in the sunset system*.

- Florence/SIS needs to identify where the SIS program information should appear on NLM web pages, NNLM information, etc. *Per Jody, these recommendations should be included in the sunset system.*
- SIS (Janice) will provide a matrix document to OCPL to help identify the disposition of SIS programs, offerings and social medial accounts - is it being sunset, moving to another NLM program, or a decision still needs to be made?

Once Janice provides the above mentioned information (mainly the matrix document) and the information is entered into the sunset system, OCPL can assist and provide guidance for the messaging. Following this message, Grace will provide the sample documents referenced in the meeting as well as a spreadsheet (template) with categories of information that should be included in the matrix. **Please provide the matrix no later than Tuesday, June 4th**.

As Jody will be out of the office most of next week, I will work with our SIS team to move the sunset plans along. So, please let me know if I can assist in any way.

Subject: Meeting with OCPL re: SIS sunset plans (social media and offerings)

Hi Siobhan and Janice,

I confirmed the meeting with Jody and OCPL staff that will be working with SIS on the sunset plans. In preparation for the meeting on 5/28, I asked if there were any specific guidance that could be shared in advance of the meeting based on information already received and info forthcoming. The following comment(s) may be helpful for submissions:

- SIS should look at how frequently, through what mechanism, and what the message should be for each of the offerings they are submitting for sunset. (For example, Twitter: 3 tweets/week for four weeks letting followers know the account is closing and directing followers to @NLM_News for future information from NLM.)
- If there is information about communications regarding the offering submitted for sunset that have already happened with stakeholders, that should be documented. There should be some clear and basic communication strategies outlined for each offering. For example, what is the message they propose emailing to HHS ASPR to let them know they will be transferring the technology and web content to them for the All Hazards Plan Website? They need to share that content, not just that they will email them.
- Please provide the updated list of SIS sunset offerings prior to 5/28

Please provide the updated list of sunset offerings prior to the meeting. If there are questions from OCPL, they can be prepared to ask during the meeting.

I hope this helps!

Thanks, Nicole

I have not heard back from Laura about the Health Reach updates on gov delivery.

I think I saw somewhere that NLM_HIV twitter handle is remaining active. So one report for Gov Delivery would be (assuming Health Reach update is going away). I will ask Ilyse to write these up, with the justification being that the offerings associated with the social media and news accounts are being sunset.

HealthReach Updates - Shares recent updates to the HealthReach website, where public health professionals can find multilingual health resources
K12NLMRESOURCES – For educators interested in NLM's online education resources
NLM_SIS Weekly Twitter Digest
NLM Outreach to Specific Populations Email Updates - Shares information and discusses outreach to specific populations

And for twitter is just @NLM_SIS

The Funding Opportunities for Disaster Health Info Products hasn't been in Gov Delivery for years. I was looking into it because it was on this page https://sis.nlm.nih.gov/listservnewsmedia.html

But I actually don't think it needs sunsetting because we sunset it a long time ago, when we stopped providing funding. There is no longer a Gov Delivery Topic for it, and hasn't been for a while.

Subject: RE: SIS social media and gov delivery - Guidance from OCPL

Janice,
The person who manages the product should decide whether or not to keep the social media/gov delivery/email. Once that decision is made, then the products being sunsetted need to be entered into the system, which I have no access to. Then OCPL will write up the sunset messages for us.

You, or whomever enters the items to be sunset into the system need to talk with product owners, not the digital communications team, which is basically defunct now. Below is my best guess of what should be sunsetted. (see https://sis.nlm.nih.gov/listservnewsmedia.html#facebook)

Sunset: in yellow, I don't know.

Subject: RE: SIS social media and gov delivery - Guidance from OCPL

Hi Siobhan,
Florence and I think the digital communications committee needs to write the sunset plans so she can approve them. We expect to keep, at least in the short term, all the product email and Twitter accounts – HIV/AIDS, REMM, WISER, CHEMM. The ones to be closed are the SIS program ones such as K12, OSP, SIS Weekly and @NLM_SIS. Colette can either close now or in September the TOXMAP news. The NLM Toxicology and Environmental Health Information email updates can remain if someone in PSD or BSD continues it.

In addition these also need to have a closing date and numbers added to the OERS.

Let me know if you have any questions.

Thanks, Janice

Good Morning, Janice (SIS Team),

Sample documents on messaging for Loansome Doc, which was sunset, are attached for your use. While still in draft form, these pieces were developed by LO and reviewed by Jody. They should prove useful as you prepare your programs and offerings for sunset.

I also created a template matrix for tracking everything you plan to sunset (or will see some major change/move). You may not have every bit of information for each column, but as much as can be completed will definitely help to provide a clear picture. It would be great if you could list them by program (and highlight the line to denote program) and the individual offerings under that program below it. This will help to keep everything organized and will allow everyone to easily distinguish between a program and offering. If you would like to add anything, please feel free to do so. Should you have any questions, let Nicole and I know.

Thank you,
Grace

Subject: Follow-up: SIS Sunset Plans (Programs, Offerings, and Social Media)

Hi Janice (SIS Team),

As a follow-up to the meeting with SIS and OCPL held on 5/28, there were a few takeaways for consideration:

- SIS still needs to decide which programs are going to sunset vs. move to other NLM programs. *Jody advised to enter this information into the sunsetting system for tracking and so that these "sunset plans" are not lost once Janice and Florence retire at the end of June.*
- Program audiences (Outreach to Specific Populations, K-12 Science and Health Education, and NLM Toxicology and Environmental Health) have their own messages for each audience. *Jody advised SIS to enter this info in the sunsetting system as well so that OCPL can determine what assistance is needed*.
- In addition to social media and offerings, there's a need to include "programs" in the sunsetting system and include details about the offerings and social media accounts associated with each program. Including program information will be helpful to align the offerings and social media accounts with the appropriate information that is relevant to the audience(s).
- SIS still needs to identify, by offering and program, what government and government-funded resources can be provided or pointed to for an offering and program that is being sunset. *Again, include in the sunset system*.
- Florence/SIS needs to identify where the SIS program information should appear on NLM web pages, NNLM information, etc. *Per Jody, these recommendations should be included in the sunset system.*
- SIS (Janice) will provide a matrix document to OCPL to help identify the disposition of SIS programs, offerings and social medial accounts - is it being sunset, moving to another NLM program, or a decision still needs to be made?

Once Janice provides the above mentioned information (mainly the matrix document) and the information is entered into the sunset system, OCPL can assist and provide guidance for the messaging. Following this message, Grace will provide the sample documents referenced in the meeting as well as a spreadsheet (template) with categories of information that should be included in the matrix. **Please provide the matrix no later than Tuesday, June 4th**.

As Jody will be out of the office most of next week, I will work with our SIS team to move the sunset plans along. So, please let me know if I can assist in any way.

Subject: RE: SIS social media and gov delivery - Guidance from OCPL

Janice,
The person who manages the product should decide whether or not to keep the social media/gov delivery/email. Once that decision is made, then the products being sunsetted need to be entered into the system, which I have no access to. Then OCPL will write up the sunset messages for us.

You, or whomever enters the items to be sunset into the system need to talk with product owners, not the digital communications team, which is basically defunct now. Below is my best guess of what should be sunsetted. (see https://sis.nlm.nih.gov/listservnewsmedia.html#facebook)

Sunset: in yellow, I don't know.

Subject: RE: SIS social media and gov delivery - Guidance from OCPL

Hi Siobhan,
Florence and I think the digital communications committee needs to write the sunset plans so she can approve them. We expect to keep, at least in the short term, all the product email and Twitter accounts – HIV/AIDS, REMM, WISER, CHEMM. The ones to be closed are the SIS program ones such as K12, OSP, SIS Weekly and @NLM_SIS. Colette can either close now or in September the TOXMAP news. The NLM

Toxicology and Environmental Health Information email updates can remain if someone in PSD or BSD continues it.

In addition these also need to have a closing date and numbers added to the OERS.

Let me know if you have any questions.

Thanks, Janice

Dear Loansome Doc provider,

On July 1, 2019, the National Library of Medicine (NLM) will retire the Loansome Doc system.

We understand that this transition may initially be an inconvenience as ~~be challenging because~~ some of your users currently access ~~depend on~~ Loansome Doc for retrieving ~~Doc to provide them with access to~~ journal articles.

As a reminder for users, in addition to Illiad and OCLC~~even though other methods to request articles are available, such as Illiad and OCLC. As a library professional, you understand that the medical information landscape has changed dramatically due to many factors including the increased availability of full text journal articles, funder public access policies such as those of NIH, and the overall increase in open access publishing.~~ , t

~~T~~he following resources offer alternative access to journal articles:

- PubMed (see How to Get the Journal Article)
- PubMed Central (over 5.1 million articles available)
- NLM Free Biomedical Literature Resources
- Google Scholar
- Publishers' websites
- Online free article services and collaborations
- Commercial article rental or purchasing services (see MyNCBI Document Delivery preferences)
- Browser add-ons that find free, legal, open access articles, such as Unpaywall, or Open Access Button
- Libraries serving your workplace, educational institution, association or other group you are affiliated with

For more information, see the NIH Public Access Policy and other open access initiatives.

To ease in the~~help you with this~~ transition, we have created a Loansome Doc Retirement Toolkit for ~~that you can use when~~ communicating with your users. In the Toolkit you will find~~t includes messaging,~~ a "To Do" checklist, instructions on how to produce a list of your Loansome Doc Patrons, and alternatives for receiving requests from users.

Please note that new user registration for Loansome Doc will be disabled on February 1, 2019.

We appreciate your help with this transition. ~~Please note that new user registration for Loansome Doc will be disabled on February 1, 2019.~~

~~Loansome Doc was launched on September 1, 1990. Since then, the interlibrary loan landscape has changed significantly, and researchers now have a variety of options available to obtain articles. As a result, Loansome Doc use has declined steadily since the peak in 2002. The decision to retire the system is in line with our commitment to the *NLM Strategic Plan 2017-2027: A*~~

Comment [MOU]: Should the acronym be spelled out?

~~*Platform for Biomedical Discovery and Data-Powered Health*.~~ ~~The plan calls for NLM to focus on resources that create a future in which data and information transform and accelerate biomedical discovery and improve health and health~~

~~care. Our assessment of Loansome Doc showed declining use and, therefore, the system will be retired.~~

P~~If you have any questions, p~~lease send any questions you may have to~~them to~~ NLM Customer Support.

Suggested Messaging from Libraries to Loansome Doc Users

Dear Loansome Doc user,

On July 1, 2019, the National Library of Medicine (NLM) will retire the Loansome Doc system. You are receiving this as a registered user of Lonesome Doc through PubMed to request articles from your campus or institutional library. ~~You are a registered user and may currently be using Loansome Doc from within PubMed to request articles from your campus or institutional library. The system is closing due to a continued decrease in use.~~

PubMed remains your key source for indexed, peer-reviewed literature. Copies of many articles are available for free, others for purchase, see "How to Get the Journal Article."

In addition to PubMed, the following resources offer access to journal articles:

- PubMed Central (Over 5.1 million articles available.)
- NLM Free Biomedical Literature Resources
- Google Scholar
- Publishers' websites
- Online free article services and collaborations
- Commercial article rental or purchasing services (see MyNCBI Document Delivery preferences)
- Browser add-ons that find free, legal, open access articles, such as Unpaywall, or Open Access

  Button

- Libraries serving your workplace, educational institution, association or other group you are affiliated with.

  For more information, see the NIH Public Access Policy and other open access initiatives.

  If you have any questions, please send them to your campus or institutional library. You can find the contact information for the library that provides your Loansome Doc service ~~displayed~~ on the My Account page in Loansome Doc.

Library "To Do" Checklist

1. Decide what future document delivery options your library will offer
2. Produce lists of patron information
3. Communicate upcoming changes in document delivery services to your patrons*
4. If your library decides to end document delivery services, close all patron accounts or records in

   your own systems

5. Update any library-owned web pages that reference Loansome Doc

Technical Bulletin Article- DRAFT

Comment [MOU]: Who is the audience?

On July 1, 2019, the National Library of Medicine (NLM) will retire the Loansome Doc system.

Loansome Doc was launched on September 1, 1990. Since then, interlibrary loan landscape has changed significantly, and researchers now have a variety of options available to obtain articles. As a result, Loansome Doc use has declined steadily since the peak in 2002. The decision to retire the system is in line with our commitment to the *NLM Strategic Plan 2017-2027: A Platform for Biomedical Discovery and Data-Powered Health.* The plan calls for NLM to focus on resources that create a future in which data and information transform and accelerate biomedical discovery and improve health and health care. Our assessment of Loansome Doc showed declining use and, therefore, the system will be retired.

The medical information landscape has also changed dramatically due to many factors including the increased availability of full text journal articles, funder public access policies such as those of NIH, and the overall increase in open access publishing.

The following resources offer alternative access to journal articles:

- PubMed see How to Get the Journal Article
- PubMed Central (Over 5.1 million articles available.)
- NLM Free Biomedical Literature Resources
- Google Scholar
- Publishers' websites
- Online free article services and collaborations
- Commercial article rental or purchasing services (see MyNCBI Document Delivery preferences)
- Browser add-ons that find free, legal, open access articles, such as Unpaywall, or Open Access Button

- Libraries serving your workplace, educational institution, association or other group you are affiliated with.

For more information, see the NIH Public Access Policy and other open access initiatives.

Toolkit

A “Loansome Doc Retirement Transition Toolkit for Libraries” is available at:

https://teamsite.nlm.nih.gov:81/iw-mount/default/main/nlm/WORKAREA/common/htdocs/docline/support/LD_toolkit.html

Loansome Doc will retire on July 1, 20198. This toolkit is intended to assist DOCLINE libraries that offer the service to end or modify their document delivery service.

Please consider whether or not you will continue to provide articles (document delivery) to users of your Loansome Doc service.

Comment [MOU]: Is it important to add here that new user registration will be disabled on February 1?

Loansome Doc System Message

On July 1, 2019, Loansome Doc will retire. Please see the *NLM Technical Bulletin* article, *Loansome Doc System To Retire July 1, 2019*, for more information. If you have any questions, please send them to the library that provides your Loansome Doc service. You can find their contact information ~~displayed~~ on the My Account page in Loansome Doc.

Internal Communications Plan

The following staff offices will be contacted as part of the process to sunset Loansome Doc

- PSD Staff
- Associate Director for Library Operations and Deputy Director
- OCPL
- National Network Coordinating Office / National Network of Libraries of Medicine
- Director and Deputy Director of the Library
- Director and Deputy Director of NIH

Subject: RE: Follow-up: SIS Sunset Plans (Programs, Offerings, and Social Media)

Thanks for all the information. I developed my own mapping document yesterday with much work accomplished. I will try to incorporate any columns not presently there. I am including ALL SIS resources and programs so you will know the disposition of each at this time. Many decisions are yet to be made and so LO will have to follow up with those plans 1-2 years down the road when things are decided. I learned yesterday that is the current thinking. Workgroups are being assembled to take a high level look at the SIS resources and programs so stay tuned.

Subject: RE: Follow-up: SIS Sunset Plans (Programs, Offerings, and Social Media)

Good Morning, Janice (SIS Team),

Sample documents on messaging for Loansome Doc, which was sunset, are attached for your use. While still in draft form, these pieces were developed by LO and reviewed by Jody. They should prove useful as you prepare your programs and offerings for sunset.

I also created a template matrix for tracking everything you plan to sunset (or will see some major change/move). You may not have every bit of information for each column, but as much as can be completed will definitely help to provide a clear picture. It would be great if you could list them by program (and highlight the line to denote program) and the individual offerings under that program below it. This will help to keep everything organized and will allow everyone to easily distinguish between a program and offering. If you would like to add anything, please feel free to do so. Should you have any questions, let Nicole and I know.

Thank you,
Grace

Subject: Follow-up: SIS Sunset Plans (Programs, Offerings, and Social Media)

Hi Janice (SIS Team),

As a follow-up to the meeting with SIS and OCPL held on 5/28, there were a few takeaways for consideration:

- SIS still needs to decide which programs are going to sunset vs. move to other NLM programs. *Jody advised to enter this information into the sunsetting system for tracking and so that these "sunset plans" are not lost once Janice and Florence retire at the end of June.*
- Program audiences (Outreach to Specific Populations, K-12 Science and Health Education, and NLM Toxicology and Environmental Health) have their own messages for each audience. *Jody advised SIS to enter this info in the sunsetting system as well so that OCPL can determine what assistance is needed*.
- In addition to social media and offerings, there's a need to include "programs" in the sunsetting system and include details about the offerings and social media accounts associated with each program. Including program information will be helpful to align the offerings and social media accounts with the appropriate information that is relevant to the audience(s).
- SIS still needs to identify, by offering and program, what government and government-funded resources can be provided or pointed to for an offering and program that is being sunset. *Again, include in the sunset system*.
- Florence/SIS needs to identify where the SIS program information should appear on NLM web pages, NNLM information, etc. *Per Jody, these recommendations should be included in the sunset system.*
- SIS (Janice) will provide a matrix document to OCPL to help identify the disposition of SIS programs, offerings and social medial accounts - is it being sunset, moving to another NLM program, or a decision still needs to be made?

Once Janice provides the above mentioned information (mainly the matrix document) and the information is entered into the sunset system, OCPL can assist and provide guidance for the messaging. Following this message, Grace will provide the sample documents referenced in the meeting as well as a spreadsheet (template) with categories of information that should be included in the matrix. **Please provide the matrix no later than Tuesday, June 4th**.

As Jody will be out of the office most of next week, I will work with our SIS team to move the sunset plans along. So, please let me know if I can assist in any way.

Regards, Nicole

Subject: Meeting with OCPL re: SIS sunset plans (social media and offerings)

Hi Siobhan and Janice,

I confirmed the meeting with Jody and OCPL staff that will be working with SIS on the sunset plans. In preparation for the meeting on 5/28, I asked if there were any specific guidance that could be shared in advance of the meeting based on information already received and info forthcoming. The following comment(s) may be helpful for submissions:

- SIS should look at how frequently, through what mechanism, and what the message should be for each of the offerings they are submitting for sunset. (For example, Twitter: 3 tweets/week

for four weeks letting followers know the account is closing and directing followers to @NLM_News for future information from NLM.)

- If there is information about communications regarding the offering submitted for sunset that have already happened with stakeholders, that should be documented. There should be some clear and basic communication strategies outlined for each offering. For example, what is the message they propose emailing to HHS ASPR to let them know they will be transferring the technology and web content to them for the All Hazards Plan Website? They need to share that content, not just that they will email them.
- Please provide the updated list of SIS sunset offerings prior to 5/28

Please provide the updated list of sunset offerings prior to the meeting. If there are questions from OCPL, they can be prepared to ask during the meeting.

I hope this helps!

Thanks, Nicole

I have not heard back from Laura about the Health Reach updates on gov delivery.

I think I saw somewhere that NLM_HIV twitter handle is remaining active. So one report for Gov Delivery would be (assuming Health Reach update is going away). I will ask Ilyse to write these up, with the justification being that the offerings associated with the social media and news accounts are being sunset.

HealthReach Updates - Shares recent updates to the HealthReach website, where public health professionals can find multilingual health resources
K12NLMRESOURCES – For educators interested in NLM's online education resources
NLM_SIS Weekly Twitter Digest
NLM Outreach to Specific Populations Email Updates - Shares information and discusses outreach to specific populations

And for twitter is just @NLM_SIS

The Funding Opportunities for Disaster Health Info Products hasn't been in Gov Delivery for years. I was looking into it because it was on this page https://sis.nlm.nih.gov/listservnewsmedia.html

But I actually don't think it needs sunsetting because we sunset it a long time ago, when we stopped providing funding. There is no longer a Gov Delivery Topic for it, and hasn't been for a while.

Subject: RE: SIS social media and gov delivery - Guidance from OCPL

Janice,
The person who manages the product should decide whether or not to keep the social media/gov delivery/email. Once that decision is made, then the products being sunsetted need to be entered into the system, which I have no access to. Then OCPL will write up the sunset messages for us.

You, or whomever enters the items to be sunset into the system need to talk with product owners, not the digital communications team, which is basically defunct now. Below is my best guess of what should be sunsetted. (see https://sis.nlm.nih.gov/listservnewsmedia.html#facebook)

Sunset: in yellow, I don't know.

Email Updates

Funding Opportunities for Disaster Health Information Projects
HealthReach Updates - Shares recent updates to the HealthReach website, where public health professionals can find multilingual health resources
K12NLMRESOURCES – For educators interested in NLM's online education resources
NLM_SIS Weekly Twitter Digest
NLM Outreach to Specific Populations Email Updates - Shares information and discusses outreach to specific populations
NLM Toxicology and Environmental Health Information Email Updates – News on resources, services, and outreach in toxicology and environmental health

News/RSS Feeds
TOXMAP News

Twitter
@NLM_HIV – NLM HIV/AIDS Information
@NLM_SIS – Clinical and non-clinical toxicology, environmental health and disaster information updates

Subject: RE: SIS social media and gov delivery - Guidance from OCPL

Hi Siobhan,
Florence and I think the digital communications committee needs to write the sunset plans so she can approve them. We expect to keep, at least in the short term, all the product email and Twitter accounts – HIV/AIDS, REMM, WISER, CHEMM. The ones to be closed are the SIS program ones such as K12, OSP, SIS Weekly and @NLM_SIS. Colette can either close now or in September the TOXMAP news. The NLM Toxicology and Environmental Health Information email updates can remain if someone in PSD or BSD continues it.

In addition these also need to have a closing date and numbers added to the OERS.

Let me know if you have any questions.

Thanks, Janice

Jody,

What you described is correct. We are working on these and will have regular follow-up meetings with OCPL staff.

I would also like to ask the NCBI team to review some of the Chem/Tox offerings, especially TOXNET sunset/transition plan. I wonder if they can view the draft versions in the sunsetting web portal.

Thanks!

Subject: Re: SIS Sunset Communications

Hi Jerry,

Joyce and I ran into each other yesterday afternoon and we had a lengthy chat about the below.

I also provide more detail around the major takeaway from the SIS team meeting I attended on Tuesday. Specifically, that Florence and Janice were going to enter all known sunset programs/offerings as well as those projected to be sunset into the electronic sunset system. Part of the information they would be including in the sunset entries is identifying where pages need to be redirected, identifying what the current distribution channels associated with the program/offering such as social media accounts, GovDelivery, etc. and drafting talking points/messages - OCPL would then work on communication strategies and messaging.

Florence, please let me know if I missed anything.

Regards,
Jody

Subject: SIS Sunset Communications

Jody,
I gave a brief update at today's Leadership meeting about development of a communications strategy for the sunsetting of SIS and some of its resources. One thing that became clear is the

need to engage the right people from NCBI and LO in the process so we can ensure that new points-of-contact are identified, intermediary pages are put in place for re-directing users from SIS resources to NCBI or LO resources, etc. Joyce can send you names of LO staff to engage. Jim suggested Janet Coleman for general NCBI related communications, as well as Evan and Stacie for more resource-specific communications. Can you be sure to include their suggestions in your planning process. Let's be sure to add this topic to our check-in next week.

Thanks
Jerry

Jerry and Jody,
Jim shared an email from you related to planning communications around SIS resources. NCBI has already been working closely with Florence and others in SIS to transition data and to plan some communications around that.

Several people at NCBI (including Stacy Lathrop, Evan Bolton, Dave Arndt, Bart Trawick, Evgeny Kireev, myself) have worked closely with Florence and others in SIS and LO (David Gillikin) to develop a ToxNet content transition plan (attached). That plan lays out what content that will/not transition to NCBI (primarily PubChem and Bookshelf; Bookshelf also pushes citations to PubMed). NCBI has also provided feedback and support to Florence as her team develops a ToxNet 'transition' NLM web page that directs users to new data locations, such as PubChem, and informs users of specific ToxNet resources that are being discontinued. The Transition web page is planned to be online for 2 years at the request of the NLM director. I also understand that Florence and others are currently drafting a technical bulletin.

This is the mock up Transition web page: https://sis4.nlm.nih.gov/changPage/newtoxnet/
(login: sis4user/4sis2use)

We (NCBI) have not been, to my knowledge, part of higher level communications planning around sunsetting the entire NLM SIS division.

Caveate, I was on leave and missed last week's meeting so perhaps something more has developed.

Subject: Linda I need your help to sustain the DR2 Program with our NLM Partner

Linda,

I was just notified by Stacey Arnesen that as part of the NLM reorganization that the DR2joint effort including the webpage and database would be discontinued by NLM. Stacey was not involved in the discussions regarding the value of this shared program for both ICs. She is concerned that senior leadership mistakenly believes that they are just hosting this website, like a contractor, on behalf of NIEHS. The program staff was asked by leadership to start letting folks know about the reorganization decisions, so it would be incredibly valuable at this time for you to reach out to Patti to remind her of our MOU with them (unsigned version attached; you have the signed version somewhere? That you signed during a meeting with Patti on/around 12/20/18..see email below) and explain the following key messages regarding the DR2 efforts and how it serves all of our interests as well as integrates with both the NLM and NIEHS strategic goals:

- The DR2 Pilot and now Program was started jointly by NIEHS and NLM in response to the NEJM call to arms by Dr. Collins with initial seed funding from the Director's Discretionary Fund

- The DR2 Website, is not just a website for an NIEHS Program, but a shared resource for both NIEHS, NLM, and increasingly other IC's and stakeholders.
    - NLM Co-Chairs the NIH Disaster Interest Group (IDIG) which meets monthly, about 20-40 participants, from across the ICs including NCI, FIC, NIMH, NINDS, NIAID, NIA, OD, NICHD, OBSSR
    - The effort has spawned the NASEM Action Collaborative on Disaster Research which now includes support from FIC, OBSSR, NCI, NICHD, NIAID, NLM, and NIEHS

- NIEHS identifies and curates research tools and resources, in collaboration with NLM, these tools are then placed into the NLM Disaster Lit collection.
    - Not only are these tools and resources of value to the broad research community but strategically**, these publicly accessible tools are being used to support and broaden NLM major goals for developing common data elements (CDE), data standardization, and data harmonization efforts.**
    - For example, the NIH RAPIDD protocol and other survey tools have been placed in the CDE collection and have been used by universities and public health agencies for responding to recent disasters, like Hurricane Harvey.
    - For example, the resources in the website and associated efforts using the NLM CDE platform were recently showcased during our Tucson exercise in Feb 2019. This exercise demonstrated the value of our joint investments including the use the DR2 tools and other resources from the NLM (including WISER and CHEMM, as well as the value of the CDE platform for quickly

identifying existing or developing new standardized surveys and then implementing data collection and harmonization for community and clinical research.

- This shared investment by NIEHS and NLM is overseen by a small staff at both IC's, which meet monthly to direct activities and plan progress, and requires very limited time as it is implemented through ongoing contract support mechanisms.

- Given the relatively small investment (< $100 K/year of NIEHS funds transferred to NLM) the program has received disproportionately high and diverse visibility and recognition from NIH and others including the NIH Directors Award, recent White House Subcommittee on Disaster Reduction (presented Feb 2019), ongoing ASPR recognition, numerous conference presentations, etc.
    - Additionally, the effort places NLM at the table/visibility with HHS/ASPR, NASEM, CDC, FDA, EPA, USGS, NOAA, and many others interested in disaster and public health emergency related research etc.
    - This effort serves as a lynchpin for all NIH disaster-related activities, the NIH OD is increasingly cognizant of the Program, as well as Congressional members now working on the 2020 Labor/HHS Appropriations.

- This shared resource showcases how our investments help the nation in response to major events of national significance in addition to supporting the ongoing mission of our IC's.

- **The DR2 program aligns with the new NLM strategic plan in several ways.**
    - ***To form" strategic partnerships to integrate and connect existing valuable resources supported by its sister institutes and centers of NIH and beyond"***
    - ***As access to a wide variety of data quickly is essential to resolve public health emergencies, DR2 promotes NLMs leadership to "advocate for research practices and policies that foster open science and scholarship", promotes NLMs efforts to ensure "digital research objects are FAIR" and ensures "discoverability while democratizing access".***

Thanks,
Aubrey

<NIEHS NLM MOU Dec12_2017versionwithsiglines - OGC edits 12-20-2017.docx>

MEMORANDUM OF UNDERSTANDING

Between the

National Institutes of Health (NIH):

National Institute of Environmental Health Sciences (NIEHS) and

National Library of Medicine (NLM)

I. PURPOSE

The purpose of this Memorandum of Understanding (MOU) between the National Institute of Environmental Health Sciences (NIEHS) and the National Library of Medicine (NLM) is to:

- establish a framework for cooperation between NIEHS and NLM that supports collaboration on knowledge and information management and data science in mutual areas of interest, and

- describe the responsibilities and benefits for each party participating in the MOU.

NIEHS and NLM plan to work closely on data and information management related to:

- toxicology and environmental health
- disaster/public health emergency preparedness and response,
- disaster research and
- education/training resources

These efforts meet critical ongoing needs for developing and providing resources and providing efficiencies relevant to these types of activities and information resources. NIEHS and NLM agree that it is in the best interests of both parties and the public to develop a strategic partnership that leverages each IC's core expertise to enhance information types, content, analysis, and access to improve human health while eliminating/minimizing duplication of efforts.

II. BACKGROUND

NIEHS and NLM are each one of 27 research institutes and centers of the National Institutes of Health. The mission of NIEHS is to discover how the environment affects people to promote healthier lives. NIEHS includes efforts such as the National Toxicology Program (NTP). NTP's Interagency Center for the Evaluation of Alternative Toxicological Methods (NICEATM) supports the Interagency Coordinating Committee on

the Validation of Alternative Methods (ICCVAM). NIEHS also includes the Worker Training Program (WTP), focused on emergency response, hazardous waste clean-up, and other worker-related training efforts. Of further relevance to this MOU are the NIEHS efforts to enhance the sharing of data and data standards, and access to summaries of various environmental health topics. NIEHS and NLM currently collaborate on the NIH Disaster Research Response Program (DR2).

NLM is the world's largest medical library, and collects material and provides information and research services in all areas of biomedicine and health care. NLM's Specialized Information Services Division (SIS) maintains the Toxicology and Environmental Health Information Program (TEHIP) and the Disaster Information Management Research Center (DIMRC). Resources from these programs complement several areas within NIEHS. Examples include the Hazardous Substances Data Bank (HSDB), the Household Products Database, TOXMAP, and other databases in the TOXNET suite. The Comparative Toxicogenomics Database (CTD), supported by NIEHS, was added to TOXNET in 2011.

Further, NLM is a member of the NIEHS-supported Interagency Coordinating Committee on the Validation of Alternative Methods (ICCVAM), with the key NLM resource of mutual interest being NLM's ALTBIB portal. ALTBIB provides information on numerous alternatives to animal testing methods.

NLM DIMRC develops several disaster/public health emergency resources including Disaster Lit, the Wireless Information System for Emergency Responders (WISER), Chemical Hazards Emergency Medical Management (CHEMM), and Radiation Emergency Medical Management (REMM).

Like NIEHS and its Worker Training Program, NLM is actively involved in training and education, and recently updated and enhanced its online tutorial on principles of toxicology, ToxTutor, and multiple courses on disaster/public health emergency information as part of its Disaster Information Specialist certificate program.

This MOU between NIEHS and NLM allows for the alignment and leveraging of a wide range of skills among limited resources to assist in the continued development and enhancement of the various types of data and databases noted above while eliminating/minimizing duplication of efforts.

III. OBJECTIVES

NIEHS and NLM will work cooperatively through this MOU to:

1) Enhance the development and leverage efforts to expand information resources in toxicology, environmental health, disaster/public health emergency preparedness and response tools, and related education/training resources;
2) Expand the dissemination of information on toxicology and environmental health, and on the disaster/public health emergency preparedness and response;
3) Improve the platforms, resources, tools, and informational materials to enhance the capacity of researchers, public health practitioners, impacted communities and other stakeholders, to better prepare for, respond to, and recover from disasters and other emerging threats, and
4) Continuously improve the collaborative efforts on disaster and public health emergency research and data science, e.g., align and leverage skills sets to maximize the impact of NIEHS and NLM activities to advance the disaster research and data science efforts of both organizations while minimizing duplication of effort and resources.

IV. RESPONSIBILITIES

NIEHS will work to:

1. Provide feedback and assist in improving NLM toxicology, environmental health, disaster/public health emergency preparedness and response resources, and education/training resources, to enhance incorporation of the content of selected NIEHS databases and resources into NLM databases and resources. Specifically, NIEHS will
    I. Contribute feedback and data into the TOXNET suite of databases
    II. Explore alternatives to animal testing (e.g., ALTBIB database)
    III. Share emerging and critical information relevant to emergency preparedness and response resources such as Disaster Lit, CHEMM and WISER.
    IV. Explore expansion of K-12 and other education/training resources such as ToxTutor.
    V. Contribute to the DR2 Repository of relevant surveys, protocols, and other materials and information needed to enhance the development and implementation of timely scientific studies.
2. Coordinate with NLM on the NIH Disaster Research Response (DR2) program by aligning skills with the complementary activities of NIEHS and NLM.
3. Engage NLM on data science efforts to align and expand the range of skill sets of both NIEHS and NLM.
4. Explore the exchange of staff (e.g., fellowship opportunities; part-time work detail) with a focus on toxicology, environmental health, disaster/public health emergency preparedness and response resources, and education/training resources. This could include having one or more NIEHS experts working with NLM personnel.

NLM will work to:

1. Explore options to provide increased awareness and access to selected NIEHS databases and resources. This might include incorporation of selected databases and resources into the TOXNET suite of databases and into ALTBIB, emergency preparedness and response resources such as Disaster Lit, CHEMM and WISER, and into education/training resources under development or developed by NLM, e.g., ToxTutor.
2. Work with one or more NIEHS experts (as a potential part time work detail) on developing, leveraging, and integrating available resources.
3. Continue collaboration with NIEHS on the NIH Disaster Research Response (DR2) program by aligning skills with the complementary activities of both organizations.
4. Explore possible initiatives for methods, software and tools to enable better data sharing, integration, and analysis of toxicology and environmental data, elevate the impact and efficiency of toxicology and environmental research, e.g., establishing data standards, and working toward implementation of a common environmental health science vocabulary.

The specific desired deliverables are outlined in the objectives.

V. PERIOD OF AGREEMENT

This MOU becomes effective upon acceptance by both parties, and will continue in effect for four years, at which time NIEHS and NLM will reevaluate the need and focus for the MOU. It may be modified by mutual written consent or terminated by either party upon a 30-day advance written notice to the other party.

VI. FUNDING

Activities undertaken pursuant to this MOU shall be at the expense of the respective agencies, subject to availability of funds. If the parties agree at any point that either NLM or NIEHS will provide funding to the other for particular activities, such funding will be accomplished via Intra-NIH Direct Citation Agreement (NIH Manual 1165- Appendix 1).

VII. SIGNATURES

The undersigned approve the terms and conditions of this MOU and represent that they have the requisite authority to enter into it.

Subject: RE: Follow-up: SIS Sunset Plans (Programs, Offerings, and Social Media)
Attachments: SIS Sunset map.xlsx

Hi everyone,
Attached is the SIS roadmap for sunsets for resources/offerings, programs and social media as requested. As you will note not all decisions have been made and not communications plans completed. Many decisions rest with LO in the future.

Janice

Subject: Follow-up: SIS Sunset Plans (Programs, Offerings, and Social Media)

Hi Janice (SIS Team),

As a follow-up to the meeting with SIS and OCPL held on 5/28, there were a few takeaways for consideration:

- SIS still needs to decide which programs are going to sunset vs. move to other NLM programs. *Jody advised to enter this information into the sunsetting system for tracking and so that these "sunset plans" are not lost once Janice and Florence retire at the end of June.*
- Program audiences (Outreach to Specific Populations, K-12 Science and Health Education, and NLM Toxicology and Environmental Health) have their own messages for each audience. *Jody advised SIS to enter this info in the sunsetting system as well so that OCPL can determine what assistance is needed*.
- In addition to social media and offerings, there's a need to include "programs" in the sunsetting system and include details about the offerings and social media accounts associated with each program. Including program information will be helpful to align the offerings and social media accounts with the appropriate information that is relevant to the audience(s).
- SIS still needs to identify, by offering and program, what government and government-funded resources can be provided or pointed to for an offering and program that is being sunset. *Again, include in the sunset system*.
- Florence/SIS needs to identify where the SIS program information should appear on NLM web pages, NNLM information, etc. *Per Jody, these recommendations should be included in the sunset system.*

- SIS (Janice) will provide a matrix document to OCPL to help identify the disposition of SIS programs, offerings and social medial accounts - is it being sunset, moving to another NLM program, or a decision still needs to be made?

Once Janice provides the above mentioned information (mainly the matrix document) and the information is entered into the sunset system, OCPL can assist and provide guidance for the messaging. Following this message, Grace will provide the sample documents referenced in the meeting as well as a spreadsheet (template) with categories of information that should be included in the matrix. **Please provide the matrix no later than Tuesday, June 4th**.

As Jody will be out of the office most of next week, I will work with our SIS team to move the sunset plans along. So, please let me know if I can assist in any way.

Regards, Nicole

Subject: RE: Meeting with OCPL re: SIS sunset plans (social media and offerings)

It was my understanding that OCPL would be providing US with guidance on how to write the messages, based on what we are entering into the sunsetting system. Now it appears that OCPL wants the messages written and provided up front? I am confused.

Thanks for your assistance in this.

Siobhan

Subject: Meeting with OCPL re: SIS sunset plans (social media and offerings)

Hi Siobhan and Janice,

I confirmed the meeting with Jody and OCPL staff that will be working with SIS on the sunset plans. In preparation for the meeting on 5/28, I asked if there were any specific guidance that could be shared in advance of the meeting based on information already received and info forthcoming. The following comment(s) may be helpful for submissions:

- SIS should look at how frequently, through what mechanism, and what the message should be for each of the offerings they are submitting for sunset. (For example, Twitter: 3 tweets/week for four weeks letting followers know the account is closing and directing followers to @NLM_News for future information from NLM.)
- If there is information about communications regarding the offering submitted for sunset that have already happened with stakeholders, that should be documented. There should be some clear and basic communication strategies outlined for each offering. For example, what is the message they propose emailing to HHS ASPR to let them know they will be transferring the technology and web content to them for the All Hazards Plan Website? They need to share that content, not just that they will email them.
- Please provide the updated list of SIS sunset offerings prior to 5/28

Please provide the updated list of sunset offerings prior to the meeting. If there are questions from OCPL, they can be prepared to ask during the meeting.

I hope this helps!

Thanks, Nicole

Subject: RE: SIS social media and gov delivery - Guidance from OCPL

I have not heard back from Laura about the Health Reach updates on gov delivery.

I think I saw somewhere that NLM_HIV twitter handle is remaining active. So one report for Gov Delivery would be (assuming Health Reach update is going away). I will ask Ilyse to write these up, with the justification being that the offerings associated with the social media and news accounts are being sunset.

HealthReach Updates - Shares recent updates to the HealthReach website, where public health professionals can find multilingual health resources
K12NLMRESOURCES – For educators interested in NLM's online education resources
NLM_SIS Weekly Twitter Digest
NLM Outreach to Specific Populations Email Updates - Shares information and discusses outreach to specific populations

And for twitter is just @NLM_SIS

That sounds good to me. I was thinking we couldn't have written one sunset plan for GovD and listed the ones to be retired and done the same for Twitter saving a lot of work. I think Florence would be ok with that plan…

The Funding Opportunities for Disaster Health Info Products hasn't been in Gov Delivery for years. I was looking into it because it was on this page https://sis.nlm.nih.gov/listservnewsmedia.html

But I actually don't think it needs sunsetting because we sunset it a long time ago, when we stopped providing funding. There is no longer a Gov Delivery Topic for it, and hasn't been for a while.

Per an email from Janice:
Please enter your sunsetted social media handles into the system before June 23 and let Janice and I know you have done so, or that it will not be sunset. https://sunsetting.nlm.nih.gov. You will have to write a brief description and justification. Work with the product manager if you have questions on how to write up the entry for sunsetting the offering.

Subject: RE: SIS social media and gov delivery - Guidance from OCPL

Janice,
The person who manages the product should decide whether or not to keep the social media/gov delivery/email. Once that decision is made, then the products being sunsetted need to be entered into the system, which I have no access to. Then OCPL will write up the sunset messages for us.

You, or whomever enters the items to be sunset into the system need to talk with product owners, not the digital communications team, which is basically defunct now. Below is my best guess of what should be sunsetted. (see https://sis.nlm.nih.gov/listservnewsmedia.html#facebook)

Sunset: in yellow, I don't know.

Hi Siobhan,
Florence and I think the digital communications committee needs to write the sunset plans so she can approve them. We expect to keep, at least in the short term, all the product email and Twitter accounts – HIV/AIDS, REMM, WISER, CHEMM. The ones to be closed are the SIS program ones such as K12, OSP, SIS Weekly and @NLM_SIS. Colette can either close now or in September the TOXMAP news. The NLM Toxicology and Environmental Health Information email updates can remain if someone in PSD or BSD continues it.

In addition these also need to have a closing date and numbers added to the OERS.

Let me know if you have any questions.

Thanks, Janice

Attachments: FORM REQUEST TO RETIRE NLM TOXMAP March2019FINAL.docx, FORM REQUEST to sunset CPDBrevFinal.docx, GeneEd_FORM REQUEST TO RETIRE NLM RESOURCE_v1.docx, ToxLearn_FORM REQUEST TO RETIRE NLM RESOURCE_rev.docx, toxmystery_FORM REQUEST TO RETIRE NLM RESOURCE_v2.docx, Request to Retire NLM Resource Chirr.docx

Hi, Nicole and Grace,

These are the sunset plans that were reviewed and approved by Jerry before the "sunsetting.nlm.nih.gov" was available. ToxLearn still needs a Letter of Agreement with Society of Toxicology.

Please keep these as OCPL's records. Thanks!

Florence

From: Chang, Florence (NIH/NLM) [E]

Subject: Sunset offerings that have been approved by Jerry

Jody,

Here are all the sunset requests that we submitted on the paper form. GeneEd and ToxMystery are already taken down. ToxLearn is still in process as we are waiting for an Letter of Intent with Society of Toxicology to be completed. We will process CPDB, CHIRR, and TOXMAP in the next couple of weeks.

The next batch of sunset requests will be through the sunset portal interface. Thanks!

Florence

REQUEST TO RETIRE NLM TOXMAP

Product owner(s) fill out sections I, III, IV and V. Include documentation with this form.
Record approvals in section II.

I. **Written justification for the retirement of an NLM resource.** Three to six months before sunsetting any NLM resource, a written justification for the retirement of the resource must be prepared. In drafting the justification, the use of statistics is often helpful. Reasons for sunsetting and/or retiring an NLM resource may include (check all that apply):

☐ Low usage

☐ Obsolescence (that is, better products have come along) – whether from NLM or another group

☒ No longer aligned with NLM priorities or mission needs

☐ Incorrect or out-of-date information. If information cannot be updated, then archive the resource

☒ Reallocation of staff to different products because resource is no longer a priority

☒ Cost in relation to value

☒ Other (Please explain) The US EPA now produces several GIS products and visualization applications (https://www.epa.gov/geospatial/epa-geospatial-applications) that have the similar GIS functionality, except the ability to search TOXNET from within the GIS tools. This was a unique feature in TOXMAP-classic, which was retired due to the obsolete technology platform. The new version of TOXMAP does not have this feature either. To make the new TOXMAP to have this feature will require major investment in software development. We cannot justify the effort because the usage of this feature was very low, averaging about 400 searches a year.

II. **Approval.** This form must be signed by:

- NLM Division head (within LHC, LO, NCBI, OCCS, SIS, OD) HFC 3/26/2019

- Upon approval by NLM division head, forward completed form to Kathy Cravedi, Director, OCPL (kcravedi@nlm.nih.gov), for distribution and approval by:
  NLM Director Initial Here Date
  NLM Deputy Director JS 3/27/2019
  NLM Communications Director Initial Here Date

III. **Prepare Communications plan for sunsetting the NLM resource.** This document is developed for sharing news about the retirement of the NLM resource with relevant internal and external audiences. Please address the following key elements:

A. ***Internal communication plan*** for NLM staff. Identify who needs to be informed? (staff, contractors) SIS staff, NLM staff, NNLM staff and core set of dedicated users from the Public Health and Toxicology Communities.

1. Determine questions that may need to be addressed. These may include:
   What information needs to be provided? TOXMAP will be retired because it no longer aligns with NLM priorities and because the US EPA now

provides several GIS products that provide similar GIS functionality of TOXMAP.

- When will the information be provided? **End of FY2019**
- By what method(s) will information be provided? Example: Email to all NLM staff Email, GovD posts, announcement on TOXMAP web site
- If multiple messages are to be sent, by what method(s) and with what frequency? Over a three-month period.
- Are there any potential areas for misunderstanding or concern? None except the non-technical users of TOXMAP may have a high learning curve to transition to the EPA GIS tools.

2. Establish what may need to be communicated to internal audiences. This could include:
    - Why is this program or service being retired? TOXMAP will be retired because the US EPA now provides several GIS products that provide similar GIS functionality.
    - What content, if any, will still be available and, if so, why and where? (Options may include archived pages on the NLM website, FTP, the Wayback Machine internet archive, and tape.) US EPA GIS applications and TRI applications; possibly NLM TOXNET TRI
    - What will happen to the staff working on the product or service? Assigned to other areas and projects within NLM/SIS.
    - What staff will be involved in this transition? Colette Hochstein
3. Identify mechanisms to be used for communicating with internal audiences. These may include some or all of the following (Check all that apply):

    ☒ Emails

    ☒ Signage

    ☐ Information delivered at staff meetings

    ☐ Point of discussion at brown bag luncheons

    ☐ Town Hall meetings, etc.

    ☐ Other (Explain) Enter other mechanism(s)
4. Develop and attach a set of Talking Points for the NLM Director TOXMAP has helped users visually explore data primarily from the EPA's Toxics Release Inventory (TRI) and Superfund Programs. TOXMAP also features Canadian NPRI data, U.S. EPA coal plant emissions data, and U.S. commercial nuclear power plants. TOXMAP overlays U.S. Census demographic data, income figures from the U.S. Department of Commerce, and health data from the NCI SEER program. It will be retired at the end of FY2019. the US EPA now provides several GIS products that provide similar GIS functionality.
5. Does the NIH Director or other IC Directors need to be informed? Yes

    If Yes, check all that apply:

    ☒ The service is produced jointly with another IC or serves an audience of interest to the IC

☐ The service has high visibility and sunsetting may result in questions, letters, emails to the NIH Director from the public, key stakeholders, Congressional staff, HHS leadership

☒ Other (Please elaborate) NIEHS Director should be notified as NIEHS serves user communities that have interest in TOXMAP. SIS has also worked for many years with the US EPA regarding the data and functionality of TOXMAP. Their staff should be informed of its status.

B. ***External communication plan*** for users, stakeholders, and the public

1. Who needs to be informed? (Identify stakeholders).
    - Why is this program or service being retired? The US EPA now produces several GIS products (https://www.epa.gov/geospatial/epa-geospatial-applications) that have the similar GIS functionality.
    - What content, if any, will still be available and, if so, why and where? Data used in TOXMAP will be available from other original sources. GIS application users can access them by overlaying the data in their GIS applications. TRI and NPL data: US EPA; Canadian NPRI data from Environment and Climate Change Canada; Nuclear Regulatory Commission publishes the commercial nuclear power plant data; BEA data from the US Department of Commerce; TRI lat/long info from EPA's Facility Registry System (FRS).; coal plant data from EIA Electricity Data Browser; EPA Air Markets Program Data (AMPD) data available from the EPA Clean Air Markets; Cancer and Mortality data available from the US NIH NCI.
    - What will happen to the staff working on the product or service? Assigned to other areas and projects within NLM/SIS

2. Establish what may need to be communicated. This could include—
    - Why is this program or service being retired? The US EPA now produces several GIS products (https://www.epa.gov/geospatial/epa-geospatial-applications) that have the similar GIS functionality.
    - What content, if any, will still be available and, if so, why and where? Data used in TOXMAP will be available from other sources. GIS application users can access them by overlaying the data to the maps. TRI and NPL data: US EPA; Canadian NPRI data from Environment and Climate Change Canada; Nuclear Regulatory Commission publishes the commercial nuclear power plant data; BEA data from the US Department of Commerce; TRI lat/long info from EPA's Facility Registry System (FRS).; coal plant data from EIA Electricity Data Browser; EPA Air Markets Program Data (AMPD) data available from the EPA Clean Air Markets; Cancer and Mortality data available from the US NIH NCI.
    - What will happen to the staff working on the product or service? Assigned to other areas and projects within NLM/SIS
    - How can I or how can my group be involved in this transition? Provide related information as needed.

3. Identify what needs to be completed:

☐ Deliverables Specify

☒ Responsible party or parties for the sunsetting process Colette Hochstein, Florence Chang

☐ Due date 9/30/2019

Identification of communication channels. These could include (Check all that apply):

☒ emails to stakeholders and users

☐ signage

☐ NLM homepage (public news announcement)

☐ speeches

☒ social media including Facebook, Twitter, LinkedIn, etc.

☒ newsletters/blogs, including *Technical Bulletin*, *NLM in Focus*, *Circulating Now*, *Musings*, etc.

☐ Other (Please Explain) Enter other possible communication channel(s)

4. Determine questions that may need to be addressed, including:
   - What information will be provided? The US EPA now produces several GIS products (https://www.epa.gov/geospatial/epa-geospatial-applications) that have the similar GIS functionality.
   - When will the information be provided? Starting Summer 2019)
   - With what frequency? Monthly
   - Are there potential areas for misunderstanding or concern? Probably not.
   - After informing stakeholders that the site will no longer be accessible, where can they find information once the site is retired? TRI and NPL data: US EPA; Canadian NPRI data from Environment and Climate Change Canada; Nuclear Regulatory Commission publishes the commercial nuclear power plant data; BEA data from the US Department of Commerce; TRI lat/long info from EPA's Facility Registry System (FRS).; coal plant data from EIA Electricity Data Browser; EPA Air Markets Program Data (AMPD) data available from the EPA Clean Air Markets; Cancer and Mortality data available from the US NIH NCI. Links to direct users to these external data sources will be provided on the TOXMAP home page for 6 months prior to the sunset.
   - How will NLM respond to questions and comments? Staff will respond to questions received through customer service emails
   - Is this an issue that may generate media interest? (If so, please include strategies for responding in the plan.) No

IV. **Posting notice on central NLM "sunsetting calendar" (coming soon) on the NLM Wiki.** A notice should be posted on the "NLM resource sunset calendar" immediately following the effective

date of the retirement of the resource. The sunset calendar, which will also be found on the NLM wiki, will serve as an historical record about retired NLM products and services.

V. **Identification of primary point of contact for further information about retired NLM resource.** Provide name and contact information for primary point of contact for retired NLM resource here:

Name	Colette Hochstein, Florence Chang

REQUEST TO RETIRE CARCINOGENIC POTENCY DATABASE (CPDB)

Product owner(s) fill out sections I, III, IV and V. Include documentation with this form.
Record approvals in section II.

I. **Written justification for the retirement of an NLM resource.** Three to six months before sunsetting any NLM resource, a written justification for the retirement of the resource must be prepared. In drafting the justification, the use of statistics is often helpful. Reasons for sunsetting and/or retiring an NLM resource may include (check all that apply):

☒ Low usage

☒ Obsolescence (that is, better products have come along) – whether from NLM or another group

☐ No longer aligned with NLM priorities or mission needs

☒ Incorrect or out-of-date information. If information cannot be updated, then archive the resource

☐ Reallocation of staff to different products because resource is no longer a priority

☐ Cost in relation to value

☒ Other (Please explain) The Carcinogenic Potency Database (CPDB) is an archival database with low and decreasing usage. It provides historical information from the years 1980 - 2011. It is no longer updated. It was created at the University of California, Berkeley, and when they no longer wanted to maintain access to it after it was no longer being built, they asked us to take it. CPDB reports analyses of animal cancer tests on 1547 chemicals. CPDB includes 6540 chronic, long-term animal cancer tests, both positive and negative for carcinogenicity, from the general published literature as well as the National Cancer Institute and the National Toxicology Program (NTP). Such tests were used in support of cancer risk assessments for humans. CPDB was developed by the Carcinogenic Potency Project at the University of California, Berkeley and the Lawrence Berkeley National Laboratory. The usage of CPDB has consistently dropped over the past years to 0.007% of TOXNET usage in FY2018. Of TOXNET's 27,582,034 page views in FY2018, only 1930 page views were for CPDB.

II. **Approval.** This form must be signed by:

- **NLM Division head (within LHC, LO, NCBI, OCCS, SIS, OD)** HFC 3/26/2019

- Upon approval by NLM division head, forward completed form to Kathy Cravedi, Director, OCPL (kcravedi@nlm.nih.gov), for distribution and approval by:

  NLM Director Initial Here Date

  NLM Deputy Director JS 3/27/2019

  NLM Communications Director Initial Here Date

III. **Prepare Communications plan for sunsetting the NLM resource.** This document is developed for sharing news about the retirement of the NLM resource with relevant internal and external audiences. Please address the following key elements:

A. ***Internal communication plan*** for NLM staff

1. Identify who needs to be informed? (staff, contractors) Staff are aware of the plan. Additional groups include NNCO, NNLM, and toxicology community via our listserv.
2. Determine questions that may need to be addressed. These may include:
    - What information needs to be provided? That the CPDB was a resource taken from the University of Berkeley after they stopped supporting it and wanted an archival home for a few years. That the information will be available on NLM's ftp site for 6 months after sunsetting.
    - When will the information be provided? 5/31/2019
    - By what method(s) will information be provided? Example: Email to all NLM staff Post on database web pages, and send to OCPL for distribution.)
    - If multiple messages are to be sent, by what method(s) and with what frequency? One round
    - Are there any potential areas for misunderstanding or concern? none
3. Establish what may need to be communicated to internal audiences. This could include:
    - Why is this program or service being retired? The information is outdated and little used. It is not in a form that lends itself to conversion to Bookshelf)
    - What content, if any, will still be available and, if so, why and where? (Options may include archived pages on the NLM website, FTP, the Wayback Machine internet archive, and tape.) The evaluated and annotated content, currently searchable on TOXNET, will no longer be available on TOXNET. The data files (PDFs, text, and web pages) will be compressed as zip files available as downloads on the NLM FTP site. The citations of referenced literatures are available on PubMed.
    - What will happen to the staff working on the product or service? No staff resources used now
    - What staff will be involved in this transition? Florence Chang, Phil Thomas
4. Identify mechanisms to be used for communicating with internal audiences. These may include some or all of the following (Check all that apply):
    - ☒ Emails
    - ☒ Signage
    - ☒ Information delivered at staff meetings
    - ☐ Point of discussion at brown bag luncheons
    - ☐ Town Hall meetings, etc.
    - ☒ Other (Explain) listserv
5. Develop and attach a set of Talking Points for the NLM Director The information is outdated and little used. It is not in a form that lends itself to

conversion to Bookshelf). The resource was a labor intensive one developed by Berkeley staff and transitioned to NLM when UC Berkley terminated the project. This resource is not in a format that can be converted to another NLM database or Bookshelf. The data will remain available on NLM's ftp site.

6. Does the NIH Director or other IC Directors need to be informed? No

   If Yes, check all that apply:

   ☐ The service is produced jointly with another IC or serves an audience of interest to the IC

   ☐ The service has high visibility and sunsetting may result in questions, letters, emails to the NIH Director from the public, key stakeholders, Congressional staff, HHS leadership

   ☐ Other (Please elaborate) Enter other reason(s) Director(s) need to be informed

B. ***External communication plan*** for users, stakeholders, and the public

1. Who needs to be informed? (Identify stakeholders).
   - Why is this program or service being retired? The information is outdated and little used. Cannot be converted to new format for TOXNET move to NCBI.
   - What content, if any, will still be available and, if so, why and where? The data will remain available on NLM's ftp site. Journal literature on which it is based is still available via PubMed.
   - What will happen to the staff working on the product or service? No staff work on this other than routine IT deployment /support issues .

2. Establish what may need to be communicated. This could include—
   - Why is this program or service being retired? The resource is outdated and little used. It cannot be converted to a new format for other NLM databases or Bookshelf. The resource will be taken down from TOXNET end May 2019
   - What content, if any, will still be available and, if so, why and where? Journal literature on which it is based is still available in PubMed. The archived content will be made available in compressed format on NLM FTP server.
   - What will happen to the staff working on the product or service? No staff
   - How can I or how can my group be involved in this transition? Enter possible support option(s)

3. Identify what needs to be completed:

   ☐ Deliverables Specify

   ☒ Responsible party or parties for the sunsetting process TOXNET IT

   ☒ Due date 5/31/20195/31/2019

   Identification of communication channels. These could include (Check all that apply):

☒ emails to stakeholders and users

☐ signage

☒ NLM homepage (public news announcement)

☐ speeches

☒ social media including Facebook, Twitter, LinkedIn, etc.

☒ newsletters/blogs, including *Technical Bulletin*, *NLM in Focus*, *Circulating Now*, *Musings*, etc.

☐ Other (Please Explain) Enter other possible communication channel(s)

4. Determine questions that may need to be addressed, including:
    - What information will be provided? Sunset of CPDB
    - When will the information be provided? Starting after approval
    - With what frequency? Enter frequency
    - Are there potential areas for misunderstanding or concern? no
    - After informing stakeholders that the site will no longer be accessible, where can they find information once the site is retired? Journal literature on which it is based is still available in PubMed. The archived content will be made available in compressed format on NLM FTP server.
    - How will NLM respond to questions and comments? Email via customer service system
    - Is this an issue that may generate media interest? (If so, please include strategies for responding in the plan.) No

IV. **Posting notice on central NLM "sunsetting calendar" (coming soon) on the NLM Wiki.** A notice should be posted on the "NLM resource sunset calendar" immediately following the effective date of the retirement of the resource. The sunset calendar, which will also be found on the NLM wiki, will serve as an historical record about retired NLM products and services.

V. **Identification of primary point of contact for further information about retired NLM resource.** Provide name and contact information for primary point of contact for retired NLM resource here:

Jeanne Goshorn Jeanne.goshorn@nih.hhs.govJeanne.goshorn@nih.hhs.gov

REQUEST TO RETIRE GeneED

Product owner(s) fill out sections I, III, IV and V. Include documentation with this form.
Record approvals in section II.

I. **Written justification for the retirement of an NLM resource.** Three to six months before sunsetting any NLM resource, a written justification for the retirement of the resource must be prepared. In drafting the justification, the use of statistics is often helpful. Reasons for sunsetting and/or retiring an NLM resource may include (check all that apply):

☐ Low usage

☒ Obsolescence (that is, better products have come along) – whether from NLM or another group

☐ No longer aligned with NLM priorities or mission needs

☐ Incorrect or out-of-date information. If information cannot be updated, then archive the resource

☒ Reallocation of staff to different products because resource is no longer a priority

☐ Cost in relation to value

☒ Other (Please explain) Some content will be emerged into Genetics Home Reference

II. **Approval.** This form must be signed by:

- NLM Division head (within LHC, LO, NCBI, OCCS, SIS, OD) Florence Chang 10/26/2018

X

Hua Florence Chang
Acting Associate Director, SIS

- Upon approval by NLM division head, forward completed form to Kathy Cravedi, Director, OCPL (kcravedi@nlm.nih.gov), for distribution and approval by:

NLM Director Initial Here Date

NLM Deputy Director Initial Here Date

X

Jerry Sheehan
NLM Deputy Director

NLM Communications Director Initial Here Date

III. **Prepare Communications plan for sunsetting the NLM resource.** This document is developed for sharing news about the retirement of the NLM resource with relevant internal and external audiences. Please address the following key elements:

A. ***Internal communication plan*** for NLM staff

1. Identify who needs to be informed? (staff, contractors) Staff that work on the project have been informed. SIS has already met with Genetics Home Reference and begun the process of determining what content to take. Additional groups include LHS staff, consumer health meet-up group, NNCO, NNLM, NSTA and NBT associations. Our contractor that works on programming and development of the platform have already been informed, but we will notify them again once this plan has been approved.
2. Determine questions that may need to be addressed. These may include:
    - What information needs to be provided? That some GeneEd content will be merged into Genetics Home Reference. GeneED will shut down on March 31, 2019.
    - When will the information be provided? Enter date
    - By what method(s) will information be provided? Example: Email to all NLM staff It is already posted on the website that it will shut down on March 31, 2019. Email to NLM staff, OCPL for social media distribution, NNCO and NNLM, post to K-12 listserv, and SIS Twitter accounts
    - If multiple messages are to be sent, by what method(s) and with what frequency? One round of messaging is sufficient. It has been posted on the site since August 2018 that the site will be shutting down March 31, 2019.
    - Are there any potential areas for misunderstanding or concern? A benefit will be that consumers and educators will have one place to access consumer level genetics information.
3. Establish what may need to be communicated to internal audiences. This could include:
    - Why is this program or service being retired? SIS is consolidating its efforts for genetic information with GHR for efficiency. The focus of GeneEd – gene resources for teachers, will easily fold into Genetics Home Reference. GHR is widely used so it will give more visibility to the teacher resources.
    - What content, if any, will still be available and, if so, why and where? (Options may include archived pages on the NLM website, FTP, the Wayback Machine internet archive, and tape.) Content from GeneEd that is widely used will be transferred to Genetics Home Reference. A survey was added to the GeneEd home page in August asking which content users access the most and want to see transferred. Metrics from GeneEd are also being used to determine which content to move. It is important to note that GeneEd is a “link site” and there is no original content other than lesson plans developed by NLM. Some content was provided by the NHGRI may be moved to GHR – NHGRI also makes this same content available on their websites.
    - What will happen to the staff working on the product or service? Primary staff were contractors that have retired. The only work currently being done on this resource is link checking.

- What staff will be involved in this transition? Laura Bartlett from SIS and Kate Greenberg and Heather Collins from Genetics Home Reference.

4. Identify mechanisms to be used for communicating with internal audiences. These may include some or all of the following (Check all that apply):

   ☒ Emails

   ☐ Signage

   ☒ Information delivered at staff meetings

   ☒ Point of discussion at brown bag luncheons

   ☐ Town Hall meetings, etc.

   ☒ Other (Explain) A notice on the site indicates GeneEd will be shutting down March 31, 2019. This decision was made before NLM had resource retirement guidelines in place.

5. Develop and attach a set of Talking Points for the NLM Director GeneEd, an educator's resource for genetics education materials for grades 9 to 12, will be retired as of March 31, 2019. Some content will be merged with Genetics Home Reference to create a single access point for the Library's genetics information for the public. We have found that many students and educators are already using Genetics Home Reference, so this merger increases efficiency to reach these audiences. GeneEd is conducting a survey, available on the site, to determine which content is most important to regular users. We are also analyzing usage metrics to determine which areas of GeneEd have the highest traffic. These data will help us decide which materials from GeneEd are most appropriate to transfer to Genetics Home Reference.

6. Does the NIH Director or other IC Directors need to be informed? No

   If Yes, check all that apply:

   ☐ The service is produced jointly with another IC or serves an audience of interest to the IC

   ☐ The service has high visibility and sunsetting may result in questions, letters, emails to the NIH Director from the public, key stakeholders, Congressional staff, HHS leadership

   ☒ Other (Please elaborate) When GeneEd was first created, SIS worked with NHGRI for advice and obtain content produced by NHGRI. We will need to inform them of our decision and "pass off" the relationship to Genetics Home Reference.

B. ***External communication plan*** for users, stakeholders, and the public

1. Who needs to be informed? (Identify stakeholders).
   - Why is this program or service being retired? GeneEd is merging with Genetics Home Reference to create one access point for genetics information for the public.
   - What content, if any, will still be available and, if so, why and where? GeneEd is conducting a survey, available on the site, to determine

which areas are most important to current users. We are also looking at the usage metrics to determine which are the most popular areas.

- What will happen to the staff working on the product or service? They were contractors and they have already departed NLM.

2. Establish what may need to be communicated. This could include—
   - Why is this program or service being retired? GeneEd website will be sunset March 31, 2019.
   - What content, if any, will still be available and, if so, why and where? We are shutting down GeneEd March 31, 2019, and relevant content will be moved to Genetics Home Reference.
   - What will happen to the staff working on the product or service?
   - How can I or how can my group be involved in this transition? Take the survey on the site.

3. Identify what needs to be completed:

   ☐ Deliverables Specify

   ☒ Responsible party or parties for the sunsetting process Laura Bartlett and Janice Kelly

   ☒ Due date 3/31/2019

   Identification of communication channels. These could include (Check all that apply):

   ☒ emails to stakeholders and users

   ☐ signage

   ☒ NLM homepage (public news announcement)

   ☐ speeches

   ☒ social media including Facebook, Twitter, LinkedIn, etc.

   ☒ newsletters/blogs, including *Technical Bulletin*, *NLM in Focus*, *Circulating Now*, *Musings*, etc.

   ☒ Other (Please Explain) We typically exhibit at the annual National Science Teachers Association meeting in spring – and occasionally at the National Biology Teachers Association. We will announce it at our booth and potentially send an announcement for their newsletters and listservs.

   Determine questions that may need to be addressed, including:
   - What information will be provided? The sunsetting of GeneEd and the information additions to GHR.
   - When will the information be provided? Jan 2019
   - With what frequency? Enter frequency
   - Are there potential areas for misunderstanding or concern? Likely not – NLM considers k-12 an audience and we have many resources. Letting people know content will be going to Genetics Home Reference will likely curb anxiety, if any exists.

- After informing stakeholders that the site will no longer be accessible, where can they find information once the site is retired? Genetics Home Reference
- How will NLM respond to questions and comments? Staff will directly respond to questions received through customer service emails.
- Is this an issue that may generate media interest? (If so, please include strategies for responding in the plan.) No – the resource had a limited audience of teachers and students. They will gain access to more information by using Genetics Home Reference.

IV. **Posting notice on central NLM "sunsetting calendar" (coming soon) on the NLM Wiki.** A notice should be posted on the "NLM resource sunset calendar" immediately following the effective date of the retirement of the resource. The sunset calendar, which will also be found on the NLM wiki, will serve as an historical record about retired NLM products and services.

V. **Identification of primary point of contact for further information about retired NLM resource.** Provide name and contact information for primary point of contact for retired NLM resource here:

Laura Bartlett bartlettl@mail.nih.gov

REQUEST TO RETIRE AN NLM RESOURCE

Product owner(s) fill out sections I, III, IV and V. Include documentation with this form.
Record approvals in section II.

I. **Written justification for the retirement of an NLM resource.** Three to six months before sunsetting any NLM resource, a written justification for the retirement of the resource must be prepared. In drafting the justification, the use of statistics is often helpful. Reasons for sunsetting and/or retiring an NLM resource may include (check all that apply):

☐ Low usage

☒ Obsolescence (that is, better products have come along) – whether from NLM or another group

☒ No longer aligned with NLM priorities or mission needs

☐ Incorrect or out-of-date information. If information cannot be updated, then archive the resource

☒ Reallocation of staff to different products because resource is no longer a priority

☒ Cost in relation to value

☒ Other (Please explain) ToxLearn has been supplanted by ToxTutor. ToxLearn was a partially completed online tutorial providing an introduction to the principles of toxicology. In addition to being unfinished (several modules were never completed), it was designed in Adobe Flash. Adobe Flash is no longer being updated, or available on most internet browsers. In contrast, ToxTutor has been updated and enhanced and now serves as the online tutorial of choice. Also, ToxTutor does not use Adobe Flash and it is compatible with the devices users are expected to use.

II. **Approval.** This form must be signed by:

- NLM Division head (within LHC, LO, NCBI, OCCS, SIS, OD) HFC 11/27/2018

X _____

Hua Florence Chang
Acting Associate Director, SIS

- Upon approval by NLM division head, forward completed form to Kathy Cravedi, Director, OCPL (kcravedi@nlm.nih.gov), for distribution and approval by:
  - NLM Director Initial Here Date
  - NLM Deputy Director Initial Here Date
  - NLM Communications Director Initial Here Date

III. **Prepare Communications plan for sunsetting the NLM resource.** This document is developed for sharing news about the retirement of the NLM resource with relevant internal and external audiences. Please address the following key elements:

A. ***Internal communication plan*** for NLM staff

1. Identify who needs to be informed? (staff, contractors) Only SIS staff have been informed. We will need to inform all NLM staff, and the RMLs.
2. Determine questions that may need to be addressed. These may include:
    - What information needs to be provided? ToxLearn has been supplanted by ToxTutor. ToxLearn is retiring due to its format in Adobe Flash and because several of its modules were never completed. In contrast, ToxTutor has been updated and enhanced and is NLM's online toxicology tutorial of choice.
    - When will the information be provided? 12/1/2018
    - By what method(s) will information be provided? Example: Email to all NLM staff Digital signage within NLM. Emails to key contacts at outside organizations, e.g., Society of Toxicology. Also to be announced during NLM exhibits.
    - If multiple messages are to be sent, by what method(s) and with what frequency? One time communications are planned.
    - Are there any potential areas for misunderstanding or concern? No, because ToxTutor is a far more current and comprehensive tutorial, and does not use Adobe Flash. It is compatible with the devices users are expected to use.
3. Establish what may need to be communicated to internal audiences. This could include:
    - Why is this program or service being retired? ToxLearn has been supplanted by ToxTutor. ToxTutor has been updated and enhanced and now serves as the online tutorial of choice. It is compatible with the devices users are expected to use to access it.
    - What content, if any, will still be available and, if so, why and where? (Options may include archived pages on the NLM website, FTP, the Wayback Machine internet archive, and tape.) SOT will host the archived version of ToxLearn, provided by NLM. NLM do not plan to keep any of the content up, or available. Its unique format in Adobe Flash does not lend well to keeping the content up.
    - What will happen to the staff working on the product or service? The NLM project lead for ToxLearn retired at the end of 2017 and there has been no further work on it.
    - What staff will be involved in this transition? Pertti (Bert) Hakkinen.
4. Identify mechanisms to be used for communicating with internal audiences. These may include some or all of the following (Check all that apply):
    - ☒ Emails
    - ☒ Signage
    - ☒ Information delivered at staff meetings
    - ☒ Point of discussion at brown bag luncheons
    - ☐ Town Hall meetings, etc.
    - ☐ Other (Explain) Enter other mechanism(s)
5. Develop and attach a set of Talking Points for the NLM Director Click or tap here to enter text.

6. Does the NIH Director or other IC Directors need to be informed? No

   If Yes, check all that apply:

   ☐ The service is produced jointly with another IC or serves an audience of interest to the IC

   ☐ The service has high visibility and sunsetting may result in questions, letters, emails to the NIH Director from the public, key stakeholders, Congressional staff, HHS leadership

   ☐ Other (Please elaborate) Enter other reason(s) Director(s) need to be informed

B. ***External communication plan*** for users, stakeholders, and the public

1. Who needs to be informed? (Identify stakeholders).
   - Why is this program or service being retired? ToxLearn has been supplanted by ToxTutor. ToxLearn was a partially completed online tutorial providing an introduction to the principles of toxicology. In addition to being unfinished (several modules were never completed), it was designed in Adobe Flash. Adobe Flash is no longer being updated, or available on most internet browsers. In contrast, ToxTutor has been updated and enhanced and it is a far more current and comprehensive tutorial. ToxTutor now serves as the online tutorial of choice. ToxTutor does not use Adobe Flash and it is compatible with the devices users are expected to use. An archived version of the ToxLearn will be hosted on SOT Web site.
   - What content, if any, will still be available and, if so, why and where? None
   - What will happen to the staff working on the product or service? The NLM project lead for ToxLearn retired at the end of 2017 and there has been no further work on it.

2. Establish what may need to be communicated. This could include—
   - Why is this program or service being retired? ToxLearn has been supplanted by ToxTutor. ToxLearn was a partially completed online tutorial providing an introduction to the principles of toxicology. In addition to being unfinished (several modules were never completed), it was designed in Adobe Flash. Adobe Flash is no longer being updated, or available on most internet browsers. ToxTutor has been updated and enhanced and now serves as the online tutorial of choice. ToxTutor does not use Adobe Flash and it is compatible with the devices users are expected to use.
   - What content, if any, will still be available and, if so, why and where? SOT indicated that they will host an archived version of ToxLearn on the SOT Website.
   - What will happen to the staff working on the product or service? They have already retired
   - How can I or how can my group be involved in this transition? None

3. Identify what needs to be completed:

☐ Deliverables Specify

☒ Responsible party or parties for the sunsetting process Pertti (Bert) Hakkinen

☒ Due date 12/31/2018

Identification of communication channels. These could include (Check all that apply):

☒ emails to stakeholders and users

☒ signage

☐ NLM homepage (public news announcement)

☐ speeches

☒ social media including Facebook, Twitter, LinkedIn, etc.

☒ newsletters/blogs, including *Technical Bulletin*, *NLM in Focus*, *Circulating Now*, *Musings*, etc.

☒ Other (Please Explain) Ask the Society of Toxicology to note this in its online "news" messaging to members.

4. Determine questions that may need to be addressed, including:
   - What information will be provided? .
   - When will the information be provided? December 1, 2018
   - With what frequency? once
   - Are there potential areas for misunderstanding or concern? No once the following is explained: ToxLearn has been supplanted by ToxTutor. ToxLearn was a partially completed online tutorial providing an introduction to the principles of toxicology. In addition to being unfinished (several modules were never completed), it was designed in Adobe Flash. Adobe Flash is no longer being updated, or available on most internet browsers. ToxTutor has been updated and enhanced and now serves as the online tutorial of choice. ToxTutor does not use Adobe Flash and it is compatible with the devices users are expected to use.
   - After informing stakeholders that the site will no longer be accessible, where can they find information once the site is retired? The archived version of ToxLearn will be available on the SOT Website.
   - How will NLM respond to questions and comments? Will answer emails sent to customer service
   - Is this an issue that may generate media interest? (If so, please include strategies for responding in the plan.) No. Our explanation should be enough.

IV. **Posting notice on central NLM "sunsetting calendar" (coming soon) on the NLM Wiki.** A notice should be posted on the "NLM resource sunset calendar" immediately following the effective date of the retirement of the resource. The sunset calendar, which will also be found on the NLM wiki, will serve as an historical record about retired NLM products and services.

V. **Identification of primary point of contact for further information about retired NLM resource.** Provide name and contact information for primary point of contact for retired NLM resource here:

Pertti (Bert) J. Hakkinen, Ph.D..	P: 301-827-4222. Pertti.hakkinen@nih.gov

REQUEST TO RETIRE Toxmystery

Product owner(s) fill out sections I, III, IV and V. Include documentation with this form.
Record approvals in section II.

I. **Written justification for the retirement of an NLM resource.** Three to six months before sunsetting any NLM resource, a written justification for the retirement of the resource must be prepared. In drafting the justification, the use of statistics is often helpful. Reasons for sunsetting and/or retiring an NLM resource may include (check all that apply):

☐ Low usage

☒ Obsolescence (that is, better products have come along) – whether from NLM or another group

☐ No longer aligned with NLM priorities or mission needs

☐ Incorrect or out-of-date information. If information cannot be updated, then archive the resource

☒ Reallocation of staff to different products because resource is no longer a priority

☒ Cost in relation to value

☒ Other (Please explain) Toxmystery is a game website that was designed in Adobe Flash. Adobe Flash is no longer being updated, or available on most internet browsers. The cost to update the game to another format is prohibitive.

II. **Approval.** This form must be signed by:

- NLM Division head (within LHC, LO, NCBI, OCCS, SIS, OD Florence Chang) 10/26/2018

  Invalid signature

  X Hua Florence Chang

  Hua Florence Chang
  Acting Associate Director, SIS
  Signed by: Hua F. Chang -S
- Upon approval by NLM division head, forward completed form to Kathy Cravedi, Director, OCPL (kcravedi@nlm.nih.gov), for distribution and approval by:

  NLM Director Initial Here Date
  NLM Deputy Director Initial Here Date
  NLM Communications Director Initial Here Date

III. **Prepare Communications plan for sunsetting the NLM resource.** This document is developed for sharing news about the retirement of the NLM resource with relevant internal and external audiences. Please address the following key elements:

A. ***Internal communication plan*** for NLM staff

1. Identify who needs to be informed? (staff, contractors) Only SIS staff have been informed. We will need to inform all NLM staff, OCPL, RMLs, and teachers.
2. Determine questions that may need to be addressed. These may include:

- What information needs to be provided? Toxmystery is retiring because it is in Adobe Flash and cannot be used effectively on Web browsers including tablets, desktops, and other educational devices.
- When will the information be provided? 11/1/2018
- By what method(s) will information be provided? Example: Email to all NLM staff Digital signage. It was announced at the NLM consumer health meet-up over the summer. Another announcement will be made at that group when we have shutdown approval.
- If multiple messages are to be sent, by what method(s) and with what frequency? A notice on the website for two months and one notice to all user groups
- Are there any potential areas for misunderstanding or concern? Because Toxmystery contains information on chemicals, the shutdown may potentially inhibit this very basic information about chemicals for those with low reading levels. More up to date materials can be found on the CDC, NIEHS and EPA websites. The uniqueness of the resource was the game-like interface with certificate for completion of the game.

3. Establish what may need to be communicated to internal audiences. This could include:
    - Why is this program or service being retired? Toxmystery is a game website designed in Adobe Flash that is not used on tablets, desktops, or other educational devices.
    - What content, if any, will still be available and, if so, why and where? (Options may include archived pages on the NLM website, FTP, the Wayback Machine internet archive, and tape.) We do not plan to keep any of the content up, or available. Its unique format in Adobe Flash does not lend well to keeping the content up. Transferring it to another format is expensive.
    - What will happen to the staff working on the product or service? This resource has been in "maintenance mode" by IT staff at SIS. Those IT staff have other work assigned.
    - What staff will be involved in this transition? Laura Bartlett and Janice Kelly
4. Identify mechanisms to be used for communicating with internal audiences. These may include some or all of the following (Check all that apply):
    - ☒ Emails
    - ☒ Signage
    - ☒ Information delivered at staff meetings
    - ☒ Point of discussion at brown bag luncheons
    - ☐ Town Hall meetings, etc.
    - ☒ Other (Explain) Enter other mechanism(s)
5. Develop and attach a set of Talking Points for the NLM Director ToxMystery, a game about chemicals in the household, will be retired on December 31,

2018. The game was built in the Adobe Flash, a format not supported tablets, most Web browsers, and other educational devices. Although the game has provided years of fun and entertainment, we have decided to retire the resource. NIEHS and EPA have built several learning activities for youth that can teach them about chemicals and environmental health.

6. Does the NIH Director or other IC Directors need to be informed? No

   If Yes, check all that apply:

   ☐ The service is produced jointly with another IC or serves an audience of interest to the IC

   ☐ The service has high visibility and sunsetting may result in questions, letters, emails to the NIH Director from the public, key stakeholders, Congressional staff, HHS leadership

   ☒ Other (Please elaborate) Enter other reason(s) Director(s) need to be informed

B. ***External communication plan*** for users, stakeholders, and the public

1. Who needs to be informed? (Identify stakeholders).
   - Why is this program or service being retired? ToxMystery, a game about chemicals in the household, will be retired on December 31, 2018. The game was built in Adobe Flash. Although the game has provided years of fun and entertainment, we have decided to retire the resource. NIEHS and EPA have built several learning activities for youth that can teach them about chemicals and environmental health.
   - What content, if any, will still be available and, if so, why and where? None
   - What will happen to the staff working on the product or service? This resource has been in "maintenance mode" for years by SIS IT staff. They are now assigned to new projects.

2. Establish what may need to be communicated. This could include—
   - Why is this program or service being retired? ToxMystery, a game about chemicals in the household, will be retired on December 31, 2018. The game was built in Adobe Flash, a format not supported by tablets, most Web browsers, or educational devices. Although the game has provided years of fun and entertainment, we have decided to retire the resource. NIEHS and EPA have built several learning activities for youth that can teach them about chemicals and environmental health.
   - What content, if any, will still be available and, if so, why and where? None.
   - What will happen to the staff working on the product or service? IT support staff work on other assignments.
   - How can I or how can my group be involved in this transition? None

3. Identify what needs to be completed:

☐ Deliverables Specify

☒ Responsible party or parties for the sunsetting process Laura Bartlett and Janice Kelly

☒ Due date 12/31/2018

Identification of communication channels. These could include (Check all that apply):

☒ emails to stakeholders and users

☒ signage

☒ NLM homepage (public news announcement)

☐ speeches

☒ social media including Facebook, Twitter, LinkedIn, etc.

☒ newsletters/blogs, including *Technical Bulletin*, *NLM in Focus*, *Circulating Now*, *Musings*, etc.

☐ Other (Please Explain) Enter other possible communication channel(s)

4. Determine questions that may need to be addressed, including:
   - What information will be provided? ToxMystery, a game about chemicals in the household, will be retired on December 31, 2018. The game was built in Adobe Flash, not supported on tablets, most Web browsers, and other educational devices. Although the game has provided years of fun and entertainment, we have decided to retire the resource. NIEHS and EPA have built several learning activities for youth that can teach them about chemicals and environmental health.
   - When will the information be provided? November 1, 2018
   - With what frequency? once
   - Are there potential areas for misunderstanding or concern? Because Toxmystery contains basic, general information on chemicals, the shutdown may potentially inhibit information about chemicals for those with low reading level. This information can be found at CDC, NIEHS, and EPA websites. The uniqueness of the resource is its game-like interface with certificate of completion. Its Adobe Flash format is now outdated for educational devices and users of Chrome and Firefox Web browsers.
   - After informing stakeholders that the site will no longer be accessible, where can they find information once the site is retired? Other government websites
   - How will NLM respond to questions and comments? Will answer emails sent to customer service
   - Is this an issue that may generate media interest? (If so, please include strategies for responding in the plan.) No. Our explanation is legit.

IV. **Posting notice on central NLM "sunsetting calendar" (coming soon) on the NLM Wiki.** A notice should be posted on the "NLM resource sunset calendar" immediately following the effective

date of the retirement of the resource. The sunset calendar, which will also be found on the NLM wiki, will serve as an historical record about retired NLM products and services.

V. **Identification of primary point of contact for further information about retired NLM resource.** Provide name and contact information for primary point of contact for retired NLM resource here:

Laura Bartlett bartlettl@mail.nlm.nih.gov

REQUEST TO RETIRE AN NLM RESOURCE

Product owner(s) fill out sections I, III, IV and V. Include documentation with this form.
Record approvals in section II.d

I. **Written justification for the retirement of an NLM resource.** Three to six months before sunsetting any NLM resource, a written justification for the retirement of the resource must be prepared. In drafting the justification, the use of statistics is often helpful. Reasons for sunsetting and/or retiring an NLM resource may include (check all that apply):

☐ Low usage

☐ Obsolescence (that is, better products have come along) – whether from NLM or another group

☒ No longer aligned with NLM priorities or mission needs

☐ Incorrect or out-of-date information. If information cannot be updated, then archive the resource

☒ Reallocation of staff to different products because resource is no longer a priority

☐ Cost in relation to value

☐ Other (Please explain) Other Justification(s)

II. **Approval.** This form must be signed by:

- NLM Division head (within LHC, LO, NCBI, OCCS, SIS, OD) Initial Here Date

- Upon approval by NLM division head, forward completed form to Kathy Cravedi, Director, OCPL (kcravedi@nlm.nih.gov), for distribution and approval by:
  NLM Director Initial Here Date
  NLM Deputy Director Initial Here Date
  NLM Communications Director Initial Here Date

III. **Prepare Communications plan for sunsetting the NLM resource.** This document is developed for sharing news about the retirement of the NLM resource with relevant internal and external audiences. Please address the following key elements:

A. ***Internal communication plan*** for NLM staff

1. Identify who needs to be informed? (staff, contractors) The CHIRr website assists external customers, namely health communication and consumer health informatics researchers -- not NLM employees. Similar content is being developed through NIH and NLM Common Data Element initiatives should NLM staff need a resource.
2. Determine questions that may need to be addressed. These may include:
   - What information needs to be provided? Not applicable
   - When will the information be provided? 1/28/2019
   - By what method(s) will information be provided? Example: Email to all NLM staff Staff will be informed through the Technical Bulletin notice and NLM social media posts. If requested, a separate email can b sent to customer service staff .

- If multiple messages are to be sent, by what method(s) and with what frequency? Technical Bulletin, NLM/OCPL social media outlets, notice on website and email to customer service staff
- Are there any potential areas for misunderstanding or concern? Not applicable

3. Establish what may need to be communicated to internal audiences. This could include:
    - Why is this program or service being retired? CHIRr provides a resource of outcome variables and suggested measures to guide a comprehensive consumer health informatics assessment. In 2018, there were 36,600 unique visitors, 46,609 visits, and 693,000 pages. NLM's priorities regarding consumer health informatics is to focus on health literacy research, not consumer health informatics. Therefore, it no longer aligns with NLM priorities. Similar content to CHIRR is being developed through NIH and NLM Common Data Elements initiatives.
    - What content, if any, will still be available and, if so, why and where? (Options may include archived pages on the NLM website, FTP, the Wayback Machine internet archive, and tape.) NLM may wish to archive this resource
    - What will happen to the staff working on the product or service? The few, impacted NLM staff have transferred to other NLM divisions to to work on other NLM priorities.
    - What staff will be involved in this transition? Staff responsible for the sunsetting and possible archiving if required
4. Identify mechanisms to be used for communicating with internal audiences. These may include some or all of the following (Check all that apply):

    ☐ Emails
    ☒ Signage
    ☐ Information delivered at staff meetings
    ☐ Point of discussion at brown bag luncheons
    ☐ Town Hall meetings, etc.
    ☒ Other (Explain) The website was not used internally, so internal outreach regarding its cancellation is not needed. Staff will be informed through social media posts and the Technical Bulletin.
5. Develop and attach a set of Talking Points for the NLM Director The Consumer Health Informatics Research Resource (CHIRr) provides a resource of outcome variables and suggested measures to guide a comprehensive consumer health informatics assessment. It explains 19 health communication research conceptual frameworks. It does not affect the work of NLM staff. NLM's emphasis has shifted in recent years from consumer health informatics and health communication research professionals to health literacy researchers. In addition, similar content is being developed through NIH and NLM Common Data Elements initiatives.
6. Does the NIH Director or other IC Directors need to be informed? No

    If Yes, check all that apply:

☐ The service is produced jointly with another IC or serves an audience of interest to the IC

☐ The service has high visibility and sunsetting may result in questions, letters, emails to the NIH Director from the public, key stakeholders, Congressional staff, HHS leadership

☐ Other (Please elaborate) ?

B. ***External communication plan*** for users, stakeholders, and the public

1. Who needs to be informed? (Identify stakeholders).
    - Why is this program or service being retired? CHIRr is a resource of outcome variables and suggested measures to guide a comprehensive consumer health informatics assessment. It explains 19 health communication research conceptual frameworks. In 2018, there were 36,600 unique visitors, 46,609 visits, and 693,000 pages. NLM's priorities regarding consumer health informatics is to focus on health literacy research, not consumer health informatics. Therefore, it no longer aligns with NLM priorities. Similar content to CHIRr is being developed through NIH and NLM Common Data Elements initiatives. Click or tap here to enter text.
    - What content, if any, will still be available and, if so, why and where? NLM may want to archive this resource
    - What will happen to the staff working on the product or service? The NLM staff working on CHIRr have been reassigned to other NLM divisions and NLM priorities.

2. Establish what may need to be communicated. This could include—
    - Why is this program or service being retired? Although the website explains 19 health communication research conceptual frameworks and had moderate use, NLM's emphasis has shifted in recent years from consumer health informatics and health communication research professionals to health literacy researchers. Similar content to CHIRr is being developed through NIH and NLM Common Data Elements initiatives.
    - What content, if any, will still be available and, if so, why and where? NLM leadership should determine if it should be archived
    - What will happen to the staff working on the product or service? The staff have transferred to other NLM divisions to work on other NLM priorities. The co-authors will be informed of the sunset plan. Transfer of the site them will be discussed.
    - How can I or how can my group be involved in this transition? NLM leadership should decide if the site should be sunset. OCPL will need to send social media posts about its sunset. The co-authors will need to decide if they want the site transferred to them.

3. Identify what needs to be completed:

☒ Deliverables Dependent on whether the site is transferred to the co-authors, sunsetted or archived

☒ Responsible party or parties for the sunsetting process SIS, OCPL, co-authors of webpage

☒ Due date 5/31/2019

Identification of communication channels. These could include (Check all that apply):

☒ emails to stakeholders and users

☒ signage

☒ NLM homepage (public news announcement)

☐ speeches

☒ social media including Facebook, Twitter, LinkedIn, etc.

☒ newsletters/blogs, including *Technical Bulletin*, *NLM in Focus*, *Circulating Now*, *Musings*, etc.

☐ Other (Please Explain) ?

4. Determine questions that may need to be addressed, including:
   - What information will be provided? The date of sunsetting will be listed on the webpage, in a Tech Bulletin article and on NLM social media outlets.
   - When will the information be provided? Starting in Jan, 2019
   - With what frequency? The website notice will be live at the end of Jan., an email and Technical Bulletin article will be done two months prior to sunsetting. Social media posts will be sent again in May, the month it will be sunset.
   - Are there potential areas for misunderstanding or concern? Highly unlikely
   - After informing stakeholders that the site will no longer be accessible, where can they find information once the site is retired? To be determined. Will offer to transfer the webpage to the co-authors or will find NIH resources for communications planned
   - How will NLM respond to questions and comments? It is suggested OCPL explain the Consumer Health Informatics Research Resource website was cancelled due to change in NLM consumer informatics priorities. Customer Service should receive a pre-formulated response to give.
   - Is this an issue that may generate media interest? (If so, please include strategies for responding in the plan.) Highly unlikely

IV. **Posting notice on central NLM "sunsetting calendar" (coming soon) on the NLM Wiki.** A notice should be posted on the "NLM resource sunset calendar" immediately following the effective date of the retirement of the resource. The sunset calendar, which will also be found on the NLM wiki, will serve as an historical record about retired NLM products and services.

V. **Identification of primary point of contact for further information about retired NLM resource.** Provide name and contact information for primary point of contact for retired NLM resource here:

Alla Keselman Keselmana@mail.nlm.nih.gov

Subject: ATTENTION: NLM SUNSETTING REQUEST CREATED

ATTENTION: The following Sunsetting Request was **CREATED** by Janice Kelly.

NLM Service/Product (Offering) Details	
NLM Service/Product (Offering)	SIS Division Sunset
Description	Resources and programs of the Specialized Information Services will be sunset or integrated into Library Operations, OCCS and Lister Hill.
Document(s) Supporting Justification	SIS Internal Communications Plan.docx SISsunset.docx SIS-System-message.docx
Justification	Other: The SIS division is being sunset
Retirement Date	06/21/2019
Organization	DSIS
Key Staff Involved	Hua Chang

Internal Communication Plan	
Staff to be Informed	Jody Nurik
Communicated Message	On June 23, 2019 the National Library of Medicine (NLM) Division of Specialized Information Services will be merged with the Division of Library Operations, and other parts of NLM. In 1966 the President's Science Advisory Committee concluded there was an urgent need for a coordinated, complete, computer-based file of toxicological information. Toxicology databases became part of NLM's online biomedical resources after a 1967 mandate from Congress to establish the NLM Toxicology Information Program (TIP), retitled in 1994 as the Toxicology and Environmental Health Information Program (TEHIP), part of NLM's Division of Specialized Information Services (SIS).The Toxicology Data Network (TOXNET) was created in 1985 to provide more effective access to these databases. TOXNET has been among the world's largest collection of toxicology databases. Over the past 50 years, SIS has expanded its services to other areas, including outreach to underserved and special populations, HIV/AIDS, and disaster/emergency preparedness and response. This change in NLM organizational structure is in keeping with its commitment to the NLM Strategic Plan 2017-2027: A Platform for Biomedical Discovery and Data-Powered Health, that focuses on accelerating discovery and advancing health through data-driven research. The new organizational structure enables NLM to make the best use of its talents and resources, and to improve efficiency and overall effectiveness. By eliminating unnecessary boundaries between units, NLM is striving to create a more collaborative environment for Its curation teams and a universal infrastructure for its technical teams, ensuring the integrity and sustainability of key SIS products and creating a common technical platform for delivering products and services. NLM is committed to support key functions in toxicology and environmental health and other important aspects of SIS. All key products and services are undergoing an exhausted review. Some will continue and others will be discontinued or integrated with other NLM products. Please stay tuned to the communications

	from NLM about the status of the SIS products and services. The following staff and offices will be contacted as part of the process of sunsetting SIS: • NLM Leadership • NLM ALL broadcast message from the Director • NLM Customer Service • National Network Coordinating Office / National Network of Libraries of Medicine • Director and Deputy Director of NIH
Date the Message will be Sent	06/14/2019
Communication Channel(s)	Emails Other: NLM ALL broadcast message from the Director
Retained Content	NLM Website Other: Referrals on the website notice will include: • For toxicology and environmental health information, visit <NEW TEHIP HOME PAGE>. • For chemical and drug information, visit ChemIDplus, NLM Drug Portal, or PubChem. • For HIV/AIDS, visit AIDSinfo, or AIDSource. • For Outreach Activities, visit <OET Main Website> • For Disaster information, visit Disaster Information. • For K-12 science and health education, visit <TOXTOWN Student Section>
Additional Information	RWS/WIM will report on SIS content on NLM main and send findings to LO or OCPL.

External Communication Plan	
External Stakeholders to be Informed	General public, SIS users
Communicated Message	On June 23, 2019 the National Library of Medicine (NLM) Division of Specialized Information Services will be merged with the Division of Library Operations, and other parts of NLM. In 1966 the President's Science Advisory Committee concluded there was an urgent need for a coordinated, complete, computer-based file of toxicological information. Toxicology databases became part of NLM's online biomedical resources after a 1967 mandate from Congress to establish the NLM Toxicology Information Program (TIP), retitled in 1994 as the Toxicology and Environmental Health Information Program (TEHIP), part of NLM's Division of Specialized Information Services (SIS).The Toxicology Data Network (TOXNET) was created in 1985 to provide more effective access to these databases. TOXNET has been among the world's largest collection of toxicology databases. Over the past 50 years, SIS has expanded its services to other areas, including outreach to underserved and special populations, HIV/AIDS, and disaster/emergency preparedness and response. This change in NLM organizational structure is in keeping with its commitment to the NLM Strategic Plan 2017-2027: A Platform for Biomedical Discovery and Data-Powered Health, that focuses on accelerating discovery and advancing health through data-driven research. The new organizational structure enables NLM to make the best use of its talents and resources, and to improve efficiency and overall effectiveness. By eliminating unnecessary boundaries between units, NLM is striving to create a more collaborative environment for Its curation teams and a universal infrastructure for its technical teams, ensuring the integrity and sustainability of key SIS products and creating a common technical platform for delivering products and services. NLM is committed to support key functions in toxicology and environmental health and other important aspects of SIS. All key products and services are undergoing an exhausted review. Some will continue and others will be discontinued or integrated with

	other NLM products. Please stay tuned to the communications from NLM about the status of the SIS products and services.

Subject: Follow-up: SIS Sunset Plans (Programs, Offerings, and Social Media)

Hi Janice (SIS Team),

As a follow-up to the meeting with SIS and OCPL held on 5/28, there were a few takeaways for consideration:

- SIS still needs to decide which programs are going to sunset vs. move to other NLM programs. *Jody advised to enter this information into the sunsetting system for tracking and so that these "sunset plans" are not lost once Janice and Florence retire at the end of June.*
- Program audiences (Outreach to Specific Populations, K-12 Science and Health Education, and NLM Toxicology and Environmental Health) have their own messages for each audience. *Jody advised SIS to enter this info in the sunsetting system as well so that OCPL can determine what assistance is needed*.
- In addition to social media and offerings, there's a need to include "programs" in the sunsetting system and include details about the offerings and social media accounts associated with each program. Including program information will be helpful to align the offerings and social media accounts with the appropriate information that is relevant to the audience(s).
- SIS still needs to identify, by offering and program, what government and government-funded resources can be provided or pointed to for an offering and program that is being sunset. *Again, include in the sunset system*.
- Florence/SIS needs to identify where the SIS program information should appear on NLM web pages, NNLM information, etc. *Per Jody, these recommendations should be included in the sunset system.*
- SIS (Janice) will provide a matrix document to OCPL to help identify the disposition of SIS programs, offerings and social medial accounts - is it being sunset, moving to another NLM program, or a decision still needs to be made?

Once Janice provides the above mentioned information (mainly the matrix document) and the information is entered into the sunset system, OCPL can assist and provide guidance for the messaging. Following this message, Grace will provide the sample documents referenced in the meeting as well as a spreadsheet (template) with categories of information that should be included in the matrix. **Please provide the matrix no later than Tuesday, June 4th**.

As Jody will be out of the office most of next week, I will work with our SIS team to move the sunset plans along. So, please let me know if I can assist in any way.

Regards, Nicole

Subject: RE: Meeting with OCPL re: SIS sunset plans (social media and offerings)

It was my understanding that OCPL would be providing US with guidance on how to write the messages, based on what we are entering into the sunsetting system. Now it appears that OCPL wants the messages written and provided up front? I am confused.

Thanks for your assistance in this.

Subject: Meeting with OCPL re: SIS sunset plans (social media and offerings)

Hi Siobhan and Janice,

I confirmed the meeting with Jody and OCPL staff that will be working with SIS on the sunset plans. In preparation for the meeting on 5/28, I asked if there were any specific guidance that could be shared in advance of the meeting based on information already received and info forthcoming. The following comment(s) may be helpful for submissions:

- SIS should look at how frequently, through what mechanism, and what the message should be for each of the offerings they are submitting for sunset. (For example, Twitter: 3 tweets/week

for four weeks letting followers know the account is closing and directing followers to @NLM_News for future information from NLM.)

- If there is information about communications regarding the offering submitted for sunset that have already happened with stakeholders, that should be documented. There should be some clear and basic communication strategies outlined for each offering. For example, what is the message they propose emailing to HHS ASPR to let them know they will be transferring the technology and web content to them for the All Hazards Plan Website? They need to share that content, not just that they will email them.
- Please provide the updated list of SIS sunset offerings prior to 5/28

Please provide the updated list of sunset offerings prior to the meeting. If there are questions from OCPL, they can be prepared to ask during the meeting.

I hope this helps!

Thanks, Nicole

Subject: RE: SIS social media and gov delivery - Guidance from OCPL

I have not heard back from Laura about the Health Reach updates on gov delivery.

I think I saw somewhere that NLM_HIV twitter handle is remaining active. So one report for Gov Delivery would be (assuming Health Reach update is going away). I will ask Ilyse to write these up, with the justification being that the offerings associated with the social media and news accounts are being sunset.

HealthReach Updates - Shares recent updates to the HealthReach website, where public health professionals can find multilingual health resources
K12NLMRESOURCES – For educators interested in NLM's online education resources
NLM_SIS Weekly Twitter Digest
NLM Outreach to Specific Populations Email Updates - Shares information and discusses outreach to specific populations

And for twitter is just @NLM_SIS

That sounds good to me. I was thinking we couldn't have written one sunset plan for GovD and listed the ones to be retired and done the same for Twitter saving a lot of work. I think Florence would be ok with that plan…

The Funding Opportunities for Disaster Health Info Products hasn't been in Gov Delivery for years. I was looking into it because it was on this page https://sis.nlm.nih.gov/listservnewsmedia.html

But I actually don't think it needs sunsetting because we sunset it a long time ago, when we stopped providing funding. There is no longer a Gov Delivery Topic for it, and hasn't been for a while.

Per an email from Janice:
Please enter your sunsetted social media handles into the system before June 23 and let Janice and I know you have done so, or that it will not be sunset. https://sunsetting.nlm.nih.gov. You will have to write a brief description and justification. Work with the product manager if you have questions on how to write up the entry for sunsetting the offering.

Subject: RE: SIS social media and gov delivery - Guidance from OCPL

Janice,
The person who manages the product should decide whether or not to keep the social media/gov delivery/email. Once that decision is made, then the products being sunsetted need to be entered into the system, which I have no access to. Then OCPL will write up the sunset messages for us.

You, or whomever enters the items to be sunset into the system need to talk with product owners, not the digital communications team, which is basically defunct now. Below is my best guess of what should be sunsetted. (see https://sis.nlm.nih.gov/listservnewsmedia.html#facebook)

Sunset: in yellow, I don't know.

Subject: RE: SIS social media and gov delivery - Guidance from OCPL

Hi Siobhan,
Florence and I think the digital communications committee needs to write the sunset plans so she can approve them. We expect to keep, at least in the short term, all the product email and Twitter accounts – HIV/AIDS, REMM, WISER, CHEMM. The ones to be closed are the SIS program ones such as K12, OSP, SIS Weekly and @NLM_SIS. Colette can either close now or in September the TOXMAP news. The NLM Toxicology and Environmental Health Information email updates can remain if someone in PSD or BSD continues it.

In addition these also need to have a closing date and numbers added to the OERS.

Let me know if you have any questions.

Thanks, Janice

Thanks Jody.

Re: the draft transition page, I don't recall Florence sharing. But, she handed Grace a handful of documents. Grace – please confirm.

And, yes we can meet. I will look on your calendar and schedule a time to meet.

Nicole

Subject: Re: Follow-up: SIS Sunset Plans (Programs, Offerings, and Social Media)

Below is some cursory messaging about the discontinuation of the SIS program that Jerry and I chatted about.

- The SIS program has integrated into other parts of NLM. This integration improves efficiency and discoverability of the SIS resources. We want to make the information more accessible to a larger audience.
- Over the next few months some systems and resources will be transitioning and some underutilized resources will be discontinued. We will provide advance notice and want you to know that for those resources that are being discontinued that the basic information will not be lost – some are being moved and some are being parked. Information will be available on our FTP server and in some instances, through partner website.

The messages should be honest and upbeat and he thought Patti might want to do an update blog, we might want to do a news announcement, etc. Sounds like he is looking for us to craft the plan/messages around this SIS discontinuation.

Jerry would like to see the draft transition webpage – did Florence provide a copy?

Nicole – do you want to meet early next week and do some message brainstorming?

Regards,
Jody

Agree. Just updated Jerry. He provided some more clarity around the SIS program communications. I wrote them down and will send them to you. He also wants to meet next week for an update so I am going to ask Chianti to schedule something for Jerry, Nicole, Florence, Janice, and me.

Regards,
Jody

Subject: Follow-up: SIS Sunset Plans (Programs, Offerings, and Social Media)

Hi Janice (SIS Team),

As a follow-up to the meeting with SIS and OCPL held on 5/28, there were a few takeaways for consideration:

- SIS still needs to decide which programs are going to sunset vs. move to other NLM programs. *Jody advised to enter this information into the sunsetting system for tracking and so that these "sunset plans" are not lost once Janice and Florence retire at the end of June.*
- Program audiences (Outreach to Specific Populations, K-12 Science and Health Education, and NLM Toxicology and Environmental Health) have their own messages for each audience. *Jody advised SIS to enter this info in the sunsetting system as well so that OCPL can determine what assistance is needed*.
- In addition to social media and offerings, there's a need to include "programs" in the sunsetting system and include details about the offerings and social media accounts associated with each program. Including program information will be helpful to align the offerings and social media accounts with the appropriate information that is relevant to the audience(s).
- SIS still needs to identify, by offering and program, what government and government-funded resources can be provided or pointed to for an offering and program that is being sunset. *Again, include in the sunset system*.
- Florence/SIS needs to identify where the SIS program information should appear on NLM web pages, NNLM information, etc. *Per Jody, these recommendations should be included in the sunset system.*
- SIS (Janice) will provide a matrix document to OCPL to help identify the disposition of SIS programs, offerings and social medial accounts - is it being sunset, moving to another NLM program, or a decision still needs to be made?

Once Janice provides the above mentioned information (mainly the matrix document) and the information is entered into the sunset system, OCPL can assist and provide guidance for the messaging. Following this message, Grace will provide the sample documents referenced in the meeting as well as a spreadsheet (template) with categories of information that should be included in the matrix. **Please provide the matrix no later than Tuesday, June 4th**.

As Jody will be out of the office most of next week, I will work with our SIS team to move the sunset plans along. So, please let me know if I can assist in any way.

Subject: Meeting with OCPL re: SIS sunset plans (social media and offerings)

Hi Siobhan and Janice,

I confirmed the meeting with Jody and OCPL staff that will be working with SIS on the sunset plans. In preparation for the meeting on 5/28, I asked if there were any specific guidance that could be shared in advance of the meeting based on information already received and info forthcoming. The following comment(s) may be helpful for submissions:

- SIS should look at how frequently, through what mechanism, and what the message should be for each of the offerings they are submitting for sunset. (For example, Twitter: 3 tweets/week for four weeks letting followers know the account is closing and directing followers to @NLM_News for future information from NLM.)
- If there is information about communications regarding the offering submitted for sunset that have already happened with stakeholders, that should be documented. There should be some clear and basic communication strategies outlined for each offering. For example, what is the message they propose emailing to HHS ASPR to let them know they will be transferring the technology and web content to them for the All Hazards Plan Website? They need to share that content, not just that they will email them.
- Please provide the updated list of SIS sunset offerings prior to 5/28

Please provide the updated list of sunset offerings prior to the meeting. If there are questions from OCPL, they can be prepared to ask during the meeting.

I hope this helps!

Thanks, Nicole

Subject: RE: SIS social media and gov delivery - Guidance from OCPL

I have not heard back from Laura about the Health Reach updates on gov delivery.

I think I saw somewhere that NLM_HIV twitter handle is remaining active. So one report for Gov Delivery would be (assuming Health Reach update is going away). I will ask Ilyse to write these up, with the justification being that the offerings associated with the social media and news accounts are being sunset.

HealthReach Updates - Shares recent updates to the HealthReach website, where public health professionals can find multilingual health resources
K12NLMRESOURCES – For educators interested in NLM's online education resources
NLM_SIS Weekly Twitter Digest

Subject: RE: SIS social media and gov delivery - Guidance from OCPL

The Funding Opportunities for Disaster Health Info Products hasn't been in Gov Delivery for years. I was looking into it because it was on this page https://sis.nlm.nih.gov/listservnewsmedia.html

But I actually don't think it needs sunsetting because we sunset it a long time ago, when we stopped providing funding. There is no longer a Gov Delivery Topic for it, and hasn't been for a while.

Subject: RE: SIS social media and gov delivery - Guidance from OCPL

Janice,
The person who manages the product should decide whether or not to keep the social media/gov delivery/email. Once that decision is made, then the products being sunsetted need to be entered into the system, which I have no access to. Then OCPL will write up the sunset messages for us.

You, or whomever enters the items to be sunset into the system need to talk with product owners, not the digital communications team, which is basically defunct now. Below is my best guess of what should be sunsetted. (see https://sis.nlm.nih.gov/listservnewsmedia.html#facebook)

Sunset: in yellow, I don't know.

Subject: RE: SIS social media and gov delivery - Guidance from OCPL

Hi Siobhan,

Florence and I think the digital communications committee needs to write the sunset plans so she can approve them. We expect to keep, at least in the short term, all the product email and Twitter accounts – HIV/AIDS, REMM, WISER, CHEMM. The ones to be closed are the SIS program ones such as K12, OSP, SIS Weekly and @NLM_SIS. Colette can either close now or in September the TOXMAP news. The NLM Toxicology and Environmental Health Information email updates can remain if someone in PSD or BSD continues it.

In addition these also need to have a closing date and numbers added to the OERS.

Let me know if you have any questions.

Thanks, Janice

Subject: Re: gathering agenda for Quarterly NLM Literature meeting

Jerry,

I'll get the Medline documentation into the "updates" section of our agenda. On your points:

1. No Comment.
2. The discussion that Patti and I had was specifically about the amount of work that NLM (now just me and one person from my group working in our spare time) do to support JATS. It is a NISO project, but we work pretty hard to keep it branded at NLM. There are no worries about the latest version that was released at the beginning of the year. I just announced at JATS-Con this year that the NISO Standing Committee will be working on a non-backward compatible version to be released no earlier than 2021. I don't anticipate any problems with this version either. I don't know who the NISO rep is now that Barbara left. I will need to know next time I need NLM to vote "Yes" on one of my items, though. ☺
3. Yes. I mean DOIs. And whether we can mint them is the question. Although the discussion has always been whether we would then need to be a CrossRef-conforming publisher. But I think the worry is the same. If we are creating and publishing content, it would be good to apply these industry standard identifiers, but I understand the limitations. That's why we save these questions for the Quarterly NLM Literature Production Committee.

Subject: Re: gathering agenda for Quarterly NLM Literature meeting

Jumping in with what I can fill in:

1. I do not have a proposal, but I can try to pull one together. I would need to familiarize myself with other NLM log data to address the consistency angle…
2. No comment.
3. He does mean DOI-dois. The question you raise is the one that has always been out there. For what it's worth, DOE is already minting DOIs for datasets and working with or in discussions with NIH institutes.

Subject: RE: gathering agenda for Quarterly NLM Literature meeting

Jeff,
Thanks for pulling together the draft agenda. I'd also like to revisit the Medline re-review procedures documentation (a status update). On the three items you suggest:

1. Do we have a proposal from NCBI about sharing PMC usage data? If so, it would be helpful to see it in advance of the meeting – and we might need to vet it w/ others (e.g., OCCS for consistency w/ other log data)
2. JATS – are there any concerns about the new JATS update? Do you know who is our current NISO rep (since Barbara Rapp retired)? If not, I can check w/ Mike Huerta
3. Do you mean "DOI" doi's???? Are we even in a position to mint them, or do we have to become a signatory to DataCite????

Thanks
Jerry

Cc: Funk, Kathryn (NIH/NLM/NCBI) [E] <kathryn.funk@nih.gov>
Subject: gathering agenda for Quarterly NLM Literature meeting

Hi Jerry,

I know we don't have a day yet, but we should start thinking about the agenda. Here are three items that we'd like to talk about.

1. Discussion of relaxing the restrictions on sharing PMC Usage Data (Katie item).

2. NLM support for NISO Z39.96 JATS. Patti brought this question up at a brown bag and suggested that it be on the next agenda.

3. Can NLM mint DOIs for the JATS-Con Proceedings articles? We've avoided doing this so that NCBI would not be considered a publisher. But EBI is going to get DOIs for articles for the JATS-Con that they hosted this year. It would be best if we could get them for the whole set consistently – and that they not be European DOIs.
   https://www.ncbi.nlm.nih.gov/books/NBK65129/

And we will want our usual updates – Library Linkout can be an update.

Here is the agenda from the last meeting. I don't think we have any holdovers.

1. Sunsetting Library LinkOut
2. Supporting other funders for PMC (and beyond)
3. Updates before MLA

a. MEDLINE journal re-review
b. PubMed 2.0
c. NIHMS4
d. ToxNet Literature Resources
e. MEDLINE Publisher Portal
f. NISO Z39.96-2019 JATS 1.2

4. Public Access Milestone Celebration

Thanks
Jeff

Hinari Access to Research for Health programme

Hinari Programme set up by WHO together with major publishers, enables low- and middle- income countries to gain access to one of the world's largest collections of biomedical and health literature. Up to 15,000 journals (in 30 different languages), up to 47,000 e-books, up to 100 other information resources are now available to health institutions in more than 100 countries, areas and territories benefiting many thousands of health workers and researchers, and in turn, contributing to improve world health.

Nature. 2016 Jun 23. doi: 10.1038/nature18938. [Epub ahead of print]

Structural basis of potent Zika-dengue virus antibody cross-neutralization.

Barba-Spaeth G[1,2], Dejnirattisai W[3], Rouvinski A[1,2], Vaney MC[1,2], Medits I[4], Sharma A[1,2], Simon-Lorière E[5,6], Sakuntabhai A[5,6], Cao-Lormeau VM[7], Haouz A[8], England P[9], Stiasny K[4], Mongkolsapaya J[3,10], Heinz FX[4], Screaton GR[3], Rey FA[1,2].

Author information

Abstract

Zika virus is a member of the flavivirus genus that had not been associated with severe disease in humans until the recent outbreaks, when it was linked to microcephaly in newborns in Brazil and to Guillain-Barré syndrome in adults in French Polynesia. Zika virus is related to dengue virus, and we report here that a category of antibodies isolated from dengue patients and targeting a conformational epitope potently neutralize Zika virus. The crystal structure of two of these antibodies in complex with the envelope protein of Zika virus reveals the details of a conserved epitope, which is also the site of interaction of the envelope protein dimer with the precursor prM protein during virus maturation. Comparison of the Zika and dengue virus immunocomplexes provides a lead for rational, epitope-focused design of a universal vaccine capable of eliciting potent cross-neutralizing antibodies to protect against Zika and dengue viruses simultaneously.

For Researchers

We specialize in clinical effectiveness research, and information based on it, at PubMed Health. Clinical effectiveness research looks for answers to the question, "What works?", in health and medicine.

We also develop resources to help researchers with the complex task of systematic reviewing. Systematic reviewing is a key part of clinical effectiveness research – but it's used across many other research areas, too.

We gather resources to help everyone else understand the research process as well, including in our glossary. Check out our collection of free online books.

About HSDB

What is HSDB?
HSDB is a toxicology database that focuses on the toxicology of potentially hazardous chemicals. It provides information on human exposure, industrial hygiene, emergency handling procedures, environmental fate, regulatory requirements, nanomaterials, and related areas. The information in HSDB has been assessed by a Scientific Review Panel.

Updates: The HSDB Scientific Review Panel meets several times yearly to review selected substances, add new records, and update records, as needed.

Did you know

How do I lease/license the TOXNET databases?

The following TOXNET databases are available for lease: ChemIDplus, DIRLINE, CCRIS, GENE-TOX, HSDB, and TOXLINE.

The National Library of Medicine presents MedPix®

Case Of The Week

MedPix® is a fully web-enabled cross-platform database, integrating images and textual information. Our primary target audience includes physicians and nurses, allied health professionals, medical students, nursing students and others.

The content material is organized by disease location (organ system), pathology category, patient profiles, and by image classification and caption. Currently, the MedPix® website can be used to browse the cases. Additional functionality: getting CME credits, registering, submitting a case and searching through image and text searches, will be introduced within the next 12 months. We will post updates on twitter @nlm_lhc#MedPix.

A free online Medical Image Database with over 53,000 indexed and curated images, from over 13,000 patients.

TOXNET TRANSITION TIMELINE

Develop TOXNET transition page: April – May 2019

Task	Due date	Responsibility of
Develop the transition page	4/26/2019	SIS
Meet with NLM Web group	5/2/2019	SIS, LO, NCBI
Enter Transition plan into the NLM Sunsetting portal	6/1/2019	SIS
Refine the page, get ready for user testing	5/9/2019	SIS, NCBI
TOXNET Fact Sheet revision	6/15/2019	SIS

Iterative user testing and refinement of the transition page: May – August 2019

Task	Due date	Responsibility of
Develop tasks and questions	5/9/2019	NCBI, SIS
Refine web page and Help pages iteratively based on usability test results	5/31/2019	NCBI, SIS

NCBI platforms (PubMed, PubChem, Bookshelf) finalize integration: May – September 2019

Task	Due date	Responsibility of
Fix CCRIS and Gene-Tox display in PubChem – by chemicals	6/7/2019	PubChem
Add IBM Watson Emergency Medical Treatment annotation from HSDB	7/15/2019	SIS, PubChem
PubChem adds HSDB housekeeping annotations, e.g. last update date, last review date, etc.	6/30/2019 (Done 5/23)	PubChem
LiverTox integration complete	9/30/2019	Bookshelf
LactMed integration complete	Done	Bookshelf

Transition page goes live: June – September 2019

Task	Due date	Responsibility of
Transfer html/css/js files to NLM main site (Teamsite)	6/1/2019	SIS, LO, OCCS
Add NLM standard header/footer (Teamsite)	6/15/2019	SIS, LO, OCCS

Publish TOXNET Transition in NLM Technical Bulletin June – September 2019

Task	Due date	Responsibility of
NLM Technical Bulletin draft	6/1/2019	SIS, NCBI, LO
NLM Technical Bulletin published	6/15/2019	SIS, NCBI, LO

Links from current TOXNET home page to transition page: June – September 2019

Task	Due date	Responsibility of
Add a link to the Transition page from TOXNET home	6/15/2019	SIS
Add links to TOXNET database home pages to NCBI version	6/15/2019	SIS

Current TOXNET Web site taken down: September – December 2019

Task	Due date	Responsibility of
Link to HSDB in PubChem record removed	12/1/2019	PubChem
Update the PubChem HSDB Data Source page • Expand HSDB to full name • URL on this page goes to TOXNET Fact sheet page	12/1/2019	PubChem
TOXNET Fact Sheet migrate to NLM Main web site	11/1/2019	LO
TOXNET server comes down	12/1/2019	OCCS
De-register Google Search Console	12/1/2019	OCCS
Discontinue TOXNET FISMA reporting	12/1/2019	OCCS

URL redirect to the transition page: September – December 2019

Task	Due date	Responsibility of
URL redirect – all non-record-based toxnet traffic redirects to Transition page	12/1/2019	OCCS, NCBI
Record-to-record mapping of URL redirect	12/1/2019	OCCS, NCBI

Transition page active and linked from NLM home page January 2020 – August 2021

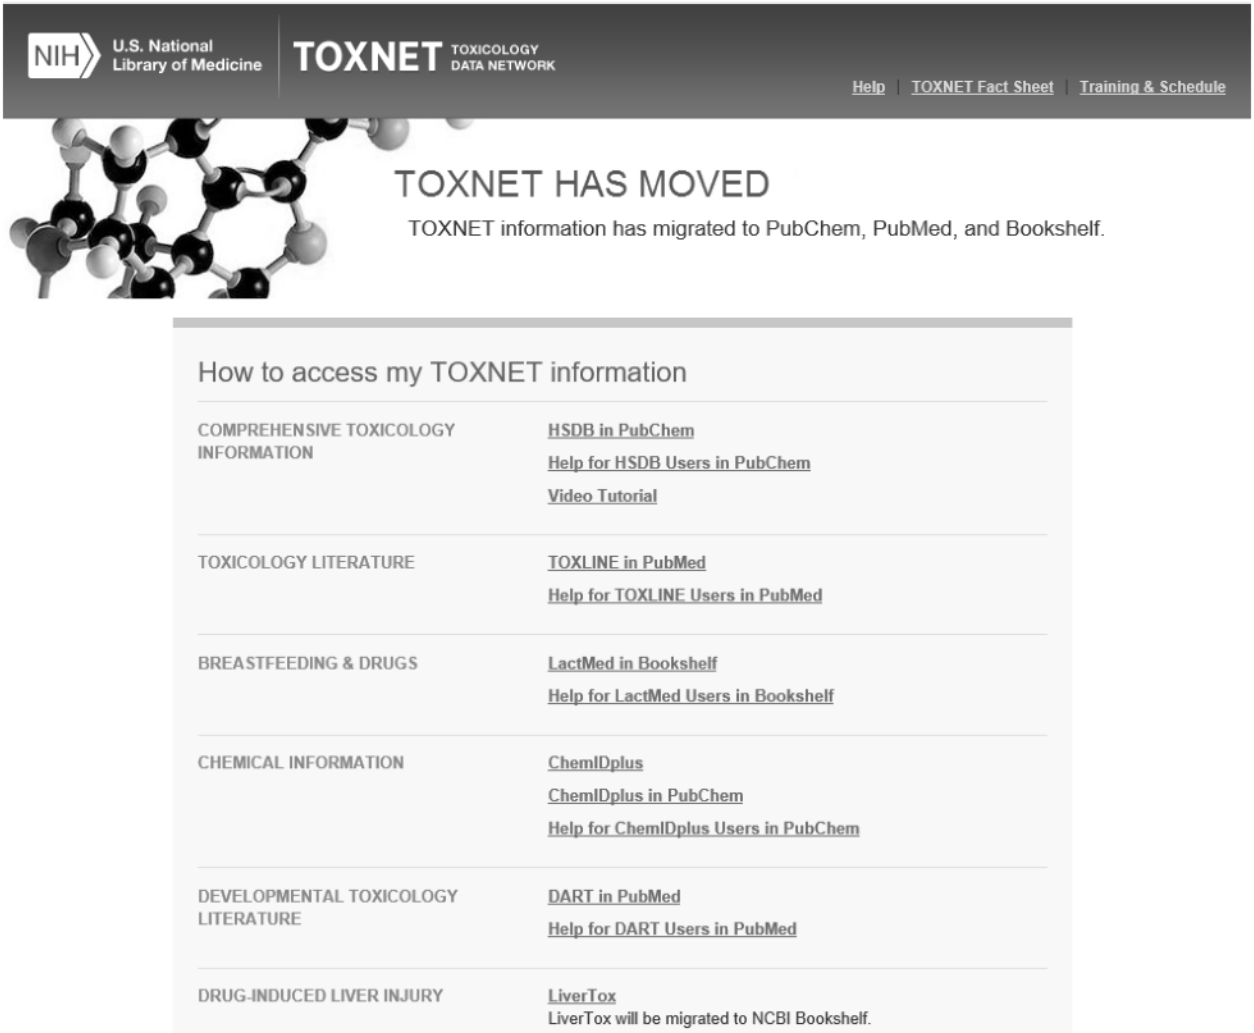
Task	Due date	Responsibility of
Maintain transition page on NLM Main website	ongoing	LO, OCCS

Transition page removal: September 2021

Task	Due date	Responsibility of
Message on Transition page 3 months before sunset	6/1/2021	LO
Sunset the transitional page	9/30/2021	LO

TOXNET TRANSITION PAGE IMPLEMENTATION

Transition page (TOXNET home page) will be enabled in September 2019 and remain on through September 2021. A link from the current TOXNET home page will direct uses to check out the TOXNET transition page for 3 months before the current TOXNET sunset. The page will be staged in dev with multiple usability sessions to test messages and user workflows. Currently, the transition page has the following look and will be adjusted per each element. User testing will begin in May 2019. All TOXNET urls will be directed to this page in December 2019 when the current TOXNET server is decommissioned. Preview this Transition Page at https://sis4.nlm.nih.gov/changPage/newtoxnet/ (sis4user/4sis2use)



1. Mobile link will be removed

    a. Current “mobile app” users will be redirected to Transition page
2. Help will go to a revised help page to help designed with content around finding information on the new pages, i.e. PubChem, Bookshelf, etc.
    a. Page will be static with links to PDFs and YouTube videos
    b. These help links will also be integrated into database structure in section 13
    c. Page will also include a link to the help center
    d. Links on the page will be consistent with TOXNET transition page
3. FAQs link will be removed
    a. Essential information will be put into Help page
4. TOXNET Fact Sheet will be updated to just contain database facts and a link to the help center
5. Training Manual & Schedule link will be replaced with link to the NNLM training page
6. Share link will be removed
7. Welcome text will include info on transition
    a. “TOXNET information has migrated to PubChem, PubMed, and Bookshelf”
8. Environmental Health & Toxicology will be removed
9. This page will be modified to contain tips on migration, content to be driven by usability and user feedback
10. Each database will have its own transition message

COMPREHENSIVE TOXICOLOGY INFORMATION	HSDB in PubChem Help for HSDB Users in PubChem Video Tutorial
TOXICOLOGY LITERATURE	TOXLINE in PubMed Help for TOXLINE Users in PubMed
BREASTFEEDING & DRUGS	LactMed in Bookshelf Help for LactMed Users in Bookshelf
CHEMICAL INFORMATION	ChemIDplus ChemIDplus in PubChem Help for ChemIDplus Users in PubChem

DEVELOPMENTAL TOXICOLOGY LITERATURE	**DART in PubMed** **Help for DART Users in PubMed**
DRUG-INDUCED LIVER INJURY	**LiverTox** LiverTox will be migrated to NCBI Bookshelf.
CHEMICAL RELEASES & MAPPING	**TOXMAP** TOXMAP website will be retired in the Fall of 2019. **TRI** TOXNET's TRI will be retired in the Fall of 2019. Visit **TRI at EPA**.
COMPARATIVE TOXICOGENOMICS	**CTD** TOXNET's CTD will be retired in the Fall of 2019. Visit **CTD** at NC State University.
HOUSEHOLD PRODUCT SAFETY	**Household Products Database**
OCCUPATIONAL EXPOSURE TO CHEMICALS	**Haz-Map** HazMap will be retired in the Fall of 2019.
RISK ASSESSMENT	**IRIS** TOXNET's IRIS will be retired in the Fall of 2019. Visit **IRIS at EPA**. **ITER** TOXNET's ITER will be retired in the Fall of 2019.
ANIMAL TESTING ALTERNATIVES	**ALTBIB**

ARCHIVED, NO LONGER UPDATED

CCRIS in PubChem

Help for CCRIS Users in PubChem

CPDB

CPDB will be retired by the Fall of 2019.

GENE-TOX in PubChem

Help for GENE-TOX Users in PubChem

Footer will remain unchanged

TOXNET TRANSITION TIMELINE

Develop TOXNET transition page: April – May 2019

Task	Due date	Responsibility of
Develop the transition page	4/26/2019	SIS
Meet with NLM Web group	5/2/2019	SIS, LO, NCBI
Enter Transition plan into the NLM Sunsetting portal	6/1/2019	SIS
Refine the page, get ready for user testing	5/9/2019	SIS, NCBI
TOXNET Fact Sheet revision	6/15/2019	SIS

Iterative user testing and refinement of the transition page: May – August 2019

Task	Due date	Responsibility of
Develop tasks and questions	5/9/2019	NCBI, SIS
Refine web page and Help pages iteratively based on usability test results	5/31/2019	NCBI, SIS

NCBI platforms (PubMed, PubChem, Bookshelf) finalize integration: May – September 2019

Task	Due date	Responsibility of
Fix CCRIS and Gene-Tox display in PubChem – by chemicals	6/7/2019	PubChem
Add IBM Watson Emergency Medical Treatment annotation from HSDB	7/15/2019	SIS, PubChem
PubChem adds HSDB housekeeping annotations, e.g. last update date, last review date, etc.	6/30/2019 (Done 5/23)	PubChem
LiverTox integration complete	9/30/2019	Bookshelf
LactMed integration complete	Done	Bookshelf

Transition page goes live: June – September 2019

Task	Due date	Responsibility of
Transfer html/css/js files to NLM main site (Teamsite)	6/1/2019	SIS, LO, OCCS
Add NLM standard header/footer (Teamsite)	6/15/2019	SIS, LO, OCCS

Publish TOXNET Transition in NLM Technical Bulletin June – September 2019

Task	Due date	Responsibility of
NLM Technical Bulletin draft	6/1/2019	SIS, NCBI, LO
NLM Technical Bulletin published	6/15/2019	SIS, NCBI, LO

Links from current TOXNET home page to transition page: June – September 2019

Task	Due date	Responsibility of
Add a link to the Transition page from TOXNET home	6/15/2019	SIS
Add links to TOXNET database home pages to NCBI version	6/15/2019	SIS

Current TOXNET Web site taken down: September – December 2019

Task	Due date	Responsibility of
Link to HSDB in PubChem record removed	12/1/2019	PubChem
Update the PubChem HSDB Data Source page • Expand HSDB to full name • URL on this page goes to TOXNET Fact sheet page	12/1/2019	PubChem
TOXNET Fact Sheet migrate to NLM Main web site	11/1/2019	LO
TOXNET server comes down	12/1/2019	OCCS
De-register Google Search Console	12/1/2019	OCCS
Discontinue TOXNET FISMA reporting	12/1/2019	OCCS

URL redirect to the transition page: September – December 2019

Task	Due date	Responsibility of
URL redirect – all non-record-based toxnet traffic redirects to Transition page	12/1/2019	OCCS, NCBI
Record-to-record mapping of URL redirect	12/1/2019	OCCS, NCBI

Transition page active and linked from NLM home page January 2020 – August 2021

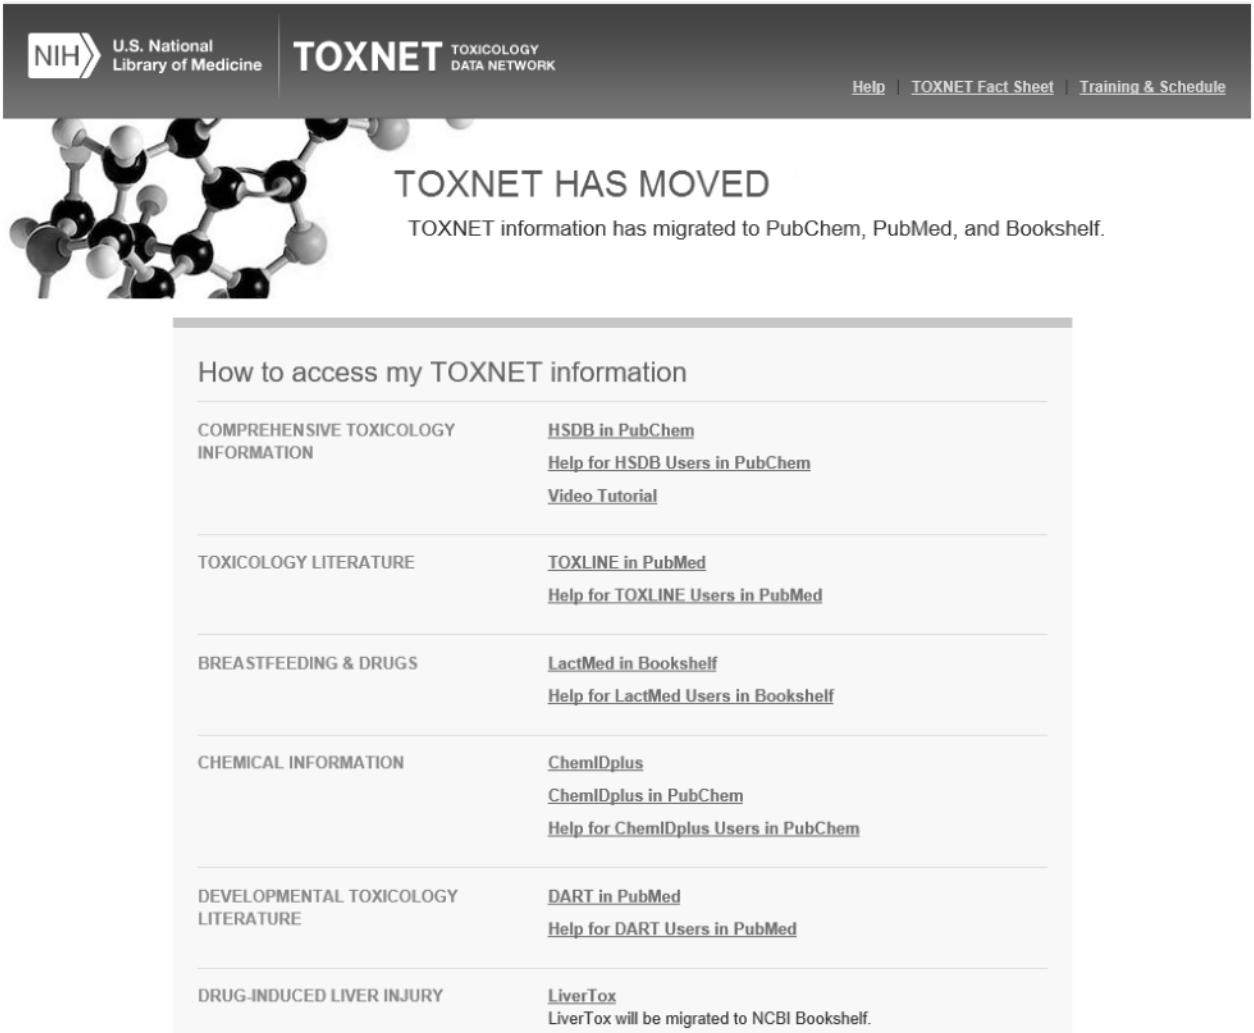
Task	Due date	Responsibility of
Maintain transition page on NLM Main website	ongoing	LO, OCCS

Transition page removal: September 2021

Task	Due date	Responsibility of
Message on Transition page 3 months before sunset	6/1/2021	LO
Sunset the transitional page	9/30/2021	LO

TOXNET TRANSITION PAGE IMPLEMENTATION

Transition page (TOXNET home page) will be enabled in September 2019 and remain on through September 2021. A link from the current TOXNET home page will direct uses to check out the TOXNET transition page for 3 months before the current TOXNET sunset. The page will be staged in dev with multiple usability sessions to test messages and user workflows. Currently, the transition page has the following look and will be adjusted per each element. User testing will begin in May 2019. All TOXNET urls will be directed to this page in December 2019 when the current TOXNET server is decommissioned. Preview this Transition Page at https://sis4.nlm.nih.gov/changPage/newtoxnet/ (sis4user/4sis2use)



1. Mobile link will be removed

    a. Current “mobile app” users will be redirected to Transition page
2. Help will go to a revised help page to help designed with content around finding information on the new pages, i.e. PubChem, Bookshelf, etc.
    a. Page will be static with links to PDFs and YouTube videos
    b. These help links will also be integrated into database structure in section 13
    c. Page will also include a link to the help center
    d. Links on the page will be consistent with TOXNET transition page
3. FAQs link will be removed
    a. Essential information will be put into Help page
4. TOXNET Fact Sheet will be updated to just contain database facts and a link to the help center
5. Training Manual & Schedule link will be replaced with link to the NNLM training page
6. Share link will be removed
7. Welcome text will include info on transition
    a. “TOXNET information has migrated to PubChem, PubMed, and Bookshelf”
8. Environmental Health & Toxicology will be removed
9. This page will be modified to contain tips on migration, content to be driven by usability and user feedback
10. Each database will have its own transition message

COMPREHENSIVE TOXICOLOGY INFORMATION	HSDB in PubChem Help for HSDB Users in PubChem Video Tutorial
TOXICOLOGY LITERATURE	TOXLINE in PubMed Help for TOXLINE Users in PubMed
BREASTFEEDING & DRUGS	LactMed in Bookshelf Help for LactMed Users in Bookshelf
CHEMICAL INFORMATION	ChemIDplus ChemIDplus in PubChem Help for ChemIDplus Users in PubChem

DEVELOPMENTAL TOXICOLOGY LITERATURE	**DART in PubMed** **Help for DART Users in PubMed**
DRUG-INDUCED LIVER INJURY	**LiverTox** LiverTox will be migrated to NCBI Bookshelf.
CHEMICAL RELEASES & MAPPING	**TOXMAP** TOXMAP website will be retired in the Fall of 2019. **TRI** TOXNET's TRI will be retired in the Fall of 2019. Visit **TRI at EPA**.
COMPARATIVE TOXICOGENOMICS	**CTD** TOXNET's CTD will be retired in the Fall of 2019. Visit **CTD** at NC State University.
HOUSEHOLD PRODUCT SAFETY	**Household Products Database**
OCCUPATIONAL EXPOSURE TO CHEMICALS	**Haz-Map** HazMap will be retired in the Fall of 2019.
RISK ASSESSMENT	**IRIS** TOXNET's IRIS will be retired in the Fall of 2019. Visit **IRIS at EPA**. **ITER** TOXNET's ITER will be retired in the Fall of 2019.
ANIMAL TESTING ALTERNATIVES	**ALTBIB**

ARCHIVED, NO LONGER UPDATED

Internal Communication Plan	
Staff to be Informed	Colette Hochstein Pertti Hakkinen Stacey Arnesen David Gillikin Terry Ahmed Wei Ma Jeanne Goshorn Amanda Wilson
Communicated Message	On December 1, 2019 the National Library of Medicine (NLM) TOXNET website will be discontinued. Most of its content will continue to be available through other NLM databases as well as external websites. TOXNET has served as an integrated system of toxicology and environmental health databases. The most frequently used of those databases are being incorporated into three of NLM's core resources: PubChem, a database of chemical information; PubMed a resource for biomedical literature; and Bookshelf, with free online access to books and documents in life science and healthcare. Several other databases in TOXNET were made available on TOXNET from other organizations, such as the U.S. Environmental Protection Agency, and will continue to be

	available from those sources. Some databases will be retired. For a complete list of TOXNET databases and how to access their content, see the TOXNET transition page.
Date the Message will be Sent	09/01/2019
Communication Channel(s)	Emails Digital signage Information delivered at staff meetings Other: GovD bulletins, Tech Bulletin
Retained Content	NLM Website
Additional Information	via PubChem, PubMed, Bookshelf, others

Subject: Report: SIS Sunset Plan Update

SIS Sunsetting Draft Message and Updates:

Draft Message in Process (Working on with Jerry) – SIS Organization Sunset

Over the next few months, some of the SIS resources and systems will transition to other areas within NLM and some underutilized resources will be integrated into other resources, accessible on partner sites, or discontinued.

To align with the National Library of Medicine's (NLM) 2017 Strategic Plan, the NLM has moved forward with organizational changes which includes the integration of Specialized Information Services (SIS) division into other parts of the Library. This integration not only improves discoverability and access to resources for engaging with broader audiences but also enables NLM to leverage its talents and resources while improving its overall efficiency and effectiveness.

Over the next few months, some of the SIS resources and systems will transition to other areas within NLM and some underutilized resources will be integrated into other resources, accessible on partner sites, or discontinued.

We will be providing notice of these changes. Please know for the resources that are being discontinued the basic information will not be lost – some will be available on other NLM web pages and through partner websites.

Recommended communication tactics/distribution channels for the above message

- SIS Web page (either a subpage off the NLM home page or on the current SIS home page). The page will be dynamic and will be the central location for NLM to provide advance notice of changes and where resources have moved/or can be accessed
- A follow-up Musings blog
- NLM News Announcement
- Technical Bulletin announcement
- Social media messaging
- E-Blast to appropriate audiences
- NLM Broadcast email from NLM Director to staff about sunset updates and thanks to SIS staff

These recommended tactics help ensure that NLM staff, NLM partners, direct beneficiary audiences, and end users are provided with up-to-date communications about transitioned and sunset resources.

Current SIS Offerings (9) Entered in the Sunset System

- TOXNET
- TOXNET Toxics Release Inventory (TRI)
- SIS K-12 Program

- Environmental Health Student Portal
- ChemSpell
- All Hazards Plan
- TOXLINE
- Arctic Health
- American Indian and Alaska Native Health Portal

Misc. info:

- Jerry, Nicole, Florence, Janice, and Jody met this week to review sunset plans and next steps and will be meeting again on June 24. As Florence and Janice are retiring, we have asked that they identify points of contacts for SIS sunset offerings
- Jody is working with Lisa Theisen (WIMS) on options for adding a SIS subpage to the NLM home page
- OCPL is working on the process and messaging around shutting down SIS social media assets
- OCPL is working on tailored messaging for K-12 and other specific audiences as the offerings are being discontinued

Subject: Re: Sunsetting NIEHS ?

In addition to what Jody sent you, which nicely summarizes Plans emerging from our meeting with Florence and Janice this week, I have also asked Stacie for a more detailed breakout of activities related to DR2 and proposals for transitioning them. Some items, like disaster related CDEs, may not sunset but transition elsewhere in NLM. The basic message to NIEHS is that we are actively assessing DR2 and expecting that some activities will transition. One item that you might discuss is the website. Although Stacie sees some value—and little cost—in keeping it, my initial thought would be to have NIEHS take it over as the NIH lead for the effort, on a mutually agreeable timeframe.

Hi Patti,

Please see below information regarding SIS sunsetting – in my office if you need anything else or have questions. Hoping this is what you were looking for.

Thanks,
Jody

SIS Sunsetting Draft Message and Updates:

Draft Message in Process (Working on with Jerry) – SIS Organization Sunset

Over the next few months, some of the SIS resources and systems will transition to other areas within NLM and some underutilized resources will be integrated into other resources, accessible on partner sites, or discontinued.

To align with the National Library of Medicine's (NLM) 2017 Strategic Plan, the NLM has moved forward with organizational changes which includes the integration of Specialized Information Services (SIS) division into other parts of the Library. This integration not only improves discoverability and access to resources for engaging with broader audiences but also enables NLM to leverage its talents and resources while improving its overall efficiency and effectiveness.

Over the next few months, some of the SIS resources and systems will transition to other areas within NLM and some underutilized resources will be integrated into other resources, accessible on partner sites, or discontinued.

We will be providing notice of these changes. Please know for the resources that are being discontinued the basic information will not be lost – some will be available on other NLM web pages and through partner websites.

Recommended communication tactics/distribution channels for the above message

- SIS Web page (either a subpage off the NLM home page or on the current SIS home page).
  The page will be dynamic and will be the central location for NLM to provide advance notice of changes and where resources have moved/or can be accessed

- A follow-up Musings blog
- NLM News Announcement
- Technical Bulletin announcement
- Social media messaging
- E-Blast to appropriate audiences
- NLM Broadcast email from NLM Director to staff about sunset updates and thanks to SIS staff

These recommended tactics help ensure that NLM staff, NLM partners, direct beneficiary audiences, and end users are provided with up-to-date communications about transitioned and sunset resources.

Current SIS Offerings (9) Entered in the Sunset System

- TOXNET
- TOXNET Toxics Release Inventory (TRI)

- SIS K-12 Program
- Environmental Health Student Portal
- ChemSpell
- All Hazards Plan
- TOXLINE
- Arctic Health
- American Indian and Alaska Native Health Portal

Misc. info:

- Jerry, Nicole, Florence, Janice, and Jody met this week to review sunset plans and next steps and will be meeting again on June 24. As Florence and Janice are retiring, we have asked that they identify points of contacts for SIS sunset offerings
- Jody is working with Lisa Theisen (WIMS) on options for adding a SIS subpage to the NLM home page
- OCPL is working on the process and messaging around shutting down SIS social media assets
- OCPL is working on tailored messaging for K-12 and other specific audiences as the offerings are being discontinued

---

Everyone,
I received this communication today from the US Consumer product and Safety Commission concerning the changes to the TOXNET databases. I have sent a short message thanking him for his input and acknowledging that I received his message.

As you can see in the attached PDF, they are especially concerned about HSDB, household products database and Haz-Map.

David

U.S. CONSUMER PRODUCT SAFETY COMMISSION
5 RESEARCH PLACE
ROCKVILLE, MD 20850

June 17, 2019

David Gillikin, Chief
Bibliographic Services Division
National Library of Medicine
Bldg. 38A, Rm. 4N419
MSC 3832
8600 Rockville Pike
Bethesda, MD 20894

Dear Mr. Gillikin:

I am writing on behalf of the staff of the U.S. Consumer Product Safety Commission (CPSC) Directorate for Health Sciences. The comments here are those of the CPSC staff, have not been reviewed or approved by, and may not necessarily reflect the views of, the Commission. As toxicologists, pharmacologists, and physiologists, we rely heavily on the National Library of Medicine's (NLM's) TOXNET and PubMed databases. NLM's databases are absolutely essential to our work protecting consumers from unreasonable risk of injury.

We understand that NLM is considering changes to its TOXLINE databases, and that some databases may be merged into other databases or be eliminated entirely. We wish to take this opportunity to explain why some of the databased are important to our work. As explained on the TOXNET Web page, the Hazardous Substances Data Bank (HSDB) is one of the most visited databases by users, including CPSC toxicologists and pharmacologists. It is particularly useful for rapidly obtaining toxicology, exposure and use information. It supports our work on chronic hazards, as well as our work on poison prevention.

The Household Products Database (HPD) is also of particular interest. Although we have jurisdiction over household products, manufacturers are not required to report their ingredients and formulations to us. As a small agency, we lack the resources to maintain such a database on

our own. Haz-Map provides useful information on consumer exposures from art materials and household remodeling.

As you continue your work on improving NLM's databases, please keep in mind the importance of your work to federal regulatory agencies and the toxicology and environmental health community. Please feel free to contact me if you would like to discuss our needs further.

Thank you very much.

Best regards,

Michael A. Babich

ATTENTION: The following Sunsetting Request was **CREATED** by Jeanne Goshorn.

NLM Service/Product (Offering) Details	
NLM Service/Product (Offering)	DART (Developmental and Reproductive Toxicology)
Description	The Developmental and Reproductive Toxicology database (DART) is a TOXNET database that provides more than 400,000 journal references covering teratology and other aspects of developmental and reproductive toxicology. DART was initially funded by the U.S. Environmental Protection Agency, the National Institute of Environmental Health Sciences, the National Center for Toxicological Research of the Food and Drug Administration, and NLM. The DART database covers teratology and other aspects of developmental and reproductive toxicology with references to literature published since the early 1900s. The DART database, like TOXLINE, contains MEDLINE/PubMed references related to this subject. A search strategy has been used with PubMed to create the basic core of DART by pulling records in to the TOXNET database, which also includes references not included in MEDLINE/PubMed, such as meeting abstracts, books, technical reports, and journals originally not indexed for or available in MEDLINE.
Document(s) Supporting Justification	DART justification.docx
Justification	No longer aligned with NLM priorities or mission needs

	Cost in relation to value

Subject: RE: TOXNET

Sure that's fine. These are the kinds of stakeholders we should be reaching out to as we consider whether to sunset or transition our information services. We need to understand how they are using the products, whether there are available equivalents and how our changes affect their work so we can communicate effectively as we sunset and transition.

Those transition/sunsetting meetings should probably include the incoming product sponsors, David, Stacey, and Amanda.

Subject: RE: The Toxicology Reference Book Collection

I just reviewed what was submitted by SIS (matrix and the entries in the system) and do not see anything about a Toxicology Reference Book Collection being destroyed, much less with a deadline of 6/24. There are several databases (shown on TOXNET) that will be assumed by other parts of NLM. Users will be pointed to their new locations (SIS shared the draft of the homepage). I am not sure to what collection, though, Dr. Corn is inquiring about.

Subject: The Toxicology Reference Book Collection

People,

I enter unfamiliar ground and apologize, but George Fonger and others are telling me of their concern about the imminent destruction (this Monday) of the Toxicology Reference Book Collection held by SIS which they believe should be preserved because the collection has both historical and quotidian pragmatic value with connections to HBCUs and Regional Medical Centers.

I claim no personal opinion about the value of these books but pass on these concerns today because their destruction is moments away, and I'd like to be sure their potential value has been fairly estimated.

Subject: SIS toxicology book collection

I understand my former colleague George Fonger spoke with you last week about the dispersal of toxicology interests here in SIS (to be merged with multiple parts of NLM) as of this coming Sunday. If you have any concerns he raised, I am available through my cell phone at: Personal Info Personal Info

My most urgent frustration is the plan to discard (I believe this means shred rather than find a home for) our toxicology reference collection on Monday. The collection contains hard to acquire books that have been collected over at least 30 years. As this division has worked with Historically Black Colleges and with Regional Medical Centers, I am sure with a little dedication something better than the current plan could be found.

As far as I can see with the Toxnet system, we are changing the essence of NLM from a place where researchers in biomedical interests find resources brought together into an institution which tells researchers to go elsewhere.

In any case, my group is gradually moving back to 38a in the coming months. Although I have been at NLM since 1997, I don't think we have met. George has always talked positively about you. If you are available for coffee someday, do let me know.

SIS Sunsetting Draft Message and Updates:

Draft Message in Process (Working on with Jerry) – SIS Organization Sunset

Over the next few months, some of the SIS resources and systems will transition to other areas within NLM and some underutilized resources will be integrated into other resources, accessible on partner sites, or discontinued.

To align with the National Library of Medicine's (NLM) 2017 Strategic Plan, the NLM has moved forward with organizational changes which includes the integration of Specialized Information Services (SIS) division into other parts of the Library. This integration not only improves discoverability and access to resources for engaging with broader audiences but also enables NLM to leverage its talents and resources while improving its overall efficiency and effectiveness.

Over the next few months, some of the SIS resources and systems will transition to other areas within NLM and some underutilized resources will be integrated into other resources, accessible on partner sites, or discontinued.

We will be providing notice of these changes. Please know for the resources that are being discontinued the basic information will not be lost – some will be available on other NLM web pages and through partner websites.

Recommended communication tactics/distribution channels for the above message

- SIS Web page (either a subpage off the NLM home page or on the current SIS home page).
  The page will be dynamic and will be the central location for NLM to provide advance notice of changes and where resources have moved/or can be accessed
- A follow-up Musings blog
- NLM News Announcement
- Technical Bulletin announcement
- Social media messaging
- E-Blast to appropriate audiences
- NLM Broadcast email from NLM Director to staff about sunset updates and thanks to SIS staff

These recommended tactics help ensure that NLM staff, NLM partners, direct beneficiary audiences, and end users are provided with up-to-date communications about transitioned and sunset resources.

Current SIS Offerings (9) Entered in the Sunset System

- TOXNET
- TOXNET Toxics Release Inventory (TRI)
- SIS K-12 Program
- Environmental Health Student Portal
- ChemSpell
- All Hazards Plan
- TOXLINE
- Arctic Health
- American Indian and Alaska Native Health Portal

Misc. info:

- Jerry, Nicole, Florence, Janice, and Jody met this week to review sunset plans and next steps and will be meeting again on June 24. As Florence and Janice are retiring, we have asked that they identify points of contacts for SIS sunset offerings
- Jody is working with Lisa Theisen (WIMS) on options for adding a SIS subpage to the NLM home page
- OCPL is working on the process and messaging around shutting down SIS social media assets
- OCPL is working on tailored messaging for K-12 and other specific audiences as the offerings are being discontinued

Subject: SIS sunsetting communication

Jody,

This is my BOR talk. I think there are messages in the talk that can be used for external communication.

Thanks! Talk to you at 4 pm today.

Florence

Patti announced in the Director's Report yesterday the organizational change that is taking place at NLM. My division, the specialized information services division, will be merged with other parts of NLM as a result of the reorganization. I am here today to bring you up to date on what will happen to SIS, the people, the projects, and the process. But first, I would like to give an overview from the historical perspective on SIS' contributions to NLM.

The 1960s were a decade of change. The 60s were also an era of growing environmental awareness. In 1962, Rachel Carson's book Silent Spring prompted the American public and the Congress to take action to protect the environment. In addition, the Amendment to the Federal Food, Drug, Cosmetic Act that required more toxicological testing on drugs led to a huge increase in publications. In 1966, a report by the President's Science Advisory Committee outlined issues related to the effects of hazardous chemicals on the environment and human health. The report suggested that the Department of Health, Education, and Welfare was the appropriate agency to develop an information program in this area. President Johnson accepted the recommendations, as a result, the National Library of Medicine was directed to establish the Toxicology Information Program.

Specialized Information Services (SIS) was established at NLM in 1967, with the Toxicology Information Program being a major element. The program was designed to fulfill recommendations made by the President's Science Advisory Committee; with the objectives to create computerized toxicology information and data banks from the literature, and from the data sources of collaborating agencies.

TOXLINE, the first online bibliographic system for toxicology, was developed in 1972 as a one-stop shop for toxicology information. During this period, CHEMLINE was also built as a chemical dictionary that contained chemical names and molecular structures. The first comprehensive factual database, Toxicology Data Bank, was released in 1978. This Data Bank later evolved into the Hazardous Substances Data Bank aka HSDB, a peer-reviewed database with a wide range of toxicology information.

In the early 1980s when the records of the factual toxicology databases became too large for the NLM ELHILL mainframe computer system, it was determined that a new system was needed. TOXNET was developed in 1985 and was a system of networked microcomputers used for database building, updates, and online searching.

By the end of 1980s, the SIS Toxicology Information Program was collaborating with many federal agencies. For example, the Agency for Toxic Substances and Disease Registry (aka ATSDR) provided substantial support for the HSDB. In addition, the Toxicology Information Program provided a public platform for online databases such as NIOSH' Registry of Toxic Effects of Chemical Substances (aka RTECS), and EPA's Toxics Release Inventory (TRI), and NCI's Chemical Carcinogenesis Research Information System (CCRIS).

Another notable SIS accomplishment for the 1980's was the release of the AIDS Clinical Trials Information Service (ACTIS). It was a collaborative effort with NIAID, and FDA in response to the HOPE Act in 1988. It was a needed service for the AIDS patients because most antiviral agents were still in the development stage. HIV-positive individual's access to potential treatments was only through clinical trials. AIDSTRIALS and AIDSDRUGS databases at NLM were the only way to get this information. The AIDSTRIALS later becomes the basis of Clinical Trials.gov. The AIDS Clinical Trials Information Service later becomes AIDSInfo, coordinated by NLM to provide access to the treatment guidelines. Today SIS manages the expanded AIDSinfo and coordinates NLM AIDS activities.

With the advent of the Internet, a web-based TOXNET was released in the late 1990s, following the footstep of NLM's Internet Grateful Med.

The Toxicology Information Program was rebranded as Toxicology and Environmental Health information Program with a new focus on environmental health information in response to the 1993 NLM Long Range Plan recommendation.

The Office of Outreach to Special Populations started in 2000 in response to the creation of the NIH National Center on Minority Health and Health Disparities and the beginning of the environmental justice movement. At that time, because SIS was already working in HIV/AIDS information services and HIV/AIDS community outreach that involved minority populations, and had information resources to address environmental justice questions, NLM placed the responsibility for outreach to minority populations in SIS.

One of our early outreach projects was the development of the Toxicology Information Outreach project (today known as Environmental Health Information Partnership or EnHIP.) This program recognized that minority communities were disproportionately exposed to toxic emissions and hazardous materials causing adverse health effects for the citizens within these communities. Outreach efforts with partnering Historically black colleges and universities and minority serving institutions around use of SIS resources were helpful in bringing attention to these environmental and health disparities issues. Another ongoing outreach activity is providing training on NLM information resources to the minority health professionals.

One of the questions we frequently get asked, was what's NLM's business in emergency response? Actually, our role in responding to chemical emergencies started way back in the 1980s. NLM's TIP, with ATSDR, built a portable microcomputer-based workstation, that provided information assistance to emergency response teams working on accidents involving hazardous chemicals. One of the recommendations from the 1993 NLM Long Range plan was that NLM should work with ATSDR, EPA, CDC, and other organizations with responsibility for emergency preparedness and response, and NLM should continue its research to improve access to information helpful for these organizations in managing emergencies such as chemical spills.

Early in the 2000's ATSDR reached out to SIS to make a case for developing a tool that puts HSDB on hand-held devices for the emergency HAZMAT responders. Subsequently in 2005, the Wireless Information System for Emergency Responders (WISER) was released. Since then, WISER has moved from Palm Pilot to iOS and Android platforms. With millions of downloads it has been one of the favorite mobile apps for the HAZMAT/emergency responder community.

With the memory of 911 and Katrina still fresh in our mind, NLM's role in disaster and public health emergency response was solidified in the 2006 NLM Long Range Plan: Charting the Course for the 21st Century: NLMs Long Range Plan 2006 to 2016. It called for NLM to ensure continuous access to health information and effective use of libraries and librarians when disasters occur and to establish a Disaster Information Management Research Center to make a strong commitment to disaster remediation and to provide a platform for demonstrating how libraries and librarians can be part of the solution. It also called for the Center to maintain close collaboration with appropriate federal agencies and initiatives and to operate across NLM. All NLM divisions have participated in a variety of disaster management activities, coordinated by SIS, which houses the Disaster center.

Originally, the target audiences for our toxicology information services were the researchers and professionals, SIS focused on expanding its audience base to the public in the past 10 years. Several consumer level resources were developed. For example, ToxTown provides consumer-level non-technical information about connections between chemicals, the environment, and the public's health. Since children are a special population, we also developed resources for the K-12 audience, such as the ToxMystery, Environmental Student Portal, and GeneEd.

In the past 52 years since the inception of SIS, we have accomplished a great deal, contributed to the health of the nation in many distinct and meaningful ways. We are an arm of NLM that are quick to respond to the needs of the communities. I want to acknowledge the SIS leadership and staff throughout the years, for their dedication and commitment.

As we step into the new era of data-driven discovery, NLM is transitioning to a new organizational structure that enables us to make the best use of our talents and resources. We are currently at Phase one of the plan, which focuses on consolidating NLM staff and related programs into a smaller number of divisions and offices to improve efficiency and our overall effectiveness. By eliminating unnecessary boundaries between units, NLM is striving to create a more collaborative environment for our curation teams and a universal infrastructure for our technical teams, ensuring the integrity and sustainability of our key products and creating a common technical platform for delivering products and services.

With the reorganization, our Division, SIS, will be incorporated into other parts of NLM. SIS staff who are responsible for Outreach, Toxicology/environmental health content curation, and disaster information will be reassigned to Library Operations. The staff that provide technical support will move

to the Office of Computer and Communications Systems. Some staff will maintain their current responsibilities, others will take on new responsibilities. We plan to complete the transition by the end of June.

The important aspects of SIS will continue to be supported by NLM. All key products and services are currently being evaluated. Some will continue, others will be discontinued, and some will be integrated with other NLM products.

Here are some key considerations when we evaluate the products, services, or offerings:

- First of all, NLM should consolidate information into a few platforms for improved user experience, discoverability, and efficiency
- Priority are given to resources that are unique, high quality, and that are highly connected to NLM offerings, or clearly contribute to furthering the strategic plan
- In addition, NLM is committed to support key offerings in toxicology and environmental health
- Consider Sunsetting an offering if a sufficiently-equivalent offering is available from another agency or organization
    - For example, NLM has provided the public search interface for EPA's Toxics Release Inventory since 1985. But over the years EPA has developed its own tools for exploring this data. NLM should discontinue the version on TOXNET.
- Similarly, consider sunsetting offerings that don't have a clear sustainability or succession plan
- And consider sunsetting offerings that have low or declining use
- Furthermore, consider the cost to sustain and upgrade
- And finally, NLM shouldn't be a web provider for another agency/entity just because they pay

Next, I would like to use TOXNET as an example of integration that we have been working on.

TOXNET is SIS' major information system. It consists of a group of databases covering chemicals and drugs, toxicology, and environmental health. Among these are ChemIDplus, Hazardous Substances Data Bank, and TOXLINE, the three most accessed TOXNET databases. The latest version of the TOXNET search system is optimized for chemical searching, it is stable and performs well. But the TOXNET search engine is long overdue for a technology refresh. So, in the spirit of "One NLM", instead of developing a new search system, we have chosen to integrate TOXNET with the existing NCBI products.

Of all the NCBI information products, PubChem is probably the one most similar to the TOXNET chemical databases.

PubChem has already incorporated almost all of the ChemIDplus data and more than 90% of the information from the Hazardous Substances Data Bank.

In addition, PubMed is the major source of new data for our bibliographic databases such as TOXLINE.

Furthermore, the NCBI Bookshelf already has a large collection of digitized toxicology and chemical books and documents. Having NCBI support the next generation TOXNET seems like a natural evolution.

We envision the functions for the future TOXNET as being separated into content creation and content delivery.

The SIS team of toxicologists and chemists will continue with content creation – to enhance the content, and expand the collection.

The TOXNET data will be part of the PubMed, PubChem and NCBI Bookshelf. The web search interface and API of the new TOXNET will be delivered by these NCBI platforms.

We anticipate major benefits of this integration, many of which align with the goals and objectives of the new NLM strategic plan:

1. First, NLM will have a newer, more robust technology platform to support TOXNET
2. Secondly, We can look forward to an expansion of the TOXNET user base
3. Most importantly, with fully developed APIs and better curation procedures, we anticipate that new TOXNET data will be machine-readable and thus be suitable for machine learning and predictive modeling to advance scientific discovery

---

The leadership from SIS, Library Operations, OCCS (Office of Computer and Communications Systems), NCBI, and Dr. Brennan have been working together in the past few months to evaluate SIS programs, considering what can be continued, or discontinued.

In this SIS Offering diagram, the inner ring of the donut shows the major SIS programs. The outer ring of the donut are offerings grouped under each program. The size of the area correlates with the cost of the offerings. [Explain the diagram, starting from the bottom right, the toxicology program, AIDS, public health or disaster information, and special population outreach]

In this next view of the diagram, the results of the first phase of program evaluation are shown here by using the different colors to represent the status of the offerings.

Red color represents sunset, green represents continue and yellow represents further evaluation required by focused working groups. Purple represents offerings that will be integrated with other NLM offerings, or programs that will be consolidated. For example, TOXNET and HSDB will be integrated with NCBI's platforms. Special population and AIDS outreach will be consolidated into the new NLM Home for Outreach.

As we sunset SIS offerings, we need to make sure there is a well-planned communication strategy. We are working closely with NLM OCPL (Office of Communication and Public Liaison) to establish a sunset protocol to help us to communicate with stakeholders and end users through the various communication channels.

To summarize, SIS' accomplishment spanned over 52 years from 1967 – 2019. The major program areas include toxicology and environmental health, outreach to special populations, AIDS/HIV, and disaster and public health information services.

The latest NLM Strategic Plan called for a more efficient organizational structure. The Division of SIS will be merged with other parts of NLM. The staff working in toxicology/environmental health, disaster information, and outreach will be reassigned to the Library Operations, the staff who provide technical support will be reassigned to the Office of Computer and Communications Systems.

All Key SIS offerings are under review. Some will continue, others will be discontinued, and some will be integrated with other NLM products. Our flagship offering, the TOXNET, was an example of integration into the NCBI platforms.

I would like to conclude this presentation by saying, it has not been easy to retire a division that has been around for over 50 years. We grieve over the closing of our division, but in the meantime, we shall put our hope in the future. I want to thank the staff at SIS for carrying out the incredible work they have been doing despite uncertainty during the time of the transition.

OVERALL SIS SUNSET MESSAGE

To align with the National Library of Medicine's 2017 Strategic Plan, the NLM has moved forward with organizational changes which includes the integration of the Specialized Information Services (SIS) division into other parts of the Library. This integration not only improves discoverability and access to resources for engaging with broader audiences but also enables NLM to leverage its talents and resources while improving its overall efficiency and effectiveness.

Over the next few months, some of the SIS resources and systems will transition to other areas within NLM and some underutilized resources will be integrated into other resources, accessible on partner sites, or discontinued. We will provide notice of these changes.

Also, links to the information and resources in their new locations, such as other NLM web pages and through partner websites, will be shared.

For questions about the location of SIS resources please email custserv@nlm.nih.gov.

TALKING POINTS FOR DR. TABAK

Original purpose: Specialized Information Services (SIS) was established at NLM in 1967, with the Toxicology Information Program being a major element. The program was designed to fulfill recommendations made by the President's Science Advisory Committee; with the objectives to create computerized toxicology information and data banks from the literature, and from the data sources of collaborating agencies.

Why no longer needed: Some SIS resources have experienced low usage and/or are obsolete; no longer align with NLM priorities or organizational needs; and/or the cost to maintain the resource is greater than the value. In assessing the SIS division as its own entity, it was determined the program no longer aligns with the NLM Strategic Plan which called for a more efficient organizational structure.

Critical issues: Over the next few months, some of the SIS resources and systems will transition to other areas within NLM and some underutilized resources will be integrated into other resources, accessible on partner sites, or discontinued. The new locations for the resources will be shared on the NLM and SIS homepages. TOXNET, the flagship SIS resource, is being integrated into the NLM National Center for Bioinformatics.

SIS Sunsetting Draft Message and Updates:

Draft Message in Process (Working on with Jerry) – SIS Organization Sunset

Over the next few months, some of the SIS resources and systems will transition to other areas within NLM and some underutilized resources will be integrated into other resources, accessible on partner sites, or discontinued.

To align with the National Library of Medicine's (NLM) 2017 Strategic Plan, the NLM has moved forward with organizational changes which includes the integration of Specialized Information Services (SIS) division into other parts of the Library. This integration not only improves discoverability and access to resources for engaging with broader audiences but also enables NLM to leverage its talents and resources while improving its overall efficiency and effectiveness.

We will be providing notice of these changes. Please know for the resources that are being discontinued the basic information will not be lost – some will be available on other NLM web pages and through partner websites.

Recommended communication tactics/distribution channels for the above message

- SIS Web page (either a subpage off the NLM home page or on the current SIS home page).
  The page will be dynamic and will be the central location for NLM to provide advance notice of changes and where resources have moved/or can be accessed
- A follow-up Musings blog
- NLM News Announcement
- Technical Bulletin announcement
- Social media messaging
- E-Blast to appropriate audiences
- NLM Broadcast email from NLM Director to staff about sunset updates and thanks to SIS staff

These recommended tactics help ensure that NLM staff, NLM partners, direct beneficiary audiences, and end users are provided with up-to-date communications about transitioned and sunset resources.

Current SIS Offerings (9) Entered in the Sunset System

- TOXNET
- TOXNET Toxics Release Inventory (TRI)
- SIS K-12 Program
- Environmental Health Student Portal
- ChemSpell
- All Hazards Plan
- TOXLINE
- Arctic Health
- American Indian and Alaska Native Health Portal

Misc. info:

- Jerry, Nicole, Florence, Janice, and Jody met this week to review sunset plans and next steps and will be meeting again on June 24. As Florence and Janice are retiring, we have asked that they identify points of contacts for SIS sunset offerings
- Jody is working with Lisa Theisen (WIMS) on options for adding a SIS subpage to the NLM home page
- OCPL is working on the process and messaging around shutting down SIS social media assets

- OCPL is working on tailored messaging for K-12 and other specific audiences as the offerings are being discontinued

Subject: SIS Sunset-Communication Messages & Distribution Plan (6/20) Draft

Hi Jody and Grace,

I attached the SIS sunset communication and distribution plan we developed today. Hopefully I caught all the details!

Regards,
Nicole

Division of Specialized Information Services (SIS)
Sunset Communication Messages and Distribution Plan

General SIS Sunset Message
(Use for NLM News Announcement, Technical Bulletin, and repurpose for SIS home page)

To align with the National Library of Medicine's 2017 Strategic Plan, the NLM has moved forward with organizational changes which includes the integration of the Specialized Information Services (SIS) division into other parts of the Library. This integration not only improves discoverability and access to resources for engaging with broader audiences but also enables NLM to leverage its talents and resources while improving its overall efficiency and effectiveness.

Over the next few months, some of the SIS resources and systems will transition to other areas within NLM and some underutilized resources will be integrated into other resources, accessible on partner sites, or discontinued. We will provide notice of these changes.

Also, links to the information and resources in their new locations, such as other NLM web pages and through partner websites, will be shared on the SIS homepage at https://sis.nlm.nih.gov.

For questions about the location of SIS resources please email custserv@nlm.nih.gov.

Communication Messages and Distribution Plan

Distribution Channel	Message	Delivery Date
Talking Points to Dr. Tabak/Dr. Collins	**Original purpose:** Specialized Information Services (SIS) was established at NLM in 1967, with the Toxicology Information Program being a major element. The program was designed to fulfill recommendations made by the President's Science Advisory Committee; with the objectives to create computerized toxicology information and data banks from the literature, and from the data sources of collaborating agencies.	Wednesday, 6/26

	Why no longer needed: Some SIS resources have experienced low usage and/or are obsolete; no longer align with NLM priorities or organizational needs and/or the cost to maintain the resource is greater than the value. In assessing the SIS division as its own entity, it was determined the program no longer aligns with the NLM Strategic Plan which called for a more efficient organizational structure. **Critical issues:** Over the next few months, some of the SIS resources and systems will transition to other areas within NLM and some underutilized resources will be integrated into other resources, accessible on partner sites, or discontinued. The new locations for the resources will be shared on the NLM and SIS homepages. TOXNET, the flagship SIS resource, is being integrated into the NLM National Center for Bioinformatics.	
NLM News Announcement	See message above the table	Friday, 6/28
NLM Broadcast Email from Dr. Brennan	Dear Colleagues: We have been working diligently to align our organizational structure and offerings with the National Library of Medicine's 2017 Strategic Plan. As we do, the NLM will become more efficient and effective to delivering on our mission. Effective on July 1st the Specialized Information Services (SIS) division will have been integrated into other parts of the Library. This integration will improve discoverability and access to resources for engaging with broader audiences and enables NLM to better leverage its talents and resources. With a long and important history, SIS has provided more than 50 years of service. Founded in response to the urgent need for a coordinated, complete, computer-based file of toxicological information in 1966, it grew over time to become what we know now at TOXNET. The program expanded further to include outreach to underserved and special populations, HIV/AIDS, and disaster/emergency preparedness and response. Our new organizational structure strives to create a more collaborative environment for its curation teams and a universal infrastructure for its technical teams, ensuring the integrity and sustainability of key SIS offerings and a common technical platform	Friday, 6/28

	for delivering products and services. The SIS homepage (https://sis.nlm.nih.gov) has been updated to alert users of these changes, as well as to direct them to resources and offerings relocated to other NLM webpages or to partner websites. With this transition, we also acknowledge two outstanding NLM leaders as they retir Florance Chang, Acting Associate Director and Janice Kelly, Acting Deputy Associate Director. They, along with their outstanding teams, have dedicated their careers to t health of the nation and a strong and trusted NLM. I hope you will join me in thankin them for their service and wishing them well as they take on new ventures. While change can be difficult, it most often leads to the greatest triumphs. I am grateful to all SIS staff for their professionalism and flexibility throughout this transition. As we work more closely and break down boundaries between our units, NLM is poised to make great strides in accelerating discovery and advancing health through data-driven research. Patti Patricia Flatley Brennan, RN, PhD Director, National Library of Medicine

Follow-Up Musings Blog		Tuesday, 7/23

Recommended communication tactics/distribution channels for the above messages

- SIS Web page (either a subpage off the NLM home page or on the current SIS home page).
  The page will be dynamic and will be the central location for NLM to provide notice of changes and where resources have moved/or can be accessed - JODY
- A follow-up Musings Blog - PATTI
- NLM News Announcement -DONE
- Technical Bulletin announcement -DONE
- Social media messaging - GRACE
- E-Blast to appropriate audiences
- NLM Broadcast email from NLM Director to staff about sunset updates and thanks to SIS staff -GRACE

These recommended tactics help ensure that NLM staff, NLM partners, direct beneficiary audiences, and end users are provided with up-to-date communications about transitioned and sunset resources.

Subject: Follow-up: SIS Sunset Plans (Programs, Offerings, and Social Media)

Hi Janice (SIS Team),

As a follow-up to the meeting with SIS and OCPL held on 5/28, there were a few takeaways for consideration:

- SIS still needs to decide which programs are going to sunset vs. move to other NLM programs. *Jody advised to enter this information into the sunsetting system for tracking and so that these "sunset plans" are not lost once Janice and Florence retire at the end of June.*
- Program audiences (Outreach to Specific Populations, K-12 Science and Health Education, and NLM Toxicology and Environmental Health) have their own messages for each audience. *Jody advised SIS to enter this info in the sunsetting system as well so that OCPL can determine what assistance is needed*.
- In addition to social media and offerings, there's a need to include "programs" in the sunsetting system and include details about the offerings and social media accounts associated with each program. Including program information will be helpful to align the offerings and social media accounts with the appropriate information that is relevant to the audience(s).
- SIS still needs to identify, by offering and program, what government and government-funded resources can be provided or pointed to for an offering and program that is being sunset. *Again, include in the sunset system*.
- Florence/SIS needs to identify where the SIS program information should appear on NLM web pages, NNLM information, etc. *Per Jody, these recommendations should be included in the sunset system.*
- SIS (Janice) will provide a matrix document to OCPL to help identify the disposition of SIS programs, offerings and social medial accounts - is it being sunset, moving to another NLM program, or a decision still needs to be made?

Once Janice provides the above mentioned information (mainly the matrix document) and the information is entered into the sunset system, OCPL can assist and provide guidance for the messaging. Following this message, Grace will provide the sample documents referenced in the meeting as well as a spreadsheet (template) with categories of information that should be included in the matrix. **Please provide the matrix no later than Tuesday, June 4th**.

As Jody will be out of the office most of next week, I will work with our SIS team to move the sunset plans along. So, please let me know if I can assist in any way.

Regards, Nicole

Subject: Meeting with OCPL re: SIS sunset plans (social media and offerings)

Hi Siobhan and Janice,

I confirmed the meeting with Jody and OCPL staff that will be working with SIS on the sunset plans. In preparation for the meeting on 5/28, I asked if there were any specific guidance that could be shared in advance of the meeting based on information already received and info forthcoming. The following comment(s) may be helpful for submissions:

- SIS should look at how frequently, through what mechanism, and what the message should be for each of the offerings they are submitting for sunset. (For example, Twitter: 3 tweets/week for four weeks letting followers know the account is closing and directing followers to @NLM_News for future information from NLM.)
- If there is information about communications regarding the offering submitted for sunset that have already happened with stakeholders, that should be documented. There should be some clear and basic communication strategies outlined for each offering. For example, what is the message they propose emailing to HHS ASPR to let them know they will be transferring the technology and web content to them for the All Hazards Plan Website? They need to share that content, not just that they will email them.
- Please provide the updated list of SIS sunset offerings prior to 5/28

Please provide the updated list of sunset offerings prior to the meeting. If there are questions from OCPL, they can be prepared to ask during the meeting.

I hope this helps!

Thanks, Nicole

The Funding Opportunities for Disaster Health Info Products hasn't been in Gov Delivery for years. I was looking into it because it was on this page https://sis.nlm.nih.gov/listservnewsmedia.html

But I actually don't think it needs sunsetting because we sunset it a long time ago, when we stopped providing funding. There is no longer a Gov Delivery Topic for it, and hasn't been for a while.

Subject: RE: SIS social media and gov delivery - Guidance from OCPL

Janice,
The person who manages the product should decide whether or not to keep the social media/gov delivery/email. Once that decision is made, then the products being sunsetted need to be entered into the system, which I have no access to. Then OCPL will write up the sunset messages for us.

You, or whomever enters the items to be sunset into the system need to talk with product owners, not the digital communications team, which is basically defunct now. Below is my best guess of what should be sunsetted. (see https://sis.nlm.nih.gov/listservnewsmedia.html#facebook)

Sunset: in yellow, I don't know.

Subject: RE: SIS social media and gov delivery - Guidance from OCPL

Hi Siobhan,
Florence and I think the digital communications committee needs to write the sunset plans so she can approve them. We expect to keep, at least in the short term, all the product email and Twitter accounts – HIV/AIDS, REMM, WISER, CHEMM. The ones to be closed are the SIS program ones such as K12, OSP, SIS Weekly and @NLM_SIS. Colette can either close now or in September the TOXMAP news. The NLM

Toxicology and Environmental Health Information email updates can remain if someone in PSD or BSD continues it.

In addition these also need to have a closing date and numbers added to the OERS.

Let me know if you have any questions.

Thanks, Janice

Subject: Follow-up: SIS Sunset Plans (Programs, Offerings, and Social Media)

Hi Janice (SIS Team),

As a follow-up to the meeting with SIS and OCPL held on 5/28, there were a few takeaways for consideration:

- SIS still needs to decide which programs are going to sunset vs. move to other NLM programs. *Jody advised to enter this information into the sunsetting system for tracking and so that these "sunset plans" are not lost once Janice and Florence retire at the end of June.*
- Program audiences (Outreach to Specific Populations, K-12 Science and Health Education, and NLM Toxicology and Environmental Health) have their own messages for each audience. *Jody advised SIS to enter this info in the sunsetting system as well so that OCPL can determine what assistance is needed*.

- In addition to social media and offerings, there's a need to include "programs" in the sunsetting system and include details about the offerings and social media accounts associated with each program. Including program information will be helpful to align the offerings and social media accounts with the appropriate information that is relevant to the audience(s).
- SIS still needs to identify, by offering and program, what government and government-funded resources can be provided or pointed to for an offering and program that is being sunset. *Again, include in the sunset system*.
- Florence/SIS needs to identify where the SIS program information should appear on NLM web pages, NNLM information, etc. *Per Jody, these recommendations should be included in the sunset system.*
- SIS (Janice) will provide a matrix document to OCPL to help identify the disposition of SIS programs, offerings and social medial accounts - is it being sunset, moving to another NLM program, or a decision still needs to be made?

Once Janice provides the above mentioned information (mainly the matrix document) and the information is entered into the sunset system, OCPL can assist and provide guidance for the messaging. Following this message, Grace will provide the sample documents referenced in the meeting as well as a spreadsheet (template) with categories of information that should be included in the matrix. **Please provide the matrix no later than Tuesday, June 4th**.

As Jody will be out of the office most of next week, I will work with our SIS team to move the sunset plans along. So, please let me know if I can assist in any way.

Regards, Nicole

Subject: Meeting with OCPL re: SIS sunset plans (social media and offerings)

Hi Siobhan and Janice,

I confirmed the meeting with Jody and OCPL staff that will be working with SIS on the sunset plans. In preparation for the meeting on 5/28, I asked if there were any specific guidance that could be shared in advance of the meeting based on information already received and info forthcoming. The following comment(s) may be helpful for submissions:

- SIS should look at how frequently, through what mechanism, and what the message should be for each of the offerings they are submitting for sunset. (For example, Twitter: 3 tweets/week for four weeks letting followers know the account is closing and directing followers to @NLM_News for future information from NLM.)
- If there is information about communications regarding the offering submitted for sunset that have already happened with stakeholders, that should be documented. There should be some clear and basic communication strategies outlined for each offering. For example, what is the message they propose emailing to HHS ASPR to let them know they will be transferring the technology and web content to them for the All Hazards Plan Website? They need to share that content, not just that they will email them.
- Please provide the updated list of SIS sunset offerings prior to 5/28

Please provide the updated list of sunset offerings prior to the meeting. If there are questions from OCPL, they can be prepared to ask during the meeting.

I hope this helps!

Thanks, Nicole

Importance: High

Per an email from Janice:
Please enter your sunsetted social media handles into the system before June 23 and let Janice and I know you have done so, or that it will not be sunset. https://sunsetting.nlm.nih.gov. You will have to write a brief description and justification. Work with the product manager if you have questions on how to write up the entry for sunsetting the offering.

Subject: RE: SIS social media and gov delivery - Guidance from OCPL

Janice,
The person who manages the product should decide whether or not to keep the social media/gov delivery/email. Once that decision is made, then the products being sunsetted need to be entered into the system, which I have no access to. Then OCPL will write up the sunset messages for us.

You, or whomever enters the items to be sunset into the system need to talk with product owners, not the digital communications team, which is basically defunct now. Below is my best guess of what should be sunsetted. (see https://sis.nlm.nih.gov/listservnewsmedia.html#facebook)

Sunset: in yellow, I don't know.

Hi Siobhan,
Florence and I think the digital communications committee needs to write the sunset plans so she can approve them. We expect to keep, at least in the short term, all the product email and Twitter accounts – HIV/AIDS, REMM, WISER, CHEMM. The ones to be closed are the SIS program ones such as K12, OSP, SIS Weekly and @NLM_SIS. Colette can either close now or in September the TOXMAP news. The NLM Toxicology and Environmental Health Information email updates can remain if someone in PSD or BSD continues it.

In addition these also need to have a closing date and numbers added to the OERS.

Let me know if you have any questions.

Thanks, Janice

Hi Jody and Grace,

I attached the SIS sunset communication and distribution plan we developed today. Hopefully I caught all the details!

Regards,
Nicole

Division of Specialized Information Services (SIS)
Sunset Communication Messages and Distribution Plan

Comment [NJ([]: This is GREAT!

General SIS Sunset Message

(Use for NLM News Announcement, Technical Bulletin, and repurpose for SIS home page)

To align with the National Library of Medicine's 2017 Strategic Plan, the NLM has moved forward with organizational changes which includes the integration of the Specialized Information Services (SIS) division into other parts of the Library. This integration not only improves discoverability and access to resources for engaging with broader audiences but also enables NLM to leverage its talents and resources while improving its overall efficiency and effectiveness.

Over the next few months, some of the SIS resources and systems will transition to other areas within NLM and some underutilized resources will be integrated into other resources, accessible on partner sites, or discontinued. We will provide notice of these changes.

Also, links to the information and resources in their new locations, such as other NLM web pages and through partner websites, will be shared on the SIS homepage at https://sis.nlm.nih.gov.

For questions about the location of SIS resources please email custserv@nlm.nih.gov.

Communication Messages and Distribution Plan

Distribution Channel	Message	Delivery Date
Talking Points to Dr. Tabak/Dr. Collins	**Original purpose:** Specialized Information Services (SIS) was established at NLM in 1967, with the Toxicology Information Program being a major element. The program was designed to fulfill recommendations made by the President's Science Advisory Committee; with the objectives to create computerized toxicology information and data banks from the literature, and from the data sources of collaborating agencies.	Wednesday, 6/26

	Why no longer needed: Some SIS resources have experienced low usage and/or are obsolete; no longer align with NLM priorities or organizational needs and/or the cost to maintain the resource is greater than the value. In assessing the SIS division as its own entity, it was determined the program no longer aligns with the NLM Strategic Plan which called for a more efficient organizational structure. **Critical issues:** Over the next few months, some of the SIS resources and systems will transition to other areas within NLM and some underutilized resources will be integrated into other resources, accessible on partner sites, or discontinued. The new locations for the resources will be shared on the NLM and SIS homepages. TOXNET, the flagship SIS resource, is being integrated into the NLM National Center for Bioinformatics.	
NLM News Announcement	To align with the National Library of Medicine's 2017 Strategic Plan, the NLM has moved forward with organizational changes which includes the integration of the Specialized Information Services (SIS) division into other parts of the Library. This integration not only improves discoverability and access to resources for engaging w broader audiences but also enables NLM to leverage its talents and resources while improving its overall efficiency and effectiveness. Over the next few months, some of the SIS resources and systems will transition to other areas within NLM and some underutilized resources will be integrated into oth resources, accessible on partner sites, or discontinued. We will provide notice of the changes. Also, links to the information and resources in their new locations, such as other NLM web pages and through partner websites, will be shared on the SIS homepage at https://sis.nlm.nih.gov. For questions about the location of SIS resources please email custserv@nlm.nih.gov	Friday, 6/28
NLM Broadcast Email from Dr. Brennan	Dear Colleagues: We have been working diligently to align our organizational structure and offerings	Friday, 6/28

with the National Library of Medicine's 2017 Strategic Plan. As we do, the NLM will become more efficient and effective to delivering on our mission. Effective on July 1st the Specialized Information Services (SIS) division will have been integrated into othe parts of the Library. This integration will improve discoverability and access to resources for engaging with broader audiences and enables NLM to better leverage i talents and resources.

With a long and important history, SIS has provided more than 50 years of service. Founded in response to the urgent need for a coordinated, complete, computer-base file of toxicological information in 1966, it grew over time to become what we know now at TOXNET. The program expanded further to include outreach to underserved and special populations, HIV/AIDS, and disaster/emergency preparedness and response.

Our new organizational structure strives to create a more collaborative environment for its curation teams and a universal infrastructure for its technical teams, ensuring the integrity and sustainability of key SIS offerings and a common technical platform for delivering products and services. The SIS homepage (https://sis.nlm.nih.gov) has been updated to alert users of these changes, as well as to direct them to resources and offerings relocated to other NLM webpages or to partner websites.

With this transition, we also acknowledge two outstanding NLM leaders as they retir Florance Chang, Acting Associate Director and Janice Kelly, Acting Deputy Associate Director. They, along with their outstanding teams, have dedicated their careers to t health of the nation and a strong and trusted NLM. I hope you will join me in thankin them for their service and wishing them well as they take on new ventures.

While change can be difficult, it most often leads to the greatest triumphs. I am grateful to all SIS staff for their professionalism and flexibility throughout this transition. As we work more closely and break down boundaries between our units, NLM is poised to make great strides in accelerating discovery and advancing health through data-driven research.

Patti

Recommended communication tactics/distribution channels for the above messages

- SIS Web page (either a subpage off the NLM home page or on the current SIS home page).
  The page will be dynamic and will be the central location for NLM to provide notice of changes and where resources have moved/or can be accessed – JODY- MOCKUP DONE
- A follow-up Musings Blog - PATTI
- NLM News Announcement -DONE
- Technical Bulletin announcement -DONE
- Social media messaging – GRACE - DONE
- E-Blast to appropriate audiences – ANY APPROPRIATE TO SEND THE SIS DIVISION SUNSETTING TO?

- NLM Broadcast email from NLM Director to staff about sunset updates and thanks to SIS staff -GRACE - DONE

These recommended tactics help ensure that NLM staff, NLM partners, direct beneficiary audiences, and end users are provided with up-to-date communications about transitioned and sunset resources.

Subject: Follow-up: SIS Sunset Plans (Programs, Offerings, and Social Media)

Hi Janice (SIS Team),

As a follow-up to the meeting with SIS and OCPL held on 5/28, there were a few takeaways for consideration:

- SIS still needs to decide which programs are going to sunset vs. move to other NLM programs. *Jody advised to enter this information into the sunsetting system for tracking and so that these "sunset plans" are not lost once Janice and Florence retire at the end of June.*
- Program audiences (Outreach to Specific Populations, K-12 Science and Health Education, and NLM Toxicology and Environmental Health) have their own messages for each audience. *Jody advised SIS to enter this info in the sunsetting system as well so that OCPL can determine what assistance is needed*.
- In addition to social media and offerings, there's a need to include "programs" in the sunsetting system and include details about the offerings and social media accounts associated with each program. Including program information will be helpful to align the offerings and social media accounts with the appropriate information that is relevant to the audience(s).
- SIS still needs to identify, by offering and program, what government and government-funded resources can be provided or pointed to for an offering and program that is being sunset. *Again, include in the sunset system*.
- Florence/SIS needs to identify where the SIS program information should appear on NLM web pages, NNLM information, etc. *Per Jody, these recommendations should be included in the sunset system.*

- SIS (Janice) will provide a matrix document to OCPL to help identify the disposition of SIS programs, offerings and social medial accounts - is it being sunset, moving to another NLM program, or a decision still needs to be made?

Once Janice provides the above mentioned information (mainly the matrix document) and the information is entered into the sunset system, OCPL can assist and provide guidance for the messaging. Following this message, Grace will provide the sample documents referenced in the meeting as well as a spreadsheet (template) with categories of information that should be included in the matrix. **Please provide the matrix no later than Tuesday, June 4th**.

As Jody will be out of the office most of next week, I will work with our SIS team to move the sunset plans along. So, please let me know if I can assist in any way.

Subject: Meeting with OCPL re: SIS sunset plans (social media and offerings)

Hi Siobhan and Janice,

I confirmed the meeting with Jody and OCPL staff that will be working with SIS on the sunset plans. In preparation for the meeting on 5/28, I asked if there were any specific guidance that could be shared in advance of the meeting based on information already received and info forthcoming. The following comment(s) may be helpful for submissions:

- SIS should look at how frequently, through what mechanism, and what the message should be for each of the offerings they are submitting for sunset. (For example, Twitter: 3 tweets/week for four weeks letting followers know the account is closing and directing followers to @NLM_News for future information from NLM.)
- If there is information about communications regarding the offering submitted for sunset that have already happened with stakeholders, that should be documented. There should be some clear and basic communication strategies outlined for each offering. For example, what is the message they propose emailing to HHS ASPR to let them know they will be transferring the technology and web content to them for the All Hazards Plan Website? They need to share that content, not just that they will email them.
- Please provide the updated list of SIS sunset offerings prior to 5/28

Please provide the updated list of sunset offerings prior to the meeting. If there are questions from OCPL, they can be prepared to ask during the meeting.

I hope this helps!

Thanks, Nicole

Subject: RE: SIS social media and gov delivery - Guidance from OCPL

I have not heard back from Laura about the Health Reach updates on gov delivery.

I think I saw somewhere that NLM_HIV twitter handle is remaining active. So one report for Gov Delivery would be (assuming Health Reach update is going away). I will ask Ilyse to write these up, with the justification being that the offerings associated with the social media and news accounts are being sunset.

HealthReach Updates - Shares recent updates to the HealthReach website, where public health professionals can find multilingual health resources
K12NLMRESOURCES – For educators interested in NLM's online education resources
NLM_SIS Weekly Twitter Digest
NLM Outreach to Specific Populations Email Updates - Shares information and discusses outreach to specific populations

And for twitter is just @NLM_SIS

The Funding Opportunities for Disaster Health Info Products hasn't been in Gov Delivery for years. I was looking into it because it was on this page https://sis.nlm.nih.gov/listservnewsmedia.html

But I actually don't think it needs sunsetting because we sunset it a long time ago, when we stopped providing funding. There is no longer a Gov Delivery Topic for it, and hasn't been for a while.

Thanks. Once they are in the sunset portal, Florence can approve and send on to Jerry and OCPL. Be sure to close them out in the OERS system. Ilyse can help with that as well. She will need ending stats…

Thanks, Janice

Importance: High

Per an email from Janice:
Please enter your sunsetted social media handles into the system before June 23 and let Janice and I know you have done so, or that it will not be sunset. https://sunsetting.nlm.nih.gov. You will have to write a brief description and justification. Work with the product manager if you have questions on how to write up the entry for sunsetting the offering.

Siobhan,
Everyone has access to the sunsetting system, sorry I forgot to include that – https://sunsetting.nlm.nih.gov. Unfortunately the digital communications team will need to reconvene and keep on top of this before June 23.

As for the orphan accounts I believe:

HealthREach – Laura
Tox and Enviro Health – Colette
ToxMAP – Colette
@NLM-HIV – Nicole and Julian

Subject: RE: SIS social media and gov delivery - Guidance from OCPL

Janice,
The person who manages the product should decide whether or not to keep the social media/gov delivery/email. Once that decision is made, then the products being sunsetted need to be entered into the system, which I have no access to. Then OCPL will write up the sunset messages for us.

You, or whomever enters the items to be sunset into the system need to talk with product owners, not the digital communications team, which is basically defunct now. Below is my best guess of what should be sunsetted. (see https://sis.nlm.nih.gov/listservnewsmedia.html#facebook)

Sunset: in yellow, I don't know.

Hi Siobhan,
Florence and I think the digital communications committee needs to write the sunset plans so she can approve them. We expect to keep, at least in the short term, all the product email and Twitter accounts – HIV/AIDS, REMM, WISER, CHEMM. The ones to be closed are the SIS program ones such as K12, OSP, SIS Weekly and @NLM_SIS. Colette can either close now or in September the TOXMAP news. The NLM Toxicology and Environmental Health Information email updates can remain if someone in PSD or BSD continues it.

In addition these also need to have a closing date and numbers added to the OERS.

Let me know if you have any questions.

Thanks, Janice

Jody and Nicole,

Happy Friday! I added the email announcement from Dr. Brennan and social media messaging options to the table for your review and consideration. I also added a note to the table for each of the channels that will use the message at the front of the table, so it didn't appear incomplete. Please let me know if you would like me to edit or update anything,

Thanks!
Grace

Hi Jody and Grace,

I attached the SIS sunset communication and distribution plan we developed today. Hopefully I caught all the details!

Regards,
Nicole

Division of Specialized Information Services (SIS)
Sunset Communication Messages and Distribution Plan

Comment [NJ([]: This is GREAT!

General SIS Sunset Message

(Use for NLM News Announcement, Technical Bulletin, and repurpose for SIS home page)

To align with the National Library of Medicine's 2017 Strategic Plan, the NLM has moved forward with organizational changes which includes the integration of the Specialized Information Services (SIS) division into other parts of the Library. This integration not only improves discoverability and access to resources for engaging with broader audiences but also enables NLM to leverage its talents and resources while improving its overall efficiency and effectiveness.

Over the next few months, some of the SIS resources and systems will transition to other areas within NLM and some underutilized resources will be integrated into other resources, accessible on partner sites, or discontinued. We will provide notice of these changes.

Also, links to the information and resources in their new locations, such as other NLM web pages and through partner websites, will be shared on the SIS homepage at https://sis.nlm.nih.gov.

For questions about the location of SIS resources please email custserv@nlm.nih.gov.

Communication Messages and Distribution Plan

Distribution Channel	Message	Delivery Date
Talking Points to Dr. Tabak/Dr. Collins	**Original purpose:** Specialized Information Services (SIS) was established at NLM in 1967, with the Toxicology Information Program being a major element. The program was designed to fulfill recommendations made by the President's Science Advisory Committee; with the objectives to create computerized toxicology information and data banks from the literature, and from the data sources of collaborating agencies.	Wednesday, 6/26

	Why no longer needed: Some SIS resources have experienced low usage and/or are obsolete; no longer align with NLM priorities or organizational needs and/or the cost to maintain the resource is greater than the value. In assessing the SIS division as its own entity, it was determined the program no longer aligns with the NLM Strategic Plan which called for a more efficient organizational structure. **Critical issues:** Over the next few months, some of the SIS resources and systems will transition to other areas within NLM and some underutilized resources will be integrated into other resources, accessible on partner sites, or discontinued. The new locations for the resources will be shared on the NLM and SIS homepages. TOXNET, the flagship SIS resource, is being integrated into the NLM National Center for Bioinformatics.	
NLM News Announcement	To align with the National Library of Medicine's 2017 Strategic Plan, the NLM has moved forward with organizational changes which includes the integration of the Specialized Information Services (SIS) division into other parts of the Library. This integration not only improves discoverability and access to resources for engaging w broader audiences but also enables NLM to leverage its talents and resources while improving its overall efficiency and effectiveness. Over the next few months, some of the SIS resources and systems will transition to other areas within NLM and some underutilized resources will be integrated into oth resources, accessible on partner sites, or discontinued. We will provide notice of the changes. Also, links to the information and resources in their new locations, such as other NLM web pages and through partner websites, will be shared on the SIS homepage at https://sis.nlm.nih.gov. For questions about the location of SIS resources please email custserv@nlm.nih.gov	Friday, 6/28
NLM Broadcast Email from Dr. Brennan	Dear Colleagues: We have been working diligently to align our organizational structure and offerings	Friday, 6/28

with the National Library of Medicine's 2017 Strategic Plan. As we do, the NLM will become more efficient and effective to delivering on our mission. Effective on July 1s the Specialized Information Services (SIS) division will have been integrated into othe parts of the Library. This integration will improve discoverability and access to resources for engaging with broader audiences and enables NLM to better leverage i talents and resources.

With a long and important history, SIS has provided more than 50 years of service. Founded in response to the urgent need for a coordinated, complete, computer-base file of toxicological information in 1966, it grew over time to become what we know now as TOXNET. The program expanded further to include outreach to underserved and special populations, HIV/AIDS, and disaster/emergency preparedness and response.

Our new organizational structure strives to create a more collaborative environment for its curation teams and a universal infrastructure for its technical teams, ensuring the integrity and sustainability of key SIS offerings and a common technical platform for delivering products and services. The SIS homepage (https://sis.nlm.nih.gov) has been updated to alert users of these changes, as well as to direct them to resources and offerings relocated to other NLM webpages or to partner websites.

With this transition, we also acknowledge two outstanding NLM leaders as they retir Florance Chang, Acting Associate Director and Janice Kelly, Acting Deputy Associate Director. They, along with their outstanding teams, have dedicated their careers to t health of the nation and a strong and trusted NLM. I hope you will join me in thankin them for their service and wishing them well as they take on new ventures.

While change can be difficult, it most often leads to the greatest triumphs. I am grateful to all SIS staff for their professionalism and flexibility throughout this transition. As we work more closely and break down boundaries between our units, NLM is poised to make great strides in accelerating discovery and advancing health through data-driven research.

Patti

Subject: RE: SIS Sunset-Communication Messages & Distribution Plan (6/20) Draft

Jody and Nicole,

Happy Friday! I added the email announcement from Dr. Brennan and social media messaging options to the table for your review and consideration. I also added a note to the table for each of the channels that will use the message at the front of the table, so it didn't appear incomplete. Please let me know if you would like me to edit or update anything,

Thanks!
Grace

Subject: SIS Sunset-Communication Messages & Distribution Plan (6/20) Draft

Hi Jody and Grace,

I attached the SIS sunset communication and distribution plan we developed today. Hopefully I caught all the details!

Regards,
Nicole

Division of Specialized Information Services (SIS)
Sunset Communication Messages and Distribution Plan

Comment [NJ([]:
To align with its 2017 Strategic Plan, the National Library of Medicine (NLM) has moved forward with organizational changes which includes the integration of the Specialized Information Services (SIS) division into other parts of the organization.

(IF YOU AGREE WITH THIS EDIT – CAN SOMEONE GO IN AND MAKE THE CHANGES THROUGHOUT THE DOCUMENT?) Thanks.

General SIS Sunset Message
(Use for NLM News Announcement, Technical Bulletin, and repurpose for SIS home page)

To align with the National Library of Medicine's (NLM) 2017 Strategic Plan, the NLM has moved forward with organizational changes which includes the integration of the Specialized Information Services (SIS) division into other parts of the Library. This integration not only improves discoverability and access to resources for engaging with broader audiences but also enables NLM to leverage its talents and resources while improving its overall efficiency and effectiveness.

Over the next few months, some of the SIS resources and systems will transition to other areas within NLM and some underutilized resources will be integrated into other resources, accessible on partner sites, or discontinued. We will provide notice of these changes.

Also, links to the information and resources in their new locations, such as other NLM web pages and through partner websites, will be shared on the SIS homepage at https://sis.nlm.nih.gov.

For questions about the location of SIS resources please email custserv@nlm.nih.gov.

Communication Messages and Distribution Plan

Distribution Channel	Message	Delivery Date
Talking Points to Dr. Tabak/Dr. Collins	**Original purpose:** Specialized Information Services (SIS) was established at NLM in 1967, with the Toxicology Information Program being a major element. The program was designed to fulfill recommendations made by the President's Science Advisory Committee; with the objectives to create computerized toxicology information and data banks from the literature, and from the data sources of collaborating agencies.	Wednesday, 6/26

	Why no longer needed: Some SIS resources have experienced low usage and/or are obsolete; no longer align with NLM priorities or organizational needs and/or the cost to maintain the resource is greater than the value. In assessing the SIS division as its own entity, it was determined the program no longer aligns with the NLM Strategic Plan which called for a more efficient organizational structure. **Critical issues:** Over the next few months, some of the SIS resources and systems will transition to other areas within NLM and some underutilized resources will be integrated into other resources, accessible on partner sites, or discontinued. The new locations for the resources will be shared on the NLM and SIS homepages. TOXNET, the flagship SIS resource, is being integrated into the NLM National Center for Bioinformatics.	
NLM News Announcement	To align with the National Library of Medicine's 2017 Strategic Plan, the NLM has moved forward with organizational changes which includes the integration of the Specialized Information Services (SIS) division into other parts of the Library. This integration not only improves discoverability and access to resources for engaging w broader audiences but also enables NLM to leverage its talents and resources while improving its overall efficiency and effectiveness. Over the next few months, some of the SIS resources and systems will transition to other areas within NLM and some underutilized resources will be integrated into oth resources, accessible on partner sites, or discontinued. We will provide notice of the changes. Also, links to the information and resources in their new locations, such as other NLM web pages and through partner websites, will be shared on the SIS homepage at https://sis.nlm.nih.gov. For questions about the location of SIS resources please email custserv@nlm.nih.gov	Friday, 6/28
NLM Broadcast Email from Dr. Brennan	Dear Colleagues: We have been working diligently to align our organizational structure and offerings	Friday, 6/28

with the National Library of Medicine's 2017 Strategic Plan. As we do, the NLM will become more efficient and effective to delivering on our mission. Effective on July 1st the Specialized Information Services (SIS) division will have been integrated into othe parts of the Library. This integration will improve discoverability and access to resources for engaging with broader audiences and enables NLM to better leverage i talents and resources.

With a long and important history, SIS has provided more than 50 years of service. Founded in response to the urgent need for a coordinated, complete, computer-base file of toxicological information in 1966, it grew over time to become what we know now at TOXNET. The program expanded further to include outreach to underserved and special populations, HIV/AIDS, and disaster/emergency preparedness and response.

Our new organizational structure strives to create a more collaborative environment for its curation teams and a universal infrastructure for its technical teams, ensuring the integrity and sustainability of key SIS offerings and a common technical platform for delivering products and services. The SIS homepage (https://sis.nlm.nih.gov) has been updated to alert users of these changes, as well as to direct them to resources and offerings relocated to other NLM webpages or to partner websites.

With this transition, we also acknowledge two outstanding NLM leaders as they retir Florance Chang, Acting Associate Director and Janice Kelly, Acting Deputy Associate Director. They, along with their outstanding teams, have dedicated their careers to t health of the nation and a strong and trusted NLM. I hope you will join me in thankin them for their service and wishing them well as they take on new ventures.

While change can be difficult, it most often leads to the greatest triumphs. I am grateful to all SIS staff for their professionalism and flexibility throughout this transition. As we work more closely and break down boundaries between our units, NLM is poised to make great strides in accelerating discovery and advancing health through data-driven research.

Patti

Recommended communication tactics/distribution channels for the above messages

- SIS Web page (either a subpage off the NLM home page or on the current SIS home page).
  The page will be dynamic and will be the central location for NLM to provide notice of changes and where resources have moved/or can be accessed – JODY- MOCKUP DONE
- A follow-up Musings Blog - PATTI
- NLM News Announcement -DONE
- Technical Bulletin announcement -DONE
- Social media messaging – GRACE - DONE
- E-Blast to appropriate audiences – ANY APPROPRIATE TO SEND THE SIS DIVISION SUNSETTING TO?
- NLM Broadcast email from NLM Director to staff about sunset updates and thanks to SIS staff -GRACE - DONE

These recommended tactics help ensure that NLM staff, NLM partners, direct beneficiary audiences, and end users are provided with up-to-date communications about transitioned and sunset resources.

If you put the message where the tagline is, we can ask Vivian Chung to edit the page in Teamsite. Any fancier web layout or changes that requires coding or style sheet modification, it would be more difficult. We will have to find someone in OCCS who can do that for us.

The red arrow points to the current tagline on the page:

Subject: Follow-up: SIS Sunset Plans (Programs, Offerings, and Social Media)

Hi Janice (SIS Team),

As a follow-up to the meeting with SIS and OCPL held on 5/28, there were a few takeaways for consideration:

- SIS still needs to decide which programs are going to sunset vs. move to other NLM programs. *Jody advised to enter this information into the sunsetting system for tracking and so that these "sunset plans" are not lost once Janice and Florence retire at the end of June.*
- Program audiences (Outreach to Specific Populations, K-12 Science and Health Education, and NLM Toxicology and Environmental Health) have their own messages for each audience. *Jody*

advised SIS to enter this info in the sunsetting system as well so that OCPL can determine what assistance is needed.

- In addition to social media and offerings, there's a need to include "programs" in the sunsetting system and include details about the offerings and social media accounts associated with each program. Including program information will be helpful to align the offerings and social media accounts with the appropriate information that is relevant to the audience(s).
- SIS still needs to identify, by offering and program, what government and government-funded resources can be provided or pointed to for an offering and program that is being sunset. *Again, include in the sunset system*.
- Florence/SIS needs to identify where the SIS program information should appear on NLM web pages, NNLM information, etc. *Per Jody, these recommendations should be included in the sunset system.*
- SIS (Janice) will provide a matrix document to OCPL to help identify the disposition of SIS programs, offerings and social medial accounts - is it being sunset, moving to another NLM program, or a decision still needs to be made?

Once Janice provides the above mentioned information (mainly the matrix document) and the information is entered into the sunset system, OCPL can assist and provide guidance for the messaging. Following this message, Grace will provide the sample documents referenced in the meeting as well as a spreadsheet (template) with categories of information that should be included in the matrix. **Please provide the matrix no later than Tuesday, June 4th**.

As Jody will be out of the office most of next week, I will work with our SIS team to move the sunset plans along. So, please let me know if I can assist in any way.

Regards, Nicole

Subject: Meeting with OCPL re: SIS sunset plans (social media and offerings)

Hi Siobhan and Janice,

I confirmed the meeting with Jody and OCPL staff that will be working with SIS on the sunset plans. In preparation for the meeting on 5/28, I asked if there were any specific guidance that could be shared in advance of the meeting based on information already received and info forthcoming. The following comment(s) may be helpful for submissions:

- SIS should look at how frequently, through what mechanism, and what the message should be for each of the offerings they are submitting for sunset. (For example, Twitter: 3 tweets/week for four weeks letting followers know the account is closing and directing followers to @NLM_News for future information from NLM.)
- If there is information about communications regarding the offering submitted for sunset that have already happened with stakeholders, that should be documented. There should be some clear and basic communication strategies outlined for each offering. For example, what is the message they propose emailing to HHS ASPR to let them know they will be transferring the technology and web content to them for the All Hazards Plan Website? They need to share that content, not just that they will email them.
- Please provide the updated list of SIS sunset offerings prior to 5/28

Please provide the updated list of sunset offerings prior to the meeting. If there are questions from OCPL, they can be prepared to ask during the meeting.

I hope this helps!

Thanks, Nicole

Siobhan,
Everyone has access to the sunsetting system, sorry I forgot to include that – https://sunsetting.nlm.nih.gov. Unfortunately the digital communications team will need to reconvene and keep on top of this before June 23.

As for the orphan accounts I believe:

HealthREach – Laura
Tox and Enviro Health – Colette
ToxMAP – Colette
@NLM-HIV – Nicole and Julian

Subject: RE: SIS social media and gov delivery - Guidance from OCPL

Janice,
The person who manages the product should decide whether or not to keep the social media/gov delivery/email. Once that decision is made, then the products being sunsetted need to be entered into the system, which I have no access to. Then OCPL will write up the sunset messages for us.

You, or whomever enters the items to be sunset into the system need to talk with product owners, not the digital communications team, which is basically defunct now. Below is my best guess of what should be sunsetted. (see https://sis.nlm.nih.gov/listservnewsmedia.html#facebook)

Sunset: in yellow, I don't know.

Subject: RE: SIS social media and gov delivery - Guidance from OCPL

Hi Siobhan,
Florence and I think the digital communications committee needs to write the sunset plans so she can approve them. We expect to keep, at least in the short term, all the product email and Twitter accounts – HIV/AIDS, REMM, WISER, CHEMM. The ones to be closed are the SIS program ones such as K12, OSP, SIS Weekly and @NLM_SIS. Colette can either close now or in September the TOXMAP news. The NLM Toxicology and Environmental Health Information email updates can remain if someone in PSD or BSD continues it.

In addition these also need to have a closing date and numbers added to the OERS.

Let me know if you have any questions.

Thanks, Janice

Subject: RE: Follow-up: SIS Sunset Plans (Programs, Offerings, and Social Media)

If you put the message where the tagline is, we can ask Vivian Chung to edit the page in Teamsite. Any fancier web layout or changes that requires coding or style sheet modification, it would be more difficult. We will have to find someone in OCCS who can do that for us.

The red arrow points to the current tagline on the page:

Subject: Follow-up: SIS Sunset Plans (Programs, Offerings, and Social Media)

Hi Janice (SIS Team),

As a follow-up to the meeting with SIS and OCPL held on 5/28, there were a few takeaways for consideration:

- SIS still needs to decide which programs are going to sunset vs. move to other NLM programs. *Jody advised to enter this information into the sunsetting system for tracking and so that these "sunset plans" are not lost once Janice and Florence retire at the end of June.*
- Program audiences (Outreach to Specific Populations, K-12 Science and Health Education, and NLM Toxicology and Environmental Health) have their own messages for each audience. *Jody*

advised SIS to enter this info in the sunsetting system as well so that OCPL can determine what assistance is needed.

- In addition to social media and offerings, there's a need to include "programs" in the sunsetting system and include details about the offerings and social media accounts associated with each program. Including program information will be helpful to align the offerings and social media accounts with the appropriate information that is relevant to the audience(s).
- SIS still needs to identify, by offering and program, what government and government-funded resources can be provided or pointed to for an offering and program that is being sunset. *Again, include in the sunset system*.
- Florence/SIS needs to identify where the SIS program information should appear on NLM web pages, NNLM information, etc. *Per Jody, these recommendations should be included in the sunset system.*
- SIS (Janice) will provide a matrix document to OCPL to help identify the disposition of SIS programs, offerings and social medial accounts - is it being sunset, moving to another NLM program, or a decision still needs to be made?

Once Janice provides the above mentioned information (mainly the matrix document) and the information is entered into the sunset system, OCPL can assist and provide guidance for the messaging. Following this message, Grace will provide the sample documents referenced in the meeting as well as a spreadsheet (template) with categories of information that should be included in the matrix. **Please provide the matrix no later than Tuesday, June 4th**.

As Jody will be out of the office most of next week, I will work with our SIS team to move the sunset plans along. So, please let me know if I can assist in any way.

Subject: FW: SIS social media and gov delivery - Guidance from OCPL
Importance: High

Per an email from Janice:
Please enter your sunsetted social media handles into the system before June 23 and let Janice and I know you have done so, or that it will not be sunset. https://sunsetting.nlm.nih.gov. You will have to write a brief description and justification. Work with the product manager if you have questions on how to write up the entry for sunsetting the offering.

Siobhan,
Everyone has access to the sunsetting system, sorry I forgot to include that – https://sunsetting.nlm.nih.gov. Unfortunately the digital communications team will need to reconvene and keep on top of this before June 23.

As for the orphan accounts I believe:

HealthREach – Laura
Tox and Enviro Health – Colette
ToxMAP – Colette
@NLM-HIV – Nicole and Julian

Janice,
The person who manages the product should decide whether or not to keep the social media/gov delivery/email. Once that decision is made, then the products being sunsetted need to be entered into the system, which I have no access to. Then OCPL will write up the sunset messages for us.

You, or whomever enters the items to be sunset into the system need to talk with product owners, not the digital communications team, which is basically defunct now. Below is my best guess of what should be sunsetted. (see https://sis.nlm.nih.gov/listservnewsmedia.html#facebook)

Sunset: in yellow, I don't know.

Hi Siobhan,
Florence and I think the digital communications committee needs to write the sunset plans so she can approve them. We expect to keep, at least in the short term, all the product email and Twitter accounts – HIV/AIDS, REMM, WISER, CHEMM. The ones to be closed are the SIS program ones such as K12, OSP, SIS Weekly and @NLM_SIS. Colette can either close now or in September the TOXMAP news. The NLM Toxicology and Environmental Health Information email updates can remain if someone in PSD or BSD continues it.

In addition these also need to have a closing date and numbers added to the OERS.

Let me know if you have any questions.

Thanks, Janice

Division of Specialized Information Services (SIS)
Sunset Communication Messages and Distribution Plan

General SIS Sunset Message
(Use for NLM News Announcement, Technical Bulletin, and repurpose for SIS home page)

To align with the National Library of Medicine's (NLM) 2017 Strategic Plan, the NLM has moved forward with organizational changes which includes the integration of the Specialized Information Services (SIS) division into other parts of the Library. This integration not only improves discoverability and access to resources for engaging with broader audiences but also enables NLM to leverage its talents and resources while improving its overall efficiency and effectiveness.

Over the next few months, some of the SIS resources and systems will transition to other areas within NLM and some underutilized resources will be integrated into other resources, accessible on partner sites, or discontinued. We will provide notice of these changes.

Also, links to the information and resources in their new locations, such as other NLM web pages and through partner websites, will be shared on the SIS homepage at https://sis.nlm.nih.gov.

For questions about the location of SIS resources please email custserv@nlm.nih.gov.

Communication Messages and Distribution Plan

Distribution Channel	Message	Delivery Date
Talking Points to Dr. Tabak/Dr. Collins	**Original purpose:** Specialized Information Services (SIS) was established at NLM in 1967, with the Toxicology Information Program being a major element. The program was designed to fulfill recommendations made by the President's Science Advisory Committee; with the objectives to create computerized toxicology information and data banks from the literature, and from the data sources of collaborating agencies.	Wednesday, 6/26

	Why no longer needed: Some SIS resources have experienced low usage and/or are obsolete; no longer align with NLM priorities or organizational needs and/or the cost to maintain the resource is greater than the value. In assessing the SIS division as its own entity, it was determined the program no longer aligns with the NLM Strategic Plan which called for a more efficient organizational structure. **Critical issues:** Over the next few months, some of the SIS resources and systems will transition to other areas within NLM and some underutilized resources will be integrated into other resources, accessible on partner sites, or discontinued. The new locations for the resources will be shared on the NLM and SIS homepages. TOXNET, the flagship SIS resource, is being integrated into the NLM National Center for Bioinformatics.	
NLM News Announcement	To align with the National Library of Medicine's (NLM) 2017 Strategic Plan, the NLM has moved forward with organizational changes which includes the integration of th Specialized Information Services (SIS) division into other parts of the Library. This integration not only improves discoverability and access to resources for engaging w broader audiences but also enables NLM to leverage its talents and resources while improving its overall efficiency and effectiveness. . Over the next few months, some of the SIS resources and systems will transition to other areas within NLM and some underutilized resources will be integrated into oth resources, accessible on partner sites, or discontinued. We will provide notice of the changes. Also, links to the information and resources in their new locations, such as other NLM web pages and through partner websites, will be shared on the SIS homepage at https://sis.nlm.nih.gov. For questions about the location of SIS resources please email custserv@nlm.nih.gov	Friday, 6/28
NLM Broadcast Email from Dr. Brennan	Dear Colleagues:	Friday, 6/28

We have been working diligently to align our organizational structure and offerings with the National Library of Medicine's 2017 Strategic Plan. As we do, the NLM will become more efficient and effective to delivering on our mission. Effective on July 1s the Specialized Information Services (SIS) division will have been integrated into othe parts of the Library. This integration will improve discoverability and access to resources for engaging with broader audiences and enables NLM to better leverage i talents and resources.

With a long and important history, SIS has provided more than 50 years of service. Founded in response to the urgent need for a coordinated, complete, computer-base file of toxicological information in 1966, it grew over time to become what we know now at TOXNET. The program expanded further to include outreach to underserved and special populations, HIV/AIDS, and disaster/emergency preparedness and response.

Our new organizational structure strives to create a more collaborative environment for its curation teams and a universal infrastructure for its technical teams, ensuring the integrity and sustainability of key SIS offerings and a common technical platform for delivering products and services. The SIS homepage (https://sis.nlm.nih.gov) has been updated to alert users of these changes, as well as to direct them to resources and offerings relocated to other NLM webpages or to partner websites.

With this transition, we also acknowledge two outstanding NLM leaders as they retir Florance Chang, Acting Associate Director and Janice Kelly, Acting Deputy Associate Director. They, along with their outstanding teams, have dedicated their careers to t health of the nation and a strong and trusted NLM. I hope you will join me in thankin them for their service and wishing them well as they take on new ventures.

While change can be difficult, it most often leads to the greatest triumphs. I am grateful to all SIS staff for their professionalism and flexibility throughout this transition. As we work more closely and break down boundaries between our units, NLM is poised to make great strides in accelerating discovery and advancing health through data-driven research.

	Patti Patricia Flatley Brennan, RN, PhD Director, National Library of Medicine

Recommended communication tactics/distribution channels for the above messages

- SIS Web page (either a subpage off the NLM home page or on the current SIS home page).
  The page will be dynamic and will be the central location for NLM to provide notice of changes and where resources have moved/or can be accessed – JODY- MOCKUP DONE
- A follow-up Musings Blog - PATTI
- NLM News Announcement -DONE
- Technical Bulletin announcement -DONE
- Social media messaging – GRACE - DONE
- E-Blast to appropriate audiences – ANY APPROPRIATE TO SEND THE SIS DIVISION SUNSETTING TO?

- NLM Broadcast email from NLM Director to staff about sunset updates and thanks to SIS staff -GRACE - DONE

These recommended tactics help ensure that NLM staff, NLM partners, direct beneficiary audiences, and end users are provided with up-to-date communications about transitioned and sunset resources.

NLM Service/Product (Offering) Details	
NLM Service/Product (Offering)	ITER (International Toxicity Estimates of Risk)
Description	ITER has been a TOXNET database for almost 20 years. It contains data in support of human health risk assessments and is currently compiled by staff at the Risk Science Center of the University of Cincinnati's Department of Environmental Health. Once some legal and logistical matters are addressed, the home of ITER will return to Toxicology Excellence for Risk Assessment (TERA), its original developer. NLM has licensed ITER initially from TERA and then UC when key TERA staff moved to UC (they are now back at TERA). We do not expect meaningful issues associated with offering ITER content via Bookshelf or PubChem once the discussions between UC and TERA are completed, The UC and TERA interactions are expected to be completed by early 2020. ITER contains data from CDC/ATSDR, Health Canada, RIVM, U.S. EPA, IARC, NSF International and independent parties offering peer-reviewed risk values. ITER provides comparison charts of international risk assessment information and explains differences in risk values derived by different organizations. ITER is updated several times a year.
Document(s) Supporting Justification	ITERonUCWebSIte.docx

Justification	Other: The plan is to sunset ITER in the Fall of 2019 if the legal and logistical issues cannot be resolved between the University of Cincinnati and TERA. ITER will be . removed from the NLM Products & Services list.

Jody

Besides the change in NLM logo, the rest are pretty straight forward. We can put in a ticket in Jira so the OCCS supervisors can assign the work to the appropriate staff.

Thanks!

Florence

If you put the message where the tagline is, we can ask Vivian Chung to edit the page in Teamsite. Any fancier web layout or changes that requires coding or style sheet modification, it would be more difficult. We will have to find someone in OCCS who can do that for us.

The red arrow points to the current tagline on the page:

Subject: RE: Follow-up: SIS Sunset Plans (Programs, Offerings, and Social Media)

Hi everyone,
Attached is the SIS roadmap for sunsets for resources/offerings, programs and social media as requested. As you will note not all decisions have been made and not communications plans completed. Many decisions rest with LO in the future.

Janice

Subject: Follow-up: SIS Sunset Plans (Programs, Offerings, and Social Media)

Hi Janice (SIS Team),

As a follow-up to the meeting with SIS and OCPL held on 5/28, there were a few takeaways for consideration:

- SIS still needs to decide which programs are going to sunset vs. move to other NLM programs. *Jody advised to enter this information into the sunsetting system for tracking and so that these "sunset plans" are not lost once Janice and Florence retire at the end of June.*
- Program audiences (Outreach to Specific Populations, K-12 Science and Health Education, and NLM Toxicology and Environmental Health) have their own messages for each audience. *Jody advised SIS to enter this info in the sunsetting system as well so that OCPL can determine what assistance is needed*.
- In addition to social media and offerings, there's a need to include "programs" in the sunsetting system and include details about the offerings and social media accounts associated with each program. Including program information will be helpful to align the offerings and social media accounts with the appropriate information that is relevant to the audience(s).
- SIS still needs to identify, by offering and program, what government and government-funded resources can be provided or pointed to for an offering and program that is being sunset. *Again, include in the sunset system*.
- Florence/SIS needs to identify where the SIS program information should appear on NLM web pages, NNLM information, etc. *Per Jody, these recommendations should be included in the sunset system.*
- SIS (Janice) will provide a matrix document to OCPL to help identify the disposition of SIS programs, offerings and social medial accounts - is it being sunset, moving to another NLM program, or a decision still needs to be made?

Once Janice provides the above mentioned information (mainly the matrix document) and the information is entered into the sunset system, OCPL can assist and provide guidance for the messaging. Following this message, Grace will provide the sample documents referenced in the meeting as well as a spreadsheet (template) with categories of information that should be included in the matrix. **Please provide the matrix no later than Tuesday, June 4th**.

As Jody will be out of the office most of next week, I will work with our SIS team to move the sunset plans along. So, please let me know if I can assist in any way.

Regards, Nicole

Subject: RE: Meeting with OCPL re: SIS sunset plans (social media and offerings)

It was my understanding that OCPL would be providing US with guidance on how to write the messages, based on what we are entering into the sunsetting system. Now it appears that OCPL wants the messages written and provided up front? I am confused.

Thanks for your assistance in this.

Subject: Meeting with OCPL re: SIS sunset plans (social media and offerings)

Hi Siobhan and Janice,

I confirmed the meeting with Jody and OCPL staff that will be working with SIS on the sunset plans. In preparation for the meeting on 5/28, I asked if there were any specific guidance that could be shared in advance of the meeting based on information already received and info forthcoming. The following comment(s) may be helpful for submissions:

- SIS should look at how frequently, through what mechanism, and what the message should be for each of the offerings they are submitting for sunset. (For example, Twitter: 3 tweets/week for four weeks letting followers know the account is closing and directing followers to @NLM_News for future information from NLM.)
- If there is information about communications regarding the offering submitted for sunset that have already happened with stakeholders, that should be documented. There should be some clear and basic communication strategies outlined for each offering. For example, what is the message they propose emailing to HHS ASPR to let them know they will be transferring the technology and web content to them for the All Hazards Plan Website? They need to share that content, not just that they will email them.
- Please provide the updated list of SIS sunset offerings prior to 5/28

Please provide the updated list of sunset offerings prior to the meeting. If there are questions from OCPL, they can be prepared to ask during the meeting.

I hope this helps!

Thanks, Nicole

Subject: RE: SIS social media and gov delivery - Guidance from OCPL

I have not heard back from Laura about the Health Reach updates on gov delivery.

I think I saw somewhere that NLM_HIV twitter handle is remaining active. So one report for Gov Delivery would be (assuming Health Reach update is going away). I will ask Ilyse to write these up, with the justification being that the offerings associated with the social media and news accounts are being sunset.

HealthReach Updates - Shares recent updates to the HealthReach website, where public health professionals can find multilingual health resources
K12NLMRESOURCES – For educators interested in NLM's online education resources
NLM_SIS Weekly Twitter Digest
NLM Outreach to Specific Populations Email Updates - Shares information and discusses outreach to specific populations

And for twitter is just @NLM_SIS

That sounds good to me. I was thinking we couldn't have written one sunset plan for GovD and listed the ones to be retired and done the same for Twitter saving a lot of work. I think Florence would be ok with that plan…

The Funding Opportunities for Disaster Health Info Products hasn't been in Gov Delivery for years. I was looking into it because it was on this page https://sis.nlm.nih.gov/listservnewsmedia.html

But I actually don't think it needs sunsetting because we sunset it a long time ago, when we stopped providing funding. There is no longer a Gov Delivery Topic for it, and hasn't been for a while.

Per an email from Janice:

Please enter your sunsetted social media handles into the system before June 23 and let Janice and I know you have done so, or that it will not be sunset. https://sunsetting.nlm.nih.gov. You will have to write a brief description and justification. Work with the product manager if you have questions on how to write up the entry for sunsetting the offering.

Siobhan,
Everyone has access to the sunsetting system, sorry I forgot to include that – https://sunsetting.nlm.nih.gov. Unfortunately the digital communications team will need to reconvene and keep on top of this before June 23.

As for the orphan accounts I believe:

HealthREach – Laura

Tox and Enviro Health – Colette
ToxMAP – Colette
@NLM-HIV – Nicole and Julian

Subject: RE: SIS social media and gov delivery - Guidance from OCPL

Janice,
The person who manages the product should decide whether or not to keep the social media/gov delivery/email. Once that decision is made, then the products being sunsetted need to be entered into the system, which I have no access to. Then OCPL will write up the sunset messages for us.

You, or whomever enters the items to be sunset into the system need to talk with product owners, not the digital communications team, which is basically defunct now. Below is my best guess of what should be sunsetted. (see https://sis.nlm.nih.gov/listservnewsmedia.html#facebook)

Sunset: in yellow, I don't know.

Hi Siobhan,
Florence and I think the digital communications committee needs to write the sunset plans so she can approve them. We expect to keep, at least in the short term, all the product email and Twitter accounts – HIV/AIDS, REMM, WISER, CHEMM. The ones to be closed are the SIS program ones such as K12, OSP, SIS Weekly and @NLM_SIS. Colette can either close now or in September the TOXMAP news. The NLM Toxicology and Environmental Health Information email updates can remain if someone in PSD or BSD continues it.

In addition these also need to have a closing date and numbers added to the OERS.

Let me know if you have any questions.

Thanks, Janice

Subject: FW: ACTION REQUIRED (ASSOCIATE DIRECTOR APPROVAL) - NLM SUNSETTING REQUEST

Bert, Florence,
Is seems like this sunset plan says NLM will commit to continue to provide ITER to the public if we can get a clear license for it from TERA or UC? But we won't know until 2020? I'm afraid I can't tell if ITER is sunsetting on TOXNET and going to be delivered from Bookshelf or PubChem or sunsetting from NLM altogether.

Thanks for clarifying.

Please review the request below and select "APPROVE", "REJECT" or "RETURN". Selecting "RETURN" will return this request to its submitter for resubmission.

NLM Service/Product (Offering) Details

NLM Service/Product (Offering)	ITER (International Toxicity Estimates of Risk)
Description	ITER has been a TOXNET database for almost 20 years. It contains data in support of human health risk assessments and is currently compiled by staff at the Risk Science Center of the University of Cincinnati's Department of Environmental Health. Once some legal and logistical matters are addressed, the home of ITER will return to Toxicology Excellence for Risk Assessment (TERA), its original developer. NLM has licensed ITER initially from TERA and then UC when key TERA staff moved to UC (they are now back at TERA). We do not expect meaningful issues associated with offering ITER content via Bookshelf or PubChem once the discussions between UC and TERA are completed, The UC and TERA interactions are expected to be completed by early 2020. ITER contains data from CDC/ATSDR, Health Canada, RIVM, U.S. EPA, IARC, NSF International and independent parties offering peer-reviewed risk values. ITER provides

	comparison charts of international risk assessment information and explains differences in risk values derived by different organizations. ITER is updated several times a year.
Document(s) Supporting Justification	ITERonUCWebSIte.docx
Justification	Other: The plan is to sunset ITER in the Fall of 2019 if the legal and logistical issues cannot be resolved between the University of Cincinnati and TERA. ITER will be . removed from the NLM Products & Services list.
Retirement Date	12/31/2019

I'm afraid I can't tell if ITER is sunsetting on TOXNET and going to be delivered from Bookshelf or PubChem or sunsetting from NLM altogether.

Under Justification it looks like the only reason to consider sunsetting is because of the ownership status with none of the other justifications considered. Do none of these apply?

- Low usage
- Obsolescence / Better products have come along, whether from NLM or another group
- No longer aligned with NLM priorities or mission needs
- Incorrect or out-of-date information
- Reallocation of staff to different products because resource is no longer a priority
- Cost in relation to value

Thanks for clarifying.

Attachments: SIS Sunset_Communication Messages and Distribution Plan 062019_V2a - js.docx

Jody,
Thanks for the draft sunset plan. I attach my markup of the plan and the messaging. As you'll see, I think we need to be clear that SIS is closing (i.e., there won't be an SIS after the end of June), but that staff and programs are transitioning elsewhere in the Library. The current phrasing about "integrating" SIS into other parts of the Library might lead some people to believe that SIS will continue to exist, but as part of another organizational unit.

Also, the messaging to Francis and Larry should be clear about the staff, budget, and program implications of the closure. If you don't already have it, I can send you the concept paper we prepared for them last year that outlined the anticipated effects. We should make sure our current messaging is consistent, to the extent possible.

Thanks
Jerry

Hi Jerry,

I have attached a draft SIS division sunset communication messaging and distribution plan. I have asked Nicole and Grace to come to the start of our 1:1 meeting on Monday at 3pm as the three of us having been working on the plan. We thought it was important to get this piece finalized before moving on to specific SIS offering communications.

Have a good weekend and look forward to seeing you on Monday,

Jody

Thanks, Florence. Since we talked about using the body of the page to add a message and links to where the resources/information can be found – you may need OCCS support.

Jody

If you put the message where the tagline is, we can ask Vivian Chung to edit the page in Teamsite. Any fancier web layout or changes that requires coding or style sheet modification, it would be more difficult. We will have to find someone in OCCS who can do that for us.

The red arrow points to the current tagline on the page:

Hi Florence and Janice,

I am working on a mockup for the SIS home page incorporating the messaging about the sunset of the SIS division and where people can find information/resources. Who is your point person for working on the website changes (making the changes to the home page, taking pages down, etc.)?

Thanks,
Jody

Hi everyone,
Attached is the SIS roadmap for sunsets for resources/offerings, programs and social media as requested. As you will note not all decisions have been made and not communications plans completed. Many decisions rest with LO in the future.

Janice

Subject: Follow-up: SIS Sunset Plans (Programs, Offerings, and Social Media)

Hi Janice (SIS Team),

As a follow-up to the meeting with SIS and OCPL held on 5/28, there were a few takeaways for consideration:

- SIS still needs to decide which programs are going to sunset vs. move to other NLM programs. *Jody advised to enter this information into the sunsetting system for tracking and so that these "sunset plans" are not lost once Janice and Florence retire at the end of June.*
- Program audiences (Outreach to Specific Populations, K-12 Science and Health Education, and NLM Toxicology and Environmental Health) have their own messages for each audience. *Jody advised SIS to enter this info in the sunsetting system as well so that OCPL can determine what assistance is needed*.
- In addition to social media and offerings, there's a need to include "programs" in the sunsetting system and include details about the offerings and social media accounts associated with each program. Including program information will be helpful to align the offerings and social media accounts with the appropriate information that is relevant to the audience(s).
- SIS still needs to identify, by offering and program, what government and government-funded resources can be provided or pointed to for an offering and program that is being sunset. *Again, include in the sunset system*.
- Florence/SIS needs to identify where the SIS program information should appear on NLM web pages, NNLM information, etc. *Per Jody, these recommendations should be included in the sunset system.*

- SIS (Janice) will provide a matrix document to OCPL to help identify the disposition of SIS programs, offerings and social medial accounts - is it being sunset, moving to another NLM program, or a decision still needs to be made?

Once Janice provides the above mentioned information (mainly the matrix document) and the information is entered into the sunset system, OCPL can assist and provide guidance for the messaging. Following this message, Grace will provide the sample documents referenced in the meeting as well as a spreadsheet (template) with categories of information that should be included in the matrix. **Please provide the matrix no later than Tuesday, June 4th**.

As Jody will be out of the office most of next week, I will work with our SIS team to move the sunset plans along. So, please let me know if I can assist in any way.

Regards, Nicole

Subject: RE: Meeting with OCPL re: SIS sunset plans (social media and offerings)

It was my understanding that OCPL would be providing US with guidance on how to write the messages, based on what we are entering into the sunsetting system. Now it appears that OCPL wants the messages written and provided up front? I am confused.

Thanks for your assistance in this.

Subject: Meeting with OCPL re: SIS sunset plans (social media and offerings)

Hi Siobhan and Janice,

I confirmed the meeting with Jody and OCPL staff that will be working with SIS on the sunset plans. In preparation for the meeting on 5/28, I asked if there were any specific guidance that could be shared in advance of the meeting based on information already received and info forthcoming. The following comment(s) may be helpful for submissions:

- SIS should look at how frequently, through what mechanism, and what the message should be for each of the offerings they are submitting for sunset. (For example, Twitter: 3 tweets/week for four weeks letting followers know the account is closing and directing followers to @NLM_News for future information from NLM.)
- If there is information about communications regarding the offering submitted for sunset that have already happened with stakeholders, that should be documented. There should be some clear and basic communication strategies outlined for each offering. For example, what is the message they propose emailing to HHS ASPR to let them know they will be transferring the technology and web content to them for the All Hazards Plan Website? They need to share that content, not just that they will email them.
- Please provide the updated list of SIS sunset offerings prior to 5/28

Please provide the updated list of sunset offerings prior to the meeting. If there are questions from OCPL, they can be prepared to ask during the meeting.

I hope this helps!

Thanks, Nicole

Subject: RE: SIS social media and gov delivery - Guidance from OCPL

I have not heard back from Laura about the Health Reach updates on gov delivery.

I think I saw somewhere that NLM_HIV twitter handle is remaining active. So one report for Gov Delivery would be (assuming Health Reach update is going away). I will ask Ilyse to write these up, with the justification being that the offerings associated with the social media and news accounts are being sunset.

HealthReach Updates - Shares recent updates to the HealthReach website, where public health professionals can find multilingual health resources
K12NLMRESOURCES – For educators interested in NLM's online education resources
NLM_SIS Weekly Twitter Digest
NLM Outreach to Specific Populations Email Updates - Shares information and discusses outreach to specific populations

And for twitter is just @NLM_SIS

That sounds good to me. I was thinking we couldn't have written one sunset plan for GovD and listed the ones to be retired and done the same for Twitter saving a lot of work. I think Florence would be ok with that plan…

The Funding Opportunities for Disaster Health Info Products hasn't been in Gov Delivery for years. I was looking into it because it was on this page https://sis.nlm.nih.gov/listservnewsmedia.html

But I actually don't think it needs sunsetting because we sunset it a long time ago, when we stopped providing funding. There is no longer a Gov Delivery Topic for it, and hasn't been for a while.

Subject: RE: SIS social media and gov delivery - Guidance from OCPL

Janice,
The person who manages the product should decide whether or not to keep the social media/gov delivery/email. Once that decision is made, then the products being sunsetted need to be entered into the system, which I have no access to. Then OCPL will write up the sunset messages for us.

You, or whomever enters the items to be sunset into the system need to talk with product owners, not the digital communications team, which is basically defunct now. Below is my best guess of what should be sunsetted. (see https://sis.nlm.nih.gov/listservnewsmedia.html#facebook)

Sunset: in yellow, I don't know.

Subject: RE: SIS social media and gov delivery - Guidance from OCPL

Hi Siobhan,
Florence and I think the digital communications committee needs to write the sunset plans so she can approve them. We expect to keep, at least in the short term, all the product email and Twitter accounts – HIV/AIDS, REMM, WISER, CHEMM. The ones to be closed are the SIS program ones such as K12, OSP, SIS Weekly and @NLM_SIS. Colette can either close now or in September the TOXMAP news. The NLM Toxicology and Environmental Health Information email updates can remain if someone in PSD or BSD continues it.

In addition these also need to have a closing date and numbers added to the OERS.

Let me know if you have any questions.

Thanks, Janice

Sunset of NLM Division of Specialized Information Services (SIS)
~~Sunset~~ Communication Messages and Distribution Plan

Comment [SJ([]: I'm not sure this is the right word, but it seems we need to be clear that SIS is closing, and functions will transition to/be integrated with other parts of the Library

General SIS Sunset Message
(Use for NLM News Announcement, Technical Bulletin, and repurpose for SIS home page)

~~To align with the National Library of Medicine's (NLM)~~As it implements its ~~2017~~ Strategic Plan, 2017-2027, ~~,~~ the ~~NLM~~ National Library of Medicine is making ~~has moved forward with~~ organizational changes ~~which~~ that includes ~~the~~ dissolution of the ~~integration of the~~ Specialized Information Services (SIS) division, effective June 30, 2019, ~~,~~ and the transition of many SIS programs into ~~into~~ other parts of the Library. This integration serves to not only improves discoverability of and access to SIS resources by NLM's ~~resources for engaging with~~ broader ~~,~~ aset of users~~udiences~~ but also enables NLM to leverage its talents and resources to ~~while~~ improve ~~ing its~~ overall efficiency and effectiveness.

Over the next few months, ~~some~~ many SIS ~~of the SIS~~ resources and ~~systems~~ programs will transition to other ~~areas~~ parts ~~within of~~ ~~NLM~~ NLM, while ~~and~~ some under~~under~~utilized resources will be integrated into other NLM resources, made accessible on partner sites, or discontinued. We will provide notice of these changes as they are made. L

~~Also,~~ links to ~~the~~ SIS ~~information and~~ resources and programs in their new locations, ~~such as other NLM web pages and through partner websites,~~ will be shared on [~~the~~ existing] SIS homepage at https://sis.nlm.nih.gov.

Questions about this transition and individual resources may be directed to

~~For questions about the location of SIS resources please email~~ custserv@nlm.nih.gov.

Communication Messages and Distribution Plan

Distribution Channel	Message	Delivery Date
Talking Points to Dr. Tabak/Dr. Collins	**Message:** NLM will close its Specialized Information Services Division effective June 30, 2019. Some SIS information services and programs will be transferred to other divisions of	Wednesday, 6/26

	NLM, while other will be terminated or transitioned to other organizations. Federal staff in SIS have been reassigned to other NLM divisions. **Original purpose:** Specialized Information Services (SIS) was established at NLM in 1967, with the Toxicology Information Program being a major element. The program was designed to fulfill recommendations made by the President's Science Advisory Committee; with the objectives to create computerized toxicology information and data banks from the literature, and from the data sources of collaborating agencies. SIS also engages in health information outreach to special populations and has responsibility for disaster health information management. **Why no longer needed:** Some SIS resources have experienced low usage and/or have become obsolete are obsolete and will be retired. Remaining remaining programs and services will be realigned to integrate them into broader NLM operations to improve operational efficiencies and effectiveness. ~~; no longer align with NLM priorities or organizational needs and/or the cost to maintain the resource is greater than the value. In assessing the SIS division as its own entity, it was determined the program no longer aligns with the NLM Strategic Plan which called for a more efficient organizational structure.~~ **Critical issues:** NLM has announced the dissolution of SIS to major stakeholder groups and will continue to provide information to assist users in finding existing information resources as they are transitioned to other websites over coming months. For those information services that will discontinued, NLM will ensure archiving of the resources so that no information is lost. ~~Over the next few months, some of the SIS resources and systems will transition to other areas within NLM and some underutilized resources will be integrated into other resources, accessible on partner sites, or discontinued.~~ The new locations for the resources will be shared on the NLM and SIS homepages. TOXNET, the flagship SIS resource, is being integrated into ~~the~~ other chemical information resources maintained by the NLM's National Center for Biotechnology Information; most remaining programs, including outreach, will be integrated into NLM's Library Operations Division.~~informatics.~~	
NLM News Announcement	To align with the National Library of Medicine's (NLM) 2017 Strategic Plan, the NLM has mov Friday, 6/28 forward with organizational changes which includes the integration of the Specialized	

Comment [SJ([]: Should indicate how many staff are reassigned

Comment [SJ([]: Please make corresponding changes in the announcements below. All should indicate a date after which SIS will cease to exist (June 30). All should indicate that no data/information will be lost in the transition – we will archive/preserve resources that we do not plan to continue.

	Information Services (SIS) division into other parts of the Library. This integration not only improves discoverability and access to resources for engaging with broader audiences but al enables NLM to leverage its talents and resources while improving its overall efficiency and effectiveness. . Over the next few months, some of the SIS resources and systems will transition to other are within NLM and some underutilized resources will be integrated into other resources, accessible on partner sites, or discontinued. We will provide notice of these changes. Also, links to the information and resources in their new locations, such as other NLM web pages and through partner websites, will be shared on the SIS homepage at https://sis.nlm.nih.gov. For questions about the location of SIS resources please email custserv@nlm.nih.gov.	
NLM Broadcast Email from Dr. Brennan	Dear Colleagues: We have been working diligently to align our organizational structure and offerings with the National Library of Medicine's ~~2017~~ Strategic Plan, 2017-1027. As we do, the NLM will becon more efficient and effective to delivering on our mission. Effective on July 1st, the Specialized Information Services (SIS) division will ~~have~~ be discontinued, with staff and programs ~~been~~ integrated into other parts of the Library. This integration will improve discoverability and access to resources for engaging with broader audiences and enables NLM to better leverag its talents and resources. With a long and important history, SIS has provided more than 50 years of service to NLM ar the American people. Founded in 1966 in response to the urgent need for a coordinated, complete, computer-based ~~file of~~ resource of toxicological information ~~in 1966~~, ~~it~~ it grew ov time to become what we know now at TOXNET. The program expanded further to include outreach to underserved and special populations, HIV/AIDS, and disaster/emergency preparedness and response. Our new organizational structure strives to create a more collaborative environment for ~~its~~	Friday, 6/28

Comment [SJ([]: Need some rewording here. It refers to SIS, not what later became TOXET

	curatn curating important toxicology information ~~on teams~~ and a more integrated informatic infrastructure ~~universal infrastructure for its technical teams,~~, ~~-~~ensuring the integrity and sustainability of key ~~SIS offerings and a common technical platform for delivering products a services~~. The SIS homepage (https://sis.nlm.nih.gov) has been updated to alert users of thes changes and ~~, as well as to~~ direct them to resources and offerings relocated to other NLM webpages or to partner websites. Information from discontinued services will be archived ar remain accessible to users. With this transition, we also acknowledge two outstanding NLM leaders as they retire, Florance Chang, Acting Associate Director, and Janice Kelly, Acting Deputy Associate Director They~~, along with their outstanding teams,~~ have dedicated their careers to the health of the nation and a strong and trusted NLM and have led an outstanding, dedicates staff. I hope yo will join me in thanking them for their service and wishing them well as they take on new ventures. While change can be difficult~~, it most often leads to the greatest triumphs~~, I believe it will produce a stronger NLM that will better serve our broad sets of users. I am grateful to all SIS staff for their professionalism and flexibility throughout this transition. As we work more closely and break down boundaries between our units, NLM is poised to make great strides i accelerating discovery and advancing health through data-driven research. Subject: Follow-up: SIS Sunset Plans (Programs, Offerings, and Social Media)

Hi Janice (SIS Team),

As a follow-up to the meeting with SIS and OCPL held on 5/28, there were a few takeaways for consideration:

- SIS still needs to decide which programs are going to sunset vs. move to other NLM programs. *Jody advised to enter this information into the sunsetting system for tracking and so that these "sunset plans" are not lost once Janice and Florence retire at the end of June.*
- Program audiences (Outreach to Specific Populations, K-12 Science and Health Education, and NLM Toxicology and Environmental Health) have their own messages for each audience. *Jody*

advised SIS to enter this info in the sunsetting system as well so that OCPL can determine what assistance is needed.

- In addition to social media and offerings, there's a need to include "programs" in the sunsetting system and include details about the offerings and social media accounts associated with each program. Including program information will be helpful to align the offerings and social media accounts with the appropriate information that is relevant to the audience(s).
- SIS still needs to identify, by offering and program, what government and government-funded resources can be provided or pointed to for an offering and program that is being sunset. *Again, include in the sunset system*.
- Florence/SIS needs to identify where the SIS program information should appear on NLM web pages, NNLM information, etc. *Per Jody, these recommendations should be included in the sunset system.*
- SIS (Janice) will provide a matrix document to OCPL to help identify the disposition of SIS programs, offerings and social medial accounts - is it being sunset, moving to another NLM program, or a decision still needs to be made?

Once Janice provides the above mentioned information (mainly the matrix document) and the information is entered into the sunset system, OCPL can assist and provide guidance for the messaging. Following this message, Grace will provide the sample documents referenced in the meeting as well as a spreadsheet (template) with categories of information that should be included in the matrix. **Please provide the matrix no later than Tuesday, June 4th**.

As Jody will be out of the office most of next week, I will work with our SIS team to move the sunset plans along. So, please let me know if I can assist in any way.

Regards, Nicole

Subject: Meeting with OCPL re: SIS sunset plans (social media and offerings)

Hi Siobhan and Janice,

I confirmed the meeting with Jody and OCPL staff that will be working with SIS on the sunset plans. In preparation for the meeting on 5/28, I asked if there were any specific guidance that could be shared in advance of the meeting based on information already received and info forthcoming. The following comment(s) may be helpful for submissions:

- SIS should look at how frequently, through what mechanism, and what the message should be for each of the offerings they are submitting for sunset. (For example, Twitter: 3 tweets/week for four weeks letting followers know the account is closing and directing followers to @NLM_News for future information from NLM.)
- If there is information about communications regarding the offering submitted for sunset that have already happened with stakeholders, that should be documented. There should be some clear and basic communication strategies outlined for each offering. For example, what is the message they propose emailing to HHS ASPR to let them know they will be transferring the technology and web content to them for the All Hazards Plan Website? They need to share that content, not just that they will email them.
- Please provide the updated list of SIS sunset offerings prior to 5/28

Please provide the updated list of sunset offerings prior to the meeting. If there are questions from OCPL, they can be prepared to ask during the meeting.

I hope this helps!

Thanks, Nicole

Subject: RE: SIS social media and gov delivery - Guidance from OCPL

I have not heard back from Laura about the Health Reach updates on gov delivery.

I think I saw somewhere that NLM_HIV twitter handle is remaining active. So one report for Gov Delivery would be (assuming Health Reach update is going away). I will ask Ilyse to write these up, with the justification being that the offerings associated with the social media and news accounts are being sunset.

HealthReach Updates - Shares recent updates to the HealthReach website, where public health professionals can find multilingual health resources
K12NLMRESOURCES – For educators interested in NLM's online education resources
NLM_SIS Weekly Twitter Digest
NLM Outreach to Specific Populations Email Updates - Shares information and discusses outreach to specific populations

And for twitter is just @NLM_SIS

The Funding Opportunities for Disaster Health Info Products hasn't been in Gov Delivery for years. I was looking into it because it was on this page https://sis.nlm.nih.gov/listservnewsmedia.html

But I actually don't think it needs sunsetting because we sunset it a long time ago, when we stopped providing funding. There is no longer a Gov Delivery Topic for it, and hasn't been for a while.

Subject: RE: SIS social media and gov delivery - Guidance from OCPL

Janice,
The person who manages the product should decide whether or not to keep the social media/gov delivery/email. Once that decision is made, then the products being sunsetted need to be entered into the system, which I have no access to. Then OCPL will write up the sunset messages for us.

You, or whomever enters the items to be sunset into the system need to talk with product owners, not the digital communications team, which is basically defunct now. Below is my best guess of what should be sunsetted. (see https://sis.nlm.nih.gov/listservnewsmedia.html#facebook)

Sunset: in yellow, I don't know.

Hi Siobhan,
Florence and I think the digital communications committee needs to write the sunset plans so she can approve them. We expect to keep, at least in the short term, all the product email and Twitter accounts – HIV/AIDS, REMM, WISER, CHEMM. The ones to be closed are the SIS program ones such as K12, OSP, SIS Weekly and @NLM_SIS. Colette can either close now or in September the TOXMAP news. The NLM Toxicology and Environmental Health Information email updates can remain if someone in PSD or BSD continues it.

In addition these also need to have a closing date and numbers added to the OERS.

Let me know if you have any questions.

Thanks, Janice

Subject: RE: Follow-up: SIS Sunset Plans (Programs, Offerings, and Social Media)

Hi Florence and Janice,

I am working on a mockup for the SIS home page incorporating the messaging about the sunset of the SIS division and where people can find information/resources. Who is your point person for working on the website changes (making the changes to the home page, taking pages down, etc.)?

Thanks,
Jody

Subject: RE: Follow-up: SIS Sunset Plans (Programs, Offerings, and Social Media)

Hi everyone,
Attached is the SIS roadmap for sunsets for resources/offerings, programs and social media as requested. As you will note not all decisions have been made and not communications plans completed. Many decisions rest with LO in the future.

Janice

Subject: Follow-up: SIS Sunset Plans (Programs, Offerings, and Social Media)

Hi Janice (SIS Team),

As a follow-up to the meeting with SIS and OCPL held on 5/28, there were a few takeaways for consideration:

- SIS still needs to decide which programs are going to sunset vs. move to other NLM programs. *Jody advised to enter this information into the sunsetting system for tracking and so that these "sunset plans" are not lost once Janice and Florence retire at the end of June.*
- Program audiences (Outreach to Specific Populations, K-12 Science and Health Education, and NLM Toxicology and Environmental Health) have their own messages for each audience. *Jody advised SIS to enter this info in the sunsetting system as well so that OCPL can determine what assistance is needed*.
- In addition to social media and offerings, there's a need to include "programs" in the sunsetting system and include details about the offerings and social media accounts associated with each program. Including program information will be helpful to align the offerings and social media accounts with the appropriate information that is relevant to the audience(s).
- SIS still needs to identify, by offering and program, what government and government-funded resources can be provided or pointed to for an offering and program that is being sunset. *Again, include in the sunset system*.

- Florence/SIS needs to identify where the SIS program information should appear on NLM web pages, NNLM information, etc. *Per Jody, these recommendations should be included in the sunset system.*
- SIS (Janice) will provide a matrix document to OCPL to help identify the disposition of SIS programs, offerings and social medial accounts - is it being sunset, moving to another NLM program, or a decision still needs to be made?

Once Janice provides the above mentioned information (mainly the matrix document) and the information is entered into the sunset system, OCPL can assist and provide guidance for the messaging. Following this message, Grace will provide the sample documents referenced in the meeting as well as a spreadsheet (template) with categories of information that should be included in the matrix. **Please provide the matrix no later than Tuesday, June 4th**.

As Jody will be out of the office most of next week, I will work with our SIS team to move the sunset plans along. So, please let me know if I can assist in any way.

Regards, Nicole

Subject: RE: Meeting with OCPL re: SIS sunset plans (social media and offerings)

It was my understanding that OCPL would be providing US with guidance on how to write the messages, based on what we are entering into the sunsetting system. Now it appears that OCPL wants the messages written and provided up front? I am confused.

Thanks for your assistance in this.

Siobhan

Subject: Meeting with OCPL re: SIS sunset plans (social media and offerings)

Hi Siobhan and Janice,

I confirmed the meeting with Jody and OCPL staff that will be working with SIS on the sunset plans. In preparation for the meeting on 5/28, I asked if there were any specific guidance that could be shared in advance of the meeting based on information already received and info forthcoming. The following comment(s) may be helpful for submissions:

- SIS should look at how frequently, through what mechanism, and what the message should be for each of the offerings they are submitting for sunset. (For example, Twitter: 3 tweets/week for four weeks letting followers know the account is closing and directing followers to @NLM_News for future information from NLM.)
- If there is information about communications regarding the offering submitted for sunset that have already happened with stakeholders, that should be documented. There should be some clear and basic communication strategies outlined for each offering. For example, what is the message they propose emailing to HHS ASPR to let them know they will be transferring the technology and web content to them for the All Hazards Plan Website? They need to share that content, not just that they will email them.
- Please provide the updated list of SIS sunset offerings prior to 5/28

Please provide the updated list of sunset offerings prior to the meeting. If there are questions from OCPL, they can be prepared to ask during the meeting.

I hope this helps!

Thanks, Nicole

Subject: RE: SIS social media and gov delivery - Guidance from OCPL

I have not heard back from Laura about the Health Reach updates on gov delivery.

I think I saw somewhere that NLM_HIV twitter handle is remaining active. So one report for Gov Delivery would be (assuming Health Reach update is going away). I will ask Ilyse to write these up, with the justification being that the offerings associated with the social media and news accounts are being sunset.

HealthReach Updates - Shares recent updates to the HealthReach website, where public health professionals can find multilingual health resources
K12NLMRESOURCES – For educators interested in NLM's online education resources
NLM_SIS Weekly Twitter Digest
NLM Outreach to Specific Populations Email Updates - Shares information and discusses outreach to specific populations

And for twitter is just @NLM_SIS

That sounds good to me. I was thinking we couldn't have written one sunset plan for GovD and listed the ones to be retired and done the same for Twitter saving a lot of work. I think Florence would be ok with that plan…

The Funding Opportunities for Disaster Health Info Products hasn't been in Gov Delivery for years. I was looking into it because it was on this page https://sis.nlm.nih.gov/listservnewsmedia.html

But I actually don't think it needs sunsetting because we sunset it a long time ago, when we stopped providing funding. There is no longer a Gov Delivery Topic for it, and hasn't been for a while.

Janice,
The person who manages the product should decide whether or not to keep the social media/gov delivery/email. Once that decision is made, then the products being sunsetted need to be entered into the system, which I have no access to. Then OCPL will write up the sunset messages for us.

You, or whomever enters the items to be sunset into the system need to talk with product owners, not the digital communications team, which is basically defunct now. Below is my best guess of what should be sunsetted. (see https://sis.nlm.nih.gov/listservnewsmedia.html#facebook)

Sunset: in yellow, I don't know.

Hi Siobhan,
Florence and I think the digital communications committee needs to write the sunset plans so she can approve them. We expect to keep, at least in the short term, all the product email and Twitter accounts – HIV/AIDS, REMM, WISER, CHEMM. The ones to be closed are the SIS program ones such as K12, OSP, SIS Weekly and @NLM_SIS. Colette can either close now or in September the TOXMAP news. The NLM Toxicology and Environmental Health Information email updates can remain if someone in PSD or BSD continues it.

In addition these also need to have a closing date and numbers added to the OERS.

Let me know if you have any questions.

Thanks, Janice

Sunset of NLM Division of Specialized Information Services (SIS) Communication Messages and Distribution Plan

General SIS Sunset Message

(Use for NLM News Announcement, Technical Bulletin, and repurpose for SIS home page)

As it implements its Strategic Plan, 2017-2027, the National Library of Medicine is making organizational changes that include the closure of the Specialized Information Services (SIS) division, effective June 30, 2019, and the transition of many SIS programs into other parts of the Library. This integration serves to not only improve discoverability of and access to SIS resources by NLM's broad set of users, but also enables NLM to leverage its talents and resources to improve overall efficiency and effectiveness.

Over the next few months, many SIS resources and programs will transition to other parts of NLM, while some underutilized resources will be integrated into other NLM resources, made accessible on partner sites, or discontinued. We will provide notice of these changes as they are made. Links to SIS resources and programs in their new locations, will be shared on the SIS homepage at https://sis.nlm.nih.gov.

Questions about this transition and individual resources may be directed to custserv@nlm.nih.gov.

Communication Messages and Distribution Plan

Distribution Channel	Message	Delivery Date
Talking Points to Dr. Tabak/Dr. Collins	**Message:** NLM will close its Specialized Information Services Division effective June 30, 2019. Some SIS information services and programs will be transferred to other divisions of NLM, while other will be terminated or transitioned to other organizations. Federal staff in SIS have been reassigned to other NLM divisions. **Original purpose:** Specialized Information Services (SIS) was established at NLM in 1967, with the Toxicology Information Program being a major element. The program was designed to fulfill recommendations made by the President's Science Advisory Committee;	Wednesday, 6/26

Comment [SJ([]: I'm not sure this is the right word, but it seems we need to be clear that SIS is closing, and functions will transition to/be integrated with other parts of the Library

Comment [SJ([]: Should indicate how many staff are reassigned

	with the objectives to create computerized toxicology information and data banks from the literature, and from the data sources of collaborating agencies. SIS also engages in health information outreach to special populations and has responsibility for disaster health information management. **Why no longer needed:** Some SIS resources have experienced low usage and/or have become obsolete are obsolete and will be retired. Remaining programs and services will be realigned to integrate them into broader NLM operations to improve operational efficiencies and effectiveness. **Critical issues:** NLM has announced the dissolution of SIS to major stakeholder groups and will continue to provide information to assist users in finding existing information resources as they are transitioned to other websites over coming months. For those information services that will discontinued, NLM will ensure archiving of the resources so that no information is lost. The new locations for the resources will be shared on the NLM and SIS homepages. TOXNET, the flagship SIS resource, is being integrated into other chemical information resources maintained by the NLM's National Center for Biotechnology Information; most remaining programs, including outreach, will be integrated into NLM's Library Operations Division.	
NLM News Announcement	As it implements its Strategic Plan, 2017-2027, the National Library of Medicine is making organizational changes that include the closure of the Specialized Information Services (SIS) division, effective June 30, 2019, and the transition of many SIS programs into other parts of the Library. This integration serves to not only improve discoverability of and access to SIS resources by NLM's broad set of users, but also enables NLM to leverage its talents and resources to improve overall efficiency and effectiveness. We will provide notice of these changes as they are made. Links to SIS resources and programs in their new locations, will be shared on the S homepage at https://sis.nlm.nih.gov. Questions about this transition and individual resources may be directed to	Friday, 6/28

Comment [SJ([]: Please make corresponding changes in the announcements below. All should indicate a date after which SIS will cease to exist (June 30). All should indicate that no data/information will be lost in the transition – we will archive/preserve resources that we do not plan to continue.

Comment [SJ([]: I'm not sure this is the right word, but it seems we need to be clear that SIS is closing, and functions will transition to/be integrated with other parts of the Library

	custserv@nlm.nih.gov. For questions about the location of SIS resources please email custserv@nlm.nih.gov.	
NLM Broadcast Email from Dr. Brennan	Dear Colleagues: We have been working diligently to align our organizational structure and offerings with the National Library of Medicine's Strategic Plan, 2017-2027. As we do, the NLM will become mo efficient and effective to delivering on our mission. Effective on July 1st, the Specialized Information Services (SIS) division will be discontinued, with staff and programs integrated in other parts of the Library. This integration will improve discoverability and access to resource for engaging with broader audiences and enables NLM to better leverage its talents and resources. With a long and important history, SIS has provided more than 50 years of service to NLM an the American people. Founded in 1966 in response to the urgent need for a coordinated, complete, computer-based resource of toxicological information, it grew over time to includ what we know now as TOXNET. The program expanded further to include outreach to underserved and special populations, HIV/AIDS, and disaster/emergency preparedness and response. Our new organizational structure strives to create a more collaborative environment for curating important toxicology information and a more integrated information infrastructure, ensuring the integrity and sustainability of key. The SIS homepage (https://sis.nlm.nih.gov) h been updated to alert users of these changes and direct them to resources and offerings relocated to other NLM webpages or to partner websites. Information from discontinued services will be archived and remain accessible to users. With this transition, we also acknowledge two outstanding NLM leaders as they retire, Florance Chang, Acting Associate Director, and Janice Kelly, Acting Deputy Associate Director They have dedicated their careers to the health of the nation and a strong and trusted NLM and have led an outstanding, dedicates staff. I hope you will join me in thanking them for the service and wishing them well as they take on new ventures.	Friday, 6/28

Comment [SJ([]: Need some rewording here. It refers to SIS, not what later became TOXET

	While change can be difficult, I believe it will produce a stronger NLM that will better serve o broad sets of users. I am grateful to all SIS staff for their professionalism and flexibility throughout this transition. As we work more closely and break down boundaries between ou units, NLM is poised to make great strides in accelerating discovery and advancing health through data-driven research. Social Media Messaging re: Shutdown	• SIS closed as of 6/30. Some resources moved to other parts of the National Library of Medicine for greater effectiveness. Please follow @NLM_News to say updated! • The @NLM_SIS account is closed as pf 6/30. Please follow @NLM_News to stay up to date! • Please follow @NLM_News to stay up to date on our services. This account will close effective 6/30. Thank you. • For all the latest information, please follow @NLM_News. Effective 6/30 this account will no longer provide updates.	Monday, 7/1
Follow-Up Musings Blog	OCPL will work with Patti on this	Tuesday, 7/23
Update NLM Website Org Charts	OCPL will make the changes to the online org charts	Monday, 7/1

Comment [NJ([]: Might consider adding a date when the account will be shutdown.

Comment [SJ([]: Yes, need to state that after June 30, or starting July 1 SIS has been dissolved, with programs and services transitioning or being integrated into other parts of the Library. Somehow we need to be clear that SIS is closed.

Comment [SJ([]: We should look to see if there is a way to include the new Office of Engagement and Training, even though it is not an official organization.

Recommended communication tactics/distribution channels for the above messages

- SIS Web page (either a subpage off the NLM home page or on the current SIS home page).
  The page will be dynamic and will be the central location for NLM to provide notice of changes and where resources have moved/or can be accessed – JODY- MOCKUP DONE
- A follow-up Musings Blog - PATTI

- NLM News Announcement -DONE
- Technical Bulletin announcement -DONE
- Social media messaging – GRACE - DONE
- E-Blast to appropriate audiences – ANY APPROPRIATE TO SEND THE SIS DIVISION SUNSETTING TO?
- NLM Broadcast email from NLM Director to staff about sunset updates and thanks to SIS staff -GRACE - DONE

These recommended tactics help ensure that NLM staff, NLM partners, direct beneficiary audiences, and end users are provided with up-to-date communications about transitioned and sunset resources.

> Jody,
> Thanks for the draft sunset plan. I attach my markup of the plan and the messaging. As you'll see, I think we need to be clear that SIS is closing (i.e., there won't be an SIS after the end of June), but that staff and programs are transitioning elsewhere in the Library. The current phrasing about "integrating" SIS into other parts of the Library might lead some people to believe that SIS will continue to exist, but as part of another organizational unit.

Also, the messaging to Francis and Larry should be clear about the staff, budget, and program implications of the closure. If you don't already have it, I can send you the concept paper we prepared for them last year that outlined the anticipated effects. We should make sure our current messaging is consistent, to the extent possible.

Thanks
Jerry

Subject: FW: Follow-up: SIS Sunset Plans (Programs, Offerings, and Social Media)

Hi Jerry,

I have attached a draft SIS division sunset communication messaging and distribution plan. I have asked Nicole and Grace to come to the start of our 1:1 meeting on Monday at 3pm as the three of us having been working on the plan. We thought it was important to get this piece finalized before moving on to specific SIS offering communications.

Have a good weekend and look forward to seeing you on Monday,

Jody

Subject: RE: Follow-up: SIS Sunset Plans (Programs, Offerings, and Social Media)

Jody,

Could you share with us the mockup when it is ready? I can probably tell whether it can be done by Vivian or it require help from Winston Churchill (OCCS support).

Thanks!

Florence

Subject: RE: Follow-up: SIS Sunset Plans (Programs, Offerings, and Social Media)

Thanks, Florence. Since we talked about using the body of the page to add a message and links to where the resources/information can be found – you may need OCCS support.

Jody

If you put the message where the tagline is, we can ask Vivian Chung to edit the page in Teamsite. Any fancier web layout or changes that requires coding or style sheet modification, it would be more difficult. We will have to find someone in OCCS who can do that for us.

The red arrow points to the current tagline on the page:

Hi Florence and Janice,

I am working on a mockup for the SIS home page incorporating the messaging about the sunset of the SIS division and where people can find information/resources. Who is your point person for working on the website changes (making the changes to the home page, taking pages down, etc.)?

Thanks,
Jody

Hi everyone,
Attached is the SIS roadmap for sunsets for resources/offerings, programs and social media as requested. As you will note not all decisions have been made and not communications plans completed. Many decisions rest with LO in the future.

Janice

Subject: Follow-up: SIS Sunset Plans (Programs, Offerings, and Social Media)

Hi Janice (SIS Team),

As a follow-up to the meeting with SIS and OCPL held on 5/28, there were a few takeaways for consideration:

- SIS still needs to decide which programs are going to sunset vs. move to other NLM programs. *Jody advised to enter this information into the sunsetting system for tracking and so that these "sunset plans" are not lost once Janice and Florence retire at the end of June.*
- Program audiences (Outreach to Specific Populations, K-12 Science and Health Education, and NLM Toxicology and Environmental Health) have their own messages for each audience. *Jody advised SIS to enter this info in the sunsetting system as well so that OCPL can determine what assistance is needed*.
- In addition to social media and offerings, there's a need to include "programs" in the sunsetting system and include details about the offerings and social media accounts associated with each program. Including program information will be helpful to align the offerings and social media accounts with the appropriate information that is relevant to the audience(s).
- SIS still needs to identify, by offering and program, what government and government-funded resources can be provided or pointed to for an offering and program that is being sunset. *Again, include in the sunset system*.

- Florence/SIS needs to identify where the SIS program information should appear on NLM web pages, NNLM information, etc. *Per Jody, these recommendations should be included in the sunset system.*
- SIS (Janice) will provide a matrix document to OCPL to help identify the disposition of SIS programs, offerings and social medial accounts - is it being sunset, moving to another NLM program, or a decision still needs to be made?

Once Janice provides the above mentioned information (mainly the matrix document) and the information is entered into the sunset system, OCPL can assist and provide guidance for the messaging. Following this message, Grace will provide the sample documents referenced in the meeting as well as a spreadsheet (template) with categories of information that should be included in the matrix. **Please provide the matrix no later than Tuesday, June 4th**.

As Jody will be out of the office most of next week, I will work with our SIS team to move the sunset plans along. So, please let me know if I can assist in any way.

Regards, Nicole

Subject: Meeting with OCPL re: SIS sunset plans (social media and offerings)

Hi Siobhan and Janice,

I confirmed the meeting with Jody and OCPL staff that will be working with SIS on the sunset plans. In preparation for the meeting on 5/28, I asked if there were any specific guidance that could be shared in advance of the meeting based on information already received and info forthcoming. The following comment(s) may be helpful for submissions:

- SIS should look at how frequently, through what mechanism, and what the message should be for each of the offerings they are submitting for sunset. (For example, Twitter: 3 tweets/week for four weeks letting followers know the account is closing and directing followers to @NLM_News for future information from NLM.)
- If there is information about communications regarding the offering submitted for sunset that have already happened with stakeholders, that should be documented. There should be some clear and basic communication strategies outlined for each offering. For example, what is the message they propose emailing to HHS ASPR to let them know they will be transferring the technology and web content to them for the All Hazards Plan Website? They need to share that content, not just that they will email them.
- Please provide the updated list of SIS sunset offerings prior to 5/28

Please provide the updated list of sunset offerings prior to the meeting. If there are questions from OCPL, they can be prepared to ask during the meeting.

I hope this helps!

Thanks, Nicole

Subject: RE: SIS social media and gov delivery - Guidance from OCPL

I have not heard back from Laura about the Health Reach updates on gov delivery.

I think I saw somewhere that NLM_HIV twitter handle is remaining active. So one report for Gov Delivery would be (assuming Health Reach update is going away). I will ask Ilyse to write these up, with the justification being that the offerings associated with the social media and news accounts are being sunset.

HealthReach Updates - Shares recent updates to the HealthReach website, where public health professionals can find multilingual health resources
K12NLMRESOURCES – For educators interested in NLM's online education resources
NLM_SIS Weekly Twitter Digest
NLM Outreach to Specific Populations Email Updates - Shares information and discusses outreach to specific populations

And for twitter is just @NLM_SIS

That sounds good to me. I was thinking we couldn't have written one sunset plan for GovD and listed the ones to be retired and done the same for Twitter saving a lot of work. I think Florence would be ok with that plan…

Subject: RE: SIS social media and gov delivery - Guidance from OCPL

The Funding Opportunities for Disaster Health Info Products hasn't been in Gov Delivery for years. I was looking into it because it was on this page https://sis.nlm.nih.gov/listservnewsmedia.html

But I actually don't think it needs sunsetting because we sunset it a long time ago, when we stopped providing funding. There is no longer a Gov Delivery Topic for it, and hasn't been for a while.

Janice,
The person who manages the product should decide whether or not to keep the social media/gov delivery/email. Once that decision is made, then the products being sunsetted need to be entered into the system, which I have no access to. Then OCPL will write up the sunset messages for us.

You, or whomever enters the items to be sunset into the system need to talk with product owners, not the digital communications team, which is basically defunct now. Below is my best guess of what should be sunsetted. (see https://sis.nlm.nih.gov/listservnewsmedia.html#facebook)

Sunset: in yellow, I don't know.

Hi Siobhan,
Florence and I think the digital communications committee needs to write the sunset plans so she can approve them. We expect to keep, at least in the short term, all the product

email and Twitter accounts – HIV/AIDS, REMM, WISER, CHEMM. The ones to be closed are the SIS program ones such as K12, OSP, SIS Weekly and @NLM_SIS. Colette can either close now or in September the TOXMAP news. The NLM Toxicology and Environmental Health Information email updates can remain if someone in PSD or BSD continues it.

In addition these also need to have a closing date and numbers added to the OERS.

Let me know if you have any questions.

Thanks, Janice

Subject: RE: ACTION REQUIRED (ASSOCIATE DIRECTOR APPROVAL) - NLM SUNSETTING REQUEST

Joyce,
I will let Bert answer most of your questions because he knows more about the value of ITER as a NLM resource. I know by looking at the stats that comparing usage of IRIS (a risk value resource from EPA) and ITER (10 risk values from 10 sources including EPA), it is a ratio of 3:5. This tells me that risk assessors or scientists prefer to see an information resource that provides data from many sources than from a single source.
We are planning to sunset ITER and IRIS from TOXNET. But they are likely to go into NCBI Books except the timing is uncertain. So on the TOXNET transition page and in the communication plan, we say these 2 resources are to sunset with TOXNET.

Subject: FW: ACTION REQUIRED (ASSOCIATE DIRECTOR APPROVAL) - NLM SUNSETTING REQUEST

Bert, Florence,
Is seems like this sunset plan says NLM will commit to continue to provide ITER to the public if we can get a clear license for it from TERA or UC? But we won't know until 2020? I'm afraid I can't tell if ITER is sunsetting on TOXNET and going to be delivered from Bookshelf or PubChem or sunsetting from NLM altogether.
Under Justification it looks like the only reason to consider sunsetting is because of the ownership status with none of the other justifications considered. Do none of these apply?

- Low usage
- Obsolescence / Better products have come along, whether from NLM or another group
- No longer aligned with NLM priorities or mission needs
- Incorrect or out-of-date information
- Reallocation of staff to different products because resource is no longer a priority
- Cost in relation to value

Thanks for clarifying.
Joyce

Please review the request below and select "APPROVE", "REJECT" or "RETURN". Selecting "RETURN" will return this request to its submitter for resubmission.

NLM Service/Product (Offering) Details

NLM Service/Product (Offering)	ITER (International Toxicity Estimates of Risk)
Description	ITER has been a TOXNET database for almost 20 years. It contains data in support of human health risk assessments and is currently compiled by staff at the Risk Science Center of the University of Cincinnati's Department of Environmental Health. Once some legal and logistical matters are addressed, the home of ITER will return to Toxicology Excellence for Risk Assessment (TERA), its original developer. NLM has licensed ITER initially from TERA and then UC when key TERA staff moved to UC (they are now back at TERA). We do not expect meaningful issues associated with offering ITER content via Bookshelf or PubChem once the discussions between UC and TERA are completed, The UC and TERA interactions are expected to be completed by early 2020. ITER contains data from CDC/ATSDR, Health Canada, RIVM, U.S. EPA, IARC, NSF International and independent parties offering peer-reviewed risk values. ITER provides comparison charts of international risk assessment information and explains differences in risk values derived by different organizations. ITER is updated several times a year.
Document(s) Supporting Justification	ITERonUCWebSIte.docx
Justification	Other: The plan is to sunset ITER in the Fall of 2019 if the legal and logistical issues cannot be resolved between the University of Cincinnati and TERA. ITER will be . removed from the NLM Products & Services list.

Sunset of NLM Division of Specialized Information Services (SIS) Communication Messages and Distribution Plan

General SIS Sunset Message

(Use for NLM News Announcement, Technical Bulletin, and repurpose for SIS home page)

As the National Library of Medicine (NLM) implements its Strategic Plan, 2017-2027, the Library is making organizational changes that include the closure of the Specialized Information Services (SIS) division, effective June 30, 2019, and the transition of many SIS programs into other parts of NLM. This integration serves to not only improve discoverability of and access to SIS resources by NLM's broad set of users, but also enables NLM to leverage its talents and resources to improve overall efficiency and effectiveness.

Over the next few months, many SIS resources and programs will transition to other parts of NLM, while some underutilized resources will be integrated into other NLM resources, made accessible on partner sites, or discontinued. We will provide notice of these changes as they are made. Links to SIS resources and programs in their new locations will be shared on the SIS homepage at https://sis.nlm.nih.gov.

Questions about this transition and individual resources may be directed to custserv@nlm.nih.gov.

Communication Messages and Distribution Plan

Distribution Channel	Message	Delivery Date
Talking Points to Dr. Tabak/Dr. Collins	**Message:** NLM will close its Specialized Information Services Division effective June 30, 2019. Some SIS information services and programs will be transferred to other divisions of NLM, while other will be terminated or transitioned to other organizations. Federal staff in SIS have been reassigned to other NLM divisions. **Original purpose:** Specialized Information Services (SIS) was established at NLM in 1967, with the Toxicology Information Program being a major element. The program was designed to fulfill recommendations made by the President's Science Advisory Committee;	Wednesday, 6/26

Comment [SJ([]: I'm not sure this is the right word, but it seems we need to be clear that SIS is closing, and functions will transition to/be integrated with other parts of the Library

Comment [SJ([]: Should indicate how many staff are reassigned

	with the objectives to create computerized toxicology information and data banks from the literature, and from the data sources of collaborating agencies. SIS also engages in health information outreach to special populations and has responsibility for disaster health information management. **Why no longer needed:** Some SIS resources have experienced low usage and/or have become obsolete and will be retired. Remaining programs and services will be realigned to integrate them into broader NLM operations to improve operational efficiencies and effectiveness. **Critical issues:** NLM has announced the dissolution of SIS to major stakeholder groups and will continue to provide information to assist users in finding existing information resources as they are transitioned to other websites over coming months. For those information services that will discontinued, NLM will ensure archiving of the resources so that no information is lost. The new locations for the resources will be shared on the NLM and SIS homepages. TOXNET, the flagship SIS resource, is being integrated into other chemical information resources maintained by the NLM's National Center for Biotechnology Information; most remaining programs, including outreach, will be integrated into NLM's Library Operations Division.	
NLM News Announcement	As it implements its Strategic Plan, 2017-2027, the National Library of Medicine is making organizational changes that include the closure of the Specialized Information Services (SIS) division, effective June 30, 2019, and the transition of many SIS programs into other parts of the Library. This integration serves to not only improve discoverability of and access to SIS resources by NLM's broad set of users, but also enables NLM to leverage its talents and resources to improve overall efficiency and effectiveness. Over the next few months, many SIS resources and programs will transition to other parts of NLM, while some underutilized resources will be integrated into other NLM resources, made accessible on partner sites, or discontinued. We will provide notice of these changes as they are made. Links to SIS resources and programs in their new locations, will be shared on the S homepage at https://sis.nlm.nih.gov. Questions about this transition and individual resources may be directed to	Friday, 6/28

Comment [SJ([]: Please make corresponding changes in the announcements below. All should indicate a date after which SIS will cease to exist (June 30). All should indicate that no data/information will be lost in the transition – we will archive/preserve resources that we do not plan to continue.

Comment [SJ([]: I'm not sure this is the right word, but it seems we need to be clear that SIS is closing, and functions will transition to/be integrated with other parts of the Library

	custserv@nlm.nih.gov. For questions about the location of SIS resources please email custserv@nlm.nih.gov.	
NLM Broadcast Email from Dr. Brennan	Dear Colleagues: We have been working diligently to align our organizational structure and offerings with the National Library of Medicine's Strategic Plan, 2017-2027. As we do, the NLM will become mo efficient and effective to delivering on our mission. Effective on July 1st, the Specialized Information Services (SIS) division will be discontinued, with staff and programs integrated in other parts of the Library. This integration will improve discoverability and access to resource for engaging with broader audiences and enables NLM to better leverage its talents and resources. With a long and important history, SIS has provided more than 50 years of service to NLM an the American people. Founded in 1966 in response to the urgent need for a coordinated, complete, computer-based resource of toxicological information, it grew over time to includ what we know now as TOXNET. The program expanded further to include outreach to underserved and special populations, HIV/AIDS, and disaster/emergency preparedness and response. Our new organizational structure strives to create a more collaborative environment for curating important toxicology information and a more integrated information infrastructure, ensuring the integrity and sustainability of key. The SIS homepage (https://sis.nlm.nih.gov) h been updated to alert users of these changes and direct them to resources and offerings relocated to other NLM webpages or to partner websites. Information from discontinued services will be archived and remain accessible to users. With this transition, we also acknowledge two outstanding NLM leaders as they retire, Florance Chang, Acting Associate Director, and Janice Kelly, Acting Deputy Associate Director They have dedicated their careers to the health of the nation and a strong and trusted NLM and have led an outstanding, dedicates staff. I hope you will join me in thanking them for the service and wishing them well as they take on new ventures.	Friday, 6/28

Comment [SJ([]: Need some rewording here. It refers to SIS, not what later became TOXET

	While change can be difficult, I believe it will produce a stronger NLM that will better serve o broad sets of users. I am grateful to all SIS staff for their professionalism and flexibility throughout this transition. As we work more closely and break down boundaries between ou units, NLM is poised to make great strides in accelerating discovery and advancing health through data-driven research. Patti Patricia Flatley Brennan, RN, PhD Director, National Library of Medicine

Subject: RE: ACTION REQUIRED (ASSOCIATE DIRECTOR APPROVAL) - NLM SUNSETTING REQUEST

Joyce and Florence, I agree with Florence's "This tells me that risk assessors or scientists prefer to see an information resource that provides current data from many sources than from a single source." We have offered ITER in TOXNET for about 20 years, and it is an unique offering that reviews and pulls together these types of risk values from EPA and several other sources.
The issue with ITER going the University of Cincinnati to its original developer (TERA) could be resolved within the few weeks; however, but the best timing for a transition might be at the end of the current funding for the University of Cincinnati. I can edit the wording to indicate that it will be resolved by Fall 2019 but the transition might occur in in April 2020 when the current funding ends for the University of Cincinnati's work on ITER. I can see how the ITER content will be offered in both Bookshelf and PubChem.
(A disclosure is that I worked at TERA for about a year before going to the European Commission, and I remember being the person at TERA to suggest approaching NLM to try to get ITER into TOXNET! The TERA and NLM interactions happened after I went to the European Commission.)
Bert

Subject: RE: ACTION REQUIRED (ASSOCIATE DIRECTOR APPROVAL) - NLM SUNSETTING REQUEST

Joyce,
I will let Bert answer most of your questions because he knows more about the value of ITER as a NLM resource. I know by looking at the stats that comparing usage of IRIS (a risk value resource from EPA) and ITER (10 risk values from 10 sources including EPA), it is a ratio of 3:5. This tells me that risk assessors or scientists prefer to see an information resource that provides data from many sources than from a single source.
We are planning to sunset ITER and IRIS from TOXNET. But they are likely to go into NCBI Books except the timing is uncertain. So on the TOXNET transition page and in the communication plan, we say these 2 resources are to sunset with TOXNET.

Subject: FW: ACTION REQUIRED (ASSOCIATE DIRECTOR APPROVAL) - NLM SUNSETTING REQUEST

Bert, Florence,
Is seems like this sunset plan says NLM will commit to continue to provide ITER to the public if we can get a clear license for it from TERA or UC? But we won't know until 2020? I'm afraid I can't tell if ITER is

sunsetting on TOXNET and going to be delivered from Bookshelf or PubChem or sunsetting from NLM altogether.
Under Justification it looks like the only reason to consider sunsetting is because of the ownership status with none of the other justifications considered. Do none of these apply?

- Low usage
- Obsolescence / Better products have come along, whether from NLM or another group
- No longer aligned with NLM priorities or mission needs
- Incorrect or out-of-date information
- Reallocation of staff to different products because resource is no longer a priority
- Cost in relation to value

Thanks for clarifying.
Joyce

ATTENTION: The following Sunsetting Request requires your approval.

Please review the request below and select "APPROVE", "REJECT" or "RETURN". Selecting "RETURN" will return this request to its submitter for resubmission.

NLM Service/Product (Offering) Details

NLM Service/Product (Offering)	ITER (International Toxicity Estimates of Risk)
Description	ITER has been a TOXNET database for almost 20 years. It contains data in support of human health risk assessments and is currently compiled by staff at the Risk Science Center of the University of Cincinnati's Department of Environmental Health. Once some legal and logistical matters are addressed, the home of ITER will return to Toxicology Excellence for Risk Assessment (TERA), its original developer. NLM has licensed ITER initially from TERA and then UC when key TERA staff moved to UC (they are now back at TERA). We do not expect meaningful issues associated with offering ITER content via Bookshelf or PubChem once the discussions between UC and TERA are completed, The UC and TERA interactions are expected to be completed by early 2020. ITER contains data from CDC/ATSDR, Health Canada, RIVM, U.S. EPA, IARC, NSF International and independent parties offering peer-reviewed risk values. ITER provides comparison charts of international risk assessment information and explains differences in risk values derived by different organizations. ITER is updated several times a year.
Document(s)	ITERonUCWebSIte.docx

Supporting Justification	
Justification	Other: The plan is to sunset ITER in the Fall of 2019 if the legal and logistical issues cannot be resolved between the University of Cincinnati and TERA. ITER will be . removed from the NLM Products & Services list.

Here's the sunset plan w/ the changes/edits I made during our meeting

Jerry

Sunset of NLM Division of Specialized Information Services (SIS) Communication Messages and Distribution Plan

General SIS Sunset Message

(Use for NLM News Announcement, Technical Bulletin, and repurpose for SIS home page)

As the National Library of Medicine (NLM) implements its Strategic Plan, 2017-2027, the Library is making organizational changes that include the closure of the Specialized Information Services (SIS) division, effective June 30, 2019, and the transition of many SIS programs into other parts of NLM. This integration serves to not only improve discoverability of and access to SIS resources by NLM's broad set of users, but also enables NLM to leverage its talents and resources to improve overall efficiency and effectiveness.

Over the next few months, many SIS resources and programs will transition to other parts of NLM, while some underutilized resources will be integrated into other NLM resources, made accessible on partner sites, or discontinued. We will provide notice of these changes as they are made. Links to SIS resources and programs in their new locations will be shared on the SIS homepage at https://sis.nlm.nih.gov.

Questions about this transition and individual resources may be directed to custserv@nlm.nih.gov.

Communication Messages and Distribution Plan

Distribution Channel	Message	Delivery Date
Talking Points to Dr. Tabak/Dr. Collins	**Message:** As outlined in the Phase 1 concept plan that was approved in late 2018, NLM will close its Specialized Information Services Division effective June 30, 2019. Some SIS information services and programs will be transferred to other divisions of NLM, while other will be terminated or transitioned to other organizations. Approximately 40 Federal staff in SIS have been reassigned to other NLM divisions. Contractors are being reassigned as programs are moved. **Original purpose:** Specialized Information Services (SIS) was established at NLM in 1967,	Wednesday, 6/26

Comment [SJ([]: I'm not sure this is the right word, but it seems we need to be clear that SIS is closing, and functions will transition to/be integrated with other parts of the Library

Comment [SJ([]: Should indicate how many staff are reassigned

	with the Toxicology Information Program being a major element. The program was designed to fulfill recommendations made by the President's Science Advisory Committee; with the objectives to create computerized toxicology information and data banks from the literature, and from the data sources of collaborating agencies. SIS also engages in health information outreach to special populations and has responsibility for disaster health information management. **Why no longer needed:** Some SIS resources have experienced low usage and/or have become obsolete and will be retired. Remaining programs and services will be realigned to integrate them into broader NLM operations to improve operational efficiencies and effectiveness. **Critical issues:** NLM has announced the dissolution of SIS to major stakeholder groups and will continue to provide information to assist users in finding existing information resources as they are transitioned to other websites over coming months. For those information services that will discontinued, NLM will ensure archiving of the resources so that no information is lost. The new locations for the resources will be shared on the NLM and SIS homepages. TOXNET, the flagship SIS resource, is being integrated into other chemical information resources maintained by the NLM's National Center for Biotechnology Information; most remaining programs, including outreach, will be integrated into NLM's Library Operations Division.	
NLM News Announcement [DELETE-DO BLOG POST INSTEAD]	As it implements its Strategic Plan, 2017-2027, the National Library of Medicine is making organizational changes that include the closure of the Specialized Information Services (SIS) division, effective June 30, 2019, and the transition of many SIS programs into other parts of the Library. Hi Janice,

Can you provide us with the most up-to-date version of the spreadsheet?

Thanks,
Jody

Hi everyone,
Attached is the SIS roadmap for sunsets for resources/offerings, programs and social media as requested. As you will note not all decisions have been made and not communications plans completed. Many decisions rest with LO in the future.

Janice

Subject: Follow-up: SIS Sunset Plans (Programs, Offerings, and Social Media)

Hi Janice (SIS Team),

As a follow-up to the meeting with SIS and OCPL held on 5/28, there were a few takeaways for consideration:

- SIS still needs to decide which programs are going to sunset vs. move to other NLM programs. *Jody advised to enter this information into the sunsetting system for tracking and so that these "sunset plans" are not lost once Janice and Florence retire at the end of June.*
- Program audiences (Outreach to Specific Populations, K-12 Science and Health Education, and NLM Toxicology and Environmental Health) have their own messages for each audience. *Jody advised SIS to enter this info in the sunsetting system as well so that OCPL can determine what assistance is needed*.
- In addition to social media and offerings, there's a need to include "programs" in the sunsetting system and include details about the offerings and social media accounts associated with each program. Including program information will be helpful to align the offerings and social media accounts with the appropriate information that is relevant to the audience(s).
- SIS still needs to identify, by offering and program, what government and government-funded resources can be provided or pointed to for an offering and program that is being sunset. *Again, include in the sunset system*.
- Florence/SIS needs to identify where the SIS program information should appear on NLM web pages, NNLM information, etc. *Per Jody, these recommendations should be included in the sunset system.*
- SIS (Janice) will provide a matrix document to OCPL to help identify the disposition of SIS programs, offerings and social medial accounts - is it being sunset, moving to another NLM program, or a decision still needs to be made?

Once Janice provides the above mentioned information (mainly the matrix document) and the information is entered into the sunset system, OCPL can assist and provide guidance for the messaging. Following this message, Grace will provide the sample documents referenced in the meeting as well as a spreadsheet (template) with categories of information that should be included in the matrix. **Please provide the matrix no later than Tuesday, June 4th**.

As Jody will be out of the office most of next week, I will work with our SIS team to move the sunset plans along. So, please let me know if I can assist in any way.

Regards, Nicole

Subject: RE: Meeting with OCPL re: SIS sunset plans (social media and offerings)

It was my understanding that OCPL would be providing US with guidance on how to write the messages, based on what we are entering into the sunsetting system. Now it appears that OCPL wants the messages written and provided up front? I am confused.

Thanks for your assistance in this.

Siobhan

Subject: Meeting with OCPL re: SIS sunset plans (social media and offerings)

Hi Siobhan and Janice,

I confirmed the meeting with Jody and OCPL staff that will be working with SIS on the sunset plans. In preparation for the meeting on 5/28, I asked if there were any specific guidance that could be shared in advance of the meeting based on information already received and info forthcoming. The following comment(s) may be helpful for submissions:

- SIS should look at how frequently, through what mechanism, and what the message should be for each of the offerings they are submitting for sunset. (For example, Twitter: 3 tweets/week for four weeks letting followers know the account is closing and directing followers to @NLM_News for future information from NLM.)
- If there is information about communications regarding the offering submitted for sunset that have already happened with stakeholders, that should be documented. There should be some clear and basic communication strategies outlined for each offering. For example, what is the message they propose emailing to HHS ASPR to let them know they will be transferring the technology and web content to them for the All Hazards Plan Website? They need to share that content, not just that they will email them.
- Please provide the updated list of SIS sunset offerings prior to 5/28

Please provide the updated list of sunset offerings prior to the meeting. If there are questions from OCPL, they can be prepared to ask during the meeting.

I hope this helps!

Thanks, Nicole

Subject: RE: SIS social media and gov delivery - Guidance from OCPL

I have not heard back from Laura about the Health Reach updates on gov delivery.

I think I saw somewhere that NLM_HIV twitter handle is remaining active. So one report for Gov Delivery would be (assuming Health Reach update is going away). I will ask Ilyse to write these up, with the justification being that the offerings associated with the social media and news accounts are being sunset.

HealthReach Updates - Shares recent updates to the HealthReach website, where public health professionals can find multilingual health resources
K12NLMRESOURCES – For educators interested in NLM's online education resources

NLM_SIS Weekly Twitter Digest
NLM Outreach to Specific Populations Email Updates - Shares information and discusses outreach to specific populations

And for twitter is just @NLM_SIS

That sounds good to me. I was thinking we couldn't have written one sunset plan for GovD and listed the ones to be retired and done the same for Twitter saving a lot of work. I think Florence would be ok with that plan…

The Funding Opportunities for Disaster Health Info Products hasn't been in Gov Delivery for years. I was looking into it because it was on this page https://sis.nlm.nih.gov/listservnewsmedia.html

But I actually don't think it needs sunsetting because we sunset it a long time ago, when we stopped providing funding. There is no longer a Gov Delivery Topic for it, and hasn't been for a while.

Subject: RE: SIS social media and gov delivery - Guidance from OCPL

Janice,
The person who manages the product should decide whether or not to keep the social media/gov delivery/email. Once that decision is made, then the products being sunsetted need to be entered into the system, which I have no access to. Then OCPL will write up the sunset messages for us.

You, or whomever enters the items to be sunset into the system need to talk with product owners, not the digital communications team, which is basically defunct now. Below is my best guess of what should be sunsetted. (see https://sis.nlm.nih.gov/listservnewsmedia.html#facebook)

Sunset: in yellow, I don't know.

Hi Siobhan,
Florence and I think the digital communications committee needs to write the sunset plans so she can approve them. We expect to keep, at least in the short term, all the product email and Twitter accounts – HIV/AIDS, REMM, WISER, CHEMM. The ones to be closed are the SIS program ones such as K12, OSP, SIS Weekly and @NLM_SIS. Colette can either close now or in September the TOXMAP news. The NLM Toxicology and Environmental Health Information email updates can remain if someone in PSD or BSD continues it.

In addition these also need to have a closing date and numbers added to the OERS.

Let me know if you have any questions.

Thanks, Janice

Here's the sunset plan w/ the changes/edits I made during our meeting

Jerry

Sunset of NLM Division of Specialized Information Services (SIS) Communication Messages and Distribution Plan

General SIS Sunset Message

As the National Library of Medicine (NLM) implements its Strategic Plan, 2017-2027, it is making organizational changes that include the closure of the Specialized Information Services (SIS) division, effective June 30, 2019, and the transition of many SIS programs into other parts of NLM. This integration serves to not only improve discoverability of and access to SIS resources by NLM's broad set of users, but also enables NLM to leverage its talents and resources to improve overall efficiency and effectiveness.

Over the next few months, many SIS resources and programs will transition to other parts of NLM, while some underutilized resources will be integrated into other NLM resources, made accessible on partner sites, or discontinued. We will provide notice of these changes as they are made. Links to SIS resources and programs in their new locations will be shared on the SIS homepage at https://sis.nlm.nih.gov.

Questions about this transition and individual resources may be directed to custserv@nlm.nih.gov or 1-888-346-3656.

Communication Messages and Distribution Plan

Distribution Channel	Message	Delivery Date
Talking Points to Dr. Collins/Dr. Tabak	**Message:** As outlined in the Phase 1 concept plan that was approved in late 2018**,** NLM will close its Specialized Information Services Division effective June 30, 2019. Some SIS information services and programs will be transferred to other divisions of NLM, while other will be terminated or transitioned to other organizations. Approximately 40 Federal staff in SIS have been reassigned to other NLM divisions. Contractors are being reassigned as programs transition. **Original purpose:** Specialized Information Services (SIS) was established at NLM in 1967, with the Toxicology Information Program being a major element. The program was	Wednesday, 6/26

	designed to fulfill recommendations made by the President's Science Advisory Committee; with the objectives to create computerized toxicology information and data banks from the literature, and from the data sources of collaborating agencies. SIS also engages in health information outreach to special populations and has responsibility for disaster health information management. **Why no longer needed:** Some SIS resources have experienced low usage and/or have become obsolete and will be retired. Remaining programs and services will be realigned to integrate them into broader NLM operations to improve operational efficiencies and effectiveness. **Critical issues:** NLM has announced the dissolution of SIS to major stakeholder groups and will continue to provide information to assist users in finding existing information resources as they are transitioned to other websites over coming months. For those information services that will discontinued, NLM will ensure archiving of the resources so that no information is lost. The new locations for the resources will be shared on the NLM and SIS homepages. TOXNET, the flagship SIS resource, is being integrated into other chemical information resources maintained by the NLM's National Center for Biotechnology Information; most remaining programs, including outreach, will be integrated into NLM's Library Operations Division.	
NLM Broadcast Email from Dr. Brennan	Dear Colleagues: We have been working diligently to align our organizational structure and offerings with the National Library of Medicine's Strategic Plan, 2017-2027. As we do, the NLM will become mc efficient and effective to delivering on our mission. Effective on July 1st, the Specialized Information Services (SIS) division will be discontinued, with staff and programs integrated ir other parts of the Library. This integration will improve discoverability and access to resourc for engaging with broader audiences and enables NLM to better leverage its talents and resources. With a long and important history, SIS has provided more than 50 years of service to NLM ar the American people. Founded in 1966 in response to the urgent need for a coordinated, complete, computer-based resource of toxicological information, it grew over time to includ	Friday, 6/28

	what we know now as TOXNET. The program expanded further to include outreach to underserved and special populations, HIV/AIDS, and disaster/emergency preparedness and response. Our new organizational structure strives to create a more collaborative environment for curating important toxicology information and a more integrated information infrastructure, ensuring the integrity and sustainability of key. The SIS homepage (https://sis.nlm.nih.gov) h been updated to alert users of these changes and direct them to resources and offerings relocated to other NLM webpages or to partner websites. Information from discontinued services will be archived and remain accessible to users. With this transition, we also acknowledge two outstanding NLM leaders as they retire, Florance Chang, Acting Associate Director, and Janice Kelly, Acting Deputy Associate Director They have dedicated their careers to the health of the nation and a strong and trusted NLM and have led an outstanding, dedicates staff. I hope you will join me in thanking them for the service and wishing them well as they take on new ventures. While change can be difficult, I believe it will produce a stronger NLM that will better serve c broad sets of users. I am grateful to all SIS staff for their professionalism and flexibility throughout this transition. As we work more closely and break down boundaries between ou units, NLM is poised to make great strides in accelerating discovery and advancing health through data-driven research. Joyce and Florence, I agree with Florence's "This tells me that risk assessors or scientists prefer to see an information resource that provides current data from many sources than from a single source." We have offered ITER in TOXNET for about 20 years, and it is an unique offering that reviews and pulls together these types of risk values from EPA and several other sources.

The issue with ITER going the University of Cincinnati to its original developer (TERA) could be resolved within the few weeks; however, but the best timing for a transition might be at the end of the current funding for the University of Cincinnati. I can edit the wording to indicate that it will be resolved by Fall 2019 but the transition might occur in in April 2020 when the current funding ends for the University of Cincinnati's work on ITER. I can see how the ITER content will be offered in both Bookshelf and PubChem.

(A disclosure is that I worked at TERA for about a year before going to the European Commission, and I remember being the person at TERA to suggest approaching NLM to try to get ITER into TOXNET! The TERA and NLM interactions happened after I went to the European Commission.)

Bert

Subject: RE: ACTION REQUIRED (ASSOCIATE DIRECTOR APPROVAL) - NLM SUNSETTING REQUEST

Joyce,

I will let Bert answer most of your questions because he knows more about the value of ITER as a NLM resource. I know by looking at the stats that comparing usage of IRIS (a risk value resource from EPA) and ITER (10 risk values from 10 sources including EPA), it is a ratio of 3:5. This tells me that risk assessors or scientists prefer to see an information resource that provides data from many sources than from a single source.

We are planning to sunset ITER and IRIS from TOXNET. But they are likely to go into NCBI Books except the timing is uncertain. So on the TOXNET transition page and in the communication plan, we say these 2 resources are to sunset with TOXNET.

Florence

Subject: FW: ACTION REQUIRED (ASSOCIATE DIRECTOR APPROVAL) - NLM SUNSETTING REQUEST

Bert, Florence,
Is seems like this sunset plan says NLM will commit to continue to provide ITER to the public if we can get a clear license for it from TERA or UC? But we won't know until 2020? I'm afraid I can't tell if ITER is sunsetting on TOXNET and going to be delivered from Bookshelf or PubChem or sunsetting from NLM altogether.

Under Justification it looks like the only reason to consider sunsetting is because of the ownership status with none of the other justifications considered. Do none of these apply?

- Low usage
- Obsolescence / Better products have come along, whether from NLM or another group
- No longer aligned with NLM priorities or mission needs
- Incorrect or out-of-date information
- Reallocation of staff to different products because resource is no longer a priority
- Cost in relation to value

Thanks for clarifying.

Joyce

Please review the request below and select "APPROVE", "REJECT" or "RETURN". Selecting "RETURN" will return this request to its submitter for resubmission.

NLM Service/Product (Offering) Details

NLM Service/Product (Offering)	ITER (International Toxicity Estimates of Risk)
Description	ITER has been a TOXNET database for almost 20 years. It contains data in support of human health risk assessments and is currently compiled by staff at the Risk Science Center of the University of Cincinnati's Department of Environmental Health. Once some legal and logistical matters are addressed, the home of ITER will return to Toxicology Excellence for Risk Assessment (TERA), its original developer. NLM has licensed ITER initially from TERA and then UC when key TERA staff moved to UC (they are now back at TERA). We do not expect meaningful issues associated with offering ITER content via Bookshelf or PubChem once the discussions between UC and TERA are completed, The UC and TERA interactions are expected to be completed by early 2020. ITER contains data from CDC/ATSDR, Health Canada, RIVM, U.S. EPA, IARC, NSF International and independent parties offering peer-reviewed risk values. ITER provides comparison charts of international risk assessment information and explains differences in risk values derived by different organizations. ITER is updated several times a year.
Document(s) Supporting Justification	ITERonUCWebSIte.docx
Justification	Other: The plan is to sunset ITER in the Fall of 2019 if the legal and logistical issues cannot be resolved between the University of Cincinnati and TERA. ITER will be . removed from the NLM Products & Services list.

Attachments: General SIS Sunset Messagefor PBjune25.docx

Hi Patti,

Please find attached for your review/comment:

- Page 1 – Is the message for the SIS program sunset. The message was reviewed this morning with Jerry, Todd, Janice, and Florence. We plan to repurpose the message on the SIS homepage to post on July 1 and in the announcement going out in the Technical Bulletin either June 28 or July 1.
- Page 2 – A draft NLM Broadcast email from you to go out this Friday, June 28.

We will soon be providing you with some talking points/rough draft for an upcoming *Musings* blog that I believe Jerry talked to you about. We are recommending the blog goes out either July 3 or 10 to keep SIS sunset communications timely and coordinated.

Please let me know if you have any questions. Thanks.

Regards,
Jody

General SIS Sunset Message - DRAFT

As the National Library of Medicine (NLM) implements its Strategic Plan, 2017-2027, it is making organizational changes that include the closure of the Specialized Information Services (SIS) division, effective June 30, 2019, and the transition of many SIS programs into other parts of NLM. This integration serves to not only improve discoverability of and access to SIS resources by NLM's broad set of users, but also enables NLM to leverage its talents and resources to improve overall efficiency and effectiveness.

Over the next few months, many SIS resources and programs will transition to other parts of NLM, while some underutilized resources will be integrated into other NLM resources, made accessible on partner sites, or discontinued. We will provide notice of these changes as they are made on the SIS home page at https://sis.nlm.nih.gov.

Questions about this transition and individual resources may be directed to custserv@nlm.nih.gov or 1-888-346-3656.

DRAFT: NLM BROADCAST EMAIL MESSAGE – recommend sending on June 28, 2019

Dear Colleagues:

We have been working diligently to align our organizational structure and offerings with the National Library of Medicine's Strategic Plan, 2017-2027. As we do, the NLM will become more efficient and effective to delivering on our mission. Effective on July 1st, the Specialized Information Services (SIS) division will be discontinued, with staff and programs integrated into other parts of the organization. This integration will improve discoverability and access to resources for engaging with broader audiences and enables NLM to better leverage its talents and resources.

With a long and important history, SIS has provided more than 50 years of service to NLM and the American people. Founded in 1966 in response to the urgent need for a coordinated, complete, computer-based resource of toxicological information, it grew over time to include what we know now as TOXNET. The program expanded further to include outreach to underserved and special populations, HIV/AIDS, and disaster/emergency preparedness and response.

Our new organizational structure strives to create a more collaborative environment for curating important toxicology information and a more integrated information infrastructure, ensuring the integrity and sustainability of key.

Over the next few months, many SIS resources and programs will transition to other parts of NLM, while some underutilized resources will be integrated into other NLM resources, made accessible on partner sites, or discontinued. We will provide notice of these changes as they are made on the SIS home page at https://sis.nlm.nih.gov.

With this transition, we also acknowledge two outstanding NLM leaders as they retire, Florance Chang, Acting Associate Director, and Janice Kelly, Acting Deputy Associate Director. They have dedicated their careers to the health of the nation and a strong and trusted NLM and have led an outstanding, dedicates staff. I hope you will join me in thanking them for their service and wishing them well as they take on new ventures.

While change can be difficult, I believe it will produce a stronger NLM that will better serve our broad sets of users. I am grateful to all SIS staff for their professionalism and flexibility throughout this transition. As we work more closely and break down boundaries between our units, NLM is poised to make great strides in accelerating discovery and advancing health through data-driven research.

Patti

Subject: RE: ACTION REQUIRED (ASSOCIATE DIRECTOR APPROVAL) - NLM SUNSETTING REQUEST

There is no guarantee when ITER will become available in NCBI Bookshelf, same as IRIS. Therefore we need to sunset it from TOXNET. It may take a year to migrate the content to Bookshelf. NCBI team is not going to work on the migration until the legal issue is solved.

For IRIS, there is no guarantee how long it will take for EPA to have the XML ready for Bookshelf. So for both ITER and IRIS, we don't have a definite timeline when they will be available on Bookshelf. So the plan is to sunset both of these TOXNET resources for the time being.

Subject: RE: ACTION REQUIRED (ASSOCIATE DIRECTOR APPROVAL) - NLM SUNSETTING REQUEST

Joyce, thanks. BTW, I had a phone conversation today with ITER's main contact at the University of Cincinnati. Within the next week or so, she is going to send me/us a plan with the steps and suggested timing for the move of ITER back to TERA (its original home). She will do this with TERA's main ITER contact to make sure they're aligned with the plan.

Florence and Jeanne, do we still do a sunset plan for ITER? It was on my ''to do" list for a sunset plan. Same question for DERMaL (I was planning to write it this week) since we are making it part of CHEMM rather than totally dropping it?

All, I know that the ITER story is a complex one so please feel free to ask me for more information. I've known the key folks at the University of Cincinnati and TERA for many years and that really helps with the interactions.

Thanks,
Bert

Subject: RE: ACTION REQUIRED (ASSOCIATE DIRECTOR APPROVAL) - NLM SUNSETTING REQUEST

Joyce and Florence, I agree with Florence's "This tells me that risk assessors or scientists prefer to see an information resource that provides current data from many sources than from a single source." We have offered ITER in TOXNET for about 20 years, and it is an unique offering that reviews and pulls together these types of risk values from EPA and several other sources.

The issue with ITER going the University of Cincinnati to its original developer (TERA) could be resolved within the few weeks; however, but the best timing for a transition might be at the end of the current funding for the University of Cincinnati. I can edit the wording to indicate that it will be resolved by Fall 2019 but the transition might occur in in April 2020 when the current funding ends for the University of Cincinnati's work on ITER. I can see how the ITER content will be offered in both Bookshelf and PubChem.

(A disclosure is that I worked at TERA for about a year before going to the European Commission, and I remember being the person at TERA to suggest approaching NLM to try to get ITER into TOXNET! The TERA and NLM interactions happened after I went to the European Commission.)

General SIS Sunset Message – DRAFT

As the National Library of Medicine (NLM) implements its Strategic Plan, 2017-2027, it is making organizational changes that include the closure of the Specialized Information Services (SIS) division, effective June 30, 2019, and the transition of many SIS programs into other parts of NLM. This integration serves to not only improve discoverability of and access to SIS resources by NLM's broad set of users,but also enables NLM to leverage its talents and resources to improve overall efficiency and effectiveness.

Over the next few months, many SIS resources and programs will transition to other parts of NLM, while some resources will be integrated into other NLM resources, made accessible on partner sites, or discontinued.

We will provide notice of these changes as they are made. Links to SIS resources and programs in their new locations will be shared on the SIS homepage at https://sis.nlm.nih.gov.

Questions about this transition and individual resources may be directed to custserv@nlm.nih.gov or 1-888-346-3656.

DRAFT: NLM BROADCAST EMAIL MESSAGE – recommend sending on June 28, 2019

Dear Colleagues:

We have been working diligently to align our organizational structure and offerings with the National Library of Medicine's Strategic Plan, 2017-2027. As we do, the NLM will become more efficient and effective to delivering on our mission. Effective on July 1st, the Specialized Information Services (SIS) division will be discontinued, with staff and programs integrated into other parts of the organization. This integration will improve discoverability and access to resources for engaging with broader audiences and enables NLM to better leverage its talents and resources.

With a long and important history, SIS has provided more than 50 years of service to NLM and the American people. Founded in 1966 in response to the urgent need for a coordinated, complete, computer-based resource of toxicological information, it grew over time to include what we know now as TOXNET. The program expanded further to include outreach to underserved and special populations, HIV/AIDS, and disaster/emergency preparedness and response.

Our new organizational structure strives to create a more collaborative environment for curating important toxicology information and a more integrated information infrastructure, ensuring the integrity and sustainability of key.

Over the next few months, many SIS resources and programs will transition to other parts of NLM, while some underutilized resources will be integrated into other NLM resources, made accessible on partner sites, or discontinued. We will provide notice of these changes as they are made on the SIS home page at https://sis.nlm.nih.gov.

With this transition, we also acknowledge two outstanding NLM leaders as they retire, Florence Chang, Acting Associate Director, and Janice Kelly, Acting Deputy Associate Director. They have dedicated their careers to the health of the nation and a strong and trusted NLM and have led an outstanding, dedicates staff. I hope you will join me in thanking them for their service and wishing them well as they take on new ventures.

While change can be difficult, I believe it will produce a stronger NLM that will better serve our broad sets of users. I am grateful to all SIS staff for their professionalism and flexibility throughout this transition. As we work more closely and break down boundaries between our units, NLM is poised to make great strides in accelerating discovery and advancing health through data-driven research.

Patti
