I met with Stacey yesterday. She suggested removing "underutilized" from the SIS home page message.

We also discussed the overall plan and messaging for the SIS sites. She agreed to work with the staff (Colette and Jen) to remove references to SIS in the "About" section and footers of the TEHIP and DIMRC pages by Friday. She had concern about posting the language, "Please note, this page will no longer….", on the following pages because they are not going away nor do they reference SIS (only in the "About" section): DIMRC, TEHIP, HIV/AIDS. She feels that the message will call unnecessary attention to SIS and unavailable pages. See below the suggestions from Stacey and an update on my communications for BSD, EnHIP and NNLM.

Web Site Message (3 Pages) **-TOXNET** **-Chemical and Drug Page** **-K-12 Science and Health Education** **-Outreach Activities & Resources**	Please note, this page will no longer be available effective 12/1/2019. For additional information, visit www.sis.nlm.nih.gov. *Per Stacey, these are the only pages that should include this message at the top of the banner.
Web Site Message (TBD) **-TEHIP Page** **-HIV/AIDS (AIDSource)** **-DIMRC**	*Per Stacey, these pages should not include the message above because decisions have NOT been made about the availability of these pages. Also, they don't reference SIS and have not been promoted in such a manner. NLM is only referenced. She agreed to work with Colette and Jen to remove any links to SIS. ----On the TEHIP home page, there is no reference to SIS --On the TEHIP about page – Colette to remove the 3 references to SIS; https://envirotoxinfo.nlm.nih.gov/about-nlmenvirotox.html On DIMRC home page – she will remove link to SIS in the footer (may not be done by Friday) On the DIMRC about page – she will ask Jen to remove reference to SIS on this page: https://disasterinfo.nlm.nih.gov/about-dimrc
Message for BSD (LO) **POC: Bert Hakkinen, Jeanne Goshorn**	Bert Hakkinen will send a message to the Scientific Review Panel. He was fine with using the language we drafted for the NLM Technical Bulletin.
ENHIP (Environmental Health Information Partnership) **POC: Cynthia Gaines, Amanda Wilson**	Messaged Amanda Wilson and Cynthia Gaines. No response from Amanda, but Cynthia stated that she and Janice already sent ENHIP messages about the closure of SIS. I asked for a copy of those messages but suggested that they still need a formal notification. I will follow up with Amanda W. Still pending.
NNLM Listserv **POC: Amanda Wilson**	I sent the draft Technical Bulletin language to Amanda for tailoring to the NNLM for the listserv message she typically sends on Fridays. No

	response yet.

Subject: Follow-up: SIS Sunset Plans (Programs, Offerings, and Social Media)

Hi Janice (SIS Team),

As a follow-up to the meeting with SIS and OCPL held on 5/28, there were a few takeaways for consideration:

- SIS still needs to decide which programs are going to sunset vs. move to other NLM programs. *Jody advised to enter this information into the sunsetting system for tracking and so that these "sunset plans" are not lost once Janice and Florence retire at the end of June.*

- Program audiences (Outreach to Specific Populations, K-12 Science and Health Education, and NLM Toxicology and Environmental Health) have their own messages for each audience. *Jody advised SIS to enter this info in the sunsetting system as well so that OCPL can determine what assistance is needed*.

- In addition to social media and offerings, there's a need to include "programs" in the sunsetting system and include details about the offerings and social media accounts associated with each

program. Including program information will be helpful to align the offerings and social media accounts with the appropriate information that is relevant to the audience(s).

- SIS still needs to identify, by offering and program, what government and government-funded resources can be provided or pointed to for an offering and program that is being sunset. *Again, include in the sunset system*.
- Florence/SIS needs to identify where the SIS program information should appear on NLM web pages, NNLM information, etc. *Per Jody, these recommendations should be included in the sunset system.*
- SIS (Janice) will provide a matrix document to OCPL to help identify the disposition of SIS programs, offerings and social medial accounts - is it being sunset, moving to another NLM program, or a decision still needs to be made?

Once Janice provides the above mentioned information (mainly the matrix document) and the information is entered into the sunset system, OCPL can assist and provide guidance for the messaging. Following this message, Grace will provide the sample documents referenced in the meeting as well as a spreadsheet (template) with categories of information that should be included in the matrix. **Please provide the matrix no later than Tuesday, June 4th**.

As Jody will be out of the office most of next week, I will work with our SIS team to move the sunset plans along. So, please let me know if I can assist in any way.

Regards, Nicole

Subject: Meeting with OCPL re: SIS sunset plans (social media and offerings)

Hi Siobhan and Janice,

I confirmed the meeting with Jody and OCPL staff that will be working with SIS on the sunset plans. In preparation for the meeting on 5/28, I asked if there were any specific guidance that could be shared in advance of the meeting based on information already received and info forthcoming. The following comment(s) may be helpful for submissions:

- SIS should look at how frequently, through what mechanism, and what the message should be for each of the offerings they are submitting for sunset. (For example, Twitter: 3 tweets/week for four weeks letting followers know the account is closing and directing followers to @NLM_News for future information from NLM.)
- If there is information about communications regarding the offering submitted for sunset that have already happened with stakeholders, that should be documented. There should be some clear and basic communication strategies outlined for each offering. For example, what is the message they propose emailing to HHS ASPR to let them know they will be transferring the technology and web content to them for the All Hazards Plan Website? They need to share that content, not just that they will email them.
- Please provide the updated list of SIS sunset offerings prior to 5/28

Please provide the updated list of sunset offerings prior to the meeting. If there are questions from OCPL, they can be prepared to ask during the meeting.

I hope this helps!

Thanks, Nicole

Subject: RE: SIS social media and gov delivery - Guidance from OCPL

I have not heard back from Laura about the Health Reach updates on gov delivery.

I think I saw somewhere that NLM_HIV twitter handle is remaining active. So one report for Gov Delivery would be (assuming Health Reach update is going away). I will ask Ilyse to write these up, with the justification being that the offerings associated with the social media and news accounts are being sunset.

HealthReach Updates - Shares recent updates to the HealthReach website, where public health professionals can find multilingual health resources
K12NLMRESOURCES – For educators interested in NLM's online education resources
NLM_SIS Weekly Twitter Digest
NLM Outreach to Specific Populations Email Updates - Shares information and discusses outreach to specific populations

And for twitter is just @NLM_SIS

The Funding Opportunities for Disaster Health Info Products hasn't been in Gov Delivery for years. I was looking into it because it was on this page https://sis.nlm.nih.gov/listservnewsmedia.html

But I actually don't think it needs sunsetting because we sunset it a long time ago, when we stopped providing funding. There is no longer a Gov Delivery Topic for it, and hasn't been for a while.

Per an email from Janice:
Please enter your sunsetted social media handles into the system before June 23 and let Janice and I know you have done so, or that it will not be sunset. https://sunsetting.nlm.nih.gov. You will have to write a brief description and justification. Work with the product manager if you have questions on how to write up the entry for sunsetting the offering.

Subject: RE: SIS social media and gov delivery - Guidance from OCPL

Janice,
The person who manages the product should decide whether or not to keep the social media/gov delivery/email. Once that decision is made, then the products being sunsetted need to be entered into the system, which I have no access to. Then OCPL will write up the sunset messages for us.

You, or whomever enters the items to be sunset into the system need to talk with product owners, not the digital communications team, which is basically defunct now. Below is my best guess of what should be sunsetted. (see https://sis.nlm.nih.gov/listservnewsmedia.html#facebook)

Sunset: in yellow, I don't know.

Hi Siobhan,
Florence and I think the digital communications committee needs to write the sunset plans so she can approve them. We expect to keep, at least in the short term, all the product email and Twitter accounts – HIV/AIDS, REMM, WISER, CHEMM. The ones to be closed are the SIS program ones such as K12, OSP, SIS Weekly and @NLM_SIS. Colette can either close now or in September the TOXMAP news. The NLM Toxicology and Environmental Health Information email updates can remain if someone in PSD or BSD continues it.

In addition these also need to have a closing date and numbers added to the OERS.

Let me know if you have any questions.

Thanks, Janice

- Florence/SIS needs to identify where the SIS program information should appear on NLM web pages, NNLM information, etc. *Per Jody, these recommendations should be included in the sunset system.*
- SIS (Janice) will provide a matrix document to OCPL to help identify the disposition of SIS programs, offerings and social medial accounts - is it being sunset, moving to another NLM program, or a decision still needs to be made?

Once Janice provides the above mentioned information (mainly the matrix document) and the information is entered into the sunset system, OCPL can assist and provide guidance for the messaging. Following this message, Grace will provide the sample documents referenced in the meeting as well as a spreadsheet (template) with categories of information that should be included in the matrix. **Please provide the matrix no later than Tuesday, June 4th**.

As Jody will be out of the office most of next week, I will work with our SIS team to move the sunset plans along. So, please let me know if I can assist in any way.

Regards, Nicole

Subject: Meeting with OCPL re: SIS sunset plans (social media and offerings)

Hi Siobhan and Janice,

I confirmed the meeting with Jody and OCPL staff that will be working with SIS on the sunset plans. In preparation for the meeting on 5/28, I asked if there were any specific guidance that could be shared in advance of the meeting based on information already received and info forthcoming. The following comment(s) may be helpful for submissions:

- SIS should look at how frequently, through what mechanism, and what the message should be for each of the offerings they are submitting for sunset. (For example, Twitter: 3 tweets/week for four weeks letting followers know the account is closing and directing followers to @NLM_News for future information from NLM.)
- If there is information about communications regarding the offering submitted for sunset that have already happened with stakeholders, that should be documented. There should be some clear and basic communication strategies outlined for each offering. For example, what is the message they propose emailing to HHS ASPR to let them know they will be transferring the technology and web content to them for the All Hazards Plan Website? They need to share that content, not just that they will email them.
- Please provide the updated list of SIS sunset offerings prior to 5/28

Please provide the updated list of sunset offerings prior to the meeting. If there are questions from OCPL, they can be prepared to ask during the meeting.

I hope this helps!

Thanks, Nicole

Subject: RE: SIS social media and gov delivery - Guidance from OCPL

I have not heard back from Laura about the Health Reach updates on gov delivery.

I think I saw somewhere that NLM_HIV twitter handle is remaining active. So one report for Gov Delivery would be (assuming Health Reach update is going away). I will ask Ilyse to write these up, with the justification being that the offerings associated with the social media and news accounts are being sunset.

The Funding Opportunities for Disaster Health Info Products hasn't been in Gov Delivery for years. I was looking into it because it was on this page https://sis.nlm.nih.gov/listservnewsmedia.html

But I actually don't think it needs sunsetting because we sunset it a long time ago, when we stopped providing funding. There is no longer a Gov Delivery Topic for it, and hasn't been for a while.

Subject: RE: SIS social media and gov delivery - Guidance from OCPL

Hi Siobhan,
Florence and I think the digital communications committee needs to write the sunset plans so she can approve them. We expect to keep, at least in the short term, all the product email and Twitter accounts – HIV/AIDS, REMM, WISER, CHEMM. The ones to be closed are the SIS program ones such as K12, OSP, SIS Weekly and @NLM_SIS. Colette can either close now or in September the TOXMAP news. The NLM

Toxicology and Environmental Health Information email updates can remain if someone in PSD or BSD continues it.

In addition these also need to have a closing date and numbers added to the OERS.

Let me know if you have any questions.

Thanks, Janice

Subject: Follow-up: SIS Sunset Plans (Programs, Offerings, and Social Media)

Hi Janice (SIS Team),

As a follow-up to the meeting with SIS and OCPL held on 5/28, there were a few takeaways for consideration:

- SIS still needs to decide which programs are going to sunset vs. move to other NLM programs. *Jody advised to enter this information into the sunsetting system for tracking and so that these "sunset plans" are not lost once Janice and Florence retire at the end of June.*
- Program audiences (Outreach to Specific Populations, K-12 Science and Health Education, and NLM Toxicology and Environmental Health) have their own messages for each audience. *Jody advised SIS to enter this info in the sunsetting system as well so that OCPL can determine what assistance is needed*.
- In addition to social media and offerings, there's a need to include "programs" in the sunsetting system and include details about the offerings and social media accounts associated with each program. Including program information will be helpful to align the offerings and social media accounts with the appropriate information that is relevant to the audience(s).
- SIS still needs to identify, by offering and program, what government and government-funded resources can be provided or pointed to for an offering and program that is being sunset. *Again, include in the sunset system*.
- Florence/SIS needs to identify where the SIS program information should appear on NLM web pages, NNLM information, etc. *Per Jody, these recommendations should be included in the sunset system.*
- SIS (Janice) will provide a matrix document to OCPL to help identify the disposition of SIS programs, offerings and social medial accounts - is it being sunset, moving to another NLM program, or a decision still needs to be made?

Once Janice provides the above mentioned information (mainly the matrix document) and the information is entered into the sunset system, OCPL can assist and provide guidance for the messaging. Following this message, Grace will provide the sample documents referenced in the meeting as well as a spreadsheet (template) with categories of information that should be included in the matrix. **Please provide the matrix no later than Tuesday, June 4th**.

As Jody will be out of the office most of next week, I will work with our SIS team to move the sunset plans along. So, please let me know if I can assist in any way.

Subject: RE: SIS social media and gov delivery - Guidance from OCPL

Hi Siobhan,
Florence and I think the digital communications committee needs to write the sunset plans so she can approve them. We expect to keep, at least in the short term, all the product email and Twitter accounts – HIV/AIDS, REMM, WISER, CHEMM. The ones to be closed are the SIS program ones such as K12, OSP, SIS Weekly and @NLM_SIS. Colette can either close now or in September the TOXMAP news. The NLM Toxicology and Environmental Health Information email updates can remain if someone in PSD or BSD continues it.

In addition these also need to have a closing date and numbers added to the OERS.

Let me know if you have any questions.

Thanks, Janice

Subject: ACTION REQUIRED (COMMUNICATION DIRECTOR APPROVAL) - NLM SUNSETTING REQUEST

ATTENTION: The following Sunsetting Request requires your approval.

Please review the request below and select "APPROVE", "REJECT" or "RETURN". Selecting "RETURN" will return this request to its submitter for resubmission.

NLM Service/Product (Offering) Details	
NLM Service/Product (Offering)	ITER (International Toxicity Estimates of Risk)
Description	ITER has been a TOXNET database for almost 20 years. It contains data in support of human health risk assessments and is currently compiled by staff at the Risk Science Center of the University of Cincinnati's Department of Environmental Health. Once some legal and logistical matters are addressed, the home of ITER will return to Toxicology Excellence for Risk Assessment (TERA), its original developer. NLM has licensed ITER initially from TERA and then UC when key TERA staff moved to UC (they are now back at TERA). We do not expect meaningful issues associated with offering ITER content via Bookshelf or PubChem once the discussions between UC and TERA are completed, The UC and TERA interactions are expected to be completed by early 2020. ITER contains data from CDC/ATSDR, Health Canada, RIVM, U.S. EPA, IARC, NSF International and independent parties offering peer-reviewed risk values. ITER provides comparison charts of international risk assessment information and explains differences in risk values derived by different organizations. ITER is updated several times a year.
Document(s) Supporting Justification	ITERonUCWebSIte.docx

Justification	Other: The plan is to sunset ITER in the Fall of 2019 if the legal and logistical issues cannot be resolved between the University of Cincinnati and TERA. ITER will be . removed from the NLM Products & Services list.
Retirement Date	12/31/2019
Organization	LO
Key Staff Involved	Colette Hochstein Pertti Hakkinen Jeanne Goshorn David Gillikin

Internal Communication Plan	
Staff to be Informed	Colette Hochstein Pertti Hakkinen Stacey Arnesen Jeanne Goshorn Wei Ma David Gillikin Amanda Wilson
Communicated Message	On December 1, 2019 the National Library of Medicine (NLM) TOXNET website will be discontinued. Most of its content will continue to be available through other NLM databases as well as external websites. ITER has been a TOXNET database for about 20 years and its content will be continued in Bookshelf and/or PubChem if and once legal and logistical issues are resolved between the original developed and the current developer, and work is done to provide the ITER content in way that can be unitized for Bookshelf and/or PubChem.. For a complete list of TOXNET databases and how to access their

	content, see the TOXNET transition page.
Date the Message will be Sent	08/31/2019

Subject: Follow-up: SIS Sunset Plans (Programs, Offerings, and Social Media)

Hi Janice (SIS Team),

As a follow-up to the meeting with SIS and OCPL held on 5/28, there were a few takeaways for consideration:

- SIS still needs to decide which programs are going to sunset vs. move to other NLM programs. *Jody advised to enter this information into the sunsetting system for tracking and so that these "sunset plans" are not lost once Janice and Florence retire at the end of June.*
- Program audiences (Outreach to Specific Populations, K-12 Science and Health Education, and NLM Toxicology and Environmental Health) have their own messages for each audience. *Jody advised SIS to enter this info in the sunsetting system as well so that OCPL can determine what assistance is needed*.
- In addition to social media and offerings, there's a need to include "programs" in the sunsetting system and include details about the offerings and social media accounts associated with each program. Including program information will be helpful to align the offerings and social media accounts with the appropriate information that is relevant to the audience(s).
- SIS still needs to identify, by offering and program, what government and government-funded resources can be provided or pointed to for an offering and program that is being sunset. *Again, include in the sunset system*.
- Florence/SIS needs to identify where the SIS program information should appear on NLM web pages, NNLM information, etc. *Per Jody, these recommendations should be included in the sunset system.*
- SIS (Janice) will provide a matrix document to OCPL to help identify the disposition of SIS programs, offerings and social medial accounts - is it being sunset, moving to another NLM program, or a decision still needs to be made?

Once Janice provides the above mentioned information (mainly the matrix document) and the information is entered into the sunset system, OCPL can assist and provide guidance for the messaging.

Following this message, Grace will provide the sample documents referenced in the meeting as well as a spreadsheet (template) with categories of information that should be included in the matrix. **Please provide the matrix no later than Tuesday, June 4th**.

As Jody will be out of the office most of next week, I will work with our SIS team to move the sunset plans along. So, please let me know if I can assist in any way.

Regards, Nicole

Subject: RE: Meeting with OCPL re: SIS sunset plans (social media and offerings)

It was my understanding that OCPL would be providing US with guidance on how to write the messages, based on what we are entering into the sunsetting system. Now it appears that OCPL wants the messages written and provided up front? I am confused.

Thanks for your assistance in this.

Siobhan

Subject: Meeting with OCPL re: SIS sunset plans (social media and offerings)

Hi Siobhan and Janice,

I confirmed the meeting with Jody and OCPL staff that will be working with SIS on the sunset plans. In preparation for the meeting on 5/28, I asked if there were any specific guidance that could be shared in advance of the meeting based on information already received and info forthcoming. The following comment(s) may be helpful for submissions:

- SIS should look at how frequently, through what mechanism, and what the message should be for each of the offerings they are submitting for sunset. (For example, Twitter: 3 tweets/week for four weeks letting followers know the account is closing and directing followers to @NLM_News for future information from NLM.)
- If there is information about communications regarding the offering submitted for sunset that have already happened with stakeholders, that should be documented. There should be some clear and basic communication strategies outlined for each offering. For example, what is the message they propose emailing to HHS ASPR to let them know they will be transferring the technology and web content to them for the All Hazards Plan Website? They need to share that content, not just that they will email them.
- Please provide the updated list of SIS sunset offerings prior to 5/28

Please provide the updated list of sunset offerings prior to the meeting. If there are questions from OCPL, they can be prepared to ask during the meeting.

I hope this helps!

Thanks, Nicole

Subject: RE: SIS social media and gov delivery - Guidance from OCPL

I have not heard back from Laura about the Health Reach updates on gov delivery.

I think I saw somewhere that NLM_HIV twitter handle is remaining active. So one report for Gov Delivery would be (assuming Health Reach update is going away). I will ask Ilyse to write these up, with the

justification being that the offerings associated with the social media and news accounts are being sunset.

That sounds good to me. I was thinking we couldn't have written one sunset plan for GovD and listed the ones to be retired and done the same for Twitter saving a lot of work. I think Florence would be ok with that plan…

Subject: RE: SIS social media and gov delivery - Guidance from OCPL

The Funding Opportunities for Disaster Health Info Products hasn't been in Gov Delivery for years. I was looking into it because it was on this page https://sis.nlm.nih.gov/listservnewsmedia.html

But I actually don't think it needs sunsetting because we sunset it a long time ago, when we stopped providing funding. There is no longer a Gov Delivery Topic for it, and hasn't been for a while.

Per an email from Janice:
Please enter your sunsetted social media handles into the system before June 23 and let Janice and I know you have done so, or that it will not be sunset. https://sunsetting.nlm.nih.gov. You will have to write a brief description and justification. Work with the product manager if you have questions on how to write up the entry for sunsetting the offering.

Siobhan,
Everyone has access to the sunsetting system, sorry I forgot to include that – https://sunsetting.nlm.nih.gov. Unfortunately the digital communications team will need to reconvene and keep on top of this before June 23.

As for the orphan accounts I believe:

HealthREach – Laura
Tox and Enviro Health – Colette
ToxMAP – Colette
@NLM-HIV – Nicole and Julian

Subject: RE: SIS social media and gov delivery - Guidance from OCPL

Janice,
The person who manages the product should decide whether or not to keep the social media/gov delivery/email. Once that decision is made, then the products being sunsetted need to be entered into the system, which I have no access to. Then OCPL will write up the sunset messages for us.

You, or whomever enters the items to be sunset into the system need to talk with product owners, not the digital communications team, which is basically defunct now. Below is my best guess of what should be sunsetted. (see https://sis.nlm.nih.gov/listservnewsmedia.html#facebook)

Sunset: in yellow, I don't know.

Subject: RE: SIS social media and gov delivery - Guidance from OCPL

Hi Siobhan,
Florence and I think the digital communications committee needs to write the sunset plans so she can approve them. We expect to keep, at least in the short term, all the product email and Twitter accounts – HIV/AIDS, REMM, WISER, CHEMM. The ones to be closed are the SIS program ones such as K12, OSP, SIS Weekly and @NLM_SIS. Colette can either close now or in September the TOXMAP news. The NLM Toxicology and Environmental Health Information email updates can remain if someone in PSD or BSD continues it.

In addition these also need to have a closing date and numbers added to the OERS.

Let me know if you have any questions.

Thanks, Janice

Sunset of NLM Division of Specialized Information Services (SIS) Communication Messages and Distribution Plan

General SIS Sunset Message

As the National Library of Medicine (NLM) implements its Strategic Plan, 2017-2027, it is making organizational changes that include the closure of the Specialized Information Services (SIS) division, effective June 30, 2019, and the transition of many SIS programs into other parts of NLM. This integration serves to not only improve discoverability of and access to SIS resources by NLM's broad set of users, but also enables NLM to leverage its talents and resources to improve overall efficiency and effectiveness.

Over the next few months, many SIS resources and programs will transition to other parts of NLM, while some resources will be integrated into other NLM resources, made accessible on partner sites, or discontinued. We will provide notice of these changes as they are made. Links to SIS resources and programs in their new locations will be shared on the SIS homepage at https://sis.nlm.nih.gov.

Questions about this transition and individual resources may be directed to custserv@nlm.nih.gov or 1-888-346-3656.

Communication Messages and Distribution Plan

Distribution Channel	Message	Delivery Date
Talking Points to Dr. Collins/Dr. Tabak	**Message:** As outlined in the Phase 1 concept plan that was approved in late 2018**,** NLM will close its Specialized Information Services Division effective June 30, 2019. Some SIS information services and programs will be transferred to other divisions of NLM, while other will be terminated or transitioned to other organizations. Approximately 40 Federal staff in SIS have been reassigned to other NLM divisions. Contractors are being reassigned as programs transition. **Original purpose:** Specialized Information Services (SIS) was established at NLM in 1967, with the Toxicology Information Program being a major element. The program was	Wednesday, 6/26

	designed to fulfill recommendations made by the President's Science Advisory Committee; with the objectives to create computerized toxicology information and data banks from the literature, and from the data sources of collaborating agencies. SIS also engages in health information outreach to special populations and has responsibility for disaster health information management. **Why no longer needed:** Some SIS resources have experienced low usage and/or have become obsolete and will be retired. Remaining programs and services will be realigned to integrate them into broader NLM operations to improve operational efficiencies and effectiveness. **Critical issues:** NLM has announced the dissolution of SIS to major stakeholder groups and will continue to provide information to assist users in finding existing information resources as they are transitioned to other websites over coming months. For those information services that will discontinued, NLM will ensure archiving of the resources so that no information is lost. The new locations for the resources will be shared on the NLM and SIS homepages. TOXNET, the flagship SIS resource, is being integrated into other chemical information resources maintained by the NLM's National Center for Biotechnology Information; most remaining programs, including outreach, will be integrated into NLM's Library Operations Division.	
NLM Broadcast Email from Dr. Brennan	Dear Colleagues: We have been working diligently to align our organizational structure and offerings with the National Library of Medicine's Strategic Plan, 2017-2027. As we do, the NLM will become mc efficient and effective to delivering on our mission. Effective on July 1st, the Specialized Information Services (SIS) division will be discontinued, with staff and programs integrated ir other parts of the organization. This integration will improve discoverability and access to resources for engaging with broader audiences and enables NLM to better leverage its talen and resources. With a long and important history, SIS has provided more than 50 years of service to NLM ar the American people. Founded in 1966 in response to the urgent need for a coordinated, complete, computer-based resource of toxicological information, it grew over time to includ	Friday, 6/28

	what we know now as TOXNET. The program expanded further to include outreach to underserved and special populations, HIV/AIDS, and disaster/emergency preparedness and response. Our new organizational structure strives to create a more collaborative environment for curating important toxicology information and a more integrated information infrastructure, ensuring the integrity and sustainability of key. Over the next few months, many SIS resources and programs will transition to other parts of NLM, while some resources will be integrated into other NLM resources, made accessible on partner sites, or discontinued. We will provide notice of these changes as they are made on the SIS home page at https://sis.nlm.nih.gov. With this transition, we also acknowledge two outstanding NLM leaders as they retire, Florence Chang, Acting Associate Director, and Janice Kelly, Acting Deputy Associate Director They have dedicated their careers to the health of the nation and a strong and trusted NLM and have led an outstanding, dedicates staff. I hope you will join me in thanking them for the service and wishing them well as they take on new ventures. While change can be difficult, I believe it will produce a stronger NLM that will better serve c broad sets of users. I am grateful to all SIS staff for their professionalism and flexibility throughout this transition. As we work more closely and break down boundaries between ou units, NLM is poised to make great strides in accelerating discovery and advancing health through data-driven research. Patti Patricia Flatley Brennan, RN, PhD Director, National Library of Medicine	
Message on SIS Home Page	Please note, this page will no longer be available effective 12/1/2019. As the National Library of Medicine (NLM) implements its Strategic Plan, 2017-2027, it is making organizational changes that include the closure of the Specialized Information Servic	Friday, 6/28 (live)

	(SIS) division, effective June 30, 2019, and the transition of many SIS programs into other pa of NLM. This integration serves to not only improve discoverability of and access to SIS resources by NLM's broad set of users, but also enables NLM to leverage its talents and resources to improve overall efficiency and effectiveness. Over the next few months, many SIS resources and programs will transition to other parts of NLM, while some underutilized resources will be integrated into other NLM resources, made accessible on partner sites, or discontinued. We will provide notice of these changes as they are made. Links to SIS resources and programs in their new locations will be shared on the S homepage at https://sis.nlm.nih.gov. Subject: Revised Plan - please review
Attachments: SIS Sunset_Communication Messages and Distribution Plan 062719V1.docx

Good morning,

I revised the attached per yesterday's discussions and decisions. Please review for accuracy.

Sunset of NLM Division of Specialized Information Services (SIS) Communication Messages and Distribution Plan

General SIS Sunset Message

As the National Library of Medicine (NLM) implements its Strategic Plan, 2017-2027, it is making organizational changes that include the closure of the Specialized Information Services (SIS) division, effective June 30, 2019, and the transition of many SIS programs into other parts of NLM. This integration serves to not only improve discoverability of and access to SIS resources by NLM's broad set of users, but also enables NLM to leverage its talents and resources to improve overall efficiency and effectiveness.

Over the next few months, many SIS resources and programs will transition to other parts of NLM, while some resources will be integrated into other NLM resources, made accessible on partner sites, or discontinued. We will provide notice of these changes as they are made. Links to SIS resources and programs in their new locations will be shared on the SIS homepage at https://sis.nlm.nih.gov.

Questions about this transition and individual resources may be directed to custserv@nlm.nih.gov or 1-888-346-3656.

Communication Messages and Distribution Plan

Distribution Channel	Message	Delivery Date
Talking Points to Dr. Collins/Dr. Tabak	**Message:** As outlined in the Phase 1 concept plan that was approved in late 2018, NLM will close its Specialized Information Services Division effective June 30, 2019. Some SIS information services and programs will be transferred to other divisions of NLM, while other will be terminated or transitioned to other organizations. Approximately 40 Federal staff in SIS have been reassigned to other NLM divisions. Contractors are being reassigned as programs transition. **Original purpose:** Specialized Information Services (SIS) was established at NLM in 1967, with the Toxicology Information Program being a major element. The	By 6/28/19

	program was designed to fulfill recommendations made by the President's Science Advisory Committee; with the objectives to create computerized toxicology information and data banks from the literature, and from the data sources of collaborating agencies. SIS also engages in health information outreach to special populations and has responsibility for disaster health information management. **Why no longer needed:** Some SIS resources have experienced low usage and/or have become obsolete and will be retired. Remaining programs and services will be realigned to integrate them into broader NLM operations to improve operational efficiencies and effectiveness. **Critical issues:** NLM has announced the dissolution of SIS to major stakeholder groups and will continue to provide information to assist users in finding existing information resources as they are transitioned to other websites over coming months. For those information services that will discontinued, NLM will ensure archiving of the resources so that no information is lost. The new locations for the resources will be shared on the NLM and SIS homepages. TOXNET, the flagship SIS resource, is being integrated into other chemical information resources maintained by the NLM's National Center for Biotechnology Information; most remaining programs, including outreach, will be integrated into NLM's Library Operations Division.	
NLM Broadcast Email from Dr. Brennan	Dear Colleagues: (BEING REWORKED TO INCLUDE ALL PHASE I UPDATES – will need to go for Patti's review) We have been working diligently to align our organizational structure and offerings wi the National Library of Medicine's Strategic Plan, 2017-2027. As we do, the NLM will become more efficient and effective to delivering on our mission. Effective on July 1st, the Specialized Information Services (SIS) division will be discontinued, with staff and programs integrated into other parts of the organization. This integration will improve discoverability and access to resources for engaging with broader audiences and enabl NLM to better leverage its talents and resources. With a long and important history, SIS has provided more than 50 years of service to	By July 9 to coincide with Patti's Blog Post

	NLM and the American people. Founded in 1966 in response to the urgent need for a coordinated, complete, computer-based resource of toxicological information, it grew over time to include what we know now as TOXNET. The program expanded further to include outreach to underserved and special populations, HIV/AIDS, and disaster/emergency preparedness and response. Our new organizational structure strives to create a more collaborative environment f curating important toxicology information and a more integrated information infrastructure, ensuring the integrity and sustainability of key. Over the next few months, many SIS resources and programs will transition to other parts of NLM, while some resources will be integrated into other NLM resources, mad accessible on partner sites, or discontinued. We will provide notice of these changes a they are made on the SIS home page at https://sis.nlm.nih.gov. With this transition, we also acknowledge two outstanding NLM leaders as they retire, Florence Chang, Acting Associate Director, and Janice Kelly, Acting Deputy Associate Director. They have dedicated their careers to the health of the nation and a strong an trusted NLM and have led an outstanding, dedicates staff. I hope you will join me in thanking them for their service and wishing them well as they take on new ventures. While change can be difficult, I believe it will produce a stronger NLM that will better serve our broad sets of users. I am grateful to all SIS staff for their professionalism and flexibility throughout this transition. As we work more closely and break down boundaries between our units, NLM is poised to make great strides in accelerating discovery and advancing health through data-driven research. Subject: Fwd: SIS sunset message to be posted on TEHIP home page and toxnet home page

Hi Jody,

Grace and I just spoke about this....

1) Grace is going to confirm the message as we changed the version a few times.

2) Grace and I agree that someone else (OCCS) will need to have access after Florence leaves just in case there are changes.

Your thoughts?

Nicole

Patti,

Below is a draft message to send to Francis and Larry to inform them of the closure of SIS, in the off-chance they are asked about it or hear complaints from the community. I've put it in the context of the larger reorg, but focus on SIS since that is the element of phase 1 that is most visible to the community.

Jerry
==========

Francis, Larry,
I am pleased to inform you that as of June 30, NLM will have completed the first phase of the reorganization that was approved late last year. While all components of NLM have been touched in some way by this reorganization, the most visible component is the closure of NLM's Specialized Information Services (SIS) Division, effective June 30, 2019. SIS was established in 1967 to fulfill recommendations of the President's Science Advisory Committee to create computerized toxicology information and data banks and also played key roles in health information outreach to special populations and disaster health information management.

With the reorganization, some SIS information services and programs will be transferred to other divisions of NLM, while others will be terminated or transitioned to other organizations. TOXNET, the flagship SIS resource, is being integrated into other chemical information resources maintained by NCBI, including PubChem. Other continuing activities will be integrated into NLM's Library Operations Division to improve operational efficiencies and effectiveness. Approximately 40 Federal staff in SIS have been reassigned to other NLM divisions and a number of contracts are being scaled back or terminated.

NLM has announced the dissolution of SIS to major stakeholder groups and will continue to provide information to assist users in finding existing information resources as they transition to other websites over coming months. For those information services that will discontinued, NLM will ensure archiving of the resources so that no important information is lost. The new locations for the resources will be shared on the NLM and SIS homepages.

I have been assisted in this reorganization by NLM's Leadership team, each of who has played a key role in effecting the change. I am particularly grateful to Florence Chang and Janice Kelly, Acting Director and Deputy Director of SIS, respectively, who have led the SIS staff during this transition and both of whom will retire on June 30.

We at NLM look forward to preparing the next phases of our reorganization, which will aim to strengthen our science and our operational services.

Patti

Hi Dr. Brennan,

Per your request, please find attached the *Communication Message and Distribution Plan* for the sunsetting of SIS. It includes draft web, email, technical bulletin, and social media content as well as the proposed timeline for distribution through these channels. Below is an overview of the schedule.

By June 28, 2019

- Provide Jerry S. with talking points for Dr. Collins and Dr. Tabak
- Update Terry Ahmed, as the custserv@nlm.nih.gov may get questions

On July 1, 2019

- Post SIS Homepage Message
- Post SIS Sunset Message on the SIS Landing Pages (6) Top Banner Notice
- Post the updated NLM Organizational Chart on all pages where it appears on the NLM site
- Post on the @nlm_sis profile page stating the account is closing as of July 31

Week of July 1, 2019

- Tweet on the @nlm_sis handle stating the account is closing as of July 31
- Send Technical Bulletin message

Week of July 8, 2019

- Post Musings Blog
- Send NLM Broadcast email from Dr. Brennan
- Send BSD Email – Bert Hakinnen will send to Scientific Review Panel
- NNLM Listserv – Amanda Wilson will send to NNLM
- Environmental Health Information Partnership (EnHIP) – Cynthia Gaines/Amanda Wilson will send to EnHIP members

Nicole S.

Hi Jody
Please send me the entire communication plan for the Phase 1 reorganization – It will help me understand the how the different messages fit together

I think that the language below is still confusing because it refers to "some" will be transitioned, be integrated, made accessible or discontinued - -what about the others?

p

Subject: RE: Overall SIS Sunset Message and NLM Broadcast email for your review

Hi Patti and Jerry,

How about the below? We need to finalize the language today in order have updates made to the websites on Monday.

Over the next few months, some SIS resources and programs will transition to other parts of NLM, be integrated into other NLM resources, made accessible on partner sites, or discontinued.

Thanks,
Jody

Hi Patti,

We met with Jerry and OCPL will be drafting a new NLM Broadcast email and talking points for your blog post to include the organizational changes highlighted below.

In the meantime, we are working on messaging for the SIS home page to post on Monday and wanted to circle back to see if the below is okay with you.

Thanks,
Jody

General SIS Sunset Message – DRAFT

As the National Library of Medicine (NLM) implements its Strategic Plan, 2017-2027, it is making organizational changes that include the closure of the Specialized Information Services (SIS) division, effective June 30, 2019, and the transition of many SIS programs into other parts of NLM. This integration serves to not only improve discoverability of and access to SIS resources by NLM’s broad set of users,but also enables NLM to leverage its talents and resources to improve overall efficiency and effectiveness.

Over the next few months, many SIS resources and programs will transition to other parts of NLM, while some resources will be integrated into other NLM resources, made accessible on partner sites, or discontinued.

We will provide notice of these changes as they are made. Links to SIS resources and programs in their new locations will be shared on the SIS homepage at https://sis.nlm.nih.gov.

Questions about this transition and individual resources may be directed to custserv@nlm.nih.gov or 1-888-346-3656.

Subject: Overall SIS Sunset Message and NLM Broadcast email for your review

Hi Patti,

Please find attached for your review/comment:

- Page 1 – Is the message for the SIS program sunset. The message was reviewed this morning with Jerry, Todd, Janice, and Florence. We plan to repurpose the message on the SIS homepage to post on July 1 and in the announcement going out in the Technical Bulletin either June 28 or July 1.
- Page 2 – A draft NLM Broadcast email from you to go out this Friday, June 28.

We will soon be providing you with some talking points/rough draft for an upcoming *Musings* blog that I believe Jerry talked to you about. We are recommending the blog goes out either July 3 or 10 to keep SIS sunset communications timely and coordinated.

Please let me know if you have any questions. Thanks.

Sunset of NLM Division of Specialized Information Services (SIS) Communication Messages and Distribution Plan

General SIS Sunset Message

As the National Library of Medicine (NLM) implements its Strategic Plan, 2017-2027, it is making organizational changes that include the closure of the Specialized Information Services (SIS) division, effective June 30, 2019, and the transition of many SIS programs into other parts of NLM. This integration serves to not only improve discoverability of and access to SIS resources by NLM's broad set of users, but also enables NLM to leverage its talents and resources to improve overall efficiency and effectiveness.

Over the next few months, some SIS resources and programs will transition to other parts of NLM, be integrated into other NLM resources, made accessible on partner sites, or discontinued. We will provide notice of these changes as they are made. Links to SIS resources and programs in their new locations will be shared on the SIS homepage at https://sis.nlm.nih.gov.

Questions about this transition and individual resources may be directed to custserv@nlm.nih.gov or 1-888-346-3656.

Communication Messages and Distribution Plan

Distribution Channel	Message	Delivery Date
Talking Points to Dr. Collins/Dr. Tabak	**Message:** As outlined in the Phase 1 concept plan that was approved in late 2018, NLM will close its Specialized Information Services Division effective June 30, 2019. Some SIS information services and programs will be transferred to other divisions of NLM, while other will be terminated or transitioned to other organizations. Approximately 40 Federal staff in SIS have been reassigned to other NLM divisions. Contractors are being reassigned as programs transition. **Original purpose:** Specialized Information Services (SIS) was established at NLM in 1967, with the Toxicology Information Program being a major element. The program was designed to fulfill recommendations made by the President's Science Advisory	6/28

	Committee; with the objectives to create computerized toxicology information and data banks from the literature, and from the data sources of collaborating agencies. SIS also engages in health information outreach to special populations and has responsibility for disaster health information management. **Why no longer needed:** Some SIS resources have experienced low usage and/or have become obsolete and will be retired. Remaining programs and services will be realigned to integrate them into broader NLM operations to improve operational efficiencies and effectiveness. **Critical issues:** NLM has announced the dissolution of SIS to major stakeholder groups and will continue to provide information to assist users in finding existing information resources as they are transitioned to other websites over coming months. For those information services that will discontinued, NLM will ensure archiving of the resources so that no information is lost. The new locations for the resources will be shared on the NLM and SIS homepages. TOXNET, the flagship SIS resource, is being integrated into other chemical information resources maintained by the NLM's National Center for Biotechnology Information; most remaining programs, including outreach, will be integrated into NLM's Library Operations Division.	
NLM Broadcast Email from Dr. Brennan	(Draft: Still in development; pending Dr. Brennan's review and approval) Dear Colleagues: We have been working diligently to align our organizational structure and offerings with the National Library of Medicine's Strategic Plan, 2017-2027. As we do, the NLM will become more efficient and effective to delivering on our mission. Effective on July 1st, th Specialized Information Services (SIS) division will be discontinued, with staff and programs integrated into other parts of the organization. This integration will improve discoverability and access to resources for engaging with broader audiences and enable NLM to better leverage its talents and resources. With a long and important history, SIS has provided more than 50 years of service to NL and the American people. Founded in 1966 in response to the urgent need for a	7/9 Coincides with Patti's Blog Post

coordinated, complete, computer-based resource of toxicological information, it grew over time to include what we know now as TOXNET. The program expanded further to include outreach to underserved and special populations, HIV/AIDS, and disaster/emergency preparedness and response.

Our new organizational structure strives to create a more collaborative environment for curating important toxicology information and a more integrated information infrastructure, ensuring the integrity and sustainability of key.

Over the next few months, some SIS resources and programs will transition to other par of NLM, be integrated into other NLM resources, made accessible on partner sites, or discontinued. We will provide notice of these changes as they are made on the SIS hom page at https://sis.nlm.nih.gov.

With this transition, we also acknowledge two outstanding NLM leaders as they retire, Florence Chang, Acting Associate Director, and Janice Kelly, Acting Deputy Associate Director. They have dedicated their careers to the health of the nation and a strong and trusted NLM and have led an outstanding, dedicates staff. I hope you will join me in thanking them for their service and wishing them well as they take on new ventures.

While change can be difficult, I believe it will produce a stronger NLM that will better serve our broad sets of users. I am grateful to all SIS staff for their professionalism and flexibility throughout this transition. As we work more closely and break down boundari between our units, NLM is poised to make great strides in accelerating discovery and advancing health through data-driven research.

Patti

Attachments: OUR DRAFT for discussion with Jody....

Hi Jody,

I was just drafting you an email. Grace and I finished the message to Dr. Brennan, but ran into a snag….

Florence, followed by Stacey, stopped by your office (Grace and I were there) with great concern about our messages for OCCS. They are adamant about us not posting messages on the secondary landing pages (AIDS, Tox, Chem, DIMRC, TEHIP). But, we should only post on the K12 page and the SIS home page. Florence was in the meeting with us at 3pm when we made this decision, but now there's an issue! We thought it would be best to speak with you, once again, before we send the message to Dr. Brennan and escalate matters….

I attached our draft message for Dr. Brennen. Note that the revised chart includes highlights that we need to address with you before sending along. We were finished with our message when this exchange happened ☺.

Subject: OUR DRAFT for discussion with Jody....
Attachments: SIS Sunset_Communication Messages and Distribution Plan 062719V2.docx

Dr. Brennan,

Per your request, please find attached the *Communication Message and Distribution Plan* for the sunsetting of SIS. It includes draft web, email, technical bulletin, and social media content, as well as the proposed timeline for distribution through these channels. Below is an overview of the schedule.

By June 28, 2019

- Provide Jerry S. with talking points for Dr. Collins and Dr. Tabak
- Update Terry Ahmed, as the custserv@nlm.nih.gov may get questions

On July 1, 2019

- Post SIS Homepage Message
- Post SIS Sunset Message on the SIS Landing Pages (6) Top Banner Notice
- Post the updated NLM Organizational Chart on all pages where it appears on the NLM site
- Post on the @nlm_sis profile page stating the account is closing as of July 31

Week of July 1, 2019

- Tweet on the @nlm_sis handle stating the account is closing as of July 31
- Send Technical Bulletin message

Week of July 8, 2019

- Post Musings Blog
- Send NLM Broadcast email from Dr. Brennan
- Send BSD Email – Bert Hakinnen will send to Scientific Review Panel
- NNLM Listserv – Amanda Wilson will send to NNLM
- Environmental Health Information Partnership (EnHIP) – Cynthia Gaines/Amanda Wilson will send to EnHIP members

Nicole D. Scott, MPH

To: Nurik, Jody (NIH/NLM) [E]
Subject: FW: Action needed: SIS Sunset email for Dr. Collins and Dr. Tabak - to get sent out by tomorrow, June 28

FYI, below is the version of the Collins/Tabak email that I sent Patti this morning. I had already reframed it as SIS in the context of the larger Phase 1 reorg. . .

To: Brennan, Patti (NIH/NLM) [E]
Subject: FW: Action needed: SIS Sunset email for Dr. Collins and Dr. Tabak - to get sent out by tomorrow, June 28

Patti,
Below is a draft message to send to Francis and Larry to inform them of the closure of SIS, in the off-chance they are asked about it or hear complaints from the community. I've put it in the context of the larger reorg, but focus on SIS since that is the element of phase 1 that is most visible to the community.

Jerry
==========

Francis, Larry,
I am pleased to inform you that as of June 30, NLM will have completed the first phase of the reorganization that was approved late last year. While all components of NLM have been touched in some way by this reorganization, the most visible component is the closure of NLM's Specialized Information Services (SIS) Division, effective June 30, 2019. SIS was established in 1967 to fulfill recommendations of the President's Science Advisory Committee to create computerized toxicology information and data banks and also played key roles in health information outreach to special populations and disaster health information management.

With the reorganization, some SIS information services and programs will be transferred to other divisions of NLM, while others will be terminated or transitioned to other organizations. TOXNET, the flagship SIS resource, is being integrated into other chemical information resources maintained by NCBI, including PubChem. Other continuing activities will be integrated into NLM's Library Operations Division to improve operational efficiencies and effectiveness. Approximately 40 Federal staff in SIS have been reassigned to other NLM divisions and a number of contracts are being scaled back or terminated.

NLM has announced the dissolution of SIS to major stakeholder groups and will continue to provide information to assist users in finding existing information resources as they transition to other websites over coming months. For those information services that will discontinued, NLM will ensure archiving of the resources so that no important information is lost. The new locations for the resources will be shared on the NLM and SIS homepages.

I have been assisted in this reorganization by NLM's Leadership team, each of who has played a key role in effecting the change. I am particularly grateful to Florence Chang and Janice Kelly, Acting Director and Deputy Director of SIS, respectively, who have led the SIS staff during this transition and both of whom will retire on June 30.

We at NLM look forward to preparing the next phases of our reorganization, which will aim to strengthen our science and our operational services.

Patti

Subject: Re: SIS toxicology book collection

Hi,
I am told the major part of the toxicology book collection will be discarded (read "trashed"). George Fonger and I have been able to contact some university researchers to take part of the collection (we have boxed up about 14 boxes and 4 large envelopes of materials), but I am under the impression that SIS is not willing to ship these most critical items.

Do you have any shipping funds that we can ship at least these materials? George estimates that the entire in-house toxicology collection cost over $300,000.

Subject: SIS toxicology book collection

I understand my former colleague George Fonger spoke with you last week about the dispersal of toxicology interests here in SIS (to be merged with multiple parts of NLM) as of this coming Sunday. If you have any concerns he raised, I am available through my cell phone at: Personal Info

My most urgent frustration is the plan to discard (I believe this means shred rather than find a home for) our toxicology reference collection on Monday. The collection contains hard to acquire books that have been collected over at least 30 years. As this division has worked with Historically Black Colleges and with Regional Medical Centers, I am sure with a little dedication something better than the current plan could be found.

As far as I can see with the Toxnet system, we are changing the essence of NLM from a place where researchers in biomedical interests find resources brought together into an institution which tells researchers to go elsewhere.

In any case, my group is gradually moving back to 38a in the coming months. Although I have been at NLM since 1997, I don't think we have met. George has always talked positively about you. If you are available for coffee someday, do let me know.

Phillip

Sunset of NLM Division of Specialized Information Services (SIS) Communication Messages and Distribution Plan

General SIS Sunset Message

As the National Library of Medicine (NLM) implements its Strategic Plan, 2017-2027, it is making organizational changes that include the closure of the Specialized Information Services (SIS) division, effective June 30, 2019, and the transition of many SIS programs into other parts of NLM. This integration serves to not only improve discoverability of and access to SIS resources by NLM's broad set of users, but also enables NLM to leverage its talents and resources to improve overall efficiency and effectiveness.

Over the next few months, some SIS resources and programs will transition to other parts of NLM, be integrated into other NLM resources, made accessible on partner sites, or discontinued. We will provide notice of these changes as they are made. Links to SIS resources and programs in their new locations will be shared on the SIS homepage at https://sis.nlm.nih.gov.

Questions about this transition and individual resources may be directed to custserv@nlm.nih.gov or 1-888-346-3656.

Communication Messages and Distribution Plan

Distribution Channel	Message	Delivery Date
Talking Points to Dr. Collins/Dr. Tabak	**Message:** As outlined in the Phase 1 concept plan that was approved in late 2018, NLM will close its Specialized Information Services Division effective June 30, 2019. Some SIS information services and programs will be transferred to other divisions of NLM, while other will be terminated or transitioned to other organizations. Approximately 40 Federal staff in SIS have been reassigned to other NLM divisions. Contractors are being reassigned as programs transition. **Original purpose:** Specialized Information Services (SIS) was established at NLM in 1967, with the Toxicology Information Program being a major element. The program was designed to fulfill recommendations made by the President's Science Advisory	6/28

	Committee; with the objectives to create computerized toxicology information and data banks from the literature, and from the data sources of collaborating agencies. SIS also engages in health information outreach to special populations and has responsibility for disaster health information management. **Why no longer needed:** Some SIS resources have experienced low usage and/or have become obsolete and will be retired. Remaining programs and services will be realigned to integrate them into broader NLM operations to improve operational efficiencies and effectiveness. **Critical issues:** NLM has announced the dissolution of SIS to major stakeholder groups and will continue to provide information to assist users in finding existing information resources as they are transitioned to other websites over coming months. For those information services that will discontinued, NLM will ensure archiving of the resources so that no information is lost. The new locations for the resources will be shared on the NLM and SIS homepages. TOXNET, the flagship SIS resource, is being integrated into other chemical information resources maintained by the NLM's National Center for Biotechnology Information; most remaining programs, including outreach, will be integrated into NLM's Library Operations Division.	
NLM Broadcast Email from Dr. Brennan	(Draft: Still in development; pending Dr. Brennan's review and approval) Dear Colleagues: We have been working diligently to align our organizational structure and offerings with the National Library of Medicine's Strategic Plan, 2017-2027. As we do, the NLM will become more efficient and effective to delivering on our mission. Effective on July 1st, th Specialized Information Services (SIS) division will be discontinued, with staff and programs integrated into other parts of the organization. This integration will improve discoverability and access to resources for engaging with broader audiences and enable NLM to better leverage its talents and resources. With a long and important history, SIS has provided more than 50 years of service to NL and the American people. Founded in 1966 in response to the urgent need for a	7/9 Coincides with Patti's Blog Post

coordinated, complete, computer-based resource of toxicological information, it grew over time to include what we know now as TOXNET. The program expanded further to include outreach to underserved and special populations, HIV/AIDS, and disaster/emergency preparedness and response.

Our new organizational structure strives to create a more collaborative environment for curating important toxicology information and a more integrated information infrastructure, ensuring the integrity and sustainability of key.

Over the next few months, some SIS resources and programs will transition to other par of NLM, be integrated into other NLM resources, made accessible on partner sites, or discontinued. We will provide notice of these changes as they are made on the SIS hom page at https://sis.nlm.nih.gov.

With this transition, we also acknowledge two outstanding NLM leaders as they retire, Florence Chang, Acting Associate Director, and Janice Kelly, Acting Deputy Associate Director. They have dedicated their careers to the health of the nation and a strong and trusted NLM and have led an outstanding, dedicates staff. I hope you will join me in thanking them for their service and wishing them well as they take on new ventures.

While change can be difficult, I believe it will produce a stronger NLM that will better serve our broad sets of users. I am grateful to all SIS staff for their professionalism and flexibility throughout this transition. As we work more closely and break down boundari between our units, NLM is poised to make great strides in accelerating discovery and advancing health through data-driven research.

Patti

Jody Nurik
Director, Office of Communications and Public Liaison (OCPL)
National Library of Medicine
National Institutes of Health
Main OCPL phone: 301-496-6308

Dear Colleagues:

We have been working diligently to align our organizational structure and offerings with the National Library of Medicine's Strategic Plan, 2017-2027. As we do, the NLM will become more efficient and effective to delivering on our mission. The first six months of the year have seen a shift toward a more unified and collaborative culture.

Earlier this year, we saw the melding of the Audiovisual Program and Development Branch and the Office of Communication and Public Liaison. This has allowed for a more comprehensive approach to NLM communications. Together, they are creating a strategic approach to design and messaging that will allow us to promote and exemplify the mission to work and serve as one NLM.

OPHIPD also became OSI…

Effective on July 1st, the Specialized Information Services (SIS) division will be discontinued, with staff and programs integrated into other parts of the organization. This integration will improve discoverability and access to resources for engaging with broader audiences and enables NLM to better leverage its talents and resources.

With a long and important history, SIS has provided more than 50 years of service to NLM and the American people. Founded in 1966 in response to the urgent need for a coordinated, complete, computer-based resource of toxicological information, it grew over time to include what we know now as TOXNET. The program expanded further to include outreach to underserved and special populations, HIV/AIDS, and disaster/emergency preparedness and response.

Our new organizational structure strives to create a more collaborative environment for curating important toxicology information and a more integrated information infrastructure, ensuring the integrity and sustainability of key.

Over the next few months, some SIS resources and programs will transition to other parts of NLM, be integrated into other NLM resources, made accessible on partner sites, or discontinued. We will provide notice of these changes as they are made on the SIS home page at https://sis.nlm.nih.gov.

With this transition, we also acknowledge two outstanding NLM leaders as they retire, Florence Chang, Acting Associate Director, and Janice Kelly, Acting Deputy Associate Director. They have dedicated their careers to the health of the nation and a strong and trusted NLM and have led an outstanding, dedicates staff. I hope you will join me in thanking them for their service and wishing them well as they take on new ventures.

While change can be difficult, I believe it will produce a stronger NLM that will better serve our broad sets of users. I am grateful to all SIS staff for their professionalism and flexibility throughout this transition. As we work more closely and break down boundaries between our units, NLM is poised to make great strides in accelerating discovery and advancing health through data-driven research.

Subject: RE: Overall SIS Sunset Message and NLM Broadcast email for your review (Communication Message and Distribution Plan)

Hi Dr. Brennan,

Per your request, please find attached the *Communication Message and Distribution Plan* for the sunsetting of SIS. It includes draft web, email, technical bulletin, and social media content as well as the proposed timeline for distribution through these channels. Below is an overview of the schedule.

By June 28, 2019

- Provide Jerry S. with talking points for Dr. Collins and Dr. Tabak
- Update Terry Ahmed, as the custserv@nlm.nih.gov may get questions

On July 1, 2019

-

- Post SIS Homepage Message
- Post SIS Sunset Message on the SIS Landing Pages (6) Top Banner Notice
- Post the updated NLM Organizational Chart on all pages where it appears on the NLM site
- Post on the @nlm_sis profile page stating the account is closing as of July 31

-
Week of July 1, 2019

-

- Tweet on the @nlm_sis handle stating the account is closing as of July 31
- Send Technical Bulletin message

Week of July 8, 2019

-

- Post Musings Blog
- Send NLM Broadcast email from Dr. Brennan
- Send BSD Email – Bert Hakinnen will send to Scientific Review Panel
- NNLM Listserv – Amanda Wilson will send to NNLM
- Environmental Health Information Partnership (EnHIP) – Cynthia Gaines/Amanda Wilson will send to EnHIP members

Nicole S.

Hi Patti and Jerry,

How about the below? We need to finalize the language today in order have updates made to the websites on Monday.

Over the next few months, some SIS resources and programs will transition to other parts of NLM, be integrated into other NLM resources, made accessible on partner sites, or discontinued.

Thanks,
Jody

Cc: Middleton, Grace (NIH/NLM) [C] <grace.middleton@nih.gov>
Subject: RE: Overall SIS Sunset Message and NLM Broadcast email for your review

The first sentence makes it sound like all SIS resources will transition to other parts of NLM. I think we need something along the lines of "some, most, many" and "the rest"

Jerry

Subject: Re: Overall SIS Sunset Message and NLM Broadcast email for your review

This sentence is unclear to me –
"Over the next few months, many SIS resources and programs will transition to other parts of NLM, while some resources will be integrated into other NLM resources, made accessible on partner sites, or discontinued. " I get the message but the 'many' then "while some" sounds squishy

Otherwise good to go

Hi Patti,

We met with Jerry and OCPL will be drafting a new NLM Broadcast email and talking points for your blog post to include the organizational changes highlighted below.

In the meantime, we are working on messaging for the SIS home page to post on Monday and wanted to circle back to see if the below is okay with you.

Thanks,
Jody

General SIS Sunset Message – DRAFT

As the National Library of Medicine (NLM) implements its Strategic Plan, 2017-2027, it is making organizational changes that include the closure of the Specialized Information Services (SIS) division, effective June 30, 2019, and the transition of many SIS programs into other parts of NLM. This integration serves to not only improve discoverability of and access to SIS resources by NLM's broad set of users,but also enables NLM to leverage its talents and resources to improve overall efficiency and effectiveness.

Over the next few months, many SIS resources and programs will transition to other parts of NLM, while some resources will be integrated into other NLM resources, made accessible on partner sites, or discontinued.

We will provide notice of these changes as they are made. Links to SIS resources and programs in their new locations will be shared on the SIS homepage at https://sis.nlm.nih.gov.

Questions about this transition and individual resources may be directed to custserv@nlm.nih.gov or 1-888-346-3656.

Subject: Re: Overall SIS Sunset Message and NLM Broadcast email for your review - Please disregard the earlier email

Thanks everyone
I want to understand why we are focusing only on SIS, when the organizational changes involve SIS, APDB, LO and OCCS — please provide me with a more comprehensive communication plan so we can put this in context — do you anticipate making a similar announcement for the other operation later in the summer?

Let's wait til all of this is clarified before we send out any announcements

Thanks
Patti

Subject: Overall SIS Sunset Message and NLM Broadcast email for your review

Hi Patti,

Please find attached for your review/comment:

- Page 1 – Is the message for the SIS program sunset. The message was reviewed this morning with Jerry, Todd, Janice, and Florence. We plan to repurpose the message on the SIS homepage to post on July 1 and in the announcement going out in the Technical Bulletin either June 28 or July 1.
- Page 2 – A draft NLM Broadcast email from you to go out this Friday, June 28.

We will soon be providing you with some talking points/rough draft for an upcoming *Musings* blog that I believe Jerry talked to you about. We are recommending the blog goes out either July 3 or 10 to keep SIS sunset communications timely and coordinated.

Please let me know if you have any questions. Thanks.

Regards,
Jody

Sunset of NLM Division of Specialized Information Services (SIS) Communication Messages and Distribution Plan

General SIS Sunset Message

As the National Library of Medicine (NLM) implements its Strategic Plan, 2017-2027, it is making organizational changes that include the closure of the Specialized Information Services (SIS) division, effective June 30, 2019, and the transition of many SIS programs into other parts of NLM. This integration serves to not only improve discoverability of and access to SIS resources by NLM's broad set of users, but also enables NLM to leverage its talents and resources to improve overall efficiency and effectiveness.

Over the next few months, some SIS resources and programs will transition to other parts of NLM, be integrated into other NLM resources, made accessible on partner sites, or discontinued. We will provide notice of these changes as they are made. Links to SIS resources and programs in their new locations will be shared on the SIS homepage at https://sis.nlm.nih.gov.

Questions about this transition and individual resources may be directed to custserv@nlm.nih.gov or 1-888-346-3656.

Communication Messages and Distribution Plan

Distribution Channel	Message	Delivery Date
Talking Points to Dr. Collins/Dr. Tabak	**Message:** As outlined in the Phase 1 concept plan that was approved in late 2018, NLM will close its Specialized Information Services Division effective June 30, 2019. Some SIS information services and programs will be transferred to other divisions of NLM, while other will be terminated or transitioned to other organizations. Approximately 40 Federal staff in SIS have been reassigned to other NLM divisions. Contractors are being reassigned as programs transition. **Original purpose:** Specialized Information Services (SIS) was established at NLM in 1967, with the Toxicology Information Program being a major element. The program was designed to fulfill recommendations made by the President's Science Advisory	6/28

	Committee; with the objectives to create computerized toxicology information and data banks from the literature, and from the data sources of collaborating agencies. SIS also engages in health information outreach to special populations and has responsibility for disaster health information management. **Why no longer needed:** Some SIS resources have experienced low usage and/or have become obsolete and will be retired. Remaining programs and services will be realigned to integrate them into broader NLM operations to improve operational efficiencies and effectiveness. **Critical issues:** NLM has announced the dissolution of SIS to major stakeholder groups and will continue to provide information to assist users in finding existing information resources as they are transitioned to other websites over coming months. For those information services that will discontinued, NLM will ensure archiving of the resources so that no information is lost. The new locations for the resources will be shared on the NLM and SIS homepages. TOXNET, the flagship SIS resource, is being integrated into other chemical information resources maintained by the NLM's National Center for Biotechnology Information; most remaining programs, including outreach, will be integrated into NLM's Library Operations Division.	
NLM Broadcast Email from Dr. Brennan	(Draft: Still in development; pending Dr. Brennan's review and approval) Dear Colleagues: We have been working diligently to align our organizational structure and offerings with the National Library of Medicine's Strategic Plan, 2017-2027. As we do, the NLM will become more efficient and effective to delivering on our mission. Effective on July 1st, th Specialized Information Services (SIS) division will be discontinued, with staff and programs integrated into other parts of the organization. This integration will improve discoverability and access to resources for engaging with broader audiences and enable NLM to better leverage its talents and resources. With a long and important history, SIS has provided more than 50 years of service to NL and the American people. Founded in 1966 in response to the urgent need for a	7/9 Coincides with Patti's Blog Post

coordinated, complete, computer-based resource of toxicological information, it grew over time to include what we know now as TOXNET. The program expanded further to include outreach to underserved and special populations, HIV/AIDS, and disaster/emergency preparedness and response.

Our new organizational structure strives to create a more collaborative environment for curating important toxicology information and a more integrated information infrastructure, ensuring the integrity and sustainability of key.

Over the next few months, some SIS resources and programs will transition to other par of NLM, be integrated into other NLM resources, made accessible on partner sites, or discontinued. We will provide notice of these changes as they are made on the SIS hom page at https://sis.nlm.nih.gov.

With this transition, we also acknowledge two outstanding NLM leaders as they retire, Florence Chang, Acting Associate Director, and Janice Kelly, Acting Deputy Associate Director. They have dedicated their careers to the health of the nation and a strong and trusted NLM and have led an outstanding, dedicates staff. I hope you will join me in thanking them for their service and wishing them well as they take on new ventures.

While change can be difficult, I believe it will produce a stronger NLM that will better serve our broad sets of users. I am grateful to all SIS staff for their professionalism and flexibility throughout this transition. As we work more closely and break down boundari between our units, NLM is poised to make great strides in accelerating discovery and advancing health through data-driven research.

Hi,
I am told the major part of the toxicology book collection will be discarded (read "trashed"). George Fonger and I have been able to contact some university researchers to take part of the collection (we have boxed up about 14 boxes and 4 large envelopes of materials), but I am under the impression that SIS is not willing to ship these most critical items.

Do you have any shipping funds that we can ship at least these materials? George estimates that the entire in-house toxicology collection cost over $300,000.

Subject: SIS toxicology book collection

I understand my former colleague George Fonger spoke with you last week about the dispersal of toxicology interests here in SIS (to be merged with multiple parts of NLM) as of this coming Sunday. If you have any concerns he raised, I am available through my cell phone at: Personal Info Personal Info

My most urgent frustration is the plan to discard (I believe this means shred rather than find a home for) our toxicology reference collection on Monday. The collection contains hard to acquire books that have been collected over at least 30 years. As this division has worked with Historically Black Colleges and with Regional Medical Centers, I am sure with a little dedication something better than the current plan could be found.

As far as I can see with the Toxnet system, we are changing the essence of NLM from a place where researchers in biomedical interests find resources brought together into an institution which tells researchers to go elsewhere.

In any case, my group is gradually moving back to 38a in the coming months. Although I have been at NLM since 1997, I don't think we have met. George has always talked positively about you. If you are available for coffee someday, do let me know.

Director, National Library of Medicine

Message on SIS Home Page	Please note, this page will no longer be available effective 12/1/2019. As the National Library of Medicine (NLM) implements its Strategic Plan, 2017-2027, is making organizational changes that include the closure of the Specialized Information Services (SIS) division, effective June 30, 2019, and the transition of mar SIS programs into other parts of NLM. This integration serves to not only improve discoverability of and access to SIS resources by NLM's broad set of users, but also enables NLM to leverage its talents and resources to improve overall efficiency and effectiveness. Over the next few months, some SIS resources and programs will transition to other parts of NLM, be integrated into other NLM resources, made accessible on partner sites, or discontinued. We will provide notice of these changes as they are made. Links to SIS resources and programs in their new locations will be shared on the SIS homepage at https://sis.nlm.nih.gov. Questions about this transition and individual resources may be directed to custserv@nlm.nih.gov or 1-888-346-3656.	On 7/1

ATTENTION: The following Sunsetting Request requires your approval.

Please review the request below and select "APPROVE", "REJECT" or "RETURN". Selecting "RETURN" will return this request to its submitter for resubmission.

NLM Service/Product (Offering) Details	
NLM Service/Product (Offering)	Haz-Map health-related database designed for health and safety professionals and for consumers
Description	Haz-Map® is an occupational health database designed for health and safety professionals and for consumers seeking information about the adverse effects of workplace exposures to chemical and biological agents. The main links in Haz-Map are between chemicals and occupational diseases. These links have been established using current scientific evidence. Haz-Map has been part of NLM's TOXNET suite of resources for over 15 years. Haz-Map is used within the Federal Government (e.g., NIH OD Division of Occupational Health and Safety staff, OSHA, CPSC, DoD, etc.) and by others. This is the current website for https://hazmap.nlm.nih.gov/
Document(s) Supporting Justification	Some publications about Haz.docx About for Haz-Map.docx 2017 HazMap 2017 Webinar from NLM.docx
Justification	No longer aligned with NLM priorities or mission needs Other: License ends in July 2019 and current plan is not to renew it. However, please note that Haz-Map is used within the Federal

	Government (e.g., NIH OD Division of Occupational Health and Safety staff, OSHA, CPSC, DoD, etc.) and by others. NIH's Division of Occupational Health and Safety lists it as Federal resource https://www.ors.od.nih.gov/sr/dohs/safety/workplace/Pages/Federal-Resources.aspx

Subject: NLM Sunsetting -

Larry,

I am pleased to inform you that as of June 30, NLM will have completed the phase one reorganization that was approved late last year. While all components of NLM have been touched in some way by this reorganization, the most visible component, which I want to call to your attention, is the closure (sunsetting) of NLM's Specialized Information Services (SIS) Division, effective June 30, 2019.

SIS was home to NLM's toxicology information resources and also played key roles in health information outreach to special populations and disaster health information management. As part of the sunsetting process, some high-value SIS information services and programs will be transferred to other divisions of NLM, while others will be terminated or transitioned to other organizations. TOXNET, the flagship SIS resource, is being integrated into other chemical information resources maintained by NCBI, including PubChem. Other continuing activities are being integrated with NLM's Library Operations Division to improve operational efficiencies and effectiveness. Approximately 40 Federal staff in SIS have been reassigned to other NLM divisions, and a number of contracts are being scaled back or terminated.

NLM has announced the sunsetting of SIS to major stakeholder groups and will continue to provide information to assist users in finding existing information resources as they transition to other websites over coming months. For those information services that will be discontinued, NLM will ensure archiving of the resources so that no valuable information is lost. The new locations for the resources will be shared on the NLM and SIS homepages. You have seen sunsetting plans for several SIS resources in recent months; I will forward more as final decisions are made about remaining resources.

Everyone on NLM's Leadership team has played a key role in effecting the phase 1 reorganization. Patti and I are particularly grateful to Florence Chang, SIS Acting Director, and Janice Kelly, SIS Deputy Director, who led the SIS staff during this sunsetting process and both of whom will retire on June 30.

We at NLM are contemplating next phases of our reorganization and will work with you and Alfred for advice and approvals as our plans come together. In the meantime, I will send you advance notice of other NLM resources that are slated for sunsetting.

Thanks,
Jerry

Subject: FW: SIS toxicology book collection

Milt,

All libraries "weed" their collections and discard books – it is a basic library function. LO's Collection Access Section (CAS) has already evaluated the books —they selected a few to fill gaps on the collection.

We have no intention to ship the boxes of books. I think you can say to Phillip the collection was evaluated by LO and NLM has a policy not to send books to other institutions.

If you see the need, please call Bert Hakkinen at 301-827-4222. He is our senior toxicologist, and he can give you an accurate assessment of the book situation.

Thanks!

Florence

Milt,
I have no estimate of the cost (6 large boxes; 8 medium boxes, 4 large envelopes – all heavy), but Florence Chang says to write/ask her. This is her last day.

Phil,

Everyone I contacted at Nlm about this collection is confident that appropriate evaluation has been made, and that removal is justified. What are the shipping costs for the 14 boxes you and George have found new homes for?

Hi,
I am told the major part of the toxicology book collection will be discarded (read "trashed"). George Fonger and I have been able to contact some university researchers to take part of the collection (we have boxed up about 14 boxes and 4 large envelopes of materials), but I am under the impression that SIS is not willing to ship these most critical items.

Do you have any shipping funds that we can ship at least these materials? George estimates that the entire in-house toxicology collection cost over $300,000.

Subject: SIS toxicology book collection

I understand my former colleague George Fonger spoke with you last week about the dispersal of toxicology interests here in SIS (to be merged with multiple parts of NLM) as of this coming Sunday. If you have any concerns he raised, I am available through my cell phone at: Personal Info Personal Info

My most urgent frustration is the plan to discard (I believe this means shred rather than find a home for) our toxicology reference collection on Monday. The collection contains hard to acquire books that have been collected over at least 30 years. As this division has worked with Historically Black Colleges and with Regional Medical Centers, I am sure with a little dedication something better than the current plan could be found.

As far as I can see with the Toxnet system, we are changing the essence of NLM from a place where researchers in biomedical interests find resources brought together into an institution which tells researchers to go elsewhere.

In any case, my group is gradually moving back to 38a in the coming months. Although I have been at NLM since 1997, I don't think we have met. George has always talked positively about you. If you are available for coffee someday, do let me know.

Order/C	1	MadMap (Jay Brown)	Q4 - Q1 FY2020	License of the content of the MadMap database, a occupational exposure and diseases database	7/31/2019 - 6/1/2020	Jul-2020	$38,500	Jul 2019	Sole source	0%			Lucie Chen	Sunset - LB02	DSD - Bert is trying to find a new home, can't be added to bookshelf because of how it is structured. Contract ends in July, needs the Sunset Form. Bert is writing the Sunset plan - 010615	No addition of meetings.	David Gillikin
DHMH/C	3	ITER (Univ of Cincinnati)	Q4 FY2019	License of the content of the International Toxicity Estimates for Risk (ITER)	4/2019 - 4/2020	Apr-2021	$25,000	Apr 2019		0%			Bert Hakkinen	LO - DSD	Bert COR - Eventually integrated into Bookshelf, ownership of the content is currently in question, will come down with TOXNet 010615	Florence Chang, Bert Hakkinen, ADLO rep (Dianne Bahoski or Joyce Backus), David Gillikin (INTERMITTENT SCOPE MEETING, purpose is continuation decision; line 11 is its own meeting	David Gillikin
Order/C	4	Poisindex emergency medical management (Truven Health) **(Not renewed yet as of March)**		License of the content of Poisindex from Truven Health	1/2019 - 1/2020	Jan-2019	$93,125	Jan 2019		0%			Joe Pelcam	N/A - 8510 or P	Micromedex - Commercially available. Not renewed but in the process of renewing license, not sure where to go. Should Jen keep this one? Up for integration. What holds "data" in LDT Key data for 9530 and WISER.	Joanne Goshorn, Bert Hakkinen, David Gillikin, Stacey Arneson, Florence Chang, Wei Ma	David Gillikin
DHMH/C	2	Pillbox	Q3-Q4 FY2019												This was going to be reviewed by the NLM Drug SWOT review group. If the Drug SWOT review is still in the plan, then Pillbox and Drug Info Portal should be evaluated by that group. Task manager: David Hale (BSD/NMEI)	Joanne Goshorn, Bert Hakkinen, David Gillikin, Stacey Arneson, Florence Chang, Wei Ma	David Gillikin
DHMH/C	3	Go Local Technical Integrator and Help Desk IT support (ICF)		Contract for the main IT contract with ICF International for providing GIS computer system administration and information system development support.	Not going to re-compete		$886,000	Sep 2019	MITAAC	100%			Florence Chang	DECS	CDR Wei Ma, Supports A & contractors, contract will end in Sept. Plans around transitioning of systems between now and Sept.	No addition of meetings.	
DHMH/C	3	TOXNET/HSDB Content Management: Isotrex Toxicon	Q4 FY2019	Support the data entry and editing system and database maintenance for TOXNET databases, including HSDB, LactMed, and IRIS.	7/2019 - 7/2020	Jan-2019	$20,000	Jul 2019	Open	100%			Phillip Thomas	DECS	CDR Robert Salas, setting up the recompete - will be done by July.	No addition of meetings.	
DHMC	3	Disaster Info Support (ICF)	Q2 FY2020	Includes support for librarian and computer programmer to support Disaster Lit, DMRC web site, Disaster health informatics and communication innovation initiatives (training, communication)	9/2019 - 9/2020	Sep-2019	$525,000	Sep 2019	BPA	50%	SIS - $225,880 IAA and DC - $360,000	Additional IAAs and DCs from partner agencies; amount varies; FY2019 total $140K	Stacey Arneson	LO - PSD	Siobhan will be task manager; broad task for IT and content; other invention projects (Kristen) general DMRC website and its LIT, CMS, production and staging is at NLM. Programmer efforts. Librarian onsite (can change), will have this PDP	ADLO rep (Dianne Bahoski or Joyce Backus), Stacey Arneson, Terry Ahmed, Jennifer Ward, OCCS rep (ask Wei Ma - either Joe Pelcin or John Rosler)	Stacey Arneson
DHMC	1	MRMR (Nine Century)	Q1 FY2020	To support the development of the tool for responding to hazardous material incidents. For maintenance for all platforms with minor enhancements and data (content) updates, and prototyping of voice-activated assistant.	9/2019 - 9/2020	Sep-2019	$450,000	Sep 2019	GSA	100%	MS - $300,000 (base) MS - $300,000 (enhancement) Additional fundings from DOT, ASPR	IAA funding from DOT, ASPR, etc. Amount varies	Joe Pelcam	LO PSD	CDR Jen - Bert is also part of the team (no formal role - facilitator and promoter). Does it make sense long term in PSD - should all Tox staff eventually land in MSD? Since the delivery mechanism is most important aspect it does belong in PSD. Jen will be fully occupied; outside contractor does the program - does OCCS need to be looped in on this? If this is expected to funded in long, resumption, offsite staff, mostly IT website, hosted at NLM, web services; 3 APIS; transitioning to PSD; we need to know about any funding for contractors that update the web pages, unclear about CMS.	ADLO rep (Dianne Bahoski or Joyce Backus), OCCS rep (ask Wei Ma - either Joe Pelcin or John Rosler), Stacey Arneson, Terry Ahmed, David Gillikin,	Stacey Arneson
DHMC	3	NAEMM Forums		NAEMM Med Prep Forum & Action Collab on Disaster research	9/2019 - 9/2020		$25,000	Sep 2019		0%			Stacey Arneson	LO - PSD	Transfer to PSD. With DO contract, we have a task em it to support NAEMM; re: IT, now formerly, need to make a decision about contributing to this in 2019, TSD should not pay for this, Tara NLM wants to belong for next year is the question. Pay for 2020 and then determine plans next year	Stacey will coordinate a discussion on long term plans.	Stacey Arneson
CHEMM/T	1	CHEMM content creation and maintenance (CHEMM)	Q1 FY2020	Support the content creation and maintenance of Chemical Hazards Emergency Medical Management (CHEMM)	8/1/2019 - 7/31/2020	Aug-2019	$80,067	Jul 2019	GSA	0%			Bert Hakkinen	LO - PSD	CDR Bert- very involved, low marginally involved, considered one of the disaster tools and closely tied to MRMR - where should it live? If outside contractor does the program - does OCCS need to be looped in on this? Could work to have Jen take over COR and Bert as an advisor PSD — Shifting from sole contract to task under a BPA - Bert Jen involved in task	ADLO rep (Dianne Bahoski or Joyce Backus), OCCS rep (ask Wei Ma - either Joe Pelcin or John Rosler), Stacey Arneson, Terry Ahmed, David Gillikin,	Stacey Arneson
DHMC	1	RMMM												LO - PSD	Jen is the POC, Florence will be handing this off to her. Issues with the Content expert HHS Funded contractor and with the technology. Florence has done the technology, funding by an interagency agreement by HHS. Dianne and David are aware of the situation - 010618 Working on JAAs with ASPR - Joint HHS ASPR	ADLO rep (Dianne Bahoski or Joyce Backus), OCCS rep (ask Wei Ma - either Joe Pelcin or John Rosler), Stacey Arneson, Terry Ahmed, David Gillikin,	Stacey Arneson
Outreach	3	Special Populations Resources Enhancement and Outreach (ICF)	Q2 FY2020	Staffing, IT support for Health Reach, American Indian Health, Arctic Health	9/2018-9/2019	Sep-2019	$0	Sep 2019	BPA	8.01%			Laura Bartlett	NA LO-PSD?	Only one left in Health Reach, but the other ones are going, Being integrated into MedlinePlus. **Michael Hench in PSD as owner?** Laura has some "Outreach" connections that involve getting content - she has a few tools that she is doing through September - User studies (10-20k of her time until fully integrated).	Dianne Baloski, Janice Kelly, Stephanie Morrison, Terry Ahmed, Stacey Arneson	Amanda Wilson
Outreach	2	Technical and Programmatic Support for Specific Population Projects (ICF)		Support services for outreach projects such as CHIC, Community Health Maps, etc	9/2018-9/2019	Sep-2019	$680,000	Sep 2019	BPA	2%			Janice Kelly	LO - OET?	Janice gave her suggestions, and will be meeting with Joyce and Amanda to discuss all Outreach programs. Prior Jahe Scott had many Subcontracts for outreach awards, TBD; **need CDR**	Dianne Baloski, Janice Kelly, Stephanie Morrison, Terry Ahmed, Stacey Arneson	Amanda Wilson
Outreach	2	Maintenance and Development Support for SIS Programs Projects (ICF)		Provide comprehensive management and staffing services to the National Library of Medicine Specialized Information Services to support websites, services and activities	9/2018-9/2019	Sep-2019	TBD ($680,000 in FY2018)	Sep 2019	BPA	1%			Nicole Scott	LO OET or PSD	supports 3 contract staff - Sent Amanda an note and she is interested; 80% DIMRC and 20% Outreach, - through Sept.	Dianne Baloski, Janice Kelly, Amanda Wilson, Terry Ahmed, Stacey Arneson	Amanda Wilson
Outreach	2	ExHIP Chair		Support for the year long duties of the ExHIP chair	1/31/2019 - 1/14/2020	Jan-2019	$20,000		Contract	0%			Janice Kelly	LO - OET	**need COR; is this an annual POT Lacra?**	Dianne Baloski, Janice Kelly, Amanda Wilson, Terry Ahmed, Stacey Arneson	Amanda Wilson
Outreach	2	ExHIP junior advisor		Support for the year long duties of the ExHIP senior advisor Rueben Warren	9/30/2018 - 9/30/2020		$10,000	9/28/2018	Contract	0%			Janice Kelly	LO - OET	**need COR; is this an annual POT Lacra?**	Dianne Baloski, Janice Kelly, Amanda Wilson, Terry Ahmed, Stacey Arneson	Amanda Wilson
Outreach	4	Higher Ed Project		Project addressing the needs of minority serving institutions to use HSDB and other NLM resources.	3/6/2018-6/2019	Jan-2018	$60,000	6/28/2018	ICF	0%			Cassandra Ash	Sunset	Totally Sunset at this point	No addition of meetings	Amanda Wilson
Outreach	2	Training and Outreach Support Services for NLM (ICF)		Subaward to GPAU for training and outreach support, promotion and logistical support to SIS	9/2018-9/2019	Jan-2019	$680,000	June 2019	BPA	0%			Nicole Scott	LO - OET?	Being competed; **need COR? Will Nicole continue once funded or should this shift to OET?** Trying to put in a BPA - Nicole still involved and Judy is aware	Dianne Baloski, Janice Kelly, Amanda Wilson, Terry Ahmed, Stacey Arneson, Judy Nurik	Amanda Wilson
Outreach	2	Training and Outreach Support Services for NLM (ICF)		DET will need to take over the separate (MS) what do they want to do with it. Resources have been developed					BPA	0%			Nicole Scott	LO - OET?	No plans right now for IAAS. **Ends in June or July?**	Dianne Baloski, Janice Kelly, Amanda Wilson, Terry Ahmed, Stacey Arneson, Judy Nurik	Amanda Wilson
Outreach	2	Training and Outreach Support Services for NLM (ICF)		DET will need to take over exhibiting), what do they want to do with it. Resources have been developed					BPA	0%			Nicole Scott	LO - OET?	No plans right now for exhibiting. **Ends in June or July?**	Dianne Baloski, Janice Kelly, Amanda Wilson, Terry Ahmed, Stacey Arneson, Judy Nurik	Amanda Wilson
CDMS-H	1	Consumer Health Resources Maintenance (ICF)	Q2 FY2020	Provide subject matter and IT expertise to support Tox Town's, Kids portal, and GeneEd	9/2018-9/2019	Sep-2019	$226,500	Sep 2019	BPA	47%			Alla Keselman	LO - PSD OET?	TOXTOWN (only) - Alla is working on it; **should it go to BSD or PSD since they have consumer resources**, no content expert (people are going) recommend PSD but needs a Task Manager - needs a home - **public facing website should transition to OCCS**; developer is ICF, different CMS, will this go into PSD as consumer or as a CHEMM Tox offering; need to know the funding breakdown of IT as opposed and **need a task manager** Bert and other Tox person make sense as an owner	Dianne Baloski, Janice Kelly, Stephanie Morrison, Terry Ahmed, Stacey Arneson	Amanda Wilson
CDMS-H	1	Special Population Resources Enhancement and Outreach (ICF)	Q4 FY2019 - Q1 FY2020	Support special population resources including Healthreach, Arctic Health, and American Indian Health.	9/2018-9/2019	Sep-2019	$220,000	Sep 2019	BPA	3%			Laura Bartlett	LO / OCCS	Need to figure out resources/funds - this is the content/Outreach part? Very little IT, done by FTE at OCCS, talk to Laura - what should happen, healthreach integrated into Medlin; **need task manager. OCCS will need support for IT, Nicole is asking for an estimate for support of HR**	Dianne Baloski, Janice Kelly, Stephanie Morrison, Terry Ahmed, Stacey Arneson	Amanda Wilson
AIDS	1	AIDSinfo and AIDSource (ICF)	Q4 2019	Manage daily operations of the AIDSinfo, InfoAIDS and AIDSource services - the AIDSinfo website, guidelines and panels, and treatment information	9/2018-9/2019	Sep-2019	TBD ($2,372,862 in FY2018)	Sep 2019	BPA	9%	SIS - 0 DMR - $1,680,000	2,680,000	Nicole Scott	LO DEPS	OCPL? Patti wants it transitioned to another IC, Nicole is working on that	Judy Nurik, Nicole Scott, Stacey Arneson, Stephanie Morrison, Terry Ahmed	Stacey Arneson
AIDS	1	AIDSinfo and AIDSource Supplemental Tasks (ICF)	Q4 2019	Support for content development, outreach, training, evaluation, user studies, etc	9/2018-9/2020	Sep-2019	TBD ($1,337,196 in FY2018)	Sep 2019	BPA	17.00%	SIS - 0 DMR - $286,080	286,080	Nicole Scott	OCPL?	OCPL? Being evaluated for inclusion in MedlinePlus- Andrew Plummer in PSD as an option; logical choice. Nicole and team talking about this. Julian works on this as well as part of the team.	Judy Nurik, Nicole Scott, Stacey Arneson, Stephanie Morrison, Terry Ahmed	Stacey Arneson

Hi Jerry,

The attached includes updates from the Friday meeting with Patti and today's activities. Nicole is working with Allison on the NLM org chart (page content and PDF) changes to the website. Think that does it for now.

Regards,
Jody

Hi Jerry,

I have been monitoring the items below that are due out today:

- SIS homepage banner and new content – DONE
- K-12 banner – DONE
- @nih_sis Twitter – account closing tweet – WENT OUT TODAY with three other message scheduled for each day the rest of this work week
- Technical Bulletin Announcement – SENT TO LO

Believe that is everything due out today. I am updating the SIS communications plan now and will send it to everyone shortly.

Regards,
Jody

Sunset of NLM Division of Specialized Information Services (SIS) Communication Messages and Distribution Plan

General SIS Sunset Message

As the National Library of Medicine (NLM) implements its Strategic Plan, 2017-2027, it is making organizational changes that include the closure of the Specialized Information Services (SIS) division, effective June 30, 2019, and the transition of many SIS programs into other parts of NLM. This integration serves to not only improve discoverability of and access to SIS resources by NLM's broad set of users, but also enables NLM to leverage its talents and resources to improve overall efficiency and effectiveness.

Over the next few months, some SIS resources and programs will transition to other parts of NLM, be integrated into other NLM resources, made accessible on partner sites, or discontinued. We will provide notice of these changes as they are made. Links to SIS resources and programs in their new locations will be shared on the SIS homepage at https://sis.nlm.nih.gov.

Questions about this transition and individual resources may be directed to custserv@nlm.nih.gov or 1-888-346-3656.

Communication Messages and Distribution Plan

Distribution Channel	Message	Delivery Date
Talking Points to Dr. Collins/Dr. Tabak	**Message:** As outlined in the Phase 1 concept plan that was approved in late 2018**,** NLM will close its Specialized Information Services Division effective June 30, 2019. Some SIS information services and programs will be transferred to other divisions of NLM, while other will be terminated or transitioned to other organizations. Approximately 40 Federal staff in SIS have been reassigned to other NLM divisions. Contractors are being reassigned as programs transition. **Original purpose:** Specialized Information Services (SIS) was established at NLM in 1967, with the Toxicology Information Program being a major element. The	6/28 Per Patti, this needs to be put on hold – annual review info.

	program was designed to fulfill recommendations made by the President's Science Advisory Committee; with the objectives to create computerized toxicology information and data banks from the literature, and from the data sources of collaborating agencies. SIS also engages in health information outreach to special populations and has responsibility for disaster health information management. **Why no longer needed:** Some SIS resources have experienced low usage and/or have become obsolete and will be retired. Remaining programs and services will be realigned to integrate them into broader NLM operations to improve operational efficiencies and effectiveness. **Critical issues:** NLM has announced the dissolution of SIS to major stakeholder groups and will continue to provide information to assist users in finding existing information resources as they are transitioned to other websites over coming months. For those information services that will discontinued, NLM will ensure archiving of the resources so that no information is lost. The new locations for the resources will be shared on the NLM and SIS homepages. TOXNET, the flagship SIS resource, is being integrated into other chemical information resources maintained by the NLM's National Center for Biotechnology Information; most remaining programs, including outreach, will be integrated into NLM's Library Operations Division.	needs to be sent first
NLM Broadcast Email from Dr. Brennan	TO INCLUDE ALL PHASE I UPDATES SIS, APDB, OET, OCCS) Dear Colleagues: We have been working diligently to align our organizational structure and offerings wi the National Library of Medicine's Strategic Plan, 2017-2027. As we do, the NLM will become more efficient and effective to delivering on our mission. Effective on July 1st, the Specialized Information Services (SIS) division will be discontinued, with staff and programs integrated into other parts of the organization. This integration will improve discoverability and access to resources for engaging with broader audiences and enabl NLM to better leverage its talents and resources.	By July 9 to coincide with Patti's Blog Post Draft send to Patti on 6/28

	With a long and important history, SIS has provided more than 50 years of service to NLM and the American people. Founded in 1966 in response to the urgent need for a coordinated, complete, computer-based resource of toxicological information, it grew over time to include what we know now as TOXNET. The program expanded further to include outreach to underserved and special populations, HIV/AIDS, and disaster/emergency preparedness and response. Our new organizational structure strives to create a more collaborative environment f curating important toxicology information and a more integrated information infrastructure, ensuring the integrity and sustainability of key. Over the next few months, some SIS resources and programs will transition to other parts of NLM, be integrated into other NLM resources, made accessible on partner site or discontinued. We will provide notice of these changes as they are made on the SIS home page at https://sis.nlm.nih.gov. With this transition, we also acknowledge two outstanding NLM leaders as they retire, Florence Chang, Acting Associate Director, and Janice Kelly, Acting Deputy Associate Director. They have dedicated their careers to the health of the nation and a strong an trusted NLM and have led an outstanding, dedicates staff. I hope you will join me in thanking them for their service and wishing them well as they take on new ventures. While change can be difficult, I believe it will produce a stronger NLM that will better serve our broad sets of users. I am grateful to all SIS staff for their professionalism and flexibility throughout this transition. As we work more closely and break down boundaries between our units, NLM is poised to make great strides in accelerating discovery and advancing health through data-driven research. Patti Patricia Flatley Brennan, RN, PhD Director, National Library of Medicine	
Message on SIS Home Page	Please note, this page will no longer be available effective 12/1/2019.	On 7/1

	As the National Library of Medicine (NLM) implements its Strategic Plan, 2017-2027, is making organizational changes that include the closure of the Specialized Information Services (SIS) division, effective June 30, 2019, and the transition of mar SIS programs into other parts of NLM. This integration serves to not only improve discoverability of and access to SIS resources by NLM's broad set of users, but also enables NLM to leverage its talents and resources to improve overall efficiency and effectiveness. Over the next few months, some SIS resources and programs will transition to other parts of NLM, be integrated into other NLM resources, made accessible on partner sites, or discontinued. We will provide notice of these changes as they are made. Links to SIS resources and programs in their new locations will be shared on the SIS homepage at https://sis.nlm.nih.gov. Questions about this transition and individual resources may be directed to custserv@nlm.nih.gov or 1-888-346-3656.	DONE

Subject: Re: SIS toxicology book collection

Milt,
Thanks for looking into this.

I'll discuss with the matter further with George to see if we can come up with another option. The small part that we have selected and boxed up are the most critical. Perhaps we can find private funding.

Phillip

Phil,

I'm sorry but this looks like an impasse that I can't resolve. I take seriously your evaluation of the value of the remaining volumes, but I cannot disregard the multiple opinions I've received that dispute your claim. In addition, SIS seems actively opposed to shipping the materials you've boxed. This is painful for you and George but I have no remedy.

Subject: Re: SIS toxicology book collection

Hi,
I am told the major part of the toxicology book collection will be discarded (read "trashed"). George Fonger and I have been able to contact some university researchers to take part of the collection (we have boxed up about 14 boxes and 4 large envelopes of materials), but I am under the impression that SIS is not willing to ship these most critical items.

Do you have any shipping funds that we can ship at least these materials? George estimates that the entire in-house toxicology collection cost over $300,000.

Subject: SIS toxicology book collection

I understand my former colleague George Fonger spoke with you last week about the dispersal of toxicology interests here in SIS (to be merged with multiple parts of NLM) as of this coming Sunday. If you have any concerns he raised, I am available through my cell phone at: Personal Info

My most urgent frustration is the plan to discard (I believe this means shred rather than find a home for) our toxicology reference collection on Monday. The collection contains hard to acquire books that have been collected over at least 30 years. As this division has worked with Historically Black Colleges and with Regional Medical Centers, I am sure with a little dedication something better than the current plan could be found.

As far as I can see with the Toxnet system, we are changing the essence of NLM from a place where researchers in biomedical interests find resources brought together into an institution which tells researchers to go elsewhere.

In any case, my group is gradually moving back to 38a in the coming months. Although I have been at NLM since 1997, I don't think we have met. George has always talked positively about you. If you are available for coffee someday, do let me know.

Subject: RE: [EXT] Metamodel for terms

Hi Mike,

I've attached MITRE's deliverable which elaborates the portfolio metamodel data elements and definitions which were prioritized for the initial work. I'm not sure if you've received this document previously; I hope it will help on the definitions front.

Then, here is some general information about the process to help answer your questions:

1. **Target customer types** – Customer list was initially developed with NLM NPA advisory team working with MITRE. We did not specifically define the customer types for the metamodel documentation. This is an improvement area. For example, we learned during the data call that there had been an NLM outreach functional analysis in the past year during which a customer type list had been produced. MITRE took that list, merged it with the original NPA list and additional customers that were submitted for the NPA. We then came up with a consolidated list that should be considered going forward. I've attached the consolidated list for your reference. We have not brought the list to the Divisions yet to discuss. The idea behind the merged list is to come to consensus that it covers all the necessary customer types. Then, each should be defined and included in the metamodel documentation.
2. **Mandate types** – The list of mandates types was originally brainstormed with the NPA advisory team. Specific definitions of each are not yet in the metamodel definitions file . This is another improvement area.
3. **Alignment to strategic plan** – Offering owners aligned offerings to SP elements based on their own perspective. There was not guidance for this at the time of the data call. This is another improvement area.

I would be very glad to set up time with you and your team to go into detail about the NLM portfolio metamodel, how definitions for data attributes were arrived at, and how MITRE set up the data calls to capture the customers, mandates, alignment and other details. We can describe the whole process to bring you up to speed. I understand that last week's NLM senior leadership meeting produced some recommended next steps in terms of normalizing terms so the timing seems to be right for us to partner with your team to refine the metamodel terms and work to improve the process overall.

Please let me know your thoughts on scheduling a meeting.

Thank you
Beth

Executive Summary

The National Institutes of Health (NIH) National Library of Medicine (NLM) Portfolio Metamodel aims to provide information to NLM decision makers to understand the mix of products and services—called offerings—that NLM provides to customer constituencies. The metamodel is a *future-state illustration* of features that are most critical to a holistic understanding of NLM's portfolio. The metamodel is populated with information sourced from NLM Division management records as well as from NLM financial management systems and processes. It is designed to help answer key management questions that are fundamental to understanding NLM's portfolio both at a high-level and at the individual offering level.

Broadly, NLM management desires to seeks information about:

- What is the number, type, and complete list of offerings available to the public? How do NLM offerings relate to each other and to NLM's mission?
- What federal or NIH mandates and/or NLM Strategic Plan elements compel NLM to support specific offerings?
- How are different customer constituencies served by NLM's diverse portfolio?
- What NLM resources (i.e., business processes and functions, technology, and data) and external resources are used in combination to deliver offerings to customers?
- What are the dependencies between offerings and their underlying resources?
- How is NLM's annual budget allocated and expended in support of individual offerings?
- What projects and activities does NLM support with federal investments to produce, operate, and maintain NLM offerings?

Scope of Document

This document consists of two sections:

- **NLM Portfolio Metamodel Components.** A common taxonomy for describing the NLM portfolio components is necessary for cross-portfolio analyses and transparent decision-making processes. This section defines each item appearing in the metamodel as well as data attributes associated with each item. Attribute values and examples are also provided to facilitate metamodel adoption.
- **NLM Portfolio Key Management Questions.** Different data points associated with the portfolio metamodel can be analyzed together to answer key management questions identified by NLM leadership. Answers support more informed decision-making about how to direct NLM's limited resources to effectively and efficiently execute NLM's mission and position NLM well for the future. This section enumerates each key management question and shows the lines of sight between different metamodel components that can provide data points to help answer each question.

Methodology

The MITRE Corporation (MITRE) collaborated with NLM leadership to develop the portfolio metamodel. To address the key management questions, the NLM portfolio metamodel collects information from internal sources and incorporates the information into a decision support environment. To create NLM's baseline portfolio inventory, portfolio data is organized into an Excel-based master data file (.xlsx) and visualized using Tableau software (.twbx). As NLM continues to develop its portfolio management (PfM) capability, NLM may opt to convert its Excel master data file to a database system to make data maintenance and expansion less cumbersome. MITRE developed metamodel definitions, data attributes and values, which were vetted by NLM leadership to ensure all aspects of the metamodel meet leadership's current reporting needs as well as some future reporting aspirations.

Intended Audience

This report is intended for NLM executive leadership, division leadership, and offering, resource, business, and technical owners.

1. Introduction

1.1 Background

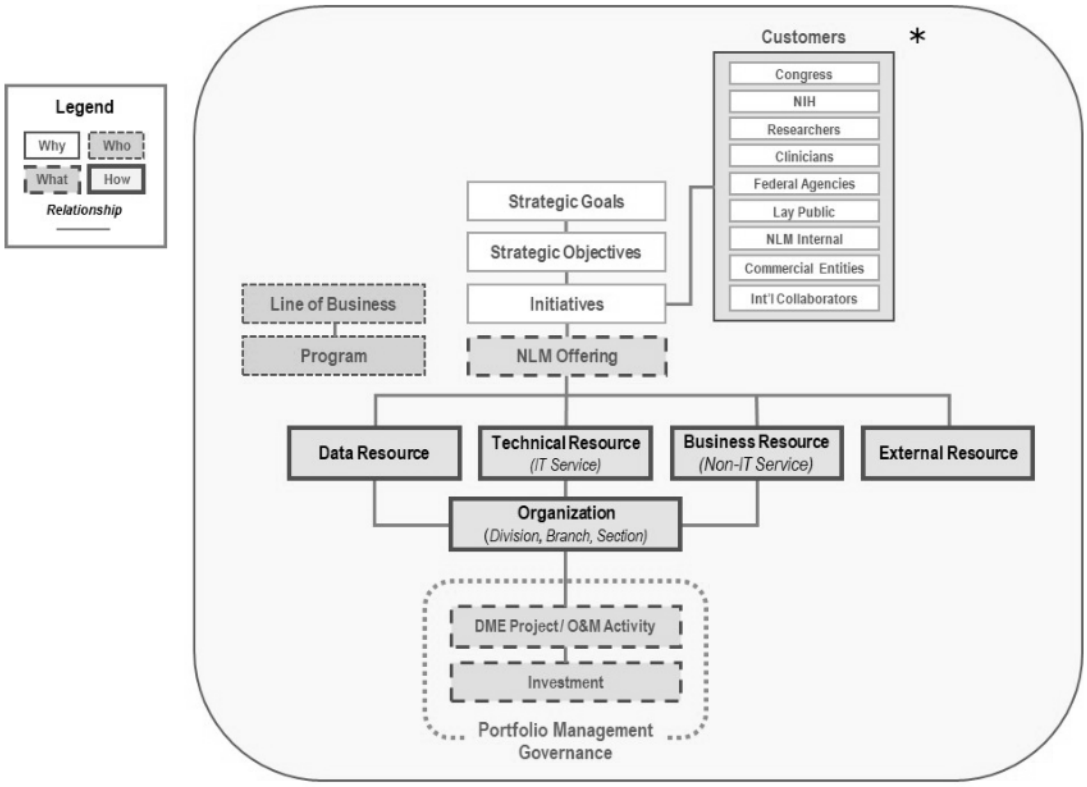
The National Library of Medicine (NLM) requested assistance from the CMS Alliance to Modernize Healthcare (CAMH), a Federally Funded Research and Development Center (FFDRC) operated by The MITRE Corporation (MITRE), to undertake an objective, unbiased, and comprehensive inventory of the entire NLM portfolio and develop portfolio analysis tools. NLM requested that MITRE propose a portfolio framework with cross-NLM applicability to facilitate standardized reporting, enable visualizations to evaluate alignment between NLM strategic priorities and offerings, and provide more robust data for planning and decision-making about NLM's future direction. This effort was the first of its kind to systematically catalog offerings (i.e., products/applications and services) delivered by individual NLM's divisions and centers in a cross-NLM portfolio framework.

By adopting portfolio management (PfM) discipline, federal agencies are equipped with more robust tools to better understand the scope, size, and impact of their business activities. PfM combines strategic, operational, financial, and performance data in a meaningful way that enables agencies to make better decisions about where to invest and to regularly evaluate the results of those investments.

1.2 Purpose

The objective of the NLM portfolio metamodel is to provide NLM a decision analysis capability that answers key management questions about how NLM fulfills its mission. The metamodel was developed using the following approach:

- Determine stakeholders for portfolio management information.
- Survey stakeholders to understand their information needs, capturing the initial set of management questions to answer.
- Parse information from discussions with leadership and interviews with NLM staff to develop a "metamodel" illustrating categories of information and their relationships.
- Evaluate data management and visualization requirements and identify a tool to support reporting based on metamodel categories.
- Determine how to compile, structure, and link information from portfolio data calls completed by key NLM stakeholders to support the relationships defined in the metamodel.
- Develop prototype NLM portfolio dashboards with different views to support answers to NLM management questions.



* The following additional customers were identified during the NPA Phase 1 data call and may be included in a future metamodel version: Educators, Students, Libraries/Librarians, and Press/Publishers.

Figure 1. NLM Portfolio Metamodel

The metamodel is designed to help NLM answer the following broad questions:

- What is the number, type, and complete list of offerings available to the public? How do NLM offerings relate to each other and to NLM's mission?
- What federal or NIH mandates and/or NLM Strategic Plan elements compel NLM to fund specific offerings?
- How are different customer constituencies served by NLM's diverse portfolio?
- What internal NLM resources (i.e., business processes and functions, technology, and data) and external resources are used in combination to deliver offerings to customers?
- What are the dependencies between offerings and their underlying resources?
- How is NLM's annual budget allocated and expended in support of individual offerings?
- What projects does NLM support with federal investments to produce, operate, and maintain NLM offerings?

2. Metamodel Definitions and Attributes

This section defines all metamodel components that comprise the types of data needed to answer key management questions. The five components are:

- **ITEM–** indicates the different components of the NLM Portfolio Metamodel.
- **ATTRIBUTES –** are the qualities or features that are regarded as a characteristic or inherent part of each ITEM. ATTRIBUTES are additional data points pertaining to ITEMS. In information management, an attribute is a piece of information that determines the properties of a field or tag in a database or a string of characters in a display.
- **VALUE –** provides possible options for the attribute based on either a predetermined list of NLM data or user-driven input.
- **EXAMPLES –** are provided to put the definitions for ITEM and ATTRIBUTE in the NLM context.

Attributes are grouped to indicate the type of information to which they relate (basic offering information or financial information). An additional distinction is made to identify attributes that are an aspirational part of the future-state NLM metamodel. These attributes were identified as important to future portfolio analyses; however, NLM leadership determined that standardized definitions for this set of attributes were not important for meaningful baseline portfolio analyses.

2.1 Attribute Group: NLM Offering Information

2.1.1 NLM Offering

Definition: The product and/or service offered to satisfy a want or need of an existing or target user constituency.

Table 1. NLM Offering Attributes

Attribute Name	Definition	Possible Values	Examples
Offering Name	The full name of the offering without information truncated by acronyms.	• List (Large Number of Possible Values) • Manual Data Entry	• Common Data Element Repository • National Health and Nutrition Examination Survey Database • PubMed
Offering Name (Short)	"Brand name," the name used to take the offering to market.	• List (Large Number of Possible Values) • Manual Data Entry	• CDE Repository • NHANES • PubMed
Offering Short Description	A succinct description of the value provided to customers.	Manual Data Entry	• CDE Repository – The NIH Common Data Element (CDE) Repository provides access to structured human and machine-readable definitions of data elements that have been recommended or required by NIH Institutes and Centers and other organizations for use in research and for other purposes. • NHANES – NHANES is a database of materials related to the second and third National Health and Nutrition Examination Surveys (NHANES II and III), carried out during the years 1976-1980 and 1988-1994, respectively. • PubMed – - PubMed is a digital collection of biomedical literature journal article abstracts.

Attribute Name	Definition	Possible Values	Examples
Offering Group	The category indicating the common purpose or characteristic that relates multiple offerings.	• Databases • Analytic Tools • Library Physical and Digital Collections • Training & Career Development • Outreach • Research • Library Science Platforms/Operations	

Attribute Name	Definition	Possible Values	Examples
Offering Type	The category indicating the form in which an offering is delivered to customers.	• Data • Digital Service • Human Service • Product	• **Product** – A system or raw materials combined and made available to users (customers). For the NLM context, a product generally refers to a physical asset or commodity provided to users. Examples: Books, exhibitions assets, training materials. • **Human Service –**Interaction between providers and users where the provider has a direct or indirect interaction with the user. Examples: Data Distribution Program, Library Operations MMS Outreach & Training. • **Digital Service –** A valuable action performed to satisfy customer need that has been delivered using IT infrastructure. Examples: Pathogen surveillance service, genome annotation service, contamination screening service. • **Data –** Information that has been translated or organized into a form that is efficient for movement, processing or consumption. Information may be housed within a database. Examples: PubMed, GenBank.
Offering Mechanism Type	The different mechanism(s) or means by which an NLM offering is provided to customers.	• API Access • Curated Data FTP • Software • Website Access • Media (Print, Video)	CDE Repository Mechanisms: 1. API Access 2. Website Access 3. Curated Data FTP

Attribute Name	Definition	Possible Values	Examples
		• Interpersonal	PubMed Offering Mechanisms: 1. API Access 2. Website Access (PubMed interactive web site) 3. Curated Data FTP NHANES Mechanisms: 1. Website Access (including controlled access) 2. Curated Data FTP 3. Software
Mandate Source Type	The primary source of NLM's mandate to provide a specific offering.	• Congress • NIH Policy • NLM Policy/ Strategic Plan • Other (e.g., historical) • Unknown	
Mandate Reference	The primary reference citation for the authorizing source legislation, policy, or regulation obligating NLM to provide resources and support for an offering or group of offerings.	Manual Data Entry	Sec. 301 of the PUBLIC HEALTH SERVICE ACT, PART D—NATIONAL LIBRARY OF MEDICINE, Subpart 1—General Provisions "PURPOSE, ESTABLISHMENT, AND FUNCTIONS OF THE NATIONAL LIBRARY OF MEDICINE"
Primary Offering Owner Name	Person accountable for delivering value to customers via a specific offering.	Manual Data Entry	Jane Smith
Critical Success Factor	Refer to specific activities, procedures, or areas that a business or organization depends on for its continued survival. (Technopedia)	Manual Data Entry	Example categories for CSF include cost, innovation, quality, speed, and size of consumer base.
Sunsetting Planned	Indicator that a plan is in place to sunset the offering in the future.	Yes	

2.1.2 Organization

Definition: The group of persons organized within NLM with responsibility to deliver a specific NLM offering. Provide NPA Organization information at the Section level or lowest level available when the Section organizational construct is not used.

Table 2. Organization Attribute

Attribute Name	Definition	Possible Values	Examples
Primary Organization Name	Name of the NLM organizational unit.	List (Large Number of Possible Values)	• Exhibitions Section • E-Health Information Support Section

2.1.3 Customers

Definition: Constituencies, including individuals, groups, or organizations, that are intended to use the project's product or service or result.

Table 3. Customer Attributes

Attribute Name	Definition	Possible Values	Examples
Customer Name	Short name for the customer constituency that uses the offering.	• Clinicians • Commercial Entities • Congress • Educators • Federal Agencies • International Collaborators • Lay Public • Libraries/Librarians • Manual Data Entry • NIH • NLM Internal • Press/Publishers • Researchers • Students	

2.1.4 NLM Initiative

Definition: A broadly defined objective that an organization must achieve to make its strategy succeed *(Association of Strategic Planning Body of Knowledge 2.0*). Initiatives are aligned to NLM Strategic Plan Goals and Objectives through the plan's hierarchical numbering framework.

Table 4. NLM Strategic Initiative Attribute

Attribute Name	Definition	Possible Values	Examples
Initiative Name	Strategic initiatives impact the organization as a whole and have enterprise-wide significance *(Association of Strategic Planning Body of Knowledge 2.0)*. If an offering is aligned to an Initiative, its alignment to the associated Strategic Objective and Goal will occur.	• List (see examples) • No alignment • Unknown	1.1b MEDLINE 2022 1.1c NLM Portfolio Assessment by MITRE 1.1d DATaset Metadata Model (DATMM) Initiative 2.1a Outreach planning 2.1d User Experience / User Development Initiative 2.1e External Communications Plans & Information Resources 2.1f Informatics Professionals Outreach, Training and Development 3.2b1 Reproducibility for Intramural Scientists Workshop 3.2b2 Second Reproducibility for Intramural Scientists Workshop 3.2c Data Science for Librarian Workforce Workshop 3.2d Assessment of extramural staff data science training needs

2.1.5 NLM Strategic Objective

Definition: A broadly defined objective that an organization must achieve to make its strategy succeed (*Association of Strategic Planning Body of Knowledge 2.0*). Objectives are aligned to NLM Strategic Plan Goals through the plan's hierarchical numbering framework.

Table 5. NLM Strategic Objective Attribute

Attribute Name	Definition	Possible Values	Examples
Strategic Objective Number	Number indicating the NLM Strategic Objective to which the offering is expected to contribute and help achieve. When an offering is aligned to a Strategic Objective, its alignment to the associated Strategic Goal will occur.	• List (see examples) • No alignment • Unknown	1.1 Connect the resources of a digital research enterprise 2.1 Know NLM users and engage with persistence 3.2 Assure data science and open science proficiency

2.1.6 NLM Strategic Goal

Definition: Encompasses the organization's vision, mission, and objectives (*Association of Strategic Planning Body of Knowledge 2.0*). High-level strategic goals have the following characteristics:

- Describe a future end-state that is supportive of the mission and vision.
- Describe actions in actionable terms.
- Relate to the expectations/requirements of all the major stakeholders and employees and reveal the underlying reasons for running the business.
- Imply a completion date at some point in the future but not defined at this point.
- Can be divided into milestones that, in turn, can be translated into achievable, assignable, and measurable objectives.

Table 6. NLM Strategic Goal Attribute

Attribute Name	Definition	Possible Values	Examples
Strategic Goal Number	Number indicating the NLM Strategic Goal to which the offering is expected to contribute and help achieve.	• Goal 1 • Goal 2 • Goal 3 • No alignment • Unknown	Goal 1 – Accelerate Discovery and advance health through data-driven research Goal 2 – Reach more people in more ways through enhanced dissemination and engagement Goal 3 – Build a workforce for data-driven research and health

2.1.7 Business Resources

Definition: Services associated with business process execution. Business resources support planning, implementation, operation, maintenance, and/or delivery of an offering. Business resources are often used in combination with technical resources and either indirectly or directly support offerings.

Table 7. Business Resource Attributes

Attribute Name	Definition	Possible Values	Examples
Business Resource Name	Short name for the business services that contribute to the delivery of an offering. The resource name given should describe the type of support provided (e.g., Content Management of RxNorm).	• List (Large Number of Possible Values) • Manual Data Entry	• Parature / Dynamics Support Portal and Ticketing System • PHPartners HSRIC curation • Prokaryotic Genome Annotation Curation • SNOMED CT US Edition Production
Business Resource Owner Name	Person responsible for managing the business resource inputs to an offering.	Manual Data Entry	Jane Smith

Attribute Name	Definition	Possible Values	Examples
Business Resource Type	Categories of business resource that distinguish the business function provided to an offering.	• Customer Service • Data • Management • Research • Other (with Manual Data Entry to add additional values)	

2.1.8 Data Resource

Definition: An organized collection of data. Data resources specify the data set that is leveraged when delivering an offering. May also be provided as an offering.

Table 8. Data Resource Attribute

Attribute Name	Definition	Possible Values	Examples
Data Resource Name	Short name for the data collection that contributes to the delivery of an offering.	• List (Large Number of Possible Values) • Manual Data Entry	• Anatquest images • PubMed Central Data Collection • VSAC data
Data Resource Owner Name	Person responsible for managing the data resource inputs to an offering.	Manual Data Entry	Jane Smith
Data Resource Owner Organization	Name of the NLM organizational unit responsible for providing the resource.	List (Large Number of Possible Values)	• Exhibitions Section • E-Health Information Support Section

2.1.9 External Resource

Definition: An input to an NLM offering that is obtained from a provider(s) outside the NLM organization.

Table 9. External Resource Attributes

Attribute Name	Definition	Possible Values	Examples
External Resource Name	Short name for the external resources that contribute to the delivery of an offering.	Manual Data Entry	eRA – public access compliance report
External Resource Provider Name	Name of external agency or organization providing the external resource.	Manual Data Entry	• NIH • EPA
External Resource Business Owner Name	Person responsible for managing the external resource inputs to an offering.	Manual Data Entry	John Smith

2.1.10 Technical Resource

Definition: Services as well as tangible assets supporting the technology needed to deliver an offering. Technical resources combine technical processes and functions of software, hardware, networks, telecommunications, and electronics as well as facilities and equipment. Includes software development, integration, and maintenance; hardware; networking integration, management and maintenance; information security (IS); IT management consultants; mobile services; web applications; and infrastructure.

Table 10. Technical Resource Attributes

Attribute Name	Definition	Possible Values	Examples
Technical Resource Name	Short name for the technical resources that contribute to the delivery of an offering.	• List (Large Number of Possible Values) • Manual Data Entry	• Annotation pipeline software • BioProject Archive • Entrez • Lexical Tools • SFX • Task Manager
Technical Resource Owner Name	Person responsible for managing the technical inputs	Manual Data Entry	Jane Smith

Attribute Name	Definition	Possible Values	Examples
	to the offering.		

3. Attribute Group: Financial Information

3.1 Expenditure

Definition: The actual spending of money; an outlay (*GAO-05-734SP Budget Glossary*).

Table 11. Annual Expenditures Attributes

Attribute Name	Definition	Possible Values[1]	Examples
Expenditure Type	The definitive breakdown of expenditures into groups that classify or summarize the type of cost.	• Division Federal Salaries (Programmatic/Operational) • Contract Salaries (Programmatic/Operational) • Service Contracts (Offering-Specific) • Other Support Costs (e.g., Administrative Overhead, Supplies, Travel, Training) • IT Services (Division-Specific) • IT Services – IT Management (Division-Specific) • IT Services – Security & Compliance (Division-Specific) • IT Services – Delivery (Division-Specific) • IT Services – Application (Division-Specific) • IT Services – Storage (Division-Specific) • IT Services – Compute (Division-Specific) • IT Services –Platform (Division-Specific) • IT Services – Network (Division-Specific) • IT Services – Data Center (Division-Specific) • NLM-wide IT Shared Services	

[1] For definitions, please refer to the **Glossary of Select Terms and Data Values**.

Attribute Name	Definition	Possible Values[1]	Examples
Cost Pool	Low-level categories that are often aligned easily to general ledger accounts. (*TBM Council*[2])	• Internal – Labor • External – Labor • External – Expenses • Internal –Other • Internal Services – IT	
Expenditure Total	Total amount of money expended to support a business activity.	Manual Data Entry (USD)	$1,234,567.89

[2] https://www.tbmcouncil.org/sites/default/files/tbmc_tbm_taxonomy_3.0.pdf

4. Proposed Future Attributes

4.1 Attribute Group: NLM Offering Information

4.1.1 Offering Information

Definition: Please refer to subsection *2.1.1*.

Table 12. Future-State NLM Offering Attributes

Attribute Name	Definition	Possible Values	Examples
Flagship Indicator	Indicator that the offering belongs to the finest, largest, or most important group of NLM offerings. *(https://www.merriam-webster.com/dictionary/flagship)*	Yes	
Key Performance Indicator (KPI)	Name of the metric most indicative of the offering's value to customers. Selected by offering business owner.	Manual Data Entry	
KPI Measurement Unit	The quantity used as the standard of measurement.	Manual Data Entry	Webpage hits
KPI Measurement Value	The measured KPI quantity at a moment in time.	Manual Data Entry	123,456
KPI Measurement Period	The predetermined time between two scheduled KPI measurements.	• Weekly • Monthly • Quarterly • Semi-annually • Annually	
KPI Measurement Date	The date on which the KPI measurement value is generated for reporting.	Manual Data Entry	YYYYMMDD

Attribute Name	Definition	Possible Values	Examples
KPI Measurement Target	The desired or benchmark KPI measurement value at any given time.	Manual Data Entry	123,456
KPI Data Source Name	Primary location (i.e., database, application, website, etc.) where current and historical KPI data are stored.	Manual Data Entry	Amazon Web Services
NLM Function	Derived from 8 functional statements describing the NLM's key functions.	• Biomedical collections/archives • Medical library development • Training • Outreach • Research • Tools development • Technical consultation	
NLM Core Operations	The range of activities that serve NLM's mission. Per the NLM Strategic Plan Implementation FAQs, NLM core operations are: • Acquire, preserve, and disseminate information • Conduct research about the information substrate of health • Workforce development • Provide training and use on how to make NLM's materials more accessible to others	• Archives & Collections • Outreach • Research • Training • Workforce Development	
Program	An organization subdivision focused on a single product or family of products (*Gartner IT Glossary*).		
Line of Business (LOB)	Related projects, subsidiary		

Attribute Name	Definition	Possible Values	Examples
	programs, and program activities that are managed in a coordinated manner to obtain benefits not available from managing them individually. (*PMBOK*®; used by NCBI). A collection of organizational resources that is geared to accomplish a certain major goal or set of goals (*www.managementhelp.org*).		

4.1.2 Technical Resource

Definition: Please refer to subsection *2.1.9*.

Table 13. Technical Resource Attributes

Attribute Name	Definition	Possible Values	Examples
FISMA System	Indicator of the NLM system designated as a part of the Federal Information Security Management Act of 2002 (FISMA) to which the technical resource is a part.	• List • Undocumented	• Access GUDID • BLAST • Clinical Trials • DailyMed • dbGaP • Digital Repository • DOCLINE • GenBank • Genetic Testing Registry (GTR) • Genetics Home Reference (GHR) • Images from the History of Medicine • Index Management System (IMS) • LPF • MEDLARS Application • MedlinePlus • MeSH • NLM Biomedical Terminology System (NBTS) • NLM Data Center • PubChem • PubMed/PubMed Central • RxNorm Editing System • Serials Extract File • TOXNET • Unified Medical Language System (UMLS) • Value Set Authority Center (VSAC) • Voyager

4.2 Attribute Group: Investment and Expenditure Information

4.2.1 DME Project

Definition: A project is a temporary endeavor undertaken to create a unique product or service. A project has a beginning and an end. (*Project Management Institute®*). A DME (Development, Modernization and Enhancement) project is the portion of an IT investment/project that deals with developing and implementing new or enhanced technology in support of an agency's mission (*48 CFR 1034.001 – Definitions*).

Table 14. Future-State DME Project Attributes

Attribute Name	Definition	Possible Values	Examples
DME Project – Resource Name	Name of the resource supported by the DME project.	Manual Data Entry	
DME Project Name	Short name for a DME project undertaken to develop a business or technical resource.	Manual Data Entry	• PubMed 2.0 • SEF Redesign
DME Project Investment Amount	Total amount invested to complete a DME project.	Manual Data Entry (USD)	$1,234,567.89
DME Project Expenditures Amount	Total expenditures incurred for a DME project to a specified point in time.	Manual Data Entry (USD)	$1,234,567.89

Attribute Name	Definition	Possible Values	Examples
DME Project Associated Investment Name	Name of HHS-reported NLM investment lines from which funding is directed to a project.	• NLM Biomedical Terminology System (NBTS) • NLM BLAST • NLM Entrez Molecular Biology Website • NLM Genome Assembly and Annotation (GenBank) • NLM Molecular Biology IT Support • NLM TOXICOLOGY DATA NETWORK • NLM Clinical Trials • NLM Health Information Resources • NLM PubChem • NLM Human Variation Resources • NLM Medical Library Heath Info Systems and Services • NLM Literature Resources • NLM Clinical Informatics and Data Standards and Analytics Research • NLM Medical Imaging and Visualization Research	

4.2.2 Operations and Maintenance (O&M) Activity

Definition: Appropriations that traditionally finance those things whose benefits are derived for a limited period (e.g., expenses rather than investments) (*Defense Acquisition University*).

Table 15. Future-State O&M Activity Attributes

Attribute Name	Definition	Possible Values	Examples
O&M Activity – Resource Name	Name of resource supported by the O&M activity.	Manual Data Entry	

Attribute Name	Definition	Possible Values	Examples
O&M Activity Name	Short name for the O&M activity supporting the operation and maintenance of a business or technical resource.	Manual Data Entry	• OCCS Application Branch Operations and Maintenance • Format R/W Maintenance Total FY • GBench Editing Total FY • SMART/SMUPD Maintenance 2018 • Sub Portal Maintenance Total FY • SuperBankIt-Maintenance-2018 • Foosh-Genbank Automation
O&M Activity Investment Amount	Total amount invested to perform an O&M activity.	Manual Data Entry (USD)	$1,234,567.89
O&M Activity Expenditure Amount	Total expenditures incurred for the O&M activity to a specified point in time.	Manual Data Entry (USD)	$1,234,567.89
O&M Activity Associated Investment Name	Name of reported NLM Investment lines from which funding is directed to an activity.	• NLM Biomedical Terminology System (NBTS) • NLM BLAST • NLM Entrez Molecular Biology Website • NLM Genome Assembly and Annotation (GenBank) • NLM Molecular Biology IT Support • NLM TOXICOLOGY DATA NETWORK • NLM Clinical Trials • NLM Health Information Resources • NLM PubChem • NLM Human Variation Resources • NLM Medical Library Heath Info Systems and Services • NLM Literature Resources • NLM Clinical Informatics and Data Standards and Analytics Research • NLM Medical Imaging and Visualization Research	

4.2.3 IT Infrastructure

Definition: Investments in IT Infrastructure reported to HHS. Includes NIH End User Devices, Tools, and Support; NIH Computational Infrastructure and Services; NIH IT Security and Compliance; and NIH Network & Telecommunications Infrastructure.

Table 16. Future-State IT Infrastructure Investment Attributes

Attribute Name	Definition	Possible Values	Examples
IT Infrastructure Investment Project Name	Short name for the IT infrastructure project investment reported to HHS.	Manual Data Entry	
IT Infrastructure Investment Amount	Total amount invested in IT infrastructure.	Manual Data Entry (USD)	$1,234,567.89

Appendix A. Key Management Questions Answered Through the NLM Portfolio Metamodel

A.1 Portfolio View: Alignment

The ***Alignment*** portfolio analysis view seeks to evaluate the linkage between an organization's business unit activities and its business goals and objectives and, in the case of federal agencies, also their mandated mission. With these guidelines, NLM's baseline alignment analyses enable drilling down to understand how singular NLM offerings (or groups of NLM offerings) support the realization of NLM strategic plan elements and fulfillment of NLM's responsibilities mandated by law, regulation, or other authoritative source. In the future, NLM should specify the desired outcomes (e.g., performance targets) for each offering and incorporate views into alignment analyses that examine the extent to which NLM is achieving its desired outcomes.

A.1.1 What offerings does NLM provide to user constituencies?

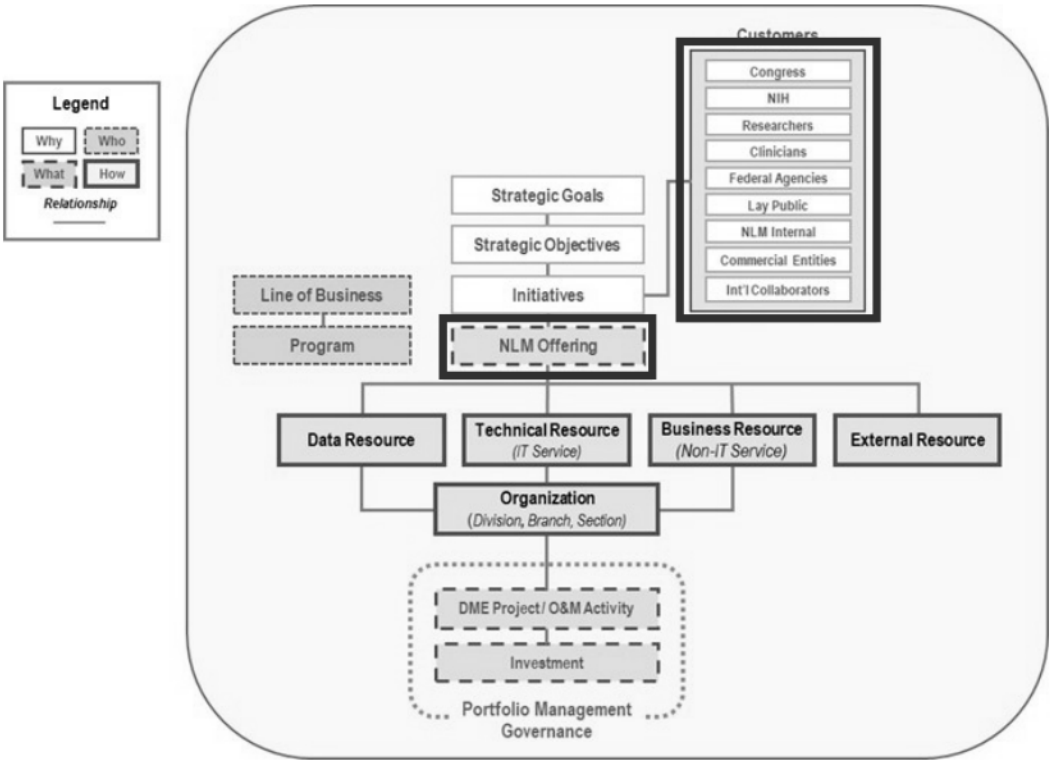


Figure 2. Alignment Question 1.1 – Line of Sight

Metamodel Items and Attributes:

Item	Attribute
NLM Offering	• Offering Name (Short) • Offering Short Description • Offering Type
Customers	• Customer Name

Outputs:

1.1.1 Count of NLM offerings

1.1.2 Comprehensive, descriptive list of NLM offerings

1.1.3 Count of NLM offerings serving different customer types

A.1.2 How do NLM offerings relate to each other?

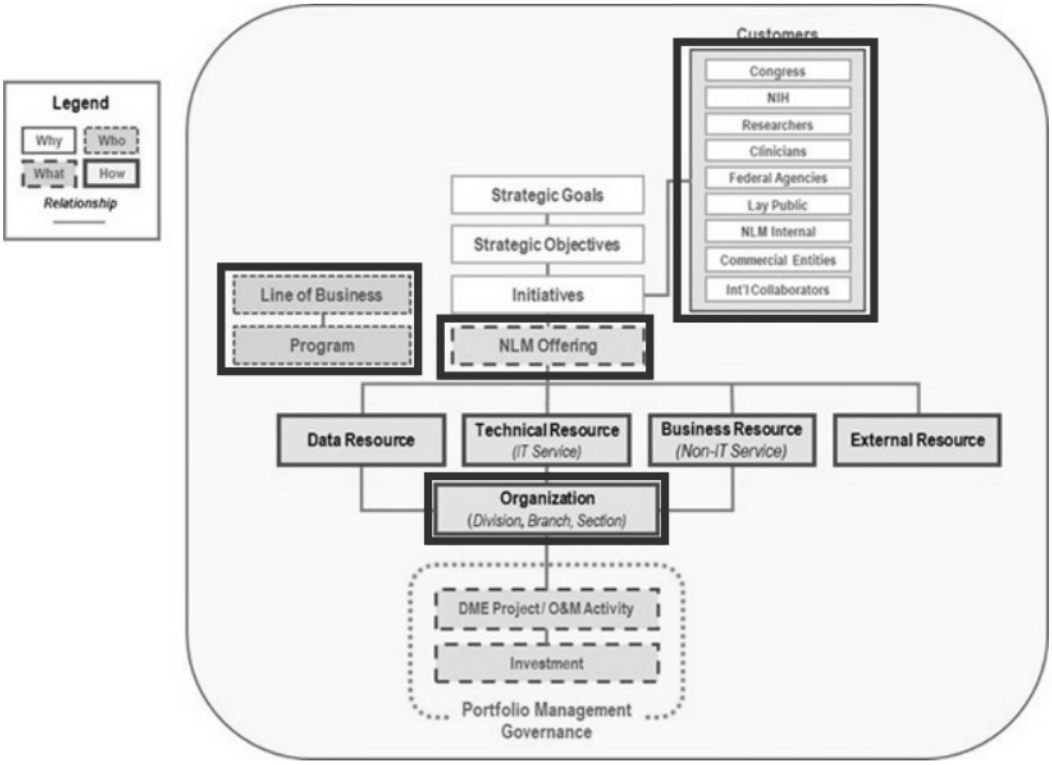

Figure 3. Alignment Question 1.2 – Line of Sight

Metamodel Items and Attributes:

Item	Attribute
NLM Offering	• Offering Name (Short) • Offering Type • Offering Group
Customers	• Customer Name
Line of Business	• LOB Name
Program	• Program Name
NLM Organization	• Organization Name

Outputs:

1.2.1 Count of NLM offerings by NLM organization (i.e., Division, Branch, Section)

1.2.2 Count of NLM offerings differentiated by offering type

1.2.3 Count of offerings by offering group

1.2.4 *(Future PfM Report)* Count of NLM offerings by NLM lines of business

1.2.5 *(Future PfM Report)* Count of NLM offerings by NLM program

A.1.3 How are NLM's current offerings directed by law, regulation, policy, or other mandate?

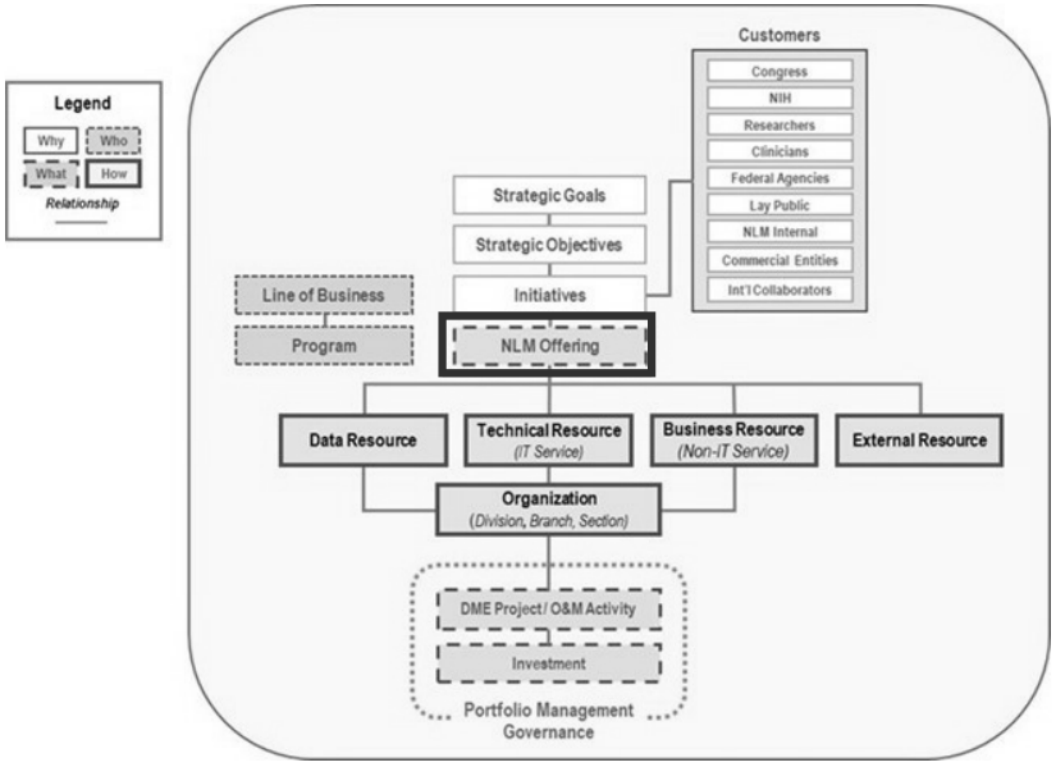

Figure 4. Alignment Questions 1.3 – Line of Sight

Metamodel Items and Attributes:

Item	Attribute
NLM Offering	• Offering Name (Short) • Mandate Source Type • Mandate Reference

Outputs:

1.3.1 Count of NLM offerings by mandate source type

1.3.2 List of NLM offerings with mandate reference citation

A.1.4 How do NLM offerings align to NLM strategic goals, objectives, and initiatives?

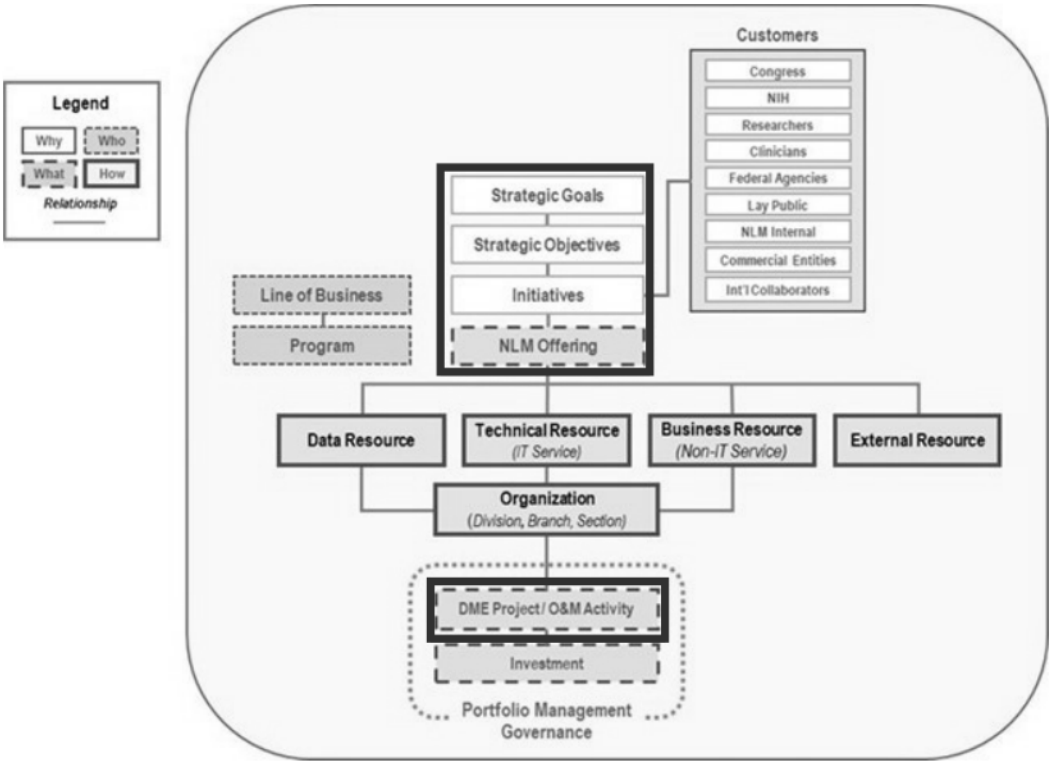

Figure 5. Alignment Question 1.4 – Line of Sight

Metamodel Items and Attributes:

Item	Attribute
NLM Offering	• Offering Name (Short)
Strategic Goal	• Strategic Goal Name
Strategic Objective	• Strategic Objective Name
Initiative	• Initiative Name
DME Project	• DME Project Name

Outputs:

1.4.1 Count of offerings aligned to each strategic goal

1.4.2 Count of offerings aligned to each strategic objective (per goal)

1.4.3 Count of offerings aligned to each 2018 strategic initiative (per objective)

1.4.4 (*Future PfM Report*) List of DME projects aligned to NLM initiatives

1.4.5 (*Future PfM Report*) Grouping(s) of DME projects identified by NLM to address specific initiatives associated with NLM strategic plan implementation and aligned to NLM offerings

A.2 Portfolio View: Fiscal Balance

The ***Fiscal Balance*** view typically presents actual operational expenditures versus expected benefits. Mature organizations will also evaluate expenditures against risk and benefits. For NLM's baseline PfM capability, NLM's diverse, public-facing offerings are the primary benefit in focus. The current-state view visualizes the allocation of fiscal year expenditure totals among offerings and by expenditure category, such as federal and contractor labor, service contracts, and IT services.

Investment information, when available within the portfolio database in the future, will further enhance NLM's ability to understand the results of specific federal investments. It may also highlight opportunities to eliminate or consolidate similar investments and be more operationally efficient.

A.2.1 What is the cost of making and maintaining NLM offerings?

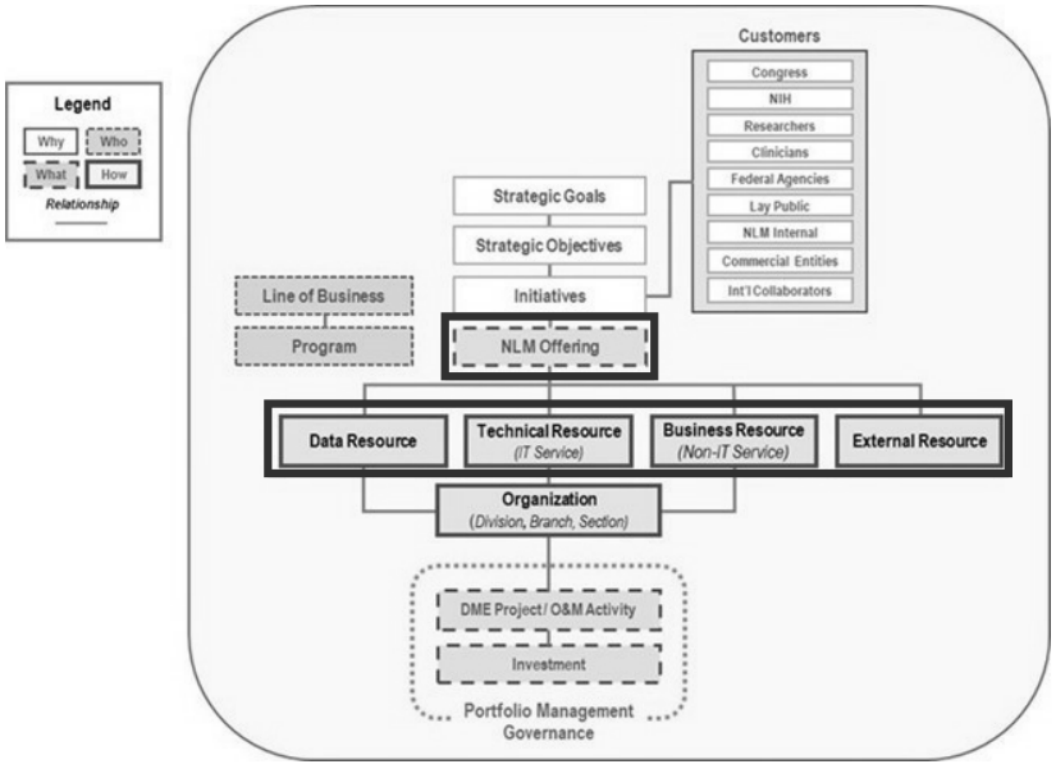

Figure 6. Fiscal Balance Question 2.1 – Line of Sight

Metamodel Items and Attributes:

Item	Attribute
NLM Offering	• Offering Name (Short)
Business Resource	• Business Resource Name
Data Resource	• Data Resource Name • Data Resource Expenditure Amount ($US; FY Total to Date)

Item	Attribute
External Resource	• External Resource Name • External Resource Expenditure Amount ($US; FY Total to Date)
Technical Resource	• Technical Resource Name • Technical Resource Expenditure Amount ($US; FY Total to Date)

Outputs:

Offering Expenditure Information

2.1.1 Total expenditures for offerings

2.1.2 A list of the "top-n" offerings with the highest expenditures

2.1.3 The breakdown of offering total expenditures among Division activities, IT services, and NLM shared services

2.1.4 The breakdown of Division expenditures for an offering by expenditure type

2.1.5 A list of the "top-n" offerings by total expenditures for IT shared services

2.1.6 A list of the "top-n" offerings by total expenditures for NLM shared services

Resource Expenditure Information

2.1.7 (*Future PfM Report*) Total expenditures by resource type (i.e., business, data, technical, and external[3])

2.1.8 (*Future PfM Report*) The breakdown of offering expenditures attributable to resource type (i.e., business, data, technical, and external)

2.1.9 (*Future PfM Report*) A list of the "top-n" resource expenditures by resource type (i.e., business, data, technical, and external)

2.1.10 (*Future PfM Report*) A list of the "top-n" offerings with the highest expenditures for each resource type (i.e., business, data, technical, and external)

2.1.11 (*Future PfM Report*) The breakdown of total expenditures by offering attributable to resource business, data, technical, and external resources against risk and resource type

[3] Determining the costs of shared resources requires a transparent, repeatable, and reasonable cost allocation approach. In addition, capturing the cost of specific external resources requires that charge-back mechanisms be in place to quantify the support NLM received from those resources.

A.2.2 How much does NLM spend on offerings with a similar purpose?

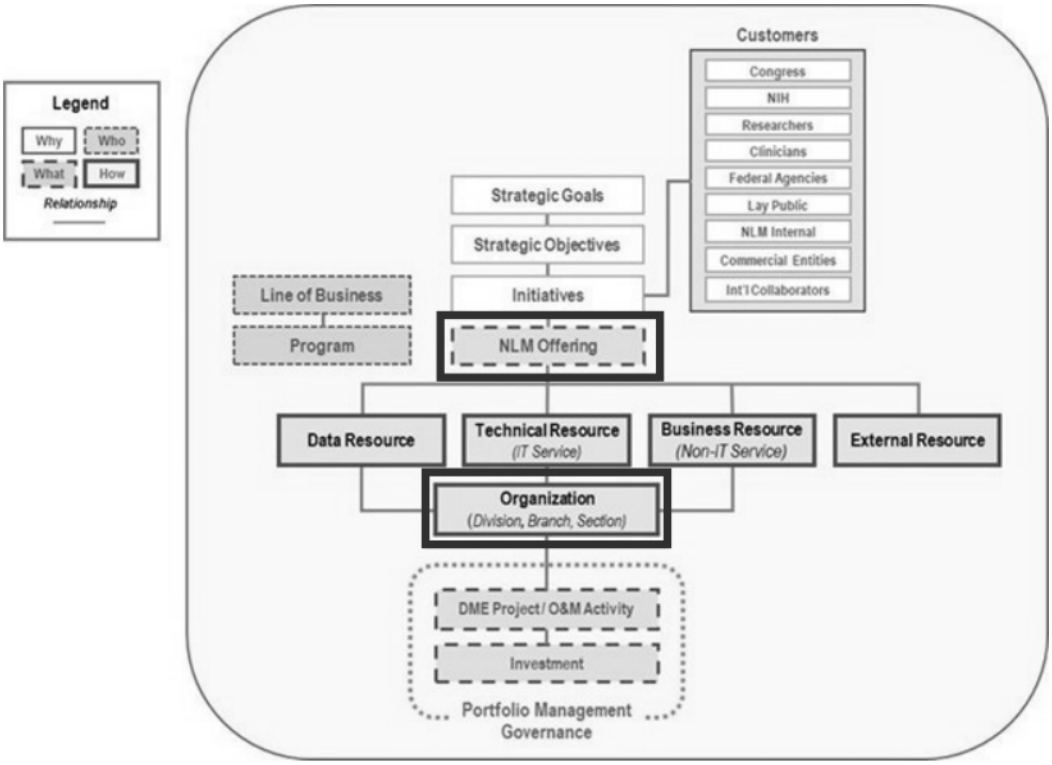

Figure 7. Fiscal Balance Question 2.2 – Line of Sight

Metamodel Items and Attributes:

Item	Attribute
NLM Offering	• Offering Name (Short) • Offering Group
Expenditures	• Expenditure Category • Expenditure Type • Expenditure Total ($US; FY Total to Date)

Outputs:

2.2.1 Total expenditures by offering group

2.2.2 Breakdown of offering group expenditures by expenditure type

A.2.3 What is the composition of NLM Investments?

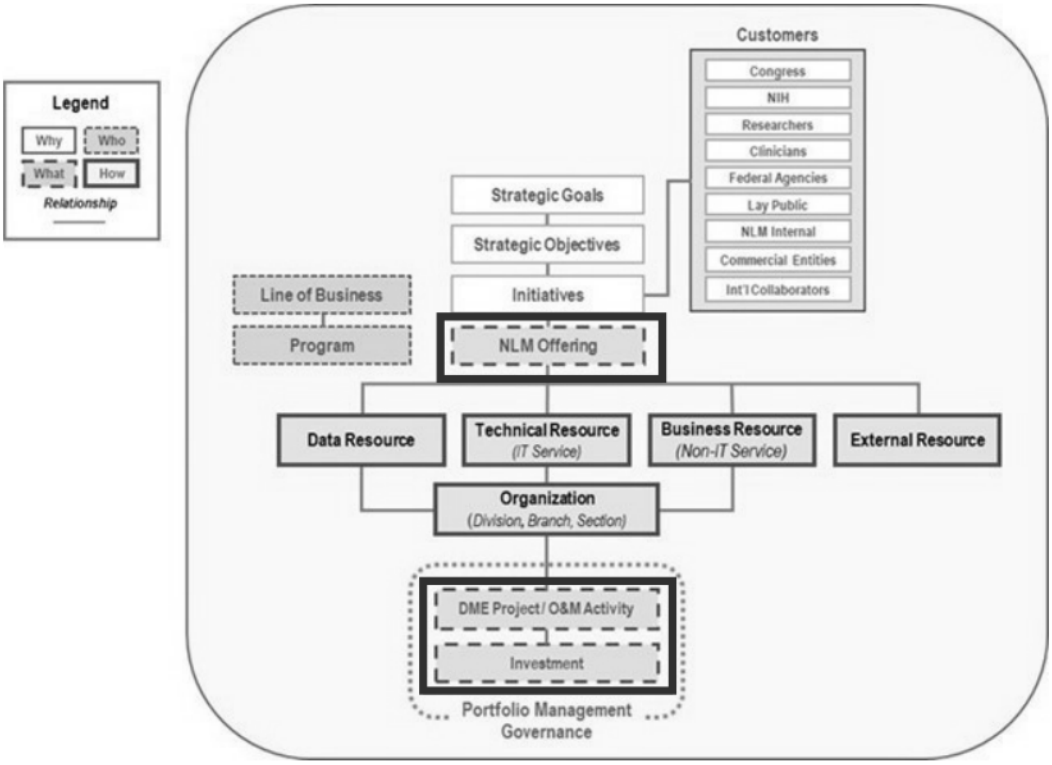

Figure 8. Fiscal Balance Question 2.3 – Line of Sight

Metamodel Items and Attributes:

Item	Attribute
NLM Offering	• Offering Name (Short)
Investment	• Investment Name • Investment Amount ($US; FY Total to Date
Investment Line	• Investment Line Name • Investment Line Investment ($US; FY Total to Date)
DME Projects	• DME Project Name • DME Project Expenditure Amount ($US; FY Total to Date)
O&M Activity	• O&M Activity Name • O&M Activity Expenditure Amount ($US; FY Total to Date)
IT Infrastructure	• IT Infrastructure Project Name • IT Infrastructure Investment Amount ($US; FY Total to Date)

Outputs:

2.3.1 (*Future PfM Report*) Total of investments

2.3.2 (*Future PfM Report*) The breakdown of total investments by investment category (i.e., DME, O&M, and IT infrastructure)

2.3.3 (*Future PfM Report*) A list of the "top-n" investments by investment category (i.e., DME, O&M, and IT infrastructure)

2.3.4 (*Future PfM Report*) The breakdown of investments by offering according to investment category (i.e., DME, O&M, and IT infrastructure)

2.3.5 (*Future PfM Report*) Total of investments by NLM organization

2.3.6 (*Future PfM Report*) Breakdown of investments for DME projects and O&M activities by NLM organization

2.3.7 (*Future PfM Report*) A list of the "top-n" offerings with the highest total investment amount

2.3.8 (*Future PfM Report*) A list of the "top-n" offerings with the highest total investment amount by investment category (i.e., DME, O&M, and IT infrastructure)

A.2.4 How much funding has NLM invested to implement strategic initiatives?

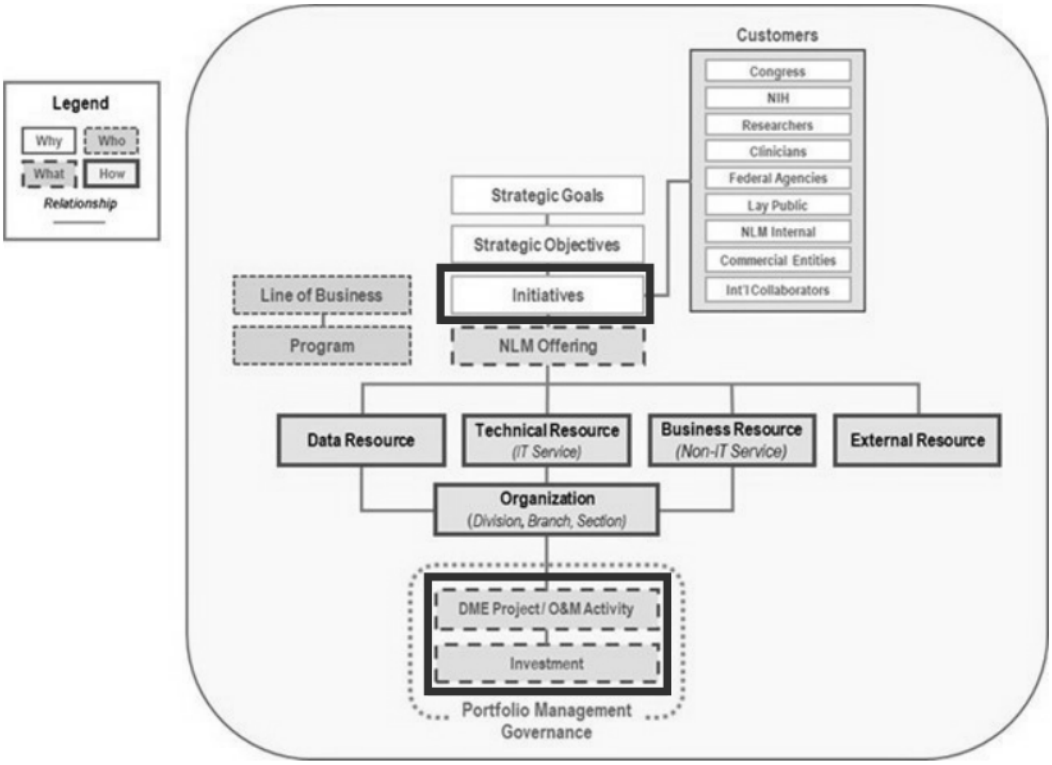

Figure 9. Fiscal Balance Question 2.4 – Line of Sight

Metamodel Items and Attributes:

Item	Attribute
Offering	• Offering Name (Short)
Initiative	• Initiative Name
Investment	• Investment Name • Investment Expenditure Amount ($US; FY Total)
DME Projects	• DME Project Name • DME Project Expenditure Amount ($US; FY Total)
O&M Activity	• O&M Activity Name • O&M Activity Expenditure Amount ($US; FY Total)

Outputs:

2.4.1 *(Future PfM Report)* The total investments in dollars allocated to address specific NLM initiatives

2.4.2 *(Future PfM Report)* A list of all investments, designated either DME project or O&M activity, allocated to offerings aligned with specific NLM initiatives

2.4.3 *(Future PfM Report)* A list of the "top-n" initiatives with the highest total dollar investment amount

2.4.4 *(Future PfM Report)* The total investments in dollars allocated to organizations responsible for resources implicated in achieving NLM initiatives

2.4.5 *(Future PfM Report)* The total expenditures in dollars allocated to address specific NLM initiatives

2.4.6 *(Future PfM Report)* A list of all expenditures, designated either DME project or O&M activity, allocated to offerings aligned with specific NLM initiatives

2.4.7 *(Future PfM Report)* A list of the "top-n" expenditures with the highest total dollar amount

2.4.8 *(Future PfM Report)* The total expenditures in dollars allocated to organizations responsible for resources implicated in achieving NLM initiatives

A.3 Portfolio View: Constraints and Dependencies

The ***Constraints and Dependencies*** portfolio view examines general constraints and dependencies that affect portfolio and portfolio component performance. NLM's current-state metamodel provides a preliminary view of dependencies among offerings as well as between offerings and NLM resources owned by NLM Divisions. Potential constraints that may be added to NLM portfolio view include funding, technology, NLM mandate, and complexity. More research is needed to identify the important management questions related to operational constraints and dependencies that the portfolio metamodel may be configured to answer.

A.3.1 How are NLM resources allocated to deliver NLM offerings?

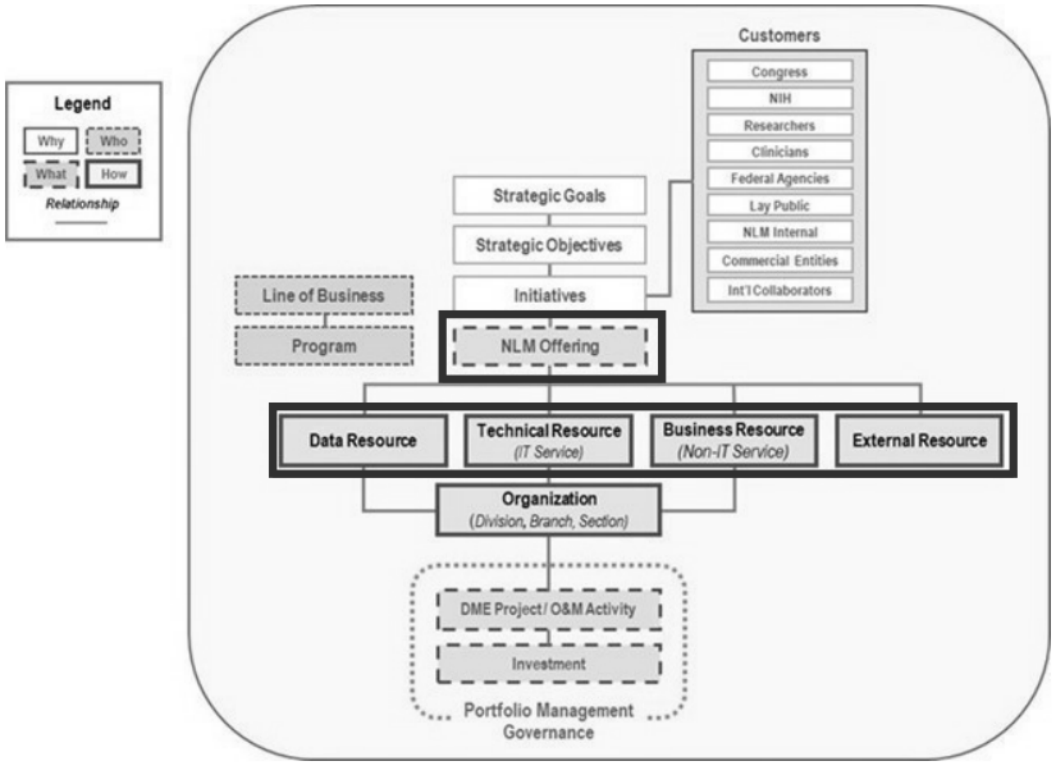

Figure 10. Constraints and Dependencies Question 3.1 – Line of Sight

Metamodel Items and Attributes:

Item	Attribute
Offering	• Offering Name (Short)
Business Resource	• Business Resource Name
Data Resource	• Data Resource Name
Technical Resource	• Technical Resource Name • DME Project Expenditure Amount ($US; FY Total)
External Resource	• External Resource Name

Outputs:

3.1.1 A list of resources (i.e., business, data, technical, and external) utilized by each NLM offering

3.1.2 A list of "top-n" resources (i.e., business, data, technical, and external) utilized by NLM offerings

3.1.3 (*Future PfM Report*) The total approximate expenditures in dollars attributable to the "top-n" shared resources (i.e., business, data, technical, and external)

3.1.4 (*Future PfM Report*) The total approximate expenditures in dollars attributable to the "top-n" shared resources (i.e., business, data, technical, and external) as a percentage of total resource costs

A.4 Portfolio View: Value

The ***Value*** portfolio view combines different indicators related to the organization's cost and funding profile, effectiveness, delivery timeline, and risks to produce a composite data point that indicates value delivered. NLM's portfolio is very diverse; for this reason, a singular value indicator cannot be applied to all portfolio components. Further work is needed to identify key value indicators. In some instances, volume and/or demand may be good indicators of customers' appreciation of NLM offerings. These types of indicators serve as a rough indicator of usefulness (e.g., low demand equates to low usefulness); however, for some offerings with a small customer constituency or specific delivery mandate, neither volume nor demand may suffice to answer the value question. Other value indicators would be required. Future work to build NLM PfM capabilities should include developing a strategy to identify value indicators for each offering or for similar offerings.

Possible strategies for determining value measures include:

1. Conduct customer surveys and analyze feedback to understand customers' perspectives
2. Select key performance indicators based on success criteria determined for an offering or a group of offerings
3. Determine a means to evaluate whether an individual offering (or a group of offerings) fulfills a mandate from Congress, NIH, NLM, or other authoritative source
4. Determine the offering's relevance and uniqueness in the market

The following are examples of value-related management questions:

- 3.1 What is the demand (usage) for NLM offerings? How has demand changed over a defined time period ("n")?
- 3.2 What is the volume of customers (total and by customer type) for each NLM offering? How has customer volume and composition changed over a defined time period ("n")?
- 3.3 How are NLM's flagship offerings performing against key performance indicators measured over a defined time period ("n")?
- 3.4 What identifiable value do offerings provide users/customers?
- 3.5 What value do customers receive from NLM offerings, as conveyed through their feedback?
- 3.6 How does offering value compare with offering total expenditures?
- 3.7 How do offerings act as a support or foundation to external outcomes (e.g., development of apps and other industry technologies, lives saved, and student/research development)?

A.5 Portfolio View: Health

The ***Health*** portfolio view provides information to help an organization understand how well it is executing against its plans for investing, expending, and accomplishing key activities. The Health view analyzes the state of individual investments against the portfolio: how many investments are on track, over budget, under budget, on or behind schedule, etc. As NLM's PfM maturity progresses, NLM may consider expanding the portfolio metamodel to capture information to respond to the following management questions, which are offered as examples only:

5.1 What is the fiscal year budget variance (planned vs. actual)?

5.2 What is the fiscal year budget variance (planned vs. actual) by Division?

5.3 What is the fiscal year variance (planned vs. actual) for NLM projects?

5.4 What is the time estimated to finish the NLM budget?

5.5 What is the workplan variance for NLM initiatives?

5.6 What is the workplan variance for 2018 DME projects?

5.7 What is the workplan variance for 2018 O&M activities?

5.8 What is the fiscal year budget variance (planned vs. actual)?

5.9 What is the budget variance between successive fiscal years?

A.6 Portfolio View: Risk

The ***Risk*** portfolio view associates a risk indicator or score to portfolio components to enable an organization to ensure the amount of risk is commensurate with the potential benefits across the short, medium, and long term. Risk can be examined from multiple perspectives, including investment function/execution, organizational reputation, operational, and competitive position. The level of risk acceptable to an organization depends on its priorities. Therefore, understanding those priorities and potential tradeoffs are paramount. A portfolio risk view is indicative of more a mature PfM approach. Some risk-related management questions are:

6.1 What level of risk does NLM assume by providing the offering?

6.2 How does an offering compare to similar offerings in the marketplace?

Glossary of Select Terms and Data Values

Expenditure Types

Division Programmatic and Operational Activities

Division Federal Salaries	For example, staff executing programmatic/operational roles in support of specific offerings or multiple offerings; includes IT developer time when supporting specific offerings.
Contract Salaries	For example, external contractors hired to support specific offerings or multiple offerings; works alongside federal staff.
Service Contracts	For example, contracts established to purchase a specific service in support of NLM Offering delivery.
Other Support Costs	For example, cost that is potentially allocable across all offerings and not generally offering-specific, such as administrative / management overhead, supplies, travel, and training.
Division-Specific IT Services	IT services provided by an NLM provider (e.g., OCCS) that are specific to a Division (i.e., software, applications, etc.).
NLM-Wide IT Shared Service Costs	IT services that are provided across all of NLM (e.g., data center and network).

Technology Business Management IT Tower Definitions[4]

IT Management	The IT Management tower includes the costs to manage, administer, and plan IT for the enterprise. It includes executive management, strategic management, enterprise architecture, IT finance, and vendor management.
Security and Compliance	The Security & Compliance tower includes service costs related to IT security compliance and disaster recovery. The scope includes costs to define, establish, enforce, and measure security, compliance, and disaster recovery readiness for the enterprise.
Delivery	The delivery tower includes the costs to monitor, support, manage, and run IT operations for the enterprise and includes the IT Service Management (ITSM) functions.
Application	The Application tower includes costs related to applications in the

[4] https://www.tbmcouncil.org/sites/default/files/tbmc_tbm_taxonomy_3.0.pdf

	enterprise. The scope includes the cost of business software and the costs to develop, manage and run applications for the enterprise.
Storage	Storage provides centralized data storage and securely holds information and data to be retrieved later. Storage may hold data for application programs and code, databases, files, media, email and many other forms of information. The storage tower includes distributed and mainframe storage that provides on-line storage for real-time access and archival storage solutions that may enable near-term retrieval or long-term archival. The storage tower excludes the internal storage included with a typical server configuration or end-user device such as a laptop, desktop or mobile phone, or tablet.
Compute	Compute refers to both general and special-purpose devices and software that are programmed to carry out a set of arithmetic or logical operations. In essence, it provides the "brains" to process application and user requests. Compute includes a wide range of physical and virtual servers differentiated by platform and operating system. The Compute tower should include all direct hardware, software, labor, and outside service costs.
Platform	Platform includes all costs associated with distributed and mainframe databases and middleware systems. Costs include DBMS software and tools, labor, and outside services.
Network	Network includes the data and voice equipment along with the transport methods to connect systems and people and to enable people to converse. Networks provide core connectivity within the enterprise data centers as well as connectivity to and access within office building and remote locations.
Data Center	Data centers are purpose-built facilities to securely house computer equipment. Data centers provide racks/cabinets and cabling; clean and redundant power; data connectivity; environmental controls, including temperature, humidity, and fire suppression; physical security; and the people to run and operate the facility and its infrastructure.

Weekly Legislation and Policy Update Discussion Items
Rebecca Goodwin, Dina Paltoo, Jerry Sheehan
July 3, 2019 -- Call in: 1-650-479-3208 Attendee access code: Passcode

- Coordinating Committee for Research on Women's Health (CCRWH)
    - Recap of 7/10 meeting
        - DUE 7/17 -- Bold ideas for research agenda; ask Mike to send request to NLM Leadership and ask ppl to send suggestions to David & Rebecca -- Valerie, Milt, Olivier, David…
            - Pelvic health, maternal morbidity & mortality, health across the lifespan, big data and addressing bias in big data…
            - Survey to reps will come 7/22 and due 8/5
            - CCRWH mtg discussion 8/14
            - Sending to Dr. Collins Sept
    - Request for NLM to present at future mtg
        - NIH-wide collxns of CDEs, standardization of lang and data…using tools and resources and platforms…
            - Lisa Lang project
            - Opportun for NLM to help ppl in other ICs to develop
        - Inclusion in research, NNLM partnership w All of Us
        - SABV data tracking/filtering in PubMed and CT.gov
        - Compile some background/briefing for Patti related to NLM efforts re RWH…

- Co-funding opportunity ORWH & OBSSR
    - CCRWH/ORWH (EP -- Noemie Elhadad endometriosis research? Bias in big data? NCBI - hackathon? OSI/OD- Workshop or guest speaker?? LHC - ?)
    - Need to be strategic abt what NLM wants to do in this area
    - Include a synopsis in the draft email for Mike to send to Leadership** might be helpful guidance for staff in thinking abt strategy and proposals/ideas

- NIDB Z report - LM200888 - National Biomedical Information Services
    - FY 2019 draft (track changes updates in progress); due 7/31 (BUT SUBMIT BY 7/26 before Jerry goes on leave starting 7/28, and draft before 7/15 to Jerry)
    - FY2018 report
        - Toxnet and disaster info research…might want to focus on notion of improving efficiencies by moving into NCBI and pubchem for toxnet; not say much abt disaster info rscs

NOTE -- ***Jerry on leave starting 7/28****

- Ellen Klutzman - Interest in NLM Policy detail
    - Patti thought a few items in her background good
    - Jerry thinks good
    - She said she has funding
    - Jerry also used as opportunity to tel Patti Dina needs more support and could pilot/demo the advantages to having more staff support

- ACTION: Jerry will mention to Patti and Dina will plan to schedule mtg w Ellen & Jerry & Rebecca to hear more abt her interests and then plan what is a good project match (incl leg tracking)

- NLM Copyright web page revisions
  - NLM Copyright Information page_revised-2019-06-27.docx

- June 26 MLA Hill Day De-brief with Mary Langman
  - Well aligned w Jody Nurik and OCPL communic strategy and audit
  - Rebecca & Dina will send Jody more info/details
  - Key takeaway that they want to keep materials fresh, not repeat, simplify (key/succinct) and streamline, more visual, creative ways to provide access to addtl info and other details on website via QR codes?)
    - Bipartisan support for NLM budget
    - Public access wasn't a big interest
    - Materials too text heavy
    - Want more abt data sci
    - Interest of legisl in net neutrality
    - Training initiatives from extramural
    - New capability brochures (CBs) aka "big bookmarks" for data sci, NLM Strategic Plan, research grants, NNLM/All of Us
  - Are members of congress receiving copies of medline plus? – jerry thinks yes but also in process of transition to online version as the publishing platform

- NLM Annual Report – is it required by legisl mandate or NIH policy? Can we leverage CJ work if we continue to do it at all?
  - Emailed Rachel Pollock

- Recap of meeting with Jeff Smith (AMIA)
  - NPrm responses
  - FHIR and Potential guide notice (Jeff mentioned engagement w CTSAs and Elaine Collier)
    - Identify meaningful things NIH can do to support use of FHIR in research was a rec during BMIC mtg by Elaine Collier…we should engage BMIC members in follow up. Jeff also said once guide notice issued, AMIA willing to help develop use cases and more info/materials. Dina agrees helpful to talk with them before RFI language finalized.
    - Dina sent Patti language as background for question from ICD review of guide notice draft re human subjects data
  - Dec Public Policy forum clinical decision support theme; registration is $350 and Dina wants to attend; call for proposals open now and due end July(?)
  - Have another mtg w Jeff in the fall

- AAU/APLU proposal
  - Jerry needs to send to Patti; Dina can tell Beth clarifying and interested in supporting and might be able to provide some funding

- AI Hearing (***added after sent agenda to Jerry…did not discuss 7/12 so maybe next week)

- NLM Congressional Justification
    - Draft outline in progress; due 6/26
    - WORK W CHIANTI TO SCHEDULE A TIME TO MEET W JERRY AND PATTI…ideally mid next week

- GDPR approved language from OGC

- Subcommittee on Open Science
    - Need to schedule meeting for all NIH staff involved
    - Sub-Groups 2 and 3 regroup
        - SOS-2: Tell about favorable view in SOS mtg re IDA and DMP
            - Follow up w email recap of SOS mtg -- Dina will draft email recap to go back to SOS-2
            - Jerry will email Laura to sched recurring monthly mtgs
        - SOS-3:
            - Jerry will email Brian to sched recurring monthly mtgs
            - NLM develop and provide more elab abt PMC as platform
            - OSTP plans & ways to communic APIs on science.gov?
        - SOS-4: Steve Sherry sent out the surveys to key staff on July 9
            - Jerry met w Andrew
                - Arrange for Katie Funk to attend and give some info
                - Andrew is going to meet w ppl re AI/ML subgroup and someone from OMB
                - Possib future mtg discussion of Evidence Act and invite Rebecca Williams from HHS to give the update and info abt guidance?
                - Dina emailed Hilary this morning; not sure abt the points of contact or official communic

- ILL statutory language
    - Rachel Pollock asked Neil (OB) to respond by today….

- NLM Policy Group

- NLM Associate Fellows
    - Stacy Brody – Open Science Comparison Report
        - REBECCA will send draft slides to JERRY
        - Get draft email info to Mike before mtg next Mon w Jerry, Mike, and Patti
    - Paije Wilson – Poster presentation at July MCBK meeting
        - REBECCA will send to Jerry & Patti as FYI

NLM Service/Product (Offering) Details	
NLM Service/Product (Offering)	DERMaL (Dermal Exposure Risk Management and Logic) website
Description	The DERMaL (Dermal Exposure Risk Management and Logic) for Emergency Preparedness and Response Toolkit was developed by NIOSH/CDC and has been hosted by NLM's CHEMM since 2015 as a valuable resource for first responders and others. The current web site is https://dermal.nlm.nih.gov/ .
Document(s) Supporting Justification	This is a NIOSH publication about DERMaL.docx
Justification	Other: It will be incorporated into CHEMM rather than as a separate web site. This plan has been shared with the key contact at NIOSH (Dr. Naomi Hudson) and there are no concerns from the NIOSH side. NIOSH (Dr. Hudson) is involved in ongoing interactions about CHEMM, e.g. project team plans and updates.

NLM Service/Product (Offering) Details	
NLM Service/Product (Offering)	Haz-Map health-related database designed for health and safety professionals and for consumers
Description	Haz-Map® is an occupational health database designed for health and safety professionals and for consumers seeking information about the adverse effects of workplace exposures to chemical and biological agents. The main links in Haz-Map are between chemicals and occupational diseases. These links have been established using current scientific evidence. Haz-Map has been part of NLM's TOXNET suite of resources for over 15 years. Haz-Map is used within the Federal Government (e.g., NIH OD Division of Occupational Health and Safety staff, OSHA, CPSC, DoD, etc.) and by others. This is the current website for https://hazmap.nlm.nih.gov/
Document(s) Supporting Justification	Some publications about Haz.docx About for Haz-Map.docx 2017 HazMap 2017 Webinar from NLM.docx
Justification	No longer aligned with NLM priorities or mission needs Other: License ends in July 2019 and current plan is not to renew it. However, please note that Haz-Map is used within the Federal

	Government (e.g., NIH OD Division of Occupational Health and Safety staff, OSHA, CPSC, DoD, etc.) and by others. NIH's Division of Occupational Health and Safety lists it as Federal resource https://www.ors.od.nih.gov/sr/dohs/safety/workplace/Pages/Federal-Resources.aspx
Retirement Date	07/31/2019
Organization	LO
Key Staff Involved	Pertti Hakkinen Jeanne Goshorn Hua Chang David Gillikin

Internal Communication Plan	
Staff to be Informed	Colette Hochstein Pertti Hakkinen Stacey Arnesen Jeanne Goshorn Wei Ma David Gillikin Amanda Wilson
Communicated Message	NLM's license for Haz-Map ended-in in July 2019.
Date the Message will be Sent	08/01/2019
Communication Channel(s)	Emails Information delivered at staff meetings Other:

	GovD toxicology-related bulletin.
Retained Content	Other: We can let interested NLM people (and people contacting NLM) know that the Haz-Map developer (Dr. Jay Brown) offers Haz-Map content on this web site: https://www.haz-map.com/
Additional Information	---

External Communication Plan	
External Stakeholders to be Informed	Federal Government users (e.g., NIH OD Division of Occupational Health and Safety staff, OSHA, CPSC, DoD, etc.) and others. Also, professional societies (e.g., American Industrial Hygiene Association, AIHA, and American College of Medical Toxicology, ACMT) and other organizations.
Communicated Message	Haz-Map will no longer be available from NLM. We can let interested NLM people know that the Haz-Map developer (Dr. Jay Brown) offers Haz-Map content on this web site: https://www.haz-map.com/
Date the Message will be Sent	08/01/2019
Communication Channel(s)	Emails Technical Bulletin Newsletter Social Media

	In person meeting or phone call
Communication Frequency	Monthly Quarterly
Retained Content	Other: We will check if NLM's licensing agreement with Dr. Jay Brown allows us to keep Haz-Map available for a brief time or longer. Also, if there is agreement within NLM, we could work within the Federal Government (e.g., NIH OD Division of Occupational Health and Safety, OSHA, CPSC, DoD, etc.) to possibly find another home for Haz-Map that NLM could then help publicize.

ATTENTION: The following Sunsetting Request requires your approval.

Please review the request below and select "APPROVE", "REJECT" or "RETURN". Selecting "RETURN" will return this request to its submitter for resubmission.

NLM Service/Product (Offering) Details	
NLM Service/Product (Offering)	TOXNET
Description	TOXNET® (TOXicology Data NETwork) is a group of databases covering chemicals and drugs, diseases and the environment, environmental health, occupational safety and health, poisoning, risk assessment and regulations, and toxicology. I
Document(s) Supporting Justification	TOXNET Internal Communications Plan.docx TOXNET usage past 12 months.docx Second revision June 11 NLM TOXNET transition page and System message.docx TOXNET Transition Page implementation v3 (1).docx
Justification	Other: NLM is consolidatiing information into a few sustainable platforms for improved user experience, discoverability and efficiency.
Retirement Date	12/01/2019

Organization	DSIS
Key Staff Involved	Evan Bolton Colette Hochstein Jeffrey Beck Pertti Hakkinen Evgueni Kireev Stacy Lathrop Kim Pruitt Jeanne Goshorn Hua Chang David Gillikin

Internal Communication Plan	
Staff to be Informed	Colette Hochstein Pertti Hakkinen Stacey Arnesen Jeanne Goshorn Wei Ma David Gillikin Terry Ahmed Amanda Wilson
Communicated Message	On December 1, 2019 the National Library of Medicine (NLM) TOXNET website will be discontinued. Most of its content will continue to be available through other NLM databases as well as external websites. TOXNET has served as an integrated system of toxicology and environmental health databases. The most frequently used of those databases are being incorporated into three of NLM's core resources: PubChem, a database of chemical information; PubMed a resource for biomedical literature; and Bookshelf, with free online access to books and documents in life science and healthcare. Several other databases in TOXNET were made available on TOXNET from other organizations, such as the U.S. Environmental Protection Agency, and will continue to be

	available from those sources. Some databases will be retired. For a complete list of TOXNET databases and how to access their content, see the TOXNET transition page.
Date the Message will be Sent	09/01/2019
Communication Channel(s)	Emails Digital signage Information delivered at staff meetings Other: GovD bulletins, Tech Bulletin
Retained Content	NLM Website
Additional Information	via PubChem, PubMed, Bookshelf, others

External Communication Plan	
External Stakeholders to be Informed	TOXNET users, TOXNET colleagues at EPA, NIEHS, NNLM, etc.
Communicated Message	On September 1, 2019 the National Library of Medicine (NLM) TOXNET website will be discontinued. Subject: RE: Toxnet, K-12 and SIS Twitter

They actually have pieces drafted. I think for K-12 we just need to edit the message they wrote and work with them on the channels they are going to use to communicate. The Twitter account is already done…except for closing it completely on the 31st.

Subject: ACTION: Provide Public Facing Website Status – NLM [Due 08/02/19]
Attachments: IDEA-Data-Call-2019-07-NLM.xlsx

All,

HHS is requesting data on NIH's public facing websites in response to the requirements of the *21st Century Integrated Digital Experience* (IDEA) Act, which was signed into law on Dec. 20, 2018

The attached spreadsheet includes your IC's websites which were submitted to HHS in prior data calls.

Please review it for accuracy and make corrections and additions as necessary. Please do not include social media accounts, mobile apps, email lists or other digital communications tools. Your response should only include websites maintained and managed by your IC.

Please provide a single, coordinated response for your IC by COB Friday, August 2, 2019 to nihitdatacall@mail.nih.gov.

Please include ALL your IC's public facing websites, including any Scientific Databases and Applications. There is a column in the spreadsheet to identify them so that these sites will not be reported beyond the HHS level.

If you have questions about any of the individual elements, please contact NIH IT Data Call at nihitdatacall@mail.nih.gov.

Thanks!

Website Type	Name of Website	URL	Status	Hosting Server	Hosting Type	Platform (if platform is not available in the dropdown, please specify the platform in the comments)	Language (if open source)	Date of Last Update	On-Board (has the owner of the site been informed about the Guidelines?)	GM Guidance (Conform with requirements of Guidelines)	Archive/Storage (Is the government approved Records Disposal Schedule adhered to and how long is the data kept?)	Content Checks (Is there a review process in place to check the content before it is published?)	Search (Is there a search engine on the website that allows users to easily search content relevant to public use)	UI/UX (Does the site through an industry standard interface guideline)	Site structure clarities (Is it easy to navigate the website with clear sitemap and are different key management and citizen's centric services)	Transactional/Efficient and Secure (Allows users to complete digital transactions, e.g. Submission of forms, Payment, Data Transmission, etc.)	Others (1. Is the transactional and usable on a personal mobile device) (2. Is there a page count specified for the website) (3. Is the website hosted in-house or outsourced to a vendor)	Scientific Database Application (Does the website's content fall under any scientific database application)	Notes (i.e. recommended by who)

Good morning, Carolyn,

Please find attached the spreadsheet provided by SIS before the division was sunset. It includes the offerings they were tracking for sunset and/or migration to another part of NLM. I hope you find this helpful.

Regards,
Grace M. Middleton

Subject: SIS Product List

Good morning,

The Steering Group has asked me to do a check to confirm we have a complete list of SIS products.Wei Is pulling me the list from the sunsetting database, but I wanted to check and see if you all had a separate list or lists that you were using, and if you would mind sharing it with me so I can check it against the list that LO is using.

To be clear, I am not asking that you create or compile a list, only share ones you're already using.

We will be reviewing the list in our meeting tomorrow morning and confirming that we have the key information and specific roles a Denna five for each of the projects. You will be sent the notes from that discussion as well as a link to the document so you have access to that information as well.

Please let me know if you have any questions. And thank you in advance for your help!

From: Lang, Lisa A (NIH/NLM) [E]
Sent: 23 Jul 2019 17:19:12 +0000
To: Paltoo, Dina (NIH/NLM) [E];Goodwin, Rebecca (NIH/NLM) [E];Sheehan, Jerry (NIH/NLM) [E]
Subject: Some background info for today's 2pm call -- data assets previously provided or identified by NIH for HHS Enterprise Data Inventory
Attachments: NIH Extract- 2016 HHS EDI file.xlsx, NIH Data Sharing Repositories from BMIC-nih_data_sharing_repositories.html.docx, m-13-13.pdf, M-19-23.pdf, Open Data Act Title 2.docx

Hello Jerry, Dina and Rebecca –

I haven't seen any agenda for today's meeting re questions/concerns we would have for OMB on title 2 – if you have anything, pls share. Jerry – do we want to meet 5 minutes early in your office to discuss NLM's point of view on this?

I understood that for the earlier version of this 'data asset' requirement, we had initially identified the data repositories on the BMIC list as the core set for inclusion in the HHS Enterprise Data Inventory (HHS EDI (2016)). The HHS EDI (2016) is a named subset of Healthdata.gov, which is updated continuously and routinely provided to Data.gov. I thought it would be helpful for us and OD to see what we have previously identified, and how it compared to the current NIH associated content in Healthdata.gov. Attached is the following

- NIH data sharing repositories list, from the BMIC site.
    - NOTE: any line highlighted in GREY represents an asset on this list that is NOT currently in either the most recent healthdata.gov pull or the 2016 HHS EDI file.
- Excel with two tabs: 2016 HHS EDI file – NIH Extract AND Healthdata.gov 7_19_19 file – NIH Extract.
    - NOTE: left-most column in yellow represent an asset that is included on the NIH data sharing repositories list, from the BMIC site.
    - NIH contributions to the 2016 HHS EDI – 104 items; NIH contributions to Healthdata.gov – 121 items

The rationale for inclusion in any of the 3 sets is NOT always clear, so any insights would be appreciated. As you will see, there are resources on the BMIC list that look as if they ought to have been included in the HHS EDI or healthdata.gov (eg, dbGaP); there are items in the EDI and healthdata that ought to be in the BMIC list (eg NDAR). The HHS EDI submissions for NLM and NIH were substantially greater than just the BMIC list.

I read the statute, which seems to be consistent with the earlier exec order, to be very broad, with broad authority to OMB to rein it in. Do you possibly have any description of the position we previously used to define what we included in the HHS EDI? This might be a good place to start today's meeting.

Thanks
Lisa

NIH Data Sharing Repositories

ICO	Repository Name	Repository Description	Data Submission Policy	Access to Data	Current NIH funding support
NLM	ClinicalTrials.gov	ClinicalTrials.gov is a registry and results database of publicly and privately supported clinical studies of human participants conducted around the world.	How to submit data to ClinicalTrials.gov	How to access ClinicalTrials.gov data	Yes
NLM	database of Genotypes and Phenotypes (dbGaP)	The database of Genotypes and Phenotypes (dbGaP) was developed to archive and distribute the data and results from studies that have investigated the interaction of genotype and phenotype in Humans.	How to submit data to dbGaP	How to access dbGaP data	No
NLM	dbSNP	dbSNP is a general public archive of all short sequence variation, not just single nucleotide substitutions that occur frequently enough in a population to be termed polymorphic, but also rare variants, including those with clinical assertions in ClinVar. dbSNP includes a broad collection of simple genetic variations such as single-base nucleotide substitutions, small-scale multi-base deletions or insertions, and microsatellite repeats.	How to submit data to dbSNP	How to access dbSNP data	Yes
NLM	dbVar	dbVar is a NCBI database of genomic structural variation.	How to submit data to dbVar	How to access dbVar data	Yes
NLM	GenBank	GenBank is the NIH genetic sequence database, an annotated collection of all publicly available	How to submit data to GenBank	How to access GenBank data	Yes

NIH Data Sharing Repositories

ICO	Repository Name	Repository Description	Data Submission Policy	Access to Data	Current NIH funding support
		DNA sequences. GenBank is designed to provide and encourage access within the scientific community to the most up to date and comprehensive DNA sequence information.			
NLM	Gene Expression Omnibus (GEO)	Gene Expression Omnibus is a public functional genomics data repository supporting MIAME-compliant submissions of array- and sequence-based data. Tools are provided to help users query and download experiments and curated gene expression profiles.	How to submit data to GEO	How to access GEO data	Yes
NLM	PubChem	PubChem provides information on the biological activities of small molecules. PubChem is organized as three linked databases (bioassay, compound, and substance data) within the NCBI's Entrez information retrieval system.	How to submit data to PubChem	How to access PubChem data	Yes
NLM	Sequence Read Archive (SRA)	The SRA is NIH's primary archive of high-throughput sequencing data and is part of the International Nucleotide Sequence Database Collaboration (INSDC) that includes at the NCBI Sequence Read Archive (SRA), the European Bioinformatics Institute (EBI), and the DNA Database of Japan (DDBJ). Data submitted to any of the three organizations are shared among them.	How to submit data to SRA	How to access SRA data	Yes

NIH Data Sharing Repositories

ICO	Repository Name	Repository Description	Data Submission Policy	Access to Data	Current NIH funding support
NINDS	Federal Interagency Traumatic Brain Injury Research (FITBIR) Informatics System	The Federal Interagency Traumatic Brain Injury Research (FITBIR) informatics system was developed to share data across the entire TBI research field and to facilitate collaboration between laboratories, as well as interconnectivity with other informatics platforms. Sharing data, methodologies, and associated tools, rather than summaries or interpretations of this information, can accelerate research progress by allowing re-analysis of data, as well as re-aggregation, integration, and rigorous comparison with other data, tools, and methods. This community-wide sharing requires common data definitions and standards, as well as comprehensive and coherent informatics approaches.	How to submit data to FITBIR	How to access FITBIR data	Yes
NINDS	NeuroMorpho.org	NeuroMorpho.Org is a centrally curated inventory of digitally reconstructed neurons associated with peer-reviewed publications. It contains contributions from over 400 laboratories worldwide and is continuously updated as new morphological reconstructions are collected, published, and shared. To date, NeuroMorpho.Org is the largest collection of publicly accessible 3D neuronal reconstructions and associated metadata.	How to submit data to NeuroMorpho	How to access NeuroMorpho data	Yes

NIH Data Sharing Repositories

ICO	Repository Name	Repository Description	Data Submission Policy	Access to Data	Current NIH funding support
		The goal of NeuroMorpho.Org is to provide dense coverage of available reconstruction data for the neuroscience community. Data sharing through NeuroMorpho.Org enables the full and continuing research potential of existing digital reconstruction data.			
NINDS	Parkinson's Disease Biomarkers Program Data Management Resource (PDBP DMR)	The NINDS Parkinson's Disease (PD) Biomarkers Program Data Management Resource enables web-based data entry for clinical studies supporting PD biomarker development, as well as broad data sharing (imaging, clinical, genetic, and biospecimen analysis) across the entire PD research community. The PDBP DMR coordinates information and access to PD biospecimens distributed through the NINDS Human Genetics, DNA, iPSC , Cell Line and Biospecimen Repository and the Harvard Neurodiscovery Initiative.	How to submit data to PDBP DMR	How to access PDBP DMR data	
NINDS	The NINDS Human Cell and Data Repository (NHCDR)	Cell sources currently include fibroblasts and/or induced pluripotent stem cells for Alzheimer's Disease, Amyotrophic Lateral Sclerosis (ALS), Ataxia-telangiectasia, Frontotemporal Lobar Degeneration (FTD), Huntington's Disease,	How to submit data to NHCDR	How to access NHCDR data	

NIH Data Sharing Repositories

ICO	Repository Name	Repository Description	Data Submission Policy	Access to Data	Current NIH funding support
		Parkinson's Disease, and healthy controls. Cell sources, including isogenic cell lines for current and new diseases covered by the NINDS will be added over the next several years.			
NIMH	NIMH Data Archive	The National Institute of Mental Health Data Archive (NDA) makes available human subjects data collected from hundreds of research projects across many scientific domains. The NDA provides infrastructure for sharing research data, tools, methods, and analyses enabling collaborative science and discovery. De-identified human subjects data, harmonized to a common standard, are available to qualified researchers. Summary data is available to all.	How to submit data to the NIMH Data Archive	How to access NIMH Data Archive data	Yes
NIMH	NIMH Repository and Genomics Resources (NRGR)	The NIMH Repository and Genomics Resource (NRGR) is the largest biorepository supporting genomics in psychiatry, providing access to biomaterials (DNA, plasma, RNA, lymphoblastoid cell lines, induced pluripotent stem cells, etc.) and phenotypic data collected from nearly 200,000 well-characterized, high-quality control and patient samples from a wide-range of mental illnesses across ancestrally diverse populations. The NRGR also provides	How to submit data to NRGR	How to access NRGR data	Yes

NIH Data Sharing Repositories

ICO	Repository Name	Repository Description	Data Submission Policy	Access to Data	Current NIH funding support
		access to some genomic data sets, including some which do not have biosamples available in the repository, such as data sets generated by the Psychiatric Genomics Consortium, the CommonMind Consortium, and the PsychENCODE consoritum.			
NIMH	OpenfMRI	The OpenfMRI database is a curated public repository of human and non-human brain imaging data collected using MRI technique (potentially with additional PET, EEG and MEG data). No registration or license agreement is required to obtain the data, which is distributed, by default, using a Public Domain license. This is possible because data are anonymized before distribution to protect the confidentiality of participants.	How to submit data to OpenfMRI	How to access OpenfMRI data	Yes
NIH (NIA, NICHD, NIDA)	Inter-university Consortium for Political and Social Research (ICPSR)	ICPSR provides leadership and training in data access, curation, and methods of analysis for the social science research community. ICPSR maintains a data archive of more than 250,000 files of research in the social and behavioral sciences. ICPSR collaborates with a number of funders, including U.S. statistical agencies and foundations, to create thematic data collections	How to submit data to ICPSR	How to access ICPSR data	Yes

NIH Data Sharing Repositories

ICO	Repository Name	Repository Description	Data Submission Policy	Access to Data	Current NIH funding support
		and data stewardship and research projects. NICHD (DSDR), NIA (NACDA), and NIDA (NAHDAP) currently support specialty archives that use the ICPSR infrastructure.			
NIH	Biological General Repository for Interaction Datasets (BioGRID)	BioGRID is a curated biological database of protein-protein interactions, genetic interactions, chemical interactions, and post-translational modifications from major model organism species. All interaction data are freely provided through our search index and available via download in a wide variety of standardized formats.	How to submit data to BioGRID	How to access BioGRID data	Yes
NIGMS (NCI, NSF, DOE-BER)	Protein Data Bank (PDB)	The mission of the RCSB Protein Data Bank (PDB) is to Sustain a unique data resource of three-dimensional biomolecular structure information.	How to submit data to PDB	How to access PDB data	Yes
NIGMS	Cell Image Library	The Cell Image Library, accepts image data sets that are too large for publishers to store, and provides access to the biomedical community. There are 10,000 datasets in 20TB of uploaded data as of mid-2018. The library inherits data from the Cell Centered Database at UCSD. Since its launch in 2010, the site has had 721,00 visitors and was cited by 175 research publications.	How to submit data to Cell Image Library	How to access Cell Image Library data	Yes

NIH Data Sharing Repositories

ICO	Repository Name	Repository Description	Data Submission Policy	Access to Data	Current NIH funding support
NIGMS	Database of Interacting Proteins (DIP)	The DIP database, a founding member of the International Molecular Exchange Consortium (IMEx: https://www.imexconsortium.org), catalogs experimentally determined interactions between proteins. It combines information from a variety of sources to create a single, consistent set of protein-protein interactions. The data stored within the DIP database are manually curated and include, when available, detailed information on the interacting regions, mutations and post-translational modifications that affect each interaction.	How to submit data to DIP	How to access DIP data	Yes
NIGMS	PhysioNet	The PhysioNet Resource is intended to stimulate current research and new investigations in the study of complex biomedical and physiologic signals. It offers free web access to large collections of recorded physiologic signals (PhysioBank) and related open-source software (PhysioToolkit).	How to submit data to PhysioNet	How to access PhysioNet data	Yes
NIGMS	Transporter Classification Database (TCDB)	The Transporter Classification Database details a comprehensive classification system for membrane transport proteins known as the Transporter Classification (TC) system. The TC system is analogous to the Enzyme Commission (EC) system for classification of enzymes,	How to submit data to TCDB	How to access TCDB data	Yes

NIH Data Sharing Repositories

ICO	Repository Name	Repository Description	Data Submission Policy	Access to Data	Current NIH funding support
		except that it incorporates both functional and phylogenetic information. Descriptions, TC numbers, and examples of over 600 families of transport proteins are provided.			
NIEHS (Added 2019 to healthdata.gov-not in 2016 EDI)	Chemical Effects in Biological Systems (CEBS)	The CEBS database houses data of interest to environmental health scientists. CEBS is a public resource, and has received depositions of data from academic, industrial, and governmental laboratories. CEBS is designed to display data in the context of biology and study design, and permit data integration across studies for novel meta analysis.	How to submit data to CEBS	How to access CEBS data	Yes
NIDDK	NIDDK Central Repository	The NIDDK Central Repository stores biosamples, genetic and other data collected in designated NIDDK-funded clinical studies. The purpose of the NIDDK Central Repository is to expand the usefulness of these studies by allowing a wider research community to access data and materials beyond the end of the study.	How to submit data to NIDDK Central Repository	How to access NIDDK Central Repository data	Yes
NIDDK	NIDDK Information Network (DKnet)	The NIDDK Information Network serves the needs of basic and clinical investigators by providing seamless access to large pools of data relevant to the mission of NIDDK. The goal of DKnet is to develop a community-based network for integration across disciplines to	How to submit data to DKnet	How to access DKnet data	Yes

NIH Data Sharing Repositories

ICO	Repository Name	Repository Description	Data Submission Policy	Access to Data	Current NIH funding support
		include the larger DK universe of diseases, investigators, and potential users.			
NIDDK	Nuclear Receptor Signaling Atlas (NURSA)	The Nuclear Receptor Signaling Atlas (NURSA) is designed to foster the development of a comprehensive understanding of the structure, function, and role in disease of nuclear receptors (NRs) and coregulators. NURSA seeks to elucidate the roles played by NRs and coregulators in metabolism and the development of metabolic disorders (including type 2 diabetes, obesity, osteoporosis, and lipid dysregulation), as well as in cardiovascular disease, oncology, regenerative medicine and the effects of environmental agents on their actions.	How to submit data to NURSA	How to access NURSA data	Yes
NIDDK	The AMP-T2D Knowledge Portal	The AMP-T2D Knowledge Portal is the NIDDK-designated repository being developed as part of the Accelerating Medicines Partnership (AMP), a public-private partnership between the National Institutes of Health (NIH), the U.S. Food and Drug Administration (FDA), 10 biopharmaceutical companies, and multiple non-profit organizations that is managed through the Foundation for the NIH (FNIH) for collection of various types of molecular data	How to submit data to the AMP-T2D Knowledge Portal	How to access AMP-T2D Knowledge Portal data	Yes

NIH Data Sharing Repositories

ICO	Repository Name	Repository Description	Data Submission Policy	Access to Data	Current NIH funding support
		such as DNA sequences, functional and epigenomic information, and clinical data from studies on type 2 diabetes and its macro- and microvascular complications from human, cell-based and animal model biosamples, analytical results and research tools towards improving current efforts to develop new therapies for complex, heterogeneous diseases, including type 2 diabetes.			
NIDCD	AphasiaBank	AphasiaBank is a shared database of multimedia interactions for the study of communication in aphasia. Access to the data in AphasiaBank is password protected and restricted to members of the AphasiaBank consortium group.	How to submit data to AphasiaBank	How to access AphasiaBank data	Yes
NIDCD	FluencyBank	FluencyBank is a shared database for the study of the development of fluency in both normal and disordered populations. Participants include normally-developing monolingual and bilingual children, children with disfluencies (CWD), adults with disfluencies (AWSD), and second language learners.	How to submit data to FluencyBank	How to access FluencyBank data	Yes
NIDA	Mouse Phenome Database (MPD)	The Mouse Phenome Database (MPD) enables the integration of genomic and phenomic data by providing access to primary experimental data, well-documented data collection protocols	How to submit data to MPD	How to access MPD data	Yes

NIH Data Sharing Repositories

ICO	Repository Name	Repository Description	Data Submission Policy	Access to Data	Current NIH funding support
		and analysis tools. Data are contributed by investigators from around the world and represent a broad scope of behavioral, morphological and physiological disease-related characteristics in naive mice and those exposed to drugs, environmental agents or other treatments.			
NIDA	National Addiction & HIV Data Archive Program (NAHDAP)	NAHDAP acquires, preserves and disseminates data relevant to drug addiction and HIV research. By preserving and making available an easily accessible library of electronic data on drug addiction and HIV infection in the United States, NAHDAP offers scholars the opportunity to conduct secondary analysis on major issues of social and behavioral sciences and public policy.	How to submit data to NAHDAP	How to access NAHDAP data	Yes
NIDA	Neuroscience Information Framework (NIF)	Discovery Portal: An innovative semantically-enhanced search engine of the largest collection of neuroscience information that allows users to customize and refine their searches via NIF's terminologies. The NIF Registry: a core resource of NIF, is a catalog of electronic resources that have been selected by NIF curators, or contributed by the community, as valuable tools for researchers and students in the field of neuroscience.	How to submit data to NIF	How to access NIF data	Yes

NIH Data Sharing Repositories

ICO	Repository Name	Repository Description	Data Submission Policy	Access to Data	Current NIH funding support
		Date Sharing service: NIF maintains the largest searchable collection of neuroscience data, the largest catalog of biomedical resources, and the largest ontology for neuroscience on the web. NIF's already established and extensive infrastructure makes sharing your data easy. LinkOut Broker: NIF provides links between PubMed articles and your data when you register to the Data Federation through the LinkOut Broker. To enable this feature, your data must include PubMed IDs. Ontology Engineering: Expertise and experience in building and enhancing the main terminologies and ontologies.			
NIDA	NIDA Center for Genetics Studies	Blood and other biospecimens along with phenotypic data collected, archived and stored.	How to submit data to the NIDA Center for Genetics Studies	How to access NIDA Center for Genetics Studies data	Yes
NIDA	NIDA Data Share	The NIDA Data Share web site is an electronic environment that allows data from completed clinical trials to be distributed to investigators and the public in order to promote new research, encourage further analyses, and disseminate information to the community.	Data download only. Data is submitted through NIDA POC	How to access NIDA Data Share data	Yes
NICHD	Archive of Data	ADDEP provides access to data including a	How to submit	How to access	Yes

NICHD	Biospecimen Repository Access and Data Sharing (BRADS)	The Division of Intramural Population Health Research (DIPHR) of the Eunice Kennedy Shriver National Institute of Child Health and Human Development (NICHD) maintains an extensive repository of datasets from completed studies, including biospecimens and ancillary data.	Not applicable	How to access BRADS data	Yes
NICHD	Child Language Data Exchange System (CHILDES)	CHILDES is a system for sharing and analyzing conversational interactions.	How to submit data to CHILDES	How to access CHILDES data	Yes
NICHD	Data and Specimen Hub (DASH)	NICHD DASH is a centralized resource for researchers to store and access de-identified data from NICHD funded research studies for the purposes of secondary research use. It serves as a mechanism for NICHD-funded extramural and intramural investigators to share research data from studies in accordance with the NIH Data Sharing Policy and the NIH Genomic Data Sharing Policy.	How to submit data to DASH	How to access DASH data	Yes

NIH Data Sharing Repositories

ICO	Repository Name	Repository Description	Data Submission Policy	Access to Data	Current NIH funding support
NICHD	Data Sharing for Demographic Research (DSDR)	DSDR is a data sharing project providing curation and archiving services for the demographic and population sciences community. It focuses on data collected through funding from the NICHD Population Dynamics Branch (PDB), but also provides these services for other data sets that fall within the scientific mission of PDB.	How to submit data to DSDR	How to access DSDR data	Yes
NICHD	National Children's Study (NCS) Archive	The NCS Archive, a data and sample repository for the National Children's Study, provides access to data and samples collected from over 5,600 U.S. birth families to study environmental influences on child health and development. Data and biological and environmental samples are freely available, with an approved request, for scientific research.	How to submit data to NCS	How to access NCS data	Yes
NICHD	PhonBank	PhonBank is an open database for the study of early phonological development using the Phon program.	How to submit data to PhonBank	How to access PhonBank data	Yes
NICHD	Xenbase	Xenbase is a Xenopus laevis and Xenopus tropicalis biology and genomics resource.	How to submit data to Xenbase	How to access Xenbase data	Yes
NIBIB (NIMH, NIDA)	NeuroImaging Tools and Resources	The NeuroImaging Tools and Resources Collaboratory (NITRC) provides free access to data and enables pay-per-use cloud-based access	How to submit data to NITRC	How to access NITRC data	Yes

NIH Data Sharing Repositories

ICO	Repository Name	Repository Description	Data Submission Policy	Access to Data	Current NIH funding support
	Collaboratory (NITRC)	to unlimited computing power, enabling worldwide scientific collaboration with minimal startup and cost. With NITRC and its components—the Resources Registry (NITRC-R), Image Repository (NITRC-IR), and Computational Environment (NITRC-CE)—a researcher can obtain pilot or proof-of-concept data to validate a hypothesis for a few dollars.			
NIBIB	LONI Database	The LONI Image Data Archive (IDA) is a user-friendly environment for archiving, searching, sharing, tracking and disseminating neuroimaging and related clinical data. The IDA is utilized for dozens of neuroimaging research projects across North America and Europe and accommodates MRI, PET, MRA, DTI and other imaging modalities.	How to submit data to LONI [PDF]	How to access LONI data [PDF]	Yes
NIBIB (MIMIC II in both healthdata and HHS EDI)	Medical Information Mart for Intensive Care-III (MIMIC-III)	MIMIC-III is a large, freely-available database comprising deidentified health-related data associated with over forty thousand patients who stayed in critical care units of the Beth Israel Deaconess Medical Center between 2001 and 2012. The database includes information such as demographics, vital sign measurements made at the bedside (~1 data point per hour), laboratory test results, procedures, medications, caregiver	How to submit data of MIMIC-III	How to access MIMIC-III data	Yes

NIH Data Sharing Repositories

ICO	Repository Name	Repository Description	Data Submission Policy	Access to Data	Current NIH funding support
		notes, imaging reports, and mortality (both in and out of hospital). MIMIC-III supports a diverse range of analytic studies spanning epidemiology, clinical decision-rule improvement, and electronic tool development.			
NIAID	Eukaryotic Pathogen Database Resources (EuPathDB)	EuPathDB Bioinformatics Resource Center for Biodefense and Emerging/Re-emerging Infectious Diseases is a portal for accessing genomic-scale datasets associated with the eukaryotic pathogens.	How to submit data to EuPathDB	How to access EuPathDB data	Yes
NIAID	Immune Epitope Database and Analysis Resource (IEDB)	This repository contains antibody/B cell and T cell epitope information and epitope prediction and analysis tools for use by the research community worldwide. Immune epitopes are defined as molecular structures recognized by specific antigen receptors of the immune system, namely antibodies, B cell receptors, and T cell receptors. Immune epitopes from infectious diseases, excluding HIV, and immune-mediated diseases and the accompanying biological information are included.	How to submit data to IEDB	How to access IEDB data	Yes
NIAID	Influenza Research Database (IRD)	The Influenza Research Database (IRD) serves as a public repository and analysis platform for flu sequence, experiment, surveillance and related data.	How to submit data to IRD	How to access IRD data	Yes

NIH Data Sharing Repositories

ICO	Repository Name	Repository Description	Data Submission Policy	Access to Data	Current NIH funding support
NIAID	ITN TrialShare	TrialShare is a transformative approach to data-sharing that enables clinical trial transparency. TrialShare provides clinical trial investigators the unprecedented ability to access de-identified study data, review published analysis methods, and perform real-time, interactive graphical analyses in collaboration with other researchers. Immune Tolerance Network (ITN) TrialShare shares information about ITN's clinical studies and specimen bio-repository. Data and analysis code underlying ITN-published manuscripts are publicly available with the goal of promoting transparency, reproducibility, and scientific collaboration.	How to submit data to TrialShare	How to access TrialShare data	Yes
NIAID	Pathosystems Resource Integration Center (PATRIC)	PATRIC, the Bacterial Bioinformatics Resource Center, supports research on bacterial infectious diseases by serving as a repository of genomic and other data with associated metadata for over 100,000 bacterial genomes. PATRIC provides an integrated suite of computational services and visualizations for users to analyze and compare their own data in a private workspace with the public data in PATRIC.	How to submit data to PATRIC	How to access PATRIC data	Yes
NIAID	The Immunology Database and	ImmPort is a public data sharing repository funded by DAIT. The data sources are primarily	How to submit data to ImmPort	How to access ImmPort data	Yes

ICO	Repository Name	Repository Description	Data Submission Policy	Access to Data	Current NIH funding support
		Aging supported Alezheimer's disease research programs and consortia . Data is available to qualified investigators as open or controlled access depending on the data type and data source.			
NIA	National Archive of Computerized Data on Aging (NACDA)	NACDA acquires and preserves data relevant to gerontological research, processing as needed to promote effective research use, disseminates them to researchers, and facilitates their use. By preserving and making available the largest library of electronic data on aging in the United States, NACDA offers opportunities for secondary analysis on major issues of scientific and policy relevance.	How to submit data to NACDA	How to access NACDA data	Yes
NIA	The National Institute on Aging Genetics of Alzheimer's Disease Data Storage Site (NIAGADS)	The National Institute on Aging Genetics of Alzheimer's Disease Data Storage Site (NIAGADS) is a national genetics data repository facilitating access to genotypic and phenotypic data for Alzheimer's disease (AD). Data include GWAS, whole genome (WGS) and whole exome (WES), expression, RNA Seq, and CHIP Seq analyses. Data for the Alzheimer's Disease Sequencing Project (ADSP) are available through a partnership with dbGaP (ADSP at dbGaP). Results are integrated and	How to submit data to NIAGADS	How to access NIAGADS data	Yes

NIH Data Sharing Repositories

		annotated in the searchable genomics database that also provides access to a variety of software packages, analytic pipelines, online resources, and web-based tools to facilitate analysis and interpretation of large-scale genomic data. Data are available as defined by the NIA Genomics of Alzheimer's Disease Sharing Policy and the NIH Genomics Data Sharing Policy. Investigators return secondary analysis data to the database in keeping with the NIAGADS Data Distribution Agreement.			
NHLBI	Biologic Specimen and Data Repository Information Coordinating Center (BioLINCC)	The goal of BioLINCC is to facilitate and coordinate the existing activities of the NHLBI Biorepository and the Data Repository and to expand their scope and usability to the scientific community through a single web-based user interface.	How to submit data to BioLINCC	How to access BioLINCC data	Yes
NHLBI	National Sleep Research Resource	The NSRR web platform enables sharing of physiological signals and clinical data elements from well-characterized, de-identified, research cohorts and clinical trials. Data queries across studies (data pooling) are possible for demographics and data variables with shared common data elements.	How to submit data to NSRR	How to access NSRR data	Yes

NIH Data Sharing Repositories

ICO	Repository Name	Repository Description	Data Submission Policy	Access to Data	Current NIH funding support
NHLBI	Rat Genome Database (RGD)	The Rat Genome Database (RGD) was established in 1999 and is the premier site for genetic, genomic, phenotype, and disease data generated from rat research. In addition, it provides easy access to corresponding data for human and mouse, as well as multiple other models such as chinchilla and 13-lined ground squirrel, facilitating cross-species comparisons. RGD's comprehensive data and innovative software tools make it a valuable resource for researchers worldwide.	How to submit data to RGD	How to access RGD data	Yes
NHLBI	The Cardiovascular Research Grid (CVRG)	The CardioVascular Research Grid (CVRG) project is creating an infrastructure for secure seamless access to study data and analysis tools. CVRG tools are developed using the Software as a Service model, allowing users to access tools through their browser, thus eliminating the need to install and maintain complex software. The CVRG project is supported by the National Heart Lung & Blood Institute. The project is based at the Institute for Computational Medicine at the Johns Hopkins University, Department of Biomedical Informatics at Vanderbilt University Medical Center, The College of Computing and Informatics at UNC	No new data submission, but one could submit new tools.	How to access CVRG data	No

		platform for querying and accessing vision research data and tools for data processing and analysis. It is the central location for NEI generated clinical and basic research data available to the public.		data	
NCI (NHGRI, NIGMS)	PeptideAtlas	PeptideAtlas is a multi-organism, publicly accessible compendium of peptides identified in a large set of tandem mass spectrometry proteomics experiments. Mass spectrometer output files are collected for human, mouse, yeast, and several other organisms, and searched using the latest search engines and protein sequences.	How to submit data to PeptideAtlas	How to access Peptide Atlas data	No
NCI	Cancer Nanotechnology Laboratory (caNanoLab)	caNanoLab is a data sharing portal designed to facilitate information sharing in the biomedical nanotechnology research community to expedite and validate the use of nanotechnology in biomedicine. caNanoLab provides support for the annotation of nanomaterials with characterizations resulting from physico-chemical, in vitro, and in vivo assays and the sharing of these characterizations and associated nanotechnology protocols in a secure fashion.	How to submit data to caNanoLab	How to access caNanoLab data	Yes
NCI	The Cancer Imaging Archive	TCIA is a service which de-identifies and hosts a large archive of medical images of cancer	How to submit data to TCIA	How to access TCIA data	Yes

NIH Data Sharing Repositories

ICO	Repository Name	Repository Description	Data Submission Policy	Access to Data	Current NIH funding support
	(TCIA)	accessible for public download. The data are organized as "Collections", typically patients related by a common disease (e.g. lung cancer), image modality (MRI, CT, etc) or research focus. DICOM is the primary file format used by TCIA for image storage. Supporting data related to the images such as patient outcomes, treatment details, genomics, pathology, and expert analyses are also provided when available.			
NCI	The Network Data Exchange (NDEx)	NDEx is an online commons where scientists can upload, share, and publicly distribute biological networks and pathway models. The NDEx Project maintains a web-accessible public server, a documentation website, provides seamless connectivity to Cytoscape as well as programmatic access using a variety of languages including Python and Java. NDEx users can easily create accounts or sign in using their Google credentials thanks to the supported open authentication (OAUTH2) method and mint DOIs for their networks to use in publications or include in other resources for long term access.	How to submit data to NDEx	How to access NDEx data	Yes

M-13-13

MEMORANDUM FOR THE HEADS OF EXECUTIVE DEPARTMENTS AND AGENCIES

FROM: Sylvia M. Burwell
Director

Steven VanRoekel
Federal Chief Information Officer

Todd Park
U.S. Chief Technology Officer

Dominic J. Mancini
Acting Administrator, Office of Information and Regulatory Affairs

SUBJECT: Open Data Policy—Managing Information as an Asset

Information is a valuable national resource and a strategic asset to the Federal Government, its partners, and the public. In order to ensure that the Federal Government is taking full advantage of its information resources, executive departments and agencies (hereafter referred to as "agencies") must manage information as an asset throughout its life cycle to promote openness and interoperability, and properly safeguard systems and information. Managing government information as an asset will increase operational efficiencies, reduce costs, improve services, support mission needs, safeguard personal information, and increase public access to valuable government information.

Making information resources accessible, discoverable, and usable by the public can help fuel entrepreneurship, innovation, and scientific discovery – all of which improve Americans' lives and contribute significantly to job creation. For example, decades ago, the Federal Government made both weather data and the Global Positioning System (GPS) freely available to anyone. Since then, American entrepreneurs and innovators have used these resources to create navigation systems, weather newscasts and warning systems, location-based applications, precision farming tools, and much more.

Pursuant to Executive Order of May 9, 2013, *Making Open and Machine Readable the New Default for Government Information*, this Memorandum establishes a framework to help institutionalize the principles of effective information management at each stage of the information's life cycle to promote interoperability and openness. Whether or not particular information can be made public, agencies can apply this framework to all information resources to promote efficiency and produce value.

Specifically, this Memorandum requires agencies to collect or create information in a way that supports downstream information processing and dissemination activities. This includes using machine-readable and open formats, data standards, and common core and extensible metadata for all new

information creation and collection efforts. It also includes agencies ensuring information stewardship through the use of open licenses and review of information for privacy, confidentiality, security, or other restrictions to release. Additionally, it involves agencies building or modernizing information systems in a way that maximizes interoperability and information accessibility, maintains internal and external data asset inventories, enhances information safeguards, and clarifies information management responsibilities.

The Federal Government has already made significant progress in improving its management of information resources to increase interoperability and openness. The President's Memorandum on *Transparency and Open Government*[1] instructed agencies to take specific actions to implement the principles of transparency, participation, and collaboration, and the Office of Management and Budget's (OMB) *Open Government Directive*[2] required agencies to expand access to information by making it available online in open formats. OMB has also developed policies to help agencies incorporate sound information practices, including OMB Circular A-130[3] and OMB Memorandum M-06-02.[4] In addition, the Federal Government launched Data.gov, an online platform designed to increase access to Federal datasets. The publication of thousands of data assets through Data.gov has enabled the development of numerous products and services that benefit the public.

To help build on these efforts, the President issued a Memorandum on May 23, 2012 entitled *Building a 21st Century Digital Government*[5] that charged the Federal Chief Information Officer (CIO) with developing and implementing a comprehensive government-wide strategy to deliver better digital services to the American people. The resulting *Digital Government Strategy*[6] outlined an information-centric approach to transform how the Federal Government builds and delivers digital services, and required OMB to develop guidance to increase the interoperability and openness of government information.

This Memorandum is designed to be consistent with existing requirements in the Paperwork Reduction Act,[7] the E-Government Act of 2002,[8] the Privacy Act of 1974,[9] the Federal Information Security Management Act of 2002 (FISMA),[10] the Confidential Information Protection and Statistical Efficiency Act of 2002 (CIPSEA),[11] the Freedom of Information Act,[12] the Information Quality Act,[13] the

Attachment

This attachment provides definitions and implementation guidance for M-13-13, *Open Data Policy—Managing Information as an Asset*.

I. Definitions:

Data: For the purposes of this Memorandum, the term "data" refers to all structured information, unless otherwise noted.[15]

Dataset: For the purposes of this Memorandum, the term "dataset" refers to a collection of data presented in tabular or non-tabular form.

Fair Information Practice Principles: The term "Fair Information Practice Principles" refers to the eight widely accepted principles for identifying and mitigating privacy impacts in information systems, programs and processes, delineated in the National Strategy for Trusted Identities in Cyberspace.[16]

Government information: As defined in OMB Circular A-130, "government information" means information created, collected, processed, disseminated, or disposed of, by or for the Federal Government.

Information: As defined in OMB Circular A-130, the term "information" means any communication or representation of knowledge such as facts, data, or opinions in any medium or form, including textual, numerical, graphic, cartographic, narrative, or audiovisual forms.

Information life cycle: As defined in OMB Circular A-130, the term "information life cycle" means the stages through which information passes, typically characterized as creation or collection, processing, dissemination, use, storage, and disposition.

Personally identifiable information: As defined in OMB Memorandum M-10-23,[17] "personally identifiable information" (PII) refers to information that can be used to distinguish or trace an individual's identity, either alone or when combined with other personal or identifying information that is linked or linkable to a specific individual. The definition of PII is not anchored to any single category of information or technology. Rather, it requires a case-by-case assessment of the specific risk that an individual can be identified. In performing this assessment, it is important for an agency to recognize that non-PII can become PII whenever additional information is made publicly available (in any medium and from any source) that, when combined with other available information, could be used to identify an individual.

Mosaic effect: The mosaic effect occurs when the information in an individual dataset, in isolation, may not pose a risk of identifying an individual (or threatening some other important interest such as security), but when combined with other available information, could pose such risk. Before disclosing potential PII or other potentially sensitive information, agencies must consider other publicly available data – in

---

[15] *Structured* information is to be contrasted with *unstructured* information (commonly referred to as "content") such as press releases and fact sheets. As described in the *Digital Government Strategy*, content may be converted to a structured format and treated as data. For example, a web-based fact sheet may be broken into the following component data pieces: the title, body text, images, and related links.

[16] The White House, *National Strategy for Trusted Identities in Cyberspace* (April 2011), *available at* http://www.whitehouse.gov/sites/default/files/rss_viewer/NSTICstrategy_041511.pdf

[17] OMB Memorandum M-10-23, *Guidance for Agency Use of Third-Party Websites and Applications* (June 25, 2010), *available at* http://www.whitehouse.gov/sites/default/files/omb/assets/memoranda_2010/m10-23.pdf

any medium and from any source – to determine whether some combination of existing data and the data intended to be publicly released could allow for the identification of an individual or pose another security concern.

Open data: For the purposes of this Memorandum, the term "open data" refers to publicly available data structured in a way that enables the data to be fully discoverable and usable by end users. In general, open data will be consistent with the following principles:

- *Public.* Consistent with OMB's *Open Government Directive*, agencies must adopt a presumption in favor of openness to the extent permitted by law and subject to privacy, confidentiality, security, or other valid restrictions.

- *Accessible.* Open data are made available in convenient, modifiable, and open formats that can be retrieved, downloaded, indexed, and searched. Formats should be machine-readable (i.e., data are reasonably structured to allow automated processing). Open data structures do not discriminate against any person or group of persons and should be made available to the widest range of users for the widest range of purposes, often by providing the data in multiple formats for consumption. To the extent permitted by law, these formats should be non-proprietary, publicly available, and no restrictions should be placed upon their use.

- *Described.* Open data are described fully so that consumers of the data have sufficient information to understand their strengths, weaknesses, analytical limitations, security requirements, as well as how to process them. This involves the use of robust, granular metadata (i.e., fields or elements that describe data), thorough documentation of data elements, data dictionaries, and, if applicable, additional descriptions of the purpose of the collection, the population of interest, the characteristics of the sample, and the method of data collection.

- *Reusable.* Open data are made available under an open license that places no restrictions on their use.

- *Complete.* Open data are published in primary forms (i.e., as collected at the source), with the finest possible level of granularity that is practicable and permitted by law and other requirements. Derived or aggregate open data should also be published but must reference the primary data.

- *Timely.* Open data are made available as quickly as necessary to preserve the value of the data. Frequency of release should account for key audiences and downstream needs.

- *Managed Post-Release.* A point of contact must be designated to assist with data use and to respond to complaints about adherence to these open data requirements.

Project Open Data: "Project Open Data," a new OMB and OSTP resource, is an online repository of tools, best practices, and schema to help agencies adopt the framework presented in this guidance. Project Open Data can be accessed at http://project-open-data.github.io.[18] Project Open Data will evolve over time as a community resource to facilitate adoption of open data practices. The repository includes definitions, code, checklists, case studies, and more, and enables collaboration across the Federal Government, in partnership with public developers, as applicable. Agencies can visit Project Open Data for a more comprehensive glossary of terms related to open data.

---

[18] Links to the best practices developed in Project Open Data referenced in this memorandum can be found through the directory on this main page.

II. Scope:

The requirements in part III, sections 1 and 2 of this Memorandum apply to all new information collection, creation, and system development efforts as well as major modernization projects that update or re-design existing information systems. National Security Systems, as defined in 40 U.S. C. 11103, are exempt from the requirements of this policy. The requirements in part III, section 3 apply to management of all datasets used in an agency's information systems. Agencies are also encouraged to improve the discoverability and usability of existing datasets by making them "open" using the methods outlined in this Memorandum, prioritizing those that have already been released to the public or otherwise deemed high-value or high-demand through engagement with customers (see part III, section 3.c). Agencies should exercise judgment before publicly distributing data residing in an existing system by weighing the value of openness against the cost of making those data public.

III. Policy Requirements:

Agencies management of information resources must begin at the earliest stages of the planning process, well before information is collected or created. Early strategic planning will allow the Federal Government to design systems and develop processes that unlock the full value of the information, and provide a foundation from which agencies can continue to manage information throughout its life cycle.

Agencies shall take the following actions to improve the management of information resources throughout the information's life cycle and reinforce the government's presumption in favor of openness:

1. **Collect or create information in a way that supports downstream information processing and dissemination activities** – Consistent with OMB Circular A-130, agencies must consider, at each stage of the information life cycle, the effects of decisions and actions on other stages of the life cycle. Accordingly, to the extent permitted by law, agencies must design new information collection and creation efforts so that the information collected or created supports downstream interoperability between information systems and dissemination of information to the public, as appropriate, without the need for costly retrofitting. This includes consideration and consultation of key target audiences for the information when determining format, frequency of update, and other information management decisions. Specifically, agencies must incorporate the following requirements into future information collection and creation efforts:

    a. **Use machine-readable and open formats**[19] – Agencies must use machine-readable and open formats for information as it is collected or created. While information should be collected electronically by default, machine-readable and open formats must be used in conjunction with both electronic and telephone or paper-based information collection efforts. Additionally, in consultation with the best practices found in Project Open Data and to the extent permitted by law, agencies should prioritize the use of open formats that are non-proprietary, publicly available, and that place no restrictions upon their use.

[19] The requirements of this subsection build upon existing requirements in OMB Statistical Policy Directives No. 1 and No. 2, *available at* http://www.whitehouse.gov/sites/default/files/omb/assets/omb/inforeg/directive1.pdf and http://www.whitehouse.gov/sites/default/files/omb/assets/omb/inforeg/directive2.pdf.

b. **Use data standards** – Consistent with existing policies relating to Federal agencies' use of standards[20] for information as it is collected or created, agencies must use standards in order to promote data interoperability and openness.

c. **Ensure information stewardship through the use of open licenses** – Agencies must apply open licenses, in consultation with the best practices found in Project Open Data, to information as it is collected or created so that if data are made public there are no restrictions on copying, publishing, distributing, transmitting, adapting, or otherwise using the information for non-commercial or for commercial purposes.[21] When information is acquired or accessed by an agency through performance of a contract, appropriate existing clauses[22] shall be utilized to meet these objectives while recognizing that contractors may have proprietary interests in such information, and that protection of such information may be necessary to encourage qualified contractors to participate in and apply innovative concepts to government programs.

d. **Use common core and extensible metadata** – Agencies must describe information using common core metadata, in consultation with the best practices found in Project Open Data, as it is collected and created. Metadata should also include information about origin, linked data, geographic location, time series continuations, data quality, and other relevant indices that reveal relationships between datasets and allow the public to determine the fitness of the data source. Agencies may expand upon the basic common metadata based on standards, specifications, or formats developed within different communities (e.g., financial, health, geospatial, law enforcement). Groups that develop and promulgate these metadata specifications must review them for compliance with the common core metadata standard, specifications, and formats.

2. **Build information systems to support interoperability and information accessibility** – Through their acquisition and technology management processes, agencies must build or modernize information systems in a way that maximizes interoperability and information accessibility, to the extent practicable and permitted by law. To this end, agencies should leverage existing Federal IT guidance, such as the *Common Approach to Federal Enterprise Architecture,*[23] when designing information systems. Agencies must exercise forethought when architecting, building, or substantially modifying an information system to facilitate public distribution, where appropriate. In addition, the agency's CIO must validate that the following minimum requirements have been incorporated into acquisition planning documents and technical design for all new information systems and those preparing for modernization, as appropriate:

   a. The system design must be scalable, flexible, and facilitate extraction of data in multiple formats and for a range of uses as internal and external needs change, including potential uses not accounted for in the original design. In general, this will involve the use of standards and specifications in the system design that promote industry best practices for information

---

[21] If a data user augments or alters original information that is attributed to the Federal Government, the user is responsible for making clear the source and nature of that augmentation.

[22] *See* Federal Acquisition Regulation (FAR) Subpart 27.4—Rights in Data and Copyrights, *available at* https://acquisition.gov/far/current/html/Subpart%2027_4.html

[23] Office of Management and Budget, Common Approach to Federal Enterprise Architecture, *available at* http://www.whitehouse.gov/sites/default/files/omb/assets/egov_docs/common_approach_to_federal_ea.pdf

sharing, and separation of data from the application layer to maximize data reuse opportunities and incorporation of future application or technology capabilities, in consultation with the best practices found in Project Open Data;

b. All data outputs associated with the system must meet the requirements described in part III, sections 1.a-e of this Memorandum and be accounted for in the data inventory described in part III section 3.a; and

c. Data schema and dictionaries have been documented and shared with internal partners and the public, as applicable.

3. **Strengthen data management and release practices** – To ensure that agency data assets are managed and maintained throughout their life cycle, agencies must adopt effective data asset portfolio management approaches. Within six (6) months of the date of this Memorandum, agencies and interagency groups must review and, where appropriate, revise existing policies and procedures to strengthen their data management and release practices to ensure consistency with the requirements in this Memorandum, and take the following actions:

   a. **Create and maintain an enterprise data inventory** – Agencies must update their inventory of agency information resources (as required by OMB Circular A-130)[24] to include an enterprise data inventory, if it does not already exist, that accounts for datasets used in the agency's information systems. The inventory will be built out over time, with the ultimate goal of including all agency datasets, to the extent practicable. The inventory will indicate, as appropriate, if the agency has determined that the individual datasets may be made publicly available (i.e., release is permitted by law, subject to all privacy, confidentiality, security, and other valid requirements) and whether they are currently available to the public. The Senior Agency Official for Records Management should be consulted on integration with the records management process. Agencies should use the Data Reference Model from the Federal Enterprise Architecture[25] to help create and maintain their inventory. Agencies must describe datasets within the inventory using the common core and extensible metadata (see part III, section 1.e).

   b. **Create and maintain a public data listing** – Any datasets in the agency's enterprise data inventory that can be made publicly available must be listed at www.[agency].gov/data in a human- and machine-readable format that enables automatic aggregation by Data.gov and other services (known as "harvestable files"), to the extent practicable. This should include datasets that can be made publicly available but have not yet been released. This public data listing should also include, to the extent permitted by law and existing terms and conditions, datasets that were produced through agency-funded grants, contracts, and cooperative agreements (excluding any data submitted primarily for the purpose of contract monitoring and administration), and, where feasible, be accompanied by standard citation information, preferably in the form of a persistent identifier. The public data listing will be built out over time, with the ultimate goal of including all agency datasets that can be made publicly available. See Project Open Data for best practices, tools, and schema to implement the public data listing and harvestable files.

---

[24] *See* OMB Circular A-130, section 8(b)(2)(a).

[25] Office of Management and Budget, Federal Enterprise Architecture (FEA) Reference Models, *available at* http://www.whitehouse.gov/omb/e-gov/fea

c. **Create a process to engage with customers to help facilitate and prioritize data release** – Agencies must create a process to engage with customers, through their www.[agency].gov/data pages and other necessary means, to solicit help in prioritizing the release of datasets and determining the most usable and appropriate formats for release.[26] Agencies should make data available in multiple formats according to their customer needs. For example, high-volume datasets of interest to developers should be released using bulk downloads as well as Application Programming Interfaces (APIs). In addition, customer engagement efforts should help agencies prioritize efforts to improve the discoverability and usability of datasets that have already been released to the public but are not yet fully "open" (e.g., they are only available in closed, inaccessible formats). See Project Open Data for best practices and tools that can be used to implement customer engagement efforts.

d. **Clarify roles and responsibilities for promoting efficient and effective data release practices** – Agencies must ensure that roles and responsibilities are clearly designated for the promotion of efficient and effective data release practices across the agency, and that proper authorities have been granted to execute on related responsibilities, including:

   i. Communicating the strategic value of open data to internal stakeholders and the public;
   ii. Ensuring that data released to the public are open (as defined in part I), as appropriate, and a point of contact is designated to assist open data use and to respond to complaints about adherence to open data requirements;
   iii. Engaging entrepreneurs and innovators in the private and nonprofit sectors to encourage and facilitate the use of agency data to build applications and services;
   iv. Working with agency components to scale best practices from bureaus and offices that excel in open data practices across the enterprise;
   v. Working with the agency's Senior Agency Official for Privacy (SAOP) or other relevant officials to ensure that privacy and confidentiality are fully protected; and
   vi. Working with the Chief Information Security Officer (CISO) and mission owners to assess overall organizational risk, based on the impact of releasing potentially sensitive data, and make a risk-based determination.

4. **Strengthen measures to ensure that privacy and confidentiality are fully protected and that data are properly secured** – Agencies must incorporate privacy analyses into each stage of the information's life cycle. In particular, agencies must review the information collected or created for valid restrictions to release to determine whether it can be made publicly available, consistent with the *Open Government Directive's* presumption in favor of openness, and to the extent permitted by law and subject to privacy, confidentiality pledge, security, trade secret, contractual, or other valid restrictions to release. If the agency determines that information should not be made publicly available on one of these grounds, the agency must document this determination in consultation with its Office of General Counsel or equivalent.

   As agencies consider whether or not information may be disclosed, they must also account for the "mosaic effect" of data aggregation. Agencies should note that the mosaic effect demands a risk-based

[26] OMB Statistical Policy Directives 3 and 4 describe the schedule and manner in which data produced by the principal statistical agencies will be released. Statistical Policy Directive No. 4: Release and Dissemination of Statistical Products Produced by Federal Statistical Agencies, *available at* http://www.whitehouse.gov/sites/default/files/omb/assets/omb/fedreg/2008/030708_directive-4.pdf; Statistical Policy Directive 3: Compilation, Release, and Evaluation of Principal Federal Economic Indicators, *available at* http://www.whitehouse.gov/sites/default/files/omb/assets/omb/inforeg/statpolicy/dir_3_fr_09251985.pdf

analysis, often utilizing statistical methods whose parameters can change over time, depending on the nature of the information, the availability of other information, and the technology in place that could facilitate the process of identification. Because of the complexity of this analysis and the scope of data involved, agencies may choose to take advantage of entities in the Executive Branch that may have relevant expertise, including the staff of Data.gov. Ultimately, it is the responsibility of each agency to perform the necessary analysis and comply with all applicable laws, regulations, and policies. In some cases, this assessment may affect the amount, type, form, and detail of data released by agencies.

As OMB has noted, "The individual's right to privacy must be protected in Federal Government information activities involving personal information."[27] As agencies consider security-related restrictions to release, they should focus on information confidentiality, integrity, and availability as part of the agency's overall risk management framework. They are required to incorporate the National Institute of Standards and Technology (NIST) Federal Information Processing Standard (FIPS) Publication 199 "Standards for Security Categorization of Federal Information and Information Systems," which includes guidance and definitions for confidentiality, integrity, and availability.[28] Agencies should also consult with the Controlled Unclassified Information (CUI) program to ensure compliance with CUI requirements,[29] the National Strategy for Information Sharing and Safeguarding,[30] and the best practices found in Project Open Data. In addition to complying with the Privacy Act of 1974, the E-Government Act of 2002, FISMA, and CIPSEA, agencies should implement information policies based upon Fair Information Practice Principles and NIST guidance on Security and Privacy Controls for Federal Information Systems and Organizations.[31] For example, agencies must:

a. Collect or create only that information necessary for the proper performance of agency functions and which has practical utility;[32]
b. Limit the collection or creation of information which identifies individuals to that which is legally authorized and necessary for the proper performance of agency functions;[33]
c. Limit the sharing of information that identifies individuals or contains proprietary information to that which is legally authorized, and impose appropriate conditions on use where a continuing obligation to ensure the confidentiality of the information exists;[34]
d. Ensure that information is protected commensurate with the risk and magnitude of the harm that would result from the loss, misuse, or unauthorized access to or modification of such information;[35] and
e. Take into account other publicly available information when determining whether particular information should be considered PII (as defined in part I of this Memorandum).

[34] *See* OMB Circular A-130, section 8(a)(9)(c).

[35] *See* OMB Circular A-130, section 8(a)(9)(a).

5. **Incorporate new interoperability and openness requirements into core agency processes –** Consistent with 44 U.S.C. 3506 (b)(2), agencies must develop and maintain an Information Resource Management (IRM) Strategic Plan. IRM Strategic Plans should align with the agency's Strategic Plan (as required by OMB Circular A-11),[36] support the attainment of agency priority goals as mandated by the Government Performance and Results Modernization Act of 2010,[37] provide a description of how IRM activities help accomplish agency missions, and ensure that IRM decisions are integrated with organizational planning, budget, procurement, financial management, human resources management, and program decisions. As part of the annual PortfolioStat process,[38] agencies must update their IRM Strategic Plans to describe how they are meeting new and existing information life cycle management requirements. Specifically, agencies must describe how they have institutionalized and operationalized the interoperability and openness requirements in this Memorandum into their core processes across all applicable agency programs and stakeholders.

IV. Implementation:

As agencies take steps to meet the requirements in this Memorandum, it is important to work strategically and prioritize those elements that can be addressed immediately, support mission-critical objectives, and result in more efficient use of taxpayer dollars.

Agencies should consider the following as they implement the requirements of this Memorandum:

1. **Roles and Responsibilities** – The Clinger-Cohen Act of 1996 assigns agency CIOs statutory responsibility for promoting the effective and efficient design and operation of all major IRM processes within their agency. Accordingly, agency heads must ensure that CIOs are positioned with the responsibility and authority to implement the requirements of this Memorandum in coordination with the agency's Chief Acquisition Officer, Chief Financial Officer, Chief Technology Officer, Senior Agency Official for Geospatial Information, Senior Agency Official for Privacy (SAOP), Chief Information Security Officer (CISO), Senior Agency Official for Records Management, and Chief Freedom of Information Act (FOIA) Officer. The CIO should also work with the agency's public affairs staff, open government staff, web manager or digital strategist, program owners and other leadership, as applicable.

   A key component of agencies' management of information resources involves working closely with the agency's SAOP and other relevant officials to ensure that each stage of the planning process includes a full analysis of privacy, confidentiality, and security issues. Agency heads must also ensure that privacy and security officials are positioned with the authority to identify information that may require additional protection and agency activities that may require additional safeguards. Consistent with OMB Memorandum M-05-08,[39] each agency's SAOP must take on a central planning and policy-making role in all agency information management activities, beginning at the earliest stages of planning and continuing throughout the life cycle of the information. In addition, if an agency's SAOP is not positioned within the office of the CIO, the agency should designate an official within the office of the CIO to serve as a liaison to help coordinate with the agency's privacy office.

---

[36] OMB Circular A-11, *available at* http://www.whitehouse.gov/omb/circulars_a11_current_year_a11_toc

[37] Pub. L. No. 111-352 (2011) (codified as 31 USC § 1120 note).

[38] In March 2012 OMB established PortfolioStat accountability sessions, engaging directly with agency leadership to assess the maturity and effectiveness of current IT management practices and address management opportunities and challenges. For FY13 OMB PortfolioStat guidance, *see* OMB Memorandum M-13-09, *Fiscal Year 2013 PortfolioStat Guidance: Strengthening Federal IT Portfolio Management* (Mar. 27, 2013), *available at* http://www.whitehouse.gov/sites/default/files/omb/memoranda/2013/m-13-09.pdf.

[39] OMB Memorandum M-05-08, *Designation of Senior Agency Officials for Privacy* (Feb. 11, 2005), *available at* http://m.whitehouse.gov/sites/default/files/omb/assets/omb/memoranda/fy2005/m05-08.pdf

2. **Government-wide Coordination** – The Federal CIO will work with the United States Chief Technology Officer (CTO) and the Administrator of the OMB Office of Information and Regulatory Affairs (OIRA) to help improve the interoperability and openness of government information. To this end, the Federal CIO will work to establish an interagency working group supported by the Federal CIO Council. The working group should focus on leveraging government-wide communities of practice to help with the development of tools that support information interoperability and openness through repositories such as Project Open Data. Part of this work should be to share best practices related to interoperability and openness within government (e.g., Federal, state, local, and tribal). These collaborations shall be subject to statutory limitations and conducted in a way that fully protects privacy, confidentiality, confidential business information, and intellectual property rights.

3. **Resources** – Policy implementation may require upfront investments depending on the maturity of existing information life cycle management processes at individual agencies. Agencies are encouraged to evaluate current processes and identify implementation opportunities that may result in more efficient use of taxpayer dollars. However, effective implementation should result in downstream cost savings for the enterprise through increased interoperability and accessibility of the agency's information resources. Therefore, these potential upfront investments should be considered in the context of their future benefits and be funded appropriately through the agency's capital planning and budget processes. Some of the requirements in this Memorandum may require additional tools and resources. Agencies should make progress commensurate with available tools and resources.

   In addition, tools, best practices, and schema to help agencies implement the requirements of this Memorandum can be found through the Digital Services Innovation Center and in Project Open Data.

4. **Accountability Mechanisms** – Progress on agency implementation of the actions required in this Memorandum will be primarily assessed by OMB and the public through analysis of the agency's updates to IRM plans (part III, section 5), the completeness of the enterprise data inventory (part III, section 3.a), and the data made available in the agency's public data listing (part III, section 3.b).

   Nothing in this Memorandum shall be construed to affect existing requirements for review and clearance of pre-decisional information by OMB relating to legislative, budgetary, administrative, and regulatory materials. Moreover, nothing in this Memorandum shall be construed to reduce the protection of information whose release would threaten national security, invade personal privacy, breach confidentiality or contractual terms, violate the Trade Secrets Act,[40] violate other statutory confidentiality requirements,[41] or damage other compelling interests. This Memorandum is not intended to, and does not, create any right or benefit, substantive or procedural, enforceable at law or in equity by any party against the United States, its departments, agencies, or entities, its officers, employees, or agents, or any other person.

EXECUTIVE OFFICE OF THE PRESIDENT
OFFICE OF MANAGEMENT AND BUDGET
WASHINGTON, D.C. 20503

July 10, 2019

M-19-23

MEMORANDUM FOR HEADS OF EXECUTIVE DEPARTMENTS AND AGENCIES

FROM: Russell T. Vought
Acting Director

SUBJECT: Phase 1 Implementation of the Foundations for Evidence-Based Policymaking Act of 2018: Learning Agendas, Personnel, and Planning Guidance

Background

The *Foundations for Evidence-Based Policymaking Act of 2018* ("Evidence Act"),[1] signed into law on January 14, 2019, emphasizes collaboration and coordination to advance data and evidence-building functions in the Federal Government by statutorily mandating Federal evidence-building activities, open government data, and confidential information protection and statistical efficiency. Evidence is broadly defined and includes foundational fact finding, performance measurement, policy analysis, and program evaluation (see Appendix A).[2] In addition, the Evidence Act mandates a systematic rethinking of government data management to better facilitate access for evidence-building activities and public consumption.

Despite previous efforts and resource commitments, Federal agencies often lack the data and evidence necessary to make critical decisions about program operations, policy, and regulations, and to gain visibility into the impact of resource allocation on achieving program objectives. Investing in and focusing on the management and use of data and evidence across the Federal Government will enable agencies to shift away from low-value activities toward actions that will support decision makers: linking spending to program outputs, delivering on mission, better managing enterprise risks, and promoting civic engagement and transparency.

The Evidence Act builds on longstanding principles underlying Federal policies and data infrastructure investments supporting information quality, access, protection, and evidence

[1] Pub. L. No. 115-435, 132 Stat. 5529.

[2] Pursuant to the Evidence Act, "evidence" is defined as "information produced as a result of statistical activities conducted for a statistical purpose." *See* 44 U.S.C. § 3561(6). The term "statistical activities" means "the collection, compilation, processing, or analysis of data for the purpose of describing or making estimates concerning the whole, or relevant groups or components within, the economy, society, or the natural environment and . . . includes the development of methods or resources that support those activities, such as measurement methods, models, statistical classifications, or sampling frames." *See id.* § 3561(10). The term "statistical purpose" means "the description, estimation, or analysis of the characteristics of groups, without identifying the individuals or organizations that comprise such groups and . . . includes the development, implementation, or maintenance of methods, technical or administrative procedures, or information resources that support [those] purposes." *See id.* § 3561(12).

building and use.[3] While anchored on these principles, the Evidence Act creates a new paradigm by calling on agencies to significantly rethink how they currently plan and organize evidence-building, data management, and data access functions to ensure an integrated and direct connection to data and evidence needs. This paradigm requires engagement and cooperation from multiple actors within agencies (e.g., senior leadership, policy officials, program administrators, performance managers, strategic planners, budget staff, evaluators, analysts, front-line staff, and data professionals) and key external stakeholders. It accelerates, expands, and reinforces the implementation of many activities underway, including the Federal Data Strategy ("Strategy");[4] the government-wide reorganization proposals to strengthen Federal evaluation and reorganize the Census Bureau, Bureau of Labor Statistics, and Bureau of Economic Analysis to improve economic statistical data;[5] new monitoring and evaluation guidelines for agencies that administer foreign assistance;[6] new centralized mission support shared services and standards;[7] and ongoing open data policy related to open data laws like the DATA Act and Geospatial Data Act.[8]

Iterative and Coordinated Implementation

Meeting the requirements of the Evidence Act will require ongoing, focused effort. OMB recognizes that implementation will necessarily build on activities already underway and, in some cases, require coordination of these activities in new ways.[9] OMB is committed to: (1) aligning related data and information policy guidance, such as the Strategy and related OMB guidance, like OMB Circular A-11, as applicable; and (2) providing iterative and supplemental guidance in four phases (see Figure 1 below):[10]

- **Phase 1: Learning Agendas, Personnel, and Planning**
- **Phase 2: Open Data Access and Management**
- **Phase 3: Data Access for Statistical Purposes**
- **Phase 4: Program Evaluation**

Figure 1: Evidence Act Guidance

Phase 1: Learning Agendas, Personnel, & Planning

- Learning Agendas
- Chief Data Officers
- Evaluation Officers
- Statistical Officials
- Agency Data Governance Boards
- Chief Data Officer Council
- Evaluation Officer Council
- Interagency Council on Statistical Policy
- Agency Evaluation Plans
- Capacity Assessments
- Open Data Plans

Phase 2: Open Data Access & Management

- Make Data Open by Default
- Comprehensive Data Inventory
- Federal Data Catalogue
- Repository of Tools and Best Practices

Phase 3: Data Access for Statistical Purposes

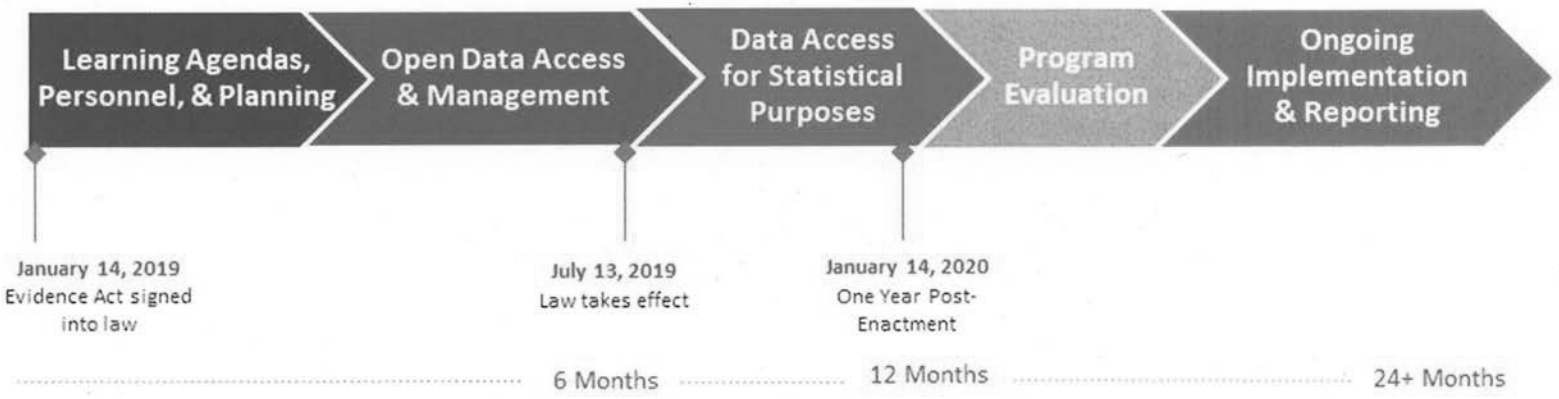
- Make Agency Data Assets Available to Statistical Units
- Expand Users' Secure Access to Data Assets through Statistical Units
- Allow Recognition of New Statistical Units
- Standardize Application Process for Accessing Data Assets
- Codify Statistical Unit Responsibilities

Phase 4: Program Evaluation

- Program Evaluation Standards and Best Practices
- Program Evaluation Skills and Competencies (with OPM)

Ongoing Implementation & Reporting

- Budget Cycles
- Information Resource Management Plans
- Performance Plans
- Strategic Plans
- Federal Data Strategy Annual Action Plans
- Biennial Report
- Statistical Programs Annual Report
- Regulatory Planning
- Information Collection Review



Phase 1: Learning Agendas, Personnel, and Planning

This memorandum includes the key requirements for implementation of Phase 1 that agencies should begin working on immediately (see Table 1 below). Phase 1 implementation includes developing Learning Agendas, designating and developing roles and responsibilities for Personnel, and undertaking Planning activities.

I. *Learning Agendas*: The **Learning Agendas** are, in many ways, the driving force for several of the activities required by and resulting from the Evidence Act. The creation of **Learning Agendas** requires agencies to identify and set priorities for evidence building, in consultation with various stakeholders.

II. *Personnel*: The newly-designated positions (**Chief Data Officer**, **Evaluation Officer**, and **Statistical Official**) all play a key role in leading these activities, including addressing the new reporting requirements. Their corresponding interagency councils likewise support these functions and roles. These senior officials will also serve on a newly required **Data Governance Body** inside their agency, which will set and enforce priorities for managing data as a strategic asset to support the agency in meeting its mission and, importantly, answering the priority questions laid out in the agency **Learning Agenda**.

III. *Planning*: The Evidence Act augments ongoing agency strategic planning activities to promote better use and management of data and evidence, consistent with the GPRA Modernization Act[11] and OMB Circular A-11 Part VI and agency-specific management routines, such as through data-driven performance and strategic reviews. Specifically, **Learning Agendas**, which identify agencies' priority questions, drive related planning activities, including:

- Developing annual **Evaluation Plans**, which will summarize the specific evaluations an agency plans to undertake to address those questions;
- Undertaking **Capacity Assessments**, which, as part of agencies' strategic plans, will help agencies to assess their ability and infrastructure to carry out evidence-building activities like foundational fact finding, performance measurement, policy analysis, and program evaluation; and
- Identifying the data needed to answer those questions.

Lastly, in tandem with Phase 2 guidance, **Open Data Plans** will inform dissemination improvement priorities as part of agencies' Strategic Information Resources Management Plans (discussed below).

The body of this memorandum summarizes these initial requirements, the corresponding deadlines, reporting formats, and responsible officials. The appendices that follow provide additional details on how agencies should implement these requirements, including how these requirements tie into existing efforts, structures, and processes. Agencies should review and refer

[11] GPRA Modernization Act of 2010, Pub. L. No. 111-352, *available at* https://www.congress.gov/111/plaws/publ352/PLAW-111publ352.pdf.

to all parts of this guidance, including the appendices, as they implement the Evidence Act's requirements.[12] Agencies are expected to resource these activities appropriately.

[12] OMB recognizes that this guidance uses both the term "data" and the term "information," and that using both terms may cause confusion. The Evidence Act introduced the term "data" into the statutory construct created by the Paperwork Reduction Act, codified in subchapter I of chapter 35 of title 44 of the U.S. Code, which generally speaks in terms of "information." The introduction of the term "data" in the Evidence Act did not, however, disturb the existing definitions or responsibilities that involve the term "information." The result is that the law now describes agency responsibilities using both terms. In this guidance, OMB uses the terms "data" and "information" consistently with the source of the authority for each requirement.

* - Deliverable should be submitted at the time the agency submits information to OMB per the Budget cycle ** - Strongly recommended for non-CFO Act agencies, as well as operational divisions, bureaus, and sub-agencies in CFO Act agencies EO = Evaluation Officer | AH = Agency Head | CDO = Chief Data Officer | SO = Statistical Official				

I. Develop a Learning Agenda (Evidence-Building Plan)[14]

Each CFO Act agency should immediately start the process of developing and implementing a multi-year learning agenda that coincides with the four-year timeframe defined for agency strategic plans (see Appendix B for additional implementation details). As described further in Appendix B, non-CFO Act agencies, as well as sub-agencies, operational divisions, and bureaus within CFO Act agencies are strongly encouraged to implement a learning agenda as appropriate in coordination with the agency-wide learning agendas. Below are the key activities for agencies to document progress in developing, publishing, and implementing a learning agenda:

- *FY 2021 Budget Submission (September 2019)*: Concurrent with their FY 2021 Budget submissions in September 2019, agencies must document their progress in developing a learning agenda in the Evidence Template that agencies are required to complete per OMB Circular No. A-11.
- *FY 2022 Annual Performance Plan and Budget Submission (September 2020)*: Concurrent with their FY 2022 Annual Performance Plan Submission in September 2020 (to coincide with the submission of the FY 2022 Budget), agencies must submit an interim learning agenda.[15] Agencies are strongly encouraged to put their learning agenda in place earlier and submit to OMB prior to the September 2020 deadline.
- *Draft Strategic Plan (May, September, and December 2021):* As part of their initial draft Strategic Plan submitted to OMB in May 2021, agencies must submit an annotated outline of their updated learning agenda, building on the interim learning agenda submitted in September 2020. The full draft learning agenda must be submitted in

[14] A learning agenda is equivalent to the agency evidence-building plan required in Section 101 of the Evidence Act. 5 U.S.C. § 312(a).

[15] Because this interim learning agenda is being developed during the last year of agency's current strategic plan, the interim learning agenda should be written to address short-term priority questions that can be answered more immediately and long-term questions that are directly linked to the agency's core statutory mission and therefore are unlikely to differ substantively from one strategic planning cycle to the next.

September 2021 with the full draft Strategic Plan. The final draft learning agenda must be submitted in December 2021 with the agency's final draft Strategic Plan.

- *Final Strategic Plan (February 2022)*: As part of their final Strategic Plan posted publicly in February 2022, agencies must include their updated, final learning agenda, which shall cover the same period.

II. Constitute Data Governance and Leadership

(a) Data Governance Body

By September 30, 2019, the head of **each agency** must establish an agency Data Governance Body, to be chaired by the Chief Data Officer, with participation from relevant senior-level staff in agency business units, data functions, and financial management (see Appendix C). All agencies must include their Data Governance Body in their Strategic Information Resources Management Plan's Governance sections as required by OMB guidance.[16] All agencies must report their Data Governance Body members to OMB via email at EvidenceAct@omb.eop.gov **no later than September 30, 2019**.

(b) Designate Key Senior Officials

OMB recognizes that agencies have been working to put key senior officials in place to meet Evidence Act requirements. As previously communicated over the past few months, the deadlines for designating these positions are listed below.

Chief Data Officer – The Chief Data Officer (CDO) shall have authority and responsibility for, among other things, data governance and lifecycle data management. The head of **each agency** must designate a senior staff person in the agency with the required qualifications (see Appendix C) **no later than July 13, 2019**.[17]

Evaluation Officer – The Evaluation Officer shall have authority and responsibility for providing leadership over the agency's evaluation and learning agenda activities.[18] The head of **each CFO-Act agency** must designate, without regard to political affiliation, a senior staff person in the agency with the required qualifications (see Appendix C) **no later than July 13, 2019**. Non-CFO Act agencies, as well as sub-agencies, operational divisions, and bureaus of CFO Act Agencies are strongly encouraged to designate an Evaluation Officer as appropriate.

Statistical Official – The Statistical Official shall have authority and responsibility to advise on statistical policy, techniques, and procedures. The head of **each CFO-Act agency** must designate a senior staff person in the agency with the required qualifications (see Appendix C) **no later than July 13, 2019**.[19] Non-CFO Act agencies, as well as sub-agencies,

---

[16] *See* OMB Circular No. A-130, § 5.a.
[17] 44 U.S.C. § 3520.
[18] 5 U.S.C. § 313.
[19] The Act requires the Statistical Official to be the head of an existing statistical agency in CFO Act agencies that have a statistical agency. 5 U.S.C. § 314(a).

operational divisions, and bureaus of CFO Act Agencies are strongly encouraged to designate a Statistical Official as appropriate.

All agencies must submit the names and contact information for their Chief Data Officer, Evaluation Officer, and Statistical Official to EvidenceAct@omb.eop.gov and post the names on their https://[agency].gov/data webpage **no later than August 2, 2019**. Agencies must provide any updates to these designations to OMB via email at EvidenceAct@omb.eop.gov and update their webpages accordingly.

Evidence Act Orientation for Designated Officials – All designated officials must attend an Evidence Act orientation hosted by OMB in **September 2019** to gain a fuller understanding of the requirements under this guidance, develop a common baseline of knowledge about key competencies required for their roles, learn about resources for fulfilling statutory responsibilities, and meet and build relationships with their peers and with OMB officials to promote interagency coordination and collaboration.

(c) Interagency Councils

Designated key officials must also participate with their peers on the following interagency councils:

Chief Data Officer Council

This Memorandum hereby establishes a Chief Data Officer Council (hereinafter "CDO Council") that will include all agency Chief Data Officers, the Administrator of the Office of Electronic Government (or designee), the Administrator of the Office of Information and Regulatory Affairs (or designee), and an Ex Officio Member (to represent all Chief Information Officers and Evaluation Officers). OMB will designate a Chair and constitute a Charter for the CDO Council. The Chair of the CDO Council, in consultation with the GSA Office of Executive Councils, will develop an implementation plan for the Council that will consider the below objectives, as well as lessons learned and best practices for managing Federal-wide executive councils.

The CDO Council shall meet regularly to establish government-wide best practices for the use, protection, dissemination, and generation of data; promote and encourage data sharing agreements between agencies; identify ways in which agencies can improve upon the production of evidence for use in policymaking; consult with the public and engage with private users of Government data and other stakeholders on how to improve access to data assets of the Federal Government; and identify and evaluate new technology solutions for improving the collection and use of data. The CDO Council shares responsibilities with other government-wide councils that conduct statutory data-related activities. OMB expects that the activities of all these councils will be coordinated through OMB in order to assure that these activities are complementary and carried out efficiently and effectively.

Interagency Council on Statistical Policy

The statutory purpose of the Interagency Council on Statistical Policy (ICSP) is to advise and assist the Chief Statistician of the United States in the coordination of the Federal Statistical System; the implementation of statistical policies, principles, standards, and guidelines; and the evaluation of statistical program performance.[20] Its membership currently includes representatives of 14 member agencies. These member agency representatives will be joined by all statistical officials designated pursuant to section 2(b) of this guidance that are not already members, increasing ICSP membership by 12. Consequently, the ICSP will include two members each from the Department of Commerce and the USDA, which each contain two principal statistical agencies, and one member each from all other CFO Act agencies.

The expanded membership will augment the ICSP's ability to meet its statutory purpose. In addition, it will be a forum for collaboration, coordination, and information sharing among the statistical agencies and additional statistical programs across all member agencies, including on issues such as ensuring data quality and confidentiality, attaining and providing data access, and playing an effective role in agency-wide data governance.

Evaluation Officer Council

The OMB Evidence Team will establish and coordinate an interagency Council composed of Evaluation Officers. The Evaluation Officer Council will serve as a forum to exchange information, consult with and advise OMB on issues that affect evaluation functions (e.g., evaluator competencies, program evaluation best practices, and evaluation capacity-building), coordinate and collaborate on areas of common interest, and serve in a leadership role for the broader Federal evaluation community. More information on the Council's composition and membership is forthcoming.

III. Conduct Assessments and Planning

(a) Annual Evaluation Plan

CFO Act agencies shall immediately begin the process of developing their first Annual Evaluation Plan. Non-CFO Act agencies, as well as sub-agencies, operational divisions, and bureaus of CFO Act Agencies are strongly encouraged to develop an evaluation plan as appropriate. At a minimum, the plan shall describe evaluation activities for the subsequent year, including the key questions for each planned "significant" evaluation study, as well as the key information collections or acquisitions the agency plans to begin.[21] Below are the required activities by which agencies will document progress in developing and publishing an Annual Evaluation Plan:

---

[20] 44 U.S.C. § 3504(e).

[21] The significance of an evaluation study should be defined by each agency and take into consideration factors such as the importance of a program or funding stream to the agency mission; the size of the program in terms of funding or people served; and the extent to which the study will fill an important knowledge gap regarding the program, population(s) served, or the issue(s) that the program was designed to address. Agencies should clearly state their criteria for designating evaluations as "significant" in their plan. *See* 5 U.S.C. § 312(b).

- *FY 2021 Budget Submission (September 2019)*: Concurrent with their FY 2021 Budget submissions in September 2019, agencies must document their progress in creating an Annual Evaluation Plan in the Evidence Template that agencies are required to complete per OMB Circular No. A-11.
- *FY 2022 Annual Performance Plan Submission (September 2020)*: Concurrent with the submission of their FY 2022 Annual Performance Plan in September 2020 (to coincide with the submission of the FY 2022 Budget), agencies must submit an Evaluation Plan that covers evaluation activities planned for FY 2022. Following this submission, agencies are expected to provide an Annual Evaluation Plan concurrent with the submission of their Annual Performance Plan to OMB in September of each year, which will be published along with the performance plans the following February.

(b) Capacity Assessment

CFO Act agencies should immediately begin to plan how they will assess the coverage, quality, methods, effectiveness, and independence of their statistics, evaluation, research, and analysis efforts. Non-CFO Act agencies, as well as sub-agencies, operational divisions, and bureaus of CFO Act agencies are strongly encouraged to plan and conduct a capacity assessment as appropriate. This assessment should provide a comprehensive view of agency capacity, while also ensuring that the review takes into account specific needs identified through the development of the agency's learning agenda. Below are the key activities for agencies to document progress in developing and undertaking a capacity assessment:

- *FY 2021 Budget Submission (September 2019)*: Concurrent with their FY 2021 Budget submissions in September 2019, agencies should propose an approach to conducting the assessment in the Evidence Template that agencies are required to complete per OMB Circular No. A-11.
- *FY 2022 Annual Performance Plan and Budget Submission (September 2020)*: Concurrent with their FY 2022 Annual Performance Plan submission in September 2020 (to coincide with the submission of the FY 2022 Budget), agencies must submit an interim capacity assessment documenting information gathered to date and outlining steps the agency intends to carry out to complete their full assessment.
- *Draft Strategic Plan (May, September, and December 2021)*: As part of their initial draft Strategic Plan submitted to OMB in May 2021, agencies must submit an initial draft capacity assessment that builds on and revises, as needed, the interim assessment submitted in September 2020. The full draft capacity assessment must be submitted in September 2021 with the full draft Strategic Plan. The final draft capacity assessment must be submitted in December 2021 as part of the agency's final draft Strategic Plan.
- *Final Strategic Plan (February 2022)*: As part of their final Strategic Plan posted publicly in February 2022, agencies must include their updated, final capacity assessment.

(c) Open Data Plan

The Evidence Act requires each agency to develop and maintain an Open Data Plan,[22] which, in general, shall describe the agency's efforts to make government data open to the public. The Open Data Plan shall be included in the agency's Strategic Information Resources Management Plan, which describes how information resource management activities help accomplish agency missions, including how they support government-wide financial management priorities, to include better integration of budget, cost, and performance data. These plans shall be updated annually and made publicly available on the agency's website not later than five days after each update.[23] OMB's forthcoming Phase 2 Guidance will provide agencies further guidance necessary to implement the Evidence Act's Open Data Plan requirement.

The Open Data Plan is one approach through which the Evidence Act strengthens the Federal government's commitment to open data. Many of the other open data requirements in the Evidence Act will be familiar to agencies because of existing open data responsibilities articulated in OMB Circular No. A-130 (*Managing Information as a Strategic Resource*) and OMB M-13-13 (*Open Data Policy – Managing Information as an Asset*). While the Evidence Act, in significant respect, carries forward the existing mechanisms for meeting open data policy objectives, the forthcoming Phase 2 Guidance will substantively update technical aspects of operationalizing these mechanisms. Until the Phase 2 Guidance goes into effect, agencies are reminded to continue meeting their existing open data obligations.

Appendices

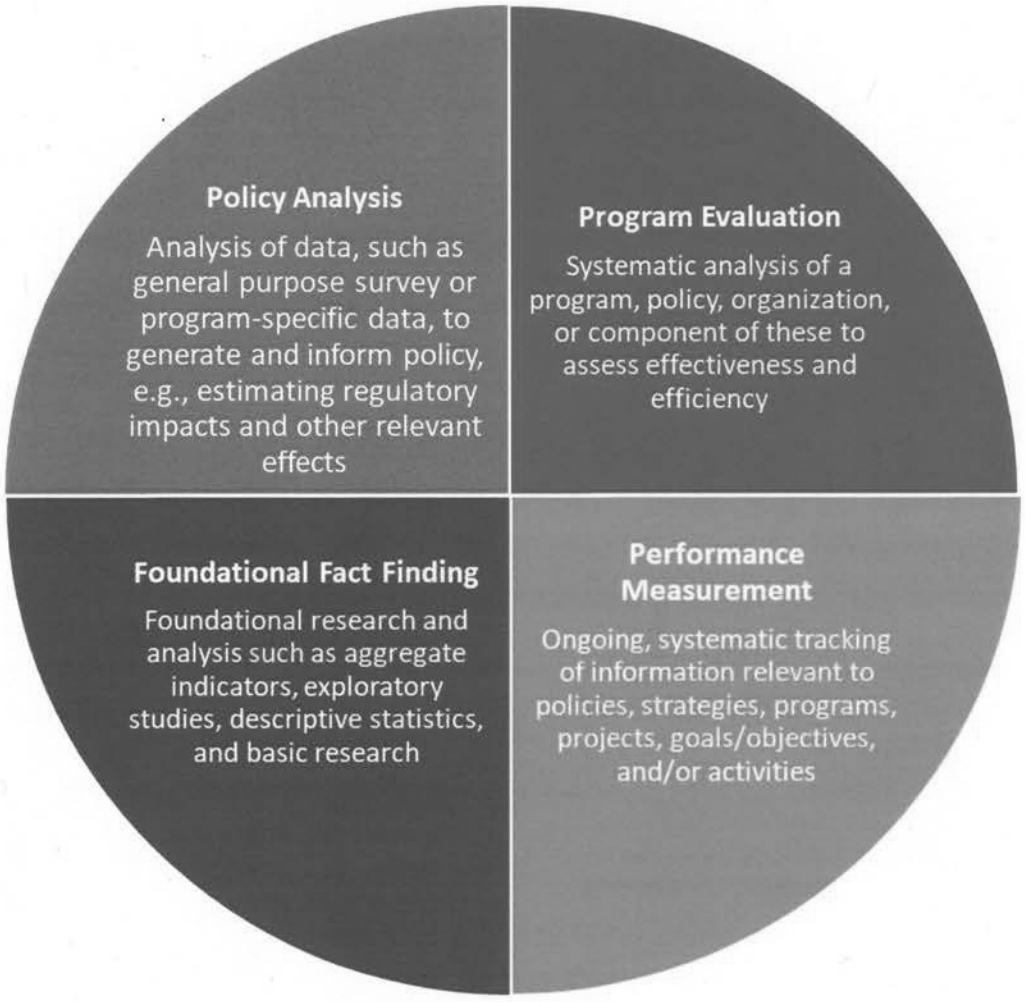
Appendix A: Components of Evidence
Appendix B: Further Guidance on Learning Agendas
Appendix C: Further Guidance on Constituting Data Governance and Leadership
Appendix D: Further Guidance on Assessments and Planning
Appendix E: Implementation Resources for Agencies

[22] 44 U.S.C. § 3506(b)(2).
[23] *See* OMB Circular No. A-130, § 5.a.

APPENDIX A: COMPONENTS OF EVIDENCE

Figure A.1 depicts and describes four interdependent components of evidence: foundational fact finding, policy analysis, program evaluation, and performance measurement. Each of these components informs and directs the others, and many evidence-building activities may be hard to categorize because they organically include more than one component. As agencies build and use evidence, per the Evidence Act and this guidance, they should consider these various types of evidence.

Figure A. 1: Components of Evidence



APPENDIX B: FURTHER GUIDANCE ON LEARNING AGENDAS

I. Purpose

The Evidence Act requires that agencies' strategic plans include a section on evidence building to be developed in conjunction with the agency's process of updating its strategic plan every four years. These evidence-building plans are systematic plans for identifying and addressing priority questions relevant to the programs, policies, and regulations of the agency. Thus, evidence-building plans are multi-year learning agendas that provide an evidence-building roadmap to support effective and efficient agency functioning. Learning agendas offer the opportunity to use data in service of addressing the key questions an agency wants to answer to improve its operational and programmatic outcomes and develop appropriate policies and regulations to support successful mission accomplishment. They identify, prioritize, and establish strategies to develop evidence to answer important short- and long-term strategic questions (i.e., questions about how the agency meets its mission(s), including about how programs, policies, and regulations function both individually and in combination) and operational questions (i.e., questions about the agency's operations like human resources, grant-making procedures, financial systems and tracking, and internal processes).[24] In this context, such strategic and operational questions to be answered can subsequently be integrated into and reflected in the agency's Strategic Plan and Annual Performance Plan. When items in the learning agenda are designed to support planned regulatory actions, the agency should cross reference the entry for that regulatory action in the current Unified Agenda of Federal Regulatory and Deregulatory Actions.

Learning agendas should be iterative, flexible, transparent, and tailored to both meet an individual agency's needs and address agency-specific challenges to developing evidence. They should highlight recent, existing, and future evidence-building activities; make an agency's evidence-building plans transparent; and promote interest in and support for the studies, evaluations, and other evidence that will follow from them. Through the necessary consultations with relevant stakeholders, learning agendas provide an opportunity to align efforts and promote interagency collaboration in areas of joint focus or shared populations or goals. For agencies with emerging evidence-building functions, the learning agenda may emphasize and help coordinate efforts to design and implement new evidence-building activities. For agencies with more mature evidence-building efforts that may already have comprehensive research plans, research roadmaps, enterprise learning agendas, or evaluation strategic plans in place, the learning agenda may highlight and prioritize existing efforts. As a result, there is no single approach or format for a learning agenda that will be effective for every agency.

A learning agenda is a systematic way to identify the data agencies intend to collect, use, or acquire, as well as the methods and analytical approaches to facilitate the use of evidence in policymaking. It promotes deliberate planning of evidence-building activities, including how to prioritize limited resources and address potential information gaps that may inhibit an agency's effective mitigation of risks identified through their enterprise risk management processes. Learning agendas relate to, but are distinct from research and development planning for the

[24] While a learning agenda may address an agency's human resources as those resources relate to an identified priority question, learning agendas do not refer to plans for human capital development.

purposes of building the stock of knowledge.[25] They can also complement an agency's submission to the Unified Agenda of Federal Regulatory and Deregulatory Actions by clearly documenting how an agency intends to build and use evidence to support its proposed regulatory actions.

II. Establishing and Utilizing a Multi-Year Learning Agenda

Requirements for a Learning Agenda

The Evidence Act requires CFO Act agencies[26] to have a learning agenda that covers a four-year period aligned with the strategic plan and that addresses priority questions (i.e., questions relevant for programmatic, operational, regulatory, or policy decision-making) across the entire agency (i.e., the entire Cabinet-level Department). Additionally, OMB strongly encourages non-CFO Act agencies, as well as sub-agencies, operational divisions, or bureaus of CFO Act agencies to develop and implement their own learning agendas that tie into and are consistent with, but are not limited by, the agency-wide agenda.

Management of the Development and Implementation Process

Pursuant to the Evidence Act, the agency's designated Evaluation Officer (see Appendix C) shall coordinate, develop, and implement the learning agenda. The Evaluation Officer shall play a leading technical role in the development and implementation of the learning agenda at the agency level and support efforts to develop learning agendas at the sub-agency, operational division, or bureau levels, particularly as those agendas relate to the agency-wide plan. Other senior officials who work on evidence-building activities, such as the Statistical Official and Chief Data Officer, may also play an important role in the learning agenda process. Agency leadership should be engaged in the development and implementation of the learning agenda, as their buy-in and support for determining what high-priority questions should be included, which stakeholders should inform the process, and which staff and data assets will be needed to fulfill the learning agenda, are critical to success.

Key Components of the Learning Agenda Process

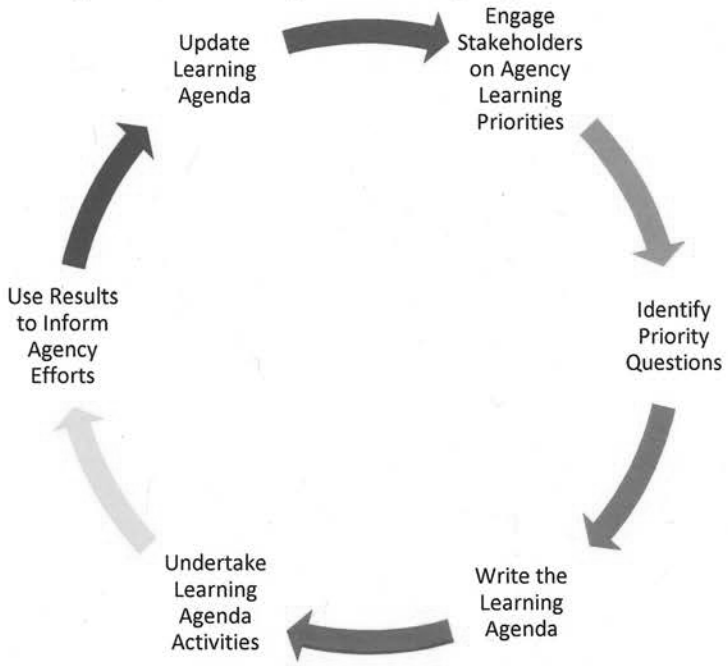
OMB recognizes that there is not just one way to develop a learning agenda. Agencies should undertake the learning agenda process in a way that is most appropriate to their particular agency. To meet the requirements for learning agendas outlined in Section 312 of the Evidence Act, agencies must include the components described further below in the process. Figure B.1 (below) shows one potential way that agencies could order these components to develop a learning agenda, though there are other approaches, and agencies may find that a different process best meets their needs.

---

[25] Pursuant to OMB Circular No. A-11, Section 210.13, Research and Development programs "focus on knowledge creation or its application to the creation of systems, methods, materials, or technologies, such as DOE's Solar Energy and NASA's Solar System Exploration programs."

[26] 5 U.S.C. § 312(a).

Figure B.1: Example Learning Agenda Process



Engage Stakeholders on Agency Learning Priorities. Agencies should consult with internal and external stakeholders throughout the process to develop and implement a learning agenda as learning priorities are identified and evidence-building activities are conducted. The purpose of stakeholder engagement is to make sure that the learning agenda addresses questions that are relevant, salient, and meaningful to those with direct interests in the agency's functions, and that the learning that results resonates with stakeholders. Agencies should consult with internal agency stakeholders who play a role in, have a stake in, or will use the results of the learning process, including agency staff who oversee the designs, processes, operations, or programs being discussed in the plan; other evaluation, statistics, analysis, data, enterprise risk management, and performance units and personnel in the agency; policy staff; regulatory staff; privacy and information law and policy personnel; and agency leadership. Per the Evidence Act, agencies shall also consult with the public, State and local governments, and representatives of non-governmental researchers. OMB also urges broader consultation with additional stakeholders, including: the Office of Management and Budget, Federal grant recipients, Congress, and industry and trade groups. Insofar as an agency's learning agenda describes its plans to build evidence to address specific questions or fill certain purposes, such as supporting data-driven, performance and strategic review processes and routines, these agendas also signal agency priorities externally, including opportunities for collaboration with external stakeholders to answer some priority questions. The agency's learning agenda should describe its stakeholder engagement, including the process and participants.

Agencies should gather input in the manner that best meets their needs, most effectively engages their specific stakeholders, and leverages existing activities and/or requirements whenever possible, in accordance with applicable law and policy. Potential models for doing so include: Requests for Information published in the Federal Register, listening sessions with groups of

stakeholders, Technical Working Groups, and one-on-one consultations. OMB recognizes that agencies may use different approaches at different points in the process, and that it may not be feasible to engage all stakeholders for all updates to the learning agenda. While agencies have the option of soliciting feedback and engaging specific stakeholders on their learning agenda as part of their consultation process on the Agency Strategic Plan[27], agencies may choose to conduct separate consultations to account for varied interests of different stakeholder groups as it relates to these components of the agency's Strategic Plan.

Identify Priority Questions. Agencies should identify priority questions that, when answered, will have the biggest impact on agency functioning and performance. Agencies may, but are not required to, tie their questions to strategic goals and strategic planning. Learning agendas should include both short- and long-term questions of interest to the agency, as well as mission-strategic and agency-operational questions (see Table B.1 below), in a balance that emphasizes those of greatest relevance and priority to the agency. In identifying questions, agencies should move beyond high-level, broad questions, even at the enterprise level, to those that have sufficient detail to be answerable and useful.

Table B.1: Examples of Potential Learning Agenda Questions

	Short-Term	Long-Term
Mission – Strategic	- What are the factors that positively and negatively predict increased numbers of participants that complete Agency A's Program B's sessions? - How can we prospectively monitor and evaluate county-level interventions and initiatives funded by Program C in Agency D?	- Have regulatory actions reduced outcome E in program area F for programs funded by Agency C? - Have capacity-building and increased opportunities for target population G led to increased participation of target population G in intervention H? - Based on projected demographic changes and economic forecasts, how will demand for Program I likely change, and what new challenges will these changes pose?
Agency – Operational	- What factors are critical for meeting Agency J's sub-contracting goals? - What effect did revised procedures have on Agency K's ability to hire new staff within 120 days? - What was the impact of online eligibility forms vs. paper forms for time to program enrollment for target population L? - How do Agency M's policies encourage grant recipients to implement practices to support stronger grant performance?	- What regulatory, policy, or process improvements could be made to help strengthen the agency's oversight and risk management? - How can Bureau N in Agency P improve partnerships with local organizations? - How can Agency Q ensure that its workforce has the ongoing IT skills needed to meet Agency R's mission?

[27] *See* OMB Circular No. A-11, § 230.15.

In defining these questions, agencies should articulate how they define short- and long-term (e.g., short-term is less than one year, while long-term is over the next four years), and the period over which they expect to answer these questions. Learning agendas can give agencies the opportunity to strategically build evidence via systematic questions and agencies should, to the extent possible, describe how short- and long-term questions relate to one another. For instance, an agency may want to understand the impact on participants of a large-scale grant program. In order to answer this long-term question, the agency may need to answer a series of short-term questions, like "How do grantees implement the program in individual locations?" or "To what extent do program participants achieve the desired intermediate-term program outcomes?"

Agencies should consider and include the range of methods and types of evidence that could be brought to bear to answer the priority questions identified in their learning agenda, including foundational fact finding, performance measurement, policy analysis, and program evaluation (see Appendix A). Agencies, to the extent practicable, may also answer questions using existing evidence, including literature reviews, meta-analyses, and research clearinghouses. Indeed, existing evidence is critical to identify gaps in knowledge and unmet needs, and learning agendas should address the current state of evidence. The questions to be answered must drive the research methods (and not vice versa), and agencies are expected to use the most rigorous methods possible that align to the identified questions and are feasible in a given circumstance. Agencies should, thus, be realistic about what can be measured and what cannot when prioritizing questions. As appropriate, agencies are encouraged to discuss opportunities for external entities to support the agency's learning agenda, including by explicitly identifying questions that are amenable to such collaboration.

Write the Learning Agenda. Written learning agendas should include the feedback gathered from the agency's stakeholder engagement efforts and use clear, plain language. Consistent with the Strategic Plan, agencies should make their learning agenda public (e.g., by posting on their agency website and disseminating to stakeholders), though agencies should determine what is most appropriate to publish based on their own needs, content, and relevant statutory requirements. At a minimum, agencies should include the following types of content in their learning agenda, recognizing that this content does not necessarily need to be organized according to these headings:

- Which Strategic Goals and Objectives that the Learning Agenda will Address;
- Priority Questions to be Answered;
- Activities that the Agency will Engage in to Address Priority Questions;
- Timing of Learning Agenda Activities;
- Potential Data, Tools, Methods and Analytic Approaches to be Used to Answer Priority Questions; and
- Anticipated Agency-Specific Challenges and Proposed Solutions to Developing Evidence to Support Agency Priorities.

Undertake Learning Agenda Activities. Agencies should carry out the activities specified in the learning agenda, including conducting evaluations (internally or externally),[28] data analyses, performance activities, syntheses of existing evidence, etc. In doing so, agencies are expected to abide by relevant OMB guidance.[29] It will be important for agencies to consider ways to combine or coordinate related evidence and data-related activities, in accordance with applicable law governing the collection, use, and disclosure of data and information.

Use Results to Inform Agency Efforts. Critical to the learning agenda process is the actual learning that results from the evidence-building activities an agency undertakes and how the agency uses and disseminates that information. Agencies should disseminate results internally to the appropriate parties for learning, improvement, and decision-making. As agencies consult with internal and external stakeholders, they should consider how to best time dissemination to maximize the usefulness of the evidence. In addition, agencies should have a plan for external publication of findings from program evaluations, research studies, and related analyses per accepted standards of scientific integrity as noted in the agency's evaluation policy or other procedures. Beyond dissemination, agencies should also consider how they will use results to inform agency decisions and activities, including, for example, continuous quality improvement, strategic planning, and budget formulation. For example, agencies can leverage their internal strategic review process, a key management routine for ensuring agency implementation strategies and activities can be updated, to improve strategic goals, objectives, and programmatic outcomes. Agencies must ensure that the use of the results of learning activities is done in accordance with applicable law and policies governing the collection, use, and disclosure of data and information.

Update Learning Agenda. Updating the learning agenda builds and maintains the culture of learning an agency needs in order to think critically and to examine and systematically improve programs, processes, regulations, and policies. Agencies must revisit their learning agendas at least annually and update them as needed to reflect progress toward meeting the agency's original goals and objectives, shifting agency priorities, changing contexts within which the agency operates, and emergent needs. Learning agendas should also be updated to incorporate, when available, the results of the activities an agency undertakes to answer priority questions. OMB does not expect that agencies will rewrite or draft a new learning agenda annually. Rather, the focus should be on creating meaningful updates as appropriate.

---

[28] Significant evaluations undertaken as part of learning agenda implementation should be included in the annual Evaluation Plans required by the Evidence Act.

[29] *See* Guidelines for Ensuring and Maximizing the Quality, Objectivity, Utility, and Integrity of Information Disseminated by Federal Agencies; Office of Mgm't & Budget, Exec. Office of the President, OMB M-05-03, Final Information Quality Bulletin for Peer Review (2005), *available at* https://www.whitehouse.gov/sites/whitehouse.gov/files/omb/assets/OMB/inforeg/iqg_oct2002.pdf; OMB M-14-06; principles and best practices in the Federal Data Strategy (forthcoming); and future OMB guidance on program evaluation.

APPENDIX C: FURTHER GUIDANCE ON CONSITUTING DATA GOVERNANCE AND LEADERSHIP

Implementing a Data Governance Body

I. Purpose

Data governance is the process of setting and enforcing priorities for managing data as a strategic asset in service of an agency's mission, including its strategic plan and other high-level priorities. This is accomplished by establishing a data governance structure with sufficient authority over the management of and access to key data assets, including roles for developing, overseeing, and coordinating data management policy and resource allocation.

Data governance is foundational to undertaking many activities required by the Evidence Act, and responsibility is shared among multiple parties. Effective implementation of data governance therefore requires a data governance body that, at a minimum:

- Supports agency priorities, such as those identified in strategic plans and learning agendas, by informing Strategic Information Resources Management Plans for the agency and identifying resources to implement those priorities;
- Coordinates and supports implementation of data management responsibilities with agency data-management actors to strengthen strategic plans and learning agendas;
- Sets agency data policy in a manner that complements, but does not supplant the statutory authority of established positions; and
- Coordinates implementation of the Federal Data Strategy by assessing data maturity, risks, and capabilities to recommend related data investment priorities.

By September 30, 2019, the head of **each agency** must establish an agency Data Governance Body, chaired by the Chief Data Officer, with participation from relevant senior-level staff in agency business units and data support functions and regular meetings.

II. People

An enterprise-wide Data Governance Body is only effective when the agency head or delegated authority sponsors the program and assigns senior staff with responsibility for ensuring that the data governance program addresses key agency concerns and priorities. In addition to the Chair (i.e., the Chief Data Officer), an agency's Data Governance Body should include appropriate senior-level staff and technical experts needed to discuss and set policy on a range of data and data-related topics.

Agencies are encouraged to constitute their Data Governance Bodies in a way that ensures that they meet the requirements discussed below for that particular agency. At a minimum, agencies should include the newly-designated positions from the Evidence Act (i.e., the Chief Data Officer, Evaluation Officer, and Statistical Official) and senior officials from agency program areas. In addition, OMB expects that the following positions have defined roles in the

governance process and may be members of the Body: Chief Acquisition Officer, Chief Financial Officer, Chief Freedom of Information Act Officer, Chief Information Officer, Chief Information Security Officer, General Counsel, Performance Improvement Officer, Senior Agency Official for Geospatial Information, Senior Agency Official for Privacy, and Senior Agency Official for Records Management. Agencies may also augment their Data Governance Body with other relevant senior officials, such as Chief Operating Officer and Chief Technology Officer for permanent or rotational participation in accordance with agency governance rules and customs. The makeup of an agency's Data Governance Body should be driven by the agency's needs and structure.

III. Reporting

All agencies must include their Data Governance Body in their Strategic Information Resources Management Plans' Governance sections as required by OMB guidance.[30] Additionally all agencies must report their Data Governance Body members to OMB via email at EvidenceAct@omb.eop.gov **no later than September 30, 2019**.

Key Senior Officials

The Evidence Act requires agencies to designate three senior officials – Chief Data Officer, Evaluation Officer, and Statistical Official – who will oversee the use of data and evidence-building activities in agencies. The following outlines OMB's expectations for the designation of these officials, as well as expectations for how these individuals will work with one another within agencies.[31]

Chief Data Officer

I. Background

While there are many roles in the Federal Government that relate to data management, over the last few years, Chief Data Officers (CDOs) have emerged to lead organizational development of processes to leverage the power of data. CDOs enable data driven decision-making in a variety of ways, from providing and leveraging centralized agency analytics capacity[32] to creating tools and platforms that enable self-service across their agencies and for the public.[33] Successful data management must account for every stage of the data lifecycle. Among other things, it involves establishing effective procedures, standards, and controls to ensure quality, accuracy, access, and protection of data, as well as managing information technology and information security. The

---

[30] *See* OMB Circular No. A-130, § 5.a.

[31] As illustrated in the descriptions of functions and responsibilities for each of these positions, it is OMB's expectation that these are full-time positions. Agencies should identify and designate staff accordingly.

[32] *See* Office of Mgm't & Budget, Exec. Office of the President, OMB M-19-16, *Centralized Mission Support Capabilities for the Federal Government* (2019), *available at* https://www.whitehouse.gov/wp-content/uploads/2019/04/M-19-16.pdf.

[33] Jane M. Wiseman, Ash Ctr. for Democratic Governance & Innovation, Harvard Kennedy Sch. Data-Driven Government: The Role of Chief Data Officers. (2018), *available at* https://www.innovations.harvard.edu/sites/default/files/Data-Driven-Government.pdf.

Evidence Act formally establishes within agencies the position of the CDO, who, through the functions described below, and in coordination with other agency leaders, will ensure the successful execution of the agency's data management responsibilities.

II. Designation of Chief Data Officers

By July 13, 2019, the head of **each agency** shall designate a nonpolitical appointee employee in the agency as a Chief Data Officer to support implementation of the Evidence Act and serve on the Chief Data Officer Council. Agency heads shall designate this role based on the qualifications below and place this role in the best position within their agency to serve the functions listed below.

The Evidence Act does not require this position to be within any particular organizational unit of the agency or to report to any particular official. However, consistent with the role they play in the agency, CDOs shall serve in a central leadership position, with visibility into relevant agency operations, and be positioned highly enough to regularly engage with other agency leadership, including the head of the agency. Agencies, as part of their Information Resource Management governance planning activities, shall evaluate the effectiveness of the organizational placement of roles and the allocation of responsibilities.

The CDO shall have the necessary authority to carry out the responsibilities described below. Nevertheless, some of these responsibilities are shared with others in the agency. Therefore, these functions should be carried out in consultation with the Data Governance Body and agency officials who also may have shared responsibilities under other statutes. The agency head is responsible for assuring that shared responsibilities are carried out in an effective and efficient manner.

III. Qualifications for Chief Data Officers

CDOs must have the necessary skills, knowledge, and expertise to carry out the functions assigned by law and described below. They should be experts in data management and governance (including creation, application, and maintenance of data standards) and have a working knowledge of data collection, analysis, protection, use, and dissemination as it relates to the agency's mission.[34] Specific qualifications include:

- Demonstrated ability to communicate effectively, build coalitions, and exert influence with political savvy among stakeholders within large organizations, between organizations and government entities (e.g., between state and Federal government bodies), and among data users and providers;
- Demonstrated ability to successfully manage organizational culture change;

[34] According to section 202(e) of the Evidence Act, "The Chief Data Officer of an agency shall be designated on the basis of demonstrated training and experience in data management, governance (including creation, application, and maintenance of data standards), collection, analysis, protection, use, and dissemination, including with respect to any statistical and related techniques to protect and de-identify confidential data." 44 U.S.C. § 3520.

- Demonstrated ability to facilitate and implement best practices in data curation and management across the entirety of the data lifecycle;
- Demonstrated ability to facilitate improved regulatory outcomes by supporting agency compliance with Executive Order 12866, *Regulatory Planning and Review*, and OMB Circular No. A-4, *Regulatory Analysis*;
- Demonstrated ability to think strategically and solve complex problems regarding the application of data to data-driven decision-making;
- Demonstrated ability to facilitate complex data analysis to improve operational results, regulatory activities, and mission outcomes; and
- Strong business acumen and familiarity with data science approaches, cloud computing, cyber security, privacy, confidentiality, data analytics, statistical methods, policy analysis, information quality standards set out in the Information Quality Act (IQA),[35] record disclosure laws and policy, and the Paperwork Reduction Act (PRA).

IV. Responsibilities for Chief Data Officers

Governance Responsibilities

One of the CDO's most important responsibilities is to convene and coordinate agency-wide data governance, which is a shared activity among multiple data stewards and supporting officials. In this regard, the Evidence Act assigns specific functions to the CDO, but it is OMB's expectation that other agency leaders continue to perform the functions assigned to them by relevant statutes. The head of the agency retains ultimate responsibility for the success of the agency's data management activities. To further the necessary collaborative environment, the CDO's convening and coordination functions shall include:[36]

- Leading the agency's Data Governance Body, including facilitating collaborative activities among the numerous actors with responsibilities and needs for data within the agency;
- Supporting the agency's learning agenda by coordinating data access and management activities that support evidence building, including evaluation, performance reporting, and the analysis of regulations;
- Coordinating with any official in the agency responsible for using, protecting, disseminating, and generating data to ensure that the data needs of the agency are met;
- Engaging agency employees, the public, and contractors in using public data assets, and encouraging collaborative approaches on improving data use;
- Supporting the Performance Improvement Officer of the agency in identifying and using data to carry out the functions described in 31 U.S.C. § 1124(a)(2);
- Supporting the Evaluation Officer of the agency in obtaining data to carry out the functions described in 5 U.S.C. § 313(d);

[35] *Id.* § 3516, note.
[36] Section 202(e) of the Evidence Act delineates functions of the Chief Data Officer. *See id.* § 3520(c).

- Reviewing the impact of the infrastructure of the agency on data asset accessibility and coordinating with the Chief Information Officer of the agency to improve such infrastructure to reduce barriers that inhibit data asset accessibility;
- Ensuring that, to the extent practicable, the agency maximizes its use of data, including for the production of evidence, including regulatory analyses, cybersecurity, and the improvement of agency operations;
- Identifying points of contact for roles and responsibilities related to open data use and implementation;
- Serving as the agency liaison to other agencies and OMB on the best way to use existing agency data for statistical purposes. This function includes helping program units provide data to statistical agencies and units, as required in section 303 of the Evidence Act;[37] and
- Complying with any regulation and guidance issued under the newly added subchapter III of chapter 35 of title 44 of the United States Code, including the acquisition and maintenance of any required certification and training.

Lifecycle Data Management Responsibilities

The second major area of responsibility for a Chief Data Officer is the agency's lifecycle data management, including:[38]

- Ensuring that the agency follows, to the extent practicable, data management best practices;[39]
- Carrying out information resources management strategic planning,[40] including leading the development of the agency's Open Data Plan;[41]
- Carrying out the requirements of the agency with regard to the information collection and control of paperwork, including certifying to OMB the agency's compliance with 5 CFR 1320.9 and 1320.8(b)(3);[42]
- Carrying out information dissemination;[43]
- Managing the agency's data assets, including the standardization of data format, sharing of data assets, and publication of data assets in accordance with applicable law;[44] and
- Carrying out records management.[45]

Delegation of Responsibilities for Statistical Law

The protection of information collected for statistical purposes is a core duty of the statistical agencies; the ability of statistical agencies to fulfill this duty is contingent on compliance with all laws and regulations that they are bound to follow. The CDO must delegate the above responsibilities to the head of a principal statistical agency or recognized statistical unit to ensure

[38] *Id.* § 3520(c)(1).
[39] *Id.* § 3520(c)(6).
[40] *Id.* §§ 3506(b), 3520(c)(5).
[41] *Id.* §§ 3506(b)(2), 3511.
[42] *Id.* §§ 3506(c); 3507.
[43] *Id.* § 3506(d).
[44] *Id.* § 3520((c)(3).
[45] *Id.* § 3506(f).

compliance with laws and associated policies specific to statistical agencies, including section 314 of title I and all of title III of the Evidence Act, as well as policies promulgated pursuant to 44 U.S.C. §§ 3504(e) and 3506(e) and the statutes authorizing each of the principal statistical agencies and each of their statistical programs. Statistical agency or unit heads, to the extent permissible by law, must consult with the CDOs in carrying out said responsibilities, and CDOs must defer to them with respect to any data acquired, maintained, or disseminated by the agency under applicable statistical law.[46]

Evaluation Officer

I. Background

Strengthening the program evaluation function within the Federal government is an important step in expanding evidence building. The Evaluation Officer shall be responsible for overseeing the agency's evaluation activities, learning agenda, and capacity assessment, as well as collaborating with, shaping, and contributing to other evidence-building functions within the agency. The Evaluation Officer is responsible for providing technical and methodological leadership to assess, improve, and advise on evaluation activities across the agency. For agencies that are less mature in their evaluation activities, or for those agencies without additional evaluation expertise distributed throughout the agency, the Evaluation Officer may also be responsible for conceptualizing, prioritizing, and designing the agency's evaluation activities.

II. Designation of Evaluation Officers

By July 13, 2019, the head of **each of the 24 Federal agencies covered by the CFO Act** must designate a senior employee of the agency as the Evaluation Officer based on demonstrated technical expertise and skills in program evaluation methodology and practices and without regard to political affiliation.[47] Each agency must have one Evaluation Officer to serve in this role for the agency as a whole (e.g., the entire Cabinet-level department). In addition, where appropriate, OMB strongly recommends that agencies consider building capacity in sub-agencies, operational divisions, or bureaus within the agency that also may have a need for an Evaluation Officer, with the agency-level official providing expert leadership and coordination among those officials.

Agencies have the flexibility to designate their Evaluation Officer based on the agency's organizational structure and particular needs. When designating the Evaluation Officer, agency heads should consider lines of accountability and the coordination needed to ensure the Evaluation Officer is aligned and partnered with supporting offices and functions to effectively perform their roles and responsibilities. Regardless of structure, there must be one Evaluation Officer at the agency-wide level who facilitates and oversees evaluation activities across the agency. It is important to note that the Evaluation Officer cannot be a member of the Inspector

[46] *Id.* § 3520(d)(3).
[47] All other agencies are encouraged to designate Evaluation Officers and implement this guidance.

General's staff or located in the Inspector General's (IG) office. While IGs play a very important role in agency oversight and accountability, the Evaluation Officer required by the Evidence Act has a different function.

III. Qualifications for Evaluation Officers

The Evaluation Officer shall be appointed without regard to political affiliation based on demonstrated, senior-level technical expertise in evaluation methods and practices and documented expertise to the disciplines of the agency. This includes advanced education and training in an evaluation-related field, direct experience in applying evaluation methods to study Federal programs and/or policies, and knowledge of current analytic techniques. Agencies shall ensure that they appoint or designate an Evaluation Officer with credibility in the range of relevant evaluation practices and methods, as well as appropriate expertise in the culture, disciplines, and policy areas of the agency. The Evaluation Officer must have the standing and authority to perform the functions listed below. Continuity of their leadership and the ability to oversee multi-year efforts are likewise important. Evaluation Officers should also have demonstrated ability to:

- Ensure that the agency maintains principles of scientific integrity throughout the evaluation process, including adherence to professional values and practices when conducting and using the findings from evaluation to maintain objectivity, clarity, and reproducibility and to insulate from bias, fabrication, falsification, censorship, or other threats to integrity;
- Ensure that rigorous evaluation is a priority that is not subordinated to other agency demands;
- Communicate effectively, build coalitions, and exert influence with political savvy among stakeholders within large organizations, between organizations and government entities (e.g., between state and Federal government bodies), and among data users and providers;
- Think strategically about allocation of evaluation resources and dissemination of evaluation findings to support agency business and mission needs;
- Communicate the findings of evidence-building activities to a range of stakeholder audiences; and
- Successfully manage organizational culture change.

The Evaluation Officer must report to a key agency official so that evaluation activities, including findings, can be integrated into decision-making processes. The Evaluation Officer must devote sufficient time to this role to meet the expectations and functions outlined in section 313 of the Evidence Act and reflected in this Memorandum.

IV. Responsibilities for Evaluation Officers

The Evaluation Officer shall have authority and responsibility for providing leadership over the agency's (or sub-agency's, operational division's, or bureau's) evaluation activities, and will be expected to perform the following functions:

- Serve as:
  - Agency champion for and educator of agency staff and leaders about evaluation, including what evaluation is, the value of conducting evaluations, how to discern high-quality evaluation from other types of analyses, and the importance of evaluation as a strategic investment;
  - Senior advisor to agency leaders on issues of evaluation policy and practice, such as designing and undertaking evaluations, interpreting results, and integrating evaluation findings into day-to-day agency operations, management processes, budgeting, strategic planning, and other decision-making;
  - Senior agency contact on evaluation for agency-wide and cross-cutting evaluation efforts, both with external stakeholders and in coordination with senior officials responsible for other agency functions, including officials responsible for implementing privacy policy, the Chief Data Officer, the Chief Information Officer, the Statistical Official, the Performance Improvement Officer, additional evaluation and analysis units and personnel in the agency, and others as appropriate;
  - Participant in the agency's Chief Operating Officer-led efforts to review progress on Agency Priority Goals and other management priorities to ensure that evidence is included and used appropriately;
  - Member of the agency Data Governance Body; and
  - Member of the interagency Evaluation Officer Council.

- Oversee or conduct:
  - Assessment of the coverage, quality, methods, effectiveness, objectivity, scientific integrity, and balance of the portfolio of evaluations, policy research, and ongoing evaluation activities of the agency, in consultation with other methodologists, such as the Statistical Official, when appropriate;
  - Improvement of agency capacity to support the development and use of evaluation, coordinate and increase technical expertise available for evaluation and related research activities within the agency, and improve the quality of evaluations and knowledge of evaluation methodology and standards;
  - Implementation of the forthcoming OMB guidance for program evaluation standards and best practices;
  - Establishment and implementation of an agency evaluation policy that affirms the agency's commitment to conducting rigorous, relevant evaluations and to using evidence from evaluations to inform policy and practice. The policy will provide the agency's stakeholders with a clear understanding of the expectations related to key principles, such as evaluation rigor, relevance, transparency, independence, and ethics;
  - Coordination, development, and implementation of the plans required under section 312 of the Evidence Act:

- Learning Agenda (evidence-building plan) in conjunction with the Agency Strategic Plan;
- Annual Evaluation Plan, submitted in conjunction with the Annual Performance Plan; and
- Capacity Assessment, included as part of the Agency Strategic Plan.

- Development of new or improvement of existing processes to integrate evaluation findings into agency decision-making and other functions;
- Management of agency-wide evaluation standards and requirements to ensure the scientific integrity of the agency's evaluation activities; and
- Use and dissemination of evaluation results throughout the agency and to the public, as appropriate.

Statistical Official

I. Background

Statistical expertise allows organizations to ensure that data are gathered, processed, and curated so as to produce statistical products with the highest standards of data quality while protecting confidentiality, privacy, and security. Data quality has multiple dimensions, including credibility and accuracy, timeliness and relevance to valuable decision-making processes, the objectivity with which data are produced, and their accessibility to multiple users at an appropriate level of clarity and detail. Applying statistical expertise involves the maintenance and development of policies that anticipate and address the needs of data users and providers, the continual advancement and adoption of statistical techniques to maximize the quality of statistical outputs, and the delineation of procedures to ensure that these policies and techniques are implemented in a rigorous and efficient manner.

II. Designation of Statistical Officials

By July 13, 2019, the head of **each of the 24 Federal agencies covered by the CFO Act** must designate a statistical official to advise on statistical policy, techniques, and procedures.[48] Within Federal agencies that contain one or more principal statistical agencies, the mantle of leadership to cultivate and apply statistical expertise is worn by those principal statistical agencies. Statistical agencies have developed and demonstrated a high level of statistical expertise over many decades as the development and implementation of statistical surveys advanced and was expanded to incorporate a wide array of non-survey data from administrative, commercial, sensor-based, and other sources. They continue to lead as the field grows and develops methodologies to improve the quality and efficiency of statistical data uses. Statistical agency heads provide oversight and advice to the leadership of their parent agencies to promote and optimally balance the ideals of data quality and confidentiality. As champions of these ideals,

[48] 5 U.S.C. § 315(a) ("The head of each agency shall designate the head of any statistical agency or unit within the agency, or in the case of an agency that does not have a statistical agency or unit, any senior agency official with appropriate expertise, as a statistical official to advise on statistical policy, techniques, and procedures. Agency officials engaged in statistical activities may consult with any such statistical official as necessary.").

principal statistical agencies are a logical choice to play a broad role in overseeing the curation and use of their parent agencies' data assets. In agencies that do not contain principal statistical agencies, a variety of other advisory structures or personnel may play similar roles. The Evidence Act institutionalizes these roles by requiring each CFO Act agency to designate a Statistical Official. For agencies that house one of the 13 statistical agencies, the agency head must designate the head of a statistical agency as the Statistical Official.[49] Where one does not exist, an agency head should identify as a Statistical Official an individual who demonstrates high levels of expertise as described in the *Qualifications* section below. OMB expects agencies to designate Statistical Officials based on the qualifications they possess and functions they are to perform as described in the *Responsibilities* section below, and that the individuals' qualifications shall take preference over other considerations. The ability of the Statistical Official to have continued leadership and the ability to oversee multi-year efforts are likewise important for agencies to consider as they designate this Official.

The Statistical Official must have the standing and authority to perform the functions listed in the *Responsibilities* section below. The Official must have sufficient independence to meet the requirements of the Evidence Act and to carry out the responsibilities of section 302(a) of the Evidence Act.[50] The Statistical Official must devote sufficient time to this role to meet the expectations and functions outlined in sections 101 and 302 of the Evidence Act[51] and reflected in this Memorandum.

III. Qualifications for Statistical Officials

Each Statistical Official must have appropriate expertise. This includes:

- Demonstrated ability to plan, implement, and direct large-scale ongoing and new statistical programs;
- Demonstrated experience in research and statistics as evidenced by published papers, presentations at professional meetings, and national recognition as an authority in a statistical field;
- Demonstrated ability to build and maintain productive relationships with high-level government policy officials, academics, scholars in research organizations, officials in international organizations, and stakeholders;
- Outstanding communication and analytical capabilities;
- Knowledge of Federal privacy and confidentiality laws and regulations as they relate to the curation of data records, the conduct of data collection activities, and the production of

[49] *See id.* The 13 principal statistical agencies are the Bureau of Economic Analysis (BEA) in the U.S. Department of Commerce; Bureau of Justice Statistics (BJS) in the U.S. Department of Justice; Bureau of Labor Statistics (BLS) in the U.S. Department of Labor; Bureau of Transportation Statistics (BTS) in the U.S. Department of Transportation; Census Bureau in the U.S. Department of Commerce in the U.S. Department of Commerce; Economic Research Service (ERS) in the U.S. Department of Agriculture; Energy Information Administration (EIA) in the U.S. Department of Energy; National Agricultural Statistics Service (NASS) in the U.S. Department of Agriculture; National Center for Education Statistics (NCES) in the U.S. Department of Education; National Center for Health Statistics (NCHS) in the U.S. Department of Health and Human Services; National Center for Science and Engineering Statistics (NCSES) in the National Science Foundation; Office of Research, Evaluation, and Statistics (ORES) in the Social Security Administration; and Statistics of Income Division (SOI) in the Internal Revenue Service.

[50] 44 U.S.C. § 3563(a).

[51] 5 U.S.C. § 311 *et seq.*; 44 U.S.C. § 3561 *et seq.*

one-time and recurring statistical products;

- Broad and comprehensive technical knowledge of statistical principles, theory and methodology, and their application to issues in the agency's subject area; and
- Extensive knowledge of statistical programs and related functions and responsibilities of entities within the agency, as well as a thorough knowledge of statistical programs of other government agencies.

IV. Responsibilities of Statistical Officials

The Statistical Official will direct and coordinate statistical policy for the agency and will be expected to perform the following functions:

- Serve as the:
  - Agency champion for data quality to ensure data relevance (e.g., by validating that data are appropriate, accurate, objective, accessible, useful, understandable, and timely), harness existing data (e.g., by identifying data needs and reusing data if possible), anticipate future uses (e.g., by building interoperability of data from its inception), and demonstrate responsiveness (e.g., by improving data collection, analysis, and dissemination with ongoing input from users and stakeholders);[52]
  - Agency champion for confidentiality protection and appropriate data access for agency data collected with legal or other restrictions on use or release;[53]
  - Agency senior advisor for statistical policy, including establishing policies to enable agencies to produce and disseminate relevant and timely statistical information, conduct credible and accurate statistical activities, conduct objective statistical activities, and protect the trust of information providers by ensuring the confidentiality and exclusive statistical use of their responses;[54]
  - Agency senior advisor for statistical techniques to ensure the use of techniques that provide optimal levels of data quality and confidentiality; and
  - Agency senior advisor for statistical procedures that implement desired policies and techniques systematically and efficiently.[55]

---

[52] *See* Office of Mgm't & Budget, Exec. Office of the President, OMB M-19-01, Request for Agency Feedback on the Federal Data Strategy, Federal Data Strategy, Principles 4-7 (2019), *available at* https://www.whitehouse.gov/wp-content/uploads/2018/10/M-19-01.pdf ("Conscious Design").

[53] *See id.* Federal Data Strategy, Principle 2 ("Exercise Responsibility").

[54] Section 302(a) of the Evidence Act requires statistical agencies and units to perform these functions through the application of policies, best practices and procedures, and requires agency heads to "enable, support, and facilitate" their performance of these responsibilities. 44 U.S.C. § 3563. Such policies, best practices, and procedures should also be promoted at the agency level.

[55] Section 101(a) of the Evidence Act requires the designated statistical official to "to advise on statistical policy, techniques, and procedures," and directs that "(a)gency officials engaged in statistical activities may consult with any such statistical official as necessary." 5 U.S.C. § 314(a). Section 101(a) further requires that "Each statistical official designated under subsection (a) shall serve as a member of the Interagency Council on Statistical Policy established under section 3504(e)(8) of title 44." 5 U.S.C. § 314(b).

- Oversee:
  - Development of agency data quality standards to ensure that quality standards described in the Information Quality Act and Paperwork Reduction Act are met for statistical products produced by any part of the agency, including the provision of metadata to meet stakeholder needs and the permission to use privacy-enhancing technologies whose use requires significant amounts of documentation; and
  - Development of agency confidentiality standards to appropriately safeguard sensitive information contained in the agency's data assets.

The Statistical Official is expected to play a significant role in the agency's data governance activities, such as serving on the Data Governance Body. The Statistical Official is also expected to collaborate and consult regularly with other senior leaders such as the CDO[56] and Evaluation Officer on issues such as statistical methodologies, data access, data acquisition and linkage, protecting confidential data, and providing input to the learning agenda.

According to section 101(a) of the Evidence Act, "(e)ach statistical official . . . shall serve as a member of the Interagency Council on Statistical Policy" (ICSP).[57] The ICSP, which is chaired by the Chief Statistician of the United States and coordinated within OMB's Office of Information and Regulatory Affairs (OIRA), will include the heads of each of the 13 principal statistical agencies, as well as the Statistical Official designated by the other CFO Act agency heads pursuant to the Evidence Act. [58]

---

[56] Section 202(e) of the Evidence Act specifies the functional relationship of the Statistical Official with the Chief Data Officer. *See* 44 U.S.C. § 3520(d)(1) ("To the extent necessary to comply with statistical laws, the Chief Data Officer of an agency shall delegate any responsibility under subsection (c) to the head of a statistical agency or unit (as defined in section 3561) within the agency."); *id.* § 3520(d)(2) ("To the extent permissible under law, the individual to whom a responsibility has been delegated under paragraph (1) shall consult with the Chief Data Officer of the agency in carrying out such responsibility."); *id.* § 3520(d)(3) ("The Chief Data Officer of the agency shall defer to the individual to whom a responsibility has been delegated under paragraph (1) regarding the necessary delegation of such responsibility with respect to any data acquired, maintained, or disseminated by the agency under applicable statistical law.").

[57] 5 U.S.C. § 314(b).

[58] *See supra* note 43 for a listing of the 13 principal statistical agencies.

APPENDIX D: FURTHER GUIDANCE ON ASSESSMENTS AND PLANNING

Annual Evaluation Plan

I. Purpose

The Evidence Act requires agencies to develop an Annual Evaluation Plan to be submitted in conjunction with the agency's Annual Performance Plan. These evaluation plans, per the Evidence Act, describe the evaluation activities the agency plans to conduct in the fiscal year following the year in which the performance plans are submitted and should include "significant" evaluations related to the learning agenda and any other "significant" evaluation, such as those required by statute.[59] The significance of an evaluation study should be defined by each agency and take into consideration factors such as the importance of a program or funding stream to the agency mission; the size of the program in terms of funding or people served; and the extent to which the study will fill an important knowledge gap regarding the program, population(s) served, or the issue(s) that the program was designed to address. Agencies should clearly state their criteria for designating evaluations as "significant" in their plans.

Evaluation plans offer agencies the opportunity to plan and document their approach to evaluation and, in particular, how their intended evaluations will support the agency's learning agenda. These plans will describe the systematic collection and analysis of information about the characteristics and outcomes of programs, projects, and processes as a basis for judgments, to improve effectiveness, and/or inform decision-makers about current and future activities. Annual Evaluation Plans support effective and efficient government by requiring agencies to think proactively and methodically about how they will use evaluation to help them operationalize and implement the activities needed to answer the agency's key questions as laid out in the learning agenda. Further, the publication of these plans supports more effective government as it allows the public to understand what an agency plans to evaluate and how it plans to do so. Publication also holds the agency accountable to undertake those activities. As evaluation is only one of many types of evidence that agencies will use to answer the priority questions identified in their learning agendas, the Annual Evaluation Plan is meant to help agencies chart their evaluation activities, and thus should reflect an agency's needs, priorities, and structure.

A number of agencies already use evaluation plans or comparable documents internally as a way to organize and monitor their evaluation activities. However, few agencies publish these plans to the extent required in Section 101 of the Evidence Act.[60] The Evidence Act, for the first time, requires agencies to create these documents consistently and to publish them. Importantly, this requirement to publish Annual Evaluation Plan will foster greater accountability and transparency in Federal evaluation activities and, ideally, the results of those activities. Having a written evaluation plan will foster openness and encourage agreement with and support of the purpose, use, and users of the evaluation results. OMB recognizes that each agency is different,

[59] Per section 101(a) of the Evidence Act, "[t]he term 'evaluation' means an assessment using systematic data collection and analysis of one or more programs, policies, and organizations intended to assess their effectiveness and efficiency." 5 U.S.C. § 311(3).
[60] 5 U.S.C. § 312(b).

and that there will be no single approach or structure for the Annual Evaluation Plan that will work for all agencies.

II. Creating an Annual Evaluation Plan

Requirements for an Annual Evaluation Plan

The Evidence Act requires CFO Act agencies to issue an Annual Evaluation Plan concurrent with the Annual Performance Plan. Additionally, OMB strongly encourages non-CFO Act agencies, as well as sub-agencies, operational divisions, bureaus within CFO Act agencies to develop and implement their own evaluation plans that tie into and are consistent with, but not limited by, the agency-wide plan as appropriate.

Management and Leadership of the Process

Per the Evidence Act, the agency's designated Evaluation Officer shall lead, coordinate, develop, and implement the Annual Evaluation Plan. The Evaluation Officer shall play a leading technical role in the development and implementation of the Annual Evaluation Plan at the agency level and also support efforts to develop evaluation plans at the sub-agency, operational division, or bureau level, particularly as the activities in those plans relate to the agency-wide evaluation plan and learning agenda. Depending on the agency, other senior leaders may play an important role in creating the Annual Evaluation Plan. Agency leaders are also critical partners in developing these plans, as their support and buy-in to planned evaluation activities are essential for their success.

Stakeholder Engagement

Agencies should consult with internal and external stakeholders as they develop and implement their initial Annual Evaluation Plan and those that will follow. This engagement will likely differ by agency depending on its needs, stakeholders, evaluation activities, etc. Internal consultation within the agency should, at a minimum, include those offices and staff that have a role in either undertaking evaluations or using their results. OMB also encourages broader consultation with additional stakeholders to the extent feasible and appropriate. OMB recognizes that extensive consultation on an annual basis may be challenging, and urges agencies to undertake processes to engage stakeholders as effectively and efficiently as possible. The process of stakeholder consultation, particularly within an agency, on evaluation plans supports collaboration and a sense of shared purpose, which increases the utility of evaluation findings to improve program effectiveness for the people and communities served.

Timing of Activities to be Included in the Plan

The Annual Evaluation Plan will describe the evaluation activities the agency intends to conduct based on the learning agenda (discussed further in Appendix B) and other statutory mandates during the fiscal year following the year that the plan is submitted (i.e., for plans that outline evaluation activities for FY 2022, agencies will submit draft plans to OMB in FY 2020 with

posting of final Annual Evaluation Plans in February 2021). Following the initial submission of the Annual Evaluation Plan, agencies can use future submissions to update and revise previously planned evaluation activities based on work conducted and new developments.

Content of the Annual Evaluation Plan

Agencies are encouraged to create Annual Evaluation Plans that reflects the agency's needs and activities. The plan should not be a laundry list of agency evaluation activities. Rather, it should explain how, taken together, the planned evaluation activities help to answer the priority evaluation questions identified in the learning agenda, and either build upon or lay the foundation for other evidence-building activities. At a minimum, an agency's Annual Evaluation Plan shall describe the elements outlined below.

Questions to Be Answered. Annual Evaluation Plans shall describe the key questions to be addressed by each significant evaluation study or phase of an existing evaluation study that the agency plans to begin in the next fiscal year (i.e., the time period covered by the Annual Evaluation Plan).[61] In discussing key questions, evaluation plans may necessarily need to describe a program's purpose, goals, and objectives, as well as discuss how program activities are linked to their intended effects. As appropriate, agencies may consider including program logic models in their evaluation plans to visually depict how a program being evaluated is expected to function and achieve its goals, specifying the program's inputs, activities, outputs, and outcomes. In this section, agencies should also discuss any evaluation activities that relate to its proposed regulatory actions in the Unified Agenda of Federal Regulatory and Deregulatory Actions, recognizing that these activities often need to occur well before the development of economically significant regulatory actions. To the extent that earlier evaluation activities influence the activities proposed in the evaluation plan, those should also be mentioned (e.g., revisions to evaluation questions based on a review of preliminary findings).

Information Needed for Evaluations. Annual Evaluation Plans shall describe the key information that will be used in the evaluations outlined in the plan. Specifically, agencies shall note whether they will undertake new information collections as part of the evaluation studies discussed or if they will acquire existing information for those evaluations.

Methods to Be Used. Annual Evaluation Plans shall describe the methods that agencies intend to use for the evaluations. To the extent practicable, agencies shall articulate the evaluation design (e.g., experimental design or randomized controlled trial, quasi-experimental design, pre-post design, implementation study). As appropriate, agencies may also discuss any other analytic considerations, such as planned subgroups of interest. OMB recognizes that providing this level of detail in advance of the actual initiation of evaluation activities may pose challenges for some agencies, particularly if they use independent, third-party organizations to conduct program evaluations and rely on those organizations to provide expert opinions on evaluation designs. Nevertheless, it is OMB's expectation that in undertaking evaluations, agencies will use the most

[61] The significance of an evaluation study should be defined by each agency and take into consideration factors such as the importance of a program or funding stream to the agency mission, the size of the program in terms of funding or people served, the extent to which the study will fill an important knowledge gap regarding the program, population(s) served, or the issue(s) that the program was designed to address. Agencies should clearly state their criteria for designating evaluations as "significant" in their plan.

appropriate method for the research question being asked. To that end, agencies may include methods that are most appropriate to answer the key questions included in evaluation plans, with the expectation that agencies will update any methods in future iterations of the Annual Evaluation Plan.

Anticipated Challenges. To the extent feasible and appropriate, agencies should discuss anticipated challenges posed by the evaluations included in the Annual Evaluation Plan. For instance, agencies may anticipate that following participants for several years to measure the long-term impacts of a program or intervention will be challenging, particularly if the population being studied is mobile. In this case, the agency might discuss ways to address sample attenuation. Conversely, agencies may encounter unexpected challenges that necessitate revisions to previously submitted evaluation plans.

Dissemination. Central to an agency's plans for evaluation activities is how the agency proposes to disseminate and use the results of those activities. The Evidence Act is clear that agencies should enhance their capacity to build and use evidence. Thus, agencies should think about and plan for how they will use evaluation results in making decisions about the programs, policies, and regulations of the agency before they begin evaluations and not as an afterthought. To the extent feasible, agencies' Annual Evaluation Plans should include discussion of how they intend to disseminate and use results for program, policy, and regulatory decision-making, in accordance with applicable law and policies governing the collection, use, and disclosure of data and information.

OMB recognizes that forecasting evaluation activities in advance, including the information described above, may be challenging. In their Annual Evaluation Plans, agencies should address the above categories of information in the level of detail that is feasible and appropriate given other considerations, such as availability of funding, procurement processes, data needs, and related matters. Agencies should be mindful of other laws relating to these areas, including the Antideficiency Act, the Federal Acquisition Regulation, agency-specific acquisition regulations, and any other applicable laws.

As agency learning agendas are expected to include a range of methods and types of evidence (e.g., foundational fact finding, performance measurement, policy analysis, and program evaluation) that could be brought to bear to answer the priority questions identified, it is understood that evaluation will only be one of those methods and be relevant for answering only some of the identified questions. The Evidence Act requires agencies to provide information on significant evaluation activities planned. At a minimum, it is OMB's expectation that agencies will include program evaluation activities in their Annual Evaluation Plans. However, to the extent that agencies would like to provide context for their evaluation plan by describing other evidence-building activities they plan to undertake, they are encouraged to do so.

Capacity Assessment

The requirement to carry out a capacity assessment applies to the 24 Federal agencies covered by the CFO Act. Non-CFO Act agencies, as well as sub-agencies, operational divisions, bureaus within CFO Act agencies are strongly encouraged to carry out a capacity assessment as

appropriate. The capacity assessment, per the Evidence Act, requires that agencies provide a list of existing activities (e.g., programs, initiatives, etc.) and operations (e.g., administrative and support tasks) that are being evaluated or analyzed.[62] Led by the Evaluation Officer, it must also include a determination of the extent to which the agency's evaluations, research and analysis efforts, and related activities are appropriate in terms of:

- Supporting agency needs;
- Balancing agency needs for learning and management, performance and strategic management, interagency and private sector coordination, and oversight and accountability; and
- Using appropriate methodologies.

Finally, the Capacity Assessment must determine current agency capacity for:

- Planning and implementing evaluation activities, disseminating best practices and findings, and incorporating employee views and feedback; and
- Carrying out capacity-building activities in order to use evaluation research and analysis approaches and data in the day-to-day operations.

The Capacity Assessment will provide senior officials with information needed to fulfill the Evidence Act's intent to improve the agency's ability to support the development and use of evaluation, coordinate and increase technical expertise available for evaluation and related research activities within the agency, and improve the quality of evaluations and knowledge of evaluation methodology and standards.

Agencies are encouraged to conduct their Capacity Assessment using a format and process best suited to their agency context but which produces an understanding of their agency's strengths and weakness and promotes the planning for and development of effective capacity-building activities. The Capacity Assessment is expected to provide agencies with a baseline against which they can measure improvements to the coverage, quality, methods, effectiveness, and independence of their agency statistics, evaluation, research, and analyses. OMB will provide additional information on the content of this assessment in future communications.

[62] 5 U.S.C. § 306(a)(8)

APPENDIX E: IMPLEMENTATION RESOURCES FOR AGENCIES

OMB recognizes that agencies may need additional resources and support to implement the Evidence Act requirements addressed in this guidance. Below are several resources that agencies are encouraged to consult and use as they implement these requirements.

Designated Official Orientation and Ongoing Training

As noted in the Memo, all designated officials (i.e., Chief Data Officers, Evaluation Officers, and Statistical Officials) must attend an Evidence Act orientation hosted by OMB in **September 2019** focused on how to undertake and operationalize these positions. It is OMB's expectation that this orientation will provide concrete tools for these designees, as well as an opportunity to build a network for peer learning.

Federal Data Strategy Tools

The Federal Data Strategy is currently developing a series of tools that agencies can use to support a range of data-related activities. As they become available, these tools will be available at https://resources.data.gov.

Evidence and Evaluation Community of Practice

The OMB Evidence and Evaluation Community page on MAX (*available at* https://community.max.gov/x/iA_OJQ) includes a curated library of materials to support agencies in developing learning agendas, writing annual evaluation plans, conducting capacity assessments, and general program evaluation activities, including:

- Example agency documents (e.g., learning agendas, evaluation plans, assessments);
- Toolkits and other reference tools;
- Training opportunities; and
- Other materials related to Evidence Act implementation.

Title II Open data Act

SEC. 202. OPEN government data.

(a) Definitions.—Section 3502 of title 44, United States Code, is amended—

(1) in paragraph (13), by striking "; and" at the end and inserting a semicolon;

(2) in paragraph (14), by striking the period at the end and inserting a semicolon; and

(3) by adding at the end the following new paragraphs:

by adding at the end the following new paragraphs:

"(15) the term 'comprehensive data inventory' means the inventory created under section 3511(a), but does not include any underlying data asset listed on the inventory;

"(16) the term 'data' means recorded information, regardless of form or the media on which the data is recorded;

"(17) the term 'data asset' means a collection of data elements or data sets that may be grouped together;

"(18) the term 'machine-readable', when used with respect to data, means data in a format that can be easily processed by a computer without human intervention while ensuring no semantic meaning is lost;

"(19) the term 'metadata' means structural or descriptive information about data such as content, format, source, rights, accuracy, provenance, frequency, periodicity, granularity, publisher or responsible party, contact information, method of collection, and other descriptions;

"(20) the term 'open Government data asset' means a public data asset that is—

"(A) machine-readable;

"(B) available (or could be made available) in an open format;

"(C) not encumbered by restrictions, other than intellectual property rights, including under titles 17 and 35, that would impede the use or reuse of such asset; and

"(D) based on an underlying open standard that is maintained by a standards organization;

"(21) the term 'open license' means a legal guarantee that a data asset is made available—

"(A) at no cost to the public; and

“(B) with no restrictions on copying, publishing, distributing, transmitting, citing, or adapting such asset;

“(22) the term ‘public data asset’ means a data asset, or part thereof, maintained by the Federal Government that has been, or may be, released to the public, including any data asset, or part thereof, subject to disclosure under section 552 of title 5; and

“(23) the term ‘statistical laws’ means subchapter III of this chapter and other laws pertaining to the protection of information collected for statistical purposes as designated by the Director.”

>>>>>>>>>>>>>>>>>>

§ 3511. Data inventory and Federal data catalogue

“(a) Comprehensive data inventory.—

“(1) IN GENERAL.—In consultation with the Director and in accordance with the guidance established under paragraph (2), the head of each agency shall, to the maximum extent practicable, develop and maintain a comprehensive data inventory that accounts for all data assets created by, collected by, under the control or direction of, or maintained by the agency. The head of each agency shall ensure that such inventory provides a clear and comprehensive understanding of the data assets in the possession of the agency.

“(2) GUIDANCE.—The Director shall establish guidance for agencies to develop and maintain comprehensive data inventories under paragraph (1). Such guidance shall include the following:

“(A) A requirement for the head of an agency to include in the comprehensive data inventory metadata on each data asset of the agency, including, to the maximum extent practicable, the following:

“(i) A description of the data asset, including all variable names and definitions.

“(ii) The name or title of the data asset.

“(iii) An indication of whether or not the agency—

“(I) has determined or can determine if the data asset is—

“(aa) an open Government data asset;

“(bb) subject to disclosure or partial disclosure or exempt from disclosure under section 552 of title 5;

“(cc) a public data asset eligible for disclosure under subsection (b); or

“(dd) a data asset not subject to open format or open license requirements due to existing limitations or restrictions on government distribution of the asset; or

“(II) as of the date of such indication, has not made such determination.

“(iv) Any determination made under section 3582, if available.

“(v) A description of the method by which the public may access or request access to the data asset.

“(vi) The date on which the data asset was most recently updated.

“(vii) Each agency responsible for maintaining the data asset.

“(viii) The owner of the data asset.

“(ix) To the extent practicable, any restriction on the use of the data asset.

“(x) The location of the data asset.

“(xi) Any other metadata necessary to make the comprehensive data inventory useful to the agency and the public, or otherwise determined useful by the Director.

“(B) A requirement for the head of an agency to exclude from the comprehensive data inventory any data asset contained on a national security system, as defined in section 11103 of title 40.

“(C) Criteria for the head of an agency to use in determining which metadata required by subparagraph (A), if any, in the comprehensive data inventory may not be made publicly available, which shall include, at a minimum, a requirement to ensure all information that could not otherwise be withheld from disclosure under section 552 of title 5 is made public in the comprehensive data inventory.

“(D) A requirement for the head of each agency, in accordance with a procedure established by the Director, to submit for inclusion in the Federal data catalogue maintained under subsection (c) the comprehensive data inventory developed pursuant to subparagraph (C), including any real-time updates to such inventory, and data assets made available in accordance with subparagraph (E) or any electronic hyperlink providing access to such data assets.

“(E) Criteria for the head of an agency to use in determining whether a particular data asset should not be made publicly available in a manner that takes into account—

“(i) risks and restrictions related to the disclosure of personally identifiable information, including the risk that an individual data asset in isolation does not pose a privacy or confidentiality risk but when combined with other available information may pose such a risk;

“(ii) security considerations, including the risk that information in an individual data asset in isolation does not pose a security risk but when combined with other available information may pose such a risk;

“(iii) the cost and benefits to the public of converting the data into a format that could be understood and used by the public;

“(iv) whether the public dissemination of the data asset could result in legal liability;

“(v) whether the data asset—

> “(I) is subject to intellectual property rights, including rights under titles 17 and 35;
>
> “(II) contains confidential business information, that could be withheld under section 552(b)(4) of title 5; or
>
> “(III) is restricted by contract or other binding, written agreement;

“(vi) whether the holder of a right to such data asset has been consulted;

“(vii) the expectation that all data assets that would otherwise be made available under section 552 of title 5 be disclosed; and

“(viii) any other considerations that the Director determines to be relevant.

“(F) Criteria for the head of an agency to use in assessing the indication of a determination under subparagraph (A)(iii) and how to prioritize any such subsequent determinations in the strategic information management plan under section 3506, in consideration of the existing resources available to the agency.

“(3) REGULAR UPDATES REQUIRED.—With respect to each data asset created or identified by an agency, the head of the agency shall update the comprehensive data inventory of the agency not later than 90 days after the date of such creation or identification.

“(b) Public data assets.—The head of each agency shall submit public data assets, or links to public data assets available online, as open Government data assets for inclusion in the Federal data catalogue maintained under subsection (c), in accordance with the guidance established under subsection (a)(2).

“(c) Federal data catalogue.—

“(1) IN GENERAL.—The Administrator of General Services shall maintain a single public interface online as a point of entry dedicated to sharing agency data assets with the public, which shall be known as the ‘Federal data catalogue’. The Administrator and the Director shall ensure that agencies can submit public data assets, or links to public data assets, for publication and public availability on the interface.

“(2) REPOSITORY.—The Director shall collaborate with the Office of Government Information Services and the Administrator of General Services to develop and maintain an online repository of tools, best practices, and schema standards to facilitate the adoption of open data practices across the Federal Government, which shall—

“(A) include any definitions, regulations, policies, checklists, and case studies related to open data policy;

“(B) facilitate collaboration and the adoption of best practices across the Federal Government relating to the adoption of open data practices; and

“(C) be made available on the Federal data catalogue maintained under paragraph (1).

“(3) ACCESS TO OTHER DATA ASSETS.—The Director shall ensure the Federal data catalogue maintained under paragraph (1) provides information on how the public can access a data asset included in a comprehensive data inventory under subsection (a) that is not yet available on the Federal data catalogue, including information regarding the application process established under section 3583 of title 44.

Joe,

We'll need your help with this data collection exercise. You'll likely need to send each of the divisions their own rows of data so they can fill them out and send back to you. Once you've completed the data collection, please forward it to Rex for internal recording and sending it forward to NIH.

Please don't hesitate to get in touch with Rex or me if you have any questions.

Thanks!!!

Ivor

Cc: Shuler, Rex (NIH/NLM) [E] <shulerr@mail.nlm.nih.gov>; NIH IT Data Call <nihitdatacall@mail.nih.gov>
Subject: ACTION: Provide Public Facing Website Status – NLM [Due 08/02/19]

All,

HHS is requesting data on NIH's public facing websites in response to the requirements of the *21st Century Integrated Digital Experience* (IDEA) Act, which was signed into law on Dec. 20, 2018

The attached spreadsheet includes your IC's websites which were submitted to HHS in prior data calls.

Please review it for accuracy and make corrections and additions as necessary. Please do not include social media accounts, mobile apps, email lists or other digital communications tools. Your response should only include websites maintained and managed by your IC.

Please provide a single, coordinated response for your IC by COB Friday, August 2, 2019 to nihitdatacall@mail.nih.gov.

Please include ALL your IC's public facing websites, including any Scientific Databases and Applications. There is a column in the spreadsheet to identify them so that these sites will not be reported beyond the HHS level.

If you have questions about any of the individual elements, please contact NIH IT Data Call at nihitdatacall@mail.nih.gov.

Thanks!

Website Type	Name of Website	URL	Status	Hosting Server	Hosting Type	Platform (if platform is not available in the dropdown, please specify the platform in the comments)	Language (if open source)	Date of Last Update	On-Board (has the owner of the site been informed about the Guidelines?)	GM Guidance (Conform with requirements of Guidelines)	Archive/Storage (Is the government approved Records Disposal Schedule adhered to and how long is the data kept?)	Content Checks (Is there a review process in place to check the content before it is published?)	Search (Is there a search engine on the website that allows users to easily search content relevant to public use)	UI/UX (Does the site through an industry standard interface guideline)	Site structure clarities (Is it easy to navigate the website with clear sitemap and are different key management and citizen's centric services)	Transactional/Efficient and Secure (Allows users to complete digital transactions, e.g. Submission of forms, Payment, Data Transmission, etc.)	Others (1. Is the transactional and usable on a personal mobile device) (2. Is there a page count specified for the website) (3. Is the website hosted in-house or outsourced to a vendor)	Scientific Database Application (Does the website's content fall under any scientific database application)	Notes (i.e. recommended by who)

The Strategic Workforce group met and reviewed a consolidated Excel workbook of NLM offerings based on lists currently in use by LO, ODPL and OCCS.. The goal is to establish a consistent list all groups can use as a reference point. The group reviewed missing data and entries with questions.

Missing data:

- 3 APIs (identified by David Gillikin)
- Need to include each individual TOXNET resource

The group reviewed entries with questions about primary organization (division) responsible, offering point of contact, other notes.

FMP will revise the list and send out for feedback before the group's July 31 meeting. Jeanne Goshorn is to be invited to the next meeting.

Questions raised by the group were:

- What are the expected timelines for working on the list?
- Should we look at the full Library Operations list?
- We need to develop a list of criteria for examining the suite of offerings

Attachments: Consolidated List of Offerings STATUS 26 JULY 2019.xlsx

Good evening everyone,

Attached is the updated version of the consolidated list of offerings. I have added the specific TOXNET resources included in the list I received from Grace that ODPL has been using as part of the sunsetting process. David and his team have also identified 12 apps that I included at the bottom of the list but did not get a chance to integrate just yet. I did include a column where I was able to identify a recent or imminent funding or POP date. The intent would be to discuss these items on Wednesday, along with the status of the green and red items. Please keep in mind our goal is to move forward with the evaluation of and decisions regarding our portfolio of projects.

Kathel, if I might ask, could you upload this version to Sharepoint? I continue to have connectivity issues.

David, Amanda and Stacey, could you (or a designated team member) review the list, particularly the critical items, to see if you would make any additions or changes? If you could also be prepared to discuss the Red and Green items assigned to your groups by Wednesday that would be great. David, as I mentioned in our earlier messages, I am happy to work with your team member to update the information regarding the apps.

Thank you all so much and have a wonderful weekend!!

Subject: RE: NLM/FMP Strategic Workforce - 7/24/19 meeting notes

Hi David,

Thank you for the note. Based on the conversation yesterday, I do expect we will need to discuss specific products during next week's meeting. The following are the three tasks we identified for the group to work on. I think we can get through the first two next week, and both of those require specific project knowledge. The third item can then be completed in the following meeting. Please let me know if you have concerns with this approach.

Proposed Agenda Items

1. Discuss projects that have an upcoming decision point or require guidance (e.g., contract or funding date in August) and decide on next steps (e.g., fund for one more year, begin sunsetting, fund incrementally)
2. Review green, red and purple products to confirm they are proceeding as planned
3. Decide on criteria, process and timeline for evaluating offerings

I am making the updates to the consolidated list we discussed yesterday. I will do an initial check of the products to see which one may have immediate dates or other issues identified that will require discussion. I will include a column indicated which ones might require discussion and why and share the revised document with the team by COB tomorrow.

Thanks,

Carolyn Kurowski

[EXTERNAL]
Do we know the agenda for next week's meeting? I need to know whether or not to invite Jeanne to attend. If we are going to talk about specific products then we will need her there. If we are going to talk about review criteria for examining the list of offerings, she may not be needed.

Thanks
David

Hazardous Substances Data Bank (HSDB)	purple	Specialized Information Services (SIS) / Biomedical Information Services Branch	Library Operations (LO)/BSD	Jeanne Goshorn	Jeanne Goshorn	Content developed in BSD, moving to PubChem in TOXNET integration with NCBI platforms in 2020		Had recent recompete dates; critical is those did not occur
HazMap	Red	Specialized Information Services (SIS) / Office of the Director / Office of Clinical Technology	Library Operations (LO)/BSD	Pertti Hakkinen	Pertti Hakkinen, David Gillikin, Jeanne Goshorn, Hua Chang	No longer aligned with NLM priorities or mission needs, Other: License ends in July 2019 and current plan is not to renew it. However, please note that Haz-Map is used within the Federal Government (e.g., NIH OD Division of Occupational Health and Safety staff, OSHA, CPSC, DoD, etc.) and by others. NIH's Division of Occupational Health and Safety lists it as Federal resource https://www.ors.od.nih.gov/sr/dohs/safety/workplace/Pages/Federal-	In development(?)	
HealthReach	purple	Specialized Information Services (SIS) / Outreach and Special Populations Branch	PSD	Laura Bartlett	Stephanie Morrison	Under study at LO to determine if integrating into Medlineplus. Need to figure out resources/funds - this is the content/Outreach part? Very little IT, done by FTE at OCCS; talk to Laura--what should happen? healthreach integrated into Med+; need task manager; OCCS will need support for IT; Nicole is asking for an estimate for support of HR - Laura replied: Health Reach will be integrated to MedlinePlus. Her involement will be ended in December 2019. Vivian		Funding date coming up.

Household Products Database	yellow	Specialized Information Services (SIS) / Office of the Director / Office of Clinical Technology	PSD	Pertti Hakkinen	Bert Hakkinen	Lucie Chen was previous owner; PSD and BSD need to decide		
Integrated Risk Information System (IRIS)	Red	Specialized Information Services (SIS) / Office of the Director / Office of Clinical Technology	Library Operations (LO)/BSD	Pertti Hakkinen	Jeanne Goshorn	TOXNET information has migrated to PubChem, PubMed and Bookshelf page will be posted on TOXNET transition page, will include the sunset notice and a link to IRIS page at EPA. Retire in fall 2019; remove from NLM products &service list; needs a sunset plan	In development(?)	
International Toxicity Estimates for Risk (ITER)	purple	Specialized Information Services (SIS) / Office of the Director / Office of Clinical Technology	Library Operations (LO)/BSD	Pertti Hakkinen	Colette Hochstein, Pertti Hakkinen, David Gillikin, Jeanne Goshorn	Other: The plan is to sunset ITER in the Fall of 2019 if the legal and logistical issues cannot be resolved between the University of Cincinnati and TERA. ITER will be . removed from the NLM Products & Services list. TOXNET information has migrated to PubMed, PubChem and Bookshelf will be posted on TOXNET transition page with help for ITER users along with the	Sunsetting	
LactMed	purple	Specialized Information Services (SIS) / Office of the Director / Office of Clinical Technology	Library Operations (LO)/BSD	Lucie Chen	Bert Hakkinen	Needs a long term discussion- being integrated into bookshelf. Issue of an APP. Needs COR - Bert? Very popular. Should not require significant time. Author is highly motivated and the tool is already integrated into bookshelf - working on recompetition now. Who manages other Bookshelf resources? Should it go there in the future? What is the process for resources going to Bookshelf, what is the model? Note: Even though this offering can be used by consumers, the content is NOT developed for consumers. May PSD would be an advisor in the future. Mobile apps (iPhone and Android)		Funding and contract date in July

LiverTox	yellow	Specialized Information Services (SIS) / Office of the Director / Office of Clinical Technology	Library Operations (LO)/BSD	Pertti Hakkinen	Pertti Hakkinen	Livertox will be taken over by NCBI bookshelf. The contents on the SIS server were updated on July 1st for the very last time. Ziying handed the files over to NCBI at the beginning of the month. It will take a few months for them to convert and host Livertox. Meanwhile, we will keep livertox running at NLM.		
NIH Disaster Research Response Program (DR2)	yellow	Specialized Information Services (SIS) / Disaster Information Management Research Center	Library Operations (LO)/PSD	Stacey Arnesen	Stacey Arnesen	Stacey to talk to NIEHS collabortor about the plan to sunset and determine other collaborations - Yellow not red?

	Criticality	Contract (Vendor)	Review Timeline	Description	Period of Performance	Recompetition by	Obligation date of funding	COR	Receiving Division	Notes	Meeting Attendees
CHEM/TOX	3	HSDB content building (Technical Research International, "TRI")		TRI funding to add new and update existing HSDB records and for database enhancement including adding new data, features, fields, and more. Funding includes management of Scientific Review Panel meetings (2 meetings/year).	7/2019 - 7/2020	Jul-2019	Jul 2019; Jan 2020	Bert Hakkinen	LO - BSD	Jeanne and Bert - Looking at reimagining this one NCBI, they already working on it. This is an area where they lost a lot of staff and they will need to do the work. There are contractors supporting who can do the curating. - **Is there an option to give them a position to support this work?**	
CHEM/TOX	3	HSDB content building (Syracuse Research Corp, "SRC")		SRC funding to add new and existing HSDB records for environmental fate section and support database enhancement for related fields.	5/2019 - 5/2020	May-2019	May 2019; Nov 2019	Bert Hakkinen	LO - BSD	Jeanne and Bert - Looking at reimagining this one NCBI, they already working on it. This is an area where they lost a lot of staff and they will need to do the work. There are contractors supporting who can do the curating. - **Is there an option to give them a position to support this work?**	
CHEM/TOX	2	ChemID system development (DS Federal)	Q4 FY2019	DSFederal funding to support continued development and maintenance of applications and database maintenance.	9/2019-9/2020	Sep-2019	Sep 2019	Ying Sun	OCCS or BSD?	COR going to OCCS and will continue to play that role; Content BSD - Content - New Chemist (not full time - 70%) and Jeanne -	
CHEM/TOX	2	ChemID content building (Cygnus)	Q4 FY2019	Cygnus funding to support chemical structure, data integration and updates for ChemIDplus	5/2019-5/2020	Apr-2019	May 2019; Jan 2020	Ying Sun	OCCS or BSD?	Content BSD - Content - New Chemist (not full time - 70%) and Jeanne - COR going to OCCS	
CHEM/TOX	2	ChemID 3-D chemical structure (Scientific Thinking)	Q4 FY2019	Funding for 3D structure support and integration activities. Contractor Mitch Miller works closely with PubChem Team.	9/2019-9/2020	Sep-2021	Sep-2019	Ying Sun	OCCS or BSD?	Content BSD - Content - New Chemist (not full time - 70%) and Jeanne - COR going to OCCS	
CHEM/TOX	2	ChemID: Astrix Software license (Biovia / Astrix)	Q4 FY2019	Biovia software licence for chemical structure software	8/2019-8/2020	Aug-2019	Aug-2019	Ying Sun	OCCS or BSD?	Content BSD - Content - New Chemist (not full time - 70%) and Jeanne - COR going to OCCS	
CHEM/TOX	2	ChemID Oracle database license	Q4 FY2019	Oracle database management system for ChemID data, licensed through OCCS	12/2018 - 12/2019			Phillip Thomas, Florence Chang	OCCS or BSD?	Content BSD - Content - New Chemist (not full time - 70%) and Jeanne - COR going to OCCS	
CHEM/TOX	3	LactMed (Phil Anderson)		Content creation and update of the LactMed database	7/2019 -7/2020	Jul-2019	Jul 2019	Lucie Chen	LO - BSD?	**Needs COR - Bert?** Very popular. Should not require significant time. Author is highly motivated and the tool is already integrated into bookshelf - working on recompetition now. Who manages other Bookshelf resources? Should it go there in the future?	
CHEM/TOX	3	Household Product Database (Henry DeLima)	Q3-Q4 FY2019	License of the content of the Household Product Database, a database on the health effects from exposure to the chemical ingredients in the household products	12/2018-12/2019	Dec-2021	Dec 2018	Lucie Chen	LO - BSD	**Needs COR - Bert?** Also very popular, so it will be evaluated. Looking to see if CPSE (Consumer Products Safety Excellence) will take it over.	
CHEM/TOX	1	HazMap (Jay Brown)	Q3-Q4 FY2019	License of the content of the HazMap database, a occupational exposure and diseases database	7/31/2019 -8/1/2020	Jul-2020	Jul 2019	Lucie Chen	Sunset	BSD - Bert is trying to find a new home, can't be added to bookshelf because of how it is structured. Contract ends in July...needs the Sunset form. **ISSUES**	
CHEM/TOX	3	ITER (Univ of Cincinnati)	Q FY2019	License of the content of the International Toxicity Estimates for Risk (ITER)	4/2019 - 4/2020	Apr-2021	Apr 2019	Bert Hakkinen	LO - BSD	Bert COR - Eventually integrated into Bookshelf; ownership of the contract is currently in question, will come down with TOXnet **ISSUES**	
CHEM/TOX	1	Poisindex emergency medical management (Truven Health) **(Not renewed yet as of March)**		License of the content of Poisindex from Truven Health	1/2019 - 1/2020	Jan-2019	Jan 2019	Jen Pakiam	NA - BSD or PSD?	Not renewed but in the process of renewing license, not sure where to go. Should Jen keep this one? Up for integration. Who holds "data" in LO?	
CHEM/TOX	3	SIS and TOXNET computer system/IT support (ICF)		Contract for the main IT contract with ICF International for providing SIS computer system administration and information system development support.	This contract will end Sept, 2019. Contractors will go to OCCS. $800,000 funding goes to OCCS in September, 2019	Not going to re-compete	Sep 2019	Florence Chang	OCCS	COR Wei Ma, Supports 3.5 contractos, contract will end in Sept. Plans around transitioning of systems between now and Sept.	
CHEM/TOX	3	TOXNET/SSEUS Content Management System (Jeffery System)	Q4 FY 2019	Support the data entry and editing system and database maintenance for TOXNET databases, including HSDB, LactMed, and ITER	7/2019 - 7/2020	Jun-2019	Jul 2019	Phillip Thomas	OCCS	COR Wei Ma, setting up the recompete - will be done by July.	
DIMRC	3	Disaster Info Support (ICF)	Q2 FY2020	Includes support for librarian and computer programmer to support Disaster Lit, DIMRC web site, Disaster health informatics and communication innovation initiatives (training, communication)	9/2019 - 9/2020	Sep-2019	Sep 2019	Stacey Arnesen	LO - PSD	Siobhan will be task manager; broad task for IT and content; other innovation projects (Victor); genernal DIMRC website and Dis Lit. CMS, production and staging is at NLM. Programmer offsite, Librarian onsite (can change); will fund this POP	
DIMRC	1	WISER (Next Century)	Q1 FY2020	To support the development of the tool for responding to hazardous material incidents. For maintenance for all platforms with minor enhancements and data (content) updates, and prototyping of voice-activated assistant.	9/2019 - 9/2020	Sep-2019	Sep 2019	Jen Pakiam	LO **PSD or BSD?**	COR Jen - Bert is also part of the team (no hands on work - facilitator and promoter). Doesn't make sense long term in PSD - should all Tox stuff eventually land in BSD? Jen will be fully occupied; outside contractor does the program - does OCCS need to be looped in on this? this is expected to funded in Sep, recompete, offsite staff; mostly IT website; hosted at NLM; web version; 3 APPS; transitioning to PSD; we need to know about any funding for contractors that update the web pages; unclear about CMS	
DIMRC	3	NASEM Forums		NASEM Med Prep Forum & Action Collab on Disaster resesarch	9/2019 - 9/2020		Sep 2019	Stacey Arnesen	LO - PSD	transfer to PSD; NIH OD contract, we have a task on it to support NASEM; no IT, run forums; need to make a decision about contributing to this in 2019, Annual fee, Cheryl Field, should this be a membership - **Did this question get answered?**	
CHEM/TOX	1	CHEMM content creation and maintenance (AlphaTrac)	Q1 FY2020	Support the content creation and maintenance of Chemical Hazards Emergency Medical Management (CHEMM)	8/1/2019 - 7/31/2020	Aug-2019	Jul 2019	Bert Hakkinen	LO - PSD?	COR Bert- very involved; Jen marginally involved, considered one of the Disaster tools and closerly tied to WISER - where should it live? outside contractor does the program - does OCCS need to be looped in on this? Could work to have Jen take over COR and Bert as an advisor PSD -- Shifting from solo contract to task under a BPA - Get Jen involved in task	
DIMRC	1	REMM							LO - PSD?	Jen is the POC, Florence will be handing this off to her. Issues with the Content expert HHS funded contractor and with the technology; Florence has done the technology; funding by an interagency agreement by HHS. Dianne and David are aware of the situation - **ISSUE**	
Outreach	3	Special Population Resources Maintenance (ICF)	Q3 FY2019	Staffing, IT support for HealthReach, American Indian Health, Arctic Health	9/2018-9/2019	Sep-2019	Sep 2019	Laura Bartlett	NA LO-PSD?	Only one left is HealthReach; but the other ones are going, Being integrated into MedLinePlus. **Michael Honch in PSD as owner?**- Laura has some "Outreach" connections that involve getting content - she has a few tasks that she is doing through September - User studies (20-25% of her time until fully integrated)	
Outreach	**2**	Technical and Programmatic Support for Specific Population Projects (ICF)		Support services for outreach projects such as CHIC, Community Health Maps, etc	9/2018-9/2019	Sep-2019	Sep 2019	Janice Kelly	LO - OET?	Janice gave her suggestions; and will be meeting with Joyce and Amanda to discuss all Outreach programs; Prior John Scott had many Subcontracts for outreach awards, TBD; **need COR**	
Outreach	**2**	Maintenace and Development Support for SIS Programs Projects (ICF)		Provide comprehensive management and staffing services to the National Library of Medicine Specialized Information Services to support websites, services and activities	9/2018-9/2019	Sep-2019	Sep 2019	Nicole Scott	LO OET or PSD?	supports 2 contract staff - **Sent Amanda an note and she is interested; 80% DIMRC and 20% Outreach; - through Sept.**	
Outreach	**2**	EnHIP Chair		Support for the year long duties of the EnHIP chair	1/15/2019-1/14/2020	Jan-2019		Janice Kelly	LO - OET	**need COR; is this an annual PO? Laura?**	
Outreach	**2**	EnHIP senior advisor		Support for the year long duties of the EnHIP senior advisor Rueben Warren	9/20/2018-9/19/2019		9/20/2019	Janice Kelly	LO - OET	**need COR; is this an annual PO? Laura?**	

Outreach	**4**	Higher Ed Project		Project addressing the needs of minority serving institutions to use HSDB and other NLM resources	3/6/18-6/28/19	Jun-2019	6/28/2019	Cassandra Allen	Sunset	Totally Sunset at this point
Outreach	**2**	Training and Outreach Support Services for NLM (ICF)		Subaward to ORAU for training and outreach support, promotion and logistical support to SIS	9/2018-6/2019	Jun-2019	June 2019	Nicole Scott	LO - OET?	Being competed; **need COR? Will Nicole continue once funded or should this shift to OET?** Trying to put in a BPA - Nicole still involved and Jody is aware
Outreach	**2**	Training and Outreach Support Services for NLM (ICF)		OET will need to take over the separate LMS; what do they want to do with it. Resources have been developed				Nicole Scott	LO - OET?	No plans right now for LMS. **Ends in June or July?**
Outreach	**2**	Training and Outreach Support Services for NLM (ICF)		OET will need to take over exhibitingS; what do they want to do with it. Resources have been developed				Nicole Scott	LO - OET?	No plans right now for exhibiting. **Ends in June or July?**
CONS HLTH	1	Consumer Health Resources: Maintenance (ICF)	Q1 FY2020	Provide subject matter and IT expertise to support Tox Town's, Kids portal, and GeneEd	9/2018-9/2019	Sep-2019	Sep 2019	Alla Keselman	LO - BSD or PSD?	TOXTOWN - Alla is working on it; **should it go to BSD or PSD since they have consumer resources;** no content expert (people are gone) recommend PSD but needs a Task Manager - needs a home - **public facing website should transition to OCCS;** developer is ICF; different CMS; will this go into PSD as consumer or as a CHEM/Tox offering. need to know the funding breakdown of IT vs content and **need a task manager**
CONS HLTH	1	Special Population Resources Enhancement and Outreach (ICF)	Q4 FY2019 - Q1 FY2020	Support special population resources including HealthReach, Arctic Health, and American Indian Health.	9/2018-9/2019	Sep-2019	Sep 2019	Laura Bartlett	LO / OCCS	Need to figure out resources/funds - this is the content/Outreach part? Very little IT, done by FTE at OCCS; talk to Laura--what should happen? healthreach integrated into Med+; **need task manager; OCCS will need support for IT; Nicole is asking for an estimate for support of HR**
AIDS	**1**	AIDSinfo and AIDSource (ICF)	Q4 2020	Manage daily operations of the AIDSinfo, infoSIDA and AIDSource services - the AIDSinfo website, guidelines and panels, and treatment information	9/2018-9/2019	Sep-2019	Sep 2019	Nicole Scott	LO **OCPL**	OCPL? Patty wants it transitioned to another IC, Nicole is working on that
AIDS	**1**	AIDSinfo and AIDSource: Supplemental Tasks (ICF)	Q4 2020	Support for content development, outreach, training, evaluation, user studies, etc	9/2018-3/2020	Sep-2019	Sep 2019	Nicole Scott	OCPL?	OCPL? Being evaluated for inclusion in MedlLinePlus- **Andrew Plummer in PSD as an option; logical choice.** Nicole and team talking about this. Julian works on this as well as part of the team.
AIDS	**3**	AIDS Foundation Houston (ACIOP)		AIDS Community Information Outreach Program (ACIOP) Awardee - (https://aciop.blog/currently-funded-projects)	9/24/18-9/23/19	N/A	Sep-2019	Nicole Scott	LO - OET?	Consider moving OET to be awarded through the UG4; End in Sept - **plans to continue? Subject: RE: NLM/FMP Strategic Workforce - 7/24/19 meeting notes

Good evening everyone,

Attached is the updated version of the consolidated list of offerings. I have added the specific TOXNET resources included in the list I received from Grace that ODPL has been using as part of the sunsetting process. David and his team have also identified 12 apps that I included at the bottom of the list but did not get a chance to integrate just yet. I did include a column where I was able to identify a recent or imminent funding or POP date. The intent would be to discuss these items on Wednesday, along with the status of the green and red items. Please keep in mind our goal is to move forward with the evaluation of and decisions regarding our portfolio of projects.

Kathel, if I might ask, could you upload this version to Sharepoint? I continue to have connectivity issues.

David, Amanda and Stacey, could you (or a designated team member) review the list, particularly the critical items, to see if you would make any additions or changes? If you could also be prepared to discuss the Red and Green items assigned to your groups by Wednesday that would be great. David, as I mentioned in our earlier messages, I am happy to work with your team member to update the information regarding the apps.

Thank you all so much and have a wonderful weekend!!

Subject: RE: NLM/FMP Strategic Workforce - 7/24/19 meeting notes

Hi David,

Thank you for the note. Based on the conversation yesterday, I do expect we will need to discuss specific products during next week's meeting. The following are the three tasks we identified for the group to work on. I think we can get through the first two next week, and both of those require specific project knowledge. The third item can then be completed in the following meeting. Please let me know if you have concerns with this approach.

Proposed Agenda Items

1. Discuss projects that have an upcoming decision point or require guidance (e.g., contract or funding date in August) and decide on next steps (e.g., fund for one more year, begin sunsetting, fund incrementally)
2. Review green, red and purple products to confirm they are proceeding as planned
3. Decide on criteria, process and timeline for evaluating offerings

I am making the updates to the consolidated list we discussed yesterday. I will do an initial check of the products to see which one may have immediate dates or other issues identified that will require discussion. I will include a column indicated which ones might require discussion and why and share the revised document with the team by COB tomorrow.

Thanks,

Carolyn Kurowski

[EXTERNAL]
Do we know the agenda for next week's meeting? I need to know whether or not to invite Jeanne to attend. If we are going to talk about specific products then we will need her there. If we are going to talk about review criteria for examining the list of offerings, she may not be needed.

Thanks
David

Strategic Workforce
7/24/19
Attending: Carolyn Kurowski, Sandy Becker, Joyce Backus, Stacey Arnesen, David Gillikin, Wei Ma, Dianne Babski, Kathel Dunn, Amanda Wilson, Bryanne Reynolds

The Strategic Workforce group met and reviewed a consolidated Excel workbook of NLM offerings based on lists currently in use by LO, ODPL and OCCS.. The goal is to establish a consistent list all groups can use as a reference point. The group reviewed missing data and entries with questions.

Missing data:

- 3 APIs (identified by David Gillikin)
- Need to include each individual TOXNET resource

The group reviewed entries with questions about primary organization (division) responsible, offering point of contact, other notes.

FMP will revise the list and send out for feedback before the group's July 31 meeting. Jeanne Goshorn is to be invited to the next meeting.

Questions raised by the group were:

- What are the expected timelines for working on the list?
- Should we look at the full Library Operations list?
- We need to develop a list of criteria for examining the suite of offerings

Tox Town	Yellow	Specialized Information Services (SIS) / Office of the Director	OET	Alla Keselman	Alla Keselman	Tox Town -> new title : Consumer Health Resources: Maintenance TOX TOWN (only) - Alla is working on it; should it go to BSD or PSD since they have consumer resoures; no content expert (people are gone) recommend PSD but needs a Task Manager - needs a home - public facing website should transition to OCCS; developer is ICF; different CMS; will this go into PSD as consumer or as a CHEM/Tox offering. need to know the funding breakdown of IT vs content and need a task		Funding coming due in September
Tox Tutor	Yellow	Specialized Information Services (SIS) / Office of the Director / Office of Clinical Technology	Library Operations (LO)/BSD	Pertti Hakkinen	Pertti Hakkinen	Needs to be reviewed; BSD and OET		
ToxMap	Red	Specialized Information Services (SIS) / Biomedical Information Services Branch	Library Operations (LO)/BSD	Colette Hochstein	Colette Hochstein	Additonal notice on TOXMAP website, notice in Technical bulletin, NLM social media feeds, remove link in NLM Prod & Services. The data files (PDFs, text, and web pages) will be compressed as zip files available as downloads on the NLM FTP site		
TOXNET	purple	Specialized Information Services (SIS) / Biomedical Files Implementation Branch	Library Operations (LO)/BSD	Florence Chang	Evan Bolton, Colette Hochstein, Jeffrey Beck, Pertti Hakkinen, Evgueni Kireev, Stacy Lathrop, Kim Pruitt, David Gillikin, Jeanne Goshorn, Hua Chang	Other: NLM is consolidatiing information into a few sustainable platforms for improved user experience, discoverability and efficiency.	Integrating	Funding dates coming due in Spetember
TOXNET Toxics Release Inventory (TRI)	Red	Specialized Information Services (SIS)	Library Operations (LO)/BSD		Colette Hochstein, David Gillikin, Jeanne Goshorn, Hua Chang		Sunsetting	
Wireless Information System for Emergency Responders (WISER)	Yellow	Specialized Information Services (SIS) / Disaster Information Management Research Center	Library Operations (LO)/PSD	Jennifer Pakiam	Stacey Arnesen			
DERMaL (Dermal Exposure Risk Management and Logic) website	purple	Specialized Information Services (SIS)	Library Operations (LO)/BSD		Jennifer Pakiam, Pertti Hakkinen, Stacey Arnesen, David Gillikin, Hua Chang	Other: It will be incorporated into CHEMM rather than as a separate web site. This plan has been shared with the key contact at NIOSH (Dr. Naomi Hudson) and there are no concerns from the NIOSH side. NIOSH (Dr. Hudson) is involved in ongoing interactions about CHEMM, e.g. project team plans and updates		

TOXLINE	purple	Specialized Information Services (SIS)	Library Operations (LO)/BSD		David Gillikin, Jeanne Goshorn, Phillip Thomas	Other: When TOXLINE was first developed (in 1972) the science of toxicology was just emerging as a recognized field for research involving several different scientific disciplines such as biochemistry, pharmacology, physiology, etc. Some of the toxicology literature was covered by MEDLINE, but much of it was not, so other relevant abstracting and indexing services were used to obtain additional literature in toxicology to merge with MEDLINE in order to create the "more complete computer-based file of toxicological information" called for by the President's Scientific Advisory Committee in 1967. Since then, MEDLINE has expanded its journal coverage significantly and other online sources of toxicology information are readily available. It is no longer necessary for NLM to create a merged database of this information. we will continue to maintain a subset filter in PubMed to		
All Hazard Plan	Red	Specialized Information Services (SIS)			Jennifer Pakiam	ASPR funded NLM to develop and maintain the All Hazards Plan website, including a editing module to edit and add new plans, a search user interface, and features for display/print/sort/group. The funding was from FY 2012 to FY 2016. Since FY2017 ASPR has not provided funding. NLM kept the Website available in maintenance mode. The NLM version of All Hazard Plan will sunset in September 2019. ASPR will host the	Sunsetting

	Criticality	Contract (Vendor)	Review Timeline	Description	Period of Performance	Recompetition by	Obligation date of funding	COR	Receiving Division	Notes	Meeting Attendees
CHEM/TOX	3	HSDB content building (Technical Research International, "TRI")		TRI funding to add new and update existing HSDB records and for database enhancement including adding new data, features, fields, and more. Funding includes management of Scientific Review Panel meetings (2 meetings/year).	7/2019 - 7/2020	Jul-2019	Jul 2019; Jan 2020	Bert Hakkinen	LO - BSD	Jeanne and Bert - Looking at reimagining this one NCBI, they already working on it. This is an area where they lost a lot of staff and they will need to do the work. There are contractors supporting who can do the curating. - **Is there an option to give them a position to support this work?**	
CHEM/TOX	3	HSDB content building (Syracuse Research Corp, "SRC")		SRC funding to add new and existing HSDB records for environmental fate section and support database enhancement for related fields.	5/2019 - 5/2020	May-2019	May 2019; Nov 2019	Bert Hakkinen	LO - BSD	Jeanne and Bert - Looking at reimagining this one NCBI, they already working on it. This is an area where they lost a lot of staff and they will need to do the work. There are contractors supporting who can do the curating. - **Is there an option to give them a position to support this work?**	
CHEM/TOX	2	ChemID system development (DS Federal)	Q4 FY2019	DSFederal funding to support continued development and maintenance of applications and database maintenance.	9/2019-9/2020	Sep-2019	Sep 2019	Ying Sun	OCCS or BSD?	COR going to OCCS and will continue to play that role; Content BSD - Content - New Chemist (not full time - 70%) and Jeanne -	
CHEM/TOX	2	ChemID content building (Cygnus)	Q4 FY2019	Cygnus funding to support chemical structure, data integration and updates for ChemIDplus	5/2019-5/2020	Apr-2019	May 2019; Jan 2020	Ying Sun	OCCS or BSD?	Content BSD - Content - New Chemist (not full time - 70%) and Jeanne - COR going to OCCS	
CHEM/TOX	2	ChemID 3-D chemical structure (Scientific Thinking)	Q4 FY2019	Funding for 3D structure support and integration activities. Contractor Mitch Miller works closely with PubChem Team.	9/2019-9/2020	Sep-2021	Sep-2019	Ying Sun	OCCS or BSD?	Content BSD - Content - New Chemist (not full time - 70%) and Jeanne - COR going to OCCS	
CHEM/TOX	2	ChemID: Astrix Software license (Biovia / Astrix)	Q4 FY2019	Biovia software licence for chemical structure software	8/2019-8/2020	Aug-2019	Aug-2019	Ying Sun	OCCS or BSD?	Content BSD - Content - New Chemist (not full time - 70%) and Jeanne - COR going to OCCS	
CHEM/TOX	2	ChemID Oracle database license	Q4 FY2019	Oracle database management system for ChemID data, licensed through OCCS	12/2018 - 12/2019			Phillip Thomas, Florence Chang	OCCS or BSD?	Content BSD - Content - New Chemist (not full time - 70%) and Jeanne - COR going to OCCS	
CHEM/TOX	3	LactMed (Phil Anderson)		Content creation and update of the LactMed database	7/2019 -7/2020	Jul-2019	Jul 2019	Lucie Chen	LO - BSD?	**Needs COR - Bert?** Very popular. Should not require significant time. Author is highly motivated and the tool is already integrated into bookshelf - working on recompetition now. Who manages other Bookshelf resources? Should it go there in the future?	
CHEM/TOX	3	Household Product Database (Henry DeLima)	Q3-Q4 FY2019	License of the content of the Household Product Database, a database on the health effects from exposure to the chemical ingredients in the household products	12/2018-12/2019	Dec-2021	Dec 2018	Lucie Chen	LO - BSD	**Needs COR - Bert?** Also very popular, so it will be evaluated. Looking to see if CPSE (Consumer Products Safety Excellence) will take it over.	
CHEM/TOX	1	HazMap (Jay Brown)	Q3-Q4 FY2019	License of the content of the HazMap database, a occupational exposure and diseases database	7/31/2019 -8/1/2020	Jul-2020	Jul 2019	Lucie Chen	Sunset	BSD - Bert is trying to find a new home, can't be added to bookshelf because of how it is structured. Contract ends in July...needs the Sunset form. **ISSUES**	
CHEM/TOX	3	ITER (Univ of Cincinnati)	Q FY2019	License of the content of the International Toxicity Estimates for Risk (ITER)	4/2019 - 4/2020	Apr-2021	Apr 2019	Bert Hakkinen	LO - BSD	Bert COR - Eventually integrated into Bookshelf; ownership of the contract is currently in question, will come down with TOXnet **ISSUES**	
CHEM/TOX	1	Poisindex emergency medical management (Truven Health) **(Not renewed yet as of March)**		License of the content of Poisindex from Truven Health	1/2019 - 1/2020	Jan-2019	Jan 2019	Jen Pakiam	NA - BSD or PSD?	Not renewed but in the process of renewing license, not sure where to go. Should Jen keep this one? Up for integration. Who holds "data" in LO?	
CHEM/TOX	3	SIS and TOXNET computer system/IT support (ICF)		Contract for the main IT contract with ICF International for providing SIS computer system administration and information system development support.	This contract will end Sept, 2019. Contractors will go to OCCS. $800,000 funding goes to OCCS in September, 2019	Not going to re-compete	Sep 2019	Florence Chang	OCCS	COR Wei Ma, Supports 3.5 contractos, contract will end in Sept. Plans around transitioning of systems between now and Sept.	
CHEM/TOX	3	TOXNET/SSEUS Content Management System (Jeffery System)	Q4 FY 2019	Support the data entry and editing system and database maintenance for TOXNET databases, including HSDB, LactMed, and ITER	7/2019 - 7/2020	Jun-2019	Jul 2019	Phillip Thomas	OCCS	COR Wei Ma, setting up the recompete - will be done by July.	
DIMRC	3	Disaster Info Support (ICF)	Q2 FY2020	Includes support for librarian and computer programmer to support Disaster Lit, DIMRC web site, Disaster health informatics and communication innovation initiatives (training, communication)	9/2019 - 9/2020	Sep-2019	Sep 2019	Stacey Arnesen	LO - PSD	Siobhan will be task manager; broad task for IT and content; other innovation projects (Victor); genernal DIMRC website and Dis Lit. CMS, production and staging is at NLM. Programmer offsite, Librarian onsite (can change); will fund this POP	
DIMRC	1	WISER (Next Century)	Q1 FY2020	To support the development of the tool for responding to hazardous material incidents. For maintenance for all platforms with minor enhancements and data (content) updates, and prototyping of voice-activated assistant.	9/2019 - 9/2020	Sep-2019	Sep 2019	Jen Pakiam	LO **PSD or BSD?**	COR Jen - Bert is also part of the team (no hands on work - facilitator and promoter). Doesn't make sense long term in PSD - should all Tox stuff eventually land in BSD? Jen will be fully occupied; outside contractor does the program - does OCCS need to be looped in on this? this is expected to funded in Sep, recompete, offsite staff; mostly IT website; hosted at NLM; web version; 3 APPS; transitioning to PSD; we need to know about any funding for contractors that update the web pages; unclear about CMS	
DIMRC	3	NASEM Forums		NASEM Med Prep Forum & Action Collab on Disaster resesarch	9/2019 - 9/2020		Sep 2019	Stacey Arnesen	LO - PSD	transfer to PSD; NIH OD contract, we have a task on it to support NASEM; no IT, run forums; need to make a decision about contributing to this in 2019, Annual fee, Cheryl Field, should this be a membership - **Did this question get answered?**	
CHEM/TOX	1	CHEMM content creation and maintenance (AlphaTrac)	Q1 FY2020	Support the content creation and maintenance of Chemical Hazards Emergency Medical Management (CHEMM)	8/1/2019 - 7/31/2020	Aug-2019	Jul 2019	Bert Hakkinen	LO - PSD?	COR Bert- very involved; Jen marginally involved, considered one of the Disaster tools and closerly tied to WISER - where should it live? outside contractor does the program - does OCCS need to be looped in on this? Could work to have Jen take over COR and Bert as an advisor PSD -- Shifting from solo contract to task under a BPA - Get Jen involved in task	
DIMRC	1	REMM							LO - PSD?	Jen is the POC, Florence will be handing this off to her. Issues with the Content expert HHS funded contractor and with the technology; Florence has done the technology; funding by an interagency agreement by HHS. Dianne and David are aware of the situation - **ISSUE**	
Outreach	3	Special Population Resources Maintenance (ICF)	Q3 FY2019	Staffing, IT support for HealthReach, American Indian Health, Arctic Health	9/2018-9/2019	Sep-2019	Sep 2019	Laura Bartlett	NA LO-PSD?	Only one left is HealthReach; but the other ones are going, Being integrated into MedLinePlus. **Michael Honch in PSD as owner?**- Laura has some "Outreach" connections that involve getting content - she has a few tasks that she is doing through September - User studies (20-25% of her time until fully integrated)	
Outreach	**2**	Technical and Programmatic Support for Specific Population Projects (ICF)		Support services for outreach projects such as CHIC, Community Health Maps, etc	9/2018-9/2019	Sep-2019	Sep 2019	Janice Kelly	LO - OET?	Janice gave her suggestions; and will be meeting with Joyce and Amanda to discuss all Outreach programs; Prior John Scott had many Subcontracts for outreach awards, TBD; **need COR**	
Outreach	**2**	Maintenace and Development Support for SIS Programs Projects (ICF)		Provide comprehensive management and staffing services to the National Library of Medicine Specialized Information Services to support websites, services and activities	9/2018-9/2019	Sep-2019	Sep 2019	Nicole Scott	LO OET or PSD?	supports 2 contract staff - **Sent Amanda an note and she is interested; 80% DIMRC and 20% Outreach; - through Sept.**	
Outreach	**2**	EnHIP Chair		Support for the year long duties of the EnHIP chair	1/15/2019-1/14/2020	Jan-2019		Janice Kelly	LO - OET	**need COR; is this an annual PO? Laura?**	
Outreach	**2**	EnHIP senior advisor		Support for the year long duties of the EnHIP senior advisor Rueben Warren	9/20/2018-9/19/2019		9/20/2019	Janice Kelly	LO - OET	**need COR; is this an annual PO? Laura?**	

Outreach	**4**	Higher Ed Project		Project addressing the needs of minority serving institutions to use HSDB and other NLM resources	3/6/18-6/28/19	Jun-2019	6/28/2019	Cassandra Allen	Sunset	Totally Sunset at this point
Outreach	**2**	Training and Outreach Support Services for NLM (ICF)		Subaward to ORAU for training and outreach support, promotion and logistical support to SIS	9/2018-6/2019	Jun-2019	June 2019	Nicole Scott	LO - OET?	Being competed; **need COR? Will Nicole continue once funded or should this shift to OET?** Trying to put in a BPA - Nicole still involved and Jody is aware
Outreach	**2**	Training and Outreach Support Services for NLM (ICF)		OET will need to take over the separate LMS; what do they want to do with it. Resources have been developed				Nicole Scott	LO - OET?	No plans right now for LMS. **Ends in June or July?**
Outreach	**2**	Training and Outreach Support Services for NLM (ICF)		OET will need to take over exhibitingS; what do they want to do with it. Resources have been developed				Nicole Scott	LO - OET?	No plans right now for exhibiting. **Ends in June or July?**
CONS HLTH	1	Consumer Health Resources: Maintenance (ICF)	Q1 FY2020	Provide subject matter and IT expertise to support Tox Town's, Kids portal, and GeneEd	9/2018-9/2019	Sep-2019	Sep 2019	Alla Keselman	LO - BSD or PSD?	TOXTOWN - Alla is working on it; **should it go to BSD or PSD since they have consumer resources;** no content expert (people are gone) recommend PSD but needs a Task Manager - needs a home - **public facing website should transition to OCCS;** developer is ICF; different CMS; will this go into PSD as consumer or as a CHEM/Tox offering. need to know the funding breakdown of IT vs content and **need a task manager**
CONS HLTH	1	Special Population Resources Enhancement and Outreach (ICF)	Q4 FY2019 - Q1 FY2020	Support special population resources including HealthReach, Arctic Health, and American Indian Health.	9/2018-9/2019	Sep-2019	Sep 2019	Laura Bartlett	LO / OCCS	Need to figure out resources/funds - this is the content/Outreach part? Very little IT, done by FTE at OCCS; talk to Laura--what should happen? healthreach integrated into Med+; **need task manager; OCCS will need support for IT; Nicole is asking for an estimate for support of HR**
AIDS	**1**	AIDSinfo and AIDSource (ICF)	Q4 2020	Manage daily operations of the AIDSinfo, infoSIDA and AIDSource services - the AIDSinfo website, guidelines and panels, and treatment information	9/2018-9/2019	Sep-2019	Sep 2019	Nicole Scott	LO **OCPL**	OCPL? Patty wants it transitioned to another IC, Nicole is working on that
AIDS	**1**	AIDSinfo and AIDSource: Supplemental Tasks (ICF)	Q4 2020	Support for content development, outreach, training, evaluation, user studies, etc	9/2018-3/2020	Sep-2019	Sep 2019	Nicole Scott	OCPL?	OCPL? Being evaluated for inclusion in MedlLinePlus- **Andrew Plummer in PSD as an option; logical choice.** Nicole and team talking about this. Julian works on this as well as part of the team.
AIDS	**3**	AIDS Foundation Houston (ACIOP)		AIDS Community Information Outreach Program (ACIOP) Awardee - (https://aciop.blog/currently-funded-projects)	9/24/18-9/23/19	N/A	Sep-2019	Nicole Scott	LO - OET?	Consider moving OET to be awarded through the UG4; End in Sept - **plans to continue? Or moving money to OARU to continue?** Need to do a new contract very quickly if that is the direction they are planning - see the other note - Tonia is helping. **Task Manager?**

Subject: Agenda items for LO / BSD meeting today, 3:00

Joyce, Dianne
Here are the agenda items for our meeting today. Most of them are really status updates. We'll see which ones you want to discuss. Jeanne has some information about the 2 Dietary Supplements databases to share, which is item #2.
David

MTG w/ LO and BSD

July 29, 2019

1. VSAC
    - Due to a proposed rule change related to opiod data, OGC and CMS are requesting that VSAC republish the May update with this data change. The VSAC team will work on this, but it means that planned development work will be stopped to accommodate the production work. There is still discussion that CMS wants to keep the to-be revision as version 1, which it won't be. The VSAC team is trying to see if something like a version 1.1 or 1a designation might be a compromise.
    - OCCS proposal to develop cloud-based VSAC
        - Provided feedback to Duc on the document prepared by OCCS that would request funding to develop a cloud-based version of VSAC (to replace the redundancy and access provided by the NCCS version).
        - Once Ivor and Duc produce a final version, have told Duc that Jerry needs to review it before we can send it to CMS. It would go to Vivian's COR contact.
2. Dietary Supplements databases: Update from Jeanne
3. LactMed
    - Bert is working on a contract renewal, which apparently is late. He's talking with Stacey and Jeanne on this work
    - LactMed as a source is part of the NCBI ToxNet integration effort. Bookshelf has been working with the LactMed author and he will be able to provide XML to BookShelf in the future. The last LactMed update via the SIS systems should be completed by the end of July. Future updates will be via BookShelf.
    - LactMed has an App, which has been reported as not being updated in several months. Apparently, Florence use to provide text files to the SIS developer for the App. The developer thinks she can use the BookShelf XML flies as a update source. The long-term viability of the App needs to be considered – it would be a sunset consideration for a part of an offering, but not the sunsetting of an offering.
4. SIS product Apps – Since the LactMed App issue was unknown, Collette provide a list of Apps that she was aware of. David Hale has been asked to review this list and develop a report identifying what the Apps are for, what products they support and other information. The identified Apps are:

AIDSinfo HIV/AIDS Drug Database	LactMed
AIDSinfo HIV/AIDS Glossary	Mobile REMM (iOS & Android)
AIDSinfo HIV/AIDS Guidelines	Pillbox
Base Chase	Run4Green

Bohr Thru	TOXinvaders
Embryo	Tox-App
ERG2016 (iOS & Android) (Soon to change to the ERG2020 app)	WISER (iOS & Android)

5. NCBI ToxNet Integration
    - The most recent NCBI ToxNet Integration meeting was held on Thursday July 25. From the meeting, it became apparent that Florence Chang did not designate anyone as the lead POC from SIS staff to carry on this work.
    - From the meeting David agreed to take on the task to identify a Lead from the LO side. The other staff who have been attending are Jeanne Goshorn, Collette Hochstein, and Bert Hakkinen.
    - Jeanne Goshorn will need to serve as the lead for LO on this effort. However, Collette has provided much of the documentation revision and organization previously for Florence. Her knowledge and background on this effort is extremely vital, and her continued involvement is necessary.
6. HR Actions
    - Heath Program Specialist update
        - 13 and 14 PDs drafted, sent to HR.
        - Teleconference call on Friday 7/26 with Dave Wittenberg and Aisha
        - Dave W. will review the 13 PD
        - He has reviewed the 14 PD again. He plans on talking to the DE Unit about a selective factor. He said we may need to provide subject matter expert due to the selective factor.
        - We confirmed that SNOMED CT should not be used in the job title.
    - MMS positions (V-Herron, V-Roy): Sara had a conference call with Dave Wittenberg and Aisha. Dave to send back some paperwork that needs to be resigned.
7. Contracts
    - RxNorm editing contract – delayed a week while Uyen is out. She did not receive a response on time from the Small Business Administration last week which has delayed her work
    - HSDB contracts
        - The first contract re-competition is near completion. Technical questions were responded to and not additional concerns were voiced.
        - The second contract re-competition – proposals received by the Contracts Office but have not been sent to the technical review team. Hope to have the review meeting late this week/early next week.

ATTENTION: The following Sunsetting Request requires your approval.

Please review the request below and select "APPROVE", "REJECT" or "RETURN". Selecting "RETURN" will return this request to its submitter for resubmission.

NLM Service/Product (Offering) Details	
NLM Service/Product (Offering)	CCRIS
Description	The CCRIS database contains chemical records with carcinogenicity, mutagenicity, tumor promotion, and tumor inhibition test results. It was developed by the National Cancer Institute (NCI). Data are derived from studies cited in primary journals, current awareness tools, NCI reports, and other sources.
Document(s) Supporting Justification	TOXLINE retirement.docx SIS-sunset-resources.docx
Justification	Low usage No longer aligned with NLM priorities or mission needs Incorrect or out-of-date information
Retirement Date	12/01/2019
Organization	LO
Key Staff Involved	Colette Hochstein Sanjay Jain

	Jeanne Goshorn Phillip Thomas David Gillikin

Internal Communication Plan	
Staff to be Informed	Colette Hochstein Pertti Hakkinen
Communicated Message	CCRIS was originally created by the National Cancer Institute (NCI) and covers the years 1985 to 2011. It is part of TOXNET, and the information it contains is already incorporated into PubChem. On December 1, 2019 the National Library of Medicine (NLM) TOXNET website will be discontinued. Most of its content will continue to be available through other NLM databases as well as external websites. TOXNET has served as an integrated system of toxicology and environmental health databases. The most frequently used of those databases are being incorporated into three of NLM's core resources: PubChem, a database of chemical information; PubMed a resource for biomedical literature; and Bookshelf, with free online access to books and documents in life science and healthcare. Several other databases in TOXNET were made available on TOXNET from other organizations, such as the U.S. Environmental Protection Agency, and will continue to be available from those sources. Some databases will be retired. For a complete list of TOXNET databases and how to access their content, see the TOXNET transition page.

Good. I'm trying to get the rest of these in to the system now that we have the offerings list.

I am still having some problems with the submission system, even from the desktop at work. The link to the TOXLINE retirement is not really relevant to CCRIS, but I could not delete it.

Jeanne

Subject: ACTION REQUIRED (ASSOCIATE DIRECTOR APPROVAL) - NLM SUNSETTING REQUEST

ATTENTION: The following Sunsetting Request requires your approval.

Please review the request below and select "APPROVE", "REJECT" or "RETURN". Selecting "RETURN" will return this request to its submitter for resubmission.

NLM Service/Product (Offering) Details	
NLM Service/Product (Offering)	Gene-TOX
Description	GENE-TOX provides genetic toxicology (mutagenicity) test data from expert peer review of open scientific literature for more than 3,000 chemicals from the United States Environmental Protection Agency (EPA). GENE-TOX was established to select assay systems for evaluation, review data in the scientific literature, and recommend proper testing protocols and evaluation procedures for these systems. This database was originally supported on TOXNET by EPA and covers the years 1991 - 1998. It is no longer updated or supported by EPA.
Document(s) Supporting Justification	Gene tox sunset submission.docx
Justification	Low usage No longer aligned with NLM priorities or mission needs Incorrect or out-of-date information
Retirement Date	12/01/2019
Organization	LO

Key Staff Involved	Colette Hochstein Sanjay Jain Jeanne Goshorn Phillip Thomas David Gillikin

Internal Communication Plan	
Staff to be Informed	David Gillikin
Communicated Message	The Gene-TOX database on TOXNET will be retired on December 1, 2019, or when the current TOXNET Web site is taken down.
Date the Message will be Sent	06/19/2019
Communication Channel(s)	Emails Information delivered at staff meetings
Retained Content	FTP Other: FTP-archived resources site
Additional Information	---

External Communication Plan	
External Stakeholders to be Informed	Environmental Protection Database (EPA)
Communicated Message	The Gene-TOX database on TOXNET will be retired on December 1, 2019, or when the current TOXNET Web site is taken down. Information from it may be available from EPA on their NSCEP publications database. or from the National Technical Information Service (NTIS).
Date the Message will be Sent	08/02/2019
Communication Channel(s)	Technical Bulletin Social Media Emails
Communication Frequency	Weekly Monthly
Retained Content	FTP Other: FTP archived NLM resources site
Page Redirected	No

Subject: Copy of LO Offering Criteria List.xlsx
Attachments: Copy of LO Offering Criteria List.xlsx, Copy of 07-29-2019 OCCS Mapping to LO Offering List.xlsx

Here's LO's and OCCS' lists--if it helps. You'll see that we added offerings to the OCCS list and now we'll add items from the OCCS list to ours (as resources).

And there are questionable things listed on the OCCS list that we need to review and possibly sunset—or just whack!

Make sense? Happy to chat again ☺
-D

NLM Classification	Classification Editor **(LO Offering- NLM Collection (Physical, Electronic, Metadata)**	Ever year TSD needs to renew category numbers. This application allows TSD to print out new labels and generate HTML pages and PDF files. Pages and files are loaded on the NLM Main Web.All the Classification are static pages/files, but the data is edited by the Editor.TSD needs to renew the HTML and PDF files annually, and the HTML and PDFs are generated from Editor.Terms from MeSH are indexed and scheduled at https://www.nlm.nih.gov/class/ (outline of index of)Classification of Medical terms (Pathology, Clinical Pathology, etc)	Tracy Pan	pantr@mail.nlm.nih.gov	ETLSS	Internal	http://wwwsvlt.nlm.nih.gov/class/ClassEditLogon.jsp	Mission Operational	
N/A (OCCS)	CMDB App	Provides a user-friendly interface to browse through the services that are provided by the NLM ITSM team. In addition, it allows service owners to make changes to a service and users to suggest changes to a service.	Preetham Nosum	nosumv@nlm.nih.gov	ETLSS	Internal	http://itservices.nlm.nih.gov	Mission Related	
CDE Repository	Common Data Elements (**LO Offering: Terminologies**)	The NIH Common Data Elements (CDE) Repository has been designed to provide access to structured human and machine-readable definitions of data elements that have been recommended or required by NIH Institutes and Centers and other organizations for use in research and for other purposes. Visit the NIH CDE Resource Portal for contextual information about the repositoryData Element (DE) - Information that describes a piece of data to be collected in a study	Christophe Ludet	christophe.ludet@nih.gov	MLB	External	https://cde.nlm.nih.gov	Mission Related	
N/A	Conservation Tracking DB **(LO Offering: Historical Web Curated Content)**	The NLM conservation staff uses the conservation database to record multiple tasks into one database. Multiple tasks include multiple treatment methods and conditions, such as survey, lab work, media, photography, conditions, previous/proposed treatments, housing, exhibition etc. And they need to record a lot of very detailed information of an item conservation. For example for media that may record color, print media, drawing, painting and conditions, for lab work may record date/time, location, conservator, approved by, completed date, using time, processing status etc. The current database allows conservators to input treatment and condition reports which provides a comprehensive and automated method for documenting their work. Current database features: 1. Store treatment reports, condition reports, surveys, and housing (storage) both current and past - for paper-based objects including flat paper manuscripts and art-on-paper, photographs, and bound materials2. Track collection items exhibition history3. Monitor progress of conservation treatment4. Linked to and searchable through Voyager	Tanya Rogers	rogerst@mail.nlm.nih.gov	EHISS	Internal	https://wwwcf.nlm.nih.gov/internal/conservt/login.cfm	Mission Operational	
DailyMed	DailyMed (**LO Offering: Terminologies**)	Daily Med is a website operated by the U.S. National Library of Medicine (NLM) to publish up-to-date and accurate drug labels (also called a "package insert") to health care providers and the general public. The contents of DailyMed is provided and updated daily by the U.S. Food and Drug Administration (FDA). The FDA in turn collects this information from the pharmaceutical industry.	Chandra Kola	kolac@mail.nlm.nih.gov	EHISS	External	https://dailymed.nlm.nih.gov/dailymed/	Mission Critical

DOCLINE	DOCLINE **(LO offering: Library Services)**	DOCLINE is the National Library of Medicine's automated interlibrary loan (ILL) request routing and referral system. The purpose of the system is to provide efficient document delivery service among libraries in the National Network of Libraries of Medicine (NN/LM).	Joseph Schechter	joseph.schechter@nih.gov	EHISS	External	https://www.docline.gov	Mission Critical	
DOCLINE	DOCLINE Batch **(LO offering: Library Services)**	Batch processes connected with Docline - DOCLINE is the National Library of Medicine's automated interlibrary loan (ILL) request routing and referral system. The purpose of the system is to provide efficient document delivery service among libraries in the National Network of Libraries of Medicine (NN/LM).	Joseph Schechter	joseph.schechter@nih.gov	EHISS	Internal	N/A	Mission Critical	
N/A	Drug Information Portal (LO Offering: Drug Information)	The NLM Drug Information Portal gives users a gateway to selected drug information from the National Library of Medicine and other key government agencies.	Chandra Kola	kolac@nih.gov	EHISS	External	https://druginfo.nlm.nih.gov/drugportal/	MIssion Critical	
N/A	Emergency Access Initiative (LO Offering: Library Services)	The Emergency Access Initiative (EAI) is a partnership of the National Library of Medicine, the National Network of Libraries of Medicine, and the Professional/Scholarly Publishing Division of the Association of American Publishers. EAI provides free access to full text articles from major biomedicine titles to healthcare professionals, librarians, and the public in the United States affected by disasters. Users in the United States affected by a disaster can request access to free full text articles by calling 1-800-338-7657 or contacting your local medical library.	Joe Potvin	potvind@mail.nlm.nih.gov	ETLSS	External	http://eai.nlm.nih.gov	Mission Critical	
N/A	Encoded Archival Description (LO Offerings: Library Services)	EAD stands for Encoded Archival Description, and is the non-proprietary, international standard for the encoding of finding aids for use in a networked (online) environment. Finding aids are inventories, indexes, or guides that are created by archival and manuscript repositories to provide detailed information about specific collections, their creators, context, and detailed contents lists. Developed by the EAD Working Group of the Society of American Archivists and first published in 1998, EAD is an Extensible Markup Language (XML) format used by archivists around the globe. The development of EAD made it possible to create electronic finding aids within a specifically archival data structure compliant with General International Standard Archival Description (ISAD(G)).The application site has the ability to create and view EAD collections of archival materials. A created EAD collection may be viewed on the site or downloaded. Collections are created via a multipart form. Upon form submission, the software transforms the input data into XML. Collections may be viewed, edited or downloaded via a sortable datatable on the index page. The site features user login by password. There are two levels of accounts admin, and user.The site is a .net Windows Forms application. It stores the data in an Oracle database. There is a dev and production environment of the software and database. dev HMD EAD dev location prod HMD EAD prod location Stash EAD HMD source control of application	Jeremy Markowitz	markowitzjj@mail.nlm.nih.gov	ELTSS	External	https://ead.nlm.nih.gov	Mission Related	
N/A	Ending the Document Game (where is this linked from? does this get any usage? What a hanging chad!) (LO Offering: HSR Information Services)	The Commission on Systemic Interoperability was authorized by the Medicare Modernization Act and established by the Secretary of Health and Human Services. Its members were appointed by the President of the United States of America and the leaders of the 108th United States Congress, and it held its first meeting on January 10, 2005.The Commission was charged with developing a strategy to make healthcare information instantly accessible at all times, by consumers and their healthcare providers. On October 25, 2005, the Commission released its report, Ending the Document Game: Connecting and Transforming Your Healthcare Through Information Technology, to the United States Congress, the Administration, and the American public	Joe Potvin	potvind@mail.nlm.nih.gov	ETLSS	External	https://endingthedocumentgame.gov	Mission Critical	
NLM Products and Services Directory	Eresources **(Lo Offering: NLM Main Web)**	The public NLM Products and Services provides one place to easily identify available NLM electronic resources including datasets, biomedical databases. A separate, internal Eresources administration system allows MEDLARS Management Section (MMS) staff to manage the growing number of resources NLM offers and keep the public database up to date.	Dorothy La	lad@mail.nlm.nih.gov	EHISS	External	https://eresources.nlm.nih.gov/nlm_eresources/	Mission Critical

HSRProj	HSRProject **(LO Offering: HSR Information Services)**	HSRProj is a searchable database providing access to ongoing grants and contracts in health services research. It provides access to information about health services research in progress before results are available in a published form. For example searching for asthma will display all current projects working in asthma research. The projects are performed by performing organizations and supporting organizations. The data is collected by UNC at Chapel Hill and sent to NLM NICHSR team in XML format.	Tanya Rogers	rogerst@mail.nlm.nih.gov	EHISS	External	https://wwwcf.nlm.nih.gov/hsr_project/home_proj.cfm	Mission Critical	

HSRR	HSRR **(LO Offering: HSR Information Services)**	HSRR is a searchable database of information about research datasets, instruments/indices and software. The database includes brief descriptions of research resources and links to PubMed.HSRR is a searchable database for tools associated with a health topic, the results are displayed as datasets, instruments or software.Dataset. A file or group of files associated with one part of a study. Files associated with a dataset might include a datafile, a machine- readable codebook, SPSS control cards, and other files related to the datafile. Examples: The files associated with California might be considered one dataset in the 1990 Census of Population and Housing STF 1A study; the files associated with the First Congress, House of Representatives, in the study "Congressional Roll Call Voting Records."Instruments/Indices DefinitionMeasurement is the process of specifying and operationalizing a given concept. A research instrument contains the operational definitions of all measures related to the research and is primarily used to collect data. When a research instrument contains only questions and statements to be answered by respondents, it is called a questionnaire. from Shi L. Health services research methods. New York: Delmar; 1997. 410 p.	Tanya Rogers	rogerst@mail.nlm.nih.gov	EHISS	External	http://hsrr.nlm.nih.gov	Mission Critical

N/A (NLM Internal App)	Inventory Control System	The Office of Administration and Management Analysis (OAMAS) at the National Library of Medicine is responsible for warehousing and providing supplies to all library divisions. The operation entails receiving supply orders from designated library staff, known as customers, placing orders to vendors, maintaining inventories in the warehouse, filling orders as they are received from customers, and keeping records for billing, tracking backorders, and other managerial functions. The Inventory Control System is designed to improve OAMAS service to NLM by providing a user-friendly ordering mechanism, enabling managers to more closely track supply receipts from vendors and deliveries to customers, reducing the number of backlog orders, and shortening the backlogs.	Tony Luu	luul@mail.nlm.nih.gov	EHISS	Internal	wwwcf2.nlm.nih.gov/internal/inventory/customer/cwelcome.cfm	Mission Operational	
Journal Donation	Journal Donation **(LO offering: Library Services)**	The National Library of Medicine welcomes donations of print journal volumes that are missing from our collection. The Journal Donation system enables users to find out which volumes are needed and what they can donate.Relations with SERIAL, HOLDINGS.Journal Donations is based on the JDONATE database; they are journals donated to the NLM by other libraries.	Dorothy La	lad@mail.nlm.nih.gov	EHISS	External	https://wwwcf.nlm.nih.gov/jdonate/index.cfm,Jdonate	Mission Related	
N/A	Learning Resources **(LO Offering: Outreach & Training)**	The learning resources project provides a way for authors to have a central metadata repository for the tutorials that they have created. There is an internal-facing web application where authors create metadata about their learning resource, and the repository can be queried to create public-facing views of certain product categories, such as LinkOut, UMLS, etc.Project Benefits:The repository allows a single point to manage metadata around training resources, and provides flexible categorization and metadata management. Authors will be able to look at a given training resource, and know all the places where it "lives" on NLM's website.	Tanya Rogers	rogerst@mail.nlm.nih.gov	EHISS	External	N/A	Mission Related	
N/A	LinkChecker Batch **(since it is database to find broken links for PHPartners & HSRR, HSRProject, then, LO Offering: HSR Information Services)**	LinkChecker is a Java program that checks databases PHPartners, HSRR, and HSRProjects to make sure all links are not broken.LinkChecker is a type of health check designed to remove dead links in the database.	Tanya Rogers	rogerst@mail.nlm.nih.gov	EHISS	Internal	N/A	Mission Related	
N/A (NLM Internal App)	Loading Dock	A system to document what is delivered to BLDG38A / OAMAS loading dock such as PCs, Laptops, Tablets, Cell Phones or any electronic devices. Those are accountable pieces of property receive a decal number before they are shipped to the users. Often receiving in the NBS system is not done in a timely fashion and the decal worksheet in NBS is not available to document the decal number associated with each piece of accountable property. As such, OAMAS needs means of documenting the decals associated with each piece of property shipped to users. Thus, Loading Dock system document the delivery to the end user and capture their ID badge information. This will be time stamped will indicate that OAMAS is no longer responsible for the item(s).	Tony Luu	luul@mail.nlm.nih.gov	EHISS	Internal	wwwcf2.nlm.nih.gov/internal/inventory/loadingdock/allmodules.cfm	Mission Operational	
Loansome Doc	Loansome Doc **(LO Offering: Sunsetted)**	Loansome Doc is NLM's application to enable a library patron to order articles from a list of citations retrieved from PubMed or the NLM Gateway by sending requests to their library	Joseph Schechter	joseph.schechter@nih.gov	EHISS	External	https://docline.gov/loansome/login.cfm	Mission Critical	Will be retired 7/1/2019

N/A	Local Legends (LO Offering: Historical Web Curated Content)	Local Legends is a partnership of the National Institutes of Healths National Library of Medicine (NLM), the NIH Office of Womens Health Research (OWHR), and the American Medical Womens Association (AMWA). On behalf of the partners, the AMWA annually calls upon the Congress to nominate outstanding women physicians from their state or district who have demonstrated commitment, originality, innovation, or creativity in her field of medicine. Local Legends is a companion gallery to NLMs Changing the Face of Medicine: Celebrating Americas Women Physicians exhibition on the campus of the National Institutes of Health in Bethesda, MD. The gallery spotlights these women physicians their lives, their achievements, their dreams, and the challenges they faced in becoming physicians. The exhibition, including the Local Legends gallery web site, will travel to cities across the country beginning in spring, 2005. In February 2004, those women physicians nominated by their Congressional representative to be Local Legends were announced at the American Medical Womens Association annual conference in San Diego, CA. These women are profiled in this web site. The AMWA has continued the Local Legends project providing the Congress with the opportunity to again nominate and recognize outstanding women physicians from their district or state to be featured in the exhibition since it began to travel throughout the United States in spring, 2005.	Winston Churchill	churchw@mail.nlm.nih.gov	ETLSS	External	http://www.nlm.nih.gov/locallegends	Mission Related	
LocatorPlus	LocatorPlus **(LO Offering: Library Services)**	The set of services supporting LO management of Voyager content (Integrated Library System and Online Public Access Catalog). LocatorPlus is the name of the web-based version of Voyager. Applications: Voyager PROD Batch, Voyager PROD Users, Voyager PROD Z3950, LocatorPlus PROD	Ruben Salas	salasr@mail.nlm.nih.gov	SSS	External	http://locatorplus.gov	Mission Critical	
LSTRC Publisher Web Form	LSTRC Admin **(LO Offering: Library Services)**	Literature Selection Technical Review Committee. The system records current and historical data concerning Committee review of journal titles. LSTRC is an NIH chartered advisory committee of external experts who review and recommend biomedical and health (serial) journal titles to be indexed and included in MEDLINE/PubMed. LSTRC Admin takes the journals from MEDLINE Review and assigns it to reviewers in MEDLINE Reviewer Web and checks with Serials to see if journals exist there.	Dorothy La	lad@mail.nlm.nih.gov	EHISS	External	https://wwwcf.nlm.nih.gov/lstrc/lstrc.html	Mission Operational	
N/A (NLM Internal App)	Manuscript Clearance	Manuscript Clearance enables digital submissions of manuscripts for NLM. The solution is comprised of a .net MCV web application, oracle database with triggers, and two additional .net applications running nightly on scheduled tasks. The web site is available to anyone with a NED account, validating user logon credentials automatically. The web application allows users to submit manuscripts and stakeholders to manage the editorial workflow. Notifications are emailed at keys stages of the process, alerting users with key roles to take action and move a request to the next stage. Users may search for requests they've submitted or are charged with acting upon. A super-admin role allows other roles to be configured through the site. The website communicates to the Oracle PCWPROD database. A dev and QA environment also exists for testing/staging.An additional .net console application notify those responsible for a specific stage of the application when no action has been taken in a multiple of 10 days. Another .net console application imports NED data on a nightly basis and updates the application's user database. These components each have a source control repository.	Jeremy Markowitz	markowitzjj@mail.nlm.nih.gov	ELTSS	Internal	https://manuscriptclearance.nlm.nih.gov	Mission Critical	
MEDLINE	Medline Review **(LO Offering: Medline/PubMed)**	The MEDLINE Review Application Form provides a standardized and efficient process for journal reviews. Editors and publishers electronically complete and submit the application form with current information about their journals to help ensure that NLM has the most accurate data available for its records. The form is required for all journals submitted to NLM for inclusion in MEDLINE.	Dorothy La	lad@mail.nlm.nih.gov	EHISS	External	https://wwwcf.nlm.nih.gov/hmddirectory/admin/index.html	Mission Operational	
MEDLINE	Medline Reviewer Web **(LO Offering: Medline/PubMed)**	The MEDLINE Reviewer Web form provides LSTRC members an interface to rate journals from MEDLINE Review that are assigned in LSTRC Admin.	Dorothy La	lad@mail.nlm.nih.gov	EHISS	External	https://wwwcf.nlm.nih.gov/lstrc/lstrcreviewer/index.html	Mission Operational	
MedlinePlus	MedlinePlus **(LO Offering: Consumer Health)**	MedlinePlus is the National Institutes of Health's Web site for patients and their families and friends. Produced by the National Library of Medicine, it brings you information about diseases, conditions, and wellness issues in language you can understand. MedlinePlus offers reliable, up-to-date health information, anytime, anywhere for free.	Dianne Sun	sund@mail.nlm.nih.gov	EHISS	External	http://medlineplus.gov	Mission Critical	
MedlinePlus	MedlinePlus Batch **(LO Offering: Consumer Health)**	MedlinePlus Service BatchAll batch jobs for MedlinePlus. For example, nightly pages build, data clean up, data retrieval and etc...	Dianne Sun	sund@mail.nlm.nih.gov	EHISS	Internal	N/A	Mission Related	
MedlinePlus Connect	MedlinePlus Connect **(LO Offering: Consumer Health)**	MedlinePlus Connect is a free service of the National Library of Medicine (NLM) and the National Institutes of Health (NIH). This service allows any electronic health record (EHR) system to easily link users to MedlinePlus, an authoritative up-to-date health information resource for patients, families and health care providers. MedlinePlus provides information about conditions and disorders, medications, and health and wellness.	Dianne Sun	sund@mail.nlm.nih.gov	EHISS	External	https://apps.nlm.nih.gov/medlineplus/services/demo.html	Mission Critical	
MedlinePlus Connect	MedlinePlus Connect - Batch **(LO Offering: Consumer Health)**	Batch jobs for MedlinePlus Connect. This includes data refreshing.	Dianne Sun	sund@mail.nlm.nih.gov	EHISS	Internal	N/A	Mission Related	
MedlinePlus Connect	MedlinePlus Connect - CMMS **(LO Offering: Consumer Health)**	Data mapping system to support M+ Connect	Dianne Sun	sund@mail.nlm.nih.gov	EHISS	Internal	https://wwwcf.nlm.nih.gov/internal/mpcadmin/login.cfm	Mission Related	
MedlinePlus	MedlinePlus Input System **(LO Offering: Consumer Health)**	Data management system that supports MedlinePlus	Dianne Sun	sund@mail.nlm.nih.gov	EHISS	Internal	https://wwwcf.nlm.nih.gov/medplapp/ch_login.cfm	Mission Related	
MeSH Vocabulary	MeSH Browser **(LO Offering: Terminologies)**	MeSH is the National Library of Medicine's controlled vocabulary thesaurus. It consists of sets of terms naming descriptors in a hierarchical structure that permits searching at various levels of specificity.MeSH browser is the default search tool for finding keywords.	Jakub Flaska	jakub.flaska@nih.gov	MLB	External	https://www.nlm.nih.gov/mesh/MBrowser.html	Mission Operational	
MeSH Vocabulary	MeSH Editing **(LO Offering: Terminologies)**	MeSH Editor (MEdit) - is a main editing application in the Global MeSH Editing Environment to support the MeSH Section staff in their efforts to revise and update the MeSH vocabulary.	Tran Luu	luut@mail.nlm.nih.gov	MLB	External	https://medit.nlm.nih.gov	Mission Related	
MeSH Vocabulary	MeSH Medline GCMS **(LO Offering: MEDLINE/PubMed)**	wwwcf.nlm.nih.gov/internal/gcms - GLOBAL CITATION MAINTENANCE SYSTEMGlobal Citation Maintenance System is the process that allows users to submit requests to make changes in MeSH indexing of citations in PubMed. It is a process to apply any changes of MeSH records to the DCMS database.	Tran Luu	luut@mail.nlm.nih.gov	MLB	Internal	https://wwwcf2.nlm.nih.gov/internal/gcms/login.cfm	Mission Operational	

MeSH Vocabulary	MeSH Medline Year End Process **(LO Offering: MEDLINE/PubMed)**	Production environment for Year End Processing. This entry refers to the component of YEP under the purview of the Medical Languages Branch (MLB).Yearly update/review of MeSH records. For example 1000 MeSH record updates may affect a million citations.	Tran Luu	luut@mail.nlm.nih.gov	MLB	External	N/A	Mission Operational	
MeSH Vocabulary	MeSH On Demand **(LO Offering:Terminologies)**	MeSH on Demand identifies MeSH Terms in your text using the NLM Medical Text Indexer (MTI) program. After processing, MeSH on Demand returns a list of MeSH Terms relevant to your text.	Jakub Flaska	jakub.flaska@nih.gov	MLB	External	http://id.nlm.nih.gov/mesh	Mission Operational	
MeSH RDF	MeSH RDF **(LO Offering: Terminologies)**	Medical Subject Headings (MeSH) RDF is a linked data representation of the MeSH biomedical vocabulary produced by the National Library of Medicine. MeSH RDF includes a downloadable file in RDF N-Triples format, a SPARQL query editor, a SPARQL endpoint (API), and a RESTful interface for retrieving MeSH data.	Dan Davis	daniel.davis@nih.gov	ELTSS	External	http://id.nlm.nih.gov/mesh	Mission Related	
MeSH Vocabulary	MeSH Translation MTMS **(LO Offering: Terminologies) this should be sunset!**	Production environment for Medical Translation Maintenance SystemTool that allows users to translate MeSH terminology into other languages.	Tran Luu	luut@mail.nlm.nih.gov	MLB	External	https://wwwcf.nlm.nih.gov/mtms/Main/login.cfm	Mission Operational	
N/A	Native Voices Video (LO Offering: Historical Web Curated Content)	Native Voices: Native Peoples Concepts of Health and Illness explores the interconnectedness of wellness, illness, and cultural life for Native Americans, Alaska Natives, and Native Hawaiians. Visitors will discover how Native concepts of health and illness are closely tied to the concepts of community, spirit, and the land.The website includes all of the exhibitions video interviews, timeline content, and images of some objects and artifacts formerly on display	Joe Potvin	potvind@mail.nlm.nih.gov	ETLSS	External	http://apps.nlm.nih.gov/nativevoices/interviews/index.cfm	Mission Critical	
N/A (OCCS Offering)	NIH Scientific Collections	In pursuant to the NIH Policy for the Management of and Access to Scientific Collections, this site provides a user interface for NIH staff to catalog scientific collections maintained and curated by NIH. Records contributed to this registry will be added to the registry of US Federal Scientific Collections (USFSC). This site is supported by the National Library of Medicine.	Chandra Kola	kolac@mail.nlm.nih.gov	EHISS	Internal	https://nihsci.nlm.nih.gov	Mission Related	
N/A	NLM Digital QA+B76	The Digital QA application implements workflows and processes to manage the digitization of textual materials that flow through the NLM digitization/scanning lab.The third party Docworks scanning platform is used to scan bound books and manuscripts which provide the upstream source of digital material to Digital QA.Quality reviewers inspect and assure scan results. Once reviewed and the QA process completed, successful scans are are sent downstream to the DigitalRepository Team.	Satyam Pakker	satyam.pakker@nih.gov	EHISS	Internal	https://wwwcf.nlm.nih.gov/internal/digitizationqa/login.cfm	Mission Critical	
NLM Main Web	NLM Main Web **(LO Offering: NLM Main Web)**	This is the website for National Library of Medicine.	Joe Potvin	potvind@mail.nlm.nih.gov	ETLSS	External	www.nlm.nih.gov	Mission Critical	
N/A (NLM Internal App)	NLM Shuttle Display	Public facing hardware/software solution which scrapes data from http://wttsshuttle.com/arrivals and wttsshuttle/livemap, then creates a user-friendly map showing the Campus and Campus Limited bus routes in realtime with a countdown until the next bus arrival. The display is located in the lobby of building 38A.	Preetham Nosum	nosumv@nlm.nih.gov	ETLSS	Internal	https://geoapps.nlm.nih.gov/shuttle	Mission Operational	
N/A (NLM Internal App)	NOSC Display Maps	This is an internal system of public displays for analyzing and showcasing NLM web traffic, as well as activities and accomplishments from partner divisions. It may also include any ad-hoc or temporal map displays.	Preetham Nosum	nosumv@nlm.nih.gov	ETLSS	Internal	https://geoapps.nlm.nih.gov/nosc	Mission Related	
Outreach & Training	OERS - Outreach Evaluation and Reporting System **(LO Offering: Outreach & Training)**	The Outreach Evaluation and Reporting System will facilitate the specification and recordation of Outreach activity performed by all of NLM and NNLM. There are several planned modules of functionality, separated by role but managed within a single web application to facilitate a central data store for persistence. This will enable a powerful foundation for elevated reporting requirements to address the single largest deficiency in current Outreach Portal.	Satyam Pakker	satyam.pakker@nih.gov	EHISS	External	https://oers.nlm.nih.gov	Mission Operational	
N/A (NLM Internal App)	One NLM Dashboard	The service will provide NLM staff and management with a single repository for digital analytics performance data from each of NLMs program domains (e.g., MedlinePlus, AccessGUDID, NLM Main, etc.).	Eric Kamal	kamale@mail.nlm.nih.gov	ETLSS	Internal	https://dashboard.nlm.nih.gov	Mission Related	
Outreach & Training	Outreach - Maps **(LO Offering: Outreach & Training)**	Outreach Display Maps	Preetham Nosum	nosumv@nlm.nih.gov	ETLSS	External	https://geoapps.nlm.nih.gov/services/outreach/	Mission Related	
N/A	Profiles of Science (LO Offering: Historical Web Curated Content)	This service allows for the creation and display of exhibits for Profiles in Science, a long-standing system at NLM for decades. The legacy system was developed by LHC, and this new service is developed and hosted by OCCS. Display is public read-only. Creation is for LO only, with authN.	Doron Shalvi	shalvid@nih.gov	EHISS	External		Mission Operational	
N/A	Patron Registration (LO Offering; Library Services)	The set of services supporting LO management of Voyager content (Integrated Library System and Online Public Access Catalog). LocatorPlus is the name of the web-based version of Voyager. Applications: Voyager PROD Batch, Voyager PROD Users, Voyager PROD Z3950, LocatorPlus PROD	Ruben Salas	salasr@mail.nlm.nih.gov	SSS	Internal	http://patronreg.nlm.nih.gov	Mission Operational	
N/A	PCM Binding Management System	The Binding Maintenance System (BMS) is used to do binding preparation or journals/monographs including downloading bib data from Voyager, entering binding requirements and notes, generating binding slips and shipping manifests via Cognos, and tracking binding shipments and status.	Tony Luu	luul@mail.nlm.nih.gov	EHISS	Internal	https://binding.nlm.nih.gov	Mission Operational	
HSRIC, PHPartners.org	PHP/HSR **(LO Offering: HSR Information Service)**	PHP/HSR Service	Tanya Rogers	rogerst@mail.nlm.nih.gov	EHISS	External	https://wwwcf.nlm.nih.gov/internal/phpartners_input/login.cfm	Mission Critical	
N/A	Relais **(LO Offering: Library Services)**	Automates the processing and handling of over DOCLINE requests for distribution to the Collection Access Section and the History of Medicine Division. Additionally, the system is used to automate the processing, sorting, and accounting for requests submitted by NLM's patrons using the Locatorplus System to submit requests using the Overnight Photocopy Service.	Joseph Schechter	joseph.schechter@nih.gov	EHISS	Internal	N/A	Mission Related	
RxNorm	RxNorm Editing System **(LO Offering: Terminologies)**	RxNorm provides normalized names for clinical drugs and links its names to many of the drug vocabularies commonly used in pharmacy management and drug interaction software, including those of First Databank, Micromedex, MediSpan, Gold Standard Alchemy, and Multum. By providing links between these vocabularies, RxNorm can mediate messages between systems not using the same software and vocabulary.	Cage Cheung	cage.cheung@nih.gov	MLB	Internal	https://www.nlm.nih.gov/research/umls/rxnorm/	Mission Operational	
N/A	ScanTrac (LO Offering: NLM Collection (Physical, Electronic, & Metadata)	ScanTrac, an online system to track journal titles as they are processed for PMC was launched in FY2006. The system, tracks the processing of newly accepted titles from signing of agreements to delivery of XML and donated source material. It is also used to track the quality assurance process and to pay invoices.	Joseph Schechter	joseph.schechter@nih.gov	EHISS	External	https://wwwcf.nlm.nih.gov/scantrac/index.cfm	Mission Critical	

N/A	ScanTrac Batch (LO Offering: NLM Collection (Physical, Electronic, & Metadata)	Batch Process for ScanTrac, an online system to track journal titles as they are processed for PMC was launched in FY2006. The system, tracks the processing of newly accepted titles from signing of agreements to delivery of XML and donated source material. It is also used to track the quality assurance process and to pay invoices.	Joseph Schechter	joseph.schechter@nih.gov	EHISS	Internal	N/A	Mission Critical	
N/A	Serials (LO Offering: NLM Collection (Physical, Electronic, & Metadata)	Application 1. The Serial Service - The Viewer and Database. The Viewer is a user interface that allows serial information to be retrieved for a selected journal. The user can query using a Title Abbreviation, NLM Unique ID, or ISSN. The Database holds the Serial DataApplication 2. Manage Serials Form - The Manage Serials Form is an interface that allows an authorized user to add or modify certain serials data for a selected journal.Application 3. TA/ISSN Module - The TA Module is used by MMS staff to review items which are changed in the ILS and come to the SEF affecting indexed serials. MMS reviews what is in the queue and then works with TSD when problems or concerns are found. The system works for MMS and TSD as an excellent checks and balances program to catch errors before then go out on indexed citations.Application 4. Journals - The Journals site is a list of Broad Subject Terms assigned to MEDLINE journals to describe the journal's overall scope. Links are attached to the terms that run a search in the NLM Catalog.	Tanya Rogers	rogerst@mail.nlm.nih.gov	EHISS	Internal	https://serials.nlm.nih.gov	Mission Critical	
SFX	SFX **(LO Offering: Library Services)**	SFX keeps track of NLM electrocic holdings (years and columes available to NLM of online resources); it also works as a link resolver that allows to get to full-text articles from citations in PubMed (if there is a subscription)SFX and ERMS are completely separate: ERMS stores licensing information (publishers, licensing terms, etc.), and SFX is where content is made active for users based on the licensing information.ERMS only records information about electronic formats but licensed titles that are stored in ERMS may also be available in print, ERMS doesn't track information for print. Information is tracked in Voyager/holdings. Print doesn't require licenses - NLM purchases a copy and keeps it in the stacks.Voyager has data about purchaser (payments) and issues/volumes received electronically and requires a license in order to access content, that information is stored in the ERMS.	Joe Potvin	potvind@mail.nlm.nih.gov	ETLSS	External	http://sfx.nlm.nih.gov	Mission Related	
N/A	Substance Registration System (LO Offering: Drug Information)	The National Library of Medicine (NLM) and the Food and Drug Administration (FDA) have established a collaborative effort to provide an interface for Public Access to the FDA's Substance Registration System. The overall purpose of the joint FDA/USP Substance Registration System (SRS) is to support health information technology initiatives by generating unique ingredient identifiers (UNIIs) for substances in drugs, biologics, foods, and devices. The UNII is a non- proprietary, free, unique, unambiguous, non semantic, alphanumeric identifier based on a substance's molecular structure and/or descriptive information.	Chandra Kola	kolac@nih.gov	EHISS	External	https://fdasis.nlm.nih.gov/srs/	Mission Critical

Subject: ACTION REQUIRED (COMMUNICATION DIRECTOR APPROVAL) - NLM SUNSETTING REQUEST

ATTENTION: The following Sunsetting Request requires your approval.

Please review the request below and select "APPROVE", "REJECT" or "RETURN". Selecting "RETURN" will return this request to its submitter for resubmission.

NLM Service/Product (Offering) Details	
NLM Service/Product (Offering)	Gene-TOX
Description	GENE-TOX provides genetic toxicology (mutagenicity) test data from expert peer review of open scientific literature for more than 3,000 chemicals from the United States Environmental Protection Agency (EPA). GENE-TOX was established to select assay systems for evaluation, review data in the scientific literature, and recommend proper testing protocols and evaluation procedures for these systems. This database was originally supported on TOXNET by EPA and covers the years 1991 - 1998. It is no longer updated or supported by EPA.
Document(s) Supporting Justification	Gene tox sunset submission.docx
Justification	Low usage No longer aligned with NLM priorities or mission needs Incorrect or out-of-date information
Retirement Date	12/01/2019
Organization	LO

Key Staff Involved	Colette Hochstein Sanjay Jain Jeanne Goshorn Phillip Thomas David Gillikin

Internal Communication Plan	
Staff to be Informed	David Gillikin
Communicated Message	The Gene-TOX database on TOXNET will be retired on December 1, 2019, or when the current TOXNET Web site is taken down.
Date the Message will be Sent	06/19/2019
Communication Channel(s)	Emails Information delivered at staff meetings
Retained Content	FTP Other: FTP-archived resources site
Additional Information	---

External Communication Plan	
External Stakeholders to be Informed	Environmental Protection Database (EPA)
Communicated Message	The Gene-TOX database on TOXNET will be retired on December 1, 2019, or when the current TOXNET Web site is taken down. Information from it may be available from EPA on their NSCEP publications database. or from the National Technical Information Service (NTIS).
Date the Message will be Sent	08/02/2019
Communication Channel(s)	Emails Technical Bulletin Social Media
Communication Frequency	Weekly Monthly
Retained Content	FTP Other: FTP archived NLM resources site
Page Redirected	No
Additional Information	---

Request Information	
Request ID	301
Task ID	521
Request Status	Associate Director Approved
Created By	Jeanne Goshorn
Date Created	06/19/2019 05:01 p.m.

APPROVE **RETURN** * **REJECT** *

Subject: RE: Inquiry - Status of NLM Toxicology Program

In thinking about this further, I think the overall response could be:

NLM's Division of Specialized Information Services (SIS) and its products were merged into 3 different areas of the Division of Library Operations in June 2019. We are currently reviewing and evaluating the products and services formerly offered by SIS to identify which products support the NLM Strategic Plan and are unique offerings from NLM. In addition, we are seeing how best to integrate some products into more currently support technology; for example, some of the ToxNet resources will be included in PubMed, BookShelf and PubChem. These changes will be announced at the appropriate times. TEHIP will need to be re-imagined within NLM over time.

Of course, OCPL can modify as they see fit.
Any concerns?
David

Joyce Dianne

Please see this request below – see the red text that Nicole has indicated.
Bert and Jeanne are quite hesitant to provide responses, and I agree with them. Though I understand why Wexler is asking for information (publication of his book), we don't a lot to respond to.

For these Reponses, here's what I can think of:

- Current organization of the Division and status/location of its digital information resources (TEHIP) –
    - Possible response: SIS staff and products were merged into 3 different areas of the Division of Library Operations: OET, PSD and BSD.
- Plans and a timetable for the organization of TEHIP –
    - I have no idea how this should be addressed, other than TEHIP will need to be re-imagined within NLM over time.

- Proper terminology to use (e.g. NLM's SIS Division and its TEHIP program were dissolved as of _____ *or* merged with _____ *or* dismantled.) *for correct phrasing in the book*

    - Suggested text: NLM's Division of Specialized Information Services and its products were merged into 3 different areas of the Division of Library Operations in June 2019. At that time, the plans for the ToxNet resources were to move them to PubMed, BookShelf and PubChem.

- Answer: Will the databases continue to exist and be updated, but via other NLM Divisions? Will URLs change?
    - Not clear about what Nicole is asking here.

We probably need to talk about this.
David

Subject: Inquiry - Status of NLM Toxicology Program

Hi Jeanne and Bert,

Phil Wexler contacted NLM (Jerry Sheehan and Jody Nurik) in January inquiring about the most updated information on the TEHIP (Toxicology and Environmental Health Information Program). As SIS, TEHIP, and their information resources played such a dominant role in toxicology over decades, he would like to ensure that his book (see thread below) does not misrepresent NLM's current role in the informatics framework of the subject. While SIS is now closed and staff are settled in their offices, we would like to provide Phil with accurate information based on his request.

Can you please provide the following information by **COB today**:

- Current organization of the Division and status/location of its digital information resources (TEHIP)
- Plans and a timetable for the organization of TEHIP
- Proper terminology to use (e.g. NLM's SIS Division and its TEHIP program were dissolved as of _____ *or* merged with _____ *or* dismantled.) *for correct phrasing in the book*
- Answer: Will the databases continue to exist and be updated, but via other NLM Divisions? Will URLs change? *Readers of the book and others will need to find the databases and know how to do so.*

Thanks, Nicole

Phil
By way of this message, I'm putting you in contact with Jody Nurik, NLM's new communications director. She has the best overview of which resources are going where, and which are set to be retired. There are still a number of resources that are being more fully assessed, but decisions have been made about many.

Best
Jerry

Phil,
We're still working out the transition timeline for SIS and its various toxicology resources. Staff will transition out of SIS and into other parts of NLM by the end of June. We're close to having the resource timeline figured out, but not yet ready to announce it. I know this creates some complications for you, but it's a complicated transition as you can imagine.

I'm looking into your second Q below and will get back to you w/ any additional information.

Best,
Jerry

Subject: RE: NLM Toxicology Program

Thanks, Jerry. The deadline for getting all the chapters in is April 1, although publication deadlines are usually made to be broken. Certainly I'd like to know as soon as possible because the further in we get in the production process, i.e. copyediting and proofing, the more of a headache it is to make any changes. On the post you directed me to, I found it rather curious that no mention whatsoever is made of SIS' toxicology activities. Also, although SIS has clearly disappeared from the organizational chart and despite a single vague occurrence of the word "toxicology" in a bulleted item, I have no inkling of where the toxicology databases will reside. So, I'd truly appreciate it if I could be apprised of the status of the toxicology information projects formerly housed in SIS as soon as you know something so I can present accurate information in my book. - Phil

Sent: Wednesday, January 30, 2019 2:52 PM
To: Sheehan, Jerry (NIH/NLM) [E] <sheehanjr@mail.nlm.nih.gov>
Subject: NLM Toxicology Program
Importance: High

Dear Jerry:

I retired from the SIS Division just about a year ago. I was surprised to learn from a couple of former colleagues that the Division and its TEHIP (Toxicology and Environmental Health Information Program) will be somehow dissolving. The people there still seem to be somewhat confused as to what will be happening. I wrote to Patti Brennan who in turn referred me to Florence Chang but neither of them were able to give me a satisfactory answer. I subsequently wrote to Kathy Craved who just informed me of her own pending retirement and suggested I contact you. I am inquiring less out of personal curiosity about SIS than because of various publications I write and edit. It is important that I get the information right.

For example, I am trying to wrap up, as editor-in-chief, the 5th edition of my *Information Resources in Toxicology* (Elsevier). As I'm sure you can imagine, given the content, NLM, SIS, and TEHIP are mentioned and described many times in a number of the more than 120 chapters. I want to be sure that the book contains the most current information about the status of NLM's tox activities. Could you, perhaps, give me some clear-cut insight into what's being planned, plus a timetable, if there is one? What, for example, is the proper terminology to use?, e.g. NLM's SIS Division and its TEHIP program were dissolved as of _____ *or* merged with _____ *or* dismantled. I'd like to know what's happening and how to correctly phrase it. And also, will the databases continue to exist and be updated, but via other NLM Divisions? Will URLs change? Readers of the book and others will need to find the databases and know how to do so. The objective of the book is to offer a comprehensive look at toxicology information resources worldwide and make it as up-to-date as possible in a print (albeit digitally available as well) publication.

Much appreciated.

Sincerely,

Phil Wexler

Subject: NLM Toxicology Program
Importance: High

Dear Jerry:

I retired from the SIS Division just about a year ago. I was surprised to learn from a couple of former colleagues that the Division and its TEHIP (Toxicology and Environmental Health Information Program) will be somehow dissolving. The people there still seem to be somewhat confused as to what will be happening. I wrote to Patti Brennan who in turn referred me to Florence Chang but neither of them were able to give me a satisfactory answer. I subsequently wrote to Kathy Craved who just informed me of her own pending retirement and suggested I contact you. I am inquiring less out of personal curiosity about SIS than because of various publications I write and edit. It is important that I get the information right.

For example, I am trying to wrap up, as editor-in-chief, the 5th edition of my *Information Resources in Toxicology* (Elsevier). As I'm sure you can imagine, given the content, NLM, SIS, and TEHIP are mentioned and described many times in a number of the more than 120 chapters. I want to be sure that the book contains the most current information about the status of NLM's tox activities. Could you, perhaps, give me some clear-cut insight into what's being planned, plus a timetable, if there is one? What, for example, is the proper terminology to use?, e.g. NLM's SIS Division and its TEHIP program were dissolved as of _____ *or* merged with _____ *or* dismantled. I'd like to know what's happening and how to correctly phrase it. And also, will the databases continue to exist and be updated, but via other NLM Divisions? Will URLs change? Readers of the book and others will need to find the databases and know how to do so. The objective of the book is to offer a comprehensive look at toxicology information resources worldwide and make it as up-to-date as possible in a print (albeit digitally available as well) publication.

Much appreciated.

Sincerely,

Phil Wexler

NLM SIS Products

NATIONAL LIBRARY OF MEDICINE (NLM)
STRATEGIC WORKFORCE MANAGEMENT AND HUMAN CAPITAL SUPPORT SERVICES PROJECT

Focus for Today

Purpose: Agree on a streamlined approach for reviewing SIS products Outcome (Picture): Agreement on what, how, and by when products will be reviewed. Process: Clarify the change and desired outcome, and agree on best way to manage the number of products to evaluate, and determine the next steps for product reviews. Part: Share your ideas on which are the top products to review and make agreements re: next steps.

Change Defined

Big Picture Question: Which SIS products will NLM continue to support? Ensure the integrity and sustainability of key products Create a common, technical platform for delivering products and services Our Task: Identify the top/key SIS products and be able to provide a compelling case to justify continuing to invest in and support these products.Communicate and lead efforts to integrate*, release to other organizations, or sunset remaining products.*Note: For products recommended for integration with other NLM products – it will be important to be able to defend budget if funding is required.The Issue: Currently 15 products awaiting a decision; a comprehensive evaluation of each product would require significant manpower and time, and the process is unlikely to result in significant reduction in products.We must begin by limiting the number of products for review. We cannot apply the full evaluation process to every product currently listed.

Options for Narrowing the Focus

1. Each team member independently identified top SIS products using current knowledge and original reasoning. Products identified by multiple members would be included for further consideration.
2. Team members review the list over the course of the next week and then hold a group discussion to generate a list of the top SIS programs. Consider original criteria.
3. Use questions and a target or cut-off to narrow list. For example, What products have more than XXX users? What products have budgets in excess of XXX? What products have long-term importance or potential? What products are currently built using the OCCS common technical platform?
4. Each POC provides an explanation of what outcomes could be expected if NLM no longer supported the product. What would users do? What would stakeholders do? Would it impact other NLM offerings? Decision makers review and select most critical products.
5. BSD and PSD Divisions recommend 5 SIS products by the end of the week; May consult with Product POCs or team members within their Division. Decision makers review the list and reduce to 5-7 products – review is based on user data, technical assessment and budget/contract amounts.

Original Product Evaluation Considerations

NLM should consolidate information into a few platforms for improved user experience, discoverability, and efficiency.Priority given to resources that are unique, high quality, and that are highly connected to NLM offerings, or clearly contribute to furthering the strategic plan.NLM is committed to support key offerings in toxicology and environmental health.Sunset offerings if a sufficiently-equivalent offering is available from another organization.Sunset offerings that don't have a clear sustainability or succession plan.Sunset offerings that have low or declining use.Consider cost to sustain and upgrade.NLM shouldn't be a web provider for another agency/entity just because they pay.

Next Actions

Who	Will Do What	How	By When

List of Offerings for Evaluation

Offering Name	Offering Short Description
Chemical Hazards Emergency Medical Management (CHEMM)	Chemical Hazards Emergency Medical Management (CHEMM) provides resources to assist in the medical response to a mass-casualty chemical incident.
ChemIDplus	The ChemIDplus database is a dictionary of over 400,000 chemicals (names, synonyms, and structures). ChemIDplus includes links to NLM and other databases and resources, including links to federal, state and international agencies.
Data Discovery	The NLM open data discovery site, presented via the Socrata platform, provides easy interface to view, filter, download, visualize, and explore datasets.
Dietary Supplement Ingredient Database	The Dietary Supplement Ingredient Database (DSID) provides estimated levels of ingredients in dietary supplement products sold in the United States. DSID is a collaboration with NIH's Office of Dietary Supplements and USDA.
Dietary Supplement Label Database	The Dietary Supplement Label Database (DSLD) includes full label derived information from dietary supplement products marketed in the U.S. with a Web-based user interface that provides ready access to label information. DSLD is a collaboration with NIH's Office of Dietary Supplements.
Disaster Information Management Research Center (DIMRC) website	The Disaster Information Management Research Center (DIMRC) website is a source for health information resources and technology for disaster and public health emergency preparedness, response, and recovery. The focus is to connect people to quality disaster and public health emergency information and foster a culture of community resiliency.

Offering Name	Offering Short Description
Disaster Lit: Database for Disaster Medicine and Public Health	Disaster Lit, the Database for Disaster Medicine and Public Health, contains links to disaster medicine and public health emergency resources available on the Internet at no cost. Resources include guidelines, research reports, training classes, fact sheets, website, databases, data sets, and similar materials.
Household Products Database	The Household Products Database links consumer brands to health effects from Safety Data Sheets provided by manufacturers and allows scientists and consumers to research potential health effects of chemicals in more than 18,000 common household products. based on chemical ingredients. A TOXNET database.
LiverTox	LiverTox provides up-to-date, accurate, and easily accessed information on the diagnosis, cause, frequency, patterns, and management of liver injury attributable to prescription and nonprescription medications, herbals and dietary supplements. A collaboration with National Institute of Diabetes and Digestive and Kidney Diseases (NIDDK).
NIH Disaster Research Response Program (DR2)	The NIH NIH Disaster Research Response Program (DR2) program is a collaboration between National Institute of Environmental Health Sciences (NIEHS) and NLM with the potential for additional NIH Institutes and Centers to join. DR2 is the national framework for research on the medical and public health aspects of disasters and public health emergencies.
Pillbox	Pillbox enables rapid identification of unknown solid-dosage medications (tablets/capsules) based on physical characteristics and high-resolution images.

List of Offering for Evaluation (cont.)

Offering Name	Offering Short Description
Radiation Emergency Medical Management (REMM)	Radiation Emergency Medical Management (REMM) is a resource to assist healtcare providers diagnosis and treat a variety of radiation injuries.
Tox Town	Tox Town provides consumer level information on everyday locations and situations where one might be exposed to toxic chemicals.
Tox Tutor	tox Tutor provides college-level tutorials on the basic principles of toxicology, toxicokinetics, cellular toxicology, and related topics, e.g., exposure science and risk assessment. It is a self-paced tutorial covering key principles of toxicology for users of the NLM chemical and toxicology databases.
Wireless Information System for Emergency Responders (WISER)	Wireless Information System for Emergency Responders (WISER) is a tool to assist emergency responders, managers, and healthcare providers in hazardous materials incidents.

Subject: RE: Inquiry - Status of NLM Toxicology Program

Reworked just a tad… not wild about David's wording but I think we've cleaned it up a bit.

In June 2019, the National Institutes of Health's, National Library of Medicine's (NLM) Division of Specialized Information Services (SIS) was merged into three different areas of the Division of Library Operations.
NLM is currently reviewing and evaluating services and offerings formerly offered by SIS, identifying which products support the NLM Strategic Plan and are unique offerings from NLM. This includes Toxicology and Environmental Health Information Program (TEHIP), which will be re-imagined over time. NLM is evaluating how to best integrate SIS offerings into more current and standard technology, for example, some of the resources from ToxNet will be included in PubMed, BookShelf and PubChem. These changes will be announced as the work is completed.

Subject: Inquiry - Status of NLM Toxicology Program

Hi Jeanne and Bert,

Phil Wexler contacted NLM (Jerry Sheehan and Jody Nurik) in January inquiring about the most updated information on the TEHIP (Toxicology and Environmental Health Information Program). As SIS, TEHIP, and their information resources played such a dominant role in toxicology over decades, he would like to ensure that his book (see thread below) does not misrepresent NLM's current role in the informatics framework of the subject. While SIS is now closed and staff are settled in their offices, we would like to provide Phil with accurate information based on his request.

Can you please provide the following information by **COB today**:

- Current organization of the Division and status/location of its digital information resources (TEHIP)
- Plans and a timetable for the organization of TEHIP
- Proper terminology to use (e.g. NLM's SIS Division and its TEHIP program were dissolved as of _____ *or* merged with _____ *or* dismantled.) *for correct phrasing in the book*
- Answer: Will the databases continue to exist and be updated, but via other NLM Divisions? Will URLs change? *Readers of the book and others will need to find the databases and know how to do so.*

Thanks, Nicole

Subject: ACTION REQUIRED (NLM DEPUTY DIRECTOR APPROVAL) - NLM SUNSETTING REQUEST

ATTENTION: The following Sunsetting Request requires your approval.

Please review the request below and select "APPROVE", "REJECT" or "RETURN". Selecting "RETURN" will return this request to its submitter for resubmission.

NLM Service/Product (Offering) Details	
NLM Service/Product (Offering)	SIS Division Sunset
Description	Resources and programs of the Specialized Information Services will be sunset or integrated into Library Operations, OCCS and Lister Hill.
Document(s) Supporting Justification	SIS Internal Communications Plan.docx SISsunset.docx SIS-System-message.docx
Justification	Other: The SIS division is being sunset
Retirement Date	06/21/2019
Organization	DSIS
Key Staff Involved	Hua Chang

Internal Communication Plan	
Staff to be Informed	Jody Nurik
Communicated Message	On June 23, 2019 the National Library of Medicine (NLM) Division of Specialized Information Services will be merged with the Division of Library Operations, and other parts of NLM. In 1966 the President's Science Advisory Committee concluded there was an urgent need for a coordinated, complete, computer-based file of toxicological information. Toxicology databases became part of NLM's online biomedical resources after a 1967 mandate from Congress to establish the NLM Toxicology Information Program (TIP), retitled in 1994 as the Toxicology and Environmental Health Information Program (TEHIP), part of NLM's Division of Specialized Information Services (SIS).The Toxicology Data Network (TOXNET) was created in 1985 to provide more effective access to these databases. TOXNET has been among the world's largest collection of toxicology databases. Over the past 50 years, SIS has expanded its services to other areas, including outreach to underserved and special populations, HIV/AIDS, and disaster/emergency preparedness and response. This change in NLM organizational structure is in keeping with its commitment to the NLM Strategic Plan 2017-2027: A Platform for Biomedical Discovery and Data-Powered Health, that focuses on accelerating discovery and advancing health through data-driven research. The new organizational structure enables NLM to make the best use of its talents and resources, and to improve efficiency and overall effectiveness. By eliminating unnecessary boundaries between units, NLM is striving to create a more collaborative environment for Its curation teams and a universal infrastructure for its technical teams, ensuring the integrity and sustainability of key SIS products and creating a common technical platform for delivering products and services. NLM is committed to support key functions in toxicology and environmental health and other important aspects of SIS. All key products and services are undergoing an exhausted review. Some will continue and others will be discontinued or integrated with other NLM products. Please stay tuned to the communications

	from NLM about the status of the SIS products and services. The following staff and offices will be contacted as part of the process of sunsetting SIS: • NLM Leadership • NLM ALL broadcast message from the Director • NLM Customer Service • National Network Coordinating Office / National Network of Libraries of Medicine • Director and Deputy Director of NIH
Date the Message will be Sent	06/14/2019
Communication Channel(s)	Emails Other: NLM ALL broadcast message from the Director
Retained Content	NLM Website Other: Referrals on the website notice will include: • For toxicology and environmental health information, visit <NEW TEHIP HOME PAGE>. • For chemical and drug information, visit ChemIDplus, NLM Drug Portal, or PubChem. • For HIV/AIDS, visit AIDSinfo, or AIDSource. • For Outreach Activities, visit <OET Main Website> • For Disaster information, visit Disaster Information. • For K-12 science and health education, visit <TOXTOWN Student Section>
Additional Information	RWS/WIM will report on SIS content on NLM main and send findings to LO or OCPL.

External Communication Plan	
External Stakeholders to be Informed	General public, SIS users
Communicated Message	On June 23, 2019 the National Library of Medicine (NLM) Division of Specialized Information Services will be merged with the Division of Library Operations, and other parts of NLM. In 1966 the President's Science Advisory Committee concluded there was an urgent need for a coordinated, complete, computer-based file of toxicological information. Toxicology databases became part of NLM's online biomedical resources after a 1967 mandate from Congress to establish the NLM Toxicology Information Program (TIP), retitled in 1994 as the Toxicology and Environmental Health Information Program (TEHIP), part of NLM's Division of Specialized Information Services (SIS).The Toxicology Data Network (TOXNET) was created in 1985 to provide more effective access to these databases. TOXNET has been among the world's largest collection of toxicology databases. Over the past 50 years, SIS has expanded its services to other areas, including outreach to underserved and special populations, HIV/AIDS, and disaster/emergency preparedness and response. This change in NLM organizational structure is in keeping with its commitment to the NLM Strategic Plan 2017-2027: A Platform for Biomedical Discovery and Data-Powered Health, that focuses on accelerating discovery and advancing health through data-driven research. The new organizational structure enables NLM to make the best use of its talents and resources, and to improve efficiency and overall effectiveness. NLM Service/Product (Offering) Details	
NLM Service/Product (Offering)	TOXLINE
Description	TOXLINE is a bibliographic database currently part of TOXNET that is created by merging currently bibliographic data from PubMed, technical report data from NTIS, grant information from NIH's RePorter, and other archival data from various sources.
Document(s) Supporting Justification	TOXLINE retirement.docx
Justification	Other: When TOXLINE was first developed (in 1972) the science of toxicology was just emerging as a recognized field for research involving several different scientific disciplines such as biochemistry, pharmacology, physiology, etc. Some of the toxicology literature was covered by MEDLINE, but much of it was not, so other relevant abstracting and indexing services were used to obtain additional literature in toxicology to merge with MEDLINE in order to create the "more complete computer-based file of toxicological information" called for by the President's Scientific Advisory Committee in 1967. Since then, MEDLINE has expanded its journal coverage significantly and other online

	sources of toxicology information are readily available. It is no longer necessary for NLM to create a merged database of this information. we will continue to maintain a subset filter in PubMed to make searching for toxicology information easy for users. In addition, the archived parts of TOXLINE will be available on the NLM FTP site.
Retirement Date	12/01/2019
Organization	LO
Key Staff Involved	Jeanne Goshorn Phillip Thomas David Gillikin

Internal Communication Plan	
Staff to be Informed	David Gillikin
Communicated Message	Part of the TOXNET transition to NCBI involves retiring TOXLINE and directing users to the toxicology subset on PubMed
Date the Message will be Sent	06/03/2019
Communication Channel(s)	Emails Information delivered at staff meetings
Retained Content	FTP
Additional Information	---

External Communication Plan	
External Stakeholders to be Informed	Users who license TOXLINE and get it in xml from our FTP site Online users
Communicated Message	TOXLINE will be retired on 1 December 2019. The toxicology subset will be available on PubMed, and older archived parts of TOXLINE will be available on the FTP site.
Date the Message will be Sent	06/03/2019
Communication Channel(s)	Technical Bulletin Newsletter
Communication Frequency	One time message
Retained Content	FTP Other: toxicology subset of PubMed

To: Backus, Joyce (NIH/NLM) [E]
Subject: ATTENTION: NLM SUNSETTING REQUEST RETURNED

ATTENTION: The following Sunsetting Request has been **RETURNED** by the Communication Director.

Communication Director	Jody Nurik
Comments	Recommend meeting with OCPL regarding all TOXNET components to develop one communications plan.

NLM Service/Product (Offering) Details	
NLM Service/Product (Offering)	CCRIS
Description	The CCRIS database contains chemical records with carcinogenicity, mutagenicity, tumor promotion, and tumor inhibition test results. It was developed by the National Cancer Institute (NCI). Data are derived from studies cited in primary journals, current awareness tools, NCI reports, and other sources.
Document(s) Supporting Justification	TOXLINE retirement.docx SIS-sunset-resources.docx
Justification	Low usage No longer aligned with NLM priorities or mission needs Incorrect or out-of-date information

Retirement Date	12/01/2019
Organization	LO
Key Staff Involved	Colette Hochstein Sanjay Jain Jeanne Goshorn Phillip Thomas David Gillikin

Internal Communication Plan	
Staff to be Informed	Colette Hochstein Pertti Hakkinen
Communicated Message	CCRIS was originally created by the National Cancer Institute (NCI) and covers the years 1985 to 2011. It is part of TOXNET, and the information it contains is already incorporated into PubChem. On December 1, 2019 the National Library of Medicine (NLM) TOXNET website will be discontinued. Most of its content will continue to be available through other NLM databases as well as external websites. TOXNET has served as an integrated system of toxicology and environmental health databases. The most frequently used of those databases are being incorporated into three of NLM's core resources: PubChem, a database of chemical information; PubMed a resource for biomedical literature; and Bookshelf, with free online access to books and documents in life science and healthcare. Several other databases in TOXNET were made available on TOXNET from other organizations, such as the U.S. Environmental Protection Agency, and will continue to be available from those sources. Some databases will be retired. For a complete list of TOXNET databases and how to access their content, see the TOXNET transition page.

Date the Message will be Sent	09/01/2019
Communication Channel(s)	Emails Digital signage Information delivered at staff meetings Other: Tech Bulluetin
Retained Content	FTP
Additional Information	---

External Communication Plan	
External Stakeholders to be Informed	TOXNET users, NCI
Communicated Message	CCRIS as a separate database will no longer be available after NLM's TOXNET is retired. In this format it will be available on the FTP site, and the data it includes is already part of NLM's PubChem. On September 1, 2019 the National Library of Medicine (NLM) TOXNET website will be discontinued. Most of its content will continue to be available through other NLM databases as well as external websites. TOXNET has served as an integrated system of toxicology and environmental health databases. The most frequently used of those databases are being incorporated into three of NLM’s core resources: PubChem, a database of chemical information; PubMed a resource for biomedical literature; and Bookshelf, with free online access to books and documents in life science and

	healthcare. Several other databases in TOXNET were made available on TOXNET from other organizations, such as the U.S. Environmental Protection Agency, and will continue to be available from those sources. Some databases will be retired. For a complete list of TOXNET databases and how to access their content, see the TOXNET transition page. If you have questions, please contact NLM Customer Support at https://support.nlm.nih.gov/
Date the Message will be Sent	09/15/2019
Communication Channel(s)	Emails Technical Bulletin Social Media
Communication Frequency	Weekly Monthly
Retained Content	NLM Website FTP
Page Redirected	No
Additional Information	A complete list of TOXNET databases and how to access their content will be posted/available vis a new TOXNET transition page.

CHEM/TOX	3	LactMed (Phil Anderson)		Content creation and update of the LactMed database	7/2019 -7/2020	Jul-2019	Jul 2019	Lucie Chen	LO - BSD?	**Needs COR - Bert?** Very popular. Should not require significant time. Author is highly motivated and the tool is already integrated into bookshelf - working on recompetition now. Who manages other Bookshelf resources? Should it go there in the future?	
CHEM/TOX	3	Household Product Database (Henry DeLima)	Q3-Q4 FY2019	License of the content of the Household Product Database, a database on the health effects from exposure to the chemical ingredients in the household products	12/2018-12/2019	Dec-2021	Dec 2018	Lucie Chen	LO - BSD	**Needs COR - Bert?** Also very popular, so it will be evaluated. Looking to see if CPSE (Consumer Products Safety Excellence) will take it over.	
CHEM/TOX	1	HazMap (Jay Brown)	Q3-Q4 FY2019	License of the content of the HazMap database, a occupational exposure and diseases database	7/31/2019 -8/1/2020	Jul-2020	Jul 2019	Lucie Chen	Sunset	BSD - Bert is trying to find a new home, can't be added to bookshelf because of how it is structured. Contract ends in July...needs the Sunset form. **ISSUES**	
CHEM/TOX	3	ITER (Univ of Cincinnati)	Q FY2019	License of the content of the International Toxicity Estimates for Risk (ITER)	4/2019 - 4/2020	Apr-2021	Apr 2019	Bert Hakkinen	LO - BSD	Bert COR - Eventually integrated into Bookshelf; ownership of the contract is currently in question, will come down with TOXnet **ISSUES**	
CHEM/TOX	1	Poisindex emergency medical management (Truven Health) **(Not renewed yet as of March)**		License of the content of Poisindex from Truven Health	1/2019 - 1/2020	Jan-2019	Jan 2019	Jen Pakiam	NA - BSD or PSD?	Not renewed but in the process of renewing license, not sure where to go. Should Jen keep this one? Up for integration. Who holds "data" in LO?	
CHEM/TOX	3	SIS and TOXNET computer system/IT support (ICF)		Contract for the main IT contract with ICF International for providing SIS computer system administration and information system development support.	This contract will end Sept, 2019. Contractors will go to OCCS. $800,000 funding goes to OCCS in September, 2019	Not going to re-compete	Sep 2019	Florence Chang	OCCS	COR Wei Ma, Supports 3.5 contractos, contract will end in Sept. Plans around transitioning of systems between now and Sept.	
CHEM/TOX	3	TOXNET/SSEUS Content Management System (Jeffery System)	Q4 FY 2019	Support the data entry and editing system and database maintenance for TOXNET databases, including HSDB, LactMed, and ITER	7/2019 - 7/2020	Jun-2019	Jul 2019	Phillip Thomas	OCCS	COR Wei Ma, setting up the recompete - will be done by July.	
DIMRC	3	Disaster Info Support (ICF)	Q2 FY2020	Includes support for librarian and computer programmer to support Disaster Lit, DIMRC web site, Disaster health informatics and communication innovation initiatives (training, communication)	9/2019 - 9/2020	Sep-2019	Sep 2019	Stacey Arnesen	LO - PSD	Siobhan will be task manager; broad task for IT and content; other innovation projects (Victor); genernal DIMRC website and Dis Lit. CMS, production and staging is at NLM. Programmer offsite, Librarian onsite (can change); will fund this POP	
DIMRC	1	WISER (Next Century)	Q1 FY2020	To support the development of the tool for responding to hazardous material incidents. For maintenance for all platforms with minor enhancements and data (content) updates, and prototyping of voice-activated assistant.	9/2019 - 9/2020	Sep-2019	Sep 2019	Jen Pakiam	LO PSD or BSD?	COR Jen - Bert is also part of the team (no hands on work - facilitator and promoter). Doesn't make sense long term in PSD - should all Tox stuff eventually land in BSD? Jen will be fully occupied; outside contractor does the program - does OCCS need to be looped in on this? this is expected to funded in Sep, recompete, offsite staff; mostly IT website; hosted at NLM; web version; 3 APPS; transitioning to PSD; we need to know about any funding for contractors that update the web pages; unclear about CMS	
DIMRC	3	NASEM Forums		NASEM Med Prep Forum & Action Collab on Disaster resesarch	9/2019 - 9/2020		Sep 2019	Stacey Arnesen	LO - PSD	transfer to PSD; NIH OD contract, we have a task on it to support NASEM; no IT, run forums; need to make a decision about contributing to this in 2019, Annual fee, Cheryl Field, should this be a membership - **Did this question get answered?**	
CHEM/TOX	1	CHEMM content creation and maintenance (AlphaTrac)	Q1 FY2020	Support the content creation and maintenance of Chemical Hazards Emergency Medical Management (CHEMM)	8/1/2019 - 7/31/2020	Aug-2019	Jul 2019	Bert Hakkinen	LO - PSD?	COR Bert- very involved; Jen marginally involved, considered one of the Disaster tools and closerly tied to WISER - where should it live? outside contractor does the program - does OCCS need to be looped in on this? Could work to have Jen take over COR and Bert as an advisor PSD -- Shifting from solo contract to task under a BPA - Get Jen involved in task	
DIMRC	1	REMM							LO - PSD?	Jen is the POC, Florence will be handing this off to her. Issues with the Content expert HHS funded contractor and with the technology; Florence has done the technology; funding by an interagency agreement by HHS. Dianne and David are aware of the situation - **ISSUE**	
Outreach	3	Special Population Resources Maintenance (ICF)	Q3 FY2019	Staffing, IT support for HealthReach, American Indian Health, Arctic Health	9/2018-9/2019	Sep-2019	Sep 2019	Laura Bartlett	NA LO-PSD?	Only one left is HealthReach; but the other ones are going, Being integrated into MedLinePlus. **Michael Honch in PSD as owner?-** Laura has some "Outreach" connections that involve getting content - she has a few tasks that she is doing through September - User studies (20-25% of her time until fully integrated)	
Outreach	**2**	Technical and Programmatic Support for Specific Population Projects (ICF)		Support services for outreach projects such as CHIC, Community Health Maps, etc	9/2018-9/2019	Sep-2019	Sep 2019	Janice Kelly	LO - OET?	Janice gave her suggestions; and will be meeting with Joyce and Amanda to discuss all Outreach programs; Prior John Scott had many Subcontracts for outreach awards, TBD; **need COR**	
Outreach	**2**	Maintenace and Development Support for SIS Programs Projects (ICF)		Provide comprehensive management and staffing services to the National Library of Medicine Specialized Information Services to support websites, services and activities	9/2018-9/2019	Sep-2019	Sep 2019	Nicole Scott	LO OET or PSD?	supports 2 contract staff - **Sent Amanda an note and she is interested; 80% DIMRC and 20% Outreach; - through Sept.**	
Outreach	**2**	EnHIP Chair		Support for the year long duties of the EnHIP chair	1/15/2019-1/14/2020	Jan-2019		Janice Kelly	LO - OET	**need COR; is this an annual PO? Laura?**	

Outreach	**2**	EnHIP senior advisor		Suppport for the year long duties of the EnHIP senior advisor Rueben Warren	9/20/2018-9/19/2019		9/20/2019	Janice Kelly	LO - **OET**	**need COR; is this an annual PO? Laura?**
Outreach	**4**	Higher Ed Project		Project addressing the needs of minority serving institutions to use HSDB and other NLM resources	3/6/18-6/28/19	Jun-2019	6/28/2019	Cassandra Allen	Sunset	Totally Sunset at this point
Outreach	**2**	Training and Outreach Support Services for NLM (ICF)		Subaward to ORAU for training and outreach support, promotion and logistical support to SIS	9/2018-6/2019	Jun-2019	June 2019	Nicole Scott	LO - OET?	Being competed; **need COR? Will Nicole continue once funded or should this shift to OET?** Trying to put in a BPA - Nicole still involved and Jody is aware
Outreach	**2**	Training and Outreach Support Services for NLM (ICF)		OET will need to take over the separate LMS; what do they want to do with it. Resources have been developed				Nicole Scott	LO - OET?	No plans right now for LMS. **Ends in June or July?**
Outreach	**2**	Training and Outreach Support Services for NLM (ICF)		OET will need to take over exhibitingS; what do they want to do with it. Resources have been developed				Nicole Scott	LO - OET?	No plans right now for exhibiting. **Ends in June or July?**
CONS HLTH	1	Consumer Health Resources: Maintenance (ICF)	Q1 FY2020	Provide subject matter and IT expertise to support Tox Town's, Kids portal, and GeneEd	9/2018-9/2019	Sep-2019	Sep 2019	Alla Keselman	LO - BSD or PSD?	TOXTOWN - Alla is working on it; **should it go to BSD or PSD since they have consumer resoures;** no content expert (people are gone) recommend PSD but needs a Task Manager - needs a home - **public facing website should transition to OCCS;** developer is ICF; different CMS; will this go into PSD as consumer or as a CHEM/Tox offering. need to know the funding breakdown of IT vs content and **need a task manager**
CONS HLTH	1	Special Population Resources Enhancement and Outreach (ICF)	Q4 FY2019 - Q1 FY2020	Support special population resources including HealthReach, Arctic Health, and American Indian Health.	9/2018-9/2019	Sep-2019	Sep 2019	Laura Bartlett	LO / OCCS	Need to figure out resources/funds - this is the content/Outreach part? Very little IT, done by FTE at OCCS; talk to Laura--what should happen? healthreach integrated into Med+; **need task manager; OCCS will need support for IT; Nicole is asking for an estimate for support of HR**
AIDS	**1**	AIDSinfo and AIDSource (ICF)	Q4 2020	Manage daily operations of the AIDSinfo, infoSIDA and AIDSource services - the AIDSinfo website, guidelines and panels, and treatment information	9/2018-9/2019	Sep-2019	Sep 2019	Nicole Scott	**LO OCPL**	OCPL? Patty wants it transitioned to another IC, Nicole is working on that
AIDS	**1**	AIDSinfo and AIDSource: Supplemental Tasks (ICF)	Q4 2020	Support for content development, outreach, training, evaluation, user studies, etc	9/2018-3/2020	Sep-2019	Sep 2019	Nicole Scott	OCPL?	OCPL? Being evaluated for inclusion in MedlLinePlus- **Andrew Plummer in PSD as an option; logical choice.** Nicole and team talking about this. Julian works on this as well as part of the team.

Subject: FW: Inquiry - Status of NLM Toxicology Program - draft for your review.

Hi Jerry,

What do you think about the below blurb to send back to Philip? Thanks, Jody

_____

In June 2019, the National Institutes of Health's, National Library of Medicine's (NLM) Division of Specialized Information Services (SIS) was merged into three different areas of the Division of Library Operations.
NLM is currently reviewing and evaluating services and offerings formerly offered by SIS, identifying which products support the NLM Strategic Plan and are unique offerings from NLM. This includes Toxicology and Environmental Health Information Program (TEHIP), which will be re-imagined over time.
NLM is evaluating how to best integrate SIS offerings into more current and standard technology, for example, some of the resources from ToxNet will be included in PubMed, BookShelf and PubChem.
These changes will be announced as the work is completed.

We are currently reviewing and evaluating the products and services formerly offered by SIS, identifying which products support the NLM Strategic Plan and are unique offerings from NLM. In addition, we are seeing how best to integrate some products into more current and standard technology used at NLM; for example, some of the ToxNet resources will be included in PubMed, BookShelf and PubChem. These changes will be announced at the

appropriate times as the work is completed. TEHIP will need to be re-imagined within NLM over time.

OCPL should of course review and edit this text as you see appropriate.
Thanks
David

Subject: Inquiry - Status of NLM Toxicology Program

Hi Jeanne and Bert,

Phil Wexler contacted NLM (Jerry Sheehan and Jody Nurik) in January inquiring about the most updated information on the TEHIP (Toxicology and Environmental Health Information Program). As SIS, TEHIP, and their information resources played such a dominant role in toxicology over decades, he would like to ensure that his book (see thread below) does not misrepresent NLM's current role in the informatics framework of the subject. While SIS is now closed and staff are settled in their offices, we would like to provide Phil with accurate information based on his request.

Can you please provide the following information by **COB today**:

- Current organization of the Division and status/location of its digital information resources (TEHIP)
- Plans and a timetable for the organization of TEHIP
- Proper terminology to use (e.g. NLM's SIS Division and its TEHIP program were dissolved as of _____ *or* merged with _____ *or* dismantled.) *for correct phrasing in the book*
- Answer: Will the databases continue to exist and be updated, but via other NLM Divisions? Will URLs change? *Readers of the book and others will need to find the databases and know how to do so.*

Thanks, Nicole

Subject: Inquiry - Status of NLM Toxicology Program

Hi Jeanne and Bert,

Phil Wexler contacted NLM (Jerry Sheehan and Jody Nurik) in January inquiring about the most updated information on the TEHIP (Toxicology and Environmental Health Information Program). As SIS, TEHIP, and their information resources played such a dominant role in toxicology over decades, he would like to ensure that his book (see thread below) does not misrepresent NLM's current role in the informatics framework of the subject. While SIS is now closed and staff are settled in their offices, we would like to provide Phil with accurate information based on his request.

Can you please provide the following information by **COB today**:

- Current organization of the Division and status/location of its digital information resources (TEHIP)
- Plans and a timetable for the organization of TEHIP
- Proper terminology to use (e.g. NLM's SIS Division and its TEHIP program were dissolved as of _____ *or* merged with _____ *or* dismantled.) *for correct phrasing in the book*
- Answer: Will the databases continue to exist and be updated, but via other NLM Divisions? Will URLs change? *Readers of the book and others will need to find the databases and know how to do so.*

Thanks, Nicole

Hi Jerry,

Will you be able to review the text below today? Thanks, Jody

_____
In June 2019, the National Institutes of Health's, National Library of Medicine's (NLM) Division of Specialized Information Services (SIS) was merged into three different areas of the Division of Library Operations.
NLM is currently reviewing and evaluating services and offerings formerly offered by SIS, identifying which products support the NLM Strategic Plan and are unique offerings from NLM. This includes Toxicology and Environmental Health Information Program (TEHIP), which will be re-imagined over time. NLM is evaluating how to best integrate SIS offerings into more current and standard technology, for example, some of the resources from ToxNet will be included in PubMed, BookShelf and PubChem. These changes will be announced as the work is completed.

Jody - I am being pressed by my publisher to provide the information I've been saying is forthcoming about the current status of SIS/TEHIP/TOXNET and I guess I'm just not sure what's holding up my getting this information from NLM. In the absence of any accurate details, I may just have to write a statement piecing together what I have come across on the Web and speculate, which would be a disservice to the readers of the book but better than ignoring the issue. - Phil

Thanks very much, Jody. As SIS, TEHIP, and their information resources played such a dominant role in toxicology over decades, I want to be certain that my book does not misrepresent NLM's current role in the informatics framework of the subject. I think if you review the email thread below, you will find it describing what kind of information I am looking for. Feel free, though, to let me know if you have any questions. I look forward to hearing from you soon. - Phil

Phil
By way of this message, I'm putting you in contact with Jody Nurik, NLM's new communications director. She has the best overview of which resources are going where, and which are set to be retired. There are still a number of resources that are being more fully assessed, but decisions have been made about many.

Best
Jerry

Phil,
We're still working out the transition timeline for SIS and its various toxicology resources. Staff will transition out of SIS and into other parts of NLM by the end of June. We're close to having the resource timeline figured out, but not yet ready to announce it. I know this creates some complications for you, but it's a complicated transition as you can imagine.

I'm looking into your second Q below and will get back to you w/ any additional information.

Best,

Jerry

Subject: RE: NLM Toxicology Program

Thanks, Jerry. The deadline for getting all the chapters in is April 1, although publication deadlines are usually made to be broken. Certainly I'd like to know as soon as possible because the further in we get in the production process, i.e. copyediting and proofing, the more of a headache it is to make any changes. On the post you directed me to, I found it rather curious that no mention whatsoever is made of SIS' toxicology activities. Also, although SIS has clearly disappeared from the organizational chart and despite a single vague occurrence of the word "toxicology" in a bulleted item, I have no inkling of where the toxicology databases will reside. So, I'd truly appreciate it if I could be apprised of the status of the

toxicology information projects formerly housed in SIS as soon as you know something so I can present accurate information in my book. - Phil

Phil,
Thanks for contacting me. We are still working through the details of the transition, which aims to better integrate SIS Tox (and other) resources into the larger NLM data infrastructure. What is the timeline for your book? We may have more answers for you in time for publication. Most of the significant changes will be announced on Patti's blog and via other NLM communications and social media channels. Here's Patti's post from 1/2/19, which gives a general overview of the current elements of NLM reorganization: https://nlmdirector.nlm.nih.gov/2019/01/02/new-year-new-directions-for-nlm/

Best,
Jerry

Subject: NLM Toxicology Program
Importance: High

Dear Jerry:

I retired from the SIS Division just about a year ago. I was surprised to learn from a couple of former colleagues that the Division and its TEHIP (Toxicology and Environmental Health Information Program) will be somehow dissolving. The people there still seem to be somewhat confused as to what will be happening. I wrote to Patti Brennan who in turn referred me to Florence Chang but neither of them were able to give me a satisfactory answer. I subsequently wrote to Kathy Craved who just informed me of her own pending retirement and suggested I contact you. I am inquiring less out of personal curiosity about SIS than because of various publications I write and edit. It is important that I get the information right.

For example, I am trying to wrap up, as editor-in-chief, the 5th edition of my *Information Resources in Toxicology* (Elsevier). As I'm sure you can imagine, given the content, NLM, SIS, and TEHIP are mentioned and described many times in a number of the more than 120 chapters. I want to be sure that the book contains the most current information about the status of NLM's tox activities. Could you, perhaps, give me some clear-cut insight into what's being planned, plus a timetable, if there is one? What, for example, is the proper terminology to use?, e.g. NLM's SIS Division and its TEHIP program were dissolved as of _____ *or* merged with _____ *or* dismantled. I'd like to know what's happening and how to correctly phrase it. And also, will the databases continue to exist and be updated, but via other

NLM Divisions? Will URLs change? Readers of the book and others will need to find the databases and know how to do so. The objective of the book is to offer a comprehensive look at toxicology information resources worldwide and make it as up-to-date as possible in a print (albeit digitally available as well) publication.

Much appreciated.

Sincerely,

Phil Wexler

Hi Jerry,

Will you be able to review the text below today? Thanks, Jody

_____
In June 2019, the National Institutes of Health's, National Library of Medicine's (NLM) Division of Specialized Information Services (SIS) was merged into three different areas of the Division of Library Operations.
NLM is currently reviewing and evaluating services and offerings formerly offered by SIS, identifying which products support the NLM Strategic Plan and are unique offerings from NLM. This includes Toxicology and Environmental Health Information Program (TEHIP), which will be re-imagined over time. NLM is evaluating how to best integrate SIS offerings into more current and standard technology, for example, some of the resources from ToxNet will be included in PubMed, BookShelf and PubChem. These changes will be announced as the work is completed.

Jody - I am being pressed by my publisher to provide the information I've been saying is forthcoming about the current status of SIS/TEHIP/TOXNET and I guess I'm just not sure what's holding up my getting this information from NLM. In the absence of any accurate details, I may just have to write a statement piecing together what I have come across on the Web and speculate, which would be a disservice to the readers of the book but better than ignoring the issue. - Phil

Hi Jody,

I looked over LO's final list of offerings and took a step back and reevaluated OCPL's list.

Please find the attached list for OCPL.

Just a reminder that within an offering, one or more resources can be found. Within the resource lives the more granular details, see below examples. As we gathered from our meeting last week with Mitre, they don't seem to be too concerned with those bottom tier details.

I. Offering- MedlinePlus Magazine
   a. Resource- NIH MedlinePlus Magazine Print (Business Resource)
      i. Project Management (Business resource)
      ii. Content/Development (Business resource)
      iii. Market Research/Web Analytics/Evaluation (Business Resource)

OR

II. Social Media Platforms
   a. Musings from the Mezzanine
      i. WordPress (Technical Resource)
      ii. Content Development (Business Resource)
      iii. Web Analytics/Evaluation (Business Resource)

Please let me know your thoughts! ☺

Thank you,
Alise

CDE Repository	Common Data Elements (**LO Offering: Terminologies**)	The NIH Common Data Elements (CDE) Repository has been designed to provide access to structured human and machine-readable definitions of data elements that have been recommended or required by NIH Institutes and Centers and other organizations for use in research and for other purposes. Visit the NIH CDE Resource Portal for contextual information about the repositoryData Element (DE) - Information that describes a piece of data to be collected in a study	Christophe Ludet	christophe.ludet@nih.gov	MLB	External	https://cde.nlm.nih.gov	Mission Related	
N/A	Conservation Tracking DB **(LO Offering: Historical Web Curated Content)**	The NLM conservation staff uses the conservation database to record multiple tasks into one database. Multiple tasks include multiple treatment methods and conditions, such as survey, lab work, media, photography, conditions, previous/proposed treatments, housing, exhibition etc. And they need to record a lot of very detailed information of an item conservation. For example for media that may record color, print media, drawing, painting and conditions, for lab work may record date/time, location, conservator, approved by, completed date, using time, processing status etc. The current database allows conservators to input treatment and condition reports which provides a comprehensive and automated method for documenting their work. Current database features: 1. Store treatment reports, condition reports, surveys, and housing (storage) both current and past - for paper-based objects including flat paper manuscripts and art-on-paper, photographs, and bound materials2. Track collection items exhibition history3. Monitor progress of conservation treatment4. Linked to and searchable through Voyager	Tanya Rogers	rogerst@mail.nlm.nih.gov	EHISS	Internal	https://wwwcf.nlm.nih.gov/internal/conservt/login.cfm	Mission Operational	
DailyMed	DailyMed (**LO Offering: Terminologies**)	Daily Med is a website operated by the U.S. National Library of Medicine (NLM) to publish up-to-date and accurate drug labels (also called a "package insert") to health care providers and the general public. The contents of DailyMed is provided and updated daily by the U.S. Food and Drug Administration (FDA). The FDA in turn collects this information from the pharmaceutical industry. N/A	Emergency Access Initiative (LO Offering: Library Services)	The Emergency Access Initiative (EAI) is a partnership of the National Library of Medicine, the National Network of Libraries of Medicine, and the Professional/Scholarly Publishing Division of the Association of American Publishers. EAI provides free access to full text articles from major biomedicine titles to healthcare professionals, librarians, and the public in the United States affected by disasters. Users in the United States affected by a disaster can request access to free full text articles by calling 1-800-338-7657 or contacting your local medical library.	Joe Potvin	potvind@mail.nlm.nih.gov	ETLSS	External	http://eai.nlm.nih.gov	Mission Critical	
N/A	Encoded Archival Description (LO Offerings: Library Services)	EAD stands for Encoded Archival Description, and is the non-proprietary, international standard for the encoding of finding aids for use in a networked (online) environment. Finding aids are inventories, indexes, or guides that are created by archival and manuscript repositories to provide detailed information about specific collections, their creators, context, and detailed contents lists. Developed by the EAD Working Group of the Society of American Archivists and first published in 1998, EAD is an Extensible Markup Language (XML) format used by archivists around the globe. The development of EAD made it possible to create electronic finding aids within a specifically archival data structure compliant with General International Standard Archival Description (ISAD(G)).The application site has the ability to create and view EAD collections of archival materials. A created EAD collection may be viewed on the site or downloaded. Collections are created via a multipart form. Upon form submission, the software transforms the input data into XML. Collections may be viewed, edited or downloaded via a sortable datatable on the index page. The site features user login by password. There are two levels of accounts admin, and user.The site is a .net Windows Forms application. It stores the data in an Oracle database. There is a dev and production environment of the software and database. dev HMD EAD dev location prod HMD EAD prod location Stash EAD HMD source control of application	Jeremy Markowitz	markowitzjj@mail.nlm.nih.gov	ELTSS	External	https://ead.nlm.nih.gov	Mission Related	
N/A	Ending the Document Game (where is this linked from? does this get any usage? What a hanging chad!) (LO Offering: HSR Information Services)	The Commission on Systemic Interoperability was authorized by the Medicare Modernization Act and established by the Secretary of Health and Human Services. Its members were appointed by the President of the United States of America and the leaders of the 108th United States Congress, and it held its first meeting on January 10, 2005.The Commission was charged with developing a strategy to make healthcare information instantly accessible at all times, by consumers and their healthcare providers. On October 25, 2005, the Commission released its report, Ending the Document Game: Connecting and Transforming Your Healthcare Through Information Technology, to the United States Congress, the Administration, and the American public	Joe Potvin	potvind@mail.nlm.nih.gov	ETLSS	External	https://endingthedocumentgame.gov	Mission Critical	
NLM Products and Services Directory	Eresources **(Lo Offering: NLM Main Web)**	The public NLM Products and Services provides one place to easily identify available NLM electronic resources including datasets, biomedical databases. N/A (NLM Internal App)	Inventory Control System	The Office of Administration and Management Analysis (OAMAS) at the National Library of Medicine is responsible for warehousing and providing supplies to all library divisions. The operation entails receiving supply orders from designated library staff, known as customers, placing orders to vendors, maintaining inventories in the warehouse, filling orders as they are received from customers, and keeping records for billing, tracking backorders, and other managerial functions. The Inventory Control System is designed to improve OAMAS service to NLM by providing a user-friendly ordering mechanism, enabling managers to more closely track supply receipts from vendors and deliveries to customers, reducing the number of backlog orders, and shortening the backlogs.	Tony Luu	luul@mail.nlm.nih.gov	EHISS	Internal	wwwcf2.nlm.nih.gov/internal/inventory/customer/cwelcome.cfm	Mission Operational	
Journal Donation	Journal Donation **(LO offering: Library Services)**	The National Library of Medicine welcomes donations of print journal volumes that are missing from our collection. The Journal Donation system enables users to find out which volumes are needed and what they can donate.Relations with SERIAL, HOLDINGS.Journal Donations is based on the JDONATE database; they are journals donated to the NLM by other libraries.	Dorothy La	lad@mail.nlm.nih.gov	EHISS	External	https://wwwcf.nlm.nih.gov/jdonate/index.cfm,Jdonate	Mission Related	
N/A	Learning Resources **(LO Offering: Outreach & Training)**	The learning resources project provides a way for authors to have a central metadata repository for the tutorials that they have created. There is an internal-facing web application where authors create metadata about their learning resource, and the repository can be queried to create public-facing views of certain product categories, such as LinkOut, UMLS, etc.Project Benefits:The repository allows a single point to manage metadata around training resources, and provides flexible categorization and metadata management. Authors will be able to look at a given training resource, and know all the places where it "lives" on NLM's website.	Tanya Rogers	rogerst@mail.nlm.nih.gov	EHISS	External	N/A	Mission Related	
N/A	LinkChecker Batch **(since it is database to find broken links for PHPartners & HSRR, HSRProject, then, LO Offering: HSR Information Services)**	LinkChecker is a Java program that checks databases PHPartners, HSRR, and HSRProjects to make sure all links are not broken.LinkChecker is a type of health check designed to remove dead links in the database.	Tanya Rogers	rogerst@mail.nlm.nih.gov	EHISS	Internal	N/A	Mission Related	
N/A (NLM Internal App)	Loading Dock	A system to document what is delivered to BLDG38A / OAMAS loading dock such as PCs, Laptops, Tablets, Cell Phones or any electronic devices. Those are accountable pieces of property receive a decal number before they are shipped to the users. Often receiving in the NBS system is not done in a timely fashion and the decal worksheet in NBS is not available to document the decal number associated with each piece of accountable property. As such, OAMAS needs means of documenting the decals associated with each piece of property shipped to users. Thus, Loading Dock system document the delivery to the end user and capture their ID badge information. This will be time stamped will indicate that OAMAS is no longer responsible for the item(s).	Tony Luu	luul@mail.nlm.nih.gov	EHISS	Internal	wwwcf2.nlm.nih.gov/internal/inventory/loadingdock/allmodules.cfm	Mission Operational	
Loansome Doc	Loansome Doc **(LO Offering: Sunsetted)**	Loansome Doc is NLM's application to enable a library patron to order articles from a list of citations retrieved from PubMed or the NLM Gateway by sending requests to their library	Joseph Schechter	joseph.schechter@nih.gov	EHISS	External	https://docline.gov/loansome/login.cfm	Mission Critical	Will be retired 7/1/2019

N/A	Local Legends (LO Offering: Historical Web Curated Content)	Local Legends is a partnership of the National Institutes of Healths National Library of Medicine (NLM), the NIH Office of Womens Health Research (OWHR), and the American Medical Womens Association (AMWA). On behalf of the partners, the AMWA annually calls upon the Congress to nominate outstanding women physicians from their state or district who have demonstrated commitment, originality, innovation, or creativity in her field of medicine. Local Legends is a companion gallery to NLMs Changing the Face of Medicine: Celebrating Americas Women Physicians exhibition on the campus of the National Institutes of Health in Bethesda, MD. The gallery spotlights these women physicians their lives, their achievements, their dreams, and the challenges they faced in becoming physicians. The exhibition, including the Local Legends gallery web site, will travel to cities across the country beginning in spring, 2005. In February 2004, those women physicians nominated by their Congressional representative to be Local Legends were announced at the American Medical Womens Association annual conference in San Diego, CA. These women are profiled in this web site. The AMWA has continued the Local Legends project providing the Congress with the opportunity to again nominate and recognize outstanding women physicians from their district or state to be featured in the exhibition since it began to travel throughout the United States in spring, 2005.	Winston Churchill	churchw@mail.nlm.nih.gov	ETLSS	External	http://www.nlm.nih.gov/locallegends	Mission Related	
LocatorPlus	LocatorPlus **(LO Offering: Library Services)**	The set of services supporting LO management of Voyager content (Integrated Library System and Online Public Access Catalog). LocatorPlus is the name of the web-based version of Voyager. Applications: Voyager PROD Batch, Voyager PROD Users, Voyager PROD Z3950, LocatorPlus PROD	Ruben Salas	salasr@mail.nlm.nih.gov	SSS	External	http://locatorplus.gov	Mission Critical	
LSTRC Publisher Web Form	LSTRC Admin **(LO Offering: Library Services)**	Literature Selection Technical Review Committee. The system records current and historical data concerning Committee review of journal titles. LSTRC is an NIH chartered advisory committee of external experts who review and recommend biomedical and health (serial) journal titles to be indexed and included in MEDLINE/PubMed. LSTRC Admin takes the journals from MEDLINE Review and assigns it to reviewers in MEDLINE Reviewer Web and checks with Serials to see if journals exist there.	Dorothy La	lad@mail.nlm.nih.gov	EHISS	External	https://wwwcf.nlm.nih.gov/lstrc/lstrc.html	Mission Operational	
N/A (NLM Internal App)	Manuscript Clearance	Manuscript Clearance enables digital submissions of manuscripts for NLM. The solution is comprised of a .net MCV web application, oracle database with triggers, and two additional .net applications running nightly on scheduled tasks. The web site is available to anyone with a NED account, validating user logon credentials automatically. The web application allows users to submit manuscripts and stakeholders to manage the editorial workflow. Notifications are emailed at keys stages of the process, alerting users with key roles to take action and move a request to the next stage. Users may search for requests they've submitted or are charged with acting upon. A super-admin role allows other roles to be configured through the site. The website communicates to the Oracle PCWPROD database. A dev and QA environment also exists for testing/staging.An additional .net console application notify those responsible for a specific stage of the application when no action has been taken in a multiple of 10 days. Another .net console application imports NED data on a nightly basis and updates the application's user database. These components each have a source control repository.	Jeremy Markowitz	markowitzjj@mail.nlm.nih.gov	ELTSS	Internal	https://manuscriptclearance.nlm.nih.gov	Mission Critical	
MEDLINE	Medline Review **(LO Offering: Medline/PubMed)**	The MEDLINE Review Application Form provides a standardized and efficient process for journal reviews. Editors and publishers electronically complete and submit the application form with current information about their journals to help ensure that NLM has the most accurate data available for its records. The form is required for all journals submitted to NLM for inclusion in MEDLINE. Subject: RE: NLM Toxicology Program
Importance: High

Good morning Phil,

We have crafted language regarding the recent changes with SIS and NLM. Please see the below.

In June 2019, the National Institutes of Health's, National Library of Medicine's (NLM) Division of Specialized Information Services (SIS) was merged into the Division of Library Operations and the Office of Computer & Communications Systems. NLM is currently reviewing and evaluating services and offerings formerly offered by SIS, identifying which products support the NLM Strategic Plan and are unique offerings from NLM. This includes Toxicology and Environmental Health Information Program (TEHIP), which will be re-imagined over time. NLM is evaluating how to best integrate SIS offerings into more current and standard technology, for example, some of the resources from ToxNet will be included in PubMed, BookShelf and PubChem. These changes will be announced as the work is completed.

For your reference, the SIS homepage will provide program updates through December, 2019.

Thank you,

Alise Crutchman, MBA

Jody - I am being pressed by my publisher to provide the information I've been saying is forthcoming about the current status of SIS/TEHIP/TOXNET and I guess I'm just not sure what's holding up my getting this information from NLM. In the absence of any accurate details, I may just have to write a statement piecing together what I have come across on the Web and speculate, which would be a disservice to the readers of the book but better than ignoring the issue. - Phil

Thanks very much, Jody. As SIS, TEHIP, and their information resources played such a dominant role in toxicology over decades, I want to be certain that my book does not misrepresent NLM's current role in the informatics framework of the subject. I think if you review the email thread below, you will find it describing what kind of information I am looking for. Feel free, though, to let me know if you have any questions. I look forward to hearing from you soon. - Phil

Phil
By way of this message, I'm putting you in contact with Jody Nurik, NLM's new communications director. She has the best overview of which resources are going where, and which are set to be retired. There are still a number of resources that are being more fully assessed, but decisions have been made about many.

Best
Jerry

Phil,
We're still working out the transition timeline for SIS and its various toxicology resources. Staff will transition out of SIS and into other parts of NLM by the end of June. We're close to having the resource timeline figured out, but not yet ready to announce it. I know this creates some complications for you, but it's a complicated transition as you can imagine.

I'm looking into your second Q below and will get back to you w/ any additional information.

Best,
Jerry

Subject: RE: NLM Toxicology Program

Thanks, Jerry. The deadline for getting all the chapters in is April 1, although publication deadlines are usually made to be broken. Certainly I'd like to know as soon as possible because the further in we get in the production process, i.e. copyediting and proofing, the more of a headache it is to make any changes. On the post you directed me to, I found it rather curious that no mention whatsoever is made

of SIS' toxicology activities. Also, although SIS has clearly disappeared from the organizational chart and despite a single vague occurrence of the word "toxicology" in a bulleted item, I have no inkling of where the toxicology databases will reside. So, I'd truly appreciate it if I could be apprised of the status of the toxicology information projects formerly housed in SIS as soon as you know something so I can present accurate information in my book. - Phil

Subject: NLM Toxicology Program
Importance: High

Dear Jerry:

I retired from the SIS Division just about a year ago. I was surprised to learn from a couple of former colleagues that the Division and its TEHIP (Toxicology and Environmental Health Information Program) will be somehow dissolving. The people there still seem to be somewhat confused as to what will be happening. I wrote to Patti Brennan who in turn referred me to Florence Chang but neither of them were able to give me a satisfactory answer. I subsequently wrote to Kathy Craved who just informed me of her own pending retirement and suggested I contact you. I am inquiring less out of personal curiosity about SIS than because of various publications I write and edit. It is important that I get the information right.

For example, I am trying to wrap up, as editor-in-chief, the 5th edition of my *Information Resources in Toxicology* (Elsevier). As I'm sure you can imagine, given the content, NLM, SIS, and TEHIP are mentioned and described many times in a number of the more than 120 chapters. I want to be sure that the book contains the most current information about the status of NLM's tox activities. Could you, perhaps, give me some clear-cut insight into what's being planned, plus a timetable, if there is one?

What, for example, is the proper terminology to use?, e.g. NLM's SIS Division and its TEHIP program were dissolved as of _____ *or* merged with _____ *or* dismantled. I'd like to know what's happening and how to correctly phrase it. And also, will the databases continue to exist and be updated, but via other NLM Divisions? Will URLs change? Readers of the book and others will need to find the databases and know how to do so. The objective of the book is to offer a comprehensive look at toxicology information resources worldwide and make it as up-to-date as possible in a print (albeit digitally available as well) publication.

Much appreciated.

Sincerely,

Phil Wexler

Subject: RE: Inquiry - Status of NLM Toxicology Program

In thinking about this further, I think the overall response could be:

NLM's Division of Specialized Information Services (SIS) and its products were merged into 3 different areas of the Division of Library Operations in June 2019. We are currently reviewing and evaluating the products and services formerly offered by SIS to identify which products support the NLM Strategic Plan and are unique offerings from NLM. In addition, we are seeing how best to integrate some products into more currently support technology; for example, some of the ToxNet resources will be included in PubMed, BookShelf and PubChem. These changes will be announced at the appropriate times. TEHIP will need to be re-imagined within NLM over time.

Of course, OCPL can modify as they see fit.
Any concerns?
David

Joyce Dianne

Please see this request below – see the red text that Nicole has indicated.
Bert and Jeanne are quite hesitant to provide responses, and I agree with them. Though I understand why Wexler is asking for information (publication of his book), we don't a lot to respond to.

For these Reponses, here's what I can think of:

- Current organization of the Division and status/location of its digital information resources (TEHIP) –
    - Possible response: SIS staff and products were merged into 3 different areas of the Division of Library Operations: OET, PSD and BSD.
- Plans and a timetable for the organization of TEHIP –
    - I have no idea how this should be addressed, other than TEHIP will need to be re-imagined within NLM over time.

- Proper terminology to use (e.g. NLM's SIS Division and its TEHIP program were dissolved as of _____ *or* merged with _____ *or* dismantled.) *for correct phrasing in the book*

    - Suggested text: NLM's Division of Specialized Information Services and its products were merged into 3 different areas of the Division of Library Operations in June 2019. At that time, the plans for the ToxNet resources were to move them to PubMed, BookShelf and PubChem.

- Answer: Will the databases continue to exist and be updated, but via other NLM Divisions? Will URLs change?
    - Not clear about what Nicole is asking here.

We probably need to talk about this.
David

Subject: Inquiry - Status of NLM Toxicology Program

Hi Jeanne and Bert,

Phil Wexler contacted NLM (Jerry Sheehan and Jody Nurik) in January inquiring about the most updated information on the TEHIP (Toxicology and Environmental Health Information Program). As SIS, TEHIP, and their information resources played such a dominant role in toxicology over decades, he would like to ensure that his book (see thread below) does not misrepresent NLM's current role in the informatics framework of the subject. While SIS is now closed and staff are settled in their offices, we would like to provide Phil with accurate information based on his request.

Can you please provide the following information by **COB today**:

- Current organization of the Division and status/location of its digital information resources (TEHIP)
- Plans and a timetable for the organization of TEHIP
- Proper terminology to use (e.g. NLM's SIS Division and its TEHIP program were dissolved as of _____ *or* merged with _____ *or* dismantled.) *for correct phrasing in the book*
- Answer: Will the databases continue to exist and be updated, but via other NLM Divisions? Will URLs change? *Readers of the book and others will need to find the databases and know how to do so.*

Thanks, Nicole

Phil
By way of this message, I'm putting you in contact with Jody Nurik, NLM's new communications director. She has the best overview of which resources are going where, and which are set to be retired. There are still a number of resources that are being more fully assessed, but decisions have been made about many.

Best
Jerry

Phil,
We're still working out the transition timeline for SIS and its various toxicology resources. Staff will transition out of SIS and into other parts of NLM by the end of June. We're close to having the resource timeline figured out, but not yet ready to announce it. I know this creates some complications for you, but it's a complicated transition as you can imagine.

I'm looking into your second Q below and will get back to you w/ any additional information.

Best,
Jerry

Subject: RE: NLM Toxicology Program

Thanks, Jerry. The deadline for getting all the chapters in is April 1, although publication deadlines are usually made to be broken. Certainly I'd like to know as soon as possible because the further in we get in the production process, i.e. copyediting and proofing, the more of a headache it is to make any changes. On the post you directed me to, I found it rather curious that no mention whatsoever is made of SIS' toxicology activities. Also, although SIS has clearly disappeared from the organizational chart and despite a single vague occurrence of the word "toxicology" in a bulleted item, I have no inkling of where the toxicology databases will reside. So, I'd truly appreciate it if I could be apprised of the status of the toxicology information projects formerly housed in SIS as soon as you know something so I can present accurate information in my book. - Phil

Thanks, Jeanne. I was mostly curious as the executive summary seemed to show that some of the recommendations are still relevant 21 years later. I don't think you need to spend a lot of time, but we could refer to it as a recommendation that we're continuing to follow, since these NAS reports are so authoritative.

The closing lines are compelling, "The committee hopes that NLM will take advantage of this opportunity to broaden its outreach and training efforts. At the same time, it is hoped that the search interface will continue to evolve and that NLM will continue to integrate the TOXNET information into its overall Web site and its plans for the future."

We're doing that integration now.

Joyce and David,
I do not believe there was a written response to the report but we did use what was in it to guide some of the redesign of TOXNET. A key recommendation in it (....one potential goal may be to provide a single entry point for searching all of the NLM databases.) seems like the start of One NLM.

Personal Info I think I actually have a copy in am unpacked box 😀 but the Bookshelf version is really convenient.

Jeanne

Subject: Discussion topics for LO BSD meeting, 3:00, 8/12

Joyce, Dianne
Here are the discussion topics for our meeting today at 3:00.
Jeanne is on leave this week.
David

1. Sunset Team
    - Setting up team to deal with Sunset plans and actual process needed to get work done
    - Team: Jeanne (lead), David Hale, Bert, Colette, Rex
        - Colette is needed for she's been developing much of the documentation previously and has been heavily involved in the ToxNet transition work. Hopefully her involvement should decrease over time.
    - Team should also work on the ToxNet NCBI integration and ChemID PubChem integration, for both are tied to sunset activities.
    - First meeting next week for Jeanne and Rex are on leave this week.
    - Will need to contact OCPL once the team gets started.
    - Need actions on Haz-Map, Dermal, and ITER.

2. Haz-Map
    - Have found the actual license, and NLM does not have any rights to the data.
    - At this point, it appears that the Contracts Office has not contacted the vendor yet.
    - Short term – will try to keep the site up through late September to give users warning
    - This could generate emails to ADLO and the Director's office.

3. David Hale – manuscript submitted for NLM review – about the importance of pill images
    - Written with 2 other people, one from Duke and Stanford.

4. Contracts
    - RxNorm editing contract – Sent email to Dianne and Dave Andrews today. Contract has been sitting in Small Business Administration for a month (since July 16).
    - HSDB contracts
        - The first contract re-competition is near completion. Technical questions were responded to and not additional concerns were voiced.
        - The second contract re-competition – Technical review meeting this Wednesday.

5. Disclosure Symposium Working Group on Uniform Disclosure Criteria and Process (Working Group II).
    - Invitation to attend, though NLM has no direct role in this.
    - Follow up from Spring 2019 meeting in DC.

6. HR Actions

- Heath Program Specialist update – No update from HR about the 14 and 13 PDs.

To: Hakkinen, Pertti (NIH/NLM) [E] <hakkinenp@mail.nlm.nih.gov>
Subject: FW: Haz-Map

Bert,
I just got this email from Matt Timberlake. He runs Toxplanet, and Haz-Map used to be a part of his collection. Can you help me to answer his question? All I know is that Florence said that Haz-Map will be moved to a new server, and it was hoped (by NIH I assume) that all databases would become available for free, i.e., the Microsoft Access tables and relationships of Haz-Map. I was supposed to hear from Enterprise Health early last month about the contract, but I haven't heard anything yet. Thanks.
Jay

Good morning everyone,

Thank you all for a very productive meeting last week. We have three topics for this week's meeting:

1. Detailed Steering group notes, we have a summary of the notes from last week's very productive session. We have added proposed action owners and timeline based on the discussion. Please review and be prepared to provide feedback.
2. Status of PD updates/revisions and proposed communication activities;
3. Supervisor check in job aid; a follow up job aid supervisors can use to check in with staff about organizational, move, or other changes. Proposal: share during next week's LO Supervisor meeting.

Bryanne will be facilitating tomorrow's meeting as I am out of the office.

Thanks everyone!

	Offering Name	Notes re: Status	Offering Short Description
1	Disaster Information Mgt Research Center (DIMRC) website	Joyce and Stacey will meet to discuss how to narrow the focus of Disaster program. Create a brief document by Aug 21st to describe proposed focus and present to Patti.	The DIMRC website is a source for health information resources and technology for disaster and public health emergency preparedness, response, and recovery. The focus is to connect people to quality disaster and public health emergency information and foster a culture of community resiliency.
2	Chemical Hazards Emergency Medical Management (CHEMM)	Joyce and Stacey will meet to discuss how to narrow the focus of Disaster program. Create a brief document by Aug 21st to describe proposed focus and present to Patti.	Chemical Hazards Emergency Medical Management (CHEMM) provides resources to assist in the medical response to a mass-casualty chemical incident.
3	Radiation Emergency Medical Mgt. (REMM)	Joyce and Stacey will meet to discuss how to narrow the focus of Disaster program. Create a brief document by Aug 21st to describe proposed focus and present to Patti.	Radiation Emergency Medical Management (REMM) is a resource to assist healthcare providers diagnosis and treat a variety of radiation injuries.
4	Wireless Information System for Emergency Responders (WISER)	Joyce and Stacey will meet to discuss how to narrow the focus of Disaster program. Create a brief document by Aug 21st to describe proposed focus and present to Patti.	Wireless Information System for Emergency Responders (WISER) is a tool to assist emergency responders, mgrs & healthcare providers in hazardous materials incidents.
5	NIH Disaster Research Response Program (DR2)	Joyce and Stacey will meet to discuss how to narrow the focus of Disaster program. Create a brief document by Aug 21st to describe proposed focus and present to Patti.	The NIH Disaster Research Response Program (DR2) program is a collaboration between NIEHS and NLM with the potential for additional NIH Institutes and Centers to join. DR2 is the national framework for research on the medical and public health aspects of disasters and public health emergencies.
6	Disaster Lit: Database for Disaster Medicine and Public Health	Joyce and Stacey will meet to discuss how to narrow the focus of Disaster program. Create a brief document by Aug 21st to describe proposed focus and present to Patti.	Disaster Lit, the Database for Disaster Medicine and Public Health, contains links to disaster medicine and public health emergency resources available on the Internet at no cost. Resources include guidelines, research reports, training classes, fact sheets, website, databases, data sets, and similar materials.
7	ChemIDplus	Evaluate – What would be required to rebuild? Notes: Started 20+ years because it was more cost effective to do in-house; Now, Software is very out of date; No source code. Does not make sense for LO to update. Need to propose a new system. David and Jeanne will move forward with OCCS.	The ChemIDplus database is a dictionary of over 400,000 chemicals (names, synonyms, and structures). ChemIDplus includes links to NLM and other databases and resources, including links to federal, state and international agencies.
8	Data Discovery	Treat as a project mot a poduct. This is a research project, not a product, per se. Needs to be evaluated to determine next steps. Has been funded for a 2nd	The NLM open data discovery site, presented via the Socrata platform, provides easy interface to view, filter, download, visualize, and explore datasets.

		year. SOCRATA is not something that NLM supports. Need to determine the best/right platform. David will manage with David Hale.	
9	Dietary Supplement Ingredient Database	Transfer to another organization or sunset; **Question**: Allowed to archive or not? Currently under review; Have explored with CIT – to put the information on their site; If funding continues to come from ODS, CIT can do this without NLM. Jeanne will continue to move forward.	The Dietary Supplement Ingredient Database (DSID) provides estimated levels of ingredients in dietary supplement products sold in the United States. DSID is a collaboration with NIH's Office of Dietary Supplements and USDA.
10	Dietary Supplement Label Database	Transfer to another organization or sunset; **Question**: Allowed to archive or not? Currently under review; Have explored with CIT – to put the information on their site; If funding continues to come from ODS, CIT can do this without NLM. Jeanne will continue to move forward.	The Dietary Supplement Label Database (DSLD) includes full label derived information from dietary supplement products marketed in the U.S. with a Web-based user interface that provides ready access to label information. DSLD is a collaboration with NIH's Office of Dietary Supplements.
11	Household Products Database	Review: If this goes away, what are the implications? What outcomes could be expected if NLM no longer supports this product? What would users do? What would stakeholders do? Would it impact other NLM offerings? Notes: Standalone but very discoverable. SBIR with CDC for 10+ years. No license that says we can reuse the data in other things. Have been some negotiations – "Yes, you can use five of them." No link back. Ingredient but not product was in NCBI. OCCS staff need training/OJT on coding. Jeanne will work with Collette to complete by Oct 1.	The Household Products Database links consumer brands to health effects from Safety Data Sheets provided by manufacturers and allows scientists and consumers to research potential health effects of chemicals in more than 18,000 common household products based on chemical ingredients. A TOXNET database.
12	LiverTox	No review needed. Signed agreement with Bookshelf; NIDDK will manage; NLM will no longer be responsible.	LiverTox provides information on the diagnosis, cause, frequency, patterns, and management of liver injury attributable to prescription and nonprescription medications, herbals and dietary supplements. A collaboration with (NIDDK).
13	Pillbox	Transfer to another organization or sunset; Archive data set. No longer sustainable. Belongs with FDA. David (or Jeanne) will work with David Hale to move forward. Sunset by Oct 1.	Pillbox enables rapid identification of unknown solid-dosage medications (tablets/capsules) based on physical characteristics and high-resolution images.
14	Tox Town	Review: If this goes away, what are the implications? What outcomes could be expected if NLM no longer supports this product? What would users do? What would	Tox Town provides consumer level information on everyday locations and situations where one might be exposed to toxic chemicals

		stakeholders do? Would it impact other NLM offerings? Amanda will work with Alla to complete by Oct 1.	
15	Tox Tutor	Review: If this goes away, what are the implications? What outcomes could be expected if NLM no longer supports this product? What would users do? What would stakeholders do? Would it impact other NLM offerings? Amanda will work with Alla to complete by Oct 1.	Tox Tutor provides college-level tutorials on the basic principles of toxicology, toxicokinetics, cellular toxicology, and related topics. It is a self-paced tutorial covering key principles of toxicology for users of the NLM chemical and toxicology databases.

Overarching language:

NLM will focus its Disaster-related products on published journal and gray-literature and products that provide chemically and toxicology related information.

NLM is committed to supporting key offerings in chemical, toxicology and environmental health, but will look for opportunities to streamline or consolidate resources where appropriate

Stand-alone offerings

Offerings without a strong infrastructure,

option will need to be sunset.

Explain how the product owner and product sponsor related to this.

STEERING GROUP MEETING NOTES 8/7/19

SIS PRODUCTS – EVALUATION APPROACH + NEXT STEPS

SIS PRODUCT STATUS

	Offering Name	Notes re: Status
1	Disaster Information Mgt Research Center (DIMRC) website	Joyce and Stacey will meet to discuss how to narrow the focus of Disaster program and create a brief document by Aug 21st to describe proposed focus and present to Patti.
2	Chemical Hazards Emergency Medical Management (CHEMM)	
3	Radiation Emergency Medical Mgt. (REMM)	
4	Wireless Information System for Emergency Responders (WISER)	
5	NIH Disaster Research Response Program (DR2)	
6	Disaster Lit: Database for Disaster Medicine and Public Health	
7	ChemIDplus	Evaluate – What would be required to rebuild? David and Jeanne will move forward with OCCS.
8	Data Discovery	Treat as a project not a product. David will manage with David Hale.
9	Dietary Supplement Ingredient Database	Transfer to another organization or sunset; **Question**: Allowed to archive or not? Jeanne will continue to move forward.
10	Dietary Supplement Label Database	
11	Household Products Database	Review: If this goes away, what are the implications? Jeanne will work with Collette to complete by Oct 1.
12	LiverTox	No review needed. Signed agreement with Bookshelf; NIDDK will manage; LO will no longer be responsible.
13	Pillbox	Transfer to another organization or sunset; Archive data set. David (or Jeanne) will work with David Hale to move forward. Sunset by Oct 1.
14	Tox Town	Review: If this goes away, what are the implications? Amanda will work with Alla to complete by Oct 1.
15	Tox Tutor	Review: If this goes away, what are the implications? Amanda will work with Alla to complete by Oct 1.

For more details, see: Offerings Status.docx

ADDITIONAL CONTEXT AND CONSIDERATIONS

1. **Fundamental Decisions**: If fundamental decisions have already been made or could reasonably be inferred from the strategic plan or discussions with Senior Leadership, we should make those fundamental decisions now. We should not evaluate products that are destined to be sunset or released to another organization.
2. **Guidance should be given at the programmatic level to guide decision at the individual level**.
3. **IT Concerns**: If a product has security issues/vulnerabilities or will take significant resources to convert to a common technology platform – this should be considered as a factor. Need to compare costs of fixing with the value provided.
4. **Licensed Data**: Some products that are being considered for Bookshelf contain licensed data. If we are not planning to renew the license, it does not make sense to convert to Bookshelf. A broader question is: Should licensed data be maintained?
5. **Pay for Publishing**: In general, NLM does not want to pay for publishing others' work.
6. **Archiving**: So long as we have permission, we will archive data sets that are sunset or transferred to another organization.
7. **Standalone or Linked**: When evaluating, need to consider – Is the product a stand-alone resource or is it linked with others? (e.g., Does it feed into another resource?) and How discoverable is the data?

DISCUSSION NOTES:

1. Stephanie Morrison – shared evaluation criteria and approach that may inform the SIS Product Review
2. Dianne and Ken may have insight based on Portfolio Analysis training
3. Communication Strategy is needed for SIS Product Review.
    a. Until the Comm Strategy is in place, limit sharing to what is essential.
    b. Communication will be limited to the SIS Product Review
    c. No mention of a similar review of all LO products in communication re: SIS; Not sure if/how this will be done, especially with upcoming renovation, data science initiative, etc. And, gradual implementation of a more robust approach to product/portfolio management may accomplish what is needed in terms of review/evaluation.
4. Joyce and Ivor have told Dr. Brennan – not to expect savings right away. There will be costs associated with integrating, releasing/transferring and sunsetting SIS products, as well as investing in SIS products that are continuing to address security concerns and migrate products to a common technology platform.
5. Dr. Brennan is moving ahead with the research initiative:
    a. Hiring 3 new investigators
    b. Hiring a Senior Scientific Director (over LHC and NCBI)
    c. Goal is to increase the NLM impact and become a more integral part of NIH research
6. Dr. Brennan is expecting LO to save money (reduce SIS-associated budget) and Ivor to work within the OCCS budget. This means not doing some of the things they have been doing. The culture of "Nice" has emphasized – How can we continue things? Bottom line is:
    - We are looking to consolidate
    - We are looking for fewer options
    - We are looking for efficiencies
7. NLM is currently under a GAO audit of computer information systems. Ivor has shared – audit has been successful.
8. Joyce will make the final decisions about SIS products and present to Patti. She believes the director is looking to her to make those decisions about what products to 'End.'
9. This group will make decisions about what products to review within the next two weeks.
10. There is some value in looking programmatically as well as by product (e.g., drug information, disaster, toxicology).

11. Joyce will meet with Stacey to discuss how to narrow the focus the disaster program. This may mean eliminating products. Likely continuing WISER because it's linked to toxicology. Joyce will carry the message forward. She does not think she would get push back.
12. Products that are mentioned in the Strategic Plan will not be eliminated (e.g., CDE Repository). Toxicology is named in the Strategic Plan; Disaster is not.
13. Disaster program was launched based on the previous strategic plan; somewhat personality driven as it was a specific interest of the leaders at that time; There are new leaders now with different interests. There has been one evaluation of disaster by Alla, and disaster lit is currently being reviewed. If there is a third review – and the disaster program is eliminated anyway – staff will be devasted. There are different interpretations of the findings of the first report – One interpretation was "We should keep it." Another interpretation was "Some people are finding this valuable. That doesn't mean 'keep it.'"
14. There are different interpretations of "gray literature" and "how NLM does gray literature" (e.g., Stacey – MedLIne is gray literature).

SUPERVISOR/EMPLOYEE DIALOGUE

CHECK-IN CONVERSATION

Purpose. The purpose of these conversations is to stay connected with staff and their work by helping them leverage their strengths to do priority work and to providing support, as needed.

According to Marcus Buckingham, on the best teams, employees are using their strengths and focused on priority work. Essentially, employees want their leaders to:

- Know me for what I do best, and
- Focus me around it.

What does a leader have to do for this to happen? The key is **frequent, strengths-based check-ins about near-term, future work**. What does that look like? One—on-one, weekly, light-touch conversations for about 10 minutes with every team member.

Questions to Ask:

1. **What are your priorities this week?**
   - What are your priorities for the next few days?
   - What are you working on this week?

2. **How can I help?**
   - What support can I provide?
   - What do you need from me?

3. **What did you love and loathe about last week?**
   - What was your emotional experience with work last week?
   - How were you leveraging your strengths?
   - What might you change?

> "Take five minutes to share five things with me about the next five days."
>
> – Marcus Buckingham

Note:

The first two questions are about focus and support, the third is about connecting to strengths. For more about identifying strengths, refer to the Supervisor/Employee Dialogue: Engagement Conversation.

TIPS FOR EFFECTIVE CONVERSATIONS

According to Marcus Buckingham, author of *Nine Lies About Work*, frequent, strengths-based check-ins about near-term, future work can have a major impact on team effectiveness and employee engagement. This 3 minute video on *Check-in Conversations* is worth checking out.

Hi all,

I've attached notes from yesterday's steering group meeting. What a productive meeting and all in 50 minutes! Please let me know if you have any questions.

Kathel—I'll put together a shorter version for wider dissemination for your review/edit.

Thanks all,
Bryanne

STEERING GROUP MEETING NOTES 8/14/19

The first section provides updated deadlines for the product status. The following three sections include notes from each of our agenda item discussions.

SIS PRODUCT STATUS

	Offering Name	Notes re: Status
1	Disaster Information Mgt Research Center (DIMRC) website	Joyce and Stacey will meet to discuss how to narrow the focus of Disaster program and create a brief document by Aug 28th to describe proposed focus and present to Patti.
2	Chemical Hazards Emergency Medical Management (CHEMM)	
3	Radiation Emergency Medical Mgt. (REMM)	
4	Wireless Information System for Emergency Responders (WISER)	
5	NIH Disaster Research Response Program (DR2)	
6	Disaster Lit: Database for Disaster Medicine and Public Health	
7	ChemIDplus	Evaluate – What would be required to rebuild? David and Jeanne will move forward with OCCS.
8	Data Discovery	Treat as a project not a product. David will manage with David Hale.
9	Dietary Supplement Ingredient Database	Transfer to another organization or sunset; **Question**: Allowed to archive or not? Jeanne will continue to move forward.
10	Dietary Supplement Label Database	
11	Household Products Database	Review: If this goes away, what are the implications? Jeanne will work with Collette to complete by Dec 15th.
12	LiverTox	No review needed. Signed agreement with Bookshelf; NIDDK will manage; LO will no longer be responsible.
13	Pillbox	Transfer to another organization or sunset; Archive data set. David (or Jeanne) will work with David Hale to move forward. Sunset by Dec 15th.
14	Tox Town	Review: If this goes away, what are the implications? Amanda will work with Alla to complete by Dec 15th.
15	Tox Tutor	Review: If this goes away, what are the implications? Amanda will work with Alla to complete by Dec 15th.
16	Drug Information Portal	Sunset and tell people how to use other resources. **(Do we want to add this and if so, do we need more information?)**

For more details, see: Offerings Status.docx

PRODUCT OFFERINGS:

1. Made some changes to the originally proposed deadlines in the Product Status section. Original deadlines weren't always feasible. Changed August 21st deadlines to August 28th. Changed October 1st deadlines to December 15th for a variety of reasons including: other Toxnet products aren't going down until December so it would be challenging to take some down earlier; workload; lack of established sunsetting process.
2. There isn't one "sunsetting process" that everyone understands since each sunset is different. For example, people often think OCPL is in charge and this isn't true. David has brought together a group which will begin meeting next week to understand and come up with a process. This process should include some way to retain needed information (e.g., SharePoint site)
    a. Some resources available to help David and his team:
        i. Pubmed Health Sunset Plan (the Cadillac of plans—can take what is applicable). This is available on the strategic plan implementation wiki
        ii. There is a sunset page including guidelines for sunsetting on the strategic plan implementation wiki. For now, this has numerous resources. Later, we might want to add something about the particular products being sunset (after communications have gone out)
        iii. Laura Bartlett has been involved in a few things that have sunset. They were small but she may have a process that she used that would be helpful
        iv. Can search using terms "sunset", "sunsetting", "retire", "retiring"
3. We need to come up with a communication strategy for the products
    a. Need to tell people <u>why</u> this is happening (e.g., financial reasons, efficiency, etc.)
    b. There are different audiences that need to be considered. Need to think through the order in which this is done (for example, if we tell federal employees they may tell contractors and don't want this to happen before Acquisition knows)
        i. Federal employees
        ii. Office of Acquisition/CORs
        iii. Contractors
        iv. General public
    c. The initial timing is important too. Stacey and Joyce won't communicate until their 2-pager is done and they have OD approval
    d. Some will be sunset, some are merged. We want to make sure not to use the term "sunset" when the offering will continue in a different place.
    e. People on the outside don't always understand the term "sunset". We'll need to define.
    f. **<u>Action Item</u>**: David to draft a statement for Joyce to review with a general communications
    g. Communication should be done in batches; first we will focus on what we are sunsetting
    h. In general, need to be aware that contractors are working on these products as well as maintaining some of the communications portals (e.g., wikis or websites). Make sure to think about what is appropriate for them to know and when.

POSITION DESCRIPTIONS (PD):

1. Joyce has talked to Aisha and asked her to prioritize the PDs for new hires in the classification pipeline. While it is important to get incumbent PD changes through the official HR process, we don't want it to slow down the hiring process and that was happening.
2. Communications Process
    a. <u>How are employees notified of changes to PD?</u> The direct supervisor should let the employees know if their PD is being changed. If someone further up in the supervisory chain is working on

the PD, that person will let the supervisor know when the PD has been approved and the direct supervisor can notify the employee. (NOTE: a PD is considered "initially approved" when the manager/supervisor working on the PD with Jacqui gives their approval of the PD to Aisha. The PD does then have to go through the NLM classification process).

   b. How will managers be informed of the process and how will they know about NLM's preference for generic PDs? For general awareness, Bryanne will share talking points with Joyce and Wei to share at the next all supervisor meeting. Supervisors should be very familiar with the preference for generic PCs.
   c. Who will inform managers that they need to send approved PD to Aisha? Jacqui will circle back with everyone she worked with to let them know about this step. (NOTE: We need to find out who Wei sends her approved PDs to in order to get them into the classification process.)
   d. These changes to individual PDs are only happening for individuals who have moved into a new position, not for all employees.

3. **Action Item**: Bryanne will ask Jacqui to reach back out to all managers she worked with to:
   a. Clarify that they are good with the drafted PD(s) and they have a "final" copy
   b. Let them know that they need to send this final copy, along with their approval to Aisha, so that she can forward to HR and get the PD into the NLM classification process.

SUPERVISOR JOB AID:

1. This is good to share at the Supervisor Meeting.
2. One way to sell it (since they just did mid-years so some supervisors might think it isn't necessary) is to connect to mid-years and explain the importance of following up right after a performance check-in to see if employees have any reactions. In addition, employees might have an "issue" that they don't consider large enough to "bother" a supervisor about or set up a meeting but if the supervisor stops by, they will discuss.
3. **Action Item**: Bryanne to find 2-5-minute video around the importance of check-ins.
   a. There is a link to a 3-minute video at the bottom of the supervisor check-in job aid (https://www.marcusbuckingham.com/rwtb/check-in-conversation/)
   b. Bryanne will send additional links separately

NLM Service/Product (Offering) Details	
NLM Service/Product (Offering)	CCRIS
Description	The CCRIS database contains chemical records with carcinogenicity, mutagenicity, tumor promotion, and tumor inhibition test results. It was developed by the National Cancer Institute (NCI). Data are derived from studies cited in primary journals, current awareness tools, NCI reports, and other sources.
Document(s) Supporting Justification	TOXLINE retirement.docx SIS-sunset-resources.docx
Justification	Low usage No longer aligned with NLM priorities or mission needs Incorrect or out-of-date information
Retirement Date	12/01/2019
Organization	LO
Key Staff Involved	Colette Hochstein Sanjay Jain

	Jeanne Goshorn Phillip Thomas David Gillikin

Internal Communication Plan	
Staff to be Informed	Colette Hochstein Pertti Hakkinen
Communicated Message	CCRIS was originally created by the National Cancer Institute (NCI) and covers the years 1985 to 2011. It is part of TOXNET, and the information it contains is already incorporated into PubChem. On December 1, 2019 the National Library of Medicine (NLM) TOXNET website will be discontinued. Most of its content will continue to be available through other NLM databases as well as external websites. TOXNET has served as an integrated system of toxicology and environmental health databases. The most frequently used of those databases are being incorporated into three of NLM's core resources: PubChem, a database of chemical information; PubMed a resource for biomedical literature; and Bookshelf, with free online access to books and documents in life science and healthcare. Several other databases in TOXNET were made available on TOXNET from other organizations, such as the U.S. Environmental Protection Agency, and will continue to be available from those sources. Some databases will be retired. For a complete list of TOXNET databases and how to access their content, see the TOXNET transition page.

Here you go. Word doc is the same as the text below.

David

In support of the NLM Strategic Plan, a major goal is to consolidate information into a few platforms, improving user experience, discoverability and efficiency. Along with this, NLM products are being reviewed and prioritized along the criteria of uniqueness, and that are highly connected to NLM offerings. Products should be sunsetted based on the following issues:

- If a sufficiently-equivalent offering is available from another organization
- The resource does not have a clear sustainability or succession plan (including not having a consistent data source, or the data source itself has no clear succession plan).
- Usage has been low or has been declining
- The cost to sustain and/or upgrade a resource
- NLM should not be a web provider for another agency entity simply because the agency is paying NLM (there are additional staff and resource costs also involved).

NLM's Division of Specialized Information Services (SIS) and its products were merged into 3 different areas of the Division of Library Operations in June 2019.
We are currently reviewing and evaluating the products and services formerly offered by SIS to identify which products support the and are unique offerings from NLM. In addition, we are seeing how best to integrate some products into more currently support technology; for example, some of the ToxNet resources will be included in PubMed, BookShelf and PubChem. These changes will be announced at the appropriate times.

Expanded version

In support of the NLM Strategic Plan, a major goal is to consolidate information into a few platforms, improving user experience, discoverability and efficiency. Along with this, NLM products are being reviewed and prioritized along the criteria of uniqueness, and that are highly connected to NLM offerings. Products should be sunsetted based on the following issues:

- If a sufficiently-equivalent offering is available from another organization
- The resource does not have a clear sustainability or succession plan (including not having a consistent data source, or the data source itself has no clear succession plan).
- Usage has been low or has been declining
- The cost to sustain and/or upgrade a resource
- NLM should not be a web provider for another agency entity simply because the agency is paying NLM (there are additional staff and resource costs also involved).

NLM's Division of Specialized Information Services (SIS) and its products were merged into 3 different areas of the Division of Library Operations in June 2019.
We are currently reviewing and evaluating the products and services formerly offered by SIS to identify which products support the and are unique offerings from NLM. In addition, we are seeing how best to integrate some products into more currently support technology; for example, some of the ToxNet resources will be included in PubMed, BookShelf and PubChem. These changes will be announced at the appropriate times.

Subject: Information about Household products and TOXNET Servers

All,
Here is the info:

1. Household products sits on its own server.
2. The retrieval side of TOXNET has 2 primary, public servers: mtoxnet.nlm.nih.gov and its hot failover server at NCCS: rtoxnet.nlm.nih.gov.
3. The TOXNET system depends on four other servers for the development and conversion of data into a searchable form:
   stoxnet.nlm.nih.gov (for data conversion and indexing)
   sisrdes.nlm.nih.gov (for data entry and compliance of data for hsdb (hazardous substances data bank)
   sis4.nlm.nih.gov (for development and testing work)
   chemid.nlm.nih.gov (for molecular images and chemical synonyms)
4. There is a further server (ltoxnet.nlm.nih.gov) at 'SIS' (NLM) Oregon site which is on cold stand-by for TOXNET retrieval.

I stop by here .
Thanks-Wei

Subject: LHC Draft Submission - Linking offerings to strategic plan objectives/goals only
Attachments: NPA Phase 1 Data Collection 2019_LHC_v23-ob2.xlsx

Good morning, Wei and Jennifer,

Olivier and I had a short conversation Friday afternoon about the LHC submission that he was working on prior to leaving the country this week. Attached is his file.

Olivier pointed out that, while the NPATT agreed that it would be possible to associate an offering to a Strategic Plan Objective or Goal when there is no direct alignment to an Initiative, the template does not allow him to do so. We took at a look at it together and agreed that the locked cells in the Objective/Goal rows prevent him from making the associations. The associations he'd like to make are listed below in his email to me.

Since Olivier is OOO this week, I offered to communicate the challenge to you all and ask your recommendations on how to make these associations. With my MITRE hat on, my recommendation is to unlock LHC's submission template and make the changes on Olivier's behalf. Then, there will be a final, correct final for LHC which you can merge into the master file. An alternative is to make the changes in a master file only but then Olivier doesn't have the final LHC file as a record.

If more information is needed about the LHC request, please let me know.

Best regards
Beth

Subject: [EXT] linking offerings to strategic plan objectives when

Beth,
I encountered the following problem when attempting to link LHC offerings to SP goals and objectives. For the 2 offerings associated with strategic initiatives, the linkage is automatic. However, I did not find a way to link the remaining 4 offerings to the SP.

Here is what I would like to do:
Profiles in Science -> Goal 2 (broadly)
Biomedical imaging services and datasets -> 1.1, 1.2, 1.3 + 2.3
Health Data Standards services and datasets -> 1.1, 1.2, 1.3 + 2.3
BioNLP and Indexing/Retrieval services and datasets -> 1.1, 1.2, 1.3 + 2.3

Please let me know what the best solution is to link these offerings to the SP.
Thanks as always for your support and guidance.

Dr. Olivier Bodenreider

Initiative Overview

NLM has invested in the NLM Portfolio Analysis (NPA) initiative to inventory NLM Offerings (i.e., products, services, applications) that are provided to user constituencies. Data gathered during the inventory will be used to group Offerings into a logical structure that creates a holistic, organized picture of NLM's portfolio.

Workbook Purpose

The purpose of this workbook is to capture information about NLM Offerings in a standardized manner to generate the NLM portfolio inventory. This workbook is intended to be completed by Offering Owners. The Offering Owner is the primary point of contact for an offering, the person with hands-on expertise in what it does, who it reaches, and how it works. NPATT Representatives, NLM Division managers with Offering oversight responsibilities and participating on the NLM Portfolio Analysis Tool Team, should review all the information prior to submission to ensure accuracy and completeness.

Workbook Instructions

This workbook includes two (2) worksheets containing Instructions and a Glossary, and nine (9) worksheets to be completed by Offering Owners, as listed in the table below. For information and assistance in completing this workbook, contact your NPATT Representative.

For definitions of key terms used in this workbook, consult the Glossary.

The deadline for submission to the NPATT is **Wednesday, September 4, 2019, at 3:00 PM**.

Questions and completed submissions should be discussed with your NPATT Representative. If you are not sure on any request for information, consult with your NPATT Representative to obtain clarification.

The following individuals are NPATT Representatives by NLM Division:

- **Library Operations (LO):** Dianne Babski, Ken Koyle, Alla Keselman
- **Lister Hill Center for Biomedical Communication (LHC):** Olivier Bodenreider
- **National Center for Biotechnology Information (NCBI):** Anatoly Mnev, Kim Pruitt
- **Office of Computer and Communications Systems (OCCS):** Wei Ma, Philip Chuang, Rex Shuler
- **Office of Communications and Public Liaison (OCPL):** Jody Nurik, Alise Crutchman, Lisa Federer, Allison Fisher
- **Office of the Director (OD):** Eddie Rivera
- **Office of Strategic Initiatives (OSI):** Mike Huerta, Leigh Samsel, Sara Tam, Constance Young
- **Office of Extramural Programs (EP):** Samantha Tempchin

Phase 1 Data Call GLOSSARY

2019 NLM Portfolio Analysis Initiative

It	Definition
C	
C	
	Customer segmentation based on user behavior.
Customer Type	A **primary customer** is the intended target audience for an **NLM Offering** based on mission alignment, policy, or law.
	An **"other" customer** is the additional audiences who are using the NLM Offering.
NLM Offering	An external-facing (non-NLM) NLM product, service, and/or research program offered to satisfy a want or need of an existing or target user constituency.
Offering Description	A brief description of the product/service provided to **Customers**.
Offering Name	The full name of the **Offering** without information truncated by acronyms.
Offering Name (Short)	"Brand name," the name used to take the **Offering** to market. If no **Offering Name (Short)**, use **Offering Name**.
Offering Sponsor Name	Refers to the person (usually a senior leader affiliated with the **NLM Offering's** organizational owner) who allocates fiscal resources to support an **Offering** and sets it in the NLM strategic context.
Offering Owner Name	Refers to the primary point of contact for an **NLM Offering,** the person with hands-on expertise in what it does, who it reaches, and how it works. The Offering Owner is involved with the **Offering** at the tactical/operational level where the decisions about managing and maintaining the **Offering** are made.
NLM Organization	The group of persons organized within NLM with responsibility to deliver a specific **NLM Offering**.
NLM Strategic Plan 2017	NLM planning document outlining the organization's vision, goals, objectives, and initiatives for the period 2017-2027.
NLM Strategic Plan 2017 Goal	The identifier and descriptive name (*e.g.*, Goal 1 - Accelerate discovery and advance health through data-driven research) of one of the three strategic goals of the **NLM Strategic Plan 2017-2027**. The Goal Name is listed in the ESM Software Suite.
NLM Strategic Plan 2017 Objective	The identifier and descriptive name (*e.g.*, 1.1 - Connect the resources of a digital research enterprise) of one of the 12 objectives under one of the three goals of the **NLM Strategic Plan 2017-2027**. The Objective Name is listed in the ESM Software Suite.
NLM Strategic Plan 2017 Initiative	The identifier and descriptive name (*e.g.*, 1.1a - Assessment of MeSH and Auto-Indexing) of an activity which is being conducted to implement the **NLM Strategic Plan 2017-2027**. The Initiative Name is listed in the ESM Software Suite.
NLM Strategic Project	The name of an activity that is being conducted to implement the NLM Strategic Plan 2017-2027. The Strategic Project name is **not** listed in the ESM Software Suite.
Primary Legislative Authorization/Mandate	A command or authorization for NLM to act in a particular way, such as to deliver certain **Offerings** (*i.e.*, products and services).
	The primary source of NLM's mandate or requirement to provide a specific **Offering**.
	Authorization by Federal Statute is legislation that permits a Federal agency to engage in an activity (*e.g.*, establish an organizational unit and provide a program or service) but does not necessarily provide information on how the agency is to implement the authority.

Primary Legislative Authorization/Mandate Type	**Active Interagency Agreement**: in addition to the regulations affecting NLM/NIH directly, other regulations may affect NLM indirectly when NLM partners with other agencies or collaborators via Interagency Agreement (IAA), Memorandum of Understanding (MOU), or informal collaboration agreement.
	Executive Order, Memorandum, or Departmental (or Agency/NLM) Policy, Plan, or Guidance: published by the White House, a Federal agency (*e.g.*, NIH), or department (*e.g.*, HHS) -- could express "expectations" or actually mandate "requirements" from Federal statutes, provide detailed information on the implementation of policy, and could either address direct agency action or "customer" (*e.g.*, grantees) behavior.
	A **Mandate by Federal Statute** is legislation that requires a Federal agency to engage in an activity.
Mandate Reference	The primary reference citation for the authorizing source legislation, policy, or regulation obligating NLM to provide resources and support for an **Offering** or group of **Offerings**.
Resource	A productive factor (*i.e.*, input) required to deliver an **NLM Offering** to its **Customers**.
Resource Name	Short name for the **Resource** that contributes to the delivery of an **Offering**.
Resource Type	The kind of **Resource** that contributes to the delivery of an **Offering**.
	Business: Person or people who perform manual processes that are required to deliver an Offering. Business Resources are often used in combination with **Technical** and **Data Resources** and either indirectly or directly support **Offerings**. Examples include management, outreach, training, customer service, and marketing. In addition, **Business Resources** also includes research that results in new approaches or scientific methods. However, **Business Resources** exclude research that results in a data asset. Other exclusions are software, hardware, or technical components, and development or curation activities to produce data assets. Business activities that build/update technologies fall under the **Technical Resource**; business activities that contribute directly to the creation of a **Data Resource** fall under **Data Resources**.
	Data: The data asset (*i.e.*, data set) and the person or people who produce, maintain, curate, and/or divest of data assets. **Offerings** often leverage **Data Resources**, and a **Data Resource** may also be provided as an **Offering**. Processes included within **Data Resource** include production, curation, quality assurance, and content development.
	External: A critical input to an **NLM Offering** that is obtained from a provider(s) external to NLM without cost to NLM. Without this contribution, offering delivery would be significantly impacted. **External Resources** are generated by other agencies (e.g., NIH, FDA) or institutions (INSDC) and then used to deliver an **NLM Offering**. External organizations such as contractors are NOT considered external resources; contractors are usually contracted to perform activities supporting business, data, or technical resources.

	Technical: A set of tangible assets supporting the technology needed to deliver an **Offering**. **Technical Resources** include mobile/web/desktop (developed by NLM teams)/cloud/data applications. For costing purposes, **Technical Resources** are supported by the combination of processes and functions of software, hardware, networks, telecommunications and electronics as well as facilities and equipment. Underpinning cost variables include: software development, integration and maintenance; hardware, networking and software procurement, integration, management and maintenance; security and compliance policies enforcement.
Resource Scope	Designation of the span of support associated with the **Resource**.
	NLM-wide: Indicates that the resource is available to and used across the enterprise (*i.e.*, multiple Divisions and Offices).
	Division-Specific: Indicates that the resource is available to, managed by, and used only by one Division for one or more Offerings.
	Offering-Specific: Indicates that the resource is developed for use by only one Offering and managed by the Division that owns the Offering.
	A value of **N/A** is applicable only for external resources.

Offering Basic Information and Mandates

Click on field name to see the definition. Columns with asterisk (*) are required fields. Select the most applicable Primary Legislative Authorization/Mandate Type from the dropdown list. Please limit Offering Description to 250 characters including Offering Name and spelling out acronyms. All other fields are free text.	Offerings

Offerings that can be associated with 2017 Strategic Initiatives

Click on field name to see the definition.
Mark an "X" ONLY beside the Initiative names that your offering is aligned to.
Your offerings will be automatically aligned to Goal and Objective which the selected Initiative is aligned to.
Goals/Objectives listed here are for Initiatives grouping only.
You may not mark an "X" beside the Goal or Objective names.

		Offerings					
		Lister Hill Intramural Research Program	Medical Informatics Training Program	Profiles in Science	Biomedical imaging services and datasets	Health Data Standards services and datasets	BioNLP and Indexing/Retrieval services and datasets
	1.1a - Assessment of MeSH and Auto-Indexing						X
	1.1b - MEDLINE 2022						X
	1.1c - NLM Portfolio Assessment by MITRE	X					
	1.1d - DATaset Metadata Model (DATMM) Initiative						
	1.1e - CDE Repository Study						
	1.1f - Link articles to associated data sets						
	Objective 1.2 - Advance research and development in biomedical informatics and data science						
	1.2a - Blue Ribbon Panel Review of NLM Intramural Research Program	X	X				
	1.2b - NLM-NSF MOU Innovative Mathematical, Statistical, and Computational Approaches to Biomedical Data Science						
	1.2c - FOA on at-scale curation approaches						
	1.2d - Data Science & Open Science Workshop	X					
	1.2e - Expand funding for extramural research to support new biomedical data-science initiatives (RPG and SBIR)						
	1.2f - Expand collaboration with other ICs and agencies on data science oriented FOAs						
	1.2g - Expand funding for intramural research	X					
	1.2h - Hire NLM-wide scientific director	X					
	1.2i - Hire more intramural investigators	X					
	1.2l - Persistent unique IDs w/in NLM systems 1.2l Persistent unique IDs w/in NLM systems						
	1.2m - BMIC criteria for data repositories						
	1.2n - OSTP criteria for data repositories OSTP data management plan guidance						
	Objective 1.3 - Foster open science policies and practices						
	Objective 1.4 - Create a sustainable, institutional, physical, and computational infrastructure						
	1.4a - TOXNet platform migration						
	1.4b1 - IT Assessment - Team 1	X					
	1.4b2 - IT Assessment - Team 2	X					
	1.4b3 - IT Assessment - Team 3	X					
	1.4b4 - IT Assessment - Team 4	X					
	1.4b5 - IT Assessment - Team 5	X					
	1.4f - Assessment of Trans-NLM Central Functions						
	1.4g - Project Management for Implementation Initiative						
	1.4h - Workspace Initiative-Redesign First Floor of Building 38						
	1.4i - NLM Strategic Plan Communication (internal)						
	1.4j - Data Center Reliability Project						
	1.4k - NAS Study on Forecasting Costs of Data Preservation and Management						
	1.4l - Migrate high availability resources to the cloud						
Goal 2 - Reach more people in more ways through enhanced dissemination and engagement pathways							
	Objective 2.1 - Know NLM users and engage with persistence						
	2.1a - Outreach planning						
	2.1b - Assessment of Tools used for NLM Resource Evaluation						
	2.1c - Assessment of Comparative Web Metrics						
	2.1d - User Experience / User Development Initiative						
	2.1e - External Communications Plans & Information Resources						
	2.1f - Informatics Professionals Outreach, Training and Development		X				
	Objective 2.2 - Foster distinctiveness of NLM as a reliable, trustable source of health information and biomedical data						
	2.2a - Branding of NLM						
	Objective 2.3 - Support research in biomedical and health information access methods and information dissemination strategies						
	2.3a - Expand support for research grants that address user needs through the Personal Health Libraries FOA						
	2.3b - Increase support for G08 Resource Grants						
	2.3c - Increase support for G08 resource grants by expanding funding to one FOA per year						
	2.3d - Support scholarly works G13 grants relating to interests of primary NLM audiences						
	Objective 2.4 - Enhance information delivery						
	2.4a - Support NN/LM activities to enhance understanding of data science and advanced data management						
	2.4b - Customer Experience IT Assessment						
Goal 3 - Build a workforce for data-driven research and health							
	Objective 3.1 - Expand and enhance research training for biomedical informatics and data science						
	3.1a - Data Science Core Skills Analysis	X					
	3.1b - Expand extramural training grant support for predoctoral biomedical data science (Ts)						
	3.1c - Increase funding for postdoctoral fellowships in data science for mid-career researchers (Fs)						
	3.1d - Increase funding for career transition awards in biomedical data science (Ks)						
	Objective 3.2 - Assure data science and open science proficiency						
	3.2a - Report on State of Data Science Training						
	3.2b1 - Reproducibility for Intramural Scientists Workshop						
	3.2b2 - Second Reproducibility for Intramural Scientists Workshop						
	3.2c - Data Science for Librarian Workforce Workshop						
	3.2d - Assessment of extramural staff data science training needs						
	3.2e - Support partnerships to share NLM curriculum materials in biomedical data science with other NIH training programs						
	3.2f - NLM Data science assessment/training	X					
	Objective 3.3 - Increase workforce diversity						
	3.3a - Increase support for training partnerships with MSIs						
	3.3b - Increase support for partnerships with I-schools						
	Objective 3.4 - Engage the next generation and promote data literacy						
	3.4b - Expand support for summer research training at NLM training programs for high school and undergraduate students		X				

Strategic Projects that can be associated with Offerings

Click on field name to see the definition.
Enter Project Name and Description. Mark an "X" under the Offering name to indicate the association.
You can leave this sheet blank if you do not have Strategic Projects.

Associated Offerings					
Lister Hill Intramural Research Program	Medical Informatics Training Program	Profiles in Science	Biomedical imaging services and datasets	Health Data Standards services and datasets	BioNLP and Indexing/Retrieval services and datasets

Strategic Projects that can be associated with 2017 Strategic Goals/Objective

Click on field name to see the definition.
The Strategic Project Name and Description will be automatically populated from the Strategic Projects tab.
Mark an "X" beside the Projects that are aligned to the corresponding goal and objectives. Please see the example.
It is preferable to map a Project to Objectives. If a Project cannot map to an Objective, map to a Goal.
A Strategic Project can align with multiple Objectives.

NLM Strategic Plan 2017 Goals/Objectives														
1 - Accelerate discovery and	1.1 - Connect the	1.2 - Advance	1.3 - Foster open science	1.4 - Create a sustainable,	**2 - Reach more people in more**	2.1 - Know NLM users	2.2 - Foster distinctiveness of	2.3 - Support research in	2.4 - Enhance	**3 - Build a workforce**	3.1 - Expand and enhance	3.2 - Assure data science	3.3 - Increase	3.4 - Engage the next generation

From: Babski, Dianne (NIH/NLM) [E]
Sent: 26 Aug 2019 18:30:29 +0000
To: NLM LO ADLO;NLM NICHSR-ALL
Subject: Lo Div Ch notes

August 22, 2019
TSD (Jennifer)

- The old Cold Fusion based LSTRC System will no longer be available after August 30, 2019. It has been replaced by the MEDLINE Publisher Portal – Journal Manager. If you need access to archived content from the old LSTRC System, please contact Jen Diffin.
- LO staff Joyce Backus, Maria Collins, David Gillikin, Jennifer Marill and Rebecca Stanger participated in the meeting of publishers on August 20, sponsored by the Friends of the NLM. NLM staff provided an update on the STRIDES Initiative, PMC and peer review documents, and the new MEDLINE Publisher Portal.

BSD (David)

- On Tuesday Aug 20, BSD launched a new team to work on identifying and overseeing the specific tasks required to carry out the sunsetting and merging of NLM products, including initially the chem/tox ones from SIS. Some of these will be sunset, some merged with NCBI products as part of the NCBI TOXNET integration, and some will go elsewhere outside of NLM. Jeanne Goshorn will coordinate the work of this group, which includes Bert Hakkinen, David Hale, Rex Robison, and, from PSD, Colette Hochstein, who worked in SIS on several resources. A SharePoint site has been set up to organize resource/product information and to collect related documentation.
- Sara Tybaert will serve as Acting Chief, BSD while both David Gillikin and Jeanne Goshorn are on leave.

HMD (Jeff)

- Following the July 9 meeting to discuss the envisioned exhibition experience in the future, post-renovation lobby of Building 38—involving Dr. Brennan, Dianne Babski, Jody Nurik, Jeff Reznick, Patricia Tuohy, and M. Nichelle Midón of NLM's new Office of Engagement and Training—HMD, under the leadership of Patricia Tuohy and in cooperation with Jeff Reznick, has engaged Dr. Ashley Bowen to complete research in the NLM collections to identify key themes, messages, and assets which will meaningfully inform the exhibition experience, as well as potential graphic panel displays in the envisioned new training center (currently the HMD reading room) and the envisioned new, state-of-the-art NLM reading room which will be located in the rotunda. Dr. Bowen is schedule to present her initial findings on January 16, 2020, , along the lines discussed and agreed upon during the July 9 meeting , and which the architect will be able to use to develop the exhibition experience; on January 16, 2020, from 1-1:30pm, Dr. Bowen will be presenting her findings to NLM leadership, prior to their leadership meeting that day. About Dr. Bowen: Dr Bowen is ideally qualified to work with NLM in this strategic way. She is currently is the Andrew W. Mellon/American Council of Learned Societies (ACLS) Public Fellow at the Science History Institute in Philadelphia, PA. Prior to joining the Science History Institute, she worked as a guest curator under contract for the National Library of Medicine's History of Medicine Division. Three of her exhibitions opened to the public in 2019: *Politics of Yellow Fever in Alexander Hamilton's America*, *Rise, Serve, Lead! America's Women Physicians*, and *Rashes to Research: Scientists and Parents Confront the 1964 Rubella Epidemic*. Dr. Bowen received her PhD in American Studies and Public Humanities from Brown University in December 2016. Her research focused on nineteenth century public health and medicine, the material culture of medicine, and representations of patient experience. In addition to publishing in academic

journals, her writing has appeared on *Atlas Obscura*, *Book Riot*, *Circulating Now*, and on the *Mercy Street* blog run by the National Museum of Civil War Medicine.

- Following the June 18 meeting requested by Dr. Brennan—including Joyce Backus, Jody Nurik, Patricia Tuohy, and Jeff Reznick—to discuss potential collaboration with the Library of Congress around exhibitions, and Jeff Reznick's subsequent email to Dr. Mary Mazanec, Director of the Congressional Research Service (with whom Dr. Brennan spoke about the potential collaboration), Jeff and Patricia Tuohy met at LC, on Monday, August 19, with David Mandel, Director, Center for Exhibits & Interpretation in the Office of the Librarian, receiving a wonderful tour of LC's new exhibition 'Shall Not Be Denied: Women Fight for the Vote' and the discussing mutual interests and potential exhibition collaboration, and agreeing to keep in touch and explore mutually-supportive ideas. We also invited David and his team to visit NLM *to meet our team, learn from them about our collections and resources, and receive a tour of NLM overall and HMD specifically.*
- Joining HMD's engagement with the August 27 NLM Data Science Open House–as detailed last week--a third poster by John Rees, David Hale (BSD), and Minh Diep Nguyen (BSD) will be on display, A Legacy Data Set's Journey to Data Science Ready: The Story of the FDA Notices of Judgment Digital Library, with all due thanks to John, David, and Minh for their collaboration on this poster and the data-focused project described therein.
- Thank to OCPL's Jody Nurik and Kathy McKay, and the entire OCPL team, for their support to publish this week's *NLM InFocus* article NLM Celebrates Acquisition of Selma and Lois DeBakey Papers, and certainly to Dr. Susan Speaker for her lead authorship if this article.
- Congratulations:
    - Dr. Stephen Greenberg for his invitation to speak to the Medical History Interest Group at the Laupus Library, East Carolina University in Greenville, NC, on September 23, as part of ECU's Ruth and John Moskop History of Medicine Lecture Series. His topic will be "Ink and Silver: Medicine, Photography, and the Printed Book, 1845-1900," a presentation draws upon the HMD collection and his own research here at NLM and in related collections elsewhere.
    - Dr. Susan Speaker, for representing NLM/HMD at the upcoming international, academic conference, ""Global Knowledge, Global Legitimacy? Transatlantic Biomedicine since 1970," to be held at the German Historical Institute in Washington, DC. Dr. Speaker will be attending the conference and authoring an historiographical overview of its proceedings which will appear in the open-access GHI Bulletin, distributed in hardcopy to 7,000 readers worldwide and freely online. Jeff Reznick will also be representing NLM/HMD, serving a chair and moderator of the session entitled "(Trans-) National Medical Ethics."

Together through these respective scholarly engagements, Steve, Susan, and Jeff will be connecting with attendees, promoting and welcoming them to engage with NLM's collections and resources, and encouraging them to apply to the NLM Michael E. DeBakey Fellowship in the History of Medicine, all toward advancing the new NLM strategic plan, especially its second goal (2.1) "Know NLM users and engage with persistence" and (2.2) "Foster distinctiveness of NLM as a reliable, trustable source of health information and biomedical data."

PSD (Stacey)

- Roz Leiderman and Tina Habash of PSD and Jennifer Gilbert of TSD attended the NEDCC conference, "Digital Directions: Fundamentals of Creating and Managing Digital Collections" in Overland Park, Kansas this week. The conference covered many aspects of creating and managing digital collections including selection, preservation, born digital, copyright, metadata, audiovisual, and assessment.

- Phyllis Levine attended training at that NIH Property Management Portal (NPMP) for Property Officers class on Aug 21.
- The widgets and buttons page was removed from the MedlinePlus website. It got very low traffic, and the buttons were not in compliance with NLM and NIH logo use policy.
- The recipe low-fat pumpkin bread was added: https://medlineplus.gov/recipes/low-fat-pumpkin-bread/
- MedlinePlus Magazine: Mary Herron met with NLM GovD staff and StratComm staff to create a pagewatch for the magazine's English and Spanish RSS feed. She also met with Diane Tuncer, OCPL, to give an overview of GovD in general and how NLM uses it.
- Social Media: Three VSFS interns will be working on the new STD text message campaign: Ameya Sanyal (Duke University), Tyler Ricks (Kennesaw State University), and Esmeralda Orozco (University of Texas).
- My MedlinePlus Newsletter: "When Worries Become Something More" was sent August 14, 2019, to 32,583 subscribers. The open rate was 32% and the click rate was 13%. The top three articles were Understanding Anxiety Disorders, Ways to Burn More Calories, Gastroparesis.
- Stephanie Morrison, Michael Honch, Kate Greenberg (GHR/LHNCBC), and Laura Bartlett (LO/OET) met with the CommunicateHealth team for a status update on the health literacy assessment tool project. CommunicateHealth has scheduled in-depth interviews with subject matter experts to get their recommendations for how to revise the PEMAT-P tool for assessing the understandability of health information. The group planned for next steps in validating the revised tool.

Attachments: Steering Group Meeting Notes 2019 0821 FMP.docx

Hi all,
Attached are the steering meeting notes from last week. I left the date on the first item as a TBD since I think that Stacey and Joyce said they couldn't meet this deadline, but I don't think we actually provided a date.
Please let me know if you have any questions.
Thanks,
Bryanne

STEERING GROUP MEETING NOTES 8/21/19

SIS PRODUCTS – STATUS, COMMUNICATIONS, + NEXT STEPS

SIS PRODUCT STATUS

	Offering Name	Notes re: Status
1	Disaster Information Mgt Research Center (DIMRC) website	Joyce and Stacey will meet to discuss how to narrow the focus of Disaster program and create a brief document by September TBD to describe proposed focus and present to Patti.
2	Chemical Hazards Emergency Medical Management (CHEMM)	
3	Radiation Emergency Medical Mgt. (REMM)	
4	Wireless Information System for Emergency Responders (WISER)	
5	NIH Disaster Research Response Program (DR2)	
6	Disaster Lit: Database for Disaster Medicine and Public Health	
7	ChemIDplus	Evaluate – David G will include with other Tox Products, and work closely with OCCS given technology issues. What would be required to rebuild? Data needed to make decision (no documentation; knowledgeable contractor re-assigned; no longer available). Can we get the product information sheet with the product dependencies? Need to determine which contracts cover which systems.
8	Data Discovery	Treat as a project not a product. David will manage with David Hale. Funding has been provided on a year-to-year basis (additional funds); not in BSD budget. David G will ask David H for a report.
9	Dietary Supplement Ingredient Database	Transfer to another organization or sunset; **Question**: Allowed to archive or not? Jeanne will continue to move forward. An announcement has been published in the Technical Bulletin about the transfer.
10	Dietary Supplement Label Database	
11	Household Products Database	Review: If this goes away, what are the implications? Jeanne will work with Collette to complete by Dec 15th. David G: who is responsible for Household Products? Bert is the current COR (Lucie Chen had been the COR previously). Joyce: it needs to go into the ChemTox suite. David G: it will go to the end of the review list. Wei: no known IT vulnerability. Is it attached to the TOXNET servers – so if the server goes down, it would affect Household Products Database.
12	LiverTox	No review needed. Signed agreement with Bookshelf; NIDDK will manage; LO will no longer be responsible.
13	Pillbox	Transfer to another organization or sunset; Archive data set. David (or Jeanne) will work with David Hale to move forward. Sunset by Dec 15th. David: communication needs to go out to staff about Pillbox sunsetting. Joyce: David H will write a two-page document to Joyce about the continuation of Pillbox.

14	Tox Town	Review: If this goes away, what are the implications? Amanda will work with Alla to complete by Dec 15th.
15	Tox Tutor	Review: If this goes away, what are the implications? Amanda will work with Alla to complete by Dec 15th.

Subject: RE: For your review: draft NLM submission to the Secretary's Council on Performance Evaluation (SCOPE)-NIH Input

Leigh,
An important point of clarification: is the entire NIH report to be only 3 pages, or is each IC providing a report of 3 pages. If the former, we have to identify just a few key bullet points to send forward, 1-2 max in each category. It would be helpful if you could recommend those points based on your understanding of the exercise.

Thanks
Jerry

Subject: For your review: draft NLM submission to the Secretary's Council on Performance Evaluation (SCOPE)-NIH Input
Importance: High

Hi Jerry and Jody,

I was asked to prepare the NLM submission to the Secretary's Council on Performance Evaluation (SCOPE). I met with Patti and received her input on topics for inclusion. Per her request, I'm sending for your review the draft NLM submission to the Secretary's Council on Performance Evaluation report (also attached for your convenience). Please kindly review at a high level for anything missing (or which you would like removed) and whether this is consistent with desired NLM messaging. I know this is a very short turn-around time – if at all possible, please provide your comments by noon Weds August 28. (We were able to get an extension from the OD to submit on Weds August 28th.)

Please note: The entire NIH report to HHS is a maximum of 3 pages. Rebecca and I saw this as an opportunity for an internal exercise to flesh out topics for other reporting purposes and we fully realize the OD may not use what is included. We have indicated in smaller, italicized font what we do not plan to send forward. Please feel free to indicate accordingly using Track Changes any additional content you believe we should remove.

We tried to focus on high profile topics significant to NLM from the NIH OD and HHS perspective which focus on impact and added value in support of the President's Management Agenda (PMA), *ReImagine HHS*, the Secretary's Goals, and the HHS Strategic Plan, as requested in the self-assessment template.

We apologize for the very short turn-around time on this and look forward to your comments.

Thank you,

Leigh and Rebecca

Leigh Samsel, M.S.
Planning and Evaluation Officer

Subject: REQUESTED: Secretary's Council on Performance Evaluation (SCOPE)-NIH Input-by August 26, 2019

Dear Executive Officers,

As you may know, the Secretary's Council on Performance Evaluation, or SCOPE, is a group of HHS leaders who annually, in November, review and assess each HHS Division on its organizational performance for the prior fiscal year. NIH will highlight key results, added value, customer-driven excellence, and activities relative to valuing workforce members and partners. A description of each of these areas are outlined in the attached SCOPE Narrative Self-Assessment template. We need your assistance in creating an NIH-wide self-assessment. Please use the attached template to highlight activities and results, for your IC, and email it to me by August 26, 2019.

Thank you in advance,

Cheryl Clarke
Special Assistant to the Deputy Director for Management(DDM)
National Institutes of Health (NIH)
Office of Management (OM)
Building 31, Room B1-C08
301-402-3988 (Office)
cheryl.clarke@nih.gov

Tab D
SCOPE Narrative Self-Assessment Template for FY 2019

NOTES	
	1) Operating Divisions and Staff Divisions may want to highlight results and progress related to the President's Management Agenda (PMA), *ReImagine HHS*, the Secretary's Goals, and the HHS Strategic Plan.
	2) Each organization's narrative self-assessment may not exceed three pages in length, with 10 point font or larger, and one inch margins; additional pages will not be able to be reviewed, due to time constraints.
	3) Please include the below headings in each organization's narrative self-assessment, and submit by Tuesday, October 1, 2019; please send a Word version to Diane.Bogusz@hhs.gov.

OPERATING DIVISION OR STAFF DIVISION [NAME]

- National Library of Medicine, NIH

[MISSION]

- Briefly describe the mission of your organization.
- Note who are your organizational customers and other key stakeholders.

FOCUS ON RESULTS AND CREATING VALUE (50 percent weight)

- *Describe key results that your organization achieved in FY 2019, and what specifically makes those results noteworthy; this criterion is externally-focused. Show how your organization added value for your customers and stakeholders in FY 2019. Consider customer feedback. Demonstrate magnitude and impact of your organizational achievements, including breadth and depth, focusing on outcomes, not outputs. Illustrate your organizational results relative to established expectations, timelines and [targets].*

NLM is adding value for its customers and stakeholders; demonstrating impact in reforming, strengthening, and modernizing health care; fostering scientific advancement; increasing efficiencies and streamlined processes; and leveraging the power of data in the following key areas:

- Intramural Research Program (IRP):
  - NLM researchers created a new algorithm called scPopCorn (**s**ingle-**c**ell sub-**Pop**ulations **Co**mpa**r**iso**n**) to understand the differences between populations of cells from single-cell experiments. scPopCorn can identify different cell types and can help to differentiate between sexes, disease status, animal type, and more. scPopCorn performs better than previously published tools for single-cell analysis. ~~Understanding similarities and differences between cells is fundamental for biomedical sciences. scPopCorn has been shown to be superior to previously published tools.~~
  - NLM has pioneered efforts to address global health challenges. Examples include: automated visual data analysis and machine learning efforts to prevent, control, and eventually eliminate cervical cancer; a 12-year collaboration with NCI to conduct research for~~toward~~ detecting abnormal lesions on the uterine cervix; a collaboration with NCI and Global Good to develop a deep-learning/Artificial Intelligence (AI) based algorithm ~~,~~ that can detect cervical precancers with significant accuracy; and a collaboration with NCI, Global Good, and UNITAID/WHO which aims to acquire more data worldwide to improve the deep-learning/AI based algorithm for further regulatory trials. Global Good aims to develop~~create~~ cell phones applications for cervical images and adapt the algorithm to determine the presence of the precancers.
  - Age-related macular degeneration (AMD) is the leading cause of blindness in developed countries and, by 2040, will affect nearly 300 million people. Accurate AMD detection and prediction of progression to late disease stage is important for personalized~~ing~~ monitoring and preventative interventions. Using retinal images taken from two longitudinal studies NLM and the National Eye Institute researchers developed novel machine-learning approaches to automatically classify AMD severity levels and predict risk of progression to late stage AMD ~~based on retinal images taken from two longitudinal studies,~~ demonstrating that the automated deep learning model was superior to existing clinical standards with ~~and has~~ the potential for improved patient care.
- New Extramural Research Program in Data Science and Intelligent Systems funding initiatives:

Comment [NJ([]: Noting globally, bullet style is inconsistent. Also, acronyms only needed if they are used more than once

Comment [SL([]: This will be filled in by the OD, as the final report will be NIH's submission to HHS

Comment [SL([]: For internal reference; will be removed before submission to NIH OD

Comment [NJ([]: Here is a blurb on Eugene Koonin's research that went out via a news release if you are interested in adding:

NIH researchers uncover role of repetitive DNA and protein sequences in tumor evolution
Discovery may be useful in cancer diagnosis

A team of researchers from the National Library of Medicine and collaborating academic research institutions developed a method to measure a type of gene mutation involved in the evolution of cancer. This type of mutation, called "repeat instability," may be useful in early cancer diagnosis

- The Personal Health Record for Youth Emancipating from Foster Care Project aims to create and distribute a personal health record for foster youth at the age of 18 to improve healthcare knowledge, utilization, care coordination, and patient outcomes. There are 427,000 children in the custody of child protective services (i.e., foster care) in the United States; approximately 5,000 youth emancipate from foster care annually. Health care outcomes are poor, in part due to lack of access to medical history. ~~improve health outcomes and promote health behaviors for the 5,000 young adults who leave foster care at age 18 each year. This involves creating and distributing a personal health record and will address lack of health information and knowledge of how to access care, poor management of chronic conditions, and increased preventable disease. Providing health data from the electronic health record (EHR) could improve health knowledge, care coordination, and patient outcomes in this vulnerable population.~~
- The Green Button Project employs a unique search engine technology and predictive modeling on a patient's case description to rapidly find health information on similar patients from data sets of up to 140 million patients to assist clinical decision-making ~~s~~ and improve health care. The researchers have completed 150 clinical consultations using this technology.

- NLM Biomedical Information Systems, web services, public awareness, and access to information
  - NLM's information resources are among the most heavily used government websites in the U.S. Each day NLM websites are used by more than 6 million people, who download about 115 terabytes of data/information. NLM receives submissions of about 15 terabytes of data/information each day. Annually, NLM websites process more than 6 billion human interactions and 8 billion computer-to-computer interactions. PubMed contains 30 million~~M~~ articles, Clinicaltrials.gov has 32,000 new clinical research studies and 6100 new results summaries (for a total of 318,000 studies and 39,000 summaries of study results and adverse events information), and 240,000 implantable devices were added to AccessGUDID database (which links FDA and SNOMED codes for medical devices) to support certified EHR requirements
  - To support its public access policy, HHS uses PubMed (a database of citations and abstracts) and PubMed Central (PMC, an open full-text digital archive of scholarly articles in the biomedical and life sciences) to facilitate the discovery of peer-reviewed biomedical and other scientific literature. Both include content that falls under the public access policies of NIH and other government and private research funders, as well as collections of current and historical scientific journal content. NLM participated in an interagency working group on open science to develop strategies for maximizing public access to federally funded publications, improve the discoverability of publications across federal agency repositories (Inventory of Agency Application Programming Interfaces and Other Services for Public Access Collections now available on Science.gov)
- NLM's Sequence Read Archive (SRA) is the largest publicly available repository of next-generation sequence data, with more than 9 million records and averages over 100,000 users per month. On a monthly basis SRA delivers over 2 petabytes of data. As part of NIH's STRIDES (Science and Technology Research Infrastructure for Discovery, Experimentation, and Sustainability) Initiative, NLM is making SRA data available through Google and Amazon, NIH's cloud partners. ~~in the STRIDES Initiative~~. Providing high-throughput sequence data on these cloud platforms provides researchers rapid access to relevant datasets and powerful compute resources. As other NIH institutes add their data, it will also enable analysis across a combination of datasets for maximum statistical power.
- NLM continues to be the epicenter of data science at NIH. ~~fulfilled its mandate to be the epicenter of data science at NIH and catalyzed NIH to accelerate progress in data science~~ Bby leveraging NLM expertise in a partnership with NIH's Center for Information Technology (CIT), NLM is a catalyst to accelerate NIH's data science. For example, through ~~via the~~ CIT's Identity and Access Management (IAM) work group, challenges for ~~to address challenges to conducting research~~ research on valuable human research data in NIH data repositories is being addressed. NLM provided expertise to the ~~a~~ strategic vision for enterprise-scale IAM anchored on centralized authentication and authorization services; developed specifications that leverage industry best practices for exchanging user claims between platforms; provided software engineering support to the tool developer and user community; and delivered proof of concept software that demonstrates successful operation of the design. The IAM working group is finalizing details to demonstrate phase one adoption by the principal data repositories within the NIH cloud community in 2020.
- NLM improved access and efficiencies to reference information on environmental health and toxicology by migrating information from TOXNET to ~~NCBI tools~~ PubMed and PubChem.
- NLM has taken a broader NIH posture by providing its staff expertise to drive intergovernmental activities to shape the national agenda related to Artificial Intelligence (AI), health data standards, open science, and data science. Contributions and involvement include: Improving the FAIRness of biomedical data by identifying characteristics of repositories of biomedical data that are important for NIH ~~to consider~~; Fast Healthcare Interoperability Resources

Comment [NJ([]: Is this case description in an EHR?

Comment [NJ([]: Can you clarify "new"? New since when?

Comment [NJ([]: If you don't use PMC further in the document recommend deleting the acronym.

Comment [NJ([]: If not used again, AI acronym is not needed

(FHIR) guidance notices; implementation tactics for the NIH Strategic Plan on Data Science, the Subcommittee on Open Science, and creation of a new Health Data Chief position.

CUSTOMER-DRIVEN EXCELLENCE (25 percent weight)

- *Describe internal improvements that your organization has made that allow you to deliver added value to your customers and stakeholders; this criterion is internally-focused. Illustrate how your organization has overcome cultural and bureaucratic barriers. Show how your internal improvements have made a measurable difference. Focus on efficiencies, cost savings, collaborations, and transparency. Show how your collaborations added value (e.g., not just that a meeting or conference occurred, but what resulted, how that makes a difference, and next steps).*

NLM is adding value for its customers and stakeholders; demonstrating impact in reforming, strengthening, and modernizing health care; fostering scientific advancement; increasing efficiencies and streamlined processes; and leveraging the power of data in the following key areas:

- NLM repurposed $20M for internal improvements to expand research, making ~~ke~~ critical improvements to its infrastructure, and increasinge efficiencies in accordance with Blue Ribbon Panel recommendations. ~~to renovate and redesign its intramural research laboratories and shared spaces to promote greater collaboration among research groups, optimize collective use of research equipment, and enable 21st century team science~~
- NLM is expanding and streamlining its IRP to address more audacious, high-risk, high-reward projects to galvanize research across the organization and inspire the larger scientific community. This involves: 1) unifying scientific direction by managing the IRP ~~managing the IRP as one unified IRP with a~~ under a single Scientific Director; 2) having a single Board of Scientific Counselors ~~with sufficient scientific breadth and expertise~~ to evaluate the full set of activity within a unified IRP; and 3) a significant boost in Intramural research to support new independent investigators and embrace new opportunities for data science, informatics, and computational biology in biomedical research.
- In support of NLM's 2017-2027 Strategic Plan ~~goals,~~ Phase One of a multi-year reorganization was implemented and sought to: ~~. Phase One sought to~~ 1) align content acquisition and curation teams, outreach, and technical groups; 2) discontinue, merge, or continue key NLM products and services; 3) map workflows and jobs to address key product and service delivery; 4) reassign staff and space over time; and 5) expand the NLM Office of the Director' focus on research, health data standards, data science, and open science. ~~Phase One activities included: responsibilities associated with technical, audiovisual, outreach, and specialized information services were realigned and consolidated into a more efficient organizational structure; a new Office of Strategic Initiatives to serve as an advisor to the NLM Director for strategic directions of NLM as well as analysis, evaluation, and reporting on NLM programs and initiatives and to plan, develop, implement, and coordinate open science and data science activities across NLM, NIH, HHS, and beyond; and a new Office of Engagement, and Training combined 5 existing groups to streamline and coordinate the library's external presence including outreach, the National Network of Libraries of Medicine, and improve the experiences of its audiences.~~
- NLM's Office of Computer and Communications Systems supported the President's Management Agenda in several ~~impactful~~ ways: 1) established benchmarks for Customer Experience (CX) that compare favorably with private-sector service organizations; 2) developed a clear set of indicators to assess CX across the organization; 3) allocated staff resources and invested in best-practice CX research tools; and 4) achieved demonstrable results in CX improvement for now and the future.
    - *Advanced its secure, agile, and cost-effective Information Technology Infrastructure. This included migrating core NLM applications to the cloud; maximizing virtualization to reduce the physical computer footprint while enabling resiliency and portability; developed an application security training portal to ensure that the NIH-wide workforce has access to training with application security best practices; and adopted the Technology Business Management (TBM) for IT financial management*
    - *Operated a CX research program geared towards providing a modern, streamlined, and responsive CX across Government with indicators of success including raising its CX above private sector industry averages, developing indicators to monitor progress towards excellent CX and mature digital services for high-impact programs, and demonstrating improvements to programs where improved CX will impact millions of Americans (modernization of PubMed website, improvements to the search algorithm and retention of past searches in AccessGUDID, and improvements to search algorithms to NLM's extensive digital collection of historical information about healthcare and medicine).*
- An IT Assessment was undertaken to improve efficiencies in cataloging, standardization, security and performance measurement, and to initiate shared services across NLM.
- NLM performed a portfolio analysis ~~audit to integrate the~~ of its products and services provided to the public ~~(trainings, research grants, and web services) into its portfolio~~, which considered ~~along with the~~ Library's personnel and budget operations. This resulted in an increased understanding of: 1) NLM's public offerings, ~~to the public and their~~ associated

Comment [NJ([]: Is this referencing Clem? If so, you might consider changing this to creating and filling a new Health Data Standards Chief position at NLM.

Comment [SL([]: For internal reference; will be removed before submission to NIH OD

Comment [NJ([]: Noting, bullets under this section should be indented

Comment [NJ([]: https://www.nlm.nih.gov/news/blue_ribbon_panel_intramural_research_program.html

Comment [NJ([]: What kind of boost?

Comment [SL([]: For internal reference; will be removed before submission to NIH OD

expenditures and mandates; 2) the tools, platforms, and infrastructure ~~which underlie~~ supporting those offerings; 3) areas of inter-dependencies and duplication; 4) opportunities for cost- and resource-sharing; 5) how the offerings align~~ed~~ to the Strategic Plan ~~goals~~; and 6) priorities.~~helped set priorities.~~

- NLM collaborates with federal agencies such as FDA, CDC, USDA ~~and others~~ to quickly resolve outbreaks of foodborne illness through rapid identification of pathogens using high throughput sequencing data and NLM's Pathogen Detection Pipeline (PDP). The PDP produces reports within 24 hours that identify sources of human illnesses, enabling the first real-time US foodborne pathogen surveillance system. This~~e~~ rapid return of results has ~~resulted in~~ significantly reduced public illness, enabling regulatory agencies to respond more quickly~~rapidly~~ to outbreaks. The PDP has been used by FDA to support more than 370 actions to protect consumers from foodborne illness.
- Partnered with more than 7,000 health science libraries and information centers via NLM's ~~the~~ National Network of Libraries of Medicine (NNLM)~~, more than 7,000 health science libraries and information centers) with public libraries~~ to:
    - Educate consumers about precision medicine and the NIH All of Us Research Program ~~in communities that are underrepresented in biomedical research;~~
    - Train health sciences librarians in research data management and data science
    - Encourage citizen science; and improve access to high-quality science-based medical information ~~online~~
    - Train ~~via NNLM~~ more than 100,000 people (via 3,000 educational activities and~~;~~ 5,000 resource demonstrations)
    - Support~~ed~~ 335 outreach and training activities for 200,000 users

VALUING WORKFORCE MEMBERS AND PARTNERS (25 percent weight)

- *Describe how your organizational leadership is changing the culture for the better.*

- In support of NLM's ~~the~~ reorganization, ~~NLM's Director and~~ the leadership team at NLM launched a change management initiative~~plan, provided by a consultant, on organizational and human dynamics and change management~~ to assist~~help~~ staff understand and manage~~cope with the~~ associated changes. This effort considered ~~e plan focused on~~ NLM's vision for the future, a workforce analysis, listening and engagement sessions with ~~to receive~~ staff~~, feedback about challenges arising from the reorganization, and included Town Hall meetings, Brown Bag lunches with leadership, as well as smaller group discussions with division heads and division staff.~~
- A multi-pronged communications program was implemented in support of the NLM reorganization which included ~~instituted by the NLM Director included~~ Town Hall meetings and brown bag lunches with leadership, small group discussions with division heads and their staff, analysis of ~~s on the Institute's re-organization, communications, implementation of the NLM Strategic Plan, new and innovative programs, and the~~ Federal Employee Viewpoint Survey results~~,; Brown Bag lunches with the Director and leadership that addressed staff questions and concerns;~~ and a Wiki site providing staff with ongoing ~~with~~ updates~~, on organizational change and changes to existing and new programs.~~
    - *Emphasize how your organization has 'moved the needle' on employee engagement, accountability, and communication.*
- NLM instituted a new team-driven approach to actively engage employees in Library improvements~~, occurring in the library.~~ This included a data science training program for all NLM staff, as well as the establishment of ~~a~~across-cutting teams at NLM such as a Communications Team, ~~a~~ Policy Group, ~~as well as a~~ Strategic Plan Implementation Council, and an NLM Portfolio Analysis Team~~ both including representatives from each NLM division~~.
- NLM launched a workforce transformation initiative, *Data Science @NLM Training Program*, to enhance~~hone~~ NLM staff skills in d~~D~~ata s~~S~~cience. Staff a~~A~~ctivities included ~~a survey to assess~~ a skills assessment in 10 data science competencies, individual training plans ~~linked to NLM's Data Science Course Catalog~~, a Data Science Basics course for all staff, an intensive Data Science Fundamentals training pilot program ~~piloted by~~ with 25 staff members, and a Data Science Open House~~, for staff to showcase their data science journey~~. A case study created by NLM, "Building a Workforce for Data-Driven Research and Health" was adopted by OMB and will be included in an OMB toolkit for ~~to~~ agencies~~, interested in learning how others have prepared their workforces to work with data and new technologies~~.

Awards:

- Dr. Patricia Flatley Brennan, NLM Director
    - The 2018 Morris F. Collen Award of Excellence at the American Medical Informatics Association's 2018 annual symposium (received in November ~~4~~, 2018)
    - Columbia University School of Nursing Second Century Award for Excellence in Health Care 2019 Recipient – For excellence in advancing the health and well-being of our citizens (received May ~~21~~, 2019)

Comment [NJ([]: Is this the same bullet or are they unrelated? (a new bullet?) Or… Encourage citizen science BY IMPROVING access to high-quality science-based medical information.

Comment [SL([]: For internal reference; will be removed before submission to NIH OD

Comment [SL([]: For internal reference; will be removed before submission to NIH OD

- Dr. Eugene Koonin, senior investigator at NLM's National Center of Biotechnology Information ~~in NCBI~~ - 2019 Benjamin Franklin Award for Open Access in the Life Sciences - In recognition of his promotion of free and open access to the materials and methods used in the life sciences (received April 2019).
- Dr. Stephen Greenberg, at NLM's History of Medicine Division (HMD) - Membership in the Academy of Health Information Professionals (AHIP) as a Distinguished Member (received May 2019). ~~The Academy, a program of the Medical Library Association, is the peer-reviewed, accomplishment/portfolio-based certification and career development program for health information professionals. Academy membership indicates that the member's peers have certified meeting a standard of professional education, experience, and accomplishment that demonstrate a commitment to career development (May 31, 2019)~~
- Dr. Susan Speaker, HMD~~istory of Medicine Division~~ - Archivists and Librarians in the History of the Health Sciences (ALHHS) 2019 ALHHS best article award for "An Historical Overview of the National Network of Libraries of Medicine, 1985-2015," which appeared in the April 2018 issue of the *Journal of the Medical Library Association*.
- Craig Locatis, Lister Hill Center - Reviewer Excellence Award from the journal *Educational Technology Research and Development* (received October 2018)
- Olivier Bodenreider, Lister Hill Center - Elected to Fellowship in the International Academy of Health Sciences Informatics (July 2019)
- Bryant Pegram – 50 years of Public Service Award (received May ~~8,~~ 2019)

This effort was finished in the fall of 2017 – attached are some relevant docs that I think are self-explanatory. I chaired it and Fred Wood (who since retired) and Tony Chu were key in collecting, organizing, and to some extent, digesting a lot of info.

Subject: RE: NLM Digital Metrics - Talk Sept 19 @ 1 - 130 / Lindberg Rm

Thanks! This will be great.

Is the NLM Evaluation Task Force still active? Who all is/was on the task force? Is there a link or place on the Wiki I can find out more about it?

Thanks so much,
Leigh

Subject: NLM Digital Metrics - Talk Sept 19 @ 1 - 130 / Lindberg Rm

As you might be aware, for a few years NLM has been working on developing NLM-wide metrics for our publicly-facing digital resources. This started with implementable recommendations from the NLM Evaluation Task Force, to finer grain plans developed by Team 4 of the NLM IT Assessment, to a trans-NLM group that will now present how Google Analytics Prime, Qualtrics, and other tools will be used to give NLM a sense of how our resources are doing. This will be presented at 1 pm on September 19 in

the Lindberg Room and you are welcome to attend. Attached is a draft of the slides to give you a better sense of what this is about.

Michael F. Huerta, PhD
Director, Office of Strategic Initiatives
Associate Director, National Library of Medicine, NIH

NLM Evaluation Task Force
Recommendations and Implementation Framework

NLM's ability to maintain a strong presence in the electronic health information space depends in part on continuous learning and innovation in applying the best available web evaluation tools and practices. Recognizing this, the Director of NLM requested an inventory of the tools and approaches used by NLM to evaluate its major public-facing websites and other electronic resources, and to make recommendations for improved use of current and new tools going forward. The goal was to comprehensively cover information about the tools and approaches rather than comprehensively cover the resources.

NLM leadership was asked to identify staff to participate in this undertaking. Those staff comprised the NLM Evaluation Task Force, which assembled an inventory of 257 applications of some 80 tools and approaches. Also developed by the Task Force was a list of tools and approaches not currently used, but the use of which would be desirable. Finally, the Task Force developed a set of ideas and recommendations for how to best proceed in this space.

A subset of Task Force members (Implementation Subgroup) who had been very active in developing the ideas and recommendations was then asked to further consider them and develop an implementation framework with recommendations consolidated, integrated, prioritized, with budgets estimated, and with potential organizational homes identified. That implementation framework is presented below.

This framework represents a future with a multifaceted and integrated approach to the evaluation of public-facing web resources at NLM. Each element contains a core plan, which is the highest priority activity, plus one or more options that should also be considered (presented in order of priority). Each core plan and its options includes a brief description of its purpose, relative priority, implementation timeline, level of effort, budget, and possible lead NLM unit(s).

The framework is designed to build on significant ongoing activity and advance NLM in the application of web metrics and digital analytics evaluation tools and approaches. Fundamentally, the framework: (A) strengthens NLM staff through knowledge sharing, success stories, and lessons learned; (B) includes user/customer feedback as a core tool, and encourages staff training and exploration with a wide range of tools; (C) develops a trans-NLM platform for digital analytics data sharing, integration, and presentation/visualization; and (D) provides the needed management support, coordination framework, and funding.

Leadership is asked to consider the following priority actions:

1. Provide support for the overall plan direction as presented or as amended;
2. Designate a trans-NLM coordinating committee, and a senior level organizational sponsor, to help assure effective leadership, coordination, planning, budget, and staff availability;
3. Approve FY18 funding to support key activities—the estimated FY18 budget includes the following licensing and/or equipment costs (not including NLM staff time):
    a. Google Analytics Premium web metrics/digital analytics license, $330K;
    b. Qualtrics user feedback license, $230K;
    c. Tableau data integration license, $25K;
    d. Slack staff communications/archiving license, $15K;
    e. Test lab for demos/testing, equipment & software, $45K;
    f. Staff training, $25K.
        i. Total = $669K less $330 credit for GAP paid with FY17 funds = Net $339K FY18 funds.
4. Support in principle an annual base licensing budget of $600K (GAP, Qualtrics, Tableau, Slack) beyond FY18, recognizing that additional data streams, metrics, and/or dashboards beyond base could increase some licensing costs. (Licensing needs would be reviewed annually.)

A. NLM Digital Analytics Community Engagement

CORE PLAN: Improve trans-NLM communication – Members of the NLM Evaluation Task Force and others with similar interests/responsibilities should meet on a regular basis both in-person and online to discuss issues like those discussed in the NLM Evaluation Task Force meetings. Brooke Dine's LO/RWS Digital Analytics Community of Practice group could serve that purpose.

PURPOSE**:** Promote digital analytics knowledge sharing among NLM staff.
PRIORITY: Highest.
TIMING: Restart Digital Analytics Community of Practice in Jan 2018 on a bimonthly basis. Archive on Slack.
EFFORT: Estimated staff time 8-16 hours per meeting to organize; 3 presenters per meeting, 8-24 hours each to prepare (depends on content and amount of new material).
BUDGET: Staff time + Slack license est. $15K/year (140 seats). Slack would serve as a multi-purpose digital analytics communication platform.
LEAD NLM UNIT(s): LO RWS, with all divisions contributing where possible.

Option 1: Produce informative success stories/use cases – Produce concisely written success stories that describe how evaluative tools and approaches were used to address identified issues and/or improve various types of electronic resources. These success stories would inform others as they consider what methods to use with a specific electronic resource. They would also make the general point of why evaluative analysis is important.

PURPOSE: Share successes and lessons learned to promote useful tools and approaches and avoid duplication of effort.
PRIORITY: High.
TIMING: Implement incrementally during 2018. Present success stories at the Digital Analytics Community of Practice, and archive on Slack.
EFFORT: Estimated staff time 16-32 hours to develop a success story guidance/template, and 16-32 hours per success story for the author to write up (depends on content and complexity).
BUDGET: Staff time only. Use Slack or other platform selected for multi-purpose use by the NLM digital analytics community.
LEAD NLM UNIT(s): LO RWS.

Option 2: Learn from others (outside experts) – Bring in outside speakers on evaluation of electronic resources. The speaker series would be a good complement to a trans-NLM group such as the recommended NLM Digital Analytics Community of Practice.

PURPOSE: Enhance NLM staff knowledge through exposure to outside perspectives.
PRIORITY: Medium.
TIMING: Include intermittently as part of the Digital Analytics Community of Practice. Archive to Slack.
EFFORT: Estimated staff time 10 hours to select each speaker and help organize event.
BUDGET: Staff time + no cost for local speakers. Out of town speakers may require travel reimbursement.
LEAD NLM UNIT(s): LO RWS.

Option 3: Make internal expertise findable – Develop a way to identify and make accessible information about whom at NLM has expertise or experience with specific tools and approaches.

PURPOSE: Facilitate NLM staff access to internal knowledge and expertise via a directory.
PRIORITY: Medium.
TIMING: Implement by Mar 2018.
EFFORT: Estimated staff time 32-40 hours to organize on a commonly accessible platform and request staff with designated expertise to submit info, and 8 hours per month to manage. Should be mostly maintenance-free once set up.

BUDGET: Staff time only. Use Slack or other communications platform selected for the NLM digital analytics community.
LEAD NLM UNIT(s): LO RWS.

B. Digital Analytics Tools and Methods Exploration

CORE PLAN: Obtain user feedback – Highly desirable to include user feedback capability for all public-facing NLM websites. NLM has experience with ForeSee, Google Analytics, and Survey Monkey, but not yet with Qualtrics, a recommended user survey service. By adding a Qualtrics license as a potential replacement for ForeSee, NLM could compare actual performance and strengths/limitations of several user feedback tools, as well as assure robust user feedback data streams. This could also include a compilation of standard and custom questions used by the feedback tools, for comparative purposes and as a resource for NLM staff.

PURPOSE: Assure that NLM has the benefit of direct user feedback for the major public-facing websites.
PRIORITY: Highest.
TIMING: Q2/Q3 FY18 (prior to decisions on FY19 contracting).
EFFORT: Estimated staff time 80-120 hours.
BUDGET: Staff time + licenses for Google Analytics and Qualtrics. Core licensing costs are included in item C-Core, Data integration. NLM divisions may wish to add additional licenses beyond the NLM core.
LEAD NLM UNIT(s): LO RWS and OCCS.

Option 1: Expand training for evaluation tools and approaches – Expand opportunities for NLM electronic resources staff to have training on evaluation methods, tools, and software, and cross training on the intersection of digital analytics and data science. Some possibilities include NNLM training classes, the HHS Data Science CoLab, Lynda.com, Software Carpentry, Data Carpentry, and DigitalGov University.

PURPOSE: Strengthen NLM staff digital analytics expertise through enhanced training opportunities.
PRIORITY: High.
TIMING: Start in Jan/Feb 2018.
EFFORT: Estimated staff time 32-40 hours to research and organize, including free and fee-based training options, to be listed in a commonly accessible platform.
BUDGET: Staff time + training budget for external training and relevant conferences of $25K in FY18. Intended to supplement not supplant divisional training budgets.
LEAD NLM UNIT(s): LO RWS (organizing) & OHIPD (training budget).

Option 2: Develop an NLM test lab – Highly desirable would be computer(s) on which tools could be tested for their usefulness; ideally, the test lab would be enterprise-readable, accessible, secure, and free to staff.

PURPOSE: Provide NLM staff with a user friendly, flexible place to try out tools and software, and for hands-on training and demos.
PRIORITY: Medium.
TIMING: Mid to late FY18.
EFFORT: Estimated staff time 80-120 hours to plan, test, and implement, 16 hours per month to manage and monitor.
BUDGET: Staff time + $10K equipment and $35K software licensing. This assumes the test lab could piggy back on NLM licenses for related software--otherwise costs could be higher.
LEAD NLM UNIT(s): LO RWS and OCCS.

C. Digital Analytics Data Integration & Dashboard

CORE PLAN: Integrate and share digital analytics data from NLM websites – Invest in tools such as Google Analytics and Qualtrics to collect quantitative and qualitative user feedback and metrics. Make these data interactive and shareable across NLM. Highly desirable to have data be brought together from tools used for different kinds of analyses on a given electronic resource; for example, data from Qualtrics can be integrated with data from Google Analytics. A pilot project is proposed for FY18 to include a cross section of NLM websites, such as NLM Home Page, MedlinePlus, ClinicalTrials.gov, PubMed, Genetics Home Reference, AIDSinfo, and TOXNET (these examples are for illustrative purposes only, detailed implementation planning is required to assure the website selection fits within budget and technical parameters).

PURPOSE: Provide licensed software for key data streams on digital analytics and user feedback for data integration.
PRIORITY: Highest.
TIMING: Phase in during FY18. Prioritize as needed to support the development and implementation.
EFFORT: Estimated 0.4 FTE OCCS staff lead for FY18 + 24-40 hours average staff time per division (will vary by division).
BUDGET: Staff time + estimated $335K per year for Google Analytics enterprise license (note that the FY18 license has already been paid for) and est. $230K per year for Qualtrics user feedback license (note that if some current ForeSee users switch to Qualtrics that could offset $75K+). Budget estimate = $627K/year less $335K for GAP paid up in FY18 = $292K (not including divisional staff time). Any ForeSee cost offset TBD. Note: actual cost could be somewhat higher depending on the number of applications, domains, data points, and metrics included.
LEAD NLM UNIT(s): OCCS.

Option 1: Share data via a trans-NLM digital analytics dashboard – A proposed FY18 pilot project would include development of a dashboard with key metrics and performance data from a representative selection of NLM websites. The new dashboard would replace the current, technically obsolete Wiki sharing platform with a state-of-the-art system. Web metrics data and key performance indicators (KPIs) should be trackable, interactive, and shareable across NLM (e.g., Tableau software can do this). An example of the types of metrics that could be included was offered by GHR: "Key GAP metrics that GHR uses and reports include site traffic (e.g. users, sessions, page views), site performance (e.g. average page load speed), and acquisition (e.g. from search engines, direct traffic, etc.). We also use the Google suite of products to track GHR's performance in Google searches and to do A/B version testing of page elements." Detailed implementation planning will be needed to select the optimal set of web metrics and other performance data for dashboard presentation.

PURPOSE: Make website usage metrics data easy to view, understand, and share.
PRIORITY: Highest.
TIMING: Phase in during FY18, prioritize as needed to support the dashboard development and implementation.
EFFORT: Estimated 0.40 FTE OCCS staff lead for FY18 + 40 hours average staff time per division (will vary as a function of number and size of divisional websites).
BUDGET: Staff time + estimated $25K per year for Tableau software license (assumes 10 developers and 40 data provider seats). Budget estimate = $124K/year (not including divisional staff time). Note: cost estimates assume one dashboard.
LEAD NLM UNIT(s): OCCS, with all divisions contributing data.

Option 2: Enterprise-wide software licensing - To reduce costs, NLM-wide enterprise licensing of data sharing, data integration, and dashboard software, required for the core plan and option 1, and other digital analytic tools, should be explored and implemented where possible. Where appropriate, this could include a core NLM number of seats or scope of licensing, augmented where desired by an additional number of seats or broader scope that could benefit from economies of scale and reduced unit costs.

PURPOSE: Assure that NLM licensing of software is cost-effective and cost-competitive, consistent with quality and performance standards.
PRIORITY: High.
TIMING: Research the enterprise software licensing options available from or with NLM, CIT/NIH, HHS, GSA, etc., and prepare a staff memo.
EFFORT: 24-40 hours staff time per each lead unit.
BUDGET: Staff time only.
LEAD NLM UNIT(s): OCCS, LO RWS, NLM Office of Acquisitions.

D. Digital Analytics Management Framework

CORE PLAN: Coordinate evaluation and management of NLM evaluation activities – Desirable to have a high-level management coordination group, across divisions, to advocate for NLM digital analytics and electronic resource evaluation, strategic vision, capacity building, and appropriate funding. Further, this group should articulate a strategic view and vision of the value and role of digital analytics and evaluation to NLM's mission.

PURPOSE: To ensure that evaluation activities at NLM are carried out in a consistent, efficient, and useful way.
PRIORITY: Highest.
TIMING: Evaluate the organizational options over the next several months in consultation with NLM management, and prepare a pros/cons memo with a recommendation.
EFFORT: 16-24 hours staff time for each lead unit.
BUDGET: Staff time only for evaluation. Implementation cost depends on whether current staff/management could fulfill this role or whether new staff would be needed.
LEAD NLM UNIT(s): OHIPD, LO RWS, NCBI, OCCS, with input from LHC and SIS. (Lead TBD)

Option 1: Designate evaluation funding – Desirable to have the digital analytics management coordination group work with NLM top management to designate electronic resources evaluation as one of its funding priorities, to support implementation of tools and approaches such as those suggested by this task force.

PURPOSE: To provide necessary resources to carry out key evaluation activities.
PRIORITY: High.
TIMING: Develop plan over the next several months including budget estimates and funding priorities.
EFFORT: 16-24 hours staff time for each lead unit.
BUDGET: Staff time only.
LEAD NLM UNIT(s): OHIPD, LO RWS, NCBI, OCCS, with input from LHC and SIS.

Option 2: Determine evaluation best practices – Desirable for the digital analytics management coordination group to commission the preparation of a set of guidelines and/or policies indicating what kinds of evaluation can and should be done for public-facing electronic resources. This could be a menu of evaluation options with pros and cons. Perhaps this could be linked to names of NLM experts to get people started in the right direction. The success stories from above could be incorporated into this as well.

PURPOSE: To make sure we are spending time, effort, and resources on the best tools and approaches, and to ensure that these tools/activities are being used consistently by all relevant NLM projects.
PRIORITY: Medium.
TIMING: Develop digital analytics evaluation best practices hand book during FY18.
EFFORT: May require 0.5 FTE staff person for six months to research, prepare a draft, and conduct technical and programmatic review + 12-24 hours staff time per division for input/review. The guidelines could be cross-linked via the digital analytics community platform to NLM experts and the success stories mentioned earlier.
BUDGET: Staff time only, unless partially contracted out.
LEAD NLM UNIT(s): SIS, LO RWS, and NCBI, with staff input/review/assistance from other units.

Option 3: Use KPI approaches – Key Performance Indicator (KPI) approaches are used only infrequently at NLM and should be considered for wider use. HHS's ASPA provides a website performance measurement template. GSA's Digital Analytics Program another a good source of relevant information and training. Also, KPIs are closely related to the Logic Tree model used in program evaluation (see, e.g., the NNLM Evaluation Office). However, it will take some time to familiarize NLM staff and management with the KPI concept and to conduct KPI training and pilot testing.

PURPOSE: To create goals and success metrics for NLM websites and track their progress over time.
PRIORITY: Medium
TIMING: Early-mid FY18 to research and prepare a resource paper on KPI or equivalent, for review, and use to encourage pilot testing during FY18.
EFFORT: Estimated 16-32 hours each for lead units and 8 hours each for review/comments by other units.
BUDGET: Staff time only.
LEAD NLM UNIT(s): LO RWS, OCCS, with input from SIS and LO NNLM.

Attachments: IT Functional Audit Analysis.xlsx

Jerry,

Good point. There was no initiative that was geared towards IT consolidation. We have two initiatives related to IT:

- IT Services Functional Audit – spreadsheet that reports on IT functional costs is attached
- IT Assessment, which has supported improvements for IT "effectiveness" and the NPA among other things.

R,
IVOR

My edits are in the text below. I'm not clear to me what activity is meant by the ongoing "IT consolidation planning effort" and how this new effort would differ from that one or leverage it. Is there some work we can point to, or a report?

Jerry
==========

I have placed a hold on your calendars for Tuesday Sept 3, 3:15-4:15 pm and Thursday Sept 5, 11-11:30 pm to discuss approaches to more effectively and efficiently manage NLM's IT resources.

NLM's growing need for strong information technology resources continues to outpace growth in our annual appropriation. It's time to find ways to ensure a strong and effective information technology resources for NLM, while eliminating unnecessary duplication and identifying common core services. Now that we have completed the IT audit and are about one year into the IT consolidation planning effort, it is time to formalize our planning for NLM-wide IT support. Banking on your collective insight and experience, it is my hope that we will align the management of our information technology resources in the best possible way to embrace opportunities in NLM's future.

I would like to use this meeting to identify approaches that we could accomplish in FY 2020 that would lead to a more effective and efficient management of IT resources at NLM.

Please come ready for discussion,

Patti

Subject: RE: Draft message to set up the IT pLanning meeting-- comments welcome

Patti,

Please see my recommended text below. I made the following key changes, primarily affecting the original sentences highlighted in light blue below:

- I removed the sentence that says that you 'intend to preserve' certain activities in the divisions, because that gets people to begin thinking that they do not have to make a real business case for things to stay as-is because you're already onboard with that idea. I would prefer you not show your cards on this right now.

- I also removed the sentence that says you asked me to share the reports, etc. It would be preferable that the meeting you'll be hosting be the first time you are briefing any of us on this topic. This way Jim and Olivier won't come to the meeting feeling uncomfortable that you and I have already had a long discussion on this topic. It's best if we all hear 'for the first time' what's on your mind and then get to work from there. I'd recommend that at this meeting you officially charge me with things you want me to do, such as share reports, develop a concept plan for IT restructuring, etc.

- Overall, it's best to say that you're interested in the advancing the management of **IT resources** at NLM, not just IT infrastructure. Otherwise, we'll all get into nickel and diming what is infrastructure and what is not, and before you know it we'll find a way to label most things as being non-infrastructure. Software development is an IT resource, just like networks, desktop, etc. But, software development is likely where we spend most of our IT dollars, and very likely where our expenditures will increase most rapidly over time. So, if the intent is to not have duplication of software development (across the NLM divisions) then we should not leave it out of the discussion. I recommend leaving out the word 'infrastructure' in our discussion and talk about re-aligning all of IT – at least as a starting point.

Please let me know if you'd like to discuss any of these thoughts/recommendations.

R,
IVOR

<<<<<<<<<< recommended text below >>>>>>>>>
Our needs for investment in strong information technology resources continue to grow at a pace that exceeds our annual appropriation. It's time to find ways to ensure a strong and effective information technology resources for NLM, while eliminating duplication of common core services. Now that we

Ivor, Jerry – Comments, please

Dear Ivor, Jerry, Jim, Olivier and Todd:

Our needs for investment in strong information infrastructure continue to grow at a pace that exceeds our annual appropriation. It's time to find ways to ensure a strong and effective NLM information infrastructure while eliminating duplication of common core services. Now that we have completed the IT audit and are about one year into the IT consolidation planning effort it is time to formalize our planning for NLM wide IT support. It is my intent that we should preserve in the division the IT activities that must be uniquely undertaken in support of the division work, and that we will create common approaches to common IT functions (e.g. security, desktop support, etc). It is my hope that we will become more effective and efficient, and that we

Building on the IT Audit and the IT Consolidation planning effort, I would like to use this meeting to identify approaches that we could accomplish in FY 2020 that would lead to a more effective and efficient IT infrastructure. I have asked Ivor to share with all of us the reports of the IT Audit and the IT consolidation planning effort.

I have placed hold on your calendars for Tuesday Sept 3 315-415 and Thursday Sept 5 11-1130 (IVOR, if you can move your USA meeting on 9.5, we could meet 1145-1245.)

Thanks in advance -I look forward to taking the next steps with you

Best

Patti

ATTENTION: The following Sunsetting Request requires your approval.

Please review the request below and select "APPROVE", "REJECT" or "RETURN". Selecting "RETURN" will return this request to its submitter for resubmission.

NLM Service/Product (Offering) Details	
NLM Service/Product (Offering)	CCRIS
Description	The CCRIS database contains chemical records with carcinogenicity, mutagenicity, tumor promotion, and tumor inhibition test results. It was developed by the National Cancer Institute (NCI). Data are derived from studies cited in primary journals, current awareness tools, NCI reports, and other sources.
Document(s) Supporting Justification	TOXLINE retirement.docx SIS-sunset-resources.docx
Justification	Low usage No longer aligned with NLM priorities or mission needs Incorrect or out-of-date information
Retirement Date	12/01/2019
Organization	LO
Key Staff Involved	Colette Hochstein Sanjay Jain

	Jeanne Goshorn Phillip Thomas David Gillikin

Internal Communication Plan	
Staff to be Informed	Colette Hochstein Pertti Hakkinen
Communicated Message	CCRIS was originally created by the National Cancer Institute (NCI) and covers the years 1985 to 2011. It is part of TOXNET, and the information it contains is already incorporated into PubChem. On December 1, 2019 the National Library of Medicine (NLM) TOXNET website will be discontinued. Most of its content will continue to be available through other NLM databases as well as external websites. TOXNET has served as an integrated system of toxicology and environmental health databases. The most frequently used of those databases are being incorporated into three of NLM's core resources: PubChem, a database of chemical information; PubMed a resource for biomedical literature; and Bookshelf, with free online access to books and documents in life science and healthcare. Several other databases in TOXNET were made available on TOXNET from other organizations, such as the U.S. Environmental Protection Agency, and will continue to be available from those sources. Some databases will be retired. For a complete list of TOXNET databases and how to access their content, see the TOXNET transition page.
Date the Message will be Sent	09/01/2019
Communication Channel(s)	Emails Digital signage

	Information delivered at staff meetings Other: Tech Bulluetin
Retained Content	FTP
Additional Information	---

External Communication Plan	
External Stakeholders to be Informed	TOXNET users, NCI
Communicated Message	CCRIS as a separate database will no longer be available after NLM's TOXNET is retired. In this format it will be available on the FTP site, and the data it includes is already part of NLM's PubChem. On September 1, 2019 the National Library of Medicine (NLM) TOXNET website will be discontinued. Most of its content will continue to be available through other NLM databases as well as external websites. TOXNET has served as an integrated system of toxicology and environmental health databases. The most frequently used of those databases are being incorporated into three of NLM's core resources: PubChem, a database of chemical information; PubMed a resource for biomedical literature; and Bookshelf, with free online access to books and documents in life science and healthcare. Several other databases in TOXNET were made available on TOXNET from other organizations, such as the U.S. Environmental Protection Agency, and will continue to be available from those sources. Some databases will be retired. For a

	complete list of TOXNET databases and how to access their content, see the TOXNET transition page. If you have questions, please contact NLM Customer Support at https://support.nlm.nih.gov/

Subject: SIS materials in learn.nlm.nih.gov
Attachments: learn_db_sis_delete_list.xlsx

Hi Jody,

I reviewed the SIS materials in the learn.nlm.nih.gov database. Attached is the spreadsheet with the actions “delete” or “keep.” I do not have access to the database to delete these items.

I will work with OET to develop criteria your contractor can use to review the remaining materials – I will have that completed by next Wednesday.

Please let me know if you have any questions.

Thanks,
Laura

Subject: DRAFT Employee Message regarding SIS Products

Hi Dianne,

Here is the draft language we put together for you to send out regarding the status of SIS products. This was discussed by the team, and we had wanted to review it during last week's meeting but did not get a chance. I'd like to send it out to the team members to review this week, in advance of our meeting on Monday.

Background language from Dr. Brennan:

"To start, we're taking a good look at all of our public-facing services, from dbGaP to PubMed to MedlinePlus, from TOXNET to PubChem to ClinicalTrials.gov. We want to be sure the user experience for each of these services is the best it can possibly be. We also want to ensure the infrastructure is robust and sustainable, and that we haven't ended up with an awkward patchwork on the back end through a series of well-intentioned but disparate fixes and user-driven improvements. We need to launch the next decade on solid technological footing." Dr. Brennan, Blog post. *Moving Forward—Together (July 2018).*

One NLM emphasizes the integration of all our valuable divisions and services under a single mantle, and acknowledges the interdependency and engagement across our programs. Dr. Brennan, Blog Post. *One NLM (January 2017).*

As we go through the process of reviewing and evaluating the products and services formerly offered by SIS, we recognize that if we are going to achieve our vision of a robust, sustainable portfolio of aligned resources we are going to need to make difficult decisions about which resources we keep and which resources we transition to other organizations or sunset altogether. Asa result, we wanted to provide more information about how we are making our decisions and how we expect things to proceed. Our decisions are being guided by a programmatic approach that considers which product areas most directly support the NLM Strategic Plan and represent unique offerings from NLM. We are clear that NLM is committed to supporting key offerings in chemical, toxicology and environmental health, but we are also looking for opportunities to streamline or consolidate resources where appropriate. We have also determined that NLM will focus its Disaster-related products on published journal and gray-literature and products that provide chemically and toxicology related information. Across all of our offering, we will look for opportunities to integrate products into more currently support technology; for example, some of the ToxNet resources will be included in PubMed, BookShelf and PubChem. Stand-alone offerings and offerings without a strong infrastructure will need to be sunset. Our leaders will be working with teams that include those of you who have worked to make these products valuable and successful, OCCS staff members who understand and can help guide us to the best technology decisions, and others who can help make appropriate plans for all of our resources over the *next 18 months*. We understand this may be challenging, but we also believe that these efforts will help us build a strong aligned and integrated platform that can reach that future vision Dr. Brennan laid out for all of us close to two years ago.

Communicated Message	On December 1, 2019 the National Library of Medicine (NLM) TOXNET website will be discontinued. Most of its content will continue to be available through other NLM databases as well as external websites. TOXNET has served as an integrated system of toxicology and environmental health databases. The most frequently used of those databases are being incorporated into three of NLM's core resources: PubChem, a database of chemical information; PubMed a resource for biomedical literature; and Bookshelf, with free online access to books and documents in life science and healthcare. Several other databases in TOXNET were made available on TOXNET from other organizations, such as the U.S. Environmental Protection Agency, and will continue to be available from those sources. Some databases will be retired. For a complete list of TOXNET databases and how to access their

	content, see the TOXNET transition page.

NLM Service/Product (Offering) Details	
NLM Service/Product (Offering)	SIS Division Sunset
Description	Resources and programs of the Specialized Information Services will be sunset or integrated into Library Operations, OCCS and Lister Hill.
Document(s) Supporting Justification	SIS Internal Communications Plan.docx SISsunset.docx SIS-System-message.docx
Justification	Other: The SIS division is being sunset
Retirement Date	06/21/2019
Organization	DSIS
Key Staff Involved	Hua Chang

Internal Communication Plan	
Staff to be Informed	Jody Nurik
Communicated Message	On June 23, 2019 the National Library of Medicine (NLM) Division of Specialized Information Services will be merged with the Division of Library Operations, and other parts of NLM. In 1966 the President's Science Advisory Committee concluded there was an urgent need for a coordinated, complete, computer-based file of toxicological information. Toxicology databases became part of NLM's online biomedical resources after a 1967 mandate from Congress to establish the NLM Toxicology Information Program (TIP), retitled in 1994 as the Toxicology and Environmental Health Information Program (TEHIP), part of NLM's Division of Specialized Information Services (SIS).The Toxicology Data Network (TOXNET) was created in 1985 to provide more effective access to these databases. TOXNET has been among the world's largest collection of toxicology databases. Over the past 50 years, SIS has expanded its services to other areas, including outreach to underserved and special populations, HIV/AIDS, and disaster/emergency preparedness and response. This change in NLM organizational structure is in keeping with its commitment to the NLM Strategic Plan 2017-2027: A Platform for Biomedical Discovery and Data-Powered Health, that focuses on accelerating discovery and advancing health through data-driven research. The new organizational structure enables NLM to make the best use of its talents and resources, and to improve efficiency and overall effectiveness. By eliminating unnecessary boundaries between units, NLM is striving to create a more collaborative environment for Its curation teams and a universal infrastructure for its technical teams, ensuring the integrity and sustainability of key SIS products and creating a common technical platform for delivering products and services. NLM is committed to support key functions in toxicology and environmental health and other important aspects of SIS. All key products and services are undergoing an exhausted review. Some will continue and others will be discontinued or integrated with other NLM products. Please stay tuned to the communications

	from NLM about the status of the SIS products and services. The following staff and offices will be contacted as part of the process of sunsetting SIS: • NLM Leadership • NLM ALL broadcast message from the Director • NLM Customer Service • National Network Coordinating Office / National Network of Libraries of Medicine • Director and Deputy Director of NIH
Date the Message will be Sent	06/14/2019
Communication Channel(s)	Emails Other: NLM ALL broadcast message from the Director
Retained Content	NLM Website Other: Referrals on the website notice will include: • For toxicology and environmental health information, visit <NEW TEHIP HOME PAGE>. • For chemical and drug information, visit ChemIDplus, NLM Drug Portal, or PubChem. • For HIV/AIDS, visit AIDSinfo, or AIDSource. • For Outreach Activities, visit <OET Main Website> • For Disaster information, visit Disaster Information. • For K-12 science and health education, visit <TOXTOWN Student Section>
Additional Information	RWS/WIM will report on SIS content on NLM main and send findings to LO or OCPL.

Philip Chuang
Neil Efrom
Mike Huerta
Ken Koyle
Mayowa Ijagbemi
Wei Ma
Beth Melby
Anatoly Mnev
Kim Pruitt
Leigh Samsel
Rex Shuler
Samantha Tempchin

Facilitation Slides:

Meeting Notes:

- Review Action Items from last week
    - OCPL to remove main webpage from Business Resources list altogether after data call
    - LO to add customer service as division-specific Business Resource in final submission
    - Update attributes file definition to be clear that there is no direct mapping between Offerings and SP elements
    - Discuss with Patti whether it would be useful for leadership to have NIH TAPS accounted for in the portfolio dashboard
        - Patti does want TAPS represented as a block expenditure
- Offering Data Call Check-In
    - EP, OCCS, and OCPL submitted
    - LO – received feedback from all but one respondent (OET)
    - NCBI – received feedback from all but one respondent who is on travel and will submit next week
    - LHS – submitted; needs to confirm that the file submitted is the final draft
    - Feedback received
        - Concern about new resources and new resources organizations which have been added by respondents during data call
            - One external data resource was added for medical device information
            - OSI will compile new additions, bring to NPATT to confirm whether resource makes sense and ensure new additions aren't duplicated and aren't already in template
            - Divisions can decide whether to change their submissions to add new resource
        - Is Resource owner needed for dashboard?

- Use case for Resource owner may not have articulated need adequately
    - When Patti receives inquiry from users of resources, she can know who to ask for information
    - For specific URL/site, you don't know specific owner because that resource has been grouped together in data call
- Decision: This information will not be portrayed in the dashboard. The IT Service Inventory from the IT assessment has owners and can furnish this information

- Group Discussion Points
    - Review Proposed Process for NPA Financial Data Call
        - Confirm use cases and attributes required
            - What level of financial data granularity is needed to respond to use cases?
            - Does the management question make sense, and does it lead to the data needed to answer the question?
        - Offering Consolidation Use Case
            - Attributes are needed to inform discussions but information itself doesn't answer what can be consolidated
            - May want to add another layer which would help identify specific attributes needed (e.g. for Offerings that support the same customer, customer name would be attribute needed)
                - If Offerings use the same resources and customers, there is an opportunity for consolidation
            - The current UC was developed before a lot of consolidation occurred. Consolidation has now occurred
                - E.g. TOXNET content now in PubChem and NCBI Bookshelf
                - LO absorbed SIS products and is identifying products which are similar; this will be captured at the resource level rather than offering level; can provide how much resource costs in overall offering
                - Resources have been consolidated and grouped together; groupings can be refined
            - The idea was to have info needed to make decisions on Offerings which can be consolidated
            - Discussion of UC attributes:
                - <u>Question:</u> Do we need to know how Offering Consolidation is supporting the NLM Strategic Plan?
                    - <u>Decision</u> – Remove Strategic Plan attributes from the UC; unnecessary
                - <u>Question:</u> What level of cost granularity is needed for Offering Consolidation? (e.g. is it important to capture whether salary is FTE vs contractor?)
                    - Collect higher level information this round to be an indicator to initiate deeper data collection when merited

- Decision: Cost-wise expenditure will be at Tower level
- Decision: Mapping to strategic plan and cost pools attribute should be removed

- Inter-NLM Collaboration Use Case
  - Concern over inability to find all connections through resource. Therefore, the same approach as was used in the baseline will be used for the UC. Collaboration will be identified by Divisions accounting for expenditures for offerings outside their Division,
    - In the future, NPATT should look into assigning costs at the resource level
  - Question: Has the group agreed to assign cost to the Tower level and no more granular?
    - Prototype template presented by OCCS at the previous meeting shows how Divisions will be able to assign cost to Offerings across all divisions to get a total NLM cost
    - Non-IT Towers will be standardized to facilitate comparable reporting
      - Preliminary list of non-IT towers will be reviewed next meeting
    - **ACTION ITEM:** MITRE will update working and attributes for Inter-NLM Collaboration Use Case
- IT Spend Analysis Use Case
  - Question: What is needed from OCCS/Ivor to help reporting?
    - Deeper TBM tower data needed; however, Ivor agreed to higher level for NPA data collection purposes
    - Higher level appropriate for initial analysis and can collect at deeper level in future
    - Resources used by multiple offerings will be revealed
    - Goal is to identify what services we are supporting and what are the costs
    - Patti's questions are
      - How do we reduce the cost of IT?
      - What are IT totals (magnitude by category)?
      - Patti discussed with Ivor
    - IT Spend may be level 2 use case

- Next meeting
  - Review List of Non-IT towers to determine categories to be used by all Divisions alongside IT Towers

ACTION ITEMS:

Item	Responsible	Due Date	Comments
MITRE will update working and attributes for Inter-NLM Collaboration Use Case	MITRE	9/11	
Propose new wording for Inter-NLM Collaboration Use Case	MITRE	9/11

Subject: ACTION REQUIRED (DIRECTOR APPROVAL) - NLM SUNSETTING REQUEST

ATTENTION: The following Sunsetting Request requires your approval.

Please review the request below and select "APPROVE", "REJECT" or "RETURN". Selecting "RETURN" will return this request to its submitter for resubmission.

NLM Service/Product (Offering) Details	
NLM Service/Product (Offering)	TOXLINE
Description	TOXLINE is a bibliographic database currently part of TOXNET that is created by merging currently bibliographic data from PubMed, technical report data from NTIS, grant information from NIH's RePorter, and other archival data from various sources.
Document(s) Supporting Justification	TOXLINE retirement.docx
Justification	Other: When TOXLINE was first developed (in 1972) the science of toxicology was just emerging as a recognized field for research involving several different scientific disciplines such as biochemistry, pharmacology, physiology, etc. Some of the toxicology literature was covered by MEDLINE, but much of it was not, so other relevant abstracting and indexing services were used to obtain additional literature in toxicology to merge with MEDLINE in order to create the "more complete computer-based file of toxicological information" called for by the President's Scientific Advisory Committee in 1967. Since then, MEDLINE has expanded its journal coverage significantly and other online

	sources of toxicology information are readily available. It is no longer necessary for NLM to create a merged database of this information. we will continue to maintain a subset filter in PubMed to make searching for toxicology information easy for users. In addition, the archived parts of TOXLINE will be available on the NLM FTP site.
Retirement Date	12/01/2019
Organization	LO
Key Staff Involved	Jeanne Goshorn Phillip Thomas David Gillikin

Internal Communication Plan	
Staff to be Informed	David Gillikin
Communicated Message	Part of the TOXNET transition to NCBI involves retiring TOXLINE and directing users to the toxicology subset on PubMed
Date the Message will be Sent	06/03/2019
Communication Channel(s)	Emails Information delivered at staff meetings
Retained Content	FTP
Additional Information	---

External Communication Plan	
External Stakeholders to be Informed	Users who license TOXLINE and get it in xml from our FTP site Online users
Communicated Message	TOXLINE will be retired on 1 December 2019. The toxicology subset will be available on PubMed, and older archived parts of TOXLINE will be available on the FTP site.
Date the Message will be Sent	06/03/2019
Communication Channel(s)	Technical Bulletin Newsletter
Communication Frequency	One time message
Retained Content	FTP Other: toxicology subset of PubMed
Page Redirected	No
Additional Information	---

Request Information	
Request ID	162

Task ID	662
Request Status	NLM Deputy Director Approved
Created By	Jeanne Goshorn

Subject: SIS materials in learn.nlm.nih.gov

Hi Jody,

I reviewed the SIS materials in the learn.nlm.nih.gov database. Attached is the spreadsheet with the actions “delete” or “keep.” I do not have access to the database to delete these items.

I will work with OET to develop criteria your contractor can use to review the remaining materials – I will have that completed by next Wednesday.

Please let me know if you have any questions.

Thanks,
Laura

Associated initiative	Metric name	Performance	Owner(s)
1.1f Link articles to associated data sets	Number of articles in PubMed linked to data sets	391,193	Jon Ostvold
1.2a Expand funding for extramural research to support new biomedical data science initiatives (BPG and SBIR)		4 New initiatives supporting BDS (NIH Comp and Stat Skill, Personal Health Libraries, SBIR/STTR Pass-through FOA and SBIR/STTR Y&M) 15 awards. 5 NSF-NLM DSM Joint initiative grants (PIDE-NLM DSM initiative grants $1,361,625), 6 NSF Smart Connected Health grants (NSF Smart Connected Health grants $1,686,899 *NOTE- this is an estimate since 3 of the grants have not yet been awarded), 1 Personal Health Libraries grant (PY2019 Personal Health Libraries grants $322,282) and 2 Computational Curation grants (Computational Curation grants $686,642)	Valerie Florance
	Number of new initiatives		
1.2a Expand funding for extramural research to support new biomedical data science initiatives (BPG and SBIR)	Number of RPG grants funded from new initiatives		Valerie Florance
1.2f Expand collaboration with other ICs and agencies on data science oriented FOAs		**NIH Parent FOAs:** 7 (2 RO1s, 1 R21, 1R35/R00, 2 F30/F31, 1 1K99/ST99) **NIH Common Fund:** 5 (NIH Director's awards) **NIA/NLM Specialized FOA/Admin Supp:** 11 (1 R01 Simu Modeling, 1 R15, 1 Institut Admin Supp, 4 NIH WENL, 1 T32, 2 NIH diversity supps and 1 NIH-NIH joint initiative HG?-JAK-19-001)	Valerie Florance
	Number of multi-IC or agency FOAs joined		
1.2f Expand collaboration with other ICs and agencies on data science oriented FOAs	Number of new grants funded from joint FOAs in data science areas	Total of 15 grants funded: 6 NSF-NLM DSM Joint initiative grants, 5 NSF Smart Connected Health grants, 2 Personal Health Libraries grants and 2 Computational Curation grants	Valerie Florance
1.2g Expand funding for intramural research	Intramural research program budget % of total NLM budget	Not sure of %	Jon Ostvold/Mr Ears
1.2g Expand funding for intramural research	Intramural research program budget growth from baseline	Increase of $550K for Xiaoling Jiang	Jon Ostvold/Mr Ears
1.2h Hire NLM-wide scientific director	Lay out timeline and process - Hire by end of CY2019	Search Committee formed, vacancy announced.	Mike Huerta
1.2i Hire more intramural investigators	Number of investigators in NLM IRP – get 3 more by end of CY2019	1 here, 3 in process	Jon Ostvold
1.4f Mitigate high availability resources to the cloud	resources migrated	Not sure.	Jon Ostvold
1.4f Mitigate high availability resources to the cloud	Number of resources in the cloud	PGAP, ELGOT, PHEMI, SRA	Jon Ostvold
2.2c Increase support for GSR resource grants by expanding funding	Number of applications funded		Valerie Florance
2.3d Support scholarly works G13 grants relating to interests of primary NLM audiences		On target. 1 new awards and 1 ongoing award this year thus far totaling $182,720 in NLM IC cost (one new award on biomedical terminologies and their role in EC)	Valerie Florance
	Number of applications funded		
2.4a Support NNLM activities to enhance understanding of data science and advanced data management	Number of NNLM initiatives with data science focus	14 OTI	Joyce Backus
2.4a Support NNLM activities to enhance understanding of data science and advanced data management	Number of participants in data science focused NNLM initiatives	726 participants in FY19	Joyce Backus
2.4b Customer Experience IT Assessment	Establish performance indicators for at least five major NLM public facing information resources	NLM's IT Assessment program developed a volume measures (users, pageviews, sessions, bounce rate) and customer experience measures (net promoter score, overall satisfaction and task accomplishment).	Jeni O'Steen
2.4b Customer Experience IT Assessment	Implement a digital scorecard platform for measuring customer experience	Implemented a digital scorecard prototype using volume and customer experience measures. The scorecard has been implemented for PubMed, MedlinePlus, NLM Main Page, Docmed2.0/4D & DailyMed	Jeni O'Steen
1.4f NPN Tool Transition	Improve the quality and modify the organization of the information content of the NPN Tool by re-considering all attributes	Task Completed. Trans-NLM team (NPATT) reviewed, discussed, refined, re-defined, prioritized and reached consensus on all information elements, use cases, business rules, and internal relationships among them. NPATT plotted next steps and future directions and the FY19 data call - under this revised regime - has been issued.	Mike Huerta
3.1b Expand extramural training grant support for predoctoral biomedical data science (T1s)	Number of predoctoral trainees in NLM-supported programs	On target. 128 predoctoral trainees (9 of which are supports by NIDA)	Valerie Florance
3.1c Increase funding for postdoctoral fellowships in data science for mid-career researchers (F4)	Number of postdoctoral trainees in NLM-supported fellowships	On target: 70 postdoctoral trainees (5 of which are supported by NEI/4S). Launch of NLM-I-T program is still in development.	Valerie Florance
3.1d Increase funding for career transition awards in biomedical data science (K4	Number of data science focused K awards	During FY2019 NLM was not able to increase funding for K awards due to the sunsetting of NLM's participation the NIH K01 training only the K99 programs. 4 awards have been made during FY2019 and 3 are DS-focused. NLM's plan continues to be to increase funding for K awards.	Valerie Florance
3.2a Support partnerships to share NIH curriculum materials in biomedical data science with other NIH training programs	Number of partnerships supported	5 NDM Training sites supported (Utah, UHSU Yale, UCSD and Indiana)	Valerie Florance
3.2a Increase support for training partnerships with MSIs	Evidence of biomedical data science in curricula of MSI partners	3 MSI schools plan supports DS curricula in their application (Colorado, Pittsburgh and UNE-CRI)	Valerie Florance
3.3a Increase support for training partnerships with schools	Number of projects supported	2 Schools schools plan supports DS curricula in their application (U Washington and U Buffalo)	Valerie Florance
3.3a Increase support for partnerships with schools	Evidence of biomedical data science in curricula of school		Valerie Florance
3.3b Increase support for partnerships with schools	Number of projects supported	2 Schools schools plan supports DS curricula in their application (U Washington and U Buffalo)	Valerie Florance
3.3f NLM Data Science Assessment/Training	Number of people who took survey	Pre-survey = 758 Post-survey = 507	Joyce Backus
	New research activities in data science (1 project) Hajesh		Clem
	Recreation of '18 and '19a		Barbec, diane
	FHIR and tool building to advance interoperability		Clem
	Data science training (2?)	28 staff completed	Joyce
	Established CBT	This should be Joyce - Todd and I recommended CBT	Mike, todd
	Reorganization		Todd
	moved 50% of resources to sustainable platforms	Yes? Tiewei	Joyce, jim
	cancelled resources	Yes?	Jerry, Joyce
	Hackathons, reproducibility workshops	2-3 Codeathons, including 2 SUH-wide workshops on r	Mike
		NIH Labs a small group to propose a management structure for an ongoing "innovation investment" program that would allow NIH staff to apply for time/support for great ideas that could lead to new products and services or to new research areas. **Target date for draft document is October 1.**

Subject: Fwd: Status of NLM Toxicology and Environmental Health Resources

Jerry,

Linda and I have asked our new Director of Data Science to get more details on how the NLM plans to proceed on these matters—and then to develop a plan on how to move forward. Would you mind if Charles contacted you to discuss your plans in more detail? Linda had the impression from Patti that you may still be supporting some of these resources. I will cc Charles on this note.

Thanks much,

Rick

One of the impacts is disbanding of the Specialized Information Services (SIS) branch. SIS was responsible for numerous toxicology-related products; e.g., ToxNet (https://toxnet.nlm.nih.gov/), the EnviroTox Resource page (https://envirotoxinfo.nlm.nih.gov/), ToxMap (https://toxmap.nlm.nih.gov/toxmap/), and education resources like ToxTown (https://toxtown.nlm.nih.gov/), ToxTutor (https://toxtutor.nlm.nih.gov/), and Environmental Health Student Portal (https://kidsenvirohealth.nlm.nih.gov/), among many others. With SIS disbanding, it's unclear what is happening with each of their products.
>
> Based on a conversation with an NLM colleague yesterday, NLM is currently undertaking a review process of the products with the intent to sunset some of them by Fall 2019.

ToxMap's website already notes it will be retired in a few months. According to my colleague, ToxNet is also set to go offline in the fall.
ToxNet is the federated portal that allows a user to search across 16 toxicology, hazard, and environmental health databases at one time. For some of the databases, ToxNet is the only platform to access the data; e.g., ITER. For the NLM-supported databases (e.g., Hazardous Substance Data Bank, LactMed, DART, …) it's unclear which ones will continue to be maintained and how they will be made available. It is also unknown what will happen with the content for those that are sunset. It was suggested they might be made available through the data distribution page - https://www.nlm.nih.gov/databases/download/data_distrib_main.html.

I'm reaching out

1. to raise awareness in case you hadn't heard,
2. to determine if NIEHS/NTP is interested in exploring what role, if any, we want to have for products that are being sunset, and
3. to propose that we engage with NLM as they think through considerations for sunsetting these environmental health and toxicology resources. This would also be an opportunity to discuss future coordination around NTP/NIEHS data resources and those of NLM (e.g., PubChem).

Look forward to hearing your perspective and interest in our engaging with NLM.

Stephanie

Rick,
I would be happy to discuss these changes with Charles. We are still making decisions about several of the resources, and part of what I am trying to do is understand which are unique and valued. I am about to head into Board meetings, so next week would be best for follow up: Mon after 3pm, Tues before 11am, or Weds before 1pm.

Thanks
Jerry

Subject: Status of NLM Toxicology and Environmental Health Resources

Hi Linda, Rick, and Brian,

As you know, NLM recently released its new strategic plan and is shifting resources in order to implement that plan. One of the impacts is disbanding of the Specialized Information Services (SIS) branch. SIS was responsible for numerous toxicology-related products; e.g., ToxNet (https://toxnet.nlm.nih.gov/), the EnviroTox Resource page (https://envirotoxinfo.nlm.nih.gov/), ToxMap (https://toxmap.nlm.nih.gov/toxmap/), and education resources like ToxTown (https://toxtown.nlm.nih.gov/), ToxTutor (https://toxtutor.nlm.nih.gov/), and Environmental Health Student Portal (https://kidsenvirohealth.nlm.nih.gov/), among many others. With SIS disbanding, it's unclear what is happening with each of their products.

Based on a conversation with an NLM colleague yesterday, NLM is currently undertaking a review process of the products with the intent to sunset some of them by Fall 2019. ToxMap's website already notes it will be retired in a few months. According to my colleague, ToxNet is also set to go offline in the fall.
ToxNet is the federated portal that allows a user to search across 16 toxicology, hazard, and environmental health databases at one time. For some of the databases, ToxNet is the only platform to access the data; e.g., ITER. For the NLM-supported databases (e.g., Hazardous Substance Data Bank, LactMed, DART, …) it's unclear which ones will continue to be maintained and how they will be made available. It is also unknown what will happen with the content for those that are sunset. It was suggested they might be made available through the data distribution page - https://www.nlm.nih.gov/databases/download/data_distrib_main.html.

I'm reaching out

1. to raise awareness in case you hadn't heard,
2. to determine if NIEHS/NTP is interested in exploring what role, if any, we want to have for products that are being sunset, and
3. to propose that we engage with NLM as they think through considerations for sunsetting these environmental health and toxicology resources. This would also be an opportunity to discuss future coordination around NTP/NIEHS data resources and those of NLM (e.g., PubChem).

Look forward to hearing your perspective and interest in our engaging with NLM.

Hi Jerry,

Could we go with 11:00 am next Wednesday, 12 is also open? I can give you a call if you provide a good number.

Thanks,

Charles

Subject: RE: Status of NLM Toxicology and Environmental Health Resources

Rick,

I would be happy to discuss these changes with Charles. We are still making decisions about several of the resources, and part of what I am trying to do is understand which are unique and valued. I am about to head into Board meetings, so next week would be best for follow up: Mon after 3pm, Tues before 11am, or Weds before 1pm.

Thanks
Jerry

Subject: Fwd: Status of NLM Toxicology and Environmental Health Resources

Jerry,

Linda and I have asked our new Director of Data Science to get more details on how the NLM plans to proceed on these matters—and then to develop a plan on how to move forward. Would you mind if Charles contacted you to discuss your plans in more detail? Linda had the impression from Patti that you may still be supporting some of these resources. I will cc Charles on this note.

Thanks much,

Rick

>
> Hi Linda, Rick, and Brian,
>
> As you know, NLM recently released its new strategic plan and is shifting resources in order to implement that plan. One of the impacts is disbanding of the Specialized Information Services (SIS) branch. SIS was responsible for numerous toxicology-related products; e.g., ToxNet (https://toxnet.nlm.nih.gov/), the EnviroTox Resource page (https://envirotoxinfo.nlm.nih.gov/), ToxMap (https://toxmap.nlm.nih.gov/toxmap/), and education resources like ToxTown (https://toxtown.nlm.nih.gov/), ToxTutor (https://toxtutor.nlm.nih.gov/), and Environmental Health Student Portal

(https://kidsenvirohealth.nlm.nih.gov/), among many others. With SIS disbanding, it's unclear what is happening with each of their products.

Based on a conversation with an NLM colleague yesterday, NLM is currently undertaking a review process of the products with the intent to sunset some of them by Fall 2019. ToxMap's website already notes it will be retired in a few months. According to my colleague, ToxNet is also set to go offline in the fall.
ToxNet is the federated portal that allows a user to search across 16 toxicology, hazard, and environmental health databases at one time. For some of the databases, ToxNet is the only platform to access the data; e.g., ITER. For the NLM-supported databases (e.g., Hazardous Substance Data Bank, LactMed, DART, …) it's unclear which ones will continue to be maintained and how they will be made available. It is also unknown what will happen with the content for those that are sunset. It was suggested they might be made available through the data distribution page - https://www.nlm.nih.gov/databases/download/data_distrib_main.html.

I'm reaching out

1. to raise awareness in case you hadn't heard,
2. to determine if NIEHS/NTP is interested in exploring what role, if any, we want to have for products that are being sunset, and
3. to propose that we engage with NLM as they think through considerations for sunsetting these environmental health and toxicology resources. This would also be an opportunity to discuss future coordination around NTP/NIEHS data resources and those of NLM (e.g., PubChem).

Look forward to hearing your perspective and interest in our engaging with NLM.

Stephanie

Ok, thanks Alise. We are going to be further discussing the mandate issue in today's meeting, as this has been an issue In many submissions. I will replace your original submission with this updated one.

Thanks so much!
Leigh

Subject: RE: Please use this template- OCPL Submission

Hi Leigh,

We have combed through our records and it does not appear that any of OCPL's offerings were mandated. The only exception is FOIA which is The Freedom of Information Act 5 U.S.C. 552.

I've populated the FOIA information in the attached spreadsheet.

Please let us know if you need anything else.

Thank you,

Hi Alise, Jody, and Allison,

Thank you for the OCPL submission for the NPATT data call. I was going over all submissions and have a question about the OCPL response:

The Primary Legislative Authorization/Mandate Type and Mandate Reference were omitted for most of the OCPL Offerings. Is this because there is no mandate for these?

Thanks!
Leigh

Importance: High

Good Morning Allison/Alise,

If you haven't started your data call, please use this template-Attached, we reformatted some cell (since when data is protected in excel, there are some format issues).

Also here some tips in case your submitters asking you (if they do copy/paste from other sources):

A. **From any source, except Excel**
   1. Select content to copy from any source (Word or website or email message or Notepad)
   2. Right-click on cell of tab (ex. Offerings and Mandates – Offering Description) in NPA template > Paste Special > **choose Text** OR

> move to **another cell**

B. **From Excel**
   1. Select content to copy from another spreadsheet or workbook
   2. Right-click on cell of tab (ex. Offerings and Mandates – Offering Description) in NPA template > Paste Value 
> move to another cell

Thanks-Wei

Initiative Overview

NLM has invested in the NLM Portfolio Analysis (NPA) initiative to inventory NLM Offerings (i.e., products, services, applications) that are provided to user constituencies. Data gathered during the inventory will be used to group Offerings into a logical structure that creates a holistic, organized picture of NLM's portfolio.

Workbook Purpose

The purpose of this workbook is to capture information about NLM Offerings in a standardized manner to generate the NLM portfolio inventory. This workbook is intended to be completed by Offering Owners. The Offering Owner is the primary point of contact for an offering, the person with hands-on expertise in what it does, who it reaches, and how it works. NPATT Representatives, NLM Division managers with Offering oversight responsibilities and participating on the NLM Portfolio Analysis Tool Team, should review all the information prior to submission to ensure accuracy and completeness.

Workbook Instructions

This workbook includes two (2) worksheets containing Instructions and a Glossary, and nine (9) worksheets to be completed by Offering Owners, as listed in the table below. For information and assistance in completing this workbook, contact your NPATT Representative.

For definitions of key terms used in this workbook, consult the Glossary.

The deadline for submission to the NPATT is **Wednesday, September 4, 2019, at 3:00 PM**.

Questions and completed submissions should be discussed with your NPATT Representative. If you are not sure on any request for information, consult with your NPATT Representative to obtain clarification.

The following individuals are NPATT Representatives by NLM Division:

- **Library Operations (LO):** Dianne Babski, Ken Koyle, Alla Keselman
- **Lister Hill Center for Biomedical Communication (LHC):** Olivier Bodenreider
- **National Center for Biotechnology Information (NCBI):** Anatoly Mnev, Kim Pruitt
- **Office of Computer and Communications Systems (OCCS):** Wei Ma, Philip Chuang, Rex Shuler
- **Office of Communications and Public Liaison (OCPL):** Jody Nurik, Alise Crutchman, Lisa Federer, Allison Fisher
- **Office of the Director (OD):** Eddie Rivera
- **Office of Strategic Initiatives (OSI):** Mike Huerta, Leigh Samsel, Sara Tam, Constance Young
- **Office of Extramural Programs (EP):** Samantha Tempchin

Phase 1 Data Call GLOSSARY

2019 NLM Portfolio Analysis Initiative

It	Definition
C	
C	
Customer Type	**Customer** segmentation based on user behavior.
	A **primary customer** is the intended target audience for an **NLM Offering** based on mission alignment, policy, or law.
	An **"other" customer** is the additional audiences who are using the NLM Offering.
NLM Offering	An external-facing (non-NLM) NLM product, service, and/or research program offered to satisfy a want or need of an existing or target user constituency.
Offering Description	A brief description of the product/service provided to **Customers**.
Offering Name	The full name of the **Offering** without information truncated by
Offering Name (Short)	"Brand name," the name used to take the **Offering** to market. If no **Offering Name (Short)**, use **Offering Name**.
Offering Sponsor Name	Refers to the person (usually a senior leader affiliated with the **NLM Offering's** organizational owner) who allocates fiscal resources to support an **Offering** and sets it in the NLM strategic context.
Offering Owner Name	Refers to the primary point of contact for an **NLM Offering,** the person with hands-on expertise in what it does, who it reaches, and how it works. The Offering Owner is involved with the **Offering** at the tactical/operational level where the decisions about managing and maintaining the **Offering** are made.
NLM Organization	The group of persons organized within NLM with responsibility to deliver a specific **NLM Offering**.
NLM Strategic Plan 2017	NLM planning document outlining the organization's vision, goals, objectives, and initiatives for the period 2017-2027.
NLM Strategic Plan 2017 Goal	The identifier and descriptive name (*e.g.*, Goal 1 - Accelerate discovery and advance health through data-driven research) of one of the three strategic goals of the **NLM Strategic Plan 2017-2027**. The Goal Name is listed in the ESM Software Suite.
NLM Strategic Plan 2017 Objective	The identifier and descriptive name (*e.g.*, 1.1 - Connect the resources of a digital research enterprise) of one of the 12 objectives under one of the three goals of the **NLM Strategic Plan 2017-2027**. The Objective Name is listed in the ESM Software Suite.
NLM Strategic Plan 2017 Initiative	The identifier and descriptive name (*e.g.*, 1.1a - Assessment of MeSH and Auto-Indexing) of an activity which is being conducted to implement the **NLM Strategic Plan 2017-2027**. The Initiative Name is listed in the ESM Software Suite.
NLM Strategic Project	The name of an activity that is being conducted to implement the NLM Strategic Plan 2017-2027. The Strategic Project name is **not** listed in the ESM Software Suite.
Primary Legislative Authorization/Mandate	A command or authorization for NLM to act in a particular way, such as to deliver certain **Offerings** (*i.e.*, products and services).
	The primary source of NLM's mandate or requirement to provide a specific **Offering**.
	Authorization by Federal Statute is legislation that permits a Federal agency to engage in an activity (*e.g.*, establish an organizational unit and provide a program or service) but does not necessarily provide information on how the agency is to implement the authority.

Primary Legislative Authorization/Mandate Type	**Active Interagency Agreement**: in addition to the regulations affecting NLM/NIH directly, other regulations may affect NLM indirectly when NLM partners with other agencies or collaborators via Interagency Agreement (IAA), Memorandum of Understanding (MOU), or informal collaboration agreement
	Executive Order, Memorandum, or Departmental (or Agency/NLM) Policy, Plan, or Guidance: published by the White House, a Federal agency (*e.g.*, NIH), or department (*e.g.*, HHS) -- could express "expectations" or actually mandate "requirements" from Federal statutes, provide detailed information on the implementation of policy, and could either address direct agency action or "customer" (*e.g.*
	A **Mandate by Federal Statute** is legislation that requires a Federal agency to engage in an activity.
Mandate Reference	The primary reference citation for the authorizing source legislation, policy, or regulation obligating NLM to provide resources and support for an **Offering** or group of **Offerings**.
Resource	A productive factor (*i.e.*, input) required to deliver an **NLM Offering** to its **Customers**.
Resource Name	Short name for the **Resource** that contributes to the delivery of an
Resource Type	The kind of **Resource** that contributes to the delivery of an **Offering**.
	Business: Person or people who perform manual processes that are required to deliver an Offering. Business Resources are often used in combination with **Technical** and **Data Resources** and either indirectly or directly support **Offerings**. Examples include management, outreach, training, customer service, and marketing. In addition, **Business Resources** also includes research that results in new approaches or scientific methods. However, **Business Resources** exclude research that results in a data asset. Other exclusions are software, hardware, or technical components, and development or curation activities to produce data assets. Business activities that build/update technologies fall under the **Technical Resource**; business activities that contribute
	Data: The data asset (*i.e.*, data set) and the person or people who produce, maintain, curate, and/or divest of data assets. **Offerings** often leverage **Data Resources**, and a **Data Resource** may also be provided as an **Offering**. Processes included within **Data Resource** include production, curation, quality assurance, and content development.
	External: A critical input to an **NLM Offering** that is obtained from a provider(s) external to NLM without cost to NLM. Without this contribution, offering delivery would be significantly impacted. **External Resources** are generated by other agencies (e.g., NIH, FDA) or institutions (INSDC) and then used to deliver an **NLM Offering**. External organizations such as contractors are NOT considered external resources; contractors are usually contracted to perform activities supporting business, data, or technical resources.
	Technical: A set of tangible assets supporting the technology needed to deliver an **Offering**. **Technical Resources** include mobile/web/desktop (developed by NLM teams)/cloud/data applications. For costing purposes, **Technical Resources** are supported by the combination of processes and functions of software, hardware, networks, telecommunications and electronics as well as facilities and equipment. Underpinning cost variables include: software development, integration and maintenance; hardware, networking and software procurement, integration, management and maintenance;
	Designation of the span of support associated with the **Resource**.

Resource Scope	**NLM-wide:** Indicates that the resource is available to and used across the enterprise (*i.e.*, multiple Divisions and Offices).
	Division-Specific: Indicates that the resource is available to, managed by, and used only by one Division for one or more Offerings.
	Offering-Specific: Indicates that the resource is developed for use by only one Offering and managed by the Division that owns the Offering.
	A value of **N/A** is applicable only for external resources.

Offerings that can be associated with 2017 Strategic Initiatives

Click on field name to see the definition.
Mark an "X" ONLY beside the Initiative names that your offering is aligned to.
Your offerings will be automatically aligned to Goal and Objective which the selected Initiative is aligned to.
Goals/Objectives listed here are for Initiatives grouping only.
You may not mark an "X" beside the Goal or Objective names.

	Offerings				
	NIH MedlinePlus Magazine	Digital Platforms	Public Inquiry/Promotion/Outreach	NLM Strategic Unified Communications	NIH FOIA Services
1.1a - Assessment of MeSH and Auto-Indexing					
1.1b - MEDLINE 2022					
1.1c - NLM Portfolio Assessment by MITRE					
1.1d - DATaset Metadata Model (DATMM) Initiative					
1.1e - CDE Repository Study					
1.1f - Link articles to associated data sets					
Objective 1.2 - Advance research and development in biomedical informatics and data science					
1.2a - Blue Ribbon Panel Review of NLM Intramural Research Program					
1.2b - NLM-NSF MOU Innovative Mathematical, Statistical, and Computational Approaches to Biomedical Data Science					
1.2c - FOA on at-scale curation approaches					
1.2d - Data Science & Open Science Workshop					
1.2e - Expand funding for extramural research to support new biomedical data-science initiatives (RPG and SBIR)					
1.2f - Expand collaboration with other ICs and agencies on data science oriented FOAs					
1.2g - Expand funding for intramural research					
1.2h - Hire NLM-wide scientific director					
1.2i - Hire more intramural investigators					
1.2l - Persistent unique IDs w/in NLM systems 1.2l Persistent unique IDs w/in NLM systems					
1.2m - BMIC criteria for data repositories					
1.2n - OSTP criteria for data repositories OSTP data management plan guidance					
Objective 1.3 - Foster open science policies and practices					
Objective 1.4 - Create a sustainable, institutional, physical, and computational infrastructure					
1.4a - TOXNet platform migration					
1.4b1 - IT Assessment - Team 1					
1.4b2 - IT Assessment - Team 2					
1.4b3 - IT Assessment - Team 3					
1.4b4 - IT Assessment - Team 4					
1.4b5 - IT Assessment - Team 5					
1.4f - Assessment of Trans-NLM Central Functions					
1.4g - Project Management for Implementation Initiative					
1.4h - Workspace Initiative-Redesign First Floor of Building 38					
1.4i - NLM Strategic Plan Communication (internal)		X	X	X	
1.4j - Data Center Reliability Project					
1.4k - NAS Study on Forecasting Costs of Data Preservation and Management					
1.4l - Migrate high availability resources to the cloud					
Goal 2 - Reach more people in more ways through enhanced dissemination and engagement pathways					
Objective 2.1 - Know NLM users and engage with persistence					
2.1a - Outreach planning			X		
2.1b - Assessment of Tools used for NLM Resource Evaluation			X		
2.1c - Assessment of Comparative Web Metrics		X			
2.1d - User Experience / User Development Initiative					
2.1e - External Communications Plans & Information Resources			X	X	
2.1f - Informatics Professionals Outreach, Training and Development			X		
Objective 2.2 - Foster distinctiveness of NLM as a reliable, trustable source of health information and biomedical data					
2.2a - Branding of NLM				X	
Objective 2.3 - Support research in biomedical and health information access methods and information dissemination strategies					
2.3a - Expand support for research grants that address user needs through the Personal Health Libraries FOA					
2.3b - Increase support for G08 Resource Grants					
2.3c - Increase support for G08 resource grants by expanding funding to one FOA per year					
2.3d - Support scholarly works G13 grants relating to interests of primary NLM audiences					
Objective 2.4 - Enhance information delivery					
2.4a - Support NN/LM activities to enhance understanding of data science and advanced data management					
2.4b - Customer Experience IT Assessment					
Goal 3 - Build a workforce for data-driven research and health					
Objective 3.1 - Expand and enhance research training for biomedical informatics and data science					
3.1a - Data Science Core Skills Analysis					
3.1b - Expand extramural training grant support for predoctoral biomedical data science (Ts)					
3.1c - Increase funding for postdoctoral fellowships in data science for mid-career researchers (Fs)					
3.1d - Increase funding for career transition awards in biomedical data science (Ks)					
Objective 3.2 - Assure data science and open science proficiency					
3.2a - Report on State of Data Science Training					
3.2b1 - Reproducibility for Intramural Scientists Workshop					
3.2b2 - Second Reproducibility for Intramural Scientists Workshop					
3.2c - Data Science for Librarian Workforce Workshop					
3.2d - Assessment of extramural staff data science training needs					
3.2e - Support partnerships to share NLM curriculum materials in biomedical data science with other NIH training					
3.2f - NLM Data science assessment/training					
Objective 3.3 - Increase workforce diversity					
3.3a - Increase support for training partnerships with MSIs					
3.3b - Increase support for partnerships with I-schools					
Objective 3.4 - Engage the next generation and promote data literacy					
3.4b - Expand support for summer research training at NLM training programs for high school and undergraduate					

Strategic Projects that can be associated with Offerings

Click on field name to see the definition.
Enter Project Name and Description. Mark an "X" under the Offering name to indicate the association.
You can leave this sheet blank if you do not have Strategic Projects.

	Associated Offerings				
	NIH MedlinePlus Magazine	Digital Platforms	Public Inquiry/Promotion/Outreach	NLM Strategic Unified Communications	NIH FOIA Services
		X	X	X	
strengthen engagement with stakeholders.		X	X	X	

Strategic Projects that can be associated with 2017 Strategic Goals/Objective

Click on field name to see the definition.
The Strategic Project Name and Description will be automatically populated from the Strategic Projects tab.
Mark an "X" beside the Projects that are aligned to the corresponding goal and objectives. Please see the example.
It is preferable to map a Project to Objectives. If a Project cannot map to an Objective, map to a Goal.
A Strategic Project can align with multiple Objectives.

Strategic Project Name	Description	NLM Strategic Plan 2017 Goals/Objectives															
		1 - Accelerate discovery and	1.1 - Connect the	1.2 - Advance	1.3 - Foster open science	1.4 - Create a sustainable,	**2 - Reach more people in more**	2.1 - Know NLM users	2.2 - Foster distinctiveness of	2.3 - Support research in	2.4 - Enhance	**3 - Build a workforce**	3.1 - Expand and enhance	3.2 - Assure data science	3.3 - Increase	3.4 - Engage the next generation
				X	X												
NLM strategic communications plan	Build a stronger, more consistent central identity to create or strengthen							X X	X X	X X	X X

NLM HSRI Resources

Name	Description	Alignment with Statute	Alignment with NLM Strategic Plan Goals	Provisional outcome: Retain, Modify Eliminate	Proposed follow-up or additional activity
SPECIALIZED RESOURCES -- NICHSR					
Assistant Director, Health Services Research Information		ALL	1,2,3	Retain	
NICHSR – office		ALL	1,2,3	Retain	Establish BoR working group to provide review and input into metrics and direction of external collaborations
HSRProj		Collect Store Disseminate	1,2	Review and redesign	Assess alignment of HSR community information needs and NLM priorities If aligned, MODERNIZE (consistent with ClinicalTrials.gov, RePORTER redesigns) Consider more GLOBAL scope; Consider as anchor for specialized HSRI offerings
HSRProj Research Gap Student Competition		Analyze, Disseminate	2,3	Retain	Expand – means to strengthen relationship with graduate education infrastructure and students and address common competencies
HSRR		Collect, Store, Retrieve, Disseminate	1,2	Retain/Modify	Hold pending discussion of HHS resources for identifying datasets for HHS sourced data; potential source for CDE Repository Assessments
HSRIC – Portal		Collect, Disseminate	1,2	Eliminate	Identify most used content and potentially include in revamped HSRProj site, or other location TBD
PHPartners – collaboration		Analyze	2,3	Eliminate	Disband – BUT NLM join/support larger, more active Council on Linkages between Academia and Public Health Practice

Name	Description	Alignment with Statute	Alignment with NLM Strategic Plan Goals	Provisional outcome: Retain, Modify Eliminate	Proposed follow-up or additional activity
PHPartners.org Portal		Collect, Disseminate	1,2	Eliminate	Identify most used content and integrate in revamped evidence-based practice function in HSRProj, or other location (TBD)
NICHSR_OneSearch		Retrieve	1	Eliminate	With elimination of portals and consolidation of HSRProj/HSRR, this is unnecessary
Tutorials/Webinars • Finding and Using Health Statistics • Health Economics • HSR (hiatus) • Public Health Data and Statistics (hiatus) • Quality Improvement (QI) Quick Guide (PHF) • NNLM-managed tutorials re information resources for PH and HSR, CDEs, ToxNet Webinars • Back to School • NNLM webinars		Disseminate Analyze	1,3	Retain, potentially shifting to OET	Work with OET Convene working group(s) to assure that presentation/branding/content quality is consistent across NLM. Identify standard marketing channels. Establish review cycle.
E-text: HTA101		Disseminate HTA	2,3	Retain, move to Bookshelf; look for more, similar texts	Work with Health Econ Community at NIH to assure relevance to their investigators/applied research
Specialized selection,		Collect	1,2	Retain	Grey Lit – strategy still TBD

Name	Description	Alignment with Statute	Alignment with NLM Strategic Plan Goals	Provisional outcome: Retain, Modify Eliminate	Proposed follow-up or additional activity
cataloguing – Catalog (ECRI)		Store			
Specialized selection -- Digital Collection (ECRI)		Collect Store	1,2	Retain	Grey Lit – strategy still TBD
Specialized selection -- historical collection • Oral Histories, interviews • Collected papers • Archive-It studies (Medicare/Medicaid at 50; Health Reform)		Collect Store	1,3	Modify	Need 30-year history of HSRI at NLM (2020) Revise/reissue 'what is HSR' video and tutorial in collaboration with HSRI in NIH and outside Review/coordinate preservation strategies with external partner organizations
Healthy People 2020 Structured Evidence Queries		Retrieve Analyze	1	TBD	Cross NLM working group to examine when/how structure queries valued
HSR general and Topic specific search queries; HSRR special queries		Retrieve Analyze	1	TBD	Group already established
Exhibits/Booth Presentations		Dissemination	2,3	Modify – booth/exhibit-OCPL with OET	Establish group/process to develop alternative of assure high quality representation at exhibits
Publications and Presentations at Panels at HSRI- relevant Professional meetings		Analysis Dissemination	2	Retain	Provide HSRI staff time to develop relevant presentations and panels

Name	Description	Alignment with Statute	Alignment with NLM Strategic Plan Goals	Provisional outcome: Retain, Modify Eliminate	Proposed follow-up or additional activity
General Activities (Related to Collection)					
PubMed – articles, journals and data		Collect Store Retrieve	1,2	Retain	Better align and integrate PubMed and Catalog collections from searcher perspective Actively incorporate HSR and PH (eg epi) communities in discussion of data repository structures and supplementary materials (coordinate with HHS Data Council)
Medline subset -- journals		Collect Store Retrieve	1,2	Retain	Complete review of recently accepted, rejected HSRI journals
PMC – articles and journals		Collect Store Retrieve	1,2	Retain	Review HSR emerging topics in non-Medline journals Actively Incorporate HSR and PH (eg epi) communities in discussion of data repository structures (coordinate with HHS Data Council)
Bookshelf (NCBI) • HSTAT-- Specialized selection • Guidelines, NASEM reports, Effectiveness Reviews (domestic and international)		Collect Store Retrieve Guideline Technology Assessments	1,2	MODIFY – to enhance computability of content	Investigate how to deploy Bookshelf for collection, retrieval of computable algorithms submitted as part of 'official' guidelines (working group, pilot project): NLM would hold, retrieve/deliver and potentially provide QA for algorithms downloaded for external use (Work with AHRQ stakeholder community re nature and this use of resource)
NLM Catalog – HSR grey		Collect	1,2	Retain	

Name	Description	Alignment with Statute	Alignment with NLM Strategic Plan Goals	Provisional outcome: Retain, Modify Eliminate	Proposed follow-up or additional activity
literature, books		Store Retrieve			
MedGen (NCBI)—clinical guidelines list		Collect Disseminate (Guidelines)	1,2	Retain	Consider consolidated portal/access page for all NLM guidelines content per earlier NCBI/NLM memo

General Activities - Other					
ClinicalTrials.gov (eg, registries)		Collect Store Retrieve	1,2	Modify	Integration with NIH CDE Repository for inclusion of variable; Consider expression of cohorts and standard measures (ala RoPR)
MeSH (targeted)		Collect Store	1,2	Retain	Work with HSR/PH communities to assure continuing review and refinement
Terminology– esp SDOH terms; Newborn Screening; opioids; Zika; support of patient-centered outcomes research		Collect Retrieve Disseminate Analyze	1,2		Without disturbing working relationships, use to identify metrics, vision statement for external project- oriented activities of mutual benefit Establish BoR working group to provide review and input into metrics and direction of external applied collaborations
Terminology Services: VSAC, NIH CDE Repository, PCORTF projects, MDEpinet		Collect Retrieve Analyze	1,2	Retain	Without disturbing working relationships, use to identify metrics, vision statement for external project- oriented activities of mutual benefit

collaborations					Establish BoR/BSC working group to provide review and input into metrics and direction of external applied collaborations
AHCJ Fellowship program		Disseminate	2,3	Retain	OCPL
[Data Science training competencies and resources]		Disseminate Analyze	2,3	EVOLVING	TBD
EP- • HSR related NOSIs, projects • NNLM including NPHCO • Bioinformatics training program		Disseminate Analyze	1,2,3	Modify	TBD -- increase transparency, recognition of HSRI roles, opportunities for collaboration
IM HSRI agenda -LHC, NCBI		Analyze	2,3	Evolve	Connect fellows across ICs with interest in HSR/PH datasets, topics?
LHC intramural datasets (eg NHANES (annotated); MIMIC II)		Analyze	2,3	Evolve	TBD
Working groups and representations, both internal and external					TBD

Other Public Health Information Access Activities

Disaster Lit		Collect	1,2	Eliminate, see	Grey Lit – but also portal. Strategy TBD

		Disseminate		above	
Lib guides re PH Topics		Collect Disseminate	1,2	Eliminate	See evidence queries, above.
ToxNet		NA	1,2	Modify- transfer	OBE
CHEMM/REMM/WISER		Disseminate Analyze	1,2,3	Modify- identify most valued unique products	Consider move to Bookshelf --link to guidelines and IM efforts re images Investigate potential for content to serve as floor for external innovation/delivery ala PubMed relationship to Ovid - TBD Establish BoR/BSC working group to provide review and input into metrics and direction of external collaborations
AIDS Research Demonstrations		Collect Disseminate	1,2		OET -- assure guidelines included in NLM corpus
Foodborne Pathogen Project/Dataset (NCBI)		Health Technology	1, 2	Retain	Without disturbing working relationship, use to identify metrics, vision statement for external project- oriented activities of mutual benefit Establish BoR/BSC working group to provide review and input into metrics and direction of external collaborations

Next Steps

Inventory, Initial Assessments

Review of principles:

General resources – generally fine but outside input should be sought for relevance

Specialized resources – pare to unique, sustainable, valuable to both users and NLM

PH Information Access – OET

Collaborations/problem solving – part of evolving intramural agenda

Priority areas/decisions for FY2020

Complete assessment of EP, NLM-external collaborations and activities

Assessment of HSR Community Information Scope and Challenges

Scoping, bibliometric review of HSRI (journals, practitioners) (with NIH Library)

Scoping review of HSRI access and utilization literature (including translation/dissemination in health setting (Job Jar)

Structured Interviews with NIH and external stakeholders, participants

Assess integration of Data Science and Informatic training among HSR/HP/PH doctoral level programs as potential expansion of T-15 program

Alignment/Explicit Coordination of HSRI review with existing NLM review efforts and workgroups

Common evaluation metrics

Enhanced definition of user communities

Evaluation of use canned search strategies

ClinicalTrials.gov/RePORTER modernization

Coordination/Consultation with related non-NLM efforts

AHRQ – ACTS

RWJF/NAM/Academyhealth reenvisioning

HealthyPeople 2030

OBSSR review

-

Training review – integration of doctoral level training (and below) -interdiscipliary use of t-15 for pre and post docs

Jim Ostell – related/distance reviews for examining author clusters.

Research/EP – what are we funding when we joint fund projects in obssr

Variability of scoring for behavior,social science and economics projects

Redesign of HSRProj platform

Subject: TOXNET page messaging

Hi, Grace,

As you know, many of the TOXNET offerings formerly supported in SIS will be migrated to other NLM resources or sunsetted by December of this year. We are currently

working on placing informational banners on many of the sites' pages to alert users of this timeline.

Although you approved related sunsetting documents in July (https://sunsetting.nlm.nih.gov/request_details/261/) we want to remind you that we will be using the following wording for our alerts:

For TOXNET home, HSDB, TOXLINE, LactMed, DART, TRI, IRIS, ITER, CTD, CCRIS, CPDB, GENE-TOX:

"On December,16, 2019, National Library of Medicine (NLM) TOXNET information will be migrated to PubChem, PubMed, and Bookshelf. Please see the TOXNET Transition page for more information. If you have questions, please contact NLM Customer Support at https://support.nlm.nih.gov/"

For ChemIDplus, HazMap, Household Products Database, LiverTox, AltBib and several others *not immediately* affected:

"National Library of Medicine (NLM) TOXNET information is being migrated to PubChem, PubMed, and Bookshelf. Please see the TOXNET Transition page for more information. If you have questions, please contact NLM Customer Support at https://support.nlm.nih.gov/"

We hope to place this information on relevant pages early next week.

Please let us know if you have any comments or concerns.

Subject: Agenda for Monday's meeting

Hi everyone,

For Monday's meeting we have two agenda items

- Review the draft message on SIS products (see attached) for Joyce and Wei to send out jointly to LO and OCCS staff

- Check in on SIS product plans; progress made, open questions, resource or assistance need to move those plans forward

Thank you,

Carolyn Kurowski

Draft language for Joyce to send out regarding the status of SIS products. This draft is based on the discussions during previous meetings and messages from Dr. Brennan and Joyce.

Background language from Dr. Brennan:

"To start, we're taking a good look at all of our public-facing services, from dbGaP to PubMed to MedlinePlus, from TOXNET to PubChem to ClinicalTrials.gov. We want to be sure the user experience for each of these services is the best it can possibly be. We also want to ensure the infrastructure is robust and sustainable, and that we haven't ended up with an awkward patchwork on the back end through a series of well-intentioned but disparate fixes and user-driven improvements. We need to launch the next decade on solid technological footing." Dr. Brennan, Blog post. *Moving Forward—Together (July 2018).*

One NLM emphasizes the integration of all our valuable divisions and services under a single mantle, and acknowledges the interdependency and engagement across our programs. Dr. Brennan, Blog Post. *One NLM (January 2017).*

DRAFT MESSAGE

As we go through the process of reviewing and evaluating the products and services formerly offered by SIS, we recognize that if we are going to achieve our vision of a robust, sustainable portfolio of aligned resources we are going to need to make difficult decisions about which resources we keep and which resources we transition to other organizations or sunset altogether. Asa result, we wanted to provide more information about how we are making our decisions and how we expect things to proceed. Our decisions are being guided by a programmatic approach that considers which product areas most directly support the NLM Strategic Plan and represent unique offerings from NLM. We are clear that NLM is committed to supporting key offerings in chemical, toxicology and environmental health, but we are also looking for opportunities to streamline or consolidate resources where appropriate. We have also determined that NLM will focus its Disaster-related products on published journal and gray-literature and products that provide chemical and toxicology-related information. Across all of our offering, we will look for opportunities to integrate products into more currently support technology; for example, some of the ToxNet resources will be included in PubMed, BookShelf and PubChem. Stand-alone offerings and offerings without a strong infrastructure will need to be sunset. Our leaders will be working with teams that include those of you who have worked to make these products valuable and successful, OCCS staff members who understand and can help guide us to the best technology decisions, and others who can help make appropriate plans for all of our resources over the *next 18 months*. We understand this may be challenging, but we also believe that these efforts will help us build a strong aligned and integrated platform that can reach that future vision Dr. Brennan laid out for all of us close to two years ago.

Subject: RE: Steering Group Meeting notes 9/16/2019

Hi everyone,

Notes from our meeting this morning with additional information requested during the meeting.

General

1. Check in on SIS product plans
    - **Guidance from Jerry;** as we move forward with our plans for either sunsetting or transition products we want to be good partners to our Federal Government partners (communicate plans, provide time to transition, identify alternative sources, extend support if possible/appropriate)
    - Use Customer Service resources as much as possible to address external questions
    - **OCPL Reviews;** Please send messages to OCPL mailbox for review prior to posting or sending out. OCPL mailbox is NLMCommunications@nlm.nih.gov

    - **LO Budget Request**
        - LO FY20 Budget information due on 9/20
        - **Debbie will schedule a meeting** to 1) confirm which groups are responsible for which products in the budget submission, 2) discuss budget requirements for SIS products and planned travel. Attendees: Debbie, Dave, David, Jeanne, Wei, Stacey, Amanda.

    - **Dietary Supplements Labels Database**
    - Jeanne working with NIH group (DKIPSE(?)) and has a meeting this week with this group. They had previously been told that they have until May 2020 to find an alternative, but this in contrary to the timeline NLM set to bring down the servers. (USDA provided 50K per year in the past) (Upcoming group may be planning to discuss additions to database). They have gotten an estimate to run the database (they currently support the content) – will transition be ready by May 2020
        - **Jeanne will schedule a meeting** Rich Balen(?) (Project Officer) to work through a high level transition plan; Joyce will come to the first meeting, then Jeanne will coordinate the transition
        - **Wei will assess implications** of maintaining the system until May but NLM does but does not plan to make enhancements or changes to the current system.

    - **Haz-Map**
    - Based on feedback from the Department of Labor, senior management has asked if Haz-Map could be kept up past December. NLM no longer has a current license, taking down

other related areas, and keeping the site up beyond December would create issues for OCCS in terms of resources and costs.
    - David will draft a message for Joyce to send to DoL person making the request to extend the site, explaining that NLM will not be able to extend access.
    - Announcements should include guidance; Sunset team has a short article about the all of the ToxNet changes and are then creating a separate article on each resource. Cheryl White – working on the website language and prepared FAQs, call customer service, standard messages, and connects with answers. **Jeanne will connect the Sunset group with Kate in OET to connect with NNLM resources** to help explain the changes and help users find other resources. The NNLM engages with the customers so they can help develop a list of 5 resources where people can go to get the same or similar information.
        - Sunset Team drafting the messages
        - OET/NNLM researching a list of 5 resources partners can use as an alternative
        - Please include a review by OCPL NLMCommunications@nlm.nih.go

2. Review the draft message on SIS products (see attached) for Joyce and Wei to send out jointly to LO and OCCS staff
    - Please send any additional comments to Carolyn by COB Monday
    - Carolyn will circulate a revised Draft Tuesday for final review and comment

3. Messaging for NNLM partners about sunsetting projects or transitioning projects
    - This topic will be included on next Monday's agenda

Hi everyone,

As we continue to move the SIS Product integration work forward, we would like to hold a few additional group meetings to determine if the current plans are moving forward effectively where we may need decisions or additional coordination. Agenda's and meeting materials will be sent out by Carolyn and the team in advance of the Monday meeting so you have time to consider and respond to any questions or topics that will be discussed.

Thank you,

Joyce

Subject: FW: TOXNET page messaging

Hi, Grace,

I should be able to coordinate changes to the SIS home page.

The Sunsetting Team met this morning and want to suggest the following changes to that messaging:

"As the National Library of Medicine (NLM) implements its Strategic Plan, 2017-2027, it is making organizational changes that include the closure of the Specialized Information Services (SIS) division, effective June 30, 2019, and the transition of some SIS programs into other parts of NLM**, including the Toxicology Data Network (TOXNET) (link to the TB article about this).** This integration serves to not only improve discoverability of and access to SIS resources by NLM's broad set of users, but also enables NLM to leverage its talents and resources to improve overall efficiency and effectiveness.

Over the next few months, some SIS resources and programs will transition to other

parts of NLM, be integrated into other NLM resources, made accessible on partner sites, or discontinued. **TOXNET is moving; most of its content will continue to be collected and reviewed; selected information is accessible through PubChem, PubMed, and Bookshelf. (Link to https://www.nlm.nih.gov/toxnet/index.html and later to the final TOXNET Transition Page).**

Questions about this transition and individual resources may be directed to custserv@nlm.nih.gov or 1-888-346-3656."

We will post the above once https://www.nlm.nih.gov/toxnet/index.html is finalized (expected to be later this week), at which time we will also post messaging on various TOXNET home pages. ("On December,16, 2019, National Library of Medicine (NLM) TOXNET information will be migrated to PubChem, PubMed, and Bookshelf. Please see the TOXNET Transition page for more information. If you have questions, please contact NLM Customer Support at https://support.nlm.nih.gov/")

Let me know if you have any questions.

Colette

Subject: TOXNET page messaging

Hi, Grace,

As you know, many of the TOXNET offerings formerly supported in SIS will be migrated to other NLM resources or sunsetted by December of this year. We are currently working on placing informational banners on many of the sites' pages to alert users of this timeline.

Although you approved related sunsetting documents in July (https://sunsetting.nlm.nih.gov/request_details/261/) we want to remind you that we will be using the following wording for our alerts:

For TOXNET home, HSDB, TOXLINE, LactMed, DART, TRI, IRIS, ITER, CTD, CCRIS, CPDB, GENE-TOX:

"On December,16, 2019, National Library of Medicine (NLM) TOXNET information will be migrated to PubChem, PubMed, and Bookshelf. Please see the TOXNET Transition page for more information. If you have questions, please contact NLM Customer Support at https://support.nlm.nih.gov/"

For ChemIDplus, HazMap, Household Products Database, LiverTox, AltBib and several others *not immediately* affected:

"National Library of Medicine (NLM) TOXNET information is being migrated to PubChem, PubMed, and Bookshelf. Please see the TOXNET Transition page for more information. If you have questions, please contact NLM Customer Support at https://support.nlm.nih.gov/"

We hope to place this information on relevant pages early next week.

Please let us know if you have any comments or concerns.

Colette Hochstein, D.M.D., MLS

Subject: RE: TOXNET page messaging

Colette,

Thank you for sharing the plan and language with me. I made the changes directly in the email below, in order to make it more direct and succinct for the user. Can you please incorporate my edits and share the pages in test before they publish? That will allow us to see how they look before the news goes public. One last review always helps.

Regards,

Subject: FW: TOXNET page messaging

Hi, Grace,

I should be able to coordinate changes to the SIS home page.

The Sunsetting Team met this morning and want to suggest the following changes to that messaging:

"As the National Library of Medicine (NLM) implements its Strategic Plan, 2017-2027, it is making organizational changes that included the closure of the Specialized Information Services (SIS) division on June 30, 2019. The transition of some SIS programs into other parts of NLM**, including the Toxicology Data Network (TOXNET) (link to the TB article about this**), serves to not only improve discoverability of and access to SIS resources by NLM's broad set of users, but also enables NLM to leverage its talents and resources to improve overall efficiency and effectiveness.

Over the next few months, some SIS resources and programs will transition to other parts of NLM, be integrated into other NLM resources, made accessible on partner sites, or discontinued. **TOXNET is moving, most of its content will continue to be collected and reviewed; selected information is accessible through PubChem, PubMed, and Bookshelf. (Link to https://www.nlm.nih.gov/toxnet/index.html and later to the final TOXNET Transition Page).**

Questions about this transition and individual resources may be directed to custserv@nlm.nih.gov or 1-888-346-3656."

We will post the above once https://www.nlm.nih.gov/toxnet/index.html is finalized (expected to be later this week), at which time we will also post messaging on various TOXNET home pages. ("On December,16, 2019, National Library of Medicine (NLM) TOXNET information will be migrated to PubChem, PubMed, and Bookshelf. Please see the TOXNET Transition page for more information. If you have questions, please contact NLM Customer Support at https://support.nlm.nih.gov/")

Let me know if you have any questions.

Colette

Subject: Haz-Map Draft

Joyce
Below is a draft message to send to Doug Pennington at DOL about Haz-Map.
David

Dear …

We appreciate your interest in and concern about the Haz-Map database that has been offered by NLM. NLM is reviewing the status the products and services formerly offered by the Division of Specialized Information Services (SIS) . During this summer SIS staff were merged with different areas of NLM; we are now in the process of making hard decisions about streamlining, consolidating, or retiring resources were appropriate. We are focusing on retaining products and services that are unique offerings from NLM, are highly connected to other NLM offerings, or clearly contribute to furthering the NLM Strategic Plan.

Haz-Map is part of the ToxNet suite of databases. Some these databases, such as ToxLine and DART are being moved into PubMed. Others, like LactMed and LiverTox have been moved to the NLM BookShelf. We do understand that Haz-Map as offered by NLM provides you with an independent, third-party source for this information. However there is nothing about the data that is unique to NLM. The data is offered directly by the content originator, www.Haz-Map.com. NLM was not providing any direct additional value to the content.

The license to maintain and update this data ended this July. We are committed to continuing access to the NLM version of Haz-Map through mid-December, allowing user such as yourself time to work with www.Haz-Map.com directly or with another third party for whom this content is better suited. In December, the Haz-Map data and the system providing it is scheduled to be retired. We hope that these remaining 3 months will provide you with enough time to develop an alternative.

Subject: RE: document for Leadership meeting

Here is what was distributed. I should note that I was surprised to hear that the full BoR was so enamored of this – Jane, Erica, and Martin (SP Subgroup) correctly pointed out that these were lacking important information (for example, numerators -or other context - on things like the number of awards, or the number of linked datasets in PMC).

I recommend that for the next iteration, leadership actually develop something more meaningful. As you'll recall, you and I kind of kluged some things together, offered that as a draft for leadership to work with, and then didn't hear a whole lot after that.

So, lots of room for improvement!

Subject: document for Leadership meeting

Troy, Chianti,
Can you please send me a copy of the document that was prepared for the Board of Regents on progress toward implementation of the NLM strategic plan. It should have a listing of activities and metrics. Patti can't access it remotely on her computer, and we'd like to discuss it at Leadership this week.

Thanks
Jerry

Associated initiative	Metric name	Performance	Owner(s)
1.1f Link articles to associated data sets	Number of articles in PubMed linked to data sets	391,193	Jon Ostvold
1.2a Expand funding for extramural research to support new biomedical data science initiatives (BPG and SBIR)		4 New initiatives supporting BDS (NIH Comp and Stat Skill, Personal Health Libraries, SBIR/STTR Pass-through FOA and SBIR/STTR Y&M) 15 awards. 5 NSF-NLM DSM Joint initiative grants (PIDE-NLM DSM initiative grants $1,361,625), 6 NSF Smart Connected Health grants (NSF Smart Connected Health grants $1,686,899 *NOTE- this is an estimate since 3 of the grants have not yet been awarded), 1 Personal Health Libraries grant (PY2019 Personal Health Libraries grants $322,282) and 2 Computational Curation grants (Computational Curation grants $686,642)	Valerie Florance
	Number of new initiatives		
1.2a Expand funding for extramural research to support new biomedical data science initiatives (BPG and SBIR)	Number of RPG grants funded from new initiatives		Valerie Florance
1.2f Expand collaboration with other ICs and agencies on data science oriented FOAs		**NIH Parent FOAs:** 7 (2 RO1s, 1 R21, 1R35/R00, 2 F30/F31, 1 1K99/ST99) **NIH Common Fund:** 5 (NIH Director's awards) **NIA/NLM Specialized FOA/Admin Supp:** 11 (1 R01 Simu Modeling, 1 R15, 1 Institut Admin Supp, 4 NIH WENL, 1 T32, 2 NIH diversity supps and 1 NIH-NIH joint initiative HG?-JAK-19-001)	Valerie Florance
	Number of multi-IC or agency FOAs joined		
1.2f Expand collaboration with other ICs and agencies on data science oriented FOAs	Number of new grants funded from joint FOAs in data science areas	Total of 15 grants funded: 6 NSF-NLM DSM Joint initiative grants, 5 NSF Smart Connected Health grants, 2 Personal Health Libraries grants and 2 Computational Curation grants	Valerie Florance
1.2g Expand funding for intramural research	Intramural research program budget % of total NLM budget	Not sure of %	Jon Ostvold/Mr Ears
1.2g Expand funding for intramural research	Intramural research program budget growth from baseline	Increase of $550K for Xiaoling Jiang	Jon Ostvold/Mr Ears
1.2h Hire NLM-wide scientific director	Lay out timeline and process - Hire by end of CY2019	Search Committee formed, vacancy announced.	Mike Huerta
1.2i Hire more intramural investigators	Number of investigators in NLM IRP – get 3 more by end of CY2019	1 here, 3 in process	Jon Ostvold
1.4f Mitigate high availability resources to the cloud	resources migrated	Not sure.	Jon Ostvold
1.4f Mitigate high availability resources to the cloud	Number of resources in the cloud	PGAP, ELGOT, PHEMI, SRA	Jon Ostvold
2.2c Increase support for GSR resource grants by expanding funding	Number of applications funded		Valerie Florance
2.3d Support scholarly works G13 grants relating to interests of primary NLM audiences		On target. 1 new awards and 1 ongoing award this year thus far totaling $182,720 in NLM IC cost (one new award on biomedical terminologies and their role in EC)	Valerie Florance
	Number of applications funded		
2.4a Support NNLM activities to enhance understanding of data science and advanced data management	Number of NNLM initiatives with data science focus	14 OTI	Joyce Backus
2.4a Support NNLM activities to enhance understanding of data science and advanced data management	Number of participants in data science focused NNLM initiatives	726 participants in FY19	Joyce Backus
2.4b Customer Experience IT Assessment	Establish performance indicators for at least five major NLM public facing information resources	NLM's IT Assessment program developed a volume measures (users, pageviews, sessions, bounce rate) and customer experience measures (net promoter score, overall satisfaction and task accomplishment).	Jeni O'Steen
2.4b Customer Experience IT Assessment	Implement a digital scorecard platform for measuring customer experience	Implemented a digital scorecard prototype using volume and customer experience measures. The scorecard has been implemented for PubMed, MedlinePlus, NLM Main Page, Docmed2.0/4D & DailyMed	Jeni O'Steen
1.4f NPN Tool Transition	Improve the quality and modify the organization of the information content of the NPN Tool by re-considering all attributes	Task Completed. Trans-NLM team (NPATT) reviewed, discussed, refined, re-defined, prioritized and reached consensus on all information elements, use cases, business rules, and internal relationships among them. NPATT plotted next steps and future directions and the FY19 data call - under this revised regime - has been issued.	Mike Huerta
3.1b Expand extramural training grant support for predoctoral biomedical data science (T1s)	Number of predoctoral trainees in NLM-supported programs	On target. 128 predoctoral trainees (9 of which are supports by NIDA)	Valerie Florance
3.1c Increase funding for postdoctoral fellowships in data science for mid-career researchers (F4)	Number of postdoctoral trainees in NLM-supported fellowships	On target: 70 postdoctoral trainees (5 of which are supported by NEI/4S). Launch of NLM-I-T program is still in development.	Valerie Florance
3.1d Increase funding for career transition awards in biomedical data science (K4	Number of data science focused K awards	During FY2019 NLM was not able to increase funding for K awards due to the sunsetting of NLM's participation the NIH K01 training only the K99 programs. 4 awards have been made during FY2019 and 3 are DS-focused. NLM's plan continues to be to increase funding for K awards.	Valerie Florance
3.2a Support partnerships to share NIH curriculum materials in biomedical data science with other NIH training programs	Number of partnerships supported	5 NDM Training sites supported (Utah, UHSU Yale, UCSD and Indiana)	Valerie Florance
3.2a Increase support for training partnerships with MSIs	Evidence of biomedical data science in curricula of MSI partners	3 MSI schools plan supports DS curricula in their application (Colorado, Pittsburgh and UNE-CRI)	Valerie Florance
3.3a Increase support for training partnerships with schools	Number of projects supported	2 Schools schools plan supports DS curricula in their application (U Washington and U Buffalo)	Valerie Florance
3.3a Increase support for partnerships with schools	Evidence of biomedical data science in curricula of school		Valerie Florance
3.3b Increase support for partnerships with schools	Number of projects supported	2 Schools schools plan supports DS curricula in their application (U Washington and U Buffalo)	Valerie Florance
3.3f NLM Data Science Assessment/Training	Number of people who took survey	Pre-survey = 758 Post-survey = 507	Joyce Backus
	New research activities in data science (1 project) Hajesh		Clem
	Recreation of '18 and '19a		Barbec, diane
	FHIR and tool building to advance interoperability		Clem
	Data science training (2?)	28 staff completed	Joyce
	Established CBT	This should be Joyce - Todd and I recommended CBT	Mike, todd
	Reorganization		Todd
	moved 50% of resources to sustainable platforms	Yes? Tiewei	Joyce, jim
	cancelled resources	Yes?	Jerry, Joyce
	Hackathons, reproducibility workshops	2-3 Codeathons, including 2 SUH-wide workshops on r	Mike
		NIH Labs a small group to propose a management structure for an ongoing "innovation investment" program that would allow NIH staff to apply for time/support for great ideas that could lead to new products and services or to new research areas. **Target date for draft document is October 1.**	
	NIAM labs		Valerie
	LM(1)		Clem
	Merged IBIC		Jerry
	Aligned intramural training program		Jerry
	Data Center redundant power and cooling		Jon/Todd

Subject: Hearing Prep for OLPA - NLM Questions DRAFT .docx
Attachments: Hearing Prep for OLPA - NLM Questions DRAFT .docx

Hi Jerry,

Please see the attached for our discussion at 11:30 AM.

Thanks.

Best,
Dina

September 25 House Labor-HHS Subcommittee Hearing Preparation
Proposed Questions and Top Priorities for the National Library of Medicine

Three Questions for NLM

1. **What is the mission of the National Library of Medicine and how does it serve the Nation?**
    - NLM has been a center of information innovation since its founding in 1836
    - Science advances through communication and knowledge; this is consistent with the NLM mission. NLM:
        - Is a leader in data science and open science research
        - Acquires, analyzes and stores data for preservation and discovery
        - Delivers digitized biomedical literature to support reliability, reproducibility, transparency, and access to research data and results
        - Ensures a data savvy and multi-disciplinary workforce
        - Helps shape the NIH and national agenda related to artificial intelligence (AI), machine learning, health data standards, interoperability, open science, and data science.
    - NLM's organization is tightly integrated through its service and research: 80% service, 20% research. NLM's organization differs from other NIH ICs – extramural program is smaller and intramural program is bigger
    - NLM conducts research that makes its resources, tools, and services more useful and usable
    - NLM hosts and maintains important public facing resources used by researchers, health professionals, and the public from all over the world (e.g., most heavily used resources include MedlinePlus, PubMed, PMC, dbGaP, ClinicalTrials.gov, Genetics Home Reference, ToxNet)
        - Each day, NLM websites are used by more than 6 million people, who deposit about 15 terabytes of data and download about 115 terabytes of data and information.
        - Annually, NLM websites receive and process more than 6 billion human interactions and 8 billion computer-to-computer interactions

2. **What type of research does NLM do, and what is most exciting to you now?**
    - As digital information systems become the foundation of biomedical research data and health information, NLM is poised to become the Library of the future, by pioneering ways to make new types of biomedical information more accessible and build tools for better management of personal health and big data.
    - Making data available to the world.
    - 9/24 announcement
    - Public access to data and publications – SRA, PMC
    - Green Button Project
    - CRISPR (Koonin)
    - PHR for people emancipating from foster care
    - The new PubMed

3. **What is NLM doing to reduce health disparities?**

- Funding research to reduce bias in big data: development of synthetic or hybrid data set which conforms to FAIR open data principles, and models racially and ethnically diverse communities in order to test methods and metrics and address possible biases due to under-representation of minorities and women.
- NIH Common Data Elements for Health Disparities: Several NIH Institutes invest in programs to develop common data elements for clinical research in order to enable data harmonization and meta-analyses and enhance data sharing. NLM works to ensure that formal vocabularies used to describe people, health problems, and health care processes are sufficiently robust to encompass the full range of health as experienced across all people, all populations, and all communities. It is essential that there be sufficiently broad and diverse formal terms for a range of racial designations, ethnic characterizations, and sex identity. The work of NLM ensures that the data used to characterize people, their health problems, and the nature and effectiveness of clinical care be true and valid indicators of people, health problems, and care processes so delving into the nature of information is central to ensuring clear and accurate descriptions of real-world experience. While these efforts have typically been discipline- and disease-specific, NLM has developed a repository of all of the NIH CDE sets and is working toward becoming the central access point for NIH CDE tools and data.

Additional "Tough" Questions for NLM (only need two)

1. **What is the process for deciding what journals to include or exclude from MEDLINE?**
    - Description of PubMed, MEDLINE, and PMC
    - To be considered for inclusion and indexing in MEDLINE, publishers submit journals to an NIH-chartered Federal Advisory Committee Act (FACA) advisory committee, the Literature Selection Technical Review Committee (LSTRC)
    - LSTRC is comprised of 14 members, who are outside experts in medicine, biomedical research, scholarly communication, medical librarianship, and related disciplines, plus consultants for domain-specific expertise as needed.
    - LSTRC is chartered to recommend journals for inclusion in MEDLINE following an established set of elements:
        - Scope and coverage (e.g., predominantly on core biomedical subjects);
        - Scientific merit of journal content (validity, importance, originality, contribution to coverage of the field);
        - Quality of editorial work to ensure objectivity, credibility, and quality of its content (e.g., procedures for elements, peer review, corrections);
        - Production quality;
        - Audience (primarily researchers and practitioners); and
        - Type of content (publications that are journals)
    - MEDLINE is highly selective. LSTRC reviews approximately 150 journals at each of its three meetings per year. This number includes first-time submissions, as well as some journals already included in MEDLINE. Only about 15% of journals reviewed are recommended for inclusion in MEDLINE.
    - Journals that are not selected for MEDLINE may apply for reconsideration after two years. Journals selected for MEDLINE are expected continue to meet NLM's established standards and can be subject to re-review, which can result in losing their indexing status.

2. **What is NLM's role in clinical trial stewardship and reform?**
    - Launched, in 2000, NLM developed and maintains ClinicalTrials.gov, a web-based registry and results submission database for federally and privately funded clinical trials testing the effectiveness of FDA-regulated experimental drugs for serious or life-threatening diseases or conditions and NIH-funded clinical trials.
    - ClinicalTrials.gov supports a series of laws and policies implemented in the United States and internationally, and is the world's largest, publicly accessible database of privately and publicly funded clinical studies conducted around the world.
    - CT.gov results reporting proportion of ones actually required compliance levels and what we are doing and what enforcement options are avail
    - Ebola and HIV reporting results accelerated treatment in the field examples – get from Becky

3. **How does NLM balance information access and protecting sensitive date and privacy?**
    - Technology and policy working together
        - Example: Providing controlled access to sensitive data (in dbGaP) and aligning with NIH policies to protect patient privacy
    - Development of Identity & Access Management integration through centralized service, can provide investigator data access approvals in a standard and secure framework across all NIH Institutes, Centers and Offices.
        - Faster software development of new analysis tools and platforms becomes possible through industry standard authorization protocols as user authorization and authentication services become a standard plug-in to new user interfaces.
    - NLM maintains a library code of conduct for accessing information
        - People should have the ability to search without surveillance
        - NLM's role is to ensures its resources are operating optimally, within appropriate laws, regulations, and policies
        - NLM does not expose user search data (e.g., for MEDLINE Plus, PubMed, PMC)

What has NLM been able to accomplish with the recent increases in Appropriations?

- Funding increased over FY2015-2019 have supported data science, more robust extramural research grants programs, NLM's investment in research, outreach, and engagement, as well as strengthening technology infrastructure.
    -
- NLM has supported extramural research programs in reducing bias in big data; research on personal health libraries for consumers and patients; and research on computational approaches to curation.
    - expanded extramural investments (almost triple the number of awards)
    -
- the increased investment has expanded training and training resources for undergraduate, graduate and postgraduate students in biomedical data science, and joint initiatives with the National Science Foundation have brought more computer scientists into biomedical informatics and data science research.
- NNLM partnership with All of Us Research Program on community engagement

- NLM is reaching more people in more ways through enhanced dissemination and engagement pathways. It supports the development and operation of high-value biomedical information services and systems, including for health data standards. To this end, has greatly expanded the quantity and range of high-quality information, tools, and data available to researchers, health professionals, and the public. Additionally, NLM has improved access to timely information about research activities from their initial funding to results, enabling researchers, practitioners, policy makers, and the public to make better informed decisions and improve efficiencies.

1)
2) stabilized and improved security of computer systems
3)expanded data science training
4) supported major reorganization of NLM
5) improved physical plant
6) added new investigators
7) improved technical infrastructure of key products
8) evaluated and re-aligned outreach

NLM's Top 3-5 Priorities (two sentences for each priority)
Overall: To become the library of the future.

- Accelerate discovery and advance health through data-driven research
- Reach more people in more ways through enhanced dissemination and engagement
- Build a workforce for data-driven research and health

September 25 House Labor-HHS Subcommittee Hearing Preparation
Proposed Questions and Top Priorities for the National Library of Medicine

Three Questions for NLM

1. ~~**What is the mission of the National Library of Medicine and h**~~**What are some of the most exciting developments in NLM's information services ~~ow does it serve the Nation~~?**
    - NLM has been a center of information innovation since its founding in 1836
    - Science advances through communication and dissemination of knowledge~~; this is consistent with the NLM mission. NLM~~:
        - [Is a leader in data science and open science research
        - Acquires, analyzes and stores data for preservation and discovery
        - Delivers digitized biomedical literature to support reliability, reproducibility, transparency, and access to research data and results
        - Ensures a data savvy and multi-disciplinary workforce
        - Helps shape the NIH and national agenda related to artificial intelligence (AI), machine learning, health data standards, interoperability, open science, and data science.]???
    - NLM's organization is tightly integrated through its service and research: 80% service, 20% research. NLM's organization differs from other NIH ICs – extramural program is smaller and intramural program is bigger
    - NLM conducts research that makes its resources, tools, and services more useful and usable
    - NLM hosts and maintains important public facing resources used by researchers, health professionals, and the public from all over the world (e.g., most heavily used resources include MedlinePlus, PubMed, PMC, dbGaP, ClinicalTrials.gov, Genetics Home Reference, ToxNet)
        - Each day, NLM websites are used by more than 6 million people, who deposit about 15 terabytes of data and download about 115 terabytes of data and information.
        - Annually, NLM websites receive and process more than 6 billion human interactions and 8 billion computer-to-computer interactions
    - Add some examples of improvements/enhancements/usage – new PubMed, etc.
    - Add support for standards, CDEs, FHIR, etc.

2. **What type of research does NLM do, and what is most exciting to you now?**
    - Included some general budget figures for our intramural and extramural research – and training. General statements about what kinds of research we do.
    - As digital information systems become the foundation of biomedical research data and health information, NLM is poised to become the Library of the future, by pioneering ways to make new types of biomedical information more accessible and build tools for better management of personal health and big data.
    - Making data available to the world.
    - 9/24 announcement
    - Public access to data and publications – SRA, PMC
    - Green Button Project

Comment [SJ([]: Where to place this bullet???

Comment [SJ([]:

Comment [SJ([]: Sound more like services than R

Comment [SJ([]: ?

Comment [SJ([]: This is services, not R

- CRISPR (Koonin)
- PHR for people emancipating from foster care
- The new PubMed
- ??? Unifying management of our intramural research program (CBB + LHC)

3. **~~What~~ How ~~is NLM~~is NLM contributing to ~~doing to reduce~~reducing health disparities?**
   - Funding research to reduce bias in big data: development of synthetic or hybrid data set which conforms to FAIR open data principles, and models racially and ethnically diverse communities in order to test methods and metrics and address possible biases due to under-representation of minorities and women.
   - NIH Common Data Elements for Health Disparities: Several NIH Institutes invest in programs to develop common data elements for clinical research in order to enable data harmonization and meta-analyses and enhance data sharing. NLM works to ensure that formal vocabularies used to describe people, health problems, and health care processes are sufficiently robust to encompass the full range of health as experienced across all people, all populations, and all communities. It is essential that there be sufficiently broad and diverse formal terms for a range of racial designations, ethnic characterizations, and sex identity. The work of NLM ensures that the data used to characterize people, their health problems, and the nature and effectiveness of clinical care be true and valid indicators of people, health problems, and care processes so delving into the nature of information is central to ensuring clear and accurate descriptions of real-world experience. While these efforts have typically been discipline- and disease-specific, NLM has developed a repository of all of the NIH CDE sets and is working toward becoming the central access point for NIH CDE tools and data.

Additional "Tough" Questions for NLM (only need two)

1. **We've heard concerns about NLM procedures for selecting journals for MEDLINE. How does NLM make decisions about ~~hat is the process for deciding~~ what journals to include or exclude from MEDLINE? And how do you respond to the criticisms raised?**
   - Description of PubMed, MEDLINE, and PMC
   - To be considered for inclusion and indexing in MEDLINE, publishers submit journals to an NIH-chartered Federal Advisory Committee Act (FACA) advisory committee, the Literature Selection Technical Review Committee (LSTRC)
   - LSTRC is comprised of 14 members, who are outside experts in medicine, biomedical research, scholarly communication, medical librarianship, and related disciplines, plus consultants for domain-specific expertise as needed.
   - LSTRC is chartered to recommend journals for inclusion in MEDLINE following an established set of elements:
     - Scope and coverage (e.g., predominantly on core biomedical subjects);
     - Scientific merit of journal content (validity, importance, originality, contribution to coverage of the field);
     - Quality of editorial work to ensure objectivity, credibility, and quality of its content (e.g., procedures for elements, peer review, corrections);
     - Production quality;
     - Audience (primarily researchers and practitioners); and
     - Type of content (publications that are journals)

Comment [SJ([]: Reframe around outreach and highlight NNLM in the response. 7000+ members across the country. . .. emphasis on outreach, includes underserved populations. Relates to using NLM products and services. . . Include AllofUs partnership and role of public libraries.

Comment [SJ([]: Should reference this in the R reponse

- MEDLINE is highly selective. LSTRC reviews approximately 150 journals at each of its three meetings per year. This number includes first-time submissions, as well as some journals already included in MEDLINE. Only about 15% of journals reviewed are recommended for inclusion in MEDLINE.
- Journals that are not selected for MEDLINE may apply for reconsideration after two years. Journals selected for MEDLINE are expected continue to meet NLM's established standards and can be subject to re-review, which can result in losing their indexing status.

2. **Why are there questionable trials listed in NLM's ClinicalTrials.gov, such as trials that require payments from participants and are conducted by clinics under investigation by FDA? How do you vet trials listed in ClinicalTrials.gov and protect patients from harmful treatments?**

- ~~**at is NLM's role in clinical trial stewardship and reform?**~~
    - Launched, in 2000, NLM developed and maintains ClinicalTrials.gov, a web-based registry and results submission database for federally and privately funded clinical trials testing the effectiveness of FDA-regulated experimental drugs for serious or life-threatening diseases or conditions and NIH-funded clinical trials.
    - ClinicalTrials.gov supports a series of laws and policies implemented in the United States and internationally, and is the world's largest, publicly accessible database of privately and publicly funded clinical studies conducted around the world.
    - CT.gov results reporting proportion of ones actually required compliance levels and what we are doing and what enforcement options are avail
    - Ebola and HIV reporting results accelerated treatment in the field examples – get from Becky

3. **How does NLM ~~balance information access and~~ protect ~~ing~~ sensitive data ~~e~~ and privacy ~~privacy?~~when making information accessible on the Internet?**
    - Technology and policy working together
        - Example: Providing controlled access to sensitive data (in dbGaP) and aligning with NIH policies to protect patient privacy
    - In general, NLM does not have patient-identificable information in its databases. dbGaP, which has de-identified individual level information and operates under strict NIH data access policies and procedures.
    - Development of Identity & Access Management integration through centralized service, can provide investigator data access approvals in a standard and secure framework across all NIH Institutes, Centers and Offices.
        - Faster software development of new analysis tools and platforms becomes possible through industry standard authorization protocols as user authorization and authentication services become a standard plug-in to new user interfaces.
    - NLM ~~maintains~~ adhere to ~~a~~ common library practice for and government laws/regularions ~~code of conduct~~ for accessing information
        - People ~~should~~ have the ability to search without surveillance; in general we don't track individual usersj of most NLM resources (eg., MedlinePlus, PubMed, PMC, ClinicalTrials.gov)
        - Note – in cases like dbGaP, approved users are available on the web, and we authenticate users to implement access controls
        -

- NLM's role is to ensures its resources are operating optimally, within appropriate laws, regulations, and policies
- NLM does not expose user search data (e.g., for MEDLINE Plus, PubMed, PMC)

What has NLM been able to accomplish with the recent increases in Appropriations?

- Funding increased over FY2015-2019 have supported growing NLM investments in data science, ~~more robust~~expansion of its extramural research grants programs, while maintaining growth in its information services, NLM's investment in research, outreach, and engagement, ~~as well as~~and strengthening ~~technology~~ its technical infrastructure. [Launched more targeted extramural programs, to reducing bias in big data; research on personal health libraries for consumers and patients; and research on computational approaches to curation.]

-
- Expanding ~~NLM has supported extramural~~ research programs
  - Growth in total budget for extramural research (e.g., $10M more in last 2 years alone, add %) - ~~expanded extramural investments (~~almost triple the number of awards)
  - Launched more targeted extramural programs, to ~~in~~ reducing bias in big data; research on personal health libraries for consumers and patients; and research on computational approaches to curation.
  - ~~and~~launched joint initiatives with the National Science Foundation have brought more computer scientists into biomedical informatics and data science research (how many grants awarded so far – 5?).
  -
  - expanded extramural investments (almost triple the number of award~~s)~~
  -
  - ~~the increased investment has~~ expanded university-based training ~~and training resources~~programs in biomed informatics and data science - –ncluding links to I-schools and minority serving institutions.
  - Hired new investigator(s)
- Sustain, enhance, and modernize NLM's most heavily used biomedical information systems, high quality, trusted information – Launch of new PubMed; addition of datasets to PMC; ClinicalTrials.gov, dbGaP. Stats about the growth in content – added x million citations to PubMed. . .
  - ~~for undergraduate, graduate and postgraduate students in biomedical data science,~~ and joint initiatives with the National Science Foundation have brought more computer scientists into biomedical informatics and data science research.
- ~~NNLM partnership with All of Us Research Program on community engagement~~
- NLM is reaching more people in more ways through enhanced dissemination and engagement pathways. It supports the development and operation of high-value biomedical information services and systems, including for health data standards. To this end, has greatly expanded the quantity and range of high-quality information, tools, and data available to researchers, health professionals, and the public. Additionally, NLM has improved access to timely information about research activities from their initial funding to results, enabling researchers, practitioners, policy makers, and the public to make better informed decisions and improve efficiencies.

Comment [SJ([]: Is this from our a

- Strengthened IT and physical infrastructure – making our on site IT systems more robust while exploring/beginning to make more use of cloud-based infrastructure – modernization of platforms. stabilized and improved security of computer systems. Planned renovation of physical space to maintain integrity of physical collection, consolidate public services spaces, house workforce of the future.
- Streamlined organizational and technical infrastructure – consolidated (staff, systems) to improve operational efficiencies and establish more common platforms for our information systems. Improve user experience, discoverabililty of information (while making more cost effective). Freed up resoruces to do all of the above

~~1)~~
~~2) stabilized and improved security of computer systems~~
~~3)expanded data science training~~
~~4) supported major reorganization of NLM~~
~~5) improved physical plant~~
~~6) added new investigators~~
~~7) improved technical infrastructure of key products~~
~~8) evaluated and re-aligned outreach~~

NLM's Top 3-5 Priorities (two sentences for each priority)

Overall: ~~To become the library of the future~~Become a platform for biomedical discovery and data-driven health.

- Accelerate discovery and advance health through data-driven research – Research, Service development
- Reach more people in more ways through enhanced dissemination and engagement – right info, right place and right time; outreach – info available to all who can use, including those who know us and those who don't (yet)
- Build a workforce for data-driven research and health –biomedical informatics to librarians/data managers – increase diversity and inclusion

Joyce
Below is a draft message to send to Doug Pennington at DOL about Haz-Map.
David

Dear …

We appreciate your interest in and concern about the Haz-Map database that has been offered by NLM. NLM is reviewing the status the products and services formerly offered by the Division of Specialized Information Services (SIS) . During this summer SIS staff were merged with different areas of NLM; we are now in the process of making hard decisions about streamlining, consolidating, or retiring resources were appropriate. We are focusing on retaining products and services that are unique offerings from NLM, are highly connected to other NLM offerings, or clearly contribute to furthering the NLM Strategic Plan.

Haz-Map is part of the ToxNet suite of databases. Some these databases, such as ToxLine and DART are being moved into PubMed. Others, like LactMed and LiverTox have been moved to the NLM BookShelf. We do understand that Haz-Map as offered by NLM provides you with an independent, third-party source for this information. However there is nothing about the data that is unique to NLM. The data is offered directly by the content originator, www.Haz-Map.com. NLM was not providing any direct additional value to the content.

The license to maintain and update this data ended this July. We are committed to continuing access to the NLM version of Haz-Map through mid-December, allowing user such as yourself time to work with www.Haz-Map.com directly or with another third party for whom this content is better suited. In December, the Haz-Map data and the system providing it is scheduled to be retired. We hope that these remaining 3 months will provide you with enough time to develop an alternative.

Cc: Hakkinen, Pertti (NIH/NLM) [E] <hakkinenp@mail.nlm.nih.gov>
Subject: RE: Haz-Map and its importance to DEEOIC and our Claimants

David,

I appreciate your reminder, and we have been researching those options as well, but as noted in my email, working directly with Haz-Map creates political and optical issues for our program.

Having Haz-Map published by a trusted government third party, like LNM, provides a great deal of cover for DEEOIC, as no one can (or has) said that its contents are dictated by DEEOIC. But, if we work directly with Haz-Map and/or it isn't published by a medical/scientific third party, we lose all of that separation and our advocacy and advisory board communities will likely say that it is now a biased tool funded by or dictated by DEEOIC…

So, although there are alternatives such as direct access or contracting, those options are fraught with issues that make Haz-Map much less valuable than if published through a respected source like NLM!

Thanks again for forwarding and if any of the senior leadership at NLM would like to discuss this with me or the DEEOIC Director, we will be happy to make ourselves available for such a discussion.

Sincerely,
Doug

Subject: Haz-Map and its importance to DEEOIC and our Claimants

David & Pertti,

I really appreciated the opportunity to discuss Haz-Map and its import to the DEEOIC with you recently. Per our discussion, I promised to send a "short" primer on who we are, what we do, and how important Haz-Map and NLM's publication of it is to our program and claimant population.

In 2000, Congress passed the Energy Employees Occupational Illness Compensation Program Act (EEOICPA) which initially provided for direct compensation and medical benefits to current or former Department of Energy (DOE) employees or contractors who worked at specified DOE nuclear weapons facilities (beginning back to 1942), and later were diagnosed with one of 22 specified cancers. In 2004, Congress amended EEOICPA to expand benefits to former DOE contractors at specified facilities who were determined by DOL that their verifiable illness (any illness/condition) was linked to a toxic exposure working at that facility and that exposure was more likely than not a significant factor in causing, contributing to, or aggravating their medical condition. Under EEOICPA, claimants are responsible for making and proving their claims, including providing all necessary evidence. The Division of Energy Employees Occupational Illness Compensation (DEEOIC) is tasked with collecting evidence, which includes: employment, medical condition(s), probable toxic exposure(s), cause of death and similar information which we utilize to make adjudicatory determinations as to if the statutory, regulatory and procedural thresholds are met to award potential compensation and medical benefits (100% medical benefits related to accepted condition(s)).

In 2005, DEEOIC recognized that it would be difficult for claimants and/or their survivors, to provide evidence from long ago, especially given the classified nature of much of the work conducted at DOE facilities, so in order to assist claimants, we developed mechanisms to assist claimants in the collection of evidence. We work with DOE and with the Social Security Administration to employment records, and we provide Industrial Hygienists and physicians who are expert in analyzing information and providing opinions related to likely exposures and how those specific exposures may have been linked to individual claimant's claimed conditions. We also recognized that identifying the likely toxins that a claimant may have come into contact with at any specific facility would be often the most difficult thing for a claimant to prove or provide. So, DEEOIC developed a contract for the development and maintenance of the Site Exposure Matrixes (SEM). The SEM (publically available at: https://www.sem.dol.gov/) contractors sift through

documentation from DOE facilities to identify the toxins present at each facility and what job categories were most likely to come into contact with those toxins. Additionally, the SEM utilizes Haz-Map to identify the likely linkages between various toxins medical conditions, which provide claimants and our claims examiners with otherwise nearly impossible information to attain. This means, that without the SEM, which provides the known toxins and job categories that would have likely been exposed to the toxins, as well as known and scientifically accepted medical conditions that are linked to those toxins, it would be up to our claimants alone to "prove" what they were exposed to, and how that likely impacted their condition. That would be a daunting and unlikely hurdle for most claimants to overcome.

So, SEM, utilizing Haz-Map is a critical and essential part of our claims adjudication tool kit, allowing DEEOIC to more effectively provide the compensation and medical benefits (currently over $1.8 billion per fiscal year) to our claimant population. If Haz-Map is not maintained, and we are unable to continue to update our evolving understanding of how different toxins impact medical conditions, many claimants will be unable to make their case for benefits.

Additionally, in the initial statute, Congress recognized that many of the claimants were exposed to radiation and toxins without being informed or made aware of the potential dangers. Our claimant population, having worked in highly classified facilities, often working with toxins that they didn't understand or weren't aware of the danger, have a highly defined mistrust of the government. There is also an advocacy community that feeds that mistrust and constantly argues that DOE and the DEEOIC are trying to limit or deny their benefits. So, having the Haz-Map utilized in SEM, where the Haz-Map is publically published and available from a trusted 3rd party like the NLM is essential to our credibility that we are using the best available science to make linkages. Without this trusted resource, published publically by NLM, our advocacy community will say that DEEOIC is simply making these decisions to thwart claimants and not meeting medical or scientific standards in our adjudicatory process.

Finally, Haz-Map is such a critical tool to our adjudication activities that from 2011-2014, DEEOIC paid NLM to publish Haz-Map updates quarterly, instead of annually. Attached is the reimbursable agreement (MOU) that we had with NLM at that time.

I hope that this helps NLM understand the value and import we place on Haz-Map for our claims process and to help assure the independence and public trust that is essential to helping maintain our ability to meet our statutory duty to our claimants.

I look forward to further and future discussions and hopefully we can work out some kind of arrangement to maintain NLM's relationship and publication of Haz-Map in the future!

Sincerely,
Doug

Subject: Haz-Map and its importance to DEEOIC and our Claimants

David & Pertti,

I really appreciated the opportunity to discuss Haz-Map and its import to the DEEOIC with you recently. Per our discussion, I promised to send a "short" primer on who we are, what we do, and how important Haz-Map and NLM's publication of it is to our program and claimant population.

In 2000, Congress passed the Energy Employees Occupational Illness Compensation Program Act (EEOICPA) which initially provided for direct compensation and medical benefits to current or former Department of Energy (DOE) employees or contractors who worked at specified DOE nuclear weapons facilities (beginning back to 1942), and later were diagnosed with one of 22 specified cancers. In 2004, Congress amended EEOICPA to expand benefits to former DOE contractors at specified facilities who were determined by DOL that their verifiable illness (any illness/condition) was linked to a toxic exposure working at that facility and that exposure was more likely than not a significant factor in causing, contributing to, or aggravating their medical condition. Under EEOICPA, claimants are responsible for making and proving their claims, including providing all necessary evidence. The Division of Energy Employees Occupational Illness Compensation (DEEOIC) is tasked with collecting evidence, which includes: employment, medical condition(s), probable toxic exposure(s), cause of death and similar information which we utilize to make adjudicatory determinations as to if the statutory, regulatory and procedural thresholds are met to award potential compensation and medical benefits (100% medical benefits related to accepted condition(s)).

In 2005, DEEOIC recognized that it would be difficult for claimants and/or their survivors, to provide evidence from long ago, especially given the classified nature of much of the work conducted at DOE facilities, so in order to assist claimants, we developed mechanisms to assist claimants in the collection of evidence. We work with DOE and with the Social Security Administration to employment records, and we provide Industrial Hygienists and physicians who are expert in analyzing information and providing opinions related to likely exposures and how those specific exposures may have been linked to individual claimant's claimed conditions. We also recognized that identifying the likely toxins that a claimant may have come into contact with at any specific facility would be often the most difficult thing for a claimant to prove or provide. So, DEEOIC developed a contract for the development and maintenance of the Site Exposure Matrixes (SEM). The SEM (publically available at: https://www.sem.dol.gov/) contractors sift through

documentation from DOE facilities to identify the toxins present at each facility and what job categories were most likely to come into contact with those toxins. Additionally, the SEM utilizes Haz-Map to identify the likely linkages between various toxins medical conditions, which provide claimants and our claims examiners with otherwise nearly impossible information to attain. This means, that without the SEM, which provides the known toxins and job categories that would have likely been exposed to the toxins, as well as known and scientifically accepted medical conditions that are linked to those toxins, it would be up to our claimants alone to "prove" what they were exposed to, and how that likely impacted their condition. That would be a daunting and unlikely hurdle for most claimants to overcome.

So, SEM, utilizing Haz-Map is a critical and essential part of our claims adjudication tool kit, allowing DEEOIC to more effectively provide the compensation and medical benefits (currently over $1.8 billion per fiscal year) to our claimant population. If Haz-Map is not maintained, and we are unable to continue to update our evolving understanding of how different toxins impact medical conditions, many claimants will be unable to make their case for benefits.

Additionally, in the initial statute, Congress recognized that many of the claimants were exposed to radiation and toxins without being informed or made aware of the potential dangers. Our claimant population, having worked in highly classified facilities, often working with toxins that they didn't understand or weren't aware of the danger, have a highly defined mistrust of the government. There is also an advocacy community that feeds that mistrust and constantly argues that DOE and the DEEOIC are trying to limit or deny their benefits. So, having the Haz-Map utilized in SEM, where the Haz-Map is publically published and available from a trusted 3rd party like the NLM is essential to our credibility that we are using the best available science to make linkages. Without this trusted resource, published publically by NLM, our advocacy community will say that DEEOIC is simply making these decisions to thwart claimants and not meeting medical or scientific standards in our adjudicatory process.

Finally, Haz-Map is such a critical tool to our adjudication activities that from 2011-2014, DEEOIC paid NLM to publish Haz-Map updates quarterly, instead of annually. Attached is the reimbursable agreement (MOU) that we had with NLM at that time.

I hope that this helps NLM understand the value and import we place on Haz-Map for our claims process and to help assure the independence and public trust that is essential to helping maintain our ability to meet our statutory duty to our claimants.

I look forward to further and future discussions and hopefully we can work out some kind of arrangement to maintain NLM's relationship and publication of Haz-Map in the future!

Sincerely,
Doug

Hi Grace,

Did you receive any technical bulletin drafts to review? They may have been sent to the NLM Comms mailbox.

Thanks,
Jody

Thanks Jerry,

I am adding David, Jeanne, and Bert to this email as they are working with the environmental health/tox resources. We have a team that is working on sunsetting and have drafted a Tech Bulletin article (sent to OCPL for review) to include more info than what is currently available online. The toxicology resources are further along than the disaster ones at this time. It is good to know that they are willing to help us with assessments, etc.

Jody, Nicole, Stacey, Dianne,
I had a call today with some staff from NIEHS who are interested in the fate of several SIS/Enviro/Tox/Disaster resources. I described to them our plans, as best we know them. It occurs to me that we should involve NIEHS in our communications plans – both so they know what is happening and so they can help us communicate to various user communities. They may also be able to assist w/ training (along the lines of helping TOXNET users transition to PubChem, etc.). They expressed interest in WISER, REMM, and CHEMM, and offered to contribute to any ongoing or planned assessments of those resources. Below are the NIEHS staff who joined the call:

Schmitt, Charles (NIH/NIEHS) [E] <charles.schmitt@nih.gov>;
Holmgren, Stephanie (NIH/NIEHS) [E] <holmgre1@niehs.nih.gov>;
Fostel, Jennifer (NIH/NIEHS) [E] <fostel@niehs.nih.gov>

Thanks,
Jerry

Subject: FW: TOXNET page messaging

Hi, Grace,

I should be able to coordinate changes to the SIS home page.

The Sunsetting Team met this morning and want to suggest the following changes to that messaging:

"As the National Library of Medicine (NLM) implements its Strategic Plan, 2017-2027, it is making organizational changes that included the closure of the Specialized Information Services (SIS) division on June 30, 2019. The transition of some SIS programs into other parts of NLM**, including the Toxicology Data Network (TOXNET) (link to the TB article about this**), serves to not only improve discoverability of and access to SIS resources by NLM's broad set of users, but also enables NLM to leverage its talents and resources to improve overall efficiency and effectiveness.

Over the next few months, some SIS resources and programs will transition to other parts of NLM, be integrated into other NLM resources, made accessible on partner sites, or discontinued. **TOXNET is moving, most of its content will continue to be collected and reviewed; selected information is accessible through PubChem, PubMed, and Bookshelf. (Link to https://www.nlm.nih.gov/toxnet/index.html and later to the final TOXNET Transition Page).**

Questions about this transition and individual resources may be directed to custserv@nlm.nih.gov or 1-888-346-3656."

We will post the above once https://www.nlm.nih.gov/toxnet/index.html is finalized (expected to be later this week), at which time we will also post messaging on various

TOXNET home pages. ("On December,16, 2019, National Library of Medicine (NLM) TOXNET information will be migrated to PubChem, PubMed, and Bookshelf. Please see the TOXNET Transition page for more information. If you have questions, please contact NLM Customer Support at https://support.nlm.nih.gov/")

Let me know if you have any questions.

Colette

Subject: TOXNET page messaging

Hi, Grace,

As you know, many of the TOXNET offerings formerly supported in SIS will be migrated to other NLM resources or sunsetted by December of this year. We are currently working on placing informational banners on many of the sites' pages to alert users of this timeline.

Although you approved related sunsetting documents in July (https://sunsetting.nlm.nih.gov/request_details/261/) we want to remind you that we will be using the following wording for our alerts:

For TOXNET home, HSDB, TOXLINE, LactMed, DART, TRI, IRIS, ITER, CTD, CCRIS, CPDB, GENE-TOX:

"On December,16, 2019, National Library of Medicine (NLM) TOXNET information will be migrated to PubChem, PubMed, and Bookshelf. Please see the TOXNET Transition page for more information. If you have questions, please contact NLM Customer Support at https://support.nlm.nih.gov/"

For ChemIDplus, HazMap, Household Products Database, LiverTox, AltBib and several others *not immediately* affected:

"National Library of Medicine (NLM) TOXNET information is being migrated to PubChem, PubMed, and Bookshelf. Please see the TOXNET Transition page for more information. If you have questions, please contact NLM Customer Support at https://support.nlm.nih.gov/"

We hope to place this information on relevant pages early next week.

Please let us know if you have any comments or concerns.

Comment [SJ([]: ?

Three Questions for NLM

What are some of the most exciting recent developments in NLM's information services?

- NLM has been a center of information innovation since its founding in 1836
- Science advances through communication and dissemination of knowledge:
    - [Is a leader in data science and open science research
    - Acquires, analyzes and stores data for preservation and discovery
    - Delivers digitized biomedical literature to support reliability, reproducibility, transparency, and access to research data and results
    - Ensures a data savvy and multi-disciplinary workforce
    - Helps shape the NIH and national agenda related to artificial intelligence (AI), machine learning, health data standards, interoperability, open science, and data science.]???
- NLM's organization is tightly integrated through its service and research: 80% service, 20% research. NLM's organization differs from other NIH ICs – extramural program is smaller and intramural program is bigger
- NLM conducts research that makes its resources, tools, and services more useful and usable
- NLM hosts and maintains important public facing resources used by researchers, health professionals, and the public from all over the world (e.g., most heavily used resources include MedlinePlus, PubMed, PMC, dbGaP, ClinicalTrials.gov, Genetics Home Reference, ToxNet)
    - ***Each day, NLM websites are used by more than 6 million people, who deposit about 15 terabytes of data and download about 115 terabytes of data and information.***
    - ***Annually, NLM websites receive and process more than 6 billion human interactions and 8 billion computer-to-computer interactions***
- *Add some examples of improvements/enhancements/usage – new PubMed, etc.*
- *Add support for standards, CDEs, FHIR, etc.*

What type of research does NLM support, and what is most exciting to you now?

- Included some general budget figures for our intramural and extramural research – and training. General statements about what kinds of research we do.
- As digital information systems become the foundation of biomedical research data and health information, NLM is poised to become the Library of the future, by pioneering ways to make new types of biomedical information more accessible and build tools for better management of personal health and big data.
- Making data available to the world.
- 9/24 announcement

- Public access to data and publications – SRA, PMC
- Green Button Project
- CRISPR (Koonin)
- PHR for people emancipating from foster care
- The new PubMed
- ??? Unifying management of our intramural research program (CBB + LHC)

Comment [SJ([]: This is services, not R

Comment [SJ([]: Should reference this in the R reponse

How is NLM contributing to reducing health disparities?

- Reframe around outreach and highlight NNLM in the response. 7000+ members across the country. . .. emphasis on outreach, includes underserved populations. Relates to using NLM products and services. . . Include AllofUs partnership and role of public libraries.
- Funding research to reduce bias in big data: development of synthetic or hybrid data set which conforms to FAIR open data principles, and models racially and ethnically diverse communities in order to test methods and metrics and address possible biases due to under-representation of minorities and women.
- NIH Common Data Elements for Health Disparities: Several NIH Institutes invest in programs to develop common data elements for clinical research in order to enable data harmonization and meta-analyses and enhance data sharing. NLM works to ensure that formal vocabularies used to describe people, health problems, and health care processes are sufficiently robust to encompass the full range of health as experienced across all people, all populations, and all communities. It is essential that there be sufficiently broad and diverse formal terms for a range of racial designations, ethnic characterizations, and sex identity. The work of NLM ensures that the data used to characterize people, their health problems, and the nature and effectiveness of clinical care be true and valid indicators of people, health problems, and care processes so delving into the nature of information is central to ensuring clear and accurate descriptions of real-world experience. While these efforts have typically been discipline- and disease-specific, NLM has developed a repository of all of the NIH CDE sets and is working toward becoming the central access point for NIH CDE tools and data.

Additional "Tough" Questions for NLM

We've heard concerns about NLM procedures for selecting journals for MEDLINE. How does NLM make decisions about what journals to include or exclude from MEDLINE, and how do you respond to criticisms raised?

- Description of PubMed, MEDLINE, and PMC
- To be considered for inclusion and indexing in MEDLINE, publishers submit journals to an NIH-chartered Federal Advisory Committee Act (FACA) advisory committee, the Literature Selection Technical Review Committee (LSTRC)

- LSTRC is comprised of 14 members, who are outside experts in medicine, biomedical research, scholarly communication, medical librarianship, and related disciplines, plus consultants for domain-specific expertise as needed.
- LSTRC is chartered to recommend journals for inclusion in MEDLINE following an established set of elements:
    - Scope and coverage (e.g., predominantly on core biomedical subjects);
    - Scientific merit of journal content (validity, importance, originality, contribution to coverage of the field);
    - Quality of editorial work to ensure objectivity, credibility, and quality of its content (e.g., procedures for elements, peer review, corrections);
    - Production quality;
    - Audience (primarily researchers and practitioners); and
    - Type of content (publications that are journals)
- MEDLINE is highly selective. LSTRC reviews approximately 150 journals at each of its three meetings per year. This number includes first-time submissions, as well as some journals already included in MEDLINE. Only about 15% of journals reviewed are recommended for inclusion in MEDLINE.
- Journals that are not selected for MEDLINE may apply for reconsideration after two years. Journals selected for MEDLINE are expected continue to meet NLM's established standards and can be subject to re-review, which can result in losing their indexing status.

We have concerns about some trials listed in NLM's ClinicalTrials.gov, such as trials that require payments from participants, are conducted by clinics under investigation by FDA, or are considered basic science. How does NLM vet trials listed in ClinicalTrials.gov to protect patients from harmful treatments and minimize the burden on researchers of submitting information?

- Launched, in 2000, NLM developed and maintains ClinicalTrials.gov, a web-based registry and results submission database for federally and privately funded clinical trials testing the effectiveness of FDA-regulated experimental drugs for serious or life-threatening diseases or conditions and NIH-funded clinical trials.
- ClinicalTrials.gov supports a series of laws and policies implemented in the United States and internationally, and is the world's largest, publicly accessible database of privately and publicly funded clinical studies conducted around the world.
- CT.gov results reporting proportion of ones actually required compliance levels and what we are doing and what enforcement options are avail
- Ebola and HIV reporting results accelerated treatment in the field examples – get from Becky

a few quick notes as background:

- Trials that require payments from participants – we supported an FDA response to Congress on this topic (in the context of stem cell clinics) recently and attach that here as reference. This would form the basis of the talking points with some more recent updates. I expect that OSP will also have an interest in this topic and how this is framed, especially given the call with FDA last week.
- Clinics under investigation by FDA – past a general statement of concern, would recommend that NLM indicate that matters about an FDA investigation are best addressed by FDA
- Basic science – would be clear that this is an NIH-wide policy (not NLM), but that we have and continue to support the work to better understand challenges and identify possible approaches to ensure information is meaningful and useful (NIH/OSP-OER should have lead on these talking points)
- Other "tough" topics – possibly compliance with FDAAA and 42 CFR Part 11; we had to report to Congress on this as part of our Cures Act reporting obligations; the report was gutted of any "real compliance" data
    - We estimate that overall compliance is about 75%, with industry and NIH-funded having higher rates of reporting
- NIH-funded trials that did not publish main results – I assume this is based on the Ross et al. paper from 2012 in BMJ
    - About half were not published in peer-reviewed journal within 30 months of completion (improves to 1/3 not published with more time)
    - Ross JS, Tse T, Zarin DA, Xu H, Zhou L, Krumholz HM. Publication of NIH funded trials registered in ClinicalTrials.gov: Cross-sectional analysis. *BMJ*. 2012;344:d7292. [Full Text]

How does NLM protect sensitive data and privacy when making information accessible on the Internet?

- Technology and policy working together
    - Example: Providing controlled access to sensitive data (in dbGaP) and aligning with NIH policies to protect patient privacy
- In general, NLM does not have patient-identificable information in its databases. dbGaP, which has de-identified individual level information and operates under strict NIH data access policies and procedures.
- Development of Identity & Access Management integration through centralized service, can provide investigator data access approvals in a standard and secure framework across all NIH Institutes, Centers and Offices.

    - Faster software development of new analysis tools and platforms becomes possible through industry standard authorization protocols as user authorization and authentication services become a standard plug-in to new user interfaces.
- NLM adhere to common library practice for and government laws/regularions for accessing information
    - People have the ability to search without surveillance; in general we don't track individual usersj of most NLM resources (eg., MedlinePlus, PubMed, PMC, ClinicalTrials.gov)
    - Note – in cases like dbGaP, approved users are available on the web, and we authenticate users to implement access controls
    - NLM's role is to ensures its resources are operating optimally, within appropriate laws, regulations, and policies
    - NLM does not expose user search data (e.g., for MEDLINE Plus, PubMed, PMC)

What has NLM been able to accomplish with the recent increases in Appropriations?

NLM has been able to accelerate its investment in data science and expand its extramural research grants programs, while maintaining growth in its information services, investment in research, outreach, and engagement, and strengthening its technical infrastructure. For example, NLM has launched more targeted extramural programs such as those for research on reducing bias in high-value, extremely large data sets, personal health libraries for consumers and patients, and computational approaches to data curation.

- Expanding research programs
    - Growth in total budget for extramural research (e.g., $10M more in last 2 years alone, add %) - almost triple the number of awards)
    - Launched more targeted extramural programs, to reducing bias in big data; research on personal health libraries for consumers and patients; and research on computational approaches to curation.
    - launched joint initiatives with the National Science Foundation have brought more computer scientists into biomedical informatics and data science research (how many grants awarded so far – 5?).
    - expanded university-based training programs in biomed informatics and data science - – ncluding links to I-schools and minority serving institutions.
    - Hired new investigator(s)
- Sustain, enhance, and modernize NLM's most heavily used biomedical information systems, high quality, trusted information – Launch of new PubMed; addition of datasets to PMC; ClinicalTrials.gov, dbGaP. Stats about the growth in content – added x million citations to PubMed. . .

- NLM is reaching more people in more ways through enhanced dissemination and engagement pathways. It supports the development and operation of high-value biomedical information services and systems, including for health data standards. To this end, has greatly expanded the quantity and range of high-quality information, tools, and data available to researchers, health professionals, and the public. Additionally, NLM has improved access to timely information about research activities from their initial funding to results, enabling researchers, practitioners, policy makers, and the public to make better informed decisions and improve efficiencies.
- Strengthened IT and physical infrastructure – making our on site IT systems more robust while exploring/beginning to make more use of cloud-based infrastructure – modernization of platforms. stabilized and improved security of computer systems. Planned renovation of physical space to maintain integrity of physical collection, consolidate public services spaces, house workforce of the future.
- Streamlined organizational and technical infrastructure – consolidated (staff, systems) to improve operational efficiencies and establish more common platforms for our information systems. Improve user experience, discoverabililty of information (while making more cost effective). Freed up resoruces to do all of the above

NLM's Top 3-5 Priorities

NLM's new strategic plan aims to position NLM to become a platform for biomedical discovery and data-driven health. NLM's will accelerate its investments in research in informatics and data science and align its research, development, and resource priorities toward achieving three goals, with an organizational structure that optimizes implementation:

- Accelerate discovery and advance health through data-driven research. NLM strives to collect and integrate an expanding set of information resources and enable them to be analyzed by tools emerging from informatics and data science research. NLM will create computable libraries of data, models, and literature and devise an interlocked environment that enables discovery.
- Reach more people in more ways through enhanced dissemination and engagement. NLM will establish pathways for dissemination and engagement across a broad range of users to drive information to the right place at the right time. NLM is committed to developing approaches to ensure information can be accessed by all communities, both those who are familiar with NLM and those who are not (yet).
- Build a workforce for data-driven research and health. NLM will expand training initiatives for informatics and data science research, for librarians and information science professionals, and for technical support that will drive and shape the future of biomedical discovery. NLM is committed to fostering a culture that not only advances science, but also ensures the development and retention of a diverse, safe, and respectful workforce for the future.

Exciting Items -- Details from NLM Leadership

EP

active grants for House LHHS Appropriations Subcommittee Members

There are 10 grants, 4 in Rep DeLauro's district, 2 in Rep Pocan's district and 4 in Rep Lee's district.

investment areas of all grants, 2017-2019

Patti mentioned at last payline meeting that it would be helpful to see this alternate view of what we are funding. We still don't have a way to do this by method, or to reflect the crosscutting nature of data science, so this uses our standard investment areas (training grants fall into 'information science'). And the year isn't over yet, so 2019 isn't complete. Let me know if you find this view helpful. vf

	Bioinformatics	Consumer Health	Data Science	Health Care	Information Science	Public Health	Translational Bioinformatics
2019	3	1		21	11	1	8
2018	9	9		18	9	1	6
2017	5	4	3	15	24	2	9

FYI Comparing 2016 to 2019 RPGs in EP

Per your comment at payline about the number of award: This was a quick table and the 2019 number of awards is still an estimate. 65% more applications since 2016 in this group of RPGs and double the number of awards. ☺ We still give smaller RPG grants than other ICs, but we don't use R01s to train grad students the way other ICs do and we control the size of the R01s on our PARs in order to give more awards.

Year	# RPGs	# funded	$ awarded	NLM RPG Success Rate	NIH RPG Success Rate	NLM Avg RPG award $	NIH Avg RPG award $
2016	136	16	$ 5,665,829	11.8%	19.1	$ 354,114	$ 499,221
2017	140	26	$ 8,953,172	18.6%	18.7	$ 344,353	$ 520,429
2018	210	34	$ 11,195,843	16.0%	20.2	$ 329,290	$ 535,239
2019*	225	38	$ 14,902,497	17.3%	[redacted]	$ 392,171	[redacted]
*2019 estimate as of 2 Sept 2019 based on R01,R21,R15,R56 awards

6 exciting grants

Below info listed with a brief summary and at least one link to an article, often more and links are 'clickable'. 3 different people put it together so the format is not consistent, but each new one starts with red type. These are the 6 grants:

1. Mechanistic Machine Learning. Albers, David
2. Bridging the Semantic Gap between research Eligibility Criteria and Clinical Data. Weng, Chunhua
3. Neighborhood Looking Glass: 360 Degree Automated Characterization of the Build Environment for Neighborhood Effects Research. Nguyen, Quynh
4. Methods and Software for High-Dimensional Risk Prediction Research. Lu, Qing
5. Heuristics to Evaluate Biomedical and Genomic Knowledge Bases for Validity. Gilllis, Jesse
6. Evidence Extraction Systems for the Molecular Interaction Literature. Peng, Nanyum

Project Title: MECHANISTIC MACHINE LEARNING

PI: ALBERS, DAVID

Grant Number: 1R01LM012734-01

The goal of this project is to develop better ways to combine data about individual patients with knowledge about physiology to create personalized forecasts and recommendations about a patient's health. The researchers will apply data assimilation (DA), mechanistic mathematical modeling, machine learning, and control theory, which have revolutionized space travel, weather forecasting, transportation and flight, and manufacturing, to clinical medicine. The project will specifically address the management of glucose in the intensive care unit, an area of high importance that could benefit from improved forecasts and recommendations.

Mechanistic machine learning: how data assimilation leverages physiologic knowledge using Bayesian inference to forecast the future, infer the present, and phenotype. *J Am Med Inform Assoc*. 2018 Oct 1;25(10):1392-1401. doi: 10.1093/jamia/ocy106. PMID: 30312445; PMCID: PMC6188514.

Project Title: BRIDGING THE SEMANTIC GAP BETWEEN RESEARCH ELIGIBILITY CRITERIA AND CLINICAL DATA
PI: WENG, CHUNHUA
Grant Number: 2R01LM009886-08A1

The long-term goal of this project is to optimize the design and conduct of human clinical research using informatics. Eligibility criteria define the study population for every human study. Their clarity, accuracy and precision are crucial to the success of participant recruitment, results dissemination, and evidence synthesis. By defining the characteristics of the intended study population, eligibility criteria critically influence the population representativeness of a clinical study, which further influences the tradeoff between patient safety and research results' replicability and generalizability. This project will integrate patient data, including clinical and genomic data, with public clinical trial information, to proactively guide investigators to optimize the precision, recruitment feasibility and representativeness of eligibility criteria. Consequently, this research will increase the transparency of the population representativeness of clinical research eligibility criteria, reduce selection biases, improve research reliability, and enhance the patient-centeredness of clinical studies and thus mitigate health disparities.

Neighborhood Looking Glass: 360 Degree Automated Characterization of the Built Environment for Neighborhood Effects Research Grant No: 5R01LM012849-02
Principal Investigator: NGUYEN, QUYNH
Institution: University of Maryland.

PROJECT SUMMARY/ABSTRACT

Shorter Summary
Neighborhood quality has long been connected with an array of health issues, from obesity to addiction, but neighborhood research has been limited by the lack of methods to characterize large geographical areas. This study uses innovative computer vision methods and a new big data source of street view images to automatically characterize neighborhood environments and linking it to health information. The system called Neighborhood Looking Glass will be available to researchers, clinicians, policy makers, city planners and others to make informed decisions about health and community needs and the impact of the built environment. The project is utilizing geographic information systems to assemble a national collection of Google Street View images of all road intersections and street segments in the United States. Aim 1. Develop automated techniques to produce neighborhood quality indicators of physical disorder (e.g., cleanliness of streets, dilapidated buildings) and walkability (e.g., crosswalks, traffic lanes) from Google Street View images combined with other neighborhood

data sources on parks, food stores, health care facilities, and social environment indicators derived from social media data. Aim 2. Measure the accuracy of data algorithms and construct a geoportal for neighborhood data visualization and data sharing, called Neighborhood Looking Glass. Aim 3. Utilize Neighborhood Looking Glass and a large collection of medical records from Intermountain Healthcare to evaluate neighborhood influences on health. Hypothesis: The built environment (physical disorder, walkability, food access, and health care access) and social environment (demographic composition, social and cultural processes) will predict the risk of obesity and substance abuse.

Using Google Street View to Examine Associations between Built Environment Characteristics and U.S. Health Outcomes

Quynh C.Nguyen, Sahil Khanna, Pallavi, Dwived, Dina Huanga, Yuru Huanga,Tolga Tasdizen, Kimberly D. Brunisholz, Feifei Li, Wyatt Gorman, Thu T. Nguyen, and Chengsheng Jiang

Preventive Medicine Reports Volume 14, June 2019, https://doi.org/10.1016/j.pmedr.2019.100859

Article Abstract

Neighborhood attributes have been shown to influence health, but advances in neighborhood research has been constrained by the lack of neighborhood data for many geographical areas and few neighborhood studies examine features of nonmetropolitan locations. We leveraged a massive source of Google Street View (GSV) images and computer vision to automatically characterize national neighborhood built environments. Using road network data and Google Street View API, from December 15, 2017-May 14, 2018 we retrieved over 16 million GSV images of street intersections across the United States. Computer vision was applied to label each image. We implemented regression models to estimate associations between built environments and county health outcomes, controlling for county-level demographics, economics, and population density. At the county level, greater presence of highways was related to lower chronic diseases and premature mortality. Areas characterized by street view images as 'rural' (having limited infrastructure) had higher obesity, diabetes, fair/poor self-rated health, premature mortality, physical distress, physical inactivity and teen birth rates but lower rates of excessive drinking. Analyses at the census tract level for 500 cities revealed similar adverse associations as was seen at the county level for neighborhood indicators of less urban development. Possible mechanisms include the greater abundance of services and facilities found in more developed areas with roads, enabling access to places and resources for promoting health. GSV images represents an underutilized resource for building national data on neighborhoods and examining the influence of built environments on community health outcomes across the United States

1R01LM012848-01 METHODS AND SOFTWARE FOR HIGH-DIMENSIONAL RISK PREDICTION RESEARCH
Lu, Qing Michigan State

The use of human genome discoveries and other established risk predictors for early disease prediction is an essential step towards precision medicine. However, the task of developing clinically useful risk prediction models is hampered by the present state of evidence, in which currently known risk predictors are insufficient for accurately predicting most human diseases. high-throughput technologies make it feasible to collect diverse types of omic data in large-scale studies, data that hold great promise to further improve existing prediction models, but the high-dimensionality of omic data, the heterogeneous etiology of human diseases, and the complex inter-relationships among various levels of omic data offer tremendous analytic challenges. The goal of this application is to complete the development of a random field (RF) framework and software for high-dimensional risk prediction research using omic data, and then apply the framework to Alzheimer's disease (AD). The proposed research will integrate a kernel function and a spatial adaptive lasso into RF, making it applicable for high-dimensional data with a large number of predictors. Moreover, the new framework can utilize the family design to address several important issues (e.g., genetic heterogeneity) in predicting complex diseases.

The proposed framework attain will attain a more accurate and robust performance than existing methods. The application of the new methods and software to large-scale AD datasets could also lead to novel AD risk prediction models that could be further replicated and investigated through collaborative research.

Risk prediction that capitalizes on emerging human genome findings holds great promise for improved healthcare and precision medicine. The proposed research will develop an analytical framework and software for risk prediction using omic data, and will apply the new framework to Alzheimer's disease.

HEURISTICS TO EVALUATE BIOMEDICAL AND GENOMIC KNOWLEDGE BASES FOR VALIDITY

1R01LM012736-01 **Contact PI / Project Leader:** GILLIS, JESSE

Title:

Awardee Organization: COLD SPRING HARBOR LABORATORY

Project Summary Our overarching goal is to understand how information characterizing genes and their function

can be organized, integrated, and then generalized to new contexts. This is a central question of the post-genomic era, and one that becomes ever more pressing as novel assays expand the scope, breadth, and detail of information describing gene properties. While the Gene Ontology is the most prominent and universal system for organizing gene function, hundreds of others exist, often serving specialized research interests. Most laboratories depend on the validity of some subset of this data to design new experiments or interpret their results, but their quality is hard to directly ascertain, particularly in novel or complex integrative methodologies. Based on substantial preliminary data, we hypothesize that determining robustness and specificity will provide a highly general assessment of the utility of databases. We propose to use these properties to assess the entire corpus of resources organizing gene information, as well as the methods which exploit this information, and the results that they report. Critically, determining robustness and specificity does not require validation with respect to 'gold standard' information. By evaluating these resources with respect to their joint specificity and robustness we determine means of integrating and organizing their data for use in novel applications. Finally, we propose to apply our improvements in quality control to better target rare but robust results where this is an experimental goal, notably rare diseases and single cell expression. The three complementary objectives in this project are to: 1. Determine the uniqueness and robustness of data characterizing gene function. We develop a formal approach for characterizing robustness and uniqueness/specificity by exploiting prior probability in the form of gene multifunctionality. We will evaluate robustness and specificity across essentially all complex and structured databases characterizing genes. These measures can be compared between databases or over time and provide a global landscape of data structure. 2. Test methods designed to exploit information describing gene function. Statistical and machine learning methods exploiting structured data will be assessed for robust and specific output. Data features driving performance in diverse applications will be identified and complementary sources of data as well as community clusters will be defined. 3. Evaluate results that depended on the use of databases describing gene function. Using a combination of text-mining and figure-mining, we will assess the ongoing literature for novel, robust, and specific gene-function associations. We will characterize and evaluate the "dark matter" of gene-function association from both the point of unannotated genes as well as incomplete functions.

Recent advances in genetics have it made possible to assess gene function in many different contexts and this data is captured in numerous resources which catalogue the varied properties of genes. The primary goal of this project is to explore and characterize the specificity and robustness of information about gene function within these databases. Because most biomedical experiments build on pre-existing knowledge, establishing guidelines for interpreting that data also has a large impact on our ability to understand novel results, particularly where they are unusual, as in many rare diseases.

EVIDENCE EXTRACTION SYSTEMS FOR THE MOLECULAR INTERACTION LITERATURE

1R01LM012592-01 **Contact PI / Project Leader:** Nanyun Violet Peng.

Title:

Awardee Organization: UNIVERSITY OF SOUTHERN CALIFORNIA

In primary research articles, scientists make claims based on evidence from experiments, and report both the claims and the supporting evidence in the results section of papers. However, biomedical databases describe the claims made by scientists in detail, but rarely provide descriptions of any supporting evidence that a consulting scientist could use to understand why the claims are being made. Currently, the process of curating evidence into databases is manual, time-consuming and expensive; thus, evidence is recorded in papers but not generally captured in database systems. For example, the European Bioinformatics Institute's INTACT database describes how different molecules biochemically interact with each other in detail. They characterize the under- lying experiment providing the evidence of that interaction with only two hierarchical variables: a code denoting the method used to detect the molecular interaction and another code denoting the method used to detect each molecule. In fact, INTACT describes 94 different types of interaction detection method that could be used in conjunction with other experimental methodological processes that can be used in a variety of different ways to reveal different details about the interaction. This crucial information is not being captured in databases. Although experimental evidence is complex, it conforms to certain principles of experimental design: experimentally study- ing a phenomenon typically involves measuring well-chosen dependent variables whilst altering the values of equally well-chosen independent variables. Exploiting these principles has permitted us to devise a preliminary, robust, general-purpose representation for experimental evidence. In this project, We will use this representation to describe the methods and data pertaining to evidence underpinning the interpretive assertions about molecular interactions described by INTACT. A key

contribution of our project is that we will develop methods to extract this evidence from scientific papers automatically (A) by using image processing on a specific subtype of figure that is common in molecular biology papers and (B) by using natural language processing to read information from the text used by scientists to describe their results. We will develop these tools for the INTACT repository but package them so that they may then also be used for evidence pertaining to other areas of research in biomedicine.

Article 1 abstract We investigate the application of deep learning to biocuration tasks that involve classification of text associated with biomedical evidence in primary research articles. We developed a large-scale corpus of molecular papers derived from PubMed and PubMed Central open access records and used it to train deep learning word embeddings under the GloVe, FastText and ELMo algorithms. We applied those models to a distant supervised method classification task based on text from figure captions or fragments surrounding references to figures in the main text using a variety or models and parameterizations. We were able to obtain triage performance with an accuracy of 0.82 using a combined convolutional neural network, bi-directional long short-term memory architecture augmented by attention to produce a single decision for triage. In this work, we hope to encourage biocuration systems developers to apply deep learning methods to their specialized tasks by repurposing large-scale word embedding to apply to their data.

Article 2 abstract This article focuses on approaches to link transcriptomic, proteomic, and peptidomic datasets mined from brain tissue to the original locations within the brain that they are derived from using digital atlas mapping techniques. We use, as an example, the transcriptomic, proteomic and peptidomic analyses conducted in the mammalian hypothalamus. Following a brief historical overview, we highlight studies that have mined biochemical and molecular information from the hypothalamus and then lay out a strategy for how these data can be linked spatially to the mapped locations in a canonical brain atlas where the data come from, thereby allowing researchers to integrate these data with other datasets across multiple scales. A key methodology that enables atlas-based mapping of extracted datasets-laser-capture microdissection-is discussed in detail, with a view

Trained a generation

I can tell you how many full time pre/postdoc slots we support per year in this 5-year round (200), but I don't have up to date numbers for trainees supported in the past. We did have a contractor do some analysis of 1991-2005 and some of those numbers are below. We don't track the careers of trainees, though programs include lists in their applications of who graduated. But QVR doesn't have full applications before 2010, so we can't see the tables that list graduates for those years.

From the late 1970s through 2008, NLM provided support for the graduate training of more than 1000 people. Since then, we have supported between 200 and 250 per year. Data in a study covering 1991-2005 indicated that about 39% of NLM trainees went into academic settings, 21% to business/industry including those who start businesses; 16% to health care settings, 2% to government and 15% to additional graduate training; the remaining 6% were not reported. The number of trainees going to industry has increased, and in some programs is as high as 50%.

These examples of jobs are non academic: For example, Eric Horvitz (BOR member) is head of Microsoft's AI group); Jessica Tennenbaum is chief data officer for the North Carolina Department of Health and Human Services, Neil Sarkar, is interim President and CEO of the Rhode Island Quality Institute; I believe that AMIA Pres Douglas Fridsma is a former NLM trainee but can't find a bio to back it up. Some other job titles of former NLM trainees: CMIO, Director of Clinical Informatics; Staff Scientist, CEO, Software Developer. Companies that hired NLM trainees include Google, Oracle, Axolotl, ION Geophysical, Pfizer, Protabit LLC and EPIC.

NCBI

Notably, a major breakthrough in gene editing technology, CRISPR-Cas, rests solidly on the work on bacterial evolutionary genomics by NLM researchers. NLM's collaborative work has resulted in the classification of CRISPR-Cas systems that have been adopted as gene editing and nucleic acid detection tools routinely used by CRISPR researchers and other microbiologists worldwide, which have led to an additional function of certain varieties of CRISPR-Cas, namely, RNA-mediated transposition. This novel function is expected to have major applications in biotechnology the development of cancer diagnostics and therapy.

- Applied computational approaches to basic biology which include: the identification of new proteins that can be employed as enhanced tools for Cas gene editing; understanding the functions and evolution of novel CRISPR-Cas variants and other antivirus defense systems in microbes; mining metagenomic data to discover novel viruses including those that dominate the human gut microbiome; comparative genomic approaches to predict novel antibiotics and antibiotic resistance mechanisms; data integration methods to study mutations in cancer-driving genes and gene networks; and identification of new cancer drivers.

(FOR SOME REASON I CANNOT INSERT COMMENTS — THROUGH OUT THIS SECTION, TRY TO LEAD WITH THE NLM ADVANCE, NOT THE CLINCIAL CHALLENGE)

STRIDES empowers the biomedical research community by facilitating **rapid access to large studies with no required download**. As part of this initiative, vast depths (petabytes) of National Heart, Lung and Blood Institute (NHLBI) TopMed data, which is managed and funded by the University of Michigan, as well as Common Fund Kids First data managed and funded by Children's Hospital of Philadelphia, will soon be linked to SRA for new discovery. This is accomplished without incurring taxpayer burden to create a second copy. Investigators with dbGaP controlled human data access approvals can read and compute on these data without delay.

For the first time, bioinformaticians and medical researchers can compute comprehensively across the cloud. This is extremely significant as major scientific work is done through exploring sequence data itself in fast, meaningful ways to answer questions like, "Has anyone else seen a protein like this before? Where else has a piece of sequence like this been collected? Is anything known about the function of a piece of sequence like this?" NCBI is working with the community to better understand the possibilities now that anyone can now compute across the entire five petabyte corpus at will, with their own ideas and tools. In early 2019, one NCBI engagement allowed a small group of scientists to take metagenomic pre-compute and analysis of viral genomes and establish a new framework to identify novel viruses in ecological samples.

Integrated Identity and Access Management through centralized services can provide investigator data access approvals in a standard and secure framework across all NIH Institutes, Centers and Offices. Faster software development of new analysis tools and platforms becomes possible through industry standard authorization protocols as user authorization and authentication services become a standard plug-in to new user interfaces.

LHC

NLM helps develop AI for Cervical Cancer Diagnostics: Cervical cancer is a leading cause of cancer mortality in low-resource settings, despite advanced understanding of its etiology and effective prevention methods. To date, human papillomavirus (HPV) vaccination and cervical screening programs are lacking in most low- and medium-income countries, which account annually for >80% of 500,000+ cancer cases. US has over 4000 cases annually mostly impacting African American women and those with poor access to healthcare.

International health authorities continue to recommend visual inspection with acetic acid (VIA) for affordable screening, but this method has been shown to be unacceptably inaccurate in identifying precancerous lesions that can be treated to prevent cancer.

In a collaboration with the National Cancer Institute (NCI) and other external collaborators (Bill Gates' Intellectual Ventures Labs, WHO/UNITAID), we have created, evaluated, and validated an AI algorithm

automated visual evaluation (AVE) algorithm for reliably screening photographic images of the uterine cervix acquired using a standard smartphone. The AI outperformed standard screening tests (clinician interpretation of the same cervical images, Pap smears, and even HPV testing) in predicting cumulative risk of precancer/cancer in the critical age group of women 25-49 years of age.

We continue to improve the algorithm with images from various ethnicities and treatment clinics from different parts of the world. Over 7 countries have expressed an interest in working with us and appropriate patient privacy protection mechanisms are currently being ironed out. We expect to receive several thousand images which will help in further improving the AI and making it reliable for the variety in disease expression.

Other than cervical images, we are also devoting efforts to AI interpretation of Pap smear images and tissue biopsy images. We are also working with the American Society for Colposcopy and Cervical Pathology on a web site for training and testing the American colposcopists (diagnosing and treating anogenital diseases).

Smartphone based image analysis for malaria diagnosis: Malaria is a major burden on global health with about 200 million cases worldwide, claiming the lives of nearly half a million individuals each year. Inadequate diagnostics is a major barrier to effective management of cases and elimination of the disease. The current gold standard method for malaria diagnosis is light microscopy of blood films. About 170 million blood films are examined every year for malaria, which involves manually identifying and counting parasites. However, microscopic diagnostics are not standardized and depend heavily on the experience and skill of the microscopist, many of whom work in isolation, with no rigorous system in place for maintenance of their skills. For false negative cases this leads to incorrect diagnosis with unnecessary use of antibiotics, a second consultation, lost days of work, and in some cases progression into severe malaria. For false positive cases, this results in unnecessary use of antimalarial drugs and side effects.

To improve malaria diagnostics, the Lister Hill National Center for Biomedical Communications, an R&D division of the U.S. National Library of Medicine at NIH, and Mahidol-Oxford Tropical Medicine Research Unit, University of Oxford, in Bangkok, Thailand, are developing a fully automated low-cost system that uses a mobile phone attached to a microscope for parasite detection and counting on blood films. Compared to manual counting, automatic parasite counting is more reliable and standardized, reduces the workload of the malaria field workers and reduces diagnostic costs. To count parasites automatically, the system uses image processing methods to find cells infected with parasites in digitized images of blood films captured by the smartphone camera. The system is first trained on manually annotated images and the trained machine learning models then discriminate between infected and uninfected cells and perform the counting. The system uses a regular smartphone and digital images acquired on standard light microscopy equipment making it ideal for resource-poor settings.

OET

The National Library of Medicine (NLM) has engaged with public libraries to promote health literacy, digital literacy, and increase competency with consumer health information within the public library workforce. Through NLM's National Network of Libraries of Medicine (NNLM) strategic partnerships

have been formed with public library associations and libraries across the country, as well as library workers. The partnerships form the backbone of ongoing activities providing education resources, training, off-the-shelf programming, seed funding, communications, and impact evaluation tools that public libraries can use to provide access to NLM's trusted, high-quality health information resources and contribute to improving the health of their communities. NNLM's founding members were health sciences, hospital, and academic libraries. The expanded focus on public libraries enables NLM to reach users were they search for health information (37% public library computer users seek health and wellness information*).

In FY19, NNLM funded over 130 projects with public libraries, resulting in over 1,400 activities reaching over 13,180 people across 45 states. The projects ranged from funding library tricycles at Miami-Dade public, to partnering health sciences libraries with public libraries to provide health information training for front-line public library staff in the southwest, to developing Prescription Drug Take-Back Day program kits for public libraries in the northwest, to hosting Citizen Science Game Day activities partnering with EyesonALZ, to hosting community conversations on mental health at Sharon Public Library. In FY19, over 100 library staff have received the MLA consumer health information specialization credential through NNLM training and support.

* [1] http://impact.ischool.washington.edu/documents/OPP4ALL_FinalReport.pdf

******additional examples*****

Specific examples of NNLM work in public libraries include the following:

- *Libraries Transform* Health Literacy Toolkit is a partnership between NNLM and the American Library Association (ALA) and helps library professionals raise awareness of how libraries provide trusted health information to their communities. The key message statements highlight how libraries transform communities. There are 17 messages total, with another set scheduled to be released in October 2019 for Health Literacy month. For the Health Literacy Toolkit, *Libraries Transform…*
    - Because libraries are partners in a healthy community.
    - Because clinical trials get results.
    - Because quality information helps you make better decisions.

- Consumer Health Information Specialization (CHIS) is a partnership with NNLM and the Medical Library Association (MLA) to equip public library staff with the skills and knowledge to become a confident, expert providers of health information in their communities. Over the past 3 years, more than 450 library staff at public libraries have participated in the CHIS program and most have received CHIS Level I or CHIS Level II certification.

- Collaborative Summer Learning Program (CSLP) health programming is a partnership between NNLM and the CSLP to bring health programming ideas to 16,000 public library locations for annual summer learning activities. During the summer of 2019, the CSLP featured the theme *A Universe of Stories* in celebration of the 50th anniversary of the first moon landing. NNLM funded activities included the Library Moon Walk sponsored by the Mohawk Valley, Southern Adirondack, and Upper Hudson Library Systems in Upstate New York. A walk from Upstate New York to the moon is approximately 238,900 miles. Libraries across ten Upstate New York

counties offered activities to get their patrons moving, dancing, and learning about health while working toward the community goal of walking far enough to reach the moon.

- Project Outcome is a partnership between NNLM and the Public Library Association (PLA) that developed a toolkit for public libraries to measure the community impact of public libraries' consumer health programming and services. The toolkit allows libraries to better understand how their resources and programs are being used and the impact as well as better determine what they can do to improve. Since the launch of the survey in May 2019, approximately 78 libraries have used the resource to evaluate their health programming.

- Citizen Science Day, an initiative supported by NNLM and lead by SciStarter and Arizona State University, supports citizen science activities each year in April (#citsciday). In 2019, public libraries in Arizona were funded to sponsor activities that encouraged communities to raise awareness about and engage in citizen science events, and in public libraries in Los Angeles, California public libraries participated in a megathon citizen science event that featured Stall Catchers, a game-based activity that helped Cornell scientists contribute to Alzheimer's disease discovery. Participation in the events contributed 2,566 research hours and analyzed 116,955 videos of stalls.

BRAIN Topics

Data Sharing

- Data should be made as widely and freely available as possible while safeguarding the privacy of participants and protecting confidential and proprietary data
- Sharing scientific data and results enables researchers to:
  - vigorously test validity of research findings
  - strengthen analyses by combining data sets, access hard-to-generate data
  - inform future research pathways
  - increase the return on investment of scientific research funding
  - accelerate translation of research results
- Committed to making NIH results available
  - NIH Data Sharing Policy (2003), BD2K Initiative (2013), GDS Policy (2014), AoU Research Program (2015), Cancer Moonshot (2016), Clinical Trials Final Rule and NIH Policy (2016)
  - NIH participates in NSTC Committee on Science, Subcommittee on Open Science
  - Maintains NIH stewardship over taxpayer funds
  - 21st CC contains provisions authorizing NIH Director to require awardees to share data generated from NIH-funded research
- Draft data management and sharing policy RFI on proposed policy provisions released Oct. 2018

Data Science Initiatives

- Committed to advancing data science infrastructure, analytics, research, workforce dev
- New office – ODDS: coordinates data science activities across NIH, including implementing strategic plan for data science with Scientific Data Council
    - Recruiting Chief Data Strategist to lead
- Science and Technology Research Infrastructure for Discovery, Experimentation, and Sustainability (STRIDES) Initiative – partnerships w/ commercial cloud providers to reduce barriers to access, compute – cross-NIH opportunity for participation
- New Models of Data Stewardship: improving data ecosystem and making data FAIR (findable, accessible, interoperable, reusable) – findings to be applied to datasets and systems across NIH
- ADD pilot project with Figshare to test viability of a general data sharing platform
- ADD NLM improved ability to attach datasets to articles in PubMed Central
- NIH issued a Guide Notice and Notice of Special Interest to the SBIR/STTR communities to encourage the use of the Fast Healthcare Interoperability Resource (FHIR) standard in research.
- ACD WG on AI – what bold, lasting contributions can NIH make to advance AI use in biomedicine, clinical research?

Public Access to Scientific Publications

- NIH continues to lead interagency discussions about ways to improve implementation of public access policies across Federal research funders
- 2018: NIH leadership met with authors of Plan S, an open-access science publishing initiative in Europe
- 2017: implementing the delayed renewal policy improved compliance to 88% from 75% (in 2012).
- 2013: NIH began withholding funding for non-competing continuation awards for non-compliance
- 2008: Statute mandated a policy requiring publications resulting from NIH funding be made public on PubMed Central (PMC).
- Annual renewals can be delayed until publications arising from prior award segments comply with the public access policy and are properly reported on the RPPR.
- NIH collaborates with AHRQ, CDC, FDA, OS/ASPR, ACL, DHS, EPA, NASA, NIST, and VA to implement their public access policies with PMC.
- PMC:
    - PPP that supports the public access policies for Gates Foundation and HHMI in addition to NIH
    - signed agreements with over 6,500 journals to post content

Comment [PD([]: Please add these updates.

Comment [PD([]: Suggest deleting

Comment [PD([]: Please add.

Clinical Trials Stewardship and Reform

Committed to responsible stewardship, accountability, oversight, transparency of CTs

- $4B/year on CTs (11% of budget)
- ½ of NIH-funded CTs did not publish main results

Actions Following FY18 Omnibus (required delay enforcing new policy for basic res.)

- Launched new human subjects' reporting system reducing awardee admin burden
  - RFI on how best to accommodate reporting for BESH studies (Report expected 02/19)
- Released BESH FOAs
- Postponed enforcing policy on disseminating NIH-Funded CT information for BESH studies
- Improving CT.gov usability

Selected Policies

- ADD – more recent Notice extending BESH grace period for another 2 years while NIH continues to engage w/ the community to understand challenges and develop solutions.
- 2018: BESH FOAs published (01/19 deadlines), SIRB policy, Human Subjects and CT information forms
- 2017: CT specific FOAs issued (01/18 deadlines), GCP, Final Rule, timely CT registration, reporting

Comment [PD([]: Please double-check this number. It may be closer to 1/3.

Subject: Follow-up questions about TOXNET page messaging

Hi, Grace,

Thanks for reviewing the TB article.

We have two concerns, as follows:

- Use of the term 'website': "…the National Library of Medicine (NLM) TOXNET …website will be retired. …." We are concerned that this term may be misleading, as TOXNET is a group of databases with a web interface, not really a website.

- The description of PM Bookshelf:

    - PubChem, an open chemistry database
    - PubMed, a resource …
    - and Bookshelf, a free online access to books and documents in life science and healthcare

    The phrase *"a free online access"* here does not seem quite right. We prefer the wording PubChem itself uses: "Bookshelf provides free online access to books and documents in life science and healthcare. Search, read, and discover."

Please let us know what you think.

Colette,

Thank you for sharing the draft content for the TB regarding the sunsetting of the TOXNET website. Jody and I have reviewed the message and made a few edits, included below. Please let me know if you have any questions or need additional support.

Kindly,
Grace

TOXNET Website to be Retired, Most Content Will Remain Available

TOXNET Website to be Retired, Most Content Will Remain Available. NLM Tech Bull. 2019 Sep-Oct;(430):e1.

2019 September 09 [posted]

On December 16, 2019, the National Library of Medicine (NLM) TOXNET (TOXicology Data NETwork) website will be retired. Most content will remain available through other NLM databases and from external websites.

TOXNET has served as an integrated system of toxicology and environmental health information. The most frequently used databases are being incorporated into three NLM core resources: PubChem, an open chemistry database; PubMed, a resource for biomedical literature; and Bookshelf, a free online access to books and documents in life science and healthcare.

Several resources in TOXNET came from other organizations, such as the U.S. Environmental Protection Agency, and will continue to be available from those sources. Some databases will be retired.

The TOXNET transition page provides a list of its databases and how to access their content. Please check that page and the *NLM Technical Bulletin* for updates.

If you have questions, please contact NLM Customer Support at https://support.nlm.nih.gov/.

Subject: FW: TOXNET page messaging

Hi, Grace,

I should be able to coordinate changes to the SIS home page.

The Sunsetting Team met this morning and want to suggest the following changes to that messaging:

"As the National Library of Medicine (NLM) implements its Strategic Plan, 2017-2027, it is making organizational changes that included the closure of the Specialized Information Services (SIS) division on June 30, 2019. The transition of some SIS programs into other parts of NLM**, including the Toxicology Data Network (TOXNET) (link to the TB article about this**), serves to not only improve discoverability of and access to SIS resources by NLM's broad set of users, but also enables NLM to leverage its talents and resources to improve overall efficiency and effectiveness.

Over the next few months, some SIS resources and programs will transition to other parts of NLM, be integrated into other NLM resources, made accessible on partner sites, or discontinued. **TOXNET is moving, most of its content will continue to be collected and reviewed; selected information is accessible through PubChem, PubMed, and Bookshelf. (Link to https://www.nlm.nih.gov/toxnet/index.html and later to the final TOXNET Transition Page).**

Questions about this transition and individual resources may be directed to custserv@nlm.nih.gov or 1-888-346-3656."

We will post the above once https://www.nlm.nih.gov/toxnet/index.html is finalized (expected to be later this week), at which time we will also post messaging on various TOXNET home pages. ("On December,16, 2019, National Library of Medicine (NLM) TOXNET information will be migrated to PubChem, PubMed, and Bookshelf. Please

see the TOXNET Transition page for more information. If you have questions, please contact NLM Customer Support at https://support.nlm.nih.gov/")

Let me know if you have any questions.

Subject: TOXNET page messaging

Hi, Grace,

As you know, many of the TOXNET offerings formerly supported in SIS will be migrated to other NLM resources or sunsetted by December of this year. We are currently working on placing informational banners on many of the sites' pages to alert users of this timeline.

Although you approved related sunsetting documents in July (https://sunsetting.nlm.nih.gov/request_details/261/) we want to remind you that we will be using the following wording for our alerts:

For TOXNET home, HSDB, TOXLINE, LactMed, DART, TRI, IRIS, ITER, CTD, CCRIS, CPDB, GENE-TOX:

"On December,16, 2019, National Library of Medicine (NLM) TOXNET information will be migrated to PubChem, PubMed, and Bookshelf. Please see the TOXNET Transition page for more information. If you have questions, please contact NLM Customer Support at https://support.nlm.nih.gov/"

For ChemIDplus, HazMap, Household Products Database, LiverTox, AltBib and several others *not immediately* affected:

"National Library of Medicine (NLM) TOXNET information is being migrated to PubChem, PubMed, and Bookshelf. Please see the TOXNET Transition page for more information. If you have questions, please contact NLM Customer Support at https://support.nlm.nih.gov/"

We hope to place this information on relevant pages early next week.

Please let us know if you have any comments or concerns.

Subject: RE: Steering Group

Good afternoon everyone,

Here are the notes from the meeting this morning. The key point for next week is the intention o use that meeting as a working meeting to discuss budget planning for the old SIS projects and activities.

Thank you,

Steering Group meeting

9/23/2019

Agenda

1. Messaging for NNLM partners about sunsetting projects or transitioning projects

   Many of them are planning training and outreach activities on products that are being sunset. If there is something general we can say to guide them in their planning?

   Hard to send a specific list of what products are being sunset since the plans differ by product.

   Amanda noted that the ToxNet process has worked well, we should replicate that.

   Carolyn asked if there is a list of classes being taught, so the group could provide guidance on which class to teach (affirmative) versus which classes they should not teach. Amanda will look into this, but thinks it will be challenging.

   Question for Jodi is there an interim message that be sent beyond Toxicology? Amanda will follow up directly.

   Ideally we would like to let them know, the list of offerings, timeline for the changes, and how they can help.
   Suggestion, use one meeting per month to review the product spreadsheet so everyone is aware of status. (Carolyn to propose using the meeting on the October 7th to review the list)

2. Check in on SIS product plans; progress made, open questions, resource or assistance need to move those plans forward

Amanda confirmed that K-12 pages being addressed by OET and are in the sunsetting process
David and Jeanne will be meeting meeting OCCS/LO staff update on Toxnet and plns for changes, they will also mention to the staff in the meeting that there is a Sunset team and there could be other requests

- Rex will be heading up an effort to look at ChemID and HSDB (working with OCCS to determine what it will take to bring it up to an acceptable level? What is the cost and time to migrate to a more modern system? What is the investment?)

Proposal: Use next Monday as a FY20 budget meeting to address SIS products, projects and other areas. Proposed attendees (Debbie, Stacey, Jeanne, David, Amanda, Dianne, Wei, Bryant, Nicole).

- What funds are needed?
- Who should put in for the funds?
- Travel?
- Information about DCCs and IAAs (check the existing list – next POP dates; dollars, targeted sunset dates) –

Debbie will look to update and send the summary file in advance of the meeting

Hi everyone,

As we continue to move the SIS Product integration work forward, we would like to hold a few additional group meetings to determine if the current plans are moving forward effectively where we may need decisions or additional coordination. Agenda's and meeting materials will be sent out by Carolyn and the team in advance of the Monday meeting so you have time to consider and respond to any questions or topics that will be discussed.

Thank you,

Joyce

Good morning,

Can you take a look at the highlight below so we have a response for Amanda when she reaches out?

Thanks,
Jody

Subject: RE: Steering Group

Good afternoon everyone,

Here are the notes from the meeting this morning. The key point for next week is the intention o use that meeting as a working meeting to discuss budget planning for the old SIS projects and activities.

Thank you,

Steering Group meeting

9/23/2019

Agenda

1. Messaging for NNLM partners about sunsetting projects or transitioning projects

   Many of them are planning training and outreach activities on products that are being sunset. If there is something general we can say to guide them in their planning?

   Hard to send a specific list of what products are being sunset since the plans differ by product.

   Amanda noted that the ToxNet process has worked well, we should replicate that.

   Carolyn asked if there is a list of classes being taught, so the group could provide guidance on which class to teach (affirmative) versus which classes they should not teach. Amanda will look into this, but thinks it will be challenging.

   Question for Jodi is there an interim message that be sent beyond Toxicology? Amanda will follow up directly.

   Ideally we would like to let them know, the list of offerings, timeline for the changes, and how they can help.
   Suggestion, use one meeting per month to review the product spreadsheet so everyone is aware of status. (Carolyn to propose using the meeting on the October 7th to review the list)

2. Check in on SIS product plans; progress made, open questions, resource or assistance need to move those plans forward

   Amanda confirmed that K-12 pages being addressed by OET and are in the sunsetting process
   David and Jeanne will be meeting meeting OCCS/LO staff update on Toxnet and plns for changes, they will also mention to the staff in the meeting that there is a Sunset team and there could be other requests
   - Rex will be heading up an effort to look at ChemID and HSDB (working with OCCS to determine what it will take to bring it up to an acceptable level? What is the cost and time to migrate to a more modern system? What is the investment?)

Proposal: Use next Monday as a FY20 budget meeting to address SIS products, projects and other areas. Proposed attendees (Debbie, Stacey, Jeanne, David, Amanda, Dianne, Wei, Bryant, Nicole).

- What funds are needed?
- Who should put in for the funds?
- Travel?
- Information about DCCs and IAAs (check the existing list – next POP dates; dollars, targeted sunset dates) –

Debbie will look to update and send the summary file in advance of the meeting

[EXTERNAL]
Hi everyone,

As we continue to move the SIS Product integration work forward, we would like to hold a few additional group meetings to determine if the current plans are moving forward effectively where we may need decisions or additional coordination. Agenda's and meeting materials will be sent out by Carolyn and the team in advance of the Monday meeting so you have time to consider and respond to any questions or topics that will be discussed.

Thank you,

Joyce

Steering Group

Every Monday, from Monday, September 16, 2019, to Monday, September 23, 2019
8:45 am | Eastern Daylight Time (New York, GMT-04:00) | 45 mins
Meeting number (access code): Passcode

To: Huerta, Mike (NIH/NLM) [E]
Subject: NPATT - I forgot to go over EP with you yesterday
Attachments: NPA Phase 1 Data Collection 2019_EP RESPONSE.xlsx

Hi Mike,

I forgot to pull up EP's submission yesterday. They turned it was first and had no issues, so I completely forgot about it. It's attached in case you want to take a look, but I verified that all of the info we went over together yesterday is complete and I will send along to Wei.

Thanks,
Leigh

Initiative Overview

NLM has invested in the NLM Portfolio Analysis (NPA) initiative to inventory NLM Offerings (i.e., products, services, applications) that are provided to user constituencies. Data gathered during the inventory will be used to group Offerings into a logical structure that creates a holistic, organized picture of NLM's portfolio.

Workbook Purpose

The purpose of this workbook is to capture information about NLM Offerings in a standardized manner to generate the NLM portfolio inventory. This workbook is intended to be completed by Offering Owners. The Offering Owner is the primary point of contact for an offering, the person with hands-on expertise in what it does, who it reaches, and how it works. NPATT Representatives, NLM Division managers with Offering oversight responsibilities and participating on the NLM Portfolio Analysis Tool Team, should review all the information prior to submission to ensure accuracy and completeness.

Workbook Instructions

This workbook includes two (2) worksheets containing Instructions and a Glossary, and nine (9) worksheets to be completed by Offering Owners, as listed in the table below. For information and assistance in completing this workbook, contact your NPATT Representative.

For definitions of key terms used in this workbook, consult the Glossary.

The deadline for submission to the NPATT is **Wednesday, September 4, 2019, at 3:00 PM**.

Questions and completed submissions should be discussed with your NPATT Representative. If you are not sure on any request for information, consult with your NPATT Representative to obtain clarification.

The following individuals are NPATT Representatives by NLM Division:

- **Library Operations (LO):** Dianne Babski, Ken Koyle, Alla Keselman
- **Lister Hill Center for Biomedical Communication (LHC):** Olivier Bodenreider
- **National Center for Biotechnology Information (NCBI):** Anatoly Mnev, Kim Pruitt
- **Office of Computer and Communications Systems (OCCS):** Wei Ma, Philip Chuang, Rex Shuler
- **Office of Communications and Public Liaison (OCPL):** Jody Nurik, Alise Crutchman, Lisa Federer, Allison Fisher
- **Office of the Director (OD):** Eddie Rivera
- **Office of Strategic Initiatives (OSI):** Mike Huerta, Leigh Samsel, Sara Tam, Constance Young
- **Office of Extramural Programs (EP):** Samantha Tempchin

Phase 1 Data Call GLOSSARY

2019 NLM Portfolio Analysis Initiative

It	Definition
C	
C	
	Customer segmentation based on user behavior.
Customer Type	A **primary customer** is the intended target audience for an **NLM Offering** based on mission alignment, policy, or law.
	An **"other" customer** is the additional audiences who are using the NLM Offering.
NLM Offering	An external-facing (non-NLM) NLM product, service, and/or research program offered to satisfy a want or need of an existing or target user constituency.
Offering Description	A brief description of the product/service provided to **Customers**.
Offering Name	The full name of the **Offering** without information truncated by acronyms.
Offering Name (Short)	"Brand name," the name used to take the **Offering** to market. If no **Offering Name (Short)**, use **Offering Name**.
Offering Sponsor Name	Refers to the person (usually a senior leader affiliated with the **NLM Offering's** organizational owner) who allocates fiscal resources to support an **Offering** and sets it in the NLM strategic context.
Offering Owner Name	Refers to the primary point of contact for an **NLM Offering,** the person with hands-on expertise in what it does, who it reaches, and how it works. The Offering Owner is involved with the **Offering** at the tactical/operational level where the decisions about managing and maintaining the **Offering** are made.
NLM Organization	The group of persons organized within NLM with responsibility to deliver a specific **NLM Offering**.
NLM Strategic Plan 2017	NLM planning document outlining the organization's vision, goals, objectives, and initiatives for the period 2017-2027.
NLM Strategic Plan 2017 Goal	The identifier and descriptive name (*e.g.*, Goal 1 - Accelerate discovery and advance health through data-driven research) of one of the three strategic goals of the **NLM Strategic Plan 2017-2027**. The Goal Name is listed in the ESM Software Suite.
NLM Strategic Plan 2017 Objective	The identifier and descriptive name (*e.g.*, 1.1 - Connect the resources of a digital research enterprise) of one of the 12 objectives under one of the three goals of the **NLM Strategic Plan 2017-2027**. The Objective Name is listed in the ESM Software Suite.
NLM Strategic Plan 2017 Initiative	The identifier and descriptive name (*e.g.*, 1.1a - Assessment of MeSH and Auto-Indexing) of an activity which is being conducted to implement the **NLM Strategic Plan 2017-2027**. The Initiative Name is listed in the ESM Software Suite.
NLM Strategic Project	The name of an activity that is being conducted to implement the NLM Strategic Plan 2017-2027. The Strategic Project name is **not** listed in the ESM Software Suite.
Primary Legislative Authorization/Mandate	A command or authorization for NLM to act in a particular way, such as to deliver certain **Offerings** (*i.e.*, products and services).
	The primary source of NLM's mandate or requirement to provide a specific **Offering**.
	Authorization by Federal Statute is legislation that permits a Federal agency to engage in an activity (*e.g.*, establish an organizational unit and provide a program or service) but does not necessarily provide information on how the agency is to implement the authority.

Primary Legislative Authorization/Mandate Type	**Active Interagency Agreement**: in addition to the regulations affecting NLM/NIH directly, other regulations may affect NLM indirectly when NLM partners with other agencies or collaborators via Interagency Agreement (IAA), Memorandum of Understanding (MOU), or informal collaboration agreement.
	Executive Order, Memorandum, or Departmental (or Agency/NLM) Policy, Plan, or Guidance: published by the White House, a Federal agency (*e.g.*, NIH), or department (*e.g.*, HHS) -- could express "expectations" or actually mandate "requirements" from Federal statutes, provide detailed information on the implementation of policy, and could either address direct agency action or "customer" (*e.g.*, grantees) behavior.
	A **Mandate by Federal Statute** is legislation that requires a Federal agency to engage in an activity.
Mandate Reference	The primary reference citation for the authorizing source legislation, policy, or regulation obligating NLM to provide resources and support for an **Offering** or group of **Offerings**.
Resource	A productive factor (*i.e.*, input) required to deliver an **NLM Offering** to its **Customers**.
Resource Name	Short name for the **Resource** that contributes to the delivery of an **Offering**.
Resource Type	The kind of **Resource** that contributes to the delivery of an **Offering**.
	Business: Person or people who perform manual processes that are required to deliver an Offering. Business Resources are often used in combination with **Technical** and **Data Resources** and either indirectly or directly support **Offerings**. Examples include management, outreach, training, customer service, and marketing. In addition, **Business Resources** also includes research that results in new approaches or scientific methods. However, **Business Resources** exclude research that results in a data asset. Other exclusions are software, hardware, or technical components, and development or curation activities to produce data assets. Business activities that build/update technologies fall under the **Technical Resource**; business activities that contribute directly to the creation of a **Data Resource** fall under **Data Resources**.
	Data: The data asset (*i.e.*, data set) and the person or people who produce, maintain, curate, and/or divest of data assets. **Offerings** often leverage **Data Resources**, and a **Data Resource** may also be provided as an **Offering**. Processes included within **Data Resource** include production, curation, quality assurance, and content development.
	External: A critical input to an **NLM Offering** that is obtained from a provider(s) external to NLM without cost to NLM. Without this contribution, offering delivery would be significantly impacted. **External Resources** are generated by other agencies (e.g., NIH, FDA) or institutions (INSDC) and then used to deliver an **NLM Offering**. External organizations such as contractors are NOT considered external resources; contractors are usually contracted to perform activities supporting business, data, or technical resources.

	Technical: A set of tangible assets supporting the technology needed to deliver an **Offering**. **Technical Resources** include mobile/web/desktop (developed by NLM teams)/cloud/data applications. For costing purposes, **Technical Resources** are supported by the combination of processes and functions of software, hardware, networks, telecommunications and electronics as well as facilities and equipment. Underpinning cost variables include: software development, integration and maintenance; hardware, networking and software procurement, integration, management and maintenance; security and compliance policies enforcement.
Resource Scope	Designation of the span of support associated with the **Resource**.
	NLM-wide: Indicates that the resource is available to and used across the enterprise (*i.e.*, multiple Divisions and Offices).
	Division-Specific: Indicates that the resource is available to, managed by, and used only by one Division for one or more Offerings.
	Offering-Specific: Indicates that the resource is developed for use by only one Offering and managed by the Division that owns the Offering.
	A value of **N/A** is applicable only for external resources.

Offering Basic Information and Mandates

Please limit Offering Description to 250 characters including Offering Name and spelling out acronyms.

Offerings			
Research Grants	Resource Grants	Workforce Development Grants	SBIR/STTR Program
EP	EP	EP	EP
Research Grants	Resource Grants	Workforce Development Grants	SBIR/STTR Program
The NLM Extramural Grant Program provides public funds to researchers and scientists to pursue research in biomedical informatics and data science. Grants are available for fundamental and applied research in biomedical informatics and data science.	Resource grants are designed to improve the dissemination, management and use of biomedical knowledge. Resource grants support the development and deployment of knowledge management tools, resources, and services that address identified, unmet needs for a broad audience.	To assure an adequate national pool of researchers in biomedical informatics and data science, training is offered through formal institutional programs, individual fellowships, and career transition awards to help informatics trainees make the transition to a successful independent research career.	Small Business Innovation Research (SBIR) and Small Business Technology Transfer Research (STTR) grants are made to U.S. small businesses that seek to undertake biomedical informatics or data science research and development leading to commercialization.

Offerings that can be associated with 2017 Strategic Initiatives

Click on field name to see the definition.
Mark an "X" ONLY beside the Initiative names that your offering is aligned to.
Your offerings will be automatically aligned to Goal and Objective which the selected Initiative is aligned to.
Goals/Objectives listed here are for Initiatives grouping only.
You may not mark an "X" beside the Goal or Objective names.

		Offerings			
		Research Grants	Resource Grants	Workforce Development Grants	SBIR/STTR Program
	1.1a - Assessment of MeSH and Auto-Indexing				
	1.1b - MEDLINE 2022				
	1.1c - NLM Portfolio Assessment by MITRE				
	1.1d - DATaset Metadata Model (DATMM) Initiative				
	1.1e - CDE Repository Study				
	1.1f - Link articles to associated data sets				
Objective 1.2 - Advance research and development in biomedical informatics and data science					
	1.2a - Blue Ribbon Panel Review of NLM Intramural Research Program				
	1.2b - NLM-NSF MOU Innovative Mathematical, Statistical, and Computational Approaches to Biomedical Data Science	X			
	1.2c - FOA on at-scale curation approaches	X			
	1.2d - Data Science & Open Science Workshop				
	1.2e - Expand funding for extramural research to support new biomedical data-science initiatives (RPG and SBIR)	X			X
	1.2f - Expand collaboration with other ICs and agencies on data science oriented FOAs	X		X	
	1.2g - Expand funding for intramural research				
	1.2h - Hire NLM-wide scientific director				
	1.2i - Hire more intramural investigators				
	1.2l - Persistent unique IDs w/in NLM systems 1.2l Persistent unique IDs w/in NLM systems				
	1.2m - BMIC criteria for data repositories				
	1.2n - OSTP criteria for data repositories OSTP data management plan guidance				
Objective 1.3 - Foster open science policies and practices					
Objective 1.4 - Create a sustainable, institutional, physical, and computational infrastructure					
	1.4a - TOXNet platform migration				
	1.4b1 - IT Assessment - Team 1				
	1.4b2 - IT Assessment - Team 2				
	1.4b3 - IT Assessment - Team 3				
	1.4b4 - IT Assessment - Team 4				
	1.4b5 - IT Assessment - Team 5				
	1.4f - Assessment of Trans-NLM Central Functions				
	1.4g - Project Management for Implementation Initiative				
	1.4h - Workspace Initiative-Redesign First Floor of Building 38				
	1.4i - NLM Strategic Plan Communication (internal)				
	1.4j - Data Center Reliability Project				
	1.4k - NAS Study on Forecasting Costs of Data Preservation and Management				
	1.4l - Migrate high availability resources to the cloud				
Goal 2 - Reach more people in more ways through enhanced dissemination and engagement pathways					
Objective 2.1 - Know NLM users and engage with persistence					
	2.1a - Outreach planning		X		
	2.1b - Assessment of Tools used for NLM Resource Evaluation				
	2.1c - Assessment of Comparative Web Metrics				
	2.1d - User Experience / User Development Initiative				
	2.1e - External Communications Plans & Information Resources				
	2.1f - Informatics Professionals Outreach, Training and Development			X	
Objective 2.2 - Foster distinctiveness of NLM as a reliable, trustable source of health information and biomedical data					
	2.2a - Branding of NLM				
Objective 2.3 - Support research in biomedical and health information access methods and information dissemination strategies					
	2.3a - Expand support for research grants that address user needs through the Personal Health Libraries FOA	X			
	2.3b - Increase support for G08 Resource Grants		X		
	2.3c - Increase support for G08 resource grants by expanding funding to one FOA per year		X		
	2.3d - Support scholarly works G13 grants relating to interests of primary NLM audiences		X		
Objective 2.4 - Enhance information delivery					
	2.4a - Support NN/LM activities to enhance understanding of data science and advanced data management		X		
	2.4b - Customer Experience IT Assessment				
Goal 3 - Build a workforce for data-driven research and health					
Objective 3.1 - Expand and enhance research training for biomedical informatics and data science					
	3.1a - Data Science Core Skills Analysis				
	3.1b - Expand extramural training grant support for predoctoral biomedical data science (Ts)			X	
	3.1c - Increase funding for postdoctoral fellowships in data science for mid-career researchers (Fs)			X	
	3.1d - Increase funding for career transition awards in biomedical data science (Ks)			X	
Objective 3.2 - Assure data science and open science proficiency					
	3.2a - Report on State of Data Science Training				
	3.2b1 - Reproducibility for Intramural Scientists Workshop				
	3.2b2 - Second Reproducibility for Intramural Scientists Workshop				
	3.2c - Data Science for Librarian Workforce Workshop				
	3.2d - Assessment of extramural staff data science training needs				
	3.2e - Support partnerships to share NLM curriculum materials in biomedical data science with other NIH training programs			X	
	3.2f - NLM Data science assessment/training				
Objective 3.3 - Increase workforce diversity					
	3.3a - Increase support for training partnerships with MSIs			X	
	3.3b - Increase support for partnerships with I-schools			X	
Objective 3.4 - Engage the next generation and promote data literacy					
	3.4b - Expand support for summer research training at NLM training programs for high school and undergraduate students			X	

Strategic Projects that can be associated with Offerings

Click on field name to see the definition.
Enter Project Name and Description. Mark an "X" under the Offering name to indicate the association.
You can leave this sheet blank if you do not have Strategic Projects.

Associated Offerings			
Research Grants	Resource Grants	Workforce Development Grants	SBIR/STTR Program

Strategic Projects that can be associated with 2017 Strategic Goals/Objective

Click on field name to see the definition.
The Strategic Project Name and Description will be automatically populated from the Strategic Projects tab.
Mark an "X" beside the Projects that are aligned to the corresponding goal and objectives. Please see the example.
It is preferable to map a Project to Objectives. If a Project cannot map to an Objective, map to a Goal.
A Strategic Project can align with multiple Objectives.

Subject: RE: STATUS? Tox Resource Follow-up

Here's an update:

Wei's team has been able to restore the ToxNet site back to the previous version, prior to CTVR being seen. I've asked some staff (Bert, Jeanne and Colette) to look around and test the site for any issues.

David

Subject: RE: STATUS? Tox Resource Follow-up

Jerry

Here's some updates on the ones you listed:

AltBib – This is a special subject query that searches PubMed. It is on the list of special queries that RWS/PSD have been charged with reviewing. I've had a short conversation on this with Terry Ahmed, head of RWS, and his group will be reviewing it. The interface for AltBib may change but I don't anticipate that it will be retired.

DART -is being moved to PubMed and we are expecting to put up messages to users this week.

Drug Information Portal – evaluation and decision is in the future.

DSLD – Jeanne has been following up on this with the DSLD working group, who know that NLM will not be supporting this in the future. They may be able to transition to their own system in Nov/Dec, but we're waiting to hear more.

Household Products Database – evaluation and decision is in the future.

As for CTRV, this one is complicated. It is supposed to be a prototype database that shouldn't be available. We been investigating this and have found that it wasn't visible to any users as of Sept 14. We have evidence that it was released, without approval, on at least Sept 14. Wei Ma and her area are now looking into it - both to remove CTRV from the public site and to figure out how it was released. An unhappy former SIS contractor was let go last week, and her last day was Sept 17. We have no direct proof that this is related yet.

David

Subject: FW: STATUS? Tox Resource Follow-up

Hi Jerry,

I am forwarding to BSD as they are handling these resources. More information is coming out soon.

Stacey

I received the question below from NIEHS. I know we will continue to support Altbib. Have we made decisions yet on the other resources listed?

Thanks
Jerry

Subject: STATUS? Tox Resource Follow-up

Hi Jerry,

I was looking through some of the other tox/enviro resources and realized that we didn't cover the status of the following six. Any word on what will happen with them?

AltBib
CTRV
DART
Drug Information Portal
DSLD
Household Products Database

Thank you in advance,
Stephanie

Subject: INPUT NEEDED: NLM Toxicology and Environmental Health Resources
Importance: High

Hi everyone,
Would like your input on NLM resources of value to you, your group, or external stakeholders. This is time sensitive as NLM is proceeding full steam ahead with a complete review of their environmental health/toxicology resources.
As you may know, NLM recently released its new strategic plan and is shifting resources in order to implement that plan. One of the impacts is disbanding of the Specialized Information Services (SIS) branch. As a result, each of their products is going through a review to determine whether NLM will continue to support it. SIS was responsible for numerous toxicology-related products; e.g., ToxNet (https://toxnet.nlm.nih.gov/), the EnviroTox Resource page (https://envirotoxinfo.nlm.nih.gov/), and education resources like Environmental Health Student Portal (https://kidsenvirohealth.nlm.nih.gov/), among many others.
NIEHS leadership is aware and Rick organized a telecon. meeting between Jerry Sheehan, NLM Deputy Director and Charles, Jennifer, and myself to discuss what's happening and how NIEHS can be kept in the loop and provide feedback. The attached document shows the latest status of each of the resources.
We are trying to understand NIEHS staff usage of these resources. Have you ever used ToxNet? Do you use any of the specific resources listed in the attachment? If so, how frequently do you use them? Do you use any through the mobile version? Do you access via an API to download data?
Appreciate receiving your feedback by the end of the week. Please circulate to others within NIEHS as well as grantees that you think may be interested.
Thank you in advance,
Stephanie

Continue - Support As Is	
ChemID Plus	chemical properties/structure
ToxTown	public education on connection between chemicals, environment, human health
WISER	chem/bio/radio agents of concern for emergency responders

Continue - Integrate with Other Resources		
Hazardous Substance Databank (HSDB)	literature-curated toxicology data of >5000 chemicals	Most (not all) content will be integrated into PubChem. Still unclear what content won't be included and where it will go.
LactMed	literature-curated data on drugs/chemicals in breastmilk and potential exposure during feeding	Content moving to NCBI Bookshelf
LiverTox	medication/supplement inducing liver injury	Content likely moving to NCBI Bookshelf. Working with NIDDK to create a stable development

Retiring		
Carcinogenic Potency Database (CPDB)	Archive data (1980-2011) of chronic, long-term animal cancer tests	Available through FTP site
Chemical Carcinogenesis Research Information Service	Archive data (1985-2011) of NCI literature-curated carcinogenicity, mutagenicity, tumor promotion/inhibition tests	Available through FTP site
GeneTox	Archive data (1991-1998) from EPA's mutagenicity testing	Available through FTP site
Environmental Health Student Portal	Resource for teachers and students in grades 6-8 to learn about how environment impacts health	https://kidsenvirohealth.nlm.nih.gov/ PEPH or OSED interest?
ToxLine	Bibliographic database of toxicology-related citations	Most (not all) of the toxicology literature in Toxline is included in PubMed. NLM is still working through how to incorporate the grey toxicology literature into their resources.
ToxMap	Interactive map overlays EPA's TRI and Superfund data along with Census and NCI SEER data	already posted on website to retire in Fall 2019
ToxNet	Federated search portal to approx. 16 chemical and environmental health databases	

External Resources Resources developed by external groups that NLM was either solely hosting or providing a secondary source to access the data.		
Comparative Toxicogenomics Database (CTD)	NCSU-owned manually curated data on chemical-gene-disease relationships	Search direct from CTD website
HazMap	Literature-curated information on adverse effects of workplace exposures to chemical/biological agents.	Still in review. Discussions underway to transition to DOE, who is a heavy user of data for occupational health claims.
Integrated Risk Information Service (IRIS)	EPA's hazard identification and dose-response risk assessment information	Search direct from EPA website
Integrative Toxicity Estimates for Risk (ITER)	TERA-developed content provides comparisons of international risk assessment information	Status unclear
ToxTutor	Online tutorials on basic toxicology principles and concepts	Discussions underway to transition back to SOT

Review in Process or Unknown	
AltBib	Gateway to resources for alternatives to the use of live vertebrates in testing
Chemical Hazards Emergency Medical Management (CHEMM) ***and*** **Radiation Emergency Medical Management (REMM)**	CHEMM = chemical emergency information and REMM = radiation information Review in Process.
Clinical Toxicology Reference Values (CTRV)	Provides numerical data on normal/therapeutic, toxic, and lethal levels of various exposures measured in blood, plasma, serum, urine, and tissue
Developmental and Reproductive Toxicology Database (DART)	Bibliographic database of 400,000 references to teratology and other developmental/reproductive tox literature.
Dietary Supplements Label Database (DSLD)	Ingredients, health claims, manufacturer information for supplements
Drug Information Portal	Drug information including names, descriptions, labels, and drug categories
Household Products Database	Safety and health information for products used around the home

Attachments: NLM Announcements

Hi Jody,
The message was sent to the Gov Delivery email list **NLM Announcements** – See attached.

I see are 14,774 subscribers that are subscribed to NLM Announcements.
Of that list I see 61 subscribers that have nlm in their email address.
I can send you that list if you like.

Additional details about all the NLM Email lists can be found on this page
https://www.nlm.nih.gov/listserv/emaillists.html

Subject: RE: Will we be putting out an announcement like this?

Regarding the first question, while Roger created the bulletin and left it in draft form, I hit the final send. I used the "NLM News Announcement" topic.
I just checked and you are not a Gov Delivery administrator on this account though Diane is. You also are not subscribed to the topic "NLM News Announcements".

I can add you at either level – as an admin I can set it up so you will receive notifications when an email is sent out. Or as a subscriber to the topic, of course, you will receive an email.

Let me know which you prefer,

Siobhan

2. **SAVE THE DATE: Preventing and Addressing Harassment in the Workplace, October 29, 2019, 2pm – 3:30pm, Lister Hill Auditorium. The NIH Civil Program will be presenting information about Preventing and Addressing Harassment in the Workplace and the Personal Relationship Policy Statement. There will be time for Q&A and Civil Specialists will be available to meet with staff to personally discuss any concerns they may have.**
3. **The NIH has launched new mandatory annual Anti-Harassment training for all staff – Federal employees, contractors, and trainees, complete by November15, 2019. This new online training is one of several measures to address and eliminate harassment in our work environment. To take the training, visit the Office of Equity, Diversity, and Inclusion's website. Recommended browsers are Chrome or IE.**

October 3, 2019

AFP(Kathel)

- Kathel Dunn and the Associates will attend the Mid-Atlantic Chapter of MLA's annual meeting in Durham, NC October 5-7, 2019. Kathel Dunn will participate in a resume review; the Associate Fellows will connect with mid-Atlantic colleagues.

LO (Joyce and Jennifer)

- The PSD Chief screening interviews have been completed. Four candidates have been invited and will be coming to NLM for full day interviews on October 7, 8, 21, and 22.

TSD (Jennifer)

- Jennifer Gilbert is attending the Lyrasis Member Summit in Chicago, IL, October 3-4. With the merger of Lyrasis and DuraSpace there is now one Annual Member Summit for the two organizations. Jennifer is attending as the NLM representative to the Fedora Leaders Group. Also, NLM is a Lyrasis Leaders Circle member.

BSD (David)

- MMS held overview presentations about former SIS products for BSD staff. David Hale provide information on Pillbox and Data Discovery, Bert Hakkinen and Evan Bolton (NCBI) presented information on HSDB and the HSDB content in PubChem, and Meng Cheng provided information on ChemIDplus. Thank you to Sue von Braunsberg for organizing the event and to David, Bert, Evan and Meng for their presentations.
- On September 26, NLM, Censeo Consulting Group, and Sapient kicked off a seven-month usability study for the NIH Common Data Elements (CDE) Repository. Censeo and Sapient will analyze user needs regarding CDEs and the CDE Repository, conduct usability testing, review the technical infrastructure, and make recommendations to NLM for the future of the repository. Dianne Babski (ADLO), Patrick McLaughlin (BSD), Rex Robison (BSD), Beth Weston (TSD), and Robin Taylor (BSD) attended.
- The 2020 MeSH Headings are now available in the MeSH Browser (https://meshb.nlm.nih.gov/search). Use the MeSH 2002 tab to use this data. The MeSH

Browser always offers access to two years of MeSH vocabulary. Sometime in early December, the default year will change to 2020 MeSH and the alternate link to the 2019 MeSH.

- On September 24, the BSD Sunset Team published a Technical Bulletin article was published, announcing that the ToxNet Website will be retired on December 16, 2019. (https://www.nlm.nih.gov/pubs/techbull/so19/so19_toxnet_discontinued.html) Some of the ToxNet databases are being retired, while others are being merged with PubMed, BookShelf or PubChem.
- NLM Technical Bulletin Update: MMS was providing content/editing support to OET through September as the NLM Technical Bulletin transitioned from BSD to OET this summer. Starting in October, the MMS role moves from direct editing work to providing support for answering questions about Technical Bulletin work.

HMD (Jeff)

- Congratulations to:
    - everyone involved in the achievement of the new *Profiles in Science* site, now live at https://profiles.nlm.nih.gov/ As Rebecca Warlow helpfully reported via email earlier this week, the new Profiles in Science is the culmination of two and half years' collaboration by a team from HMD, OCCS, TSD, and LHC. The new Profiles site is a great example of NLM cooperation that benefits our users by leveraging and expanding the functionality of the existing NLM Digital Collections platform. All of the public digitized resources in Profiles in Science are available in Digital Collections, where you can find the content under the Genre: Archival Materials facet, and it can be searched with all other content in Digital Collections. As part of this project, the software ArchivesSpace and Spotlight were implemented to showcase the curated content in Profiles. The resources are managed in Digital Collections and made dynamically available to Spotlight over the IIIF API, a protocol that can enable richer access to the images. As Rebecca reported, new features in Profiles in Science will be developed in the coming months, and the team welcomes feedback jointly to Rebecca and Christie Moffatt.
    - everyone who contributed to the success of week's installation of the two new, evergreen banners at the entryway of the History of Medicine Division Reading Room. They look fantastic, as does the associated, curated informational material which will shortly be available at the HMD reference desk. Both testify wonderfully to our stewardship of NLM's historical collections, to the depth and breadth of NLM's collections overall, and to the experience and expertise which each and every one of us contributes every day to informing our patrons who visit us to use these collections for their research.
    - Steve Greenberg on the publication of his article "What Really Happened... Mostly," in the Fall 2019 issue of "The Watermark," the quarterly publication of Archivists and Librarians in the History of the Health Sciences/Medical Museums Association. The article discusses the restoration work of filmmaker Peter Jackson with original First World War movie footage in the Imperial War Museum, and its implication for curators and researchers. The article is available on page 12 of the issue.
- And thanks to:
    - Erika Mills and Ginny Roth for offering LO Division Chiefs and Deputies a very informative and enjoyable and preview tour of their collaboration in co-curating the new special display in the HMD Reading Room, *World Health Organization: Picturing Health For All*, and to both of them also for preparing their associated presentation at

the October 11 Division Chiefs/Section Heads meeting. And look for their blog post later today on *Circulating Now*.

- the *Journal of the Medical Library Association*—and especially to Steve Greenberg, editor of its regular *History Matters* column, as well as to Katherine Akers, JMLA editor, and Susan C. T. Talmage, JMLA managing editor—for publishing in its new October issue From Postcard to Book Cover: Illustrating Connections between Medical History and Digital Humanities, by E. Thomas Ewing, Katherine Randall, and Jeffrey S. Reznick, and featuring the latest chapter in the impactful partnership between the NLM and the NEH.

OET (Amanda)

- Last week, Dan Gerendasy represented NLM at the H3Africa conference in Accra, Ghana where he hosted or presented the following workshops for attendees: Writing to Publish, Mock Reviewer Orientation, Media Engagement, and Ethics of Scientific Writing.
- On Tuesday, Aimee Gogan and Amanda Wilson met with Cochrane to discuss opportunities for collaboration with Cochrane Crowd for NNLM's crowdsourcing and citizen science activities.
- The Request for Information "Evolving the National Network of Libraries of Medicine (UG4)" was released on Tuesday. The comment period closes December 2, 2019. Mike Davidson is the NLM contact for the initiative.
- This week OET assumed management of the NLM Outreach Evaluation and Reporting System (OERS). Thanks to Maria Collins for developing the system and leading us through the transition. Renee Bougard, OET, is the new product owner for OERS.

PSD (Stacey)

- The DOCLINE Team is pleased to announce that DOCLINE 6.2 was released on October 1st . V6.2 is the 16th release since system went live in March and features the much-missed ability to place multiple requests at one time, using PMIDs.
    - The PMID request "Success!" page was updated to include more information about the requested material; and now also includes: Borrowing Library, Patron Name (if input by borrower), date/time requests were placed, and submitting user. The release adds a dozen further updates to the system, including enhancements to Manual Ordering, button labels to improve clarity, Journal Search Results, User messages, and links to LocatorPlus.
    - User feedback about the release was swift and appreciative!
- Starting October 2nd, the Main Reading Room began filling requests following an e-First policy. This means if the item requested is available electronically, the print copy will not be pulled from the stacks. The patrons will be instructed how to obtain articles online. This applies mostly to journals. Exceptions to this policy would include: (cover page needed, table of contents needed (as they are often in html not PDF) or the patron needs ads from a certain time period. These will be provided on a case by case basis.
- Siobhan Champ-Blackwell will be co-presenting at two workshops at the Midwest Chapter/MLA Annual meeting in Milwaukee, WI on Oct 5: “Libraries as a Disaster Recovery Resource: How to Make a Difference” and “Libraries as a Disaster Recovery Resource: Take Action”.
- Colette Hochstein participated in the TOXNET to NCBI Databases Integration Team (Evgeny Kireev, Evan Bolton, Stacy Lathrop, Jeff Beck (NCBI); Jeanne Goshorn, David Gillikin, Bert Hakkinen, (BSD)), which is working to integrate content from TOXNET databases into NCBI products to make its data more findable, accessible, interoperable, and re-usable for data science discovery. This approach will leverage NCBI's data processing and delivery pipeline to improve chemical searching and chemical query expansion algorithms.

- Social Media: Stacy Coppess and Stephanie Morrison met with Jody Nurik (OCPL) and her team to get feedback on an upcoming text messaging campaign and ideas for expanding MedlinePlus social media.
- Stephanie Morrison, Sabrina Springer, and Laura Bartlett met with Dr. Dina Demner Fushman (LHNCBC) and her research team to make plans for a data science research collaboration between their team and MedlinePlus. They will be using natural language processing tools and approaches to help MedlinePlus create consumer-level content and keep existing content up-to-date.
- Laura Bartlett, Michael Honch, and Stephanie Morrison attended a meeting with CommunicateHealth to get an update on the ongoing health literacy assessment project.
- HIPU welcomed Laura Bartlett (LO/OET) on a 120-day detail. Laura will serve as a special project lead for HIPU. Specifically, she will lead the data science research collaborations and other special projects related to user needs assessments, evaluation, etc. Laura will also be helping with the evaluation and transition of Genetics Home Reference, HealthReach, and potentially other NLM products into MedlinePlus.
- Ron Gordner reviewed several search strategies for topic areas on DIMRC resources.
- Fifteen new medical tests are now available in MedlinePlus
  - Lactate Dehydrogenase (LDH) Test
  - Lactate Dehydrogenase (LDH) Isoenzymes Test
  - Ammonia Levels
  - Prolactin Levels
  - Ceruloplasmin Test
  - Natriuretic Peptide Tests (BNP, NT-proBNP)
  - Parathyroid Hormone (PTH) Test
  - Lactic Acid Test
  - 17-Hydroxyprogesterone
  - Smooth Muscle Antibody (SMA) Test
  - Cord Blood Testing and Banking
  - Comprehensive Metabolic Panel (CMP)
  - Adrenocorticotropic Hormone (ACTH)
  - Liver Function Tests
  - Creatinine Test
- PCMS staff worked with the NIH Office of Research Facilities to repair the dehumidification system and bring it back online to lower the relative humidity and inhibit further mold growth. The portable dehumidifiers were removed on September 27th. Unfortunately, the relative humidity has risen over the past week and more repairs to the main dehumidification system are needed. Staff are working to bring back the portable dehumidifiers. A last minute, end of year contract was signed to remediate the mold in the collection. It is anticipated work will begin in the next week.

The following is the list we last discussed in August. If you have a more up to date document you would like to review during the meeting please. Let Bryanne know.

	Offering Name	Notes re: Status
1	Disaster Information Mgt Research Center (DIMRC) website	Joyce and Stacey will meet to discuss how to narrow the focus of Disaster program and create a brie proposed focus and present to Patti.
2	Chemical Hazards Emergency Medical Management (CHEMM)	
3	Radiation Emergency Medical Mgt. (REMM)	
4	Wireless Information System for Emergency Responders (WISER)	
5	NIH Disaster Research Response Program (DR2)	
6	Disaster Lit: Database for Disaster Medicine and Public Health	
7	ChemIDplus	Evaluate – David G will include with other Tox Products, and work closely with OCCS given technol required to rebuild? Data needed to make decision (no documentation; knowledgeable contractor Can we get the product information sheet with the product dependencies? Need to determine wh systems.
8	Data Discovery	Treat as a project not a product. David will manage with David Hale. Funding has been provided o funds); not in BSD budget. David G will ask David H for a report.
9	Dietary Supplement Ingredient Database	Transfer to another organization or sunset; **Question**: Allowed to archive or not? Jeanne will conti announcement has been published in the Technical Bulletin about the transfer.
10	Dietary Supplement Label Database	
11	Household Products Database	Review: If this goes away, what are the implications? Jeanne will work with Collette to complete by responsible for Household Products? Bert is the current COR (Lucie Chen had been the COR previc the ChemTox suite. David G: it will go to the end of the review list. Wei: no known IT vulnerability servers – so if the server goes down, it would affect Household Products Database.
12	LiverTox	No review needed. Signed agreement with Bookshelf; NIDDK will manage; LO will no longer be re
13	Pillbox	Transfer to another organization or sunset; Archive data set. David (or Jeanne) will work with David Hale to move forward. Sunset by Dec 15th. David: commur about Pillbox sunsetting. Joyce: David H will write a two-page document to Joyce about the continu
14	Tox Town	Review: If this goes away, what are the implications? Amanda will work with Alla to complete by D
15	Tox Tutor	Review: If this goes away, what are the implications? Amanda will work with Alla to complete by D

Subject: Files for tomorrow
Attachments: NLM agenda 10-7.docx, NLM Updates 10-7.xlsx

Hi Joyce,

I just realized that I'm not sure if you generally use your computer for the WebEx for these meetings. I'll bring my FMP laptop, but I'm not sure if I can project from that so I'm attaching the files for you to this email.

There is an agenda and then an Excel file that we'll be updating. I'll see you tomorrow.

Thanks,
Bryanne

AGENDA 10/7:

Review the status of transitioning SIS products

- What is the current plan (dates and activities)?
- What assistance is needed/requested?
- Does the team need a decision to move forward?
- Do team members need to coordinate on some aspect of the plan (technology, communication, research)?

	Offering Name	Notes re: Status
1	Disaster Information Mgt Research Center (DIMRC) website	Joyce and Stacey will meet to discuss how to narrow the focus of Disaster program and create a brief document by to describe proposed focus and present to Patti.
2	Chemical Hazards Emergency Medical Management (CHEMM)	
3	Radiation Emergency Medical Mgt. (REMM)	
4	Wireless Information System for Emergency Responders (WISER)	
5	NIH Disaster Research Response Program (DR2)	
6	Disaster Lit: Database for Disaster Medicine and Public Health	
7	ChemIDplus	Evaluate – David G will include with other Tox Products, and work closely with OCCS given technology issues. What would be required to rebuild? Data needed to make decision (no documentation; knowledgeable contractor re-assigned; no longer available). Can we get the product information sheet with the product dependencies? Need to determine which contracts cover which systems. **UPDATE: A lot of issues being identified by OCCS. Huge cost implications for Oracle database just to keep going. Probably need to support until PubChem is the full presentation system (FY20 goal). Long term, costs will continue to increase (maintain Oracle and build new systm to transfer to differnt database and platform)**
8	Data Discovery	Treat as a project not a product. David will manage with David Hale. Funding has been provided on a year-to-year basis (additional funds); not in BSD budget. David G will ask David H for a report. **UPDATE: Project started to provide product information and usage data. Also testing how this product could support NCBI codeathons; working with Allissa Dillman (NCBI) to see if this is useful for the data display, visualization and API functions.**
9	Dietary Supplement Ingredient Database	Transfer to another organization or sunset; **Question**: Allowed to archive or not? Jeanne will continue to move forward. An announcement has been published in the Technical Bulletin about the transfer.
10	Dietary Supplement Label Database	
11	Household Products Database	Review: If this goes away, what are the implications? Jeanne will work with Collette to complete by Dec 15th. David G: who is responsible for Household Products? Bert is the current COR (Lucie Chen had been the COR previously). Joyce: it needs to go into the ChemTox suite. David G: it will go to the end of the review list. Wei: no known IT vulnerability. Is it attached to the TOXNET servers – so if the server goes down, it would affect Household
12	LiverTox	No review needed. Signed agreement with Bookshelf; NIDDK will manage; LO will no longer be responsible.
13	Pillbox	Transfer to another organization or sunset; Archive data set. David (or Jeanne) will work with David Hale to move forward. Sunset by Dec 15th. David: communication needs to go out to staff about Pillbox sunsetting. Joyce: David H will write a two-page document to Joyce about the continuation of Pillbox. **UPDATE: Hale working on 2 page summary for Backus; need a deadline for this. Still need the communciation to go out to staff before sunset data and expectation can be set.**
14	Tox Town	Review: If this goes away, what are the implications? Amanda will work with Alla to complete by Dec 15th. **UPDATE: Questions from NIEHS sent to OET. BSD now has OET POC to send questions to.**
15	Tox Tutor	Review: If this goes away, what are the implications? Amanda will work with Alla to complete by Dec 15th. **UPDATE: Questions from NIEHS sent to OET. BSD now has OET POC to send questions to.**
16	HDSB	**UPDATE: Major Security issue/violations found - access violates HHS/NIH security regulations. No PIV card access required. OCCS does not have current resources to launch full investigation yet. Workflow - knowledge of the full HSDB workflow is gone when staff left last fall. David developing summary about HSDB issues**
17	Drug Information Portal	**UPDATE: Domino effect on this system based on ToxNet sunset. Users will be presented with broken links. Not known if OCCS has resources to fix issues to retain site.**

October 2019

FRONT

Accelerating Discovery & Data-Powered Health

GOAL 1: Accelerate discovery and advance health by providing the tools for data-driven research

Objective 1.1: Connect the resources of a digital research enterpriise
Objective 1.2: Advance R&D biomedical informatics and data science
Objective 1.3: Foster open science policies and practices
Objective 1.4: Create a sustainable institutional, physical, and computational infrastructure.

GOAL 2: Reach more people in more ways through enhanced dissemination and engagement pathways

Objective 2.1: Know NLM users and engage with persistence
Objective 2.2: Foster distinctiveness of NLM as a reliable, trustable source of health information and biomedical data
Objective 2.3: Support research in biomedical and health information access methods and information dissemination strategies
Objective 2.4: Enhance information delivery

GOAL 3: Build a workforce for data-driven research and health

Objective 3.1: Expand and enhance research training for biomedical informatics and data science
Objective 3.2: Assure data science and open science proficiency
Objective 3.3: Increase workforce diversity . . .
Objective 3.4: Engage the next generation and promote data literacy

NATIONAL LIBRARY
OF

NLM envisions three pillars as the foundation for such a platform: 1. Innovate, create, and maintain a sustainable digital ecosystem to keep pace with the data demands of the research enterprise 2. Engage a wide range of audiences to ensure the right information gets delivered to them at the right time. 3. Inspire and empower the data-driven workforce of the future. The NIH has affirmed its dedication to the future of data-powered health.

NLM Strategic Plan Implementation Council

Thursday, September 5, 2019 // 4 - 5 pm
Lindberg Room, Mezzanine, Building 38

Meeting Minutes

Increasing Visibility of the Strategic Plan – Jody Nurik

- Jody Nurik outlined a proposed communications strategy to increase the visibility of the strategic plan and its goals across the Library
    - Phase 1 would focus on strategically placing visuals around the Library with the pillars of the Strategic Plan
        - Idea is that if people want to see how their work connects to the Strategic Plan, they need to be reminded what the Strategic Plan is trying to achieve
    - Phase 2 would be more focused on directly relating the goals and objectives of the plan to activities happening across the Library to accomplish the vision
- Jody presented mock-ups of five different kinds of visual assets, which can be viewed in the presentation slides
    - Signage
    - Posters
    - Screensaver to provide to everyone and have in conference rooms
    - Plexiglass stands – two-sided
        - Should add logo to both sides
    - Business cards – two-sided

Discussion of Communication Strategy – All

- Patti Brennan asked about the green color palette, which might be difficult to read in a dark room
    - Decision was to put the graphics out to the community for feedback
    - General agreement around the room was that the print should be bigger, and we should ensure the graphics are high contrast
- Mike asked whether we envision other communication beyond the signage
    - Will send out a broadcast email announcing that the signage is now around the Library and ask them to think about those goals and how their work relates to them
    - Include that we want to hear from the community about the graphics and ideas they might have around further communications, as well as asking what they need from the Council
- Anatoly Mnev noted that it's great to have this visual communication out, but unless we connect it to the work people are doing around the Library, it may not achieve its maximum impact
    - People need to understand what their day-to-day jobs have to do with the Strategic Plan, so we will need to start an effort mapping activities to strategic goals and objectives

- Mike noted that we have already collected strategic projects in the data call for the NLM Portfolio Analysis
    - Can begin to identify the people working on those projects, and for instance, have a picture of that person with a quote and description of what they're doing and how it relates to strategic plan
    - Can have a generic poster about the Strategic Plan and additional posters about some of the strategic activities
- Anatoly also noted that it would be good to have dashboard with strategic projects, not just those listed in the ESM tool, with rolling updates so people can see the progress of different project
    - Can be available online
    - Mike noted that this was an idea when the Plan originally rolled out, but people haven't done a great job of consistently updated the progress of these projects
        - Anatoly noted that this dashboard and updating in the dashboard could be owned by the people directly working on those projects, rather than managers
- Valerie Schneider noted that some of the work that we do at NLM has aligned with these goals for a long time, so it would be important to show how those longstanding activities connect to the Strategic Plan
    - Patti noted that it's still important for NLM staff to recognize that there is a real shift that is happening in the Library's priorities, even as some day-to-day operations remain the same
    - Might be worthwhile to write a blog post to help NLM staff see what we've done over the years, how your work fits in with what we've done, and how the goals are about consolidating our efforts and driving the Strategic Plan
        - About taking the best strengths of the Library and using them to drive the science of the future

- Anne Altemus suggested that we could take one pillar of the Plan and show some projects that are being done to support the pillar; could have a series of posters around the Library
- Jody suggested creating videos, similar to those made for the Data Science Day, where staff could talk about what data science means to them
    - Could start Town Hall Meetings with these videos
    - Anatoly also suggested promoting certain projects, as they did during Data Science Day, creating videos and posters to post around the Library
        - Jody noted that the posters from Data Science Day have been captured and are on the Data Science wall
    - Anne noted that we can also push video through email
        - Each month, we could pick a pillar and highlight a project that supports it
        - Build a collection of demonstrated expression of the Strategic Plan
    - Mike noted that we'll need to identify who and what to highlight as a Council
        - Council members can bring ideas from their respective Divisions back to the Council

        - Anatoly noted that this doesn't need to be an exhaustive effort to capture everything
        - Showing staff that these are the objectives and goals of the Strategic Plan and here is how the work everyone is doing is being pushed up to support the goals/pillars
    - Rex Shuler noted that the useful thing about the pillars is that you can drill down into finer granularity – underlying the goals are the objectives, underlying the objectives are the strategic projects and initiatives
        - Can continue to drill down to show the work underneath it and the people supporting that work
- Patti suggested to Mike that as they consider the five-year update on the Strategic Plan, they might turn it around into a campaign asking NLM staff where they see themselves in the progress of the Strategic Plan to learn more about people's ideas
- Dan Cho noted that we might incorporate the pillars of the Strategic Plan on the NLM home page
    - Patti suggested going to the homepage and being able to click around to find stories about NLM staff and what they're doing to support the Strategic Plan
    - Anne noted that at the Board of Regents meeting, some of these stories were already highlighted, which can be shared – can call from the reports that were made there
- Patti suggested cleaning up the report that was given to the Board of Regents of all the different accomplishments over the year to share with the community
    - Everything from how many papers in PubMed Central that now have data associated with them to the number of people reached through the Data Science Training Initiative to the number of grant areas we've funded
- Jody noted that we need to make sure we're engaging a broad swath of NLM, so we're not focusing on people who already know a lot about the Plan, but are targeting those who don't so we can get them excited and engaged
    - Patti likes the idea of telling people that because of what they're doing, we're achieving the Strategic Plan – make the Plan more concrete and to recognize their efforts
    - Idea of the visuals is that they'll be around as a constant reminder of what the plan is
- Council members' input on different visual materials
    - People liked the poster, digital signage, and the business cards
    - Not much enthusiasm around the screensaver and the plexiglass sign
    - Anne also suggested creating a pop-up banner for the three pillars to display in Lister Hill and around the Library so that people coming through on tours can see what's going on across the Library

Round Robin Updates – All

- Mike for OSI
    - In April, OSI hosted a workshop where we brought about 15 librarians and iSchool faculty in to identify data science skills that would be useful for librarians working in research-based libraries, beyond data management assistance

        - OSI just finished a draft of the report on the workshop, led by Lisa Federer, and the draft was sent to Elaine Martin at Harvard University, who was the chair of the workshop, for comments; once we incorporate those comments, we'll be circulating the report to other participants
        - Subsets of the participants have been getting together and working on synthesizing and sharing outcomes of the workshop at various meetings
        - The document looks not only at the data science-related skills and services that data librarians should be thinking about, but also how general librarianship skills integrate with those more data-centric considerations
- Patti for OD
    - We are now under a continuing resolution, so we have enough funds to take us up through November 21st
        - Dr. Collins is optimistic that we will be having a budget resolution after that, which will likely be a minibus, so we won't be lumped in with Defense
    - Patti also gave Congressional testimony last week, which had a great response, and she thanked NLM staff for their work to support the testimony
- Dan Cho for MeSH
    - Have teamed up with NCBI taxonomy and have introduced their entire set of data into MeSH – turning all the terms they have into MeSH terms so they are discoverable
        - Set up as SCRs (Supplemental Concept Record)
        - With the inclusion of data related to bacteria, SCR has now grown 7%, and still have other kingdoms to incorporate
        - Supports Objective 1.1 – connecting NLM resources
- Valerie for NCBI
    - MEDLINE2020 group met a few weeks ago to look at the relationship of the gene database and indexing, as well as the progress on GeneRIFs (Gene Reference into Function)
        - Report from Jian Liu and staff on the indexing side who are looking into automating this process
        - Now discussions of programmatically pulling in relationships between genes and literature
    - Making sure that there will be engagement with users
- Rex for OCCS
    - IT assessment teams have been working hard to figure out ways to measure and quantify the accomplishments of NLM products
    - Have run into an impasse with the ways in which offerings have been described because they are no longer technical
        - No longer good alignment between IT assessment and offerings
        - There's a thought that those descriptions can be translated to map the component technologies (e.g. webpages) to offerings, but right now there's a disconnect
- Anne for OCPL

    - Noted that Patti has a talk coming up, which will be a retrospective on how the Library has successfully implemented the strategic plan, at the Charleston Publisher's Conference at the end of October/early November
    - The Tour program will be undergoing enhancements and updates with new information
        - Tara Mowery has had great numbers of people coming through
        - Need to highlight current research projects, people, and the new NLM vision
        - Doing a refresh now and would like thoughts and input on elements of divisions that should be featured
        - Jody noted that as new staff come on, part of their orientation should be a tour
        - Dan added that visitors could be given a business card with the pillars of the strategic plan when they tour
- Marie Gallagher for LHC
    - Have been participating in the IT Assessment Effort
    - Related to the third pillar, Marie got to participate in the Data Science Fundamentals class
        - She noted that in order to utilize the data science software and tools, trainees would need to use their own machines because of restrictions around what software can be downloaded
        - Mike asked Rex whether OCCS can set up machines that have the required data science tools (e.g. Jupyter notebooks) pre-installed for people who want to get training – developer desktops
    - Mike suggested that it would be useful for people who have data science skills that they aren't using for their jobs to put their skills into the Job Jar so they can put those skills to use
        - Right now, people who have ideas for projects can put those projects in, but the reverse isn't true
- Anatoly for NCBI
    - In October, PubMed 2.0 will go live, which will be the beginning of the transition for the whole PubMed, which should be complete by April 2020
        - Right now, PubMed Labs is undergoing rigorous testing to prepare for the transition later this month
- Jody for OCPL
    - Related to goal 2, will have the first trans-NLM social media working group to understand how we can cross-promote messages
        - How we're using social media, what kinds of accounts exist
        - Talk about metrics
    - After Patti's testimony on Wednesday, realized it would be nice to have one central place to go with talking points and updated statistics – now working on this
        - Right now, sources of information are the CJ, the strategic plan, Patti's testimony and FAQs, blogs, and presentations
        - Will then go out and interview people
- Rebecca for HMD

    - HMD opened a new exhibition in the HMD Reading Room on the first floor called *World Health Organization: Picturing Health for All*
        - Features a selection of images from the NLM Prints & Photographs collection of WHO photographs that highlight some of WHO's work in the 20th century
    - Thursday, October 10th have the next in the HMD Lecture with Ted Brown to talk about WHO's declaration from 1978
        - Being held in memory of Dr. James H. Cassedy
        - Will be in LHC Auditorium at 10am
    - Relaunched Pofiles in Science on Monday, profiles.nlm.nih.gov
        - Now integrated with the digital repository and are able to provide images and documents in new ways to people
- Karen Nimerick for LO
    - Had a nice exchange with SIS folks who joined the staff
        - Provided presentations on their respective products
        - HFTB and ToxNet will be integrated with PubChem, PubMed, and Bookshelf
            - Should finish work by end of December
    - DATMM project is making good progress and are working to finalize the data model
- Alicia Ross for EP
    - As of September 24th, awarded $55 million of NLM's funds and $16 million from co-funding
        - 67 new awards, 120 non-competing awards, and 5 supplements
    - Building priorities for FY2020

Subject: RE: SIS/NCBI proposals

Reducing the folks on this exchange..

I think there is a reason this fell apart.. the March proposal was not very specific at all about staff, price, who delivered what, or how it would really be organized. I think it was more along the lines of "give PubChem the SIS staff and contracts and we'll figure out how to make it work". While I don't doubt that Evan will do something with those resources, it is not at all clear to me if 1) he understands the contract structure and what he can or cannot do with it, 2) if LO or NCBI have a clear idea of what they'll get in the end.

So, we have to decide how hands on we want to be on this, and also have a clearer idea what you and we are willing to accept. So, I would suggest that only we 3 have a frank chat before we pull in other people again.

I had thought the last outcome of our discussion was for the group, led by Evan, to come up with an alternative to the March proposal. We had a lot of questions about the proposal. But Florence Chang was here at that point to work on it, of course.

I think we need to get this discussion going again. Shall I schedule?

Subject: RE: SIS/NCBI proposals

Attached is the last proposal I got from Evan Bolton. It was in March 2019.

In the email Evan said that this "had been approved by Florence", but that there was more discussion ongoing and he'd get back to us. I assume that if Florence had been involved in writing it, that you had seen it too.. but maybe not.

Following this was in internal email discussion include Evan, Kim, and I, where I asking about clarification on contracting and personnel.. that is things like is the proposal to use the existing contractors to build some new system? Had the new system been designed? Would the existing contractor be the best to build this system or should it be bid out? Were the SIS staff moving to NCBI? Being 100% detailed to this? What about the contract indexing support? Same questions.. would it be the same people, the same contractors, if the process would be different? If all of this was going to be unified under PubChem, why was David Gillikin running it? Was his role purely administrative or was there some oversight of staff or project?

It sounded like it hadn't been completely worked out.. then discussion seems to have dropped on our side.

Unless Kim or you know more?

Subject: RE: SIS/NCBI proposals

Jim, Kim,
I had thought the outcome of our March 22 meeting is that we would get an alternative proposal to the ones we discussed. David Gillikin met with Evan and he indicated he wasn't working on a new proposal. I think this lost momentum with Florence's retirement, perhaps.

I do think PubChem should be the future of chemical information at NLM, but we may need to discuss what that looks like.

Subject: RE: SIS/NCBI proposals

I appreciate that there is overlap in activities, and also that this suggestion includes a number of changes of direction for both specific staff members and also for the existing contracts. I also know a lot is up in the air about the future of MeSH, it's application to retrieval, and the relative roles of machine data extraction and human curation.. so a lot of fluidity around the whole activity. I wouldn't be surprised if a solution that seemed like a good fit last year or this year or next year might seem like a less good fit in three years as all this develops.. so I think LO, NCBI, LHC, OCCS will need to work together on all this in a flexible, collegial, and probably evolving way.

That said, adopting all or parts of these two proposals does mean we need to agree on some decisions about the scope of contract renewals, and the focus of staff member efforts no matter where they sit. So perhaps the next step is to try and get concrete about that, and map out a timeline over the next year with the milestones that we have to meet in order to move in this direction.

My understanding here, so correct me if I'm wrong, is that you like the overall directions in these proposals, and would like to move ahead with implementation generally, and that we are now only discussing specifics like timing, goals, and staff assignments.

Thanks, Jim. We haven't gotten to the decisions for each individual SIS staff member and matching them with the effort needed for the offerings that will continue. The plan is to have the chem/tox expertise in the same unit as the MeSH chemical expertise and drug info as there will be synergies there. We were, of course, intending to support key offerings that we concur need to continue.

I recommend we continue with the plan to move the SIS staff to LO and OCCS and work to ensure the staff and products are sufficiently supported and work together.

In terms of personnel,

"I do expect that the SIS staff and the SIS content staff and any contractors needed to maintain the information needed going forward will be part of LO, BSD. We'll have to be sure to set up structures to ensure efficient and effective work."

Was certainly the plan developed at the NLM and toward which people have been working the last year.

If those folks, as well as the contract support, will remain in LO, but we will otherwise adopt some of Evan's proposal, then this will, indeed, require regular and careful coordination. That will probably require some face to face discussion, but to start, it might be good to share assumptions. Obviously moving those people into NCBI as Evan suggests, would imply they work 100% on the ToxNet aspects of PubChem. If they remain in LO, would it be under the same assumption of 100% time? If not, then what were your assumptions about the time they would have available for ToxNet aspects of PubChem? That might help set some realistic expectations here.

Joyce,

Here are some quick answers to your questions.

Evan

--

Re: Proposed Management Structure
This proposal envisions the five personnel from the SIS HSDB/ChemID teams (including Hakkinen, Goshorn, and Hochstein) would be moved into the NCBI Chemistry Data Service Division as opposed to LO. While not explicitly stated, a ToxNet line of business would be created therein to house the HSDB and ChemID data generation projects. This would put ChemID/HSDB teams in lockstep with the PubChem teams and provide a very tight organizational integration of the workflows between the three projects.

RE: Phase 2
It is believed that no matter where HSDB/ChemID ends up one or both of the workflow management software packages will need to be 'reimagined'. The proposal would simplify the workflow. If ChemID/HSDB are merged into the NCBI Chemistry, NCBI would build this system as a workflow extension to the existing PubChem Upload system.

Re: SAC vs. SRP
Yes, the SAC replaces the SRP. Essentially, the SRP meets twice a year for three days at a time and peer reviews each added/modified record in HSDB (a very slow process involving a lot of prework prior to a meeting). Instead, the SAC would advise HSDB on the prioritization of data sources and data types that should be added to HSDB and help HSDB perfect the content and form needed to expand the utility and impact of the HSDB content. The SAC would be made up of community representatives/stakeholders knowledgeable in their respective fields and in the content, the workflows and the end-user use cases they represent. It would be organized much like any advisory committee with a chair and members. The SAC is envisioned to meet virtually and in person by collocating at key conferences. The exception to this would be the first SAC meeting where the thought is to have a one day meeting at NIH to complete the transition from the SRP and orient the SAC to get it started/oriented on good footing.

David (NIH/NLM) [E] <gillikd@mail.nlm.nih.gov>
Subject: RE: SIS/NCBI proposals

Just took a quick scan of these and am already impressed with the time, effort and thoughtful work that went into making these recommendations.

I have a few initial questions that might be answered by email or in a discussion we could schedule later this month.

The HSDB/PubChem/ChemID integration ends with this recommendation,
"Proposed Management Structure - Having the three project teams in one organization will be optimal."
Since the SIS staff named, Hakkinen, Goshorn, and Hochstein will be based in Library Operations, is LO the "one organization?" What are the "three project teams" envisioned?

In "Phase 2" a system is discussed. Will NCBI build that system? OCCS?

Does the Scientific Advisory Committee (SAC) replace the Scientific Review Panel (SRP). How would the SAC differ and how would it be organized?

I'm sure I'll have more questions after we review these proposals more thoroughly.

These proposals are a terrific step in providing sustained support for chemical information and publications for Books.

Subject: SIS/NCBI proposals

Joyce, Ivor, Florence,

Attached are two proposals from NCBI about the suggested changes to the ToxNet dataflows for the end state after the transition. My understanding is that the authors, Stacy and Evan, have discussed these with Florence and her team, but I don't think we've really talked about this yet in our bigger group of affected divisions.

I think it's important for all of us to look these over, and see if this looks like a promising and reasonable direction to you all. Obviously there are plenty of details to still be worked out, but we didn't want to spend more time on it unless it looked like the direction you all wanted to go.

Jim

Hi all,

It was great to see/meet most of you in person today. I've attached notes from this morning's steering group meeting as well as the updated Products Spreadsheet.

Please let me know if you have any additional comments or updates to this spreadsheet. We will not be meeting next week due to the holiday. Enjoy the long weekend!

Thanks,
Bryanne

Subject: RE: Steering Group

Good morning everyone,

The following is our agenda for Monday. I will be on vacation next week so Bryanne will be facilitating the discussion on Monday.

Review the status of transitioning SIS products

- What is the current plan (dates and activities)?
- What assistance is needed/requested?
- Does the team need a decision to move forward?
- Do team members need to coordinate on some aspect of the plan (technology, communication, research)?

The following is the list we last discussed in August. If you have a more up to date document you would like to review during the meeting please. Let Bryanne know.

	Offering Name	Notes re: Status
1	Disaster Information Mgt Research Center (DIMRC) website	Joyce and Stacey will meet to discuss how to narrow the focus of Disaster program and create a brie proposed focus and present to Patti.
2	Chemical Hazards Emergency Medical Management (CHEMM)	
3	Radiation Emergency Medical Mgt. (REMM)	
4	Wireless Information System for Emergency Responders (WISER)	
5	NIH Disaster Research Response Program (DR2)	
6	Disaster Lit: Database for Disaster Medicine and Public Health	
7	ChemIDplus	Evaluate – David G will include with other Tox Products, and work closely with OCCS given technol required to rebuild? Data needed to make decision (no documentation; knowledgeable contractor Can we get the product information sheet with the product dependencies? Need to determine wh systems.
8	Data Discovery	Treat as a project not a product. David will manage with David Hale. Funding has been provided o funds); not in BSD budget. David G will ask David H for a report.
9	Dietary Supplement Ingredient Database	Transfer to another organization or sunset; **Question**: Allowed to archive or not? Jeanne will conti announcement has been published in the Technical Bulletin about the transfer.
10	Dietary Supplement Label Database	
11	Household Products Database	Review: If this goes away, what are the implications? Jeanne will work with Collette to complete by responsible for Household Products? Bert is the current COR (Lucie Chen had been the COR previo the ChemTox suite. David G: it will go to the end of the review list. Wei: no known IT vulnerability servers – so if the server goes down, it would affect Household Products Database.
12	LiverTox	No review needed. Signed agreement with Bookshelf; NIDDK will manage; LO will no longer be re
13	Pillbox	Transfer to another organization or sunset; Archive data set. David (or Jeanne) will work with David Hale to move forward. Sunset by Dec 15th. David: commun about Pillbox sunsetting. Joyce: David H will write a two-page document to Joyce about the continu
14	Tox Town	Review: If this goes away, what are the implications? Amanda will work with Alla to complete by D
15	Tox Tutor	Review: If this goes away, what are the implications? Amanda will work with Alla to complete by D

Thanks,

Carolyn Kurowski

IMPORTANT NOTICE: Please note that this Webex service allows audio and other information sent during the session to be recorded, which may be discoverable in a legal matter. You should inform all meeting attendees prior to recording if you intend to record the meeting.

AGENDA 10/7/2019

Review the status of transitioning SIS products

- What is the current plan (dates and activities)?
- What assistance is needed/requested?
- Does the team need a decision to move forward?
- Do team members need to coordinate on some aspect of the plan (technology, communication, research)?

Participants: Grace (phone), Bryanne, Debbie, Wei, Joyce, Dianne, Stacey, David, Jeanne

Notes:

- Item #1: Wei mentioned that Laura asked her to update American Indian and Arctic Health systems, but she thought those were sunsetting. Grace confirmed that both of these sunsets have been approved and communicated.
    - Grace emailed Laura letting her know her next steps in the sunsetting process and letting her know that she owns the process now that sunsetting has been approved
    - Stacey will also follow-up with Laura
    - This led to a larger conversation around how communications around sunset decisions are made and who is notified. If only the person who initiated is communicated with, this can be problematic (the person could miss the e-mail or may no longer be with the organization). Joyce and Wei to follow-up to discuss automatic communications
    - American Indian and Arctic Health will be sunset December 16th; notices will go up ASAP; no updates will be made to the site; the web team will do the archiving

- Item #2 : David mentioned that the SIS site will need to be sunset and asked who owns this? The PSD web team and Collette will take care of this

- Item #3: We made updates to the Product spreadsheet
    - See spreadsheet for specific updates
    - In addition, David requested talking points for staff about why we are sunsetting things and how to help them understand the new direction and where resources will go instead.

- There will be no meeting next week due to the holiday on Monday.

	Offering Name	Notes re: Status
1	Disaster Information Mgt Research Center (DIMRC) website	Joyce and Stacey will meet to discuss how to narrow the focus of Disaster program and create a brief document by to describe proposed focus and present to Patti. **UPDATE 10/7:** Action Item: waiting on text from Carolyn. Does she need any input? Carolyn can call Stacey with questions. Text will be around NLM's current focus versus what no longer doing
2	Chemical Hazards Emergency Medical Management (CHEMM)	**UPDATE 10/7: CHEMM is a little up in the air, retaining for right now, might move later. Good for FY20 and have $. Need FY20 date to make decision with HHS--earlier rather than later (November?); believe in NLM's direction to not host CHEMM (but NLM $ in there, linked in WISER app)** Action Item: need timeline of actions and need to make internal decision on direction first
3	Radiation Emergency Medical Mgt. (REMM)	**UPDATE 10/7: REMM is a little up in the air, retaining for right now, might move later. Good for FY20 and have $. Need FY20 date to make decision with HHS--earlier rather than later (November?); Was Florence and Bert; believe in NLM's direction to not host REMM** Action Item: need timeline of actions and need to make internal decision on direction first
4	Wireless Information System for Emergency Responders (WISER)	
5	NIH Disaster Research Response Program	Action Item: need timeline of actions and need to make internal decision on direction first
6	Disaster Lit: Database for Disaster Medicine and Public Health	
7	ChemIDplus	Evaluate – David G will include with other Tox Products, and work closely with OCCS given technology issues. What would be required to rebuild? Data needed to make decision (no documentation; knowledgeable contractor re-assigned; no longer available). Can we get the product information sheet with the product dependencies? Need to determine which contracts cover which systems. **UPDATE 10/7: Issues being identified by OCCS. Huge cost implications for Oracle database just to keep going. Probably need to support until PubChem is the full presentation system (FY20 goal). Long term, costs will continue to increase (maintain Oracle and build new systm to transfer to differnt database and platform).** Next Step: full cost estimate that Wei is developing to keep Oracle going (discuss between OCCS and LO)
8	Data Discovery	Treat as a project not a product. David will manage with David Hale. Funding has been provided on a year-to-year basis (additional funds); not in BSD budget. David G will ask David H for a report by or before February 1. **UPDATE 10/7: Project started to provide product information and usage data. Also testing how this product could support NCBI codeathons; working with Allissa Dillman (NCBI) to see if this is useful for the data display, visualization and API functions.** **Next Step: David H. working on report by February 1, prior to Socrata license expiration in March or April, to deterime if Data Discovery is viable (very manual system), identify technical specs, and cost.**
9	Dietary Supplement Ingredient Database	Transfer to another organization or sunset; **Question**: Allowed to archive or not? Jeanne will continue to move forward. An announcement has been published in the Technical Bulletin about the transfer.
10	Dietary Supplement Label Database	**UPDATE 10/7: waiting for ODS (they were hoping in October/November); then will put**
11	Household Products Database	Review: If this goes away, what are the implications? Jeanne will work with Collette to complete by Dec 15th. David G: who is responsible for Household Products? Bert is the current COR (Lucie Chen had been the COR previously). Joyce: it needs to go into the ChemTox suite. David G: it will go to the end of the review list. Wei: no known IT vulnerability. Is it attached to the TOXNET servers – so if the server goes down, it would affect Household Products Database. **UPDATE 10/7: world in 2020 is different than in 1995, can now get this information on a particular product on the internet (google) and other sources (e.g., doctor's office, etc). Is it worth it? Concerns about maintenance since only has 21,000 products or if formulation changes; not that expensive; should sunset based on the fact that can now get this information in other places but couldn't when this was started; Propose that we sunset; Bert is COR; David needs communication message**
12	LiverTox	No review needed. Signed agreement with Bookshelf; NIDDK will manage; LO will no longer be responsible.
13	Pillbox	Transfer to another organization or sunset; Archive data set. David (or Jeanne) will work with David Hale to move forward. Sunset by Dec 15th. David: communication needs to go out to staff about Pillbox sunsetting. Joyce: David H will write a two-page document to Joyce about the continuation of Pillbox. **UPDATE: Hale working on 2 page summary for Backus; need a deadline for this.** **Next Steps: Still need the communciation to go out to staff before sunset data and expectation can be set.**

14	Tox Town	Review: If this goes away, what are the implications? Amanda will work with Alla to complete by Dec 15th. **UPDATE: Questions from NIEHS sent to OET. BSD now has OET POC to send questions to.**
15	Tox Tutor	Review: If this goes away, what are the implications? Amanda will work with Alla to complete by Dec 15th. **UPDATE: Questions from NIEHS sent to OET. BSD now has OET POC to send questions to.**
16	HSDB	**UPDATE: Potential security issues have been identified and OCCS does not have current resources to launch full investigation. Workflow - knowledge of the full HSDB workflow is gone when staff left last fall.** **Next Steps: David developing summary about HSDB issues; cost exorbitant; will be recommendation to sunset. David will set up meeting with Joyce and Dianne to discuss**
17	Drug Information Portal	**UPDATE: Domino effect on this system based on ToxNet sunset. Users will be presented with broken links. Not known if OCCS has resources to fix issues to retain site.**

David,
Thanks for sending for review. I made some suggestions in the attached version. I think you can start the signatures.

Joyce

Unauthorized Commitment Action/Ratification Request

Date: **October 22, 2019**

From: **David Gillikin, Chief, Bibliographic Services Division/Library Operations**

Through: **Joyce Backus, Associate Director for Library Operations, NLM**

Through: **Daniel Hartinger, Director, Office of Acquisitions, NLM**

To: **Diane Frasier, Head of Contracting Activity, NIH**

Subject: **Request of Unauthorized Commitment Ratification pursuant to FAR 1.602-3, HHSAR 301.602-3, and HHS Acquisition Alert 2017-02.**

The following information is provided by the individual responsible for creating the subject unauthorized commitment to support a request for ratification.

1. **Name, address, telephone number, and email address, of Government official who created the unauthorized commitment.**

   David Gillikin
   National Institutes of Health
   National Library of Medicine
   Library Operations
   Bibliographic Services Division
   8600 Rockville Pike
   4N419 Bldg. 38A
   Bethesda, MD 20894
   301-827-5034

2. **Name, address, telephone number, email address and/or URL (if available) of the vendor.**

   Jay A. Brown, MD, MPH
   6216 Coho Ln NE
   Olympia, WA 98506
   360-628-8569
   brownjay@haz-map.com

3. **Description of goods, services, or equipment acquired:**

   Chemical and toxicological data about hazardous substances were retained on the NLM website Haz-Map after the license for the data expired. The period of time for the retention of the content is August 1, 2019 – December 31, 2019.

   The total amount for the unauthorized commitment is $16,041 ($3,208.20 per month for 5 months).

4. **Description of benefit received by the Government (include / attach a properly executed Inspection Report or Receiving Report (Receipt, Inspection, and Acceptance) issued in accordance with FAR 32.905 (c) .**

   NLM continued to provide the Haz-Map chemical and toxicology information to our end-users and our federal colleagues for a transition period before the Haz-Map site would be retired. This time period would allow users to be notified about the planned retirement of Haz-map, giving them time to identify other federal or commercial resources for this content.

5. **Explanation of how Contractor was selected. If other vendors were contacted, indicate their names and prices quoted (attach separate pages if necessary or document on Quotation Abstract form).**

   The contract with Jay Brown for the Haz-Map data was already in place. The period of performance for the contract ended on July 31, 2019 without the option year being exercised.

6. **Document the basis for determining the price fair and reasonable in accordance with FAR 13.106-3 (a) and/or FAR 15.402. Program staff should consult with contracting officer when addressing this element. (FAR 1.602-3 (c) (4)).**

   The annual contract cost for Haz-Map content is $38,500. The monthly cost is $3,208.20. The cost for the time period of August 1, 2019 – December 31, 2019 is $16,041 for 5 months.

7. **Explain, in detail, how the unauthorized commitment occurred and why normal procurement procedures were not followed (FAR 1.602-3 (b) (1)).**

   During the first 6 months of 2019, work was under way to merge the Division of Specialized Information Services (SIS) staff and products into Library Operations (LO). Several contract actions overseen by the Acting Director of SIS were not handled ~~in an appropriate or timely manner~~before her retirment. This included the contract actions for the ToxNet product called Haz-Map. This product ~~would~~ was~~be~~ transferred to the Bibliographic Services Division (BSD) within Library Operations on June 24, 2019.

   The period of performance for the SIS product, Haz-Map, ended on July 31, 2019. The work to initiate the option year had not been undertaken by the Acting Director or by the COR for the contract prior to the merger of SIS into LO in June or the retirement of the Acting Director in June 2019. In addition, though a sunset plan for Haz-Map had been written, no actions had been pursued by former SIS staff to retire the Haz-Map product by July 31, 2019.

   The Haz-Map COR notified his new supervisor, the Chief of the Bibliographic Services Division, on July 31 that the contract was closing on July 31. No work on the option year renewal or on the retirement process had been implemented. No announcements had been made to the public or to the Haz-M~~N~~ap content vendor, Jay Brown. In addition, no work had been done with OCCS to determine how to take down the Haz-Map product from the ToxNet system. The Haz-Map product is integrated into the ToxNet search system and

removing this content would not be a simple process. The ToxNet search system ~~i~~was scheduled to be retired in December 2019.

Users were not aware of the potential retirement of Haz-Map. The sudden removal of this content would not be in the best interests of NLM or our users.

In order to better serve NLM end-users and colleagues in other federals agencies, such as the Occupational Health and Safety Agency in the Department of Labor, the decision was made to retain the Haz-Map content on the ToxNet system until December 2019 when the ToxNet system ~~would~~ will be retired.

8. **Describe any other special circumstances (e.g. employee creating the unauthorized commitment has left NIH) or procedures, including clearances (e.g. Special Clearance and Other Acquisition Procedures or Preparation and Clearance of Scientific, Technical, and Public Information Presented by NIH Employees or Produced for Distribution by NIH, etc.) (FAR 1.602-3 (b) (7)).**

   The merger of SIS into LO, and the retirements of the Acting Director and Assistant Acting Director of SIS in June 2019 introduced administrative and managerial issues for the areas of Library Operations into which the SIS staff and products were moved. Other key staff, such as contract CORs, also retired or left SIS during the first half of 2019. This has left Library Operations staff with gaps in knowledge about SIS budget and contractual issues that are still being uncovered.

9. **Describe, in detail, the proper procedure(s) that should have been followed (FAR 1.602-3 (b) (1)).**

   The Division of Specialized Information Services should have initiated the actions to exercise the contract option In the Spring of 2019 in order to award the option year for the Haz-Map data by July 31, 2019.

   Alternatively, the sunset plan for retiring the Haz-Map product should have been started May 2019 in order to provide users with advanced knowledge of the retirement of the site. The vendor should also have been told that the contract option year would not be awarded. All of this information should have been provided to the Bibliographic Services Division prior to the Haz-Map content being transferred.

10. **List all steps taken by Institute, Center or Office (ICO) management, cognizant Office of Acquisition, Delegated Office of Acquisition, and/or Governmentwide Commercial Purchase Card holder to prevent reoccurrence of future unauthorized commitments (FAR 1.602-3 (b) (1)).**

    Review and documentation of the contracts and period of performances of the SIS products transferred from SIS to the Bibliographic Services Division (BSD) has been performed. BSD has set up a Sunset Team to more fully document and complete the sunsetting activities associated with the 14 SIS products that compose the ToxNet search system. Some of these products are being merged into other NLM databases, while others are being fully retired. The sunset plans include a communication strategy that has been developed with the NLM Office of Communications and Public Liaison.

NLM Service/Product (Offering) Details	
NLM Service/Product (Offering)	Gene-TOX
Description	GENE-TOX provides genetic toxicology (mutagenicity) test data from expert peer review of open scientific literature for more than 3,000 chemicals from the United States Environmental Protection Agency (EPA). GENE-TOX was established to select assay systems for evaluation, review data in the scientific literature, and recommend proper testing protocols and evaluation procedures for these systems. This database was originally supported on TOXNET by EPA and covers the years 1991 - 1998. It is no longer updated or supported by EPA.

ATTENTION: The following Sunsetting Request has been **APPROVED**.

NLM Service/Product (Offering) Details	
NLM Service/Product (Offering)	DART (Developmental and Reproductive Toxicology)
Description	The Developmental and Reproductive Toxicology database (DART) is a TOXNET database that provides more than 400,000 journal references covering teratology and other aspects of developmental and reproductive toxicology. DART was initially funded by the U.S. Environmental Protection Agency, the National Institute of Environmental Health Sciences, the National Center for Toxicological Research of the Food and Drug Administration, and NLM. The DART database covers teratology and other aspects of developmental and reproductive toxicology with references to literature published since the early 1900s. The DART database, like TOXLINE, contains MEDLINE/PubMed references related to this subject. A search strategy has been used with PubMed to create the basic core of DART by pulling records in to the TOXNET database, which also includes references not included in MEDLINE/PubMed, such as meeting abstracts, books, technical reports, and journals originally not indexed for or available in MEDLINE.
Document(s) Supporting Justification	DART justification.docx
Justification	No longer aligned with NLM priorities or mission needs Cost in relation to value

Retirement Date	12/01/2019

NLM Service/Product (Offering) Details	
NLM Service/Product (Offering)	TOXNET Toxics Release Inventory (TRI)
Description	The Toxics Release Inventory (TRI), a resource of the U.S. Environmental Protection Agency, is a set of publicly available databases containing information on releases of specific toxic chemicals and their management as waste, as reported annually by U.S. industrial and federal facilities. This inventory was established under the Emergency Planning and Community Right to Know Act of 1986 (EPCRA). TRI's data, beginning with the 1987 reporting year, covers air, water, land, and underground injection releases, as well as transfers to waste sites. In agreement with the Pollution Prevention Act of 1990, source reduction and recycling data is also included in TRI. The Toxicology and Environmental Health Information Program (TEHIP) in the Division of Specialized Information Services (SIS) of the National Library of Medicine (NLM) has provided access to TRI as part of its TOXNET® (TOXicology Data NETwork) databases, which cover toxicology, hazardous chemicals, environmental health and related areas.
Document(s) Supporting Justification	TOXNET TRI Sunsetting.docx

NLM Service/Product (Offering) Details

NLM Service/Product (Offering)	ITER (International Toxicity Estimates of Risk)
Description	ITER has been a TOXNET database for almost 20 years. It contains data in support of human health risk assessments and is currently compiled by staff at the Risk Science Center of the University of Cincinnati's Department of Environmental Health. Once some legal and logistical matters are addressed, the home of ITER will return to Toxicology Excellence for Risk Assessment (TERA), its original developer. NLM has licensed ITER initially from TERA and then UC when key TERA staff moved to UC (they are now back at TERA). We do not expect meaningful issues associated with offering ITER content via Bookshelf or PubChem once the discussions between UC and TERA are completed, The UC and TERA interactions are expected to

	be completed by early 2020. ITER contains data from CDC/ATSDR, Health Canada, RIVM, U.S. EPA, IARC, NSF International and independent parties offering peer-reviewed risk values. ITER provides comparison charts of international risk assessment information and explains differences in risk values derived by different organizations. ITER is updated several times a year.
Document(s) Supporting Justification	ITERonUCWebSIte.docx
Justification	Other: The plan is to sunset ITER in the Fall of 2019 if the legal and logistical issues cannot be resolved between the University of Cincinnati and TERA. ITER will be . removed from the NLM Products & Services list.
Retirement Date	12/31/2019
Organization	LO
Key Staff Involved	Colette Hochstein Pertti Hakkinen Jeanne Goshorn David Gillikin

Internal Communication Plan

Organization	LO
Key Staff Involved	Colette Hochstein Sanjay Jain Jeanne Goshorn Phillip Thomas David Gillikin

Internal Communication Plan	
Staff to be Informed	Colette Hochstein Pertti Hakkinen
Communicated Message	CCRIS was originally created by the National Cancer Institute (NCI) and covers the years 1985 to 2011. It is part of TOXNET, and the information it contains is already incorporated into PubChem. On December 1, 2019 the National Library of Medicine (NLM) TOXNET website will be discontinued. Most of its content will continue to be available through other NLM databases as well as external websites. TOXNET has served as an integrated system of toxicology and environmental health databases. The most frequently used of those databases are being incorporated into three of NLM's core resources: PubChem, a database of chemical information; PubMed a resource for biomedical literature; and Bookshelf, with free online access to books and documents in life science and healthcare. Several other databases in TOXNET were made available on TOXNET from other organizations, such as the U.S. Environmental Protection Agency, and will continue to be available from those sources. Some databases will be retired. For a complete list of TOXNET databases and how to access their content, see the TOXNET transition page.

The Associate Fellows selected their projects for the Fall:

- Brenna Cox: Investigate the addition of CPT4 procedure codes to MedlinePlus Connect; Jen Jentsch, project sponsor
- Sharon Han: Analysis of NLM interlibrary loan usage data during selected public health events; Colette Hochstein, Gillian Takamaru, Lis Unger, project sponsors
- Eden Kinzel: Analyze cost and impact of change in MEDLINE indexing start date policy; Beth Weston, Jules Shore, project sponsors
- Louise To: Consumer health informatics – infobutton resources – MedlinePlus Connect and Wikidata and Wikipedia; Vojtech Huser, project sponsor

LO (Dianne)
Tentative Dates for Library Operations All Staff meetings for 2020 below. All meetings will be held in Lister Hill Auditorium, 10am – 11am.

- March 17, 2020
- June 2, 2020
- September 29, 2020
- December 15, 2020

Reminder: Work-Life@NIH Workshop: a Guide to Enhancing Workforce Well-being will be held November 6, 2019, 9am – 11am, NLM Visitor Center. In-person or webex attendance.

TSD (Jennifer)

- Lorretta Turnage, Head, Acquisitions Unit 2, Collection Development and Acquisitions Section, will retire on January 3, 2020 after more than 36 years of service at NLM. Lorretta has supervised the unit responsible for the management of purchasing, record creation, and the ordering and receiving of monographs and other materials for the NLM collection. She helped implement the acquisitions functions of the Voyager Integrated Library System including staff training, documentation for procedures, and workflow creation. Lorretta implemented other features in Voyager including the use of embedded order data and EDI (Electronic Data Interchange) for monographs. Lorretta also coordinated the gifts program for monographs including the NLM Exchange Program, the Library of Congress Duplicates Program, and gifts received from worldwide sources. Lorretta has consistently focused on increasing work efficiency and helped implement the Central Receiving and Tracking System (CRTS) used to systematically track the processing of monographs. Lorretta will be greatly missed! More information regarding her party in December will be issued within the next few weeks.
- The Literature Selection Technical Review Committee (LSTRC) meeting was held Oct. 24-25. Several significant changes were introduced at this meeting:
    - TSD staff assumed responsibility for coordinating the meeting.
    - The LSTRC Reviewer Interface within the MEDLINE Publisher Portal was implemented.
    - A new Journal Review Report form was implemented.

    - Detailed screening information, prepared by Selectors in the Collection Development and Acquisitions Section (CDAS), was provided for each journal.

The changes were enthusiastically welcomed by the LSTRC reviewers who greatly appreciated the work that went into improving the system and processes for LSTRC journal review. Thanks go to the many staff in LO, NCBI and OCCS who contributed to the successful development and implementation of these changes.

- The MeSH RDF URIs have been added to the display for all descriptors and qualifiers in the MeSH Browser under the label RDF Unique Identifier.
- Cheryl Fields is attending the Charleston Conference November 4-8 in Charleston, SC. Part of her time will include performing a market survey, in preparation for the serials contract re-negotiation that will begin shortly.

HMD (Jeff)

- Congratulations to our former Pathways intern Thu Tran, who informed us this week that Nova Southeastern University College of Optometry in Fort Lauderdale, Florida, has accepted her into its class of 2024. “Thank you so much for your all of your support, guidance, and encouragement during my time at HMD,” Thu shared. “I wouldn't be where I am today without your investment in me as your intern. I will always remember fondly of my time at HMD, as it was one of the best experiences I have had as an undergraduate student.” Congratulations and best wishes, Thu, and we look forward to keeping in touch and learning about your further career successes!
- Thanks very much to Harold Lindmark and NLM Team OAMAS for their time and support:
    - last Friday, October 25, to relocate HMD’s astral bench so carefully and strategically to the rotunda. Thanks equally to Ken Koyle for spearheading this important change to support integration of the reading rooms, and to Deshaun Williams for helpfully documenting this major change through a series of thoughtful photographs, and
    - this Thursday, October 31, to remove the defunct Turning the Pages kiosk from the HMD coat room, paving the way for its footprint to allow for a new set of patron lockers to be installed as part of the planned integration of the reading rooms by April 6, 2020.
- The Anglo-American publisher Phaidon has just released *Anatomy: Exploring the Human Body*, the latest in its “Explorer Collection.” The profusely illustrated volume includes twenty-four images from HMD and NLM, including several multi-page spreads.
- Christie Moffatt attended a Continuing Education to Advance Web Archiving (CEDWARC) workshop on Monday, October 28 at George Washington University. The workshop was organized and hosted by Virginia Tech Libraries and the Virginia Tech Department of Computer Science, in collaboration with Los Alamos National Lab Research Library, Old Dominion University Department of Computer Science, the University of Waterloo Department of History, the Internet Archive, and George Washington University Libraries (with IMLS funding) to teach library and archive professionals advanced web archiving and analysis techniques including the use tools and services such as Social Feed Manager, Webrecorder, Storytelling, ArchivesSpark, and Archives Unleashed.
- HMD welcomes back History Associates Archivist Erica Williams who joins the Digital Manuscripts Program staff as a contractor to work on Profiles in Science and web archiving projects for the next several months.
- On Tuesday, October 22, as part of a week-long celebration of International Open Access Week (October 21-27), the NLM Copyright Group hosted a brown bag talk about Open Access and Public Access. Thanks to Katie Funk for giving an excellent presentation “After the Big Bang: The Expanding Universe of ‘Open’ in Scholarly Communication,” exploring how the dialogue around openness in scholarly communication has evolved in the last two decades and expanded

in recent years. 12 NLM staff attended in person and 17 participated online. A copy of Katie's talk has been added to the Copyright Group wiki page under Copyright Resources, and is available directly here.

- And a reminder about HMD's two exciting and data-oriented Job Jar projects, both still open for participation by interested and qualified colleagues: Help us reveal data in NLM's historical collections! (led by and with thanks to Beth Mullen) and Understanding how to surface and study patterns of medical terminology used in historic films and videos about mental illness (led by and with thanks to Sarah Eilers).

OET (Amanda)

- Happy Halloween!
- Monday-Wednesday, OET staff (Franda Liu, Nichelle Midon, and Amanda Wilson) attended the All of Us Research Program Face-to-Face meeting.
- Monday-Wednesday, OET staff (Mike Davidson, Aimee Gogan, and Kate Majewski) attended Federal Grants Training for working with the UG4 grants.

PSD (Stacey)

- On Monday, October 28th, the DOCLINE team released the "Contact Library" feature. This allows libraries to contact each other from within the system using an envelope icon that appears next to each request. Since NLM is also a user of DOCLINE, NLM customers can contact us with this feature as well. Those messages will show up in Dynamics as a customer support ticket. The feature has been highly requested, and we're excited to release it to the users.
- PCMS is finalizing the cleaning protocol for mold remediation with the contractor and expects the remediation to start in mid-November.
- The CAS Head position closed on October 30th.
- On October 28th, Stacey Arnesen, as alternate COR for the Biomedical, Public Health, and Clinical Information Services (BPHCIS) BPA, participated in a meeting of CORs, task managers, and contracts office staff to discuss task management for FY20.

October 24, 2019

LO

- The group* leading the planning and implementation of the combined reading room functions continues to meet bi-weekly and make progress toward the target date of April 6, 2020, when functions of the main reading room will begin formally to occur in the HMD reading room. . *This group consists of Stacey Arnesen, Steve Greenberg, Terry Ahmed, Ken Koyle, Ben Petersen, D'Neen Ross, and Rebecca Warlow. The new wiki space of the group is here, while their associated SharePoint space is here.
- The PSD Chief onsite interviews have been completed. The interview teams are compiling feedback and expect to have all comments to ADLO by the close of October.
- On October 29, 2019, 2pm – 3:30pm in the Lister Hill Auditorium, the NIH Civil Program will present information about Preventing and Addressing Harassment in the Workplace and the Personal Relationship Policy Statement. There will be time for Q&A and Civil Specialists will be available to meet with staff to personally discuss any concerns they may have.
- As of 10/24, 82% of Library Operations staff have taken the online Anti-Harassment training. Thank you! Deadline for completion for those who have not yet taken the training is November 15, 2019.

All of Us Updates:

Enrollment in All of Us

-

-
    - Just surpassed 250,000 participants and 200,000 core participants! Now, more than 278,000 participants have enrolled in the program, including more than 214,000 who have provided physical measurements and biospecimens. View our Data Snapshots.

Other Information of Interest:

-
    - On September 3, *All of Us* issued a Request for Information (RFI) to collect additional input from the consultation and engagement with Tribal Nations. Responses to the RFI will be accepted through October 31 and must be submitted via email to AoUTribal@nih.gov. View the RFI for full details.
    - On October 18, *All of Us* selected the HudsonAlpha Institute for Biotechnology to evaluate the use of leading-edge DNA sequencing technologies that could someday improve diagnosis and treatment of many diseases. NCATS is funding the project with $7 million over one year. With this award, HudsonAlpha will use long-read whole genome sequencing technologies to generate genetic data on about 6,000 samples from participants of different backgrounds.
    - **Saliva Pilot:** We have recently launched a saliva pilot with a limited number of direct volunteers who live outside of partner catchment areas and so are currently ineligible for standard collection of blood and urine samples. The program will gradually ramp up operations to collect a few thousand saliva samples from participants directly by mail. The goals of this project are to assess technical feasibility, the participant experience, completion rates, and data quality. The samples will undergo genetic analysis in the future, but no return of results is planned for the near term.
    - **PregSource® Pilot:** This fall, we plan to launch a new pilot project with NICHD, inviting eligible *All of Us* participants to join PregSource, a separate research project on pregnancy. PregSource participants complete online surveys about their health, their pregnancies, and their babies' health to help researchers and health care providers better understand pregnancy and women's experiences with motherhood. This effort is an initial step toward our larger goal of launching child enrollment in the future.
    - **Researcher Workbench:** This December, we'll make a go/no-go decision on the readiness of the Researcher Workbench for a public beta launch in early February. Our researcher outreach plans are in development and will include publications about our demonstration projects and presentations at a diverse set of scientific conferences. Many thanks to the LCT for offering input on priority events and other aspects of the rollout.
    - **Genomics:** We are working hard to firm up our genomics plans and timeline, in ongoing collaboration with the consortium, the IRB, and the Food and Drug Administration. Currently, we expect to begin by genotyping a limited number of participant samples and returning non–health-related results. These will likely include information about ancestry (though not at the resolution of 23andMe or ancestry.com) and common traits (such as lactose tolerance and caffeine metabolism). We'll likely return just a few traits at first and add more as we gauge participants' interest. Whole genome sequencing and the return of

health-related results (e.g., pharmacogenomics, the ACMG59) will likely come in a later phase. Plans remain subject to change, so any public announcements about what specific information we'll return and when we'll return it remain on hold. Our main message now is that the program intends to return both health-related and non–health-related genetic information to participants over time.

- **Mental Health Campaign:** We're working with NIMH to kick off a mental health campaign in early 2020, which will include rolling out a new survey on mental health and well-being and a mood module for *All of Us* participants. The program will disseminate various educational messages about mental health as a communications tactic to encourage participants to complete these additional activities.
- **NPR:**How Should Scientists' Access To Health Databanks Be Managed? (September 6): More than a million Americans have donated genetic information and medical data for research projects. But how that information gets used varies a lot, depending on the philosophy of the organizations that have gathered the data.
- **Technology Networks:**The *All of Us* Research Project: A historic effort to sequence one million genomes (September 2): Technology Networks recently spoke with Josh Denny, M.D., M.S., principal investigator of the *All of Us* Data Research Center and a professor of biomedical informatics and medicine at Vanderbilt University Medical Center. They wanted to know more about the aims of the project and the logistics involved with sequencing the genome of more than one million people.

TSD (Jennifer)

- YEP processing to update NLM bibliographic records with 2020 MeSH has been postponed from the weekend of November 15 to the weekend of December 6, to stay aligned with the indexing update which will take place on December 4-5.

NICHSR (Dianne)

- The planning stages for the 4th Annual HSRProj Student Competition have commenced. The first meeting will be held in November, with the marketing campaign opening that same month.

HMD (Jeff)

- Jeff Reznick and Rebecca Warlow met with former HHS-secretary Louis W. Sullivan, MD, to discuss his recent donation of his papers and to share ideas for making researchers aware of NLM's new stewardship of this important collection.
- Jeff Reznick met with Dr. Brennan, Jerry Sheehan, Dr. Corn, and Jody Nurik about the 2020 Lindberg-King lecture and NLM's role in programming this annual event next year as part of a day symposium next summer in honor of Dr. Donald A.B. Lindberg. Jeff will be working directly with Dr. Corn on this future planning and coordinating with NLM's OCPL to ensure success and impact.
- Ahead of the scheduled removal this Friday, October 25, of the circular bench and rug in the HMD reading room, as part of the announced plans and ongoing collaborative work to integrate NLM's reading rooms by the target date of April 6, 2020, HMD staff gathered on Tuesday, October 22, for a final staff photo in this spot, with all due credit and thanks to Susan Speaker for spearheading the gathering, and Steve Greenberg for taking the photograph, which in due course will be catalogued and preserved in NLM Digital Collections, along with the selected, catalogued, and described photos taken as

part of the efforts to capture visually NLM spaces, workflows, and people for the purpose of preserving these images for future generations, as reported on September 26, 2019.

AFP (Kathel)

- On Friday, October 25, 2019, the Associate Fellows met with Patti Brennan for a preparation meeting and discussion prior to their attending the American Medical Informatics Association (AMIA) meeting November 17 – 20, 2019. The Associate Fellows previously met with Liz Amos and India Winter, a post-bac nurse in Patti Brennan's NINR lab to review the AMIA meeting schedule, workshops, and potential people to meet.

BSD (David)

- Meng Cheng (MMS) participated in the Oct 16-18 Codeathon.
- The Annual Indexing Orientation will be held on November 1 in the Lister Hill Auditorium. An initial overall presentation will be given in the auditorium from 8:30-9:150, with breakout sessions to follow. Olga Printseva and Janice Ward will lead the review of the 2020 MeSH Highlights. The breakout sessions will be lead by Nick Miliaras, Stella Koppel, David Cissel, Janice Ward, and Olga Printseva. Thank you very much to all of them and everyone else in Index Section who have worked the planning efforts for the orientation session.
- On October 22, Robin Taylor (MMS) gave an update to the NIH Common Data Elements (CDE) Task Force on NLM CDE activities since December 2018 and asked for the Task Force's support for the current usability study.
- On October 23, Chris Hui participate in a conference call with Craig Anderson, Senior Expert, Program Delivery, Health Canada/Government of Canada.). Health Canada is planning on the implementation of standard product labels (SPL) for drug product labeling and wanted to hear about NLM's experiences with SPL data.
- The BSD Sunset Team created a list of URL redirects that need to be put in place in December when many TOXNET resources will be taken down or transitioned to other sites. These will be discussed at the monthly meeting of the NCBI TOXNET Integration project meeting on October 24.
- Jeanne Goshorn will be Acting Chief BSD for Oct 28 - Nov 1 while David Gillikin is on leave.

OET (Amanda)

- This week, Science Classroom was added to ToxTown, which integrates classroom resources from the to-be-retired Environmental Health Student Portal: https://toxtown.nlm.nih.gov/science-classroom.

PSD (Stacey)

- PSD hosted the NLM Associate Fellows for three days, October 15-17, 2019. Thanks to the many PSD staff who gave excellent presentations to the Associate Fellows and recruited two fellows to work with PSD on fall projects.
- The CAS Section Head position is posted on USAjobs.gov. The position is open from October 21 – October 30, 2019.
- The bilingual technical information specialist position also is posted on USAjobs.gov. This position closes on October 26, 2019.
- Dan Wendling led an NLM Codeathon team in a project that classifies search queries, in an effort to improve Search Engine Optimization (SEO).
- Laura Bartlett led a team at the NLM Codeathon doing Twitter sentiment analysis around MedlinePlus and other NLM consumer health resources. Sabrina Springer also participated in the Codeathon working on finding, organizing, and analyzing NNLM funded activity data.
- Roger Brtva coordinated the retirement of the Local Legends subsite on NLM Main.

- My MedlinePlus Newsletter: “What You Should Know About STDs” was sent on October 16, 2019, to 35,819 subscribers. The open rate was 30%, and the click rate was 9%. The top three articles were: Chapped Lips, Farmers Market Salsa, What Causes a Stroke?
- Jen Jentsch and Stephanie Morrison met with Lakshmi Grama, NCI's Associate Director of the Office of Dissemination and Digital Communications (ODD), and members of her team, to discuss the integration of NCI consumer health materials into MedlinePlus Connect. Jen also presented on MedlinePlus Connect at the staff meeting for NHLBI's Office of Science Policy, Engagement, Education and Communications (OSPEEC). Both NCI and NHLBI have expressed strong interest in joining MedlinePlus Connect. Jen provided both groups with participation guidelines and starter materials.
- Stephanie Morrison and Stacy Coppess met with Sherine El-Toukhy from the National Institute on Minority Health and Health Disparities to discuss a text message campaign collaboration.
- Stephanie Morrison attended a meeting of the NIH Health Literacy Quality Improvement Workgroup. The group discussed improvements to the NIH Clear Health page and finding a home for MedlinePlus's tutorial on How to Write Easy-to-Read Materials.
- Mary Herron, Stacy Coppess, and Stephanie Morrison spoke with Dr. Lisa Fitzpatrick about her community outreach and information program, Dr. Lisa on the Street.
- Sabrina Springer attended the NLM Codeathon as part of the NNLM FOA group. We investigated finding, organizing, and analyzing NNLM funded activity data. The group presented one way of analyzing the data to gain a better understanding of trends and future needs.
- For staff wishing to archive past wiki content, Dan Wendling created new documentation at Wiki archiving choices - And how to implement your choice.
- PSD released & promoted the new DIMRC online course on Continuity of Operations (COOP) Planning - https://www.nlm.nih.gov/dis_courses/coop/index.html
- Jen Pakiam held a WISER planning meeting to flesh out the priorities for the next year in terms of feature developments, etc.
- Stacey Arnesen and Jen Pakiam participated in a meeting with HHS Assistant Secretary for Preparedness and Response (ASPR) staff and contractors to discuss plans for CHEMM and REMM.
- The My MedlinePlus Newsletter: “Sleep: Getting Your Z's” was sent October 9, 2019, to 35,456 subscribers. The open rate was 32% and the click rate was 6%. The top three articles were: Whole Wheat Quick Bread, Improve Your Sleep Habits, Why Can’t I Fall Asleep?
- Stephanie Morrison and the team updated the metrics/analytics we will report about MedlinePlus and MedlinePlus Connect beginning in FY20. Stephanie updated the NLM Statistics wiki and related documentation.
- Stacey Arnesen, Stephanie Morrison, Alla Keselman (OET), and Amanda Wilson (OET) met to discuss strategy for the future of Tox Town. We will explore whether another IC would be interested in adopting Tox Town, and otherwise consider how to evaluate this resource for possible inclusion in MedlinePlus.
- MedlinePlus website (English and Spanish): The recipes Baked Cauliflower Tots https://medlineplus.gov/recipes/baked-cauliflower-tots/ and Peanut Power Smoothie: https://medlineplus.gov/recipes/peanut-power-smoothie/ were added.

Subject: Reminder: NLM SP Imp Cncl Mtg This Thursday 11-7-19 @ 4pm
Attachments: List of Strategic Offerings.xlsx, NLM_SP_IC_agenda 11-7-19.docx, NLM SP ImpCncl Notes 2019-10-03.docx

Dear Strategic Plan Implementation Council Members,

A reminder that the NLM Strategic Plan Implementation Council will be meeting this Thursday, November 7th at 4pm in the Lindberg Conference Room. I've attached the agenda for your reference, and the prompt for our discussion below:

> To build off of some of the strategic communications ideas discussed at our last meeting, we would like to center our next meeting on a discussion of projects happening within your respective divisions that support the Strategic Plan. I've attached a list of NLM offerings that align to Strategic Objectives (tab 1) and Strategic Initiatives (tab 2) as a starting place. We'd like you to look through the list and select one from your respective divisions for our discussion, with attention to how we might practically develop a communication strategy around them (e.g. do we highlight the project through a blog post, in a video, through digital signage, at Town Hall meetings, etc.).

I've attached the agenda for the meeting, as well as notes from our last meeting if you need a refresh.

Thanks,
Maryam

NLM Strategic Plan Implementation Council

Thursday, November 7, 2019 // 4 - 5 pm
*Lindberg Room, Mezzanine, Building 38**

Agenda

- **Welcome and Recap of October Meeting** – Mike Huerta (5 minutes)
- **Share-out of Strategic Projects from NLM Divisions** – All (25 minutes)
  - Council members will share a strategic project from their respective division
- **Discussion of Communication around Strategic Projects** – All (30 minutes)
  - Drawing from the concrete examples discussed, how might we develop a strategy around communicating these projects? How can we connect them to progress in implementing the Strategic Plan?

_____
**To participate by WebEx*

When it's time, join the meeting.

https://nih.webex.com/nih/j.php?MTID=m6db842fed3d76f1d8d9938204f01305d

Meeting number (access code): 623 834 420

Meeting password: 8G2fb5MG

Join by phone: 1-650-479-3208 Call-in toll number (US/Canada)

NLM Strategic Plan Implementation Council

Thursday, September 5, 2019 // 4 - 5 pm
Lindberg Room, Mezzanine, Building 38

Meeting Minutes

Increasing Visibility of the Strategic Plan – Jody Nurik

- Jody Nurik outlined a proposed communications strategy to increase the visibility of the strategic plan and its goals across the Library
    - Phase 1 would focus on strategically placing visuals around the Library with the pillars of the Strategic Plan
        - Idea is that if people want to see how their work connects to the Strategic Plan, they need to be reminded what the Strategic Plan is trying to achieve
    - Phase 2 would be more focused on directly relating the goals and objectives of the plan to activities happening across the Library to accomplish the vision
- Jody presented mock-ups of five different kinds of visual assets, which can be viewed in the presentation slides
    - Signage
    - Posters
    - Screensaver to provide to everyone and have in conference rooms
    - Plexiglass stands – two-sided
        - Should add logo to both sides
    - Business cards – two-sided

Discussion of Communication Strategy – All

- Patti Brennan asked about the green color palette, which might be difficult to read in a dark room
    - Decision was to put the graphics out to the community for feedback
    - General agreement around the room was that the print should be bigger, and we should ensure the graphics are high contrast
- Mike asked whether we envision other communication beyond the signage
    - Will send out a broadcast email announcing that the signage is now around the Library and ask them to think about those goals and how their work relates to them
    - Include that we want to hear from the community about the graphics and ideas they might have around further communications, as well as asking what they need from the Council
- Anatoly Mnev noted that it's great to have this visual communication out, but unless we connect it to the work people are doing around the Library, it may not achieve its maximum impact
    - People need to understand what their day-to-day jobs have to do with the Strategic Plan, so we will need to start an effort mapping activities to strategic goals and objectives

- Mike noted that we have already collected strategic projects in the data call for the NLM Portfolio Analysis
    - Can begin to identify the people working on those projects, and for instance, have a picture of that person with a quote and description of what they're doing and how it relates to strategic plan
    - Can have a generic poster about the Strategic Plan and additional posters about some of the strategic activities
- Anatoly also noted that it would be good to have dashboard with strategic projects, not just those listed in the ESM tool, with rolling updates so people can see the progress of different project
    - Can be available online
    - Mike noted that this was an idea when the Plan originally rolled out, but people haven't done a great job of consistently updated the progress of these projects
        - Anatoly noted that this dashboard and updating in the dashboard could be owned by the people directly working on those projects, rather than managers
- Valerie Schneider noted that some of the work that we do at NLM has aligned with these goals for a long time, so it would be important to show how those longstanding activities connect to the Strategic Plan
    - Patti noted that it's still important for NLM staff to recognize that there is a real shift that is happening in the Library's priorities, even as some day-to-day operations remain the same
    - Might be worthwhile to write a blog post to help NLM staff see what we've done over the years, how your work fits in with what we've done, and how the goals are about consolidating our efforts and driving the Strategic Plan
        - About taking the best strengths of the Library and using them to drive the science of the future

- Anne Altemus suggested that we could take one pillar of the Plan and show some projects that are being done to support the pillar; could have a series of posters around the Library
- Jody suggested creating videos, similar to those made for the Data Science Day, where staff could talk about what data science means to them
    - Could start Town Hall Meetings with these videos
    - Anatoly also suggested promoting certain projects, as they did during Data Science Day, creating videos and posters to post around the Library
        - Jody noted that the posters from Data Science Day have been captured and are on the Data Science wall
    - Anne noted that we can also push video through email
        - Each month, we could pick a pillar and highlight a project that supports it
        - Build a collection of demonstrated expression of the Strategic Plan
    - Mike noted that we'll need to identify who and what to highlight as a Council
        - Council members can bring ideas from their respective Divisions back to the Council

        - Anatoly noted that this doesn't need to be an exhaustive effort to capture everything
        - Showing staff that these are the objectives and goals of the Strategic Plan and here is how the work everyone is doing is being pushed up to support the goals/pillars
    - Rex Shuler noted that the useful thing about the pillars is that you can drill down into finer granularity – underlying the goals are the objectives, underlying the objectives are the strategic projects and initiatives
        - Can continue to drill down to show the work underneath it and the people supporting that work
- Patti suggested to Mike that as they consider the five-year update on the Strategic Plan, they might turn it around into a campaign asking NLM staff where they see themselves in the progress of the Strategic Plan to learn more about people's ideas
- Dan Cho noted that we might incorporate the pillars of the Strategic Plan on the NLM home page
    - Patti suggested going to the homepage and being able to click around to find stories about NLM staff and what they're doing to support the Strategic Plan
    - Anne noted that at the Board of Regents meeting, some of these stories were already highlighted, which can be shared – can call from the reports that were made there
- Patti suggested cleaning up the report that was given to the Board of Regents of all the different accomplishments over the year to share with the community
    - Everything from how many papers in PubMed Central that now have data associated with them to the number of people reached through the Data Science Training Initiative to the number of grant areas we've funded
- Jody noted that we need to make sure we're engaging a broad swath of NLM, so we're not focusing on people who already know a lot about the Plan, but are targeting those who don't so we can get them excited and engaged
    - Patti likes the idea of telling people that because of what they're doing, we're achieving the Strategic Plan – make the Plan more concrete and to recognize their efforts
    - Idea of the visuals is that they'll be around as a constant reminder of what the plan is
- Council members' input on different visual materials
    - People liked the poster, digital signage, and the business cards
    - Not much enthusiasm around the screensaver and the plexiglass sign
    - Anne also suggested creating a pop-up banner for the three pillars to display in Lister Hill and around the Library so that people coming through on tours can see what's going on across the Library

Round Robin Updates – All

- Mike for OSI
    - In April, OSI hosted a workshop where we brought about 15 librarians and iSchool faculty in to identify data science skills that would be useful for librarians working in research-based libraries, beyond data management assistance

        - OSI just finished a draft of the report on the workshop, led by Lisa Federer, and the draft was sent to Elaine Martin at Harvard University, who was the chair of the workshop, for comments; once we incorporate those comments, we'll be circulating the report to other participants
        - Subsets of the participants have been getting together and working on synthesizing and sharing outcomes of the workshop at various meetings
        - The document looks not only at the data science-related skills and services that data librarians should be thinking about, but also how general librarianship skills integrate with those more data-centric considerations
- Patti for OD
    - We are now under a continuing resolution, so we have enough funds to take us up through November 21st
        - Dr. Collins is optimistic that we will be having a budget resolution after that, which will likely be a minibus, so we won't be lumped in with Defense
    - Patti also gave Congressional testimony last week, which had a great response, and she thanked NLM staff for their work to support the testimony
- Dan Cho for MeSH
    - Have teamed up with NCBI taxonomy and have introduced their entire set of data into MeSH – turning all the terms they have into MeSH terms so they are discoverable
        - Set up as SCRs (Supplemental Concept Record)
        - With the inclusion of data related to bacteria, SCR has now grown 7%, and still have other kingdoms to incorporate
        - Supports Objective 1.1 – connecting NLM resources
- Valerie for NCBI
    - MEDLINE2020 group met a few weeks ago to look at the relationship of the gene database and indexing, as well as the progress on GeneRIFs (Gene Reference into Function)
        - Report from Jian Liu and staff on the indexing side who are looking into automating this process
        - Now discussions of programmatically pulling in relationships between genes and literature
    - Making sure that there will be engagement with users
- Rex for OCCS
    - IT assessment teams have been working hard to figure out ways to measure and quantify the accomplishments of NLM products
    - Have run into an impasse with the ways in which offerings have been described because they are no longer technical
        - No longer good alignment between IT assessment and offerings
        - There's a thought that those descriptions can be translated to map the component technologies (e.g. webpages) to offerings, but right now there's a disconnect
- Anne for OCPL

    - Noted that Patti has a talk coming up, which will be a retrospective on how the Library has successfully implemented the strategic plan, at the Charleston Publisher's Conference at the end of October/early November
    - The Tour program will be undergoing enhancements and updates with new information
        - Tara Mowery has had great numbers of people coming through
        - Need to highlight current research projects, people, and the new NLM vision
        - Doing a refresh now and would like thoughts and input on elements of divisions that should be featured
        - Jody noted that as new staff come on, part of their orientation should be a tour
        - Dan added that visitors could be given a business card with the pillars of the strategic plan when they tour
- Marie Gallagher for LHC
    - Have been participating in the IT Assessment Effort
    - Related to the third pillar, Marie got to participate in the Data Science Fundamentals class
        - She noted that in order to utilize the data science software and tools, trainees would need to use their own machines because of restrictions around what software can be downloaded
        - Mike asked Rex whether OCCS can set up machines that have the required data science tools (e.g. Jupyter notebooks) pre-installed for people who want to get training – developer desktops
    - Mike suggested that it would be useful for people who have data science skills that they aren't using for their jobs to put their skills into the Job Jar so they can put those skills to use
        - Right now, people who have ideas for projects can put those projects in, but the reverse isn't true
- Anatoly for NCBI
    - In October, PubMed 2.0 will go live, which will be the beginning of the transition for the whole PubMed, which should be complete by April 2020
        - Right now, PubMed Labs is undergoing rigorous testing to prepare for the transition later this month
- Jody for OCPL
    - Related to goal 2, will have the first trans-NLM social media working group to understand how we can cross-promote messages
        - How we're using social media, what kinds of accounts exist
        - Talk about metrics
    - After Patti's testimony on Wednesday, realized it would be nice to have one central place to go with talking points and updated statistics – now working on this
        - Right now, sources of information are the CJ, the strategic plan, Patti's testimony and FAQs, blogs, and presentations
        - Will then go out and interview people
- Rebecca for HMD

    - HMD opened a new exhibition in the HMD Reading Room on the first floor called *World Health Organization: Picturing Health for All*
        - Features a selection of images from the NLM Prints & Photographs collection of WHO photographs that highlight some of WHO's work in the 20th century
    - Thursday, October 10th have the next in the HMD Lecture with Ted Brown to talk about WHO's declaration from 1978
        - Being held in memory of Dr. James H. Cassedy
        - Will be in LHC Auditorium at 10am
    - Relaunched Pofiles in Science on Monday, profiles.nlm.nih.gov
        - Now integrated with the digital repository and are able to provide images and documents in new ways to people
- Karen Nimerick for LO
    - Had a nice exchange with SIS folks who joined the staff
        - Provided presentations on their respective products
        - HFTB and ToxNet will be integrated with PubChem, PubMed, and Bookshelf
            - Should finish work by end of December
    - DATMM project is making good progress and are working to finalize the data model
- Alicia Ross for EP
    - As of September 24th, awarded $55 million of NLM's funds and $16 million from co-funding
        - 67 new awards, 120 non-competing awards, and 5 supplements
    - Building priorities for FY2020

Joyce
You don't need to try to read this full email trail. Basically Nancy Baker, Literature Informatics Researcher at EPA, has been asking questions about the Toxline transition, and wanting to know if NLM will be providing a lot of training and support for how to do the searching in PubMed that she issue to. This is ended up with Bert working with her and probably having a conference call with her in December. There is an apparent concern that there are some Toxline citations that may not make it into PubMed – Bert has asked her a list of those citations.

I just wanted you aware of this in case you or the Director's Office hears from EPA.

I just had a long call with Nancy. What we arrived at as a next step is a conference call with you, me, and possibly others such as NIEHS' Stephanie Holmgren to discuss this and what could be done. Likely in early December given Nancy's availability. She'll also be reaching-out to NIEHS' Stephanie Holmgren. The key thing seems to be that Nancy feels that there are some documents only in TOXLINE that would not be accessible if TOXLINE goes away. She'll get me a list of those. I suspect some of those documents could be added to Bookshelf as time goes on.

I would not think that it would, given the fact that it is a subset of PubMed. An organization that wanted the older material could get it from us via data distribution and put is somewhere they could search it when needed.

And her boss = Charles Schmitt. Both are tasked with coming-up with recommendations for NIEHS leadership about what to do with Haz-Map and Household Products Database, and anything else that we may not want, e.g., ToxTutor. TOXLINE has yet to come up as a topic during my numerous interactions with NIEHS.

What does this person mean by deliver? The PubMed sunset t for toxicology does the same thing, and just requires the use of that filter in your search strategy. It would also be possible to set up a recurring update search on PubMed that could be emailed.

Dear Colette,

Thanks for writing back.

It's possible your group doesn't understand how Toxline has been used by the tox community. It's very important! I can only speak for one set of users, but they have protocols and processes they publish describing how they search bibliographic sites, including Toxline. They expect the community will reuse their queries and processes to retrieve the same set of article citations.

If the Toxline web site goes away, we will need to know how to reproduce Toxline results from previous projects given the new set of tools and how to construct a new protocol for future projects. And we'll need to have those new procedures ready for use soon.

Is it possible for the Toxline web site could remain functional to deliver current content even though new citations are not added? That would give us a chance to work on new procedures.

We would also like to advocate for some education and a chance to ask questions in an interactive setting.

I've copied in some colleagues who work with Toxline and support user communities.

Thank you,

Nancy Baker

Ms. Baker,

The National Library of Medicine does not plan to provide formal education and outreach regarding accessing TOXLINE content in PubMed.

As you may know, in recent years most of TOXLINE's content has come from PubMed. The portion that had been updated routinely was the reports from NTIS; that was discontinued earlier this year because NTIS now focuses on data science activities other than the routine collection of government reports.

The archived portion of TOXLINE, which included databases from a wide variety of time periods and sources, will remain available from the NLM data distribution center. In future, it is possible it will be also available via an NLM offering that allows more interactive access.

The core toxicology literature will continue to be available in PubMed and is readily accessible as the Toxicology subset using a PubMed filter (insert exact search term with "toxicology [SB] "). Help with this can be found at https://www.nlm.nih.gov/toxnet/toxline-help.html.

Thanks again for your inquiry.

Hi, Colette,

I was wondering if you (someone at NLM) is doing education and outreach on the phase out of Toxline. Toxline searches are an important part of the lit review requirements of many people in the tox field, both in EPA and outside. Would you be available for a Skype meeting or something similar?

Thanks,

Nancy

Ms. Baker,

Thank you for your inquiry about NLM TOXLINE.
Regarding "Will all the synonym and chemical expansion features be intact?" No. However, NLM is working on a more unified approach to the handling of chemical terminology while consolidating its resources onto fewer software platforms.

Regarding "Will the non-Medline records be included?" No. For the past few years, only PubMed has been updated in TOXLINE. NTIS is moving away from the collection of government reports, which was the focus of its mission for many years. NLM is working on ways to make the archived portion of TOXLINE accessible to users, possibly via its data distribution program (https://www.nlm.nih.gov/databases/download/data_distrib_main.html).

Again, thank you for your email.

Joyce
You don't need to try to read this full email trail. Basically Nancy Baker, Literature Informatics Researcher at EPA, has been asking questions about the Toxline transition, and wanting to know if NLM will be providing a lot of training and support for how to do the searching in PubMed that she issue to. This is ended up with Bert working with her and probably having a conference call with her in December. There is an apparent concern that there are some Toxline citations that may not make it into PubMed – Bert has asked her a list of those citations.

I just wanted you aware of this in case you or the Director's Office hears from EPA.

I just had a long call with Nancy. What we arrived at as a next step is a conference call with you, me, and possibly others such as NIEHS' Stephanie Holmgren to discuss this and what could be done. Likely in early December given Nancy's availability. She'll also be reaching-out to NIEHS' Stephanie Holmgren. The key thing seems to be that Nancy feels that there are some documents only in TOXLINE that would not be accessible if TOXLINE goes away. She'll get me a list of those. I suspect some of those documents could be added to Bookshelf as time goes on.

I would not think that it would, given the fact that it is a subset of PubMed. An organization that wanted the older material could get it from us via data distribution and put is somewhere they could search it when needed.

And her boss = Charles Schmitt. Both are tasked with coming-up with recommendations for NIEHS leadership about what to do with Haz-Map and Household Products Database, and anything else that we may not want, e.g., ToxTutor. TOXLINE has yet to come up as a topic during my numerous interactions with NIEHS.

What does this person mean by deliver? The PubMed sunset t for toxicology does the same thing, and just requires the use of that filter in your search strategy. It would also be possible to set up a recurring update search on PubMed that could be emailed.

Dear Colette,

Thanks for writing back.

It's possible your group doesn't understand how Toxline has been used by the tox community. It's very important! I can only speak for one set of users, but they have protocols and processes they publish describing how they search bibliographic sites, including Toxline. They expect the community will reuse their queries and processes to retrieve the same set of article citations.

If the Toxline web site goes away, we will need to know how to reproduce Toxline results from previous projects given the new set of tools and how to construct a new protocol for future projects. And we'll need to have those new procedures ready for use soon.

Is it possible for the Toxline web site could remain functional to deliver current content even though new citations are not added? That would give us a chance to work on new procedures.

We would also like to advocate for some education and a chance to ask questions in an interactive setting.

I've copied in some colleagues who work with Toxline and support user communities.

Thank you,

Nancy Baker

Subject: W: case #CAS-428977-S1N3S0: Toxline TRACKING:000267000007504

Ms. Baker,

The National Library of Medicine does not plan to provide formal education and outreach regarding accessing TOXLINE content in PubMed.

As you may know, in recent years most of TOXLINE's content has come from PubMed. The portion that had been updated routinely was the reports from NTIS; that was discontinued earlier this year because NTIS now focuses on data science activities other than the routine collection of government reports.

The archived portion of TOXLINE, which included databases from a wide variety of time periods and sources, will remain available from the NLM data distribution center. In future, it is possible it will be also available via an NLM offering that allows more interactive access.

The core toxicology literature will continue to be available in PubMed and is readily accessible as the Toxicology subset using a PubMed filter (insert exact search term with

"toxicology [SB] "). Help with this can be found at https://www.nlm.nih.gov/toxnet/toxline-help.html.

Thanks again for your inquiry.

Hi, Colette,

I was wondering if you (someone at NLM) is doing education and outreach on the phase out of Toxline. Toxline searches are an important part of the lit review requirements of many people in the tox field, both in EPA and outside. Would you be available for a Skype meeting or something similar?

Thanks,

Nancy

Ms. Baker,

Thank you for your inquiry about NLM TOXLINE.
Regarding "Will all the synonym and chemical expansion features be intact?" No. However, NLM is working on a more unified approach to the handling of chemical terminology while consolidating its resources onto fewer software platforms.

Regarding "Will the non-Medline records be included?" No. For the past few years, only PubMed has been updated in TOXLINE. NTIS is moving away from the collection of government reports, which was the focus of its mission for many years. NLM is working on ways to make the archived portion of TOXLINE accessible to users, possibly via its data distribution program (https://www.nlm.nih.gov/databases/download/data_distrib_main.html).

Again, thank you for your email.

Dear Strategic Plan Implementation Council Members,

A reminder that the NLM Strategic Plan Implementation Council will be meeting this Thursday, November 7th at 4pm in the Lindberg Conference Room. I've attached the agenda for your reference, and the prompt for our discussion below:

> To build off of some of the strategic communications ideas discussed at our last meeting, we would like to center our next meeting on a discussion of projects happening within your respective divisions that support the Strategic Plan. I've attached a list of NLM offerings that align to Strategic Objectives (tab 1) and Strategic Initiatives (tab 2) as a starting place. We'd like you to look through the list and select one from your respective divisions for our discussion, with attention to how we might practically develop a communication strategy around them (e.g. do we highlight the project through a blog post, in a video, through digital signage, at Town Hall meetings, etc.).

I've attached the agenda for the meeting, as well as notes from our last meeting if you need a refresh.

Thanks,
Maryam

NLM Strategic Plan Implementation Council

Thursday, November 7, 2019 // 4 - 5 pm
*Lindberg Room, Mezzanine, Building 38**

Agenda

- **Welcome and Recap of October Meeting** – Mike Huerta (5 minutes)
- **Share-out of Strategic Projects from NLM Divisions** – All (25 minutes)
  - Council members will share a strategic project from their respective division
- **Discussion of Communication around Strategic Projects** – All (30 minutes)
  - Drawing from the concrete examples discussed, how might we develop a strategy around communicating these projects? How can we connect them to progress in implementing the Strategic Plan?

_____
**To participate by WebEx*

When it's time, join the meeting.

https://nih.webex.com/nih/j.php?MTID=m6db842fed3d76f1d8d9938204f01305d

Meeting number (access code): 623 834 420

Meeting password: 8G2fb5MG

Join by phone: 1-650-479-3208 Call-in toll number (US/Canada)

Global call-in numbers

NLM Strategic Plan Implementation Council

Thursday, September 5, 2019 // 4 - 5 pm
Lindberg Room, Mezzanine, Building 38

Meeting Minutes

Increasing Visibility of the Strategic Plan – Jody Nurik

- Jody Nurik outlined a proposed communications strategy to increase the visibility of the strategic plan and its goals across the Library
    - Phase 1 would focus on strategically placing visuals around the Library with the pillars of the Strategic Plan
        - Idea is that if people want to see how their work connects to the Strategic Plan, they need to be reminded what the Strategic Plan is trying to achieve
    - Phase 2 would be more focused on directly relating the goals and objectives of the plan to activities happening across the Library to accomplish the vision
- Jody presented mock-ups of five different kinds of visual assets, which can be viewed in the presentation slides
    - Signage
    - Posters
    - Screensaver to provide to everyone and have in conference rooms
    - Plexiglass stands – two-sided
        - Should add logo to both sides
    - Business cards – two-sided

Discussion of Communication Strategy – All

- Patti Brennan asked about the green color palette, which might be difficult to read in a dark room
    - Decision was to put the graphics out to the community for feedback
    - General agreement around the room was that the print should be bigger, and we should ensure the graphics are high contrast
- Mike asked whether we envision other communication beyond the signage
    - Will send out a broadcast email announcing that the signage is now around the Library and ask them to think about those goals and how their work relates to them
    - Include that we want to hear from the community about the graphics and ideas they might have around further communications, as well as asking what they need from the Council
- Anatoly Mnev noted that it's great to have this visual communication out, but unless we connect it to the work people are doing around the Library, it may not achieve its maximum impact
    - People need to understand what their day-to-day jobs have to do with the Strategic Plan, so we will need to start an effort mapping activities to strategic goals and objectives

- Mike noted that we have already collected strategic projects in the data call for the NLM Portfolio Analysis
    - Can begin to identify the people working on those projects, and for instance, have a picture of that person with a quote and description of what they're doing and how it relates to strategic plan
    - Can have a generic poster about the Strategic Plan and additional posters about some of the strategic activities
- Anatoly also noted that it would be good to have dashboard with strategic projects, not just those listed in the ESM tool, with rolling updates so people can see the progress of different project
    - Can be available online
    - Mike noted that this was an idea when the Plan originally rolled out, but people haven't done a great job of consistently updated the progress of these projects
        - Anatoly noted that this dashboard and updating in the dashboard could be owned by the people directly working on those projects, rather than managers
- Valerie Schneider noted that some of the work that we do at NLM has aligned with these goals for a long time, so it would be important to show how those longstanding activities connect to the Strategic Plan
    - Patti noted that it's still important for NLM staff to recognize that there is a real shift that is happening in the Library's priorities, even as some day-to-day operations remain the same
    - Might be worthwhile to write a blog post to help NLM staff see what we've done over the years, how your work fits in with what we've done, and how the goals are about consolidating our efforts and driving the Strategic Plan
        - About taking the best strengths of the Library and using them to drive the science of the future

- Anne Altemus suggested that we could take one pillar of the Plan and show some projects that are being done to support the pillar; could have a series of posters around the Library
- Jody suggested creating videos, similar to those made for the Data Science Day, where staff could talk about what data science means to them
    - Could start Town Hall Meetings with these videos
    - Anatoly also suggested promoting certain projects, as they did during Data Science Day, creating videos and posters to post around the Library
        - Jody noted that the posters from Data Science Day have been captured and are on the Data Science wall
    - Anne noted that we can also push video through email
        - Each month, we could pick a pillar and highlight a project that supports it
        - Build a collection of demonstrated expression of the Strategic Plan
    - Mike noted that we'll need to identify who and what to highlight as a Council
        - Council members can bring ideas from their respective Divisions back to the Council

        - Anatoly noted that this doesn't need to be an exhaustive effort to capture everything
        - Showing staff that these are the objectives and goals of the Strategic Plan and here is how the work everyone is doing is being pushed up to support the goals/pillars
    - Rex Shuler noted that the useful thing about the pillars is that you can drill down into finer granularity – underlying the goals are the objectives, underlying the objectives are the strategic projects and initiatives
        - Can continue to drill down to show the work underneath it and the people supporting that work
- Patti suggested to Mike that as they consider the five-year update on the Strategic Plan, they might turn it around into a campaign asking NLM staff where they see themselves in the progress of the Strategic Plan to learn more about people's ideas
- Dan Cho noted that we might incorporate the pillars of the Strategic Plan on the NLM home page
    - Patti suggested going to the homepage and being able to click around to find stories about NLM staff and what they're doing to support the Strategic Plan
    - Anne noted that at the Board of Regents meeting, some of these stories were already highlighted, which can be shared – can call from the reports that were made there
- Patti suggested cleaning up the report that was given to the Board of Regents of all the different accomplishments over the year to share with the community
    - Everything from how many papers in PubMed Central that now have data associated with them to the number of people reached through the Data Science Training Initiative to the number of grant areas we've funded
- Jody noted that we need to make sure we're engaging a broad swath of NLM, so we're not focusing on people who already know a lot about the Plan, but are targeting those who don't so we can get them excited and engaged
    - Patti likes the idea of telling people that because of what they're doing, we're achieving the Strategic Plan – make the Plan more concrete and to recognize their efforts
    - Idea of the visuals is that they'll be around as a constant reminder of what the plan is
- Council members' input on different visual materials
    - People liked the poster, digital signage, and the business cards
    - Not much enthusiasm around the screensaver and the plexiglass sign
    - Anne also suggested creating a pop-up banner for the three pillars to display in Lister Hill and around the Library so that people coming through on tours can see what's going on across the Library

Round Robin Updates – All

- Mike for OSI
    - In April, OSI hosted a workshop where we brought about 15 librarians and iSchool faculty in to identify data science skills that would be useful for librarians working in research-based libraries, beyond data management assistance

        - OSI just finished a draft of the report on the workshop, led by Lisa Federer, and the draft was sent to Elaine Martin at Harvard University, who was the chair of the workshop, for comments; once we incorporate those comments, we'll be circulating the report to other participants
        - Subsets of the participants have been getting together and working on synthesizing and sharing outcomes of the workshop at various meetings
        - The document looks not only at the data science-related skills and services that data librarians should be thinking about, but also how general librarianship skills integrate with those more data-centric considerations
- Patti for OD
    - We are now under a continuing resolution, so we have enough funds to take us up through November 21st
        - Dr. Collins is optimistic that we will be having a budget resolution after that, which will likely be a minibus, so we won't be lumped in with Defense
    - Patti also gave Congressional testimony last week, which had a great response, and she thanked NLM staff for their work to support the testimony
- Dan Cho for MeSH
    - Have teamed up with NCBI taxonomy and have introduced their entire set of data into MeSH – turning all the terms they have into MeSH terms so they are discoverable
        - Set up as SCRs (Supplemental Concept Record)
        - With the inclusion of data related to bacteria, SCR has now grown 7%, and still have other kingdoms to incorporate
        - Supports Objective 1.1 – connecting NLM resources
- Valerie for NCBI
    - MEDLINE2020 group met a few weeks ago to look at the relationship of the gene database and indexing, as well as the progress on GeneRIFs (Gene Reference into Function)
        - Report from Jian Liu and staff on the indexing side who are looking into automating this process
        - Now discussions of programmatically pulling in relationships between genes and literature
    - Making sure that there will be engagement with users
- Rex for OCCS
    - IT assessment teams have been working hard to figure out ways to measure and quantify the accomplishments of NLM products
    - Have run into an impasse with the ways in which offerings have been described because they are no longer technical
        - No longer good alignment between IT assessment and offerings
        - There's a thought that those descriptions can be translated to map the component technologies (e.g. webpages) to offerings, but right now there's a disconnect
- Anne for OCPL

    - Noted that Patti has a talk coming up, which will be a retrospective on how the Library has successfully implemented the strategic plan, at the Charleston Publisher's Conference at the end of October/early November
    - The Tour program will be undergoing enhancements and updates with new information
        - Tara Mowery has had great numbers of people coming through
        - Need to highlight current research projects, people, and the new NLM vision
        - Doing a refresh now and would like thoughts and input on elements of divisions that should be featured
        - Jody noted that as new staff come on, part of their orientation should be a tour
        - Dan added that visitors could be given a business card with the pillars of the strategic plan when they tour
- Marie Gallagher for LHC
    - Have been participating in the IT Assessment Effort
    - Related to the third pillar, Marie got to participate in the Data Science Fundamentals class
        - She noted that in order to utilize the data science software and tools, trainees would need to use their own machines because of restrictions around what software can be downloaded
        - Mike asked Rex whether OCCS can set up machines that have the required data science tools (e.g. Jupyter notebooks) pre-installed for people who want to get training – developer desktops
    - Mike suggested that it would be useful for people who have data science skills that they aren't using for their jobs to put their skills into the Job Jar so they can put those skills to use
        - Right now, people who have ideas for projects can put those projects in, but the reverse isn't true
- Anatoly for NCBI
    - In October, PubMed 2.0 will go live, which will be the beginning of the transition for the whole PubMed, which should be complete by April 2020
        - Right now, PubMed Labs is undergoing rigorous testing to prepare for the transition later this month
- Jody for OCPL
    - Related to goal 2, will have the first trans-NLM social media working group to understand how we can cross-promote messages
        - How we're using social media, what kinds of accounts exist
        - Talk about metrics
    - After Patti's testimony on Wednesday, realized it would be nice to have one central place to go with talking points and updated statistics – now working on this
        - Right now, sources of information are the CJ, the strategic plan, Patti's testimony and FAQs, blogs, and presentations
        - Will then go out and interview people
- Rebecca for HMD

    - HMD opened a new exhibition in the HMD Reading Room on the first floor called *World Health Organization: Picturing Health for All*
        - Features a selection of images from the NLM Prints & Photographs collection of WHO photographs that highlight some of WHO's work in the 20th century
    - Thursday, October 10th have the next in the HMD Lecture with Ted Brown to talk about WHO's declaration from 1978
        - Being held in memory of Dr. James H. Cassedy
        - Will be in LHC Auditorium at 10am
    - Relaunched Pofiles in Science on Monday, profiles.nlm.nih.gov
        - Now integrated with the digital repository and are able to provide images and documents in new ways to people
- Karen Nimerick for LO
    - Had a nice exchange with SIS folks who joined the staff
        - Provided presentations on their respective products
        - HFTB and ToxNet will be integrated with PubChem, PubMed, and Bookshelf
            - Should finish work by end of December
    - DATMM project is making good progress and are working to finalize the data model
- Alicia Ross for EP
    - As of September 24th, awarded $55 million of NLM's funds and $16 million from co-funding
        - 67 new awards, 120 non-competing awards, and 5 supplements
    - Building priorities for FY2020

Subject: RE: Steering Committee Meeting Agenda (11/8)

Good morning everyone,

It has been awhile since we have met as a team. Looking forward to checking in with everyone at 10:00 today.

Agenda items:

Sunset Communications:

- A retirement message has been put up on the page https://sis.nlm.nih.gov/ , for it announced the closure of SIS, and has links to the TOXNET products that are being sunsetted in December. However, other areas cited on this page are not sunsetting yet. The message was put up for it was on one of Florence's lists of things to do in relationship to the ToxNet NCBI working group that's been underway for 2 years now.

- Confirm everyone getting the sunsetting system communications following the system modifications by OCCS

- Status of Dietary Supplement Ingredient/Label Database—any updates from ODS?

- HSDB updates?

- Other project updates or questions?

Subject: RE: Steering Committee Meeting Agenda (10/21)

Good morning everyone,

The following are the notes from the meeting including Wei's update on the release of the new functionality for the Sunsetting tool.

1. **Follow-up items from last week**

    a. Any changes to how follow-up communications are done for products that are initiated into the sunset process? Does everyone who needs to know get notified?
    Update from Wei: Following Changes (per meeting's discussion and requirements) have been implemented and pushed to production yesterday afternoon for sunsetting system:

        - The system will now notify approvers, internal staff to be notified, submitter of the request and key staff involved when someone takes an action on a request.
        - The reports permission now is given to all users.

    b. Carolyn to provide text for how to narrow the focus of Disaster program—any questions/discussion needed?
    Carolyn to schedule a meeting with Joyce and Stacey to review language

    c. Any updates to timeline of actions and internal decision on REMM?
    Check with Stacey

    d. Any updates to timeline of actions and internal decision on DR2?

Check with Stacey

e. Full cost estimate for ChemIDPlus?
The ask is not to provide a full cost estimate but for the group to be aware that the costs are changing/increasing. Need this information by when? OCCS has identified a placeholder estimate of 7X the cost from FY19 and is waiting for a firmer estimate from Oracle, but will include an estimate in the OCCS budget to make sure it will be covered. A decision about the actual way forward for this product will need to be make in the spring (the budget estimate does not mean will automatically move forward with keeping this product).

f. Dietary Supplement Ingredient/Label Database—any updates from ODS?
ODS knows the server is coming down in December. Rich (ODS project officer) has as a cost estimate and is working on this now. Jeanne will check in with Rich David and Jeanne will provide a list of products that are coming down; in "Francis" language; help from Carolyn to get this list in good order.

g. Final decision to sunset Household Products Database?
Proceeding with including that in the December retirements; vendor has been notified. This will be done prior to the end of the contract.

h. Has Pillbox communications gone out to staff?
No, David needs the general communication, message to David Hale provide your justification to Joyce by end of the week, know that unless he has brand new information (sustainable model) Joyce will not change her mind about sunsetting Pillbox. Plan would then be to work on taking this down in January. (time to

i. HSDB—meeting between David and Joyce and Dianne?
David and Wei have determined that HSDB violates security requirements in several ways. Had a meeting with Contracts to do a stop work order. Anticipate penalties. Trying to identify special projects to use money effectively (environmental scans to determine what other products are available, do any Federal agencies out there have definitive list of chemicals that should be included, even have feedback on most useful elements). Only half of the FY19 money was obligated, will not be using FY20 funds, and HSDB will "go into hiatus" for a few years. During that time evaluate if it should be brought back using a new content management system. For users, content system was already being changed over to PubChem, and all resources available. NCBI will to go with the status quo but they do not want to be developing a new content management system. Jeanne and team will ask for use information.
If there is an emergency chemical information need, NLM could be asked to do a manual update to the records, after coordinating with other agencies.

2. **Continue to review the status of transitioning SIS products (I've attached the meeting notes from last week as well as the most recent version of the product list)**

Drug information portal – Works off of ChemID, different interface and pulling information from same searches so if ChemID goes away, this should go away as well. Meng can fix dead link problem while she fixes them in ChemID (actually happens automatically for Drug Info Portal). This will give us more time to answer the question "What is NLM's Drug Information goal/intentions?" Has solid use information and could end up being a valued product but need time to determine.

Subject: Steering Committee Meeting Agenda (10/21)

Hi all,

Here's an agenda for Monday's Steering Committee meeting. Carolyn will be back with you all facilitating the meeting. Have a good rest of the week/weekend!

Agenda 10/21

1. **Follow-up items from last week**
    a. Any changes to how follow-up communications are done for products that are initiated into the sunset process? Does everyone who needs to know get notified?
    b. Carolyn to provide text for how to narrow the focus of Disaster program—any questions/discussion needed?
    c. Any updates to timeline of actions and internal decision on REMM?
    d. Any updates to timeline of actions and internal decision on DR2?
    e. Full cost estimate for ChemIDlus?

f. Dietary Supplement Ingredient/Label Database—any updates from ODS?
g. Final decision to sunset Household Products Database?
h. Has Pillbox communications gone out to staff?
i. HSDB—meeting between David and Joyce and Dianne?

2. **Continue to review the status of transitioning SIS products (I've attached the meeting notes from last week as well as the most recent version of the product list)**
   - What is the current plan (dates and activities)?
   - What assistance is needed/requested?
   - Does the team need a decision to move forward?
   - Do team members need to coordinate on some aspect of the plan (technology, communication, research)?
   - Sunsetting product lessons learned/shared process development

3. **Sunsetting product lessons learned/shared process development**

Thanks,
Bryanne

This so called 'new' pubmed is the same one promoted for a year and continues to SUCK BADLY for hiding details TWO links away from results, while wasting space by giving prominence to results by year. I have protested this hiding of DETAILS multiple times to no avail.

How can I keep the critical DETAILS with search results as has been the case for many years?

This is so CRITICAL because nearly every search is interpreted and DETAILS is the only way to see if the interpretations are appropriate or require manual manipulation. Making that two link jump-wait for every search attempt is dreadful.

Subject: List of Apps

[EXTERNAL]
Everyone

Here's the list of SIS Apps and background info that we had uncovered. This list goes beyond just Tox/Chem products. The BSD sunset group will be handling the Tox/Chem/Pillbox items only.

David

Specialized Information Services – Mobile Apps

AIDSinfo Guidelines

- Project lead: **Nicole Scott (LO/OET), Allison McDougall (ICF)**
- App developer: **ICF**
- Mobile platforms: **iOS, Android**
- Is the associated project still active? **Yes**
- Is app actively being developed? **No**
- Is the app's data being updated? **Yes**
- Is app currently available in the Apple App Store/Google Play Store? **Yes**
- Is there funding and/or a contract associated with the app? **Yes**
- User groups/use cases

- **AIDSinfo Guidelines – Developed for healthcare professionals that treat individuals with HIV. The AIDS*info* HIV/AIDS Guidelines app provides access to the federally approved HIV/AIDS medical practice guidelines.**
- **The app offers treatment recommendations approved by expert panels for the treatment of adult, adolescent, pediatric, and perinatal HIV infection, as well as the prevention and treatment of HIV-related opportunistic infections in adults, adolescents, and children.**

AIDSinfo Drug Database

- Project lead: **Nicole Scott (LO/OET), Allison McDougall (ICF)**
- App developer: **ICF**
- Mobile platforms: **iOS, Android**
- Is the associated project still active? **Yes**
- Is app actively being developed? **No**
- Is the app's data being updated? **Yes**
- Is app currently available in the Apple App Store/Google Play Store? **Yes**
- Is there funding and/or a contract associated with the app? **Yes**
- User groups/use cases
    - **AIDSinfo Drug Database - The AIDS*info* HIV/AIDS Drug Database app provides access to the same drug information provided by the AIDS*info* Drug Database.**
    - **The app includes two versions of each drug summary—one for consumers (English and Spanish) and one for health care professionals.**
    - **The app automatically refreshes content, so the information is always up to date. Also links users to relevant clinical trials.**

AIDSinfo Glossary

- Project lead: **Nicole Scott (LO/OET), Allison McDougall (ICF)**
- App developer: **ICF**
- Mobile platforms: **iOS, Android**
- Is the associated project still active? **Yes**
- Is app actively being developed? **No**
- Is the app's data being updated? **Yes**
- Is app currently available in the Apple App Store/Google Play Store? **Yes**
- Is there funding and/or a contract associated with the app? **Yes**
- User groups/use cases
    - **AIDSinfo Glossary – Developed for a consumer audience. The app includes English and Spanish definitions of more than 700 HIV/AIDS-related terms (the same terms found in the AIDS*info* Glossary of HIV/AIDS-Related Terms.).**

LactMed

- Project lead: **Ying Sun (OCCS/AB)**
- App developer: **Ying Sun (OCCS/AB)**
- Mobile platforms: **iOS**
- Is the associated project still active? **Yes**
- Is app currently available in the Apple App Store/Google Play Store? **Yes**
- Is app actively being developed? **No**

- Is the app's data being updated?
- Is there funding and/or a contract associated with the app?**No**
- User groups/user cases
    - **LactMed a database of drugs and dietary supplements that may affect breastfeeding. It includes information on the levels of such substances in breast milk and infant blood, and possible adverse effects in the nursing infant. Suggested therapeutic alternatives to those drugs are provided, where appropriate.**
    - **All data are derived from the scientific literature and fully referenced. Summaries of the reported information are provided and include links to other NLM databases. Supplemental links to breastfeeding resources from credible organizations are also provided.**

Embryo

- Project lead: **Ying Sun (OCCS/AB)**
- App developer: **Ying Sun (OCCS/AB)**
- Is the associated project still active? **No**
- Mobile platforms: **iOS**
- Is app currently available in the Apple App Store/Google Play Store? **No**
- Is app actively being developed? **No**
- Is the app's data being updated? **N/A**
- Is there funding and/or a contract associated with the app? **No**
- User groups/use cases
    - **see https://link.springer.com/chapter/10.1007%2F978-3-642-24826-9_48**

Base Chase

- Project lead: **Alla Keselman (LO/OET)**
- App developer: **SIS interns**
- Is the associated project still active? **No**
- Mobile platforms: **iOS**
- Is app currently available in the Apple App Store/Google Play Store? **Yes**
- Is app actively being developed? **No**
- Is the app's data being updated? **N/A**
- Is there funding and/or a contract associated with the app? **No**
- User groups/user cases
    - **In Base Chase a cartoon mascot DeeNA jumps onto fast moving platforms to grab DNA bases and complete unique DNA strands of various animals. The game supports high school biology curriculum. Short (about 5 minutes) meaningful in-class game sessions are possible.**

Bohr Thru

- Project lead: **Alla Keselman (LO/OET)**
- App developer: **SIS interns**
- Is the associated project still active? **No**
- Mobile platforms: **iOS**
- Is app currently available in the Apple App Store/Google Play Store? **Yes**
- Is app actively being developed? **No**

- Is the app's data being updated? **N/A**
- Is there funding and/or a contract associated with the app? **No**
- User groups/user cases
    - **Bohr Thru uses a 3-match game style to collect protons, neutrons, and electrons to create the first 18 elements on the periodic table. Element structures are further reinforced during bonus rounds where players that successfully build Bohr models earn "power-ups" to use in the 3-match game. Atom, the game's mascot, travels along with you and provides fun and interesting facts about the chemical elements.**
    - **The game supports entry level chemistry curriculum. Short, (about 5 minutes,) meaningful, in-class game sessions are possible.**

Run4Green

- Project lead: **Alla Keselman (LO/OET)**
- App developer: **SIS interns**
- Is the associated project still active? **No**
- Mobile platforms: **iOS**
- Is app currently available in the Apple App Store/Google Play Store? **Yes**
- Is app actively being developed? **No**
- Is the app's data being updated? **N/A**
- Is there funding and/or a contract associated with the app? **No**
- User groups/user cases
    - **Run4Green helps K-12 students to explore the topics of environmental conservation.**
    - **It reinforces the concepts of greenhouse gas reduction, using renewable energies, and making green product purchases. It teaches students on how to go green and what green products are.**

TOXinvaders

- Project lead: **Ying Sun (OCCS/AB)**
- App developer: **Ying Sun (OCCS/AB)**
- Is the associated project still active? **No**
- Mobile platforms: **iOS**
- Is app currently available in the Apple App Store/Google Play Store? **Yes**
- Is app actively being developed? **No**
- Is the app's data being updated? **N/A**
- Is there funding and/or a contract associated with the app? **No**
- User groups/user cases
    - **TOXinvaders engages young adolescents in a fast-paced attack on toxic chemicals in the environment.**
    - **The game supports middle school science concepts about environment and health.**

Tox-App

- Project leads: **Ying Sun (OCCS/AB), Colette Hochstein (LO/PSD)**
- App developer: **SIS intern, Ying Sun (OCCS/AB)**
- Is the associated project still active? **No**
- Mobile platforms: **iOS**
- Is app currently available in the Apple App Store/Google Play Store? **Yes**

- Is app actively being developed? **No**
- Is the app's data being updated? **No. Currently provides the TRI 2016 data set.**
- Is there funding and/or a contract associated with the app? **No**
- User groups/user cases
    - **Scientific research professionals, Public health professionals, Toxicologists, Environmental lawyers, "Concerned citizens" with an active interest in environmental health issues, Environmental health/justice specialists, IT specialists, GIS specialists, Students, Industrial hygienists, Informatics analysts, Medical librarians**
    - **Tox-App is based on the web-based NLM TOXMAP (https://toxmap.nlm.nih.gov).**
    - **Tox-App lets users search for industrial facilities that most recently reported releasing certain chemicals into the environment to the US EPA TRI program.**
    - **Tox-App provides some of the basic TOXMAP functions, including the ability to search for reporting facilities, or browse for these facilities by chemical, state, or county.**

WISER

- Project leads: **Jen Pakiam (LO/PSD)**
- App developer: **Next Century Corporation (NLM contract)**
- Is the associated project still active? **Yes**
- Mobile platforms: **iOS, Android**
- Is app currently available in the Apple App Store/Google Play Store? **Yes**
- Is app actively being developed? **Yes**
- Is the app's data being updated? **Yes**
- Is there funding and/or a contract associated with the app? **Yes, with the contract we have with Next Century Corporation. This contract will expire 09/29/19, so is being re-competed.**
- User groups/user cases
    - **A system designed to assist emergency responders in hazardous material incidents. WISER provides a wide range of information on hazardous substances, including substance identification support, physical characteristics, human health information, and containment and suppression advice. Modified slightly from https://wiser.nlm.nih.gov/**
    - **Responders typically have it on their personal devices & consult it for training & when responding on-scene. App is also downloaded to various department devices.**

MobileREMM

- Project leads: **Jen Pakiam (LO/PSD)**
- App developer: **Next Century Corporation (NLM contract)**
- Is the associated project still active? **Yes**
- Mobile platforms: **iOS, Android**
- Is app currently available in the Apple App Store/Google Play Store? **Yes**
- Is app actively being developed? **Yes**
- Is the app's data being updated? **Yes**
- Is there funding and/or a contract associated with the app? **Yes, via NLM and ASPR funds**
- User groups/user cases
    - **Mobile REMM contains selected, key files from the online, full version of REMM**
    - **Reference & training exercises related to radiation emergencies**

ERG2016 (soon to be ERG2020)

- Project leads: **Jen Pakiam (LO/PSD)**
- App developer: **Next Century Corporation (NLM contract)**
- Is the associated project still active? **Yes**
- Mobile platforms: **iOS, Android**
- Is app currently available in the Apple App Store/Google Play Store? **Yes**
- Is app actively being developed? **Yes**
- Is the app's data being updated? **Yes**
- Is there funding and/or a contract associated with the app? **Yes. IAA funds from DOT/PHMSA are used to develop & maintain this app (through the contract with Next Century Corporation).**
- User groups/user cases
    - **ERG2016 is a free, mobile web app of the Emergency Response Guidebook 2016 (ERG). The safety tool provides the nation's emergency responders with fast, easily accessible information to help them manage hazardous material incidents.**
    - **Modified slightly from: https://www.phmsa.dot.gov/hazmat/erg/erg2016-mobileapp**
    - **Responders typically have it on their personal devices & consult it for training & when responding on-scene. App is also downloaded to various department devices.**

Pillbox

- Project leads: **David Hale (LO/BSD)**
- App developer: **Gotomedia**
- Is the associated project still active? **Yes**
- Mobile platforms: **iOS**
- Is app currently available in the Apple App Store/Google Play Store? **No**
- Is app actively being developed? **No**
- Is the app's data being updated? **N/A**
- Is there funding and/or a contract associated with the app? **No**
- User groups/user cases
    - **The Pillbox mobile app provided offline access to Pillbox's data and images to support offline identification and information retrieval of pills.**
    - **Emergency medical personnel and law enforcement who required this information when cell/internet service were not available, such as in rural/aquatic environments, lower levels of buildings, and other connectivity-challenging situations. Patients and caregivers were also established users.**
    - **Texas Parks & Wildlife Department Law Enforcement Division had the Pillbox mobile app installed on 800 officer's phones, with active use in the field.**
    - **HHS Design Fellows conducting user research interviewed emergency and law enforcement personnel, finding praise for Pillbox's mobile user experience and substantial need for the functionality, data, images to be provided in an offline application. Interviewees have also stated these tasks have become more difficult to perform in the absence of the Pillbox app.**

Reminders!

1. **All staff should be working with their supervisors to take their "use or lose" leave by Jan 4.**
2. **All NIH employees must complete Annual Ethics Training before Friday, December 13, 2019. The training module contains several scenarios and hypothetical questions, providing a self-check of your understanding. Upon completion, you will have the option to "print" or "save" a certificate for your own records. Please note: you must complete the entire module through to the certificate page for your training to be automatically recorded in the ethics database. Go to the following link to start this training: https://ethics.od.nih.gov/Training/AET.htm.**

November 28, 2019 ~ *Happy Thanksgiving to all!*

AFP (Kathel)
On December 17, 2019, Kathel Dunn and Associate Fellows will visit the Goddard Library, NASA.
ADLO (Dianne)
Library Operations will hold its All Staff Meeting on Tuesday, December 3, 2019, 10am – 11am. Along with Division announcements and a Space Planning Update, the Division Chiefs will present Division Accomplishments for FY19; Goals for FY20.
HMD (Jeff)

- Congratulations to
    - All involved in the selection and announcement of first venues for NLM Exhibitions Connect, which encourages venues hosting NLM banner exhibitions to engage with and disseminate NLM health information resources to their communities as part of the experience of hosting NLM banner exhibitions.
    - Holly Herro whose abstract "Leather selection and use: The impact of conservators' choices" has been selected for a poster presentation to be part of the 48th American Institute for Conservation (AIC) Annual Meeting in Salt Lake City, UT - May 19-23 2020. This is a continuation of the work Holly and her team have been conducting of how different binding leathers, both modern and historical, were made and what causes their differing levels of aging and deterioration.
- Thanks to:
    - Stephen Greenberg for his planning to welcome to HMD, during the afternoon of December 11, staff of Dumbarton Oaks Research Library and Collection. This engagement is a direct outcome of Steve receiving and accepting an invitation from the Dumbarton Oaks in late 2017, to represent NLM in discussions about the digitization of source materials important for the study of the history of botany, as part of ongoing collaboration between Dumbarton Oaks and JSTOR and JSTOR Labs, and involving several universities and public institutions and their contributions to teaching and research related to plant collections (herbaria, rare books, taxonomic databases, etc.), which have been digitized or lend themselves to digitization. The aim of the workshop

was to foster an exchange of ideas about qualitative and quantitative sources relating to plants and their social contexts, and to determine the best ways of making primary sources available to researchers and students.
    - Tara Mowery for giving HMD a helpful heads-up about a special visit to HMD, on January 30, 2020, of 50 STEM producers from PBS Learning Media, as part of an NIH tour being arranged by NIGMS and involving its director Dr. Lorsch who will talk with about NIGMS Science Education Partnership Awards (SEPA) program and resources, as well as other NIH STEM materials.
- Jeff Reznick visited Weill Cornell Medical Center to deliver a Heberden Society Lecture entitled *So Comes the Sacred Work: Disabled Soldiers and the Humanitarianism of John Galsworthy during the Great War*, encompassing aspects of his research and publications based on NLM's collections and resources. Approximately 40 individuals attended Jeff's lecture, three of whom indicated their interest to write for *Circulating Now*, based on their use of NLM's historical collections, and after Jeff featured the blog in his introductory remarks. Jeff also participated ex-officio in the fall meeting of the advisory committee of the Medical Center Archives of NewYork-Presbyterian/Weill Cornell Medicine, and visited colleagues at the library of the Hospital for Special Surgery, and at the New York Academy of Medicine.

November 21, 2019
LO (Jeff)

- The group* leading the planning and implementation of the combined reading room functions met again this week, as part of their ongoing bi-weekly schedule of meetings. This week's focus was primarily on a draft layout of the integrated reading room with thanks D'Neen Ross for crafting it following walkthroughs and feedback from workgroup members. In continued cooperation with everyone, and the April 6, 2020, target date of the reading room integration, D'Neen will be honing this draft for further discussion at our next meeting. This week also the group also celebrated the fact recently learned that the Phase 1 demarcation line has shifted to allow for the PSD elevator and dumbwaiter to be accessible during Phase 1. *This main group—appreciatively involving our colleagues when we need their experience and expertise—consists of Stacey Arnesen, Patrick Casey, Steve Greenberg, Terry Ahmed, Ken Koyle, Ben Petersen, D'Neen Ross, and Rebecca Warlow. The wiki space of the group is here and associated SharePoint space is here. Thanks again to everyone for their respective contributions to this important, collaborative initiative!

BSD (David)

- Congratulations to NLM Karaoke team, the Bibliophiles, for participating in the NLM CFC Karaoke challenge. The team members were David Anderson (MMS), In-Hye Cho (MMS), Dorothy Trinh (Index Section), Paul Fontelo (LHC) and Allissa Dillman (NCBI).
- The BSD Sunset Team published the first Technical Bulletin article summarizing changes to former SIS resources that will move elsewhere. https://www.nlm.nih.gov/pubs/techbull/nd19/nd19_toxnet_new_locations.html . Team members met on Tuesday 19 November with staff from BSD and OET who are working on some former SIS outreach resources that are being sunset, sharing with them the BSD Sunset Team's plans for archiving resources that will not be available elsewhere after the TOXNET system is taken down.
- Bert Hakkinen (BSD), Jean Goshorn (BSD), Meng Cheng (BSD), Colette Hochstein (PSD) and David Gillikin (BSD) participated in a conference call with NIEHS and EPA representatives to talk about

the retirement of ToxNet, the move of HSDB content into PubChem, and the features and content of TOXLINE and PubMed.

- The BSD FY2019 Fourth Quarter and Annual Summary report is available on the LO Quarterly Reports SharePoint site at https://sharepoint.nlm.nih.gov/Projects/Knowman/SiteAssets/LO%20Quarterly%20Reports.aspx
- Bert Hakkinen (BSD) and Jen Pakiam (PSD) had a meeting on November 18 with the WISER contractor staff. They discussed and prioritize WISER efforts over the next two years. Jen Pakiam and the WISER contractor staff will be interacting with PubChem's Evan Bolton and Jeff Zhang about WISER content in PubChem, and PubChem content in WISER.

HMD (Jeff)

- On the heels of the Washington Post's recent feature on the recent launch of the NLM's new online exhibition *This Lead is Killing Us: A History of Citizens Fighting Lead Poisoning in Their Communities*, be sure to check out the banner version of this exhibition now in the NLM rotunda. Congratulations again to the Exhibition Program team and everyone involved in the curation and launch of this new exhibition!
- Thanks to Tom Ewing of Virginia Tech for flagging HMD that The Washington Post *Made by History* section has published his essay, "How media can help fight flu," which uses historical examples from the 1918 Spanish Influenza to address the role of the media today in dealing with serious disease threats. Tom wrote further "This essay built upon a history of NEH support for influenza history projects, often in partnership with the National Library of Medicine. These projects include a Digging into Data Challenge grant, which applied computational tools for text analysis to understand newspaper coverage of the 1918 Spanish influenza; a bilateral Digital Humanities grant to study the Russian influenza, with a focus on popular reporting in newspapers and expert analysis in medical journals, and two Summer Seminars for K12 teachers on the Spanish influenza in 2015 and 2018. The History of Medicine Division of the National Library of Medicine hosted the teachers who conducted research activities and attended sessions with NIAID epidemiologists and virologists Dr. Morens and Dr. Taubenberger (link); posting research on the Russian influenza by teams of Virginia Tech undergraduates in Circulating Now (link and link); my posts on the Spanish flu in Circulating Now (link and link), and numerous other related collaborations (link). Virginia Tech's College of Liberal Arts and Human Sciences has supported these projects as part of the university's goal of bringing advanced research to broad public audiences. The Dean of the College, Laura Belmonte, is copied on this message so she is aware of the extent and value of these partnerships."
- Jeff Reznick's 2019 Selma and Lois DeBakey Lecture in Biomedical Communication delivered last week at Methodist Hospital in Houston, and based on NLM's recent acquisition of the papers of Selma and Lois DeBakey, is now available online. During his time in Houston Jeff met and spoke at length with numerous faculty of Methodist, including William Winters, MD, and George Noon, MD, as well as, Denis and Michael DeBakey, the sons of Michael DeBakey, and Susan Cooley King, PhD, RN, daughter of Denton Cooley, and Neil Bush, brother of former President George W. Bush.
- This Thursday, Jeff Reznick will be delivering a Heberden Society Lecture at Weill-Cornell Medical Center, entitled *So Comes the Sacred Work: Disabled Soldiers and the Humanitarianism of John Galsworthy during the Great War*, encompassing aspects of Jeff's research and publications based on NLM's collections and resources. Jeff will also be participating ex-officio in the fall meeting of the advisory committee of the Medical Center Archives of NewYork-Presbyterian/Weill Cornell Medicine. In both respects, this public engagement, like others

undertaken by colleagues in HMD and across the Library, independently and together serve to advance the new NLM strategic plan, especially its second goal (2.1) know NLM users and engage with persistence, and (2.2) foster distinctiveness of NLM as a reliable, trustable source of health information and biomedical data.

OET (Amanda)

- This week, a new TB article was published announcing the retirement of the American Indian and Alaska Native Health Portal and Arctic Health website on December 16, 2019: https://www.nlm.nih.gov/pubs/techbull/nd19/nd19_sis_portal_retire.html.
- On Tuesday and Wednesday, Amanda Wilson and Jen Jentsch (PSD) as members of the NASEM Roundtable on Health Literacy for the workshop "Developing Health Literacy Skills in Youth" and committee meeting.
- On Wednesday Mike Davidson presented the new PubMed as part of NNLM Resource Picks webinar series to ~300 attendees.
- This Wednesday was our 4th #citeNLM Fall 2019 virtual edit-a-thon! Check out our dashboard to see stats on the event and entire fall campaign: https://outreachdashboard.wmflabs.org/campaigns/citenlm_fall_2019/programs

PSD (Stacey)

- Reminder for NLM staff that they can place requests for ILLs with the NIH Library. Please see procedures located here: Interlibrary Loan (ILL). The materials will be delivered to the Information Desk in the Reading Room. You'll be notified by email to come pick up the materials.
- The 100% design for the B2 shelving installation has been submitted and reviewed. The new likely construction start date will be in early January with a completion date in May 2020.
- The remediation of mold-affected items on B2 began on 11/12. A team of contractors constructed a containment zone and have commenced cleaning all collection items and shelving within the zone. Cleaning on B2 is expected to be complete by mid-December. Once complete, the contractors will move to the B3 level, which is expected to take an additional five weeks.
- The recipe Vegetables and Turkey Stir-Fry was added to MedlinePlus.
- The health topic, Hidradenitis Suppurativa, is now available in Spanish: Hidradenitis supurativa
- MedlinePlus Magazine (English and Spanish): The Winter issue of the NIH MedlinePlus Magazine is wrapping up and will be delivered to subscribers in mid-to late January. The cover topic is Sickle Cell Disease and the celebrity is Jordin Sparks. The Spring 2020 issue topic and celebrity are Diabetes and Viola Davis.
- My MedlinePlus Newsletter "My MedlinePlus Weekly Newsletter: Quit Smoking, IOL Implants, Thyroid Ultrasound" sent November 13, 2019, to 41,630 subscribers, open rate 30%, click rate 12%. Top three articles: Spinal Stenosis, Bladder Matters, Buttermilk Scones.
- On November 15, the article, *About MedlinePlus: New and Updated Information*, was published in the *NLM Technical Bulletin* announcing the expanded and updated suite of web pages where you can learn about MedlinePlus resources and policies.
- The Trans-NLM Unified Digital Presence Working Group discussed the NLM identity guidelines, product logo standards, collaborative chartering, and the LHNCBC website logo redesign at their biweekly meeting.
- Stephanie Morrison (PSD) and Laura Bartlett (OET) attended the monthly meeting of the NIH Health Literacy Quality Improvement workgroup. Laura gave a brief presentation to update the group on the NLM health literacy assessment tool project.
- On Monday, 11/18, Lisa Theisen and Colette Hochstein met with the Unified Digital Presence Working Group. Topics discussed were updated NLM Identity Guidelines, the proposed new

design for the home page and how to best approach the review of the over 270 product offering logos on NLM sites.

- On Tuesday, 11/19, Ken Koyle, Lisa Theisen, Gillian Takamaru and Joe McNair met with Dan Wendling to discuss future plans and expansion of ILL and Call slip data visualizations using Tableau. The goal is to minimize manual statistics gathering and review CAS analytics more broadly.
- On Thursday, 11/21, Ken Koyle, Stacey Arnesen and Lisa Theisen, along with OCCS met with MLA to discuss the migration of the EFTS service from the University of Connecticut to MLA hosting.

I don't who in OSP would be able to talk about the impact of PubMed and other NLM efforts to make data public. We would only need to mention NIH data policies over the years to promote release of data. The whole thing we me talking about patents and licensing is 20 min.
I think an NLM person would be best.

Subject: Your participation in the 5-6 December National Academies meeting on Federal Labs (Washington, DC)

Dear Mark,

We are delighted that you will be joining us as a speaker at the 5-6 December 2019 meeting of the National Academies committee on *Advancing Commercialization from Federal Laboratories*, which will be held in Washington, DC.

You mentioned that you would like to bring a colleague as co-presenter. Have you identified who you would like to co-present with you?

The overall meeting will take place in two locations over the course of the two-day event:

- **The first day (Thursday, 5 December) will take place in the Duke Center** (1201 Pennsylvania Avenue, NW, Suite 500, Washington DC 20004), with open sessions currently scheduled to run from 9:00 AM to 4:15 PM (Eastern Time).
- **The second day (Friday, 6 December) will take place in Room 125 of the National Academy of Sciences headquarters** (2101 Constitution Avenue, NW, Washington, DC 20418), with open sessions currently scheduled to run 9:00-11:00 AM (Eastern Time).

Your Scheduled Speaking Time:
You are scheduled to take part in the session providing an "Overview of Technology Transfer at DOD and NIH," which is currently scheduled to run 11:15AM—1:15PM (Eastern Time) on 5 December at the Duke Center. You and your colleague will have approximately 25-30 minutes for the joint presentation.

A draft agenda will be sent separately as we approach the event.

Request for Bio:
We would appreciate it if you, and any co-presenter, would each send us, at your earliest convenience, a **short biography** that would be appropriate for distribution to the committee and other meeting attendees.

Again, we are delighted that you will be joining us in December to meet with the committee. If you have any questions, please do not hesitate to contact me.

Best regards,
Anita

Aisha,
Here is the file for the document I just gave you that David and I have signed. If any of the further signatories have modest changes, please just make them and re-send to me and David to sign. Philip can help make e-signature blocks if we need to do it too often.

David's out next week, just FYI.

Unauthorized Commitment Action/Ratification Request

Date: **October 22, 2019**

From: **David Gillikin, Chief, Bibliographic Services Division/Library Operations**

Through: **Joyce Backus, Associate Director for Library Operations, NLM**

Through: **Daniel Hartinger, Director, Office of Acquisitions, NLM**

To: **Diane Frasier, Head of Contracting Activity, NIH**

Subject: **Request of Unauthorized Commitment Ratification pursuant to FAR 1.602-3, HHSAR 301.602-3, and HHS Acquisition Alert 2017-02.**

The following information is provided by the individual responsible for creating the subject unauthorized commitment to support a request for ratification.

1. **Name, address, telephone number, and email address, of Government official who created the unauthorized commitment.**

   David Gillikin
   National Institutes of Health
   National Library of Medicine
   Library Operations
   Bibliographic Services Division
   8600 Rockville Pike
   4N419 Bldg. 38A
   Bethesda, MD 20894
   301-827-5034

2. **Name, address, telephone number, email address and/or URL (if available) of the vendor.**

   Jay A. Brown, MD, MPH
   6216 Coho Ln NE
   Olympia, WA 98506
   360-628-8569
   brownjay@haz-map.com

3. **Description of goods, services, or equipment acquired:**

   Chemical and toxicological data about hazardous substances were retained on the NLM website Haz-Map after the license for the data expired. The period of time for the retention of the content is August 1, 2019 – December 31, 2019.

   The total amount for the unauthorized commitment is $16,041 ($3,208.20 per month for 5 months).

4. **Description of benefit received by the Government (include / attach a properly executed Inspection Report or Receiving Report (Receipt, Inspection, and Acceptance) issued in accordance with FAR 32.905 (c) .**

   NLM continued to provide the Haz-Map chemical and toxicology information to our end-users and our federal colleagues for a transition period before the Haz-Map site would be retired. This time period would allow users to be notified about the planned retirement of Haz-map, giving them time to identify other federal or commercial resources for this content.

5. **Explanation of how Contractor was selected. If other vendors were contacted, indicate their names and prices quoted (attach separate pages if necessary or document on Quotation Abstract form).**

   The contract with Jay Brown for the Haz-Map data was already in place. The period of performance for the contract ended on July 31, 2019 without the option year being exercised.

6. **Document the basis for determining the price fair and reasonable in accordance with FAR 13.106-3 (a) and/or FAR 15.402. Program staff should consult with contracting officer when addressing this element. (FAR 1.602-3 (c) (4)).**

   The annual contract cost for Haz-Map content is $38,500. The monthly cost is $3,208.20. The cost for the time period of August 1, 2019 – December 31, 2019 is $16,041 for 5 months.

7. **Explain, in detail, how the unauthorized commitment occurred and why normal procurement procedures were not followed (FAR 1.602-3 (b) (1)).**

   During the first 6 months of 2019, work was under way to merge the Division of Specialized Information Services (SIS) staff and products into Library Operations (LO). Several contract actions overseen by the Acting Director of SIS were not handled before her retirement. This included the contract actions for the ToxNet product called Haz-Map. This product was transferred to the Bibliographic Services Division (BSD) within Library Operations on June 24, 2019.

   The period of performance for the SIS product, Haz-Map, ended on July 31, 2019. The work to initiate the option year had not been undertaken by the Acting Director or by the COR for the contract prior to the merger of SIS into LO in June or the retirement of the Acting Director in June 2019. In addition, though a sunset plan for Haz-Map had been written, no actions had been pursued by former SIS staff to retire the Haz-Map product by July 31, 2019.

   The Haz-Map COR notified his new supervisor, the Chief of the Bibliographic Services Division, on July 31 that the contract was closing on July 31. No work on the option year renewal or on the retirement process had been implemented. No announcements had been made to the public or to the Haz-Map content vendor, Jay Brown. In addition, no work had been done with OCCS to determine how to take down the Haz-Map product from the ToxNet system. The Haz-Map product is integrated into the ToxNet search system and

removing this content would not be a simple process. The ToxNet search system is scheduled to be retired in December 2019.

Users were not aware of the potential retirement of Haz-Map. The sudden removal of this content would not be in the best interests of NLM or our users.

In order to better serve NLM end-users and colleagues in other federals agencies, such as the Occupational Health and Safety Agency in the Department of Labor, the decision was made to retain the Haz-Map content on the ToxNet system until December 2019 when the ToxNet system will be retired.

8. **Describe any other special circumstances (e.g. employee creating the unauthorized commitment has left NIH) or procedures, including clearances (e.g. Special Clearance and Other Acquisition Procedures or Preparation and Clearance of Scientific, Technical, and Public Information Presented by NIH Employees or Produced for Distribution by NIH, etc.) (FAR 1.602-3 (b) (7)).**

   The merger of SIS into LO, and the retirements of the Acting Director and Assistant Acting Director of SIS in June 2019 introduced administrative and managerial issues for the areas of Library Operations into which the SIS staff and products were moved. Other key staff, such as contract CORs, also retired or left SIS during the first half of 2019. This has left Library Operations staff with gaps in knowledge about SIS budget and contractual issues that are still being uncovered.

9. **Describe, in detail, the proper procedure(s) that should have been followed (FAR 1.602-3 (b) (1)).**

   The Division of Specialized Information Services should have initiated the actions to exercise the contract option In the Spring of 2019 in order to award the option year for the Haz-Map data by July 31, 2019.

   Alternatively, the sunset plan for retiring the Haz-Map product should have been started May 2019 in order to provide users with advanced knowledge of the retirement of the site. The vendor should also have been told that the contract option year would not be awarded. All of this information should have been provided to the Bibliographic Services Division prior to the Haz-Map content being transferred.

10. **List all steps taken by Institute, Center or Office (ICO) management, cognizant Office of Acquisition, Delegated Office of Acquisition, and/or Governmentwide Commercial Purchase Card holder to prevent reoccurrence of future unauthorized commitments (FAR 1.602-3 (b) (1)).**

    Review and documentation of the contracts and period of performances of the SIS products transferred from SIS to the Bibliographic Services Division (BSD) has been performed. BSD has set up a Sunset Team to more fully document and complete the sunsetting activities associated with the 14 SIS products that compose the ToxNet search system. Some of these products are being merged into other NLM databases, while others are being fully retired. The sunset plans include a communication strategy that has been developed with the NLM Office of Communications and Public Liaison.

Reminders!

- **All staff should be working with their supervisors to take their "use or lose" leave by Jan 4.**
- **All NIH employees must complete Annual Ethics Training before Friday, December 13, 2019. The training module contains several scenarios and hypothetical questions, providing a self-check of your understanding. Upon completion, you will have the option to "print" or "save" a certificate for your own records. Please note: you must complete the entire module through to the certificate page for your training to be automatically recorded in the ethics database. Go to the following link to start this training: https://ethics.od.nih.gov/Training/AET.htm.**

Please note I did NOT add notes from LO, AFP or NICHSR this week; will add notes to this week's release.

December 5, 2019
LO (Jeff)

- The group* leading the planning and implementation of the combined reading room functions met again this week, as part of an ongoing bi-weekly schedule of meetings. Our plan is to combine the reading rooms in the current HMD reading room space by April 6. To meet this deadline we are working on several tasks including honing the draft layout of the integrated reading room, cross-training the PSD and HMD reference staff, developing a communications plan for our patrons and external stakeholders, planning to move furniture and equipment from the main reading room to the HMD reading room to accommodate additional researchers, adding additional lockers for patrons, updating signage, and discussing how retrievals to the combined reading room will happen. The wiki space of the group is here and associated SharePoint space is here.
  Thanks again to everyone for their respective contributions to this important, collaborative initiative.

*This group—appreciatively involving our colleagues when we need their experience and expertise—consists of Jeff Reznick, Stacey Arnesen, Patrick Casey, Stephen Greenberg, Terry Ahmed, Ken Koyle, Ben Petersen, D'Neen Ross, and Rebecca Warlow.

TSD (Beth)

- Voyager and LocatorPlus will be unavailable from 3 pm Friday, December 6, through Sunday, December 8, for Year End Processing (YEP), MeSH URI maintenance and OCCS server maintenance.
- LO staff Dianne Babski, Joyce Backus, Maria Collins, David Gillikin, and Jennifer Marill participated in the meeting of publishers on December 3, sponsored by the Friends of the NLM. Discussion topics included the new PubMed, NIH funded pre-prints, data connection and data discovery, the NIH data management and sharing policy, the new NLM Board of Regents Collection and Preservation Policy, and an update on the changes to the LSTRC system and LSTRC review forms.

- Jen Diffin and Jennifer Gilbert will be attending CNI in DC on December 9-10. Jennifer Gilbert is presenting, "Designing a Migration Path: Final Report and Recommendation," as part of a project briefing panel at CNI. She will also be attending the Fedora Leadership Meeting on December 11 in DC as NLM's representative to DuraSpace.

BSD (David)

- Tammy Powell attended the FDA CDER Prescription Drug Labeling Conference on December 4-5. The meeting covered updated Labeling Rules; Labeling For Biologic Products; Methods to improve the quality of Structured Product Labeling submissions; Product Nomenclature
- The BSD Sunset Team made plans to retire apps associated with SIS resources that are moving to Bookshelf (LactMed) ore being retired (TOXMAP) following an NLM decision not to expend considerable effort to create new apps. The Sunset Team continued to plan, with appropriate NLM staff, the URL redirects that will be put in place by December 16 when many of the TOXNET resources will be taken down or made available only in their new locations.
- Bert Hakkinen participated in the November 20 monthly meeting of the Interagency Coordinating Committee on the Validation of Alternative Methods (*ICCVAM*).
- On November 21, Bert Hakkinen and Meng Cheng provide webinar for FMC Corporation (a Fortune 500 chemicals company) very interested in the "TOXNET is Moving" efforts. The focus was on HSDB's move into PubChem; ChemIDplus, ToxTutor, PubMed, and Bookshelf were also of high interest to the participants.
- The RxNorm December monthly release was made available for download on Monday, December 2. Units of measure on RxNorm normal forms for dietary supplements are changing beginning with the December release. The new Qualitative Distinction modifier "Micronized" is also included. Details on this update are found in the NLM Technical Bulletin article "RxNorm December 2019 Release".
- Bert Hakkinen and Jen Pakiam (PSD) had a biweekly status and planning meeting on December 4 with the WISER contractor staff. Also, they will be meeting soon with PubChem's Evan Bolton and Jeff Zhang about WISER content in PubChem, and PubChem content in WISER.

HMD (Jeff)

- Thanks to Sarah Eilers for informing that the NLM video productions marking the 175th anniversary of our institution and the publication of *Images of America: National Library of Medicine* are now available in NLM Digital Collections, therefore helping to preserve not merely these production themselves but the combined staff expertise, expertise, stewwardship, and public service these productions together represent. Thanks very much to Sarah and everyone involved in cataloging and ingesting these important productions, and others in the future pertaining to the history of our institution as our successors will be able to learn from it.
- With generous support of the Office of Communication and Public Liaison, the National Library of Medicine initiated a trans-institution effort to document, using still photography, our spaces, workflows, and people. Those photographs are now available in SharePoint in a Project labeled NLM Photography. All images are organized into folders by office. Within each office folder are 3 sub-folders. Two folders hold copies of all images from the shoot—organized by format—tiffs and jpgs. The third folder holds jpgs of the "selected" images and a Word document with caption information. The "selected" images represent those photographs that are technically the most interesting (out of the hundreds of photographs taken), and are most successful in representing our spaces, workflows, and people. SharePoint permissions are set so you can download the photographs, and edit and correct the captions.The photographs and caption information are in the queue for cataloging and upload into Digital Collections.

- The selection committee for NLM's annual Michael E. DeBakey Fellowship in the History of Medicine–consisting of Jeff Reznick, Ken Koyle, Rebecca Warlow, Susan Speaker, and Christopher Wanjek (Acting Director, NIH Office of History)--has selected six fellows who, over the course of 2020, will undertake their research projects onsite at NLM. The public announcement of these six selected fellows is forthcoming.

PSD (Stacey)

- Dan Wendling and Colette Hochstein sat in on the Bi-Weekly Digital Data Analytics Status meeting yesterday. A draft of the proposed NLM Digital Scorecard display was reviewed and discussed. The group deliberated about which Time Period (e.g. monthly, quarterly) would be most useful. It was pointed out that Project Managers may be more interested in monthly stats, while Senior Staff may prefer a quarterly summary and well as a comparative/trend summary (e.g. previous year). Several LO staff were asked for feedback about an earlier version of this; they will again be asked. OET pointed out that there are areas of the Library with products that are quite different from these; the group needs to determine how the measures will be adapted to meet their needs.
- A new MedlinePlus health topic on HIV PrEP and PEP (pre-exposure prophylaxis and post-exposure prophylaxis) was released in English and Spanish.
- The "My MedlinePlus Weekly Newsletter: Thanksgiving Food Safety, Family Health History, Indigestion, Ear Infections" was sent November 27, 2019, to 42,328 subscribers; the open rate was 29%, the click rate was 9%. Top three articles: Plantar Fasciitis, Best Practices for Safe Food Preparation, Vegetables and Turkey Stir-Fry.
- The Trans-NLM Unified Digital Presence Work Group had its biweekly meeting. The group discussed overall NLM and product identity guidelines and collaborative chartering.
- DOCLINE 6.2.4 was released on 12/4/19. The release includes updates to Routing Algorithm information, search results pagination for Requests, Libraries, Journals, and Holdings Search results, a revised Borrow Menu option to improve clarity and ease of use, updates to Account Application emails and the "Fill from Format" label on Request forms.
- Thanks to the technical experts from OCCS for their assistance in quickly resolving two computer problems impacting Reading Room operations this week – a LocatorPlus outage on 12/3/19, and a network problem that affected Voyager, Relais, and the network printers on 12/4/19.

[EXTERNAL]

Dear Carolyn,

I will miss today's meeting.

OET updates are as follows:

From NIEHS on 27 Nov: "NTP does have an interest in these educational resources [ToxTown, ToxTutor, EnvironmentalHealth Student Portal]. It's just a matter of our internal leadership going through a discussion/approval process."
ToxTown: Deliberations at NIEHS continue. Last week NIEHS Librarian Stephanie Holmgren was in touch asking about technical infrastructure for ToxTown and whether or not the student health portal was integrated with ToxTown (it is now).

ToxTutor: Last week, Stephanie also asked the same set of technical questions to Bert about ToxTutor. At the same time, Bert has had conversations with Dr. Wilson Rumbeiha, wkrumbeiha@ucdavis.edu, at UC Davis who hosts: http://www.toxmsdt.com/e-modules.html. He is very interested in taking over and Bert prefers he take over ToxTutor, but he, Dr. Rumbeiha, is using grant funding to support his website. Currently, ToxTutor is hosted on ORAU's (i.e., Oakridge) LMS TopClass (not Moodle. That needs to be corrected in last week's notes). OET prefers NIEHS.

Keeping ToxTutor up for now is folded into the maintenance we're already paying on the LMS being up. ORAU and OET exploring the option of serving the course without requiring a login.

Community Health Maps: OET is discussing evaluation results and making a sunset recommendation this week.

Apps: OET is preparing and submitting sunset plans for 4 apps: Base Chase, Bohr Thru, Rub4Green, and Tox Invaders. After approval, OET will alert Wei's team who will then pull from the app store/Google Play/ etc. OET is thinking timing on this to be April/May, unless leadership wants earlier. Wei has said OCCS can accommodate what timing we propose.

Regards,
Amanda

Good morning everyone,

The following is our agenda for our meeting this morning:

1. Policy on Website/Product retirement and Archiving issues
2. Sources for consolidated list of SIS products
3. DIMRC updates
4. ToxNet Updates

5. Update on data retention options and maintaining access to NLM data that is not available elsewhere. (Wei)
6. ToxTown and Tox Tutor updates
7. Other updates

See you shortly,

Subject: RE: Steering Committee Meeting Agenda and Notes (11/25)

Good morning everyone,

Here are the notes from our meeting today. Have a wonderful Thanksgiving!

- Plans for the ToxNet box on the NLM homepage. No updates, Stacey is working with Lisa and her team, December 16 is the deadline.

- Discussion on outdated Apps.

  - DECISION: **BSD will coordinate pulling LacMed and any other Tox related apps (not WISER) from Apple and Android stores**. As of the 16th the link for the LacMed APP will go down. OCCS does not have Android support and the Apple version of the app is very old (V5 vs V11). Group decided that apps should be taken down. Rex is working on the next Technical Document that covers LacMed and possibly LiverTox and will reference Bookshelf and HRSA site Mother to Baby.

- As we shut down sites, we need a general policy on how long the site and content should be retained by OCCS. This is really a site by site discussion – for example, sites that had licensed data don't need to be retain for a long time. A general policy would probably be good to have.

  - Category 1: we have data and we are allowed to distribute, keep visual through archive, Category 2: Keep the data but remove the search and access system. Category 3: We do not have rights to the data, OCCS retain short term, just block access, for 1-2 months and then remove completely. Coordinate with LO to archive the webpages to retain the look and feel. **(David will write this up)**

- Some of the sites being shut down are the software products and we need to determine how/if these things should be retained /archived. For example, ToxNet is a search retrieval system that NLM developed. What are the parameters that we need to consider for this legacy software/product

  - Materials that preserve the look and feel and describe how the system works should be archived. (Training materials or tutorials are a good past example).

- Results of EPA's call (Tuesday Nov 19 Bert set it up and will be attending - – what steps if any?)

  - No Action: Asking about items that did not get converted. Wanted to know how to get to the information that they need to access. They were pleased to see the technical information.

- WIM and deadlinks communications – Stacey update; Stacey will confirm that Collette and Roger are keeping everyone informed.

  - Roger has it covered, no issues.

- NIEHS updates?

  - Still gathering data. When will OET/Amanda make the decision to sunset resources.
  - ToxTutor was just updated; in Oakridge and Moodle, also free standing. Move to a single hosting location (Moodle).
  - ToxTown also recently updated and maintained on the Consumer Health.

- For BSD resources, we are working through a timeline, if they want to take over the resources they need to deal directly with the vendors because BSD does not own data.

○ Discussion on retenation of data and maintaining access to NLM data that is not available elsewhere.

- Wei will check, is our data on the FTP site backed up and accessible even if we remove the search engine?

Subject: RE: Steering Committee Meeting Agenda (11/15)

Thank you everyone,

The following are the meeting notes.

- Results of EPA's call (Tuesday Nov 19 Bert set it up and will be attending - – what steps if any?)

- Plans for the ToxNet box on the NLM homepage No updates, Stacey is working with Lisa and her team December 16 is the deadline.

- WIM and deadlinks communications – Stacey update; Stacey will confirm that Collette and Roger are keeping everyone informed.

  - Process will result in deadlinks; process will be 1) remove the link, 2) redirect the link, 3) lead to text note.
  - Most redirects are between OCCS and NCBI resources
  - **WIM team needs to setup a review to make sure the redirects are working as expected – this review should go beyond just pages they control, need to work with Site owners and OCPL. (As an example, previously they have provided reports to others to let them know which links will be impacted).**
  - The links are expected to go to the transition page.
  - Static documents (looking at those for removal, archive or other actions) – who will do this work?
  - Other NLM pages that the WIM does not review; as OCPL moves into a role as a content manager.
  - **Wei will confirm the plans for redirects are moving forward and on track.**
  - **Customer Service has standard answers for sunsetting from Sunsetting team.**
  - **Strategies for communicating future changes.**

- One Technical Bulletin ready to go; in the approval process with OCPL.

- NIEHS updates?

  - Asked for analytics and cost information. Taking proposal to management. Amanda will check in with Alla.
  - ToxTown - Longer term/Fallback strategy (spoke Stacey and Stephanie- integrating information into MedLine+ -- there is ToxTown funding to do this work—would require a review of appropriate content)
  - Tox Tutor – does not have longer term plan at this time. (Society of Toxicology had expressed interest in the past – communicating with Bert and maybe Jerry; recently asked about the cost to maintain resources).

Other OET Product Updates

- American Indian Alaska Native page – sunsetting plan is being enacted.
- Artic Health – University of Alaska running new site, just redirects. (might be some work? Amanda will confirm)
- Hosting the Consumer Health Map Blog – working with the writer to find a new home.

- Other product updates?

- HSDB – still waiting for Contracts to complete next steps.
  - Original plan to cut access this weekend; now cut Monday.
- Plan around Chemical Information
  - Should we continue we continue to Tox work at all?
  - What level of support can we provide? David will provide level of effort and cost.
    - Base level – LO provide chemical sources to be used by PubChem (review process similar to what we do with Bookshelf)
    - Provide Chemical Data support – curated data – redefine the level of information needed within PubChem.
    - Provide chemical data at the Toxicology level – develop a review AND input system for providing information/shared content management system.
- AidsInfo – Nicole and Stacey have been meeting with OAR to transition, information gathering meeting to learn about service; OAR will make a decision in March about contract support and begin implementing in September.

- Will only need communications plans, does not impact OCCS since it is hosted at contractor site.

Subject: RE: Steering Committee Meeting Agenda (11/15)

Good morning everyone,

I have the following items for our agenda for this morning.

Agenda

- Results of David EPA's call – what steps if any? (training?)
- Plans for the ToxNet box on the NLM homepage?
- WIM and deadlinks communications – Stacey update
- NIHES updates?
- Other product updates?
- Other topics?

Notes from the Steering Committee Meeting on 11/15

1. A retirement message has been put up on the page https://sis.nlm.nih.gov/ , it announced the closure of SIS, and has links to the TOXNET products that are being sunsetted in December. However, other areas cited on this page are not sunsetting yet. The message was put up for it was on one of Florence's lists of things to do in relationship to the ToxNet NCBI working group that's been underway for 2 years now. **All of the links on this page are being handled.**

SIS Home page https://sis.nlm.nih.gov/– going away and serves as access point for other resources, Amanda has outreach, K-12 education, AIDs; how is Stacey is handling DIMRC.

NLM Home Page https://www.nlm.nih.gov/ -- Action for PSD to remove Toxnet box from home page (connected page will be gone) – new product? What do they want to do? More positive page? **Stacey will talk with Lisa to determine what to replace on the Home Page.**

General action? Who is telling people about issues with web pages and web links? WIM team is dealing with broken links, how are they communicating those issues? Are they anticipated or only responding? How do they work? Stacey and Lisa (PSD) -- **Stacey will confirm that Collette is communicating the pages that are going away so the team can plan work. Can they find all links? Who else needs to be notified?**

2. For some sunsetting site, people ask us to **release source code and/or Web site icon images** (not NIH or NLM logo), I don't think that NLM has an policy regarding this and maybe we should have one or group can make a decision (thanks Joyce for providing a very useful input for a recent request).

Statement – Administrative Manual (David will send a general email and then store it on the SharePoint site).

Release Source Code -- Releasing source code creates future security risks since developed for our environment so we cannot be responsible for releasing to other environments.

Release Web site icon images – these were developed in the past so the provenance of the images is not known, so we cannot give permission to use.

3. Also for some sunsetting sites, people ask **for redirect** (redirect to new site (if content was merged)), some ask for redirect 1 year, some ask if possible to redirect forever… Again, we shall come out a consistent rule (since redirect maintenance also costs).

David will send this message as well.

NLM will support redirect for 1 year; Web team will look at adding an interrupt message during the redirect, Wei will check in.

4. Confirm everyone getting the sunsetting system communications following the system modifications by OCCS

Yes, complete.

5. Status of Dietary Supplement Ingredient/Label Database—any updates from ODS?

They are moving, we are moving forward.

6. HSDB updates?

Issue partial stop work order. And then shutting down access. Within timeline.

7. Other project updates or questions?

HAZMAP proceeding quickly, working on requisition and on track.

BSD Sunset team working with Ruben to determine what needs to be taken down across the products.

NIHES meeting about taking over TOX tutor and TOX town. Librarian very interested. Trying to figure out transition plans. (NTP may also be interested as well). ITER and other areas as well.

FOR NEXT MEETING

Results of David EPA's call – what steps if any? (training?)

WIM and deadlinks communications – Stacey will update

Subject: RE: Steering Committee Meeting Agenda (10/21)

Good morning everyone,

The following are the notes from the meeting including Wei's update on the release of the new functionality for the Sunsetting tool.

1. **Follow-up items from last week**
    a. Any changes to how follow-up communications are done for products that are initiated into the sunset process? Does everyone who needs to know get notified?

    Update from Wei: Following Changes (per meeting's discussion and requirements) have been implemented and pushed to production yesterday afternoon for sunsetting system:

    - The system will now notify approvers, internal staff to be notified, submitter of the request and key staff involved when someone takes an action on a request.
    - The reports permission now is given to all users.

    b. Carolyn to provide text for how to narrow the focus of Disaster program—any questions/discussion needed?

    Carolyn to schedule a meeting with Joyce and Stacey to review language

    c. Any updates to timeline of actions and internal decision on REMM?

    Check with Stacey

    d. Any updates to timeline of actions and internal decision on DR2?

Check with Stacey

e. Full cost estimate for ChemIDPlus?

   The ask is not to provide a full cost estimate but for the group to be aware that the costs are changing/increasing. Need this information by when? OCCS has identified a placeholder estimate of 7X the cost from FY19 and is waiting for a firmer estimate from Oracle, but will include an estimate in the OCCS budget to make sure it will be covered. A decision about the actual way forward for this product will need to be make in the spring (the budget estimate does not mean will automatically move forward with keeping this product).

f. Dietary Supplement Ingredient/Label Database—any updates from ODS?

   ODS knows the server is coming down in December. Rich (ODS project officer) has as a cost estimate and is working on this now. Jeanne will check in with Rich

   David and Jeanne will provide a list of products that are coming down; in "Francis" language; help from Carolyn to get this list in good order.

g. Final decision to sunset Household Products Database?

   Proceeding with including that in the December retirements; vendor has been notified. This will be done prior to the end of the contract.

h. Has Pillbox communications gone out to staff?

   No, David needs the general communication, message to David Hale provide your justification to Joyce by end of the week, know that unless he has brand new information (sustainable model) Joyce will not change her mind about sunsetting Pillbox. Plan would then be to work on taking this down in January. (time to

i. HSDB—meeting between David and Joyce and Dianne?

   David and Wei have determined that HSDB violates security requirements in several ways. Had a meeting with Contracts to do a stop work order. Anticipate penalties. Trying to identify special projects to use money effectively (environmental scans to determine what other products are available, do any Federal agencies out there have definitive list of chemicals that should be included, even have feedback on most useful elements). Only half of the FY19 money was

obligated, will not be using FY20 funds, and HSDB will "go into hiatus" for a few years. During that time evaluate if it should be brought back using a new content management system. For users, content system was already being changed over to PubChem, and all resources available. NCBI will to go with the status quo but they do not want to be developing a new content management system. Jeanne and team will ask for use information.

If there is an emergency chemical information need, NLM could be asked to do a manual update to the records, after coordinating with other agencies.

2. **Continue to review the status of transitioning SIS products (I've attached the meeting notes from last week as well as the most recent version of the product list)**

Drug information portal – Works off of ChemID, different interface and pulling information from same searches so if ChemID goes away, this should go away as well. Meng can fix dead link problem while she fixes them in ChemID (actually happens automatically for Drug Info Portal). This will give us more time to answer the question "What is NLM's Drug Information goal/intentions?" Has solid use information and could end up being a valued product but need time to determine.

Subject: Steering Committee Meeting Agenda (10/21)

Hi all,

Here's an agenda for Monday's Steering Committee meeting. Carolyn will be back with you all facilitating the meeting. Have a good rest of the week/weekend!

Agenda 10/21

1. **Follow-up items from last week**
    a. Any changes to how follow-up communications are done for products that are initiated into the sunset process? Does everyone who needs to know get notified?
    b. Carolyn to provide text for how to narrow the focus of Disaster program—any questions/discussion needed?
    c. Any updates to timeline of actions and internal decision on REMM?
    d. Any updates to timeline of actions and internal decision on DR2?
    e. Full cost estimate for ChemIDlus?
    f. Dietary Supplement Ingredient/Label Database—any updates from ODS?
    g. Final decision to sunset Household Products Database?
    h. Has Pillbox communications gone out to staff?
    i. HSDB—meeting between David and Joyce and Dianne?

2. **Continue to review the status of transitioning SIS products (I've attached the meeting notes from last week as well as the most recent version of the product list)**

- What is the current plan (dates and activities)?
- What assistance is needed/requested?
- Does the team need a decision to move forward?
- Do team members need to coordinate on some aspect of the plan (technology, communication, research)?
- Sunsetting product lessons learned/shared process development

3. **Sunsetting product lessons learned/shared process development**

Thanks,

Bryanne

Subject: General update message

Hi Joyce,

I have attached a draft update message for your review. The idea would be for you and Wei to share this with LO and OCCS staff to help people understand the status of SIS products. It could also be talking points you share at an all staff meeting. I tried to work in that your Div Chiefs are in fact working on making decisions, that it is an iterative process and that you are using the criteria established back in Jan. I am hoping that this message will provide both Stacy and David the talking points they need to move things forward with some of their staff members. In addition to this message, I will have a draft update on the disaster products and on the toxicology product for you when you get back on Tuesday. Have a safe and fun trip the weekend!

Draft language for Joyce and Wei to share regarding the status of SIS products. This draft is based on the discussions during previous meetings, messages from Dr. Brennan and Joyce and updates from the Steering team.

Background language from Dr. Brennan:

"To start, we're taking a good look at all of our public-facing services, from dbGaP to PubMed to MedlinePlus, from TOXNET to PubChem to ClinicalTrials.gov. We want to be sure the user experience for each of these services is the best it can possibly be. We also want to ensure the infrastructure is robust and sustainable, and that we haven't ended up with an awkward patchwork on the back end through a series of well-intentioned but disparate fixes and user-driven improvements. We need to launch the next decade on solid technological footing." Dr. Brennan, Blog post. *Moving Forward—Together (July 2018).*

One NLM emphasizes the integration of all our valuable divisions and services under a single mantle, and acknowledges the interdependency and engagement across our programs. Dr. Brennan, Blog Post. *One NLM (January 2017).*

DRAFT MESSAGE

LO and OCCS Workforce Message

Intended Audience: NLM workforce (OCCS and LO in particular)

Status of SIS Programs:

Just over three months have passed since we integrated SIS staff into LO, OCCS, and OCPL. We appreciate the flexibility and adaptability our staff members have shown in response to these changes. In particular, we appreciate everyone's efforts to transition and support the various programs built by SIS over the years. We continue to review and evaluate these products and services to determine which we should include in NLM's long-term portfolio of products. We are having to make difficult decisions about some long-standing offerings, and we thought it would be helpful to share a few insights into how we are making our decisions and determining how we will proceed.

At a high level, our decisions are being guided by the NLM Strategic Plan and Dr. Brennan's vision of a well-integrated, user-friendly, and technologically-stainable portfolio of offerings. As we consider both topic areas and individual products, we are looking to the criteria established back in January when the first phase of evaluations occurred. These criteria include the following considerations:

- NLM should consolidate information into a few platforms for improved user experience, discoverability, and efficiency
- Priority should be given to resources that are unique, high quality, and that are highly connected to NLM offerings, or clearly contribute to furthering the strategic plan
- NLM is committed to supporting key offerings in chemical, toxicology, and environmental health
- Sunset offerings if a sufficiently-equivalent offering is available from another organization
- Sunset offerings that don't have a clear sustainability or succession plan

- Sunset offerings that have low or declining use
- Consider the cost required to sustain and upgrade
- NLM shouldn't be a web provider for another agency/entity just because they pay

Using these criteria, we have decided to focus on streamlining and consolidating NLM's chemical, toxicology and environmental health resources. We have also determined that NLM will continue to provide disaster-related literature and some grey literature that is already collected through digital collections or Bookshelf. However, we will no longer be providing products that are specifically focused on disaster grey literature. WISER will continue given that it is a toxicology-related resource. Across all our offerings, we are looking for opportunities to integrate products into existing platforms or technologies, but stand-alone offerings and offerings without a strong infrastructure are being sunset.

Our approach has been an iterative process; asking questions and collecting information so we can make appropriate decisions that are in the best interest of the Library and our users. Our Division Chiefs and their staff are working closely with our OCCS colleagues, and over the next 18 months they are working on plans for each of the SIS offerings. As we learn more about different products in light of the criteria we have established, we are finding that the best decision is to transition these resources to other organizations or sunset them all together. We understand this may be challenging, but we also believe that these efforts will help us build a strong, integrated portfolio of offerings that exemplify that future vision Dr. Brennan laid out for all of us close to two years ago.

_____

Michael F. Huerta, PhD
Director, Office of Strategic Initiatives
Associate Director, National Library of Medicine, NIH

Realizing the Promise of a Digital Ecosystem for Science and Scholarship[i]

Michael F. Huerta, PhD, Associate Director for Program Development and NLM Coordinator of Data Science and Open Science, National Library of Medicine, National Institutes of Health

What is the National Library of Medicine and What Does It Do?

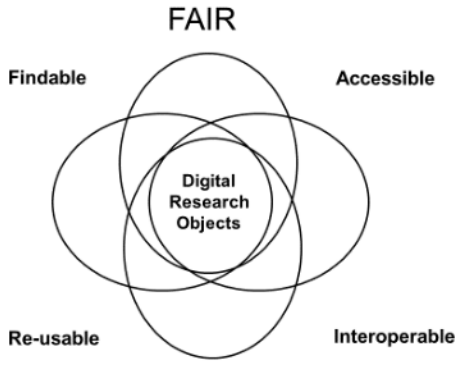
The National Library of Medicine (NLM) joined the National Institutes of Health (NIH) in 1968. As an NIH Institute, NLM conducts and supports research and training in information science, informatics, and data science. The NLM is also the world's largest biomedical and medical library, tracing its origins to the library of the Office of the Surgeon General of the Army in 1836[ii]. Today, in addition to its large collections of physical items, including books, journals, manuscripts, photographs, and other items, NLM is also home to hundreds of digital data and information resources. These include major resources, such as ClinicalTrials.gov[iii], which houses information about and from hundreds of thousands of clinical trials, and MedlinePlus[iv], which provides authoritative consumer health information, as well as smaller resources serving important niche purposes, such as TOXNET, which is a collection of databases and information products related to toxicology, environmental health, and hazardous substances[v].

Every day, NLM receives more than 10 terabytes of digital content from more than 3000 users, and delivers more than 100 terabytes to more than 4 million users, often through application programming interfaces. Users of these resources include researchers, healthcare providers, and the general public. The Library supports activities that engage all categories of users to make its resources known, understood and used. For example, to facilitate and enhance health information access to the general public throughout the country, including many rural areas, the NLM supports the National Network of Libraries of Medicine[vi]. Through its eight regional medical libraries, the Network reaches more than 6500 points of presence across the country in academic health science, community college, tribal college and public libraries, as well as other organizations, such as community health centers.

With medicine and biomedicine as its substantive scope, the NLM has been paying attention to that literature for more than 180 years. In 1879, John Shaw Billings, Director of the Library of the Surgeon General of the Army, and Robert Fletcher compiled and had published *Index Medicus*, an index of medical books, journals, and pamphlets[vii]. Stewarded by NLM, *Index Medicus* continued to be the authoritative index of the medical literature until 2004, but by 1964 the Library had started compiling citations and indexing much of the biomedical and medical literature digitally, in a database system called MEDLARS. In 1971, this database became available online (mostly

through university libraries) as MEDLINE[viii]. And, in 1997, PubMed, which included MEDLINE bibliographic data and more, was launched for free use by anyone on the World Wide Web. Today, PubMed contains more than 27 million bibliographic citations[ix].

In addition to bibliographic data, NLM has established databases and resources for particular types of research data. These include GenBank, a database containing all publicly available DNA sequence data with annotations[x], and others[xi]. As biomedical research becomes increasingly digital, the NLM will likely pay attention to research objects beyond research data and bibliographic data. Such digital research objects[xii] (DROs) might include software used to generate or analyze research data, as well as models, workflows, etc., used in research. (It is important to note that "pay attention to" covers a broad range of possible activities.) To DROs, such as citations or datasets, NLM applies: information science to curate acquired objects, informatics to compute in context on these objects, and data science to extract insight from these objects. After this, the DROs are findable (e.g., by having had metadata assigned), accessible (e.g., through publicly accessible databases), interoperable (e.g., by having adopted common data-related standards), and re-usable (e.g., by linking one set of objects, like publication citations, to another set of objects, like the datasets reported on in those publications). Thus, the processes of NLM applied to DROs make those objects compliant with the FAIR Principles[xiii]. In addition, NLM is interested in making DROs attributable (e.g., through PubMed Identifiers, PMIDs, or GenBank Accession Numbers) and sustainable (NLM considers this carefully before committing to hosting DROs).



The Importance of Being FAIR

When DROs are findable, accessible, interoperable, re-usable, and attributable, they make possible a more data-centric and open paradigm of science and scholarship, where the products and processes of research can populate an ecosystem that allows for others than those who produced specific DROs to add value to the science and scholarship around them. The starting point for bringing DROs into this more open ecosystem is to share DROs, especially data. Benefits of sharing data and other DROs can include (depending how interoperable they are with other data and tools): providing a deeper understanding of the publications and ideas with which they are associated, gaining additional insight by reanalysis of the data, boosting statistical power to answer particular questions by aggregating multiple datasets, ability to apply big data analytic methods, broadening opportunities for collaboration, enhancing accountability

(e.g., assessing reproducibility) and increasing return on research investments for research participants, science, and society.

Of course, there are also objections to such sharing, including: the costs incurred by making data and other DROs FAIR and sharing them, the possibility of others using the shared data to publish before the lab that produced the data does, concerns about intellectual property, patient privacy, and confidentiality, the fact that credit is accrued to investigators for papers published but not for data-related activities (so efforts not directed at publishing represent a net loss), the concern that data will not be understood and that the data will be misused. Most of these objections can be, and in some cases have already been, overcome (e.g., support of funders for data-sharing activities, use of embargo periods so sharing data happens after publication, and a host of policy and practice solutions to address intellectual property and patient privacy concerns). Yet, some, such as the lack of incentives for data-sharing, will require broad changes in the enterprise, while others still, such as the misuse of data, may never be fully resolved.

Conducting biomedical research in a more data-centric and open paradigm has repeatedly been shown to add significant value to science and scholarship. This was perhaps most famously demonstrated by the Human Genome Project, a 13-year project launched in 1990 that fundamentally changed the direction of biomedical research, and transformed our understanding of health and illness[xiv]. The spectacular success of the Human Genome Project was powered by collaborations and interactions of investigators in the ecosystem wrought of its findable, accessible, interoperable, re-usable data, tools, and infrastructure. Since then, many large-scale data-centric and open research initiatives have proven the value of these paradigms, including the Human Connectome Project and its subsequent related initiatives[xv], the NIH Human Microbiome Project[xvi], and the Genotype-Tissue Expression initiative[xvii]. And, the use of data-centric and open paradigms continues today as projects like All of Us[xviii] and the Adolescent Brain Cognitive Development Study[xix] get underway.

From Concept-Centric and Closed to

Data-centric & open paradigms have proven successful

Data-Centric and Open

Despite many examples of data-centric and open approaches being used, most biomedical research is not conducted that way. For most research, the major public products are scientific papers reporting conclusions *about* the data, but the data themselves are almost never seen by others, much less shared with others. Thus, the currency of most biomedical research is not the data, but ideas and concepts about the data; it is concept-centric. And, since data are not made available to others, most research remains closed rather than open. This, however, is about to change. As society increasingly expects data from federally

funded research to be broadly accessible, as computational and communication technologies become ever more powerful, as the scientific opportunities afforded by open and data-centric paradigms become more obvious, and as bipartisan policy directives from executive and legislative branches of the federal government encourage data sharing, it is likely that data-centric and open paradigms will soon be used beyond the confines of one-off initiatives.

An important policy directive was issued on February 22, 2013 by the Director of the White House Office of Science and Technology Policy (OSTP), Dr. John Holdren, wherein federal agencies with annual research and development budgets exceeding $100 million were directed to increase public access to the results of the research they conduct or support, including both the publications and the data underlying those publications[xx].

The National Institutes of Health issued its plan for meeting the OSTP directive in February 2015[xxi]. Regarding access to research publications, the NIH already had a policy in place, and NLM had already developed PubMed Central as the infrastructure to provide public access to them. Starting in 2008, NIH required "scientists to submit final peer-reviewed journal manuscripts that arise from NIH funds to PubMed Central immediately upon acceptance for publication"[xxii]. Since the OSTP directive, several other agencies across the federal government have opted to use PubMed Central as the infrastructure for publications supported by those agencies. The NIH plan for making research data more accessible in response to the OSTP directive and in the interest of better science, is described below.

What is NIH Doing to Make Digital Research Objects FAIR?

As data and other DROs become more broadly accessible, it is important that NIH encourage and facilitate these objects being findable, accessible, interoperable, and re-usable. There are existing and ongoing efforts at NIH that do or could support the FAIR principles; some of these are described, below.

Findable – PubMed is a powerful platform for discovery of the biomedical literature, with coverage from 1946 to the present, and more selectively before 1946. The full contents of some 5600 journals are indexed with a curated, hierarchically organized terminology (MeSH[xxiii]) that allows for sophisticated search and retrieval of citations. This infrastructure could be leveraged to make other DROs, such as datasets, findable, perhaps by building on MeSH in ways that would be well suited to categorize and find datasets, with a pointer to the locations of the datasets.

Some publication citations in PubMed already link to datasets[xxiv]. And, it is expected that within the next year, investigators submitting papers to PubMed Central will be able to also deposit in PubMed Central the datasets associated with those papers. Both mechanisms allow data to be findable via the literature.

Data repositories make their constituent data findable and NLM supports a portal with information about, and links to, some 70 data repositories that are supported by NIH[xxv], and that allow data egress and ingress. This portal can be used to identify data repositories contain-

ing data of interest, and the search mechanisms available for the respective repositories can be used to find specific datasets.

Looking forward, NLM is now exploring specifications that could be used to describe datasets with appropriate metadata, ideally in ways that would be widely applicable across much of the diverse data landscape of biomedical research.

Accessible – As was mentioned, the 2013 OSTP directive to increase public access to research results supported with federal funding included increasing access to both research publications and research data. Highlights of the NIH plan to make research data more accessible include that policies would apply to all NIH mechanisms of research support, including grants, contracts, and intramural projects, and would apply at all levels of support, regardless of the amount of budget.

Data management plans would be expected from all applications and proposals for research support, and would provide information such as the type and amounts of data expected to be generated or collected, the data-related standards to be used, how data might be made available to others, provisions for re-use, etc. The data management plans would be part of the review process, with the review of the plan being able to affect the merit score.

Peer review of the data management plans would allow plans to be reviewed on a project-by-project basis, with the expertise and norms of that particular research community brought to bear on the assessment. Peer review of data management plans, with that review affecting the overall score of the review, will also raise the salience of the plans with applicants and reviewers, encouraging an appropriate level of consideration being paid to them both parties.

Interoperable – Data, and other DROs, are made interoperable with other DROs, tools and data resources through the use of standards. The NLM develops, supports the development of, and stewards widely-used standards, particularly for biomedical literature, healthcare information technology, and certain types of research data. These standards include[xxvi] terminologies, such as the Unified Medical Language System[xxvii] and SNOMED CT, coding systems like LOINC[xxviii], and metadata tagging specifications like JATS[xxix].

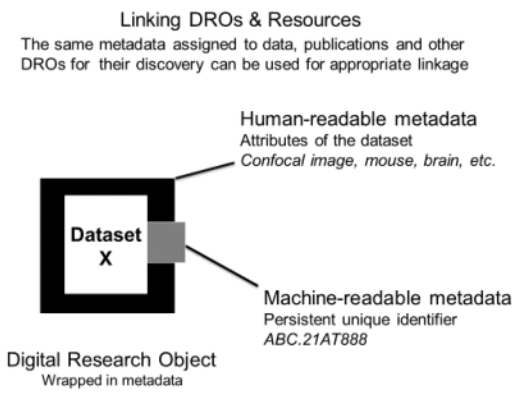
Across NIH, data repositories and major research initiatives supported by NIH, its institutes and centers, also specify data-related standards. Some of these, such as the Human Connectome Project, have incentivized investigators beyond that initiative[xxx] to adopt their data-related standards as their adoption allows investigators not supported by the initiative to rigorously compare their data with the initiative's data.

As the value of the use of common standards becomes more evident, institutes and centers of the NIH are increasingly communicating about and coordinating such efforts. For example, the NIH Clinical Common Data Elements Task Force maintains a conversation among all institutes and centers on this topic and is currently considering how to best harmonize related infrastructure, as well as developing and documenting best

practices for standing up common data element initiatives. The NLM has also developed web resources on behalf of the Task Force, including a portal to NIH collections of common data elements and related resources[xxxi], and a repository for common data elements used in research conducted or supported by NIH[xxxii]. The repository allows users to search for specific common data elements, by topic, funding opportunity announcement, etc., as well as serving as a platform to compare and harmonize similar but distinct common data elements. Such harmonization mitigates the unnecessary proliferation of these types of standards.

NIH is now launching pilot projects to create cloud instances as virtual spaces for data, analytic tools, repositories, and other DROs. Digital research objects that populate this NIH Data Commons will need to be compliant FAIR principles and certain standards[xxxiii], enhancing their interoperability.

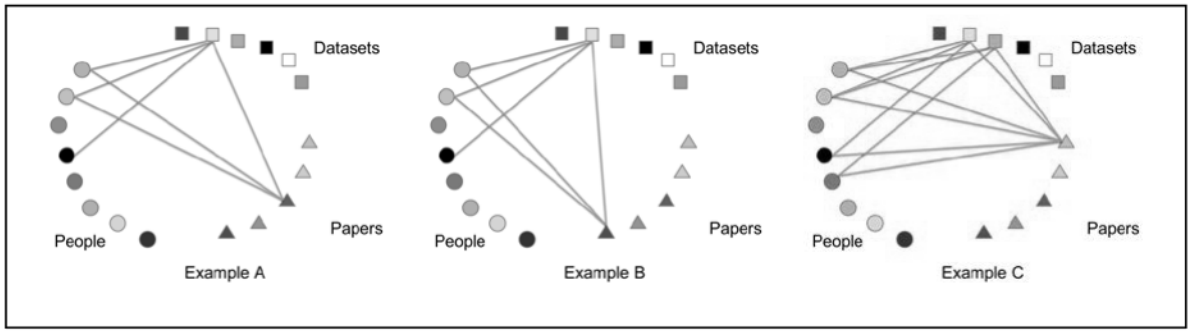
Re-usable – Digital research objects are re-usable and most useful when they are linked to each other. Such linkage depends upon metadata of the DRO (metadata are data or information about DRO). For example, if the DRO is a research dataset, it might have both human-readable and machine-readable types of metadata. The human-readable metadata might be a set of descriptors such as "confocal image, mouse, brain" to reflect the instrument source of the data, and the organism and tissue type from which the data were collected. The machine-readable metadata might be a string of alpha numeric characters. Ideally, the identifier is unique so it resolves to the intended object, and persistent so



that version of that object will not be lost over time, and its provenance tracked (i.e., changes to the object can be monitored by relating the identifier to identifiers of subsequent, modified, versions of it).

Linkage of DROs forms the basis of a digital ecosystem because such linkage allows DROs to interact in an automated and dynamic way. A simple example of such an ecosystem is shown below, where each disc represents a particular person, each square a particular dataset, and each triangle a particular scientific publication. And, each of these objects is associated with other specific objects through linkage of their respective persistent unique identifiers, shown as lines connecting them.

In Example A, below, three individuals participated in activities resulting in a dataset (i.e., they are the data authors), and two of them were authors on the paper. In Example B, the same dataset produced by the same three data authors resulted in a second publication by the same two paper authors. In Example C, the dataset and data authors from examples A and B, as well as an additional dataset authored by a subset of data authors in previous example and a



new author, served as the basis of a scientific publication for which all authors of both datasets served as paper authors.

At this time, through some of NIH's research data repositories, bibliographic data platform (i.e., PubMed), administrative systems for grants, investigator's identifiers, and other DRO identifiers, simple linkage like that illustrated here is possible for certain sets of DROs (e.g., as does the National Database for Autism Research[xxxiv]).

Now, imagine an ecosystem where all DROs have persistent unique identifiers and are associated with (linked to) all DROs appropriately. So, in addition to identifiers of particular datasets, publications, investigators and their affiliations, also present and appropriately linked in this ecosystem are identifiers such as those for the specific instrument used to collect the data (e.g., the particular magnetic resonance imaging scanner), the specific data-related standards (e.g., NIfTI-1[xxxv] data format), the software used to statistically analyze the data (e.g., AFNI_17.2.05[xxxvi]), pre-registered experimental protocols[xxxvii], etc. For any given DRO (whether a dataset, paper, data author, paper author, software tool, etc.), such an ecosystem would allow a person - or a computer - to be aware of all of the other DROs directly linked to it. Of, course, this awareness of associations need not be limited to the first degree of association, but higher levels; analysis of such higher dimensional relationships across networks of DROs could provide interesting insights about the nature of the science, itself. Comprehensive awareness of associations in and by the ecosystem could be maintained by something like a blockchain approach[xxxviii],[xxxix], with the DRO links representing the transactions tracked. Such an approach could provide a way to characterize the DROs and maintain provenance at-scale in an open, distributed, and reliable manner, adding significant value to the ecosystem of science and scholarship.

Data Science and Open Science at NIH: Looking Forward

With the retirement of Dr. Donald A. B. Lindberg as the Director of NLM, the Director of NIH asked a working group of the Advisory Committee to the Director to examine the nexus of NLM's purview and expertise and the future of data science and open science in biomedicine[xl]. Later that year, the working group issued a report[xli] with six recommendations, all of which were adopted by the Director of NIH. One of these was that "NLM should be the intellectual and programmatic epicenter for data science at NIH" and another that "NLM should lead efforts to support and catalyze open

science, data sharing, and research reproducibility, striving to promote the concept that biomedical information and its transparent analysis are public goods." Soon thereafter, Dr. Patricia Flatley Brennan accepted the position as Director of NLM.

Since Dr. Brennan's arrival at NLM, input has been solicited and received from many, including NLM leadership and staff, leadership of NIH institutes and centers, external experts, and the general public through meetings, workshops, committee deliberations, town halls, and published requests for information (some of these activities have been undertaken as part of the decadal NLM strategic planning process). Informed by these ideas from diverse perspectives, a view has emerged of the key issues that need to be addressed as NLM assumes the leadership role for data science and open science at NIH.

A clear and urgent priority for biomedical data science and open science is to engage with others across NIH to develop solutions for sustainability. As more large scale, large cohort studies, initiatives, and research programs are launched, the valuable data they produce must be housed, curated, and disseminated. Economies of scale and experience can be realized with a strategic enterprise approach, solving the same problem once rather than multiple times, converging on common standards, common architectures, coordination of acquisition activities around compute, and developing best practices for implementing and maintaining data assets and related infrastructure. Of course, it is important that trans-NIH approaches are flexible enough to meet the needs of particular studies, initiatives, and programs.

Another important contributor to sustainability is the use of evidence-based value assessment (e.g., cost/benefit analyses). Decisions such as those about: which data to keep, at what level particular datasets should be curated, how long specific datasets should be kept, which infrastructure should be invested in, which policies should be implemented and at what level of compliance, would all benefit by having an empirically-derived base of evidence for support. Such evidence could be used to develop criteria and heuristics for guidance about future investments in data, infrastructure, and policy.

Other priorities include the: 1) Strategic engagement beyond NIH, as data, science, and scholarship do not respect borders of nations, economic sectors or disciplines. 2) Development of a data-savvy workforce, including not only data scientists, *per se*, but data scientists cross-trained in biomedicine, biomedical scientist cross-trained in data science, both intramurally and extramurally. And, as data science and open science figure more prominently in NIH portfolios of extramurally-supported research, program officers, scientific review officers, and scientific policy staff of NIH must become more familiar with these areas. 3) Promotion of open science through changes in policies, engagement with the public around data and open science issues, and the development of tools designed specifically for use by public to facilitate their participation in research activities. 4) Research and innovation in data science and open science, developing new analytic approaches and tools,

solutions to challenges of curation at-scale, and exploration of various flavors of artificial intelligence to harness the dynamic and expanding ecosystem of science and scholarship.

Finally, it is important to note that the behaviors of individuals and the practices of research-related organizations in a closed, concept-centric paradigm of science and scholarship are very different than those required for an open, data-centric paradigm. For example, in the former data are not shared, while the latter depends upon sharing data (and other DROs). The flip from the former paradigm to the latter will require changes in incentives to both people and organizations comprising the biomedical research enterprise (e.g., universities, funders, publishers, professional societies, regulatory agencies, etc.). Ideally, these incentives would be distributed across the entire enterprise and would be strategically aligned with each other to be mutually and maximally reinforcing, and avoiding unintended consequences. Due to wide variations in how poised various biomedical research domains are for adopting a data-centric and open paradigm (e.g., genomics already is largely thus; not so for epidemiology), such strategic incentive structures would likely be best designed and developed domain-by-domain, rather than across all areas of biomedicine at once.

In closing, the cumulative biomedical knowledgebase and breathtakingly powerful scientific technologies available today present significant opportunities to understand health and mitigate illness. A digital ecosystem wrought of data science and open science promises to multiply these opportunities many-fold. With the right incentives in place, this promise could be realized in the foreseeable future.

Hi Stacey,

Do you know if an update went out to stakeholders in the last day or two about Toxnet ? We have received the below request in addition to another one. We are wondering what precipitated the two requests. If you aren't the right person who should OCPL reach out to?

Regards,

Jody

Hi, NLM--

I'm a reporter for Undark Magazine, which covers science and society for a national audience from its headquarters at MIT.

I'm working on a story about the impending shutdown of ToxMap, and wanted to get input from the NLM on the decision to close the service down. Is anyone available for a phone call today or tomorrow?

I'm at Personal Info

Thanks,

Michael

Dear [Michael]

Dear [David]

As the National Library of Medicine (NLM) implements its current Strategic Plan, it has had to make some difficult organizational changes that have resulted in some resources and programs being integrated into other NLM resources, made accessible on partner sites, or discontinued. These changes are intended to provide greater alignment of resources to fulfill NLM's mission.

While the TOXMAP website will be retired this month, selected TOXMAP data can be accessed from the following sites:
U.S. EPA Toxics Release Program (TRI)
U.S. EPA Superfund Program
U.S. EPA Facilities Registry System (FRS)
U.S. EPA Clean Air Markets Program
U.S. EPA Geospatial Applications
U.S. NIH NCI Surveillance, Epidemiology, and End Results Program (SEER)
Government of Canada National Pollutant Release Inventory (NPRI)
U.S. Census Bureau
U.S. Nuclear Regulatory Commission (NRC)

Sincerely,

The NLM Team

****

Subject: Press request: Discontinuation of ToxMap

I'm working on a story for the newsletter *Inside EPA* about the end of NLM's ToxMap service. Does the library have any comment on the reasons for canceling it, or any potential replacement for the function it currently serves?

Deadline is close of business today. Thanks!

Hi Jody,

Looks like we received 2 inquiries about TOXMAP.

Attached is a draft response that we could consider using for both inquiries (very similar inquiries), which is curious.

Want to share with you before reaching out to Jerry.

Diane

Subject: RE: question from a reporter re: ToxMap

On December 16, 2019, National Library of Medicine (NLM) TOXNET information will be migrated to PubChem, PubMed, and Bookshelf. Please see the TOXNET Transition page for more information. If you have questions, please contact NLM Customer Support at https://support.nlm.nih.gov/

This might be the reason for the two press requests today. David Gillikin and Jeanne Goshorn regarding TOXNET might be able to provide assistance/insights.

Thanks,
Jody

Hi Grace,

As part of the sunset efforts, were there key messages, talking points developed? If so, a written response could be drafted as part of the clearance request. Can recommend that it just be a statement; not an interview.

Diane

Hi, NLM--

I'm a reporter for Undark Magazine, which covers science and society for a national audience from its headquarters at MIT.

I'm working on a story about the impending shutdown of ToxMap, and wanted to get input from the NLM on the decision to close the service down. Is anyone available for a phone call today or tomorrow?

I'm at Personal Info

Thanks,

Michael

Dear [Michael]

Dear [David]

As the National Library of Medicine (NLM) implements its current Strategic Plan, it has had to make some difficult organizational changes that have resulted in some resources and programs being integrated into other NLM resources, made accessible on partner sites, or discontinued. These changes are intended to provide greater alignment of resources to fulfill NLM's mission.

While the TOXMAP website will be retired this month, selected TOXMAP data can be accessed from the following sites:
U.S. EPA Toxics Release Program (TRI)
U.S. EPA Superfund Program
U.S. EPA Facilities Registry System (FRS)
U.S. EPA Clean Air Markets Program
U.S. EPA Geospatial Applications
U.S. NIH NCI Surveillance, Epidemiology, and End Results Program (SEER)
Government of Canada National Pollutant Release Inventory (NPRI)
U.S. Census Bureau
U.S. Nuclear Regulatory Commission (NRC)

Thank you.

Subject: FORM REQUEST TO RETIRE NLM TOXMAP March2019rev - js.docx
Attachments: FORM REQUEST TO RETIRE NLM TOXMAP March2019rev - js.docx

Here's the information about why we sunset ToxMap.

REQUEST TO RETIRE NLM TOXMAP

Product owner(s) fill out sections I, III, IV and V. Include documentation with this form.
Record approvals in section II.

I. **Written justification for the retirement of an NLM resource.** Three to six months before sunsetting any NLM resource, a written justification for the retirement of the resource must be prepared. In drafting the justification, the use of statistics is often helpful. Reasons for sunsetting and/or retiring an NLM resource may include (check all that apply):

☐ Low usage

☐ Obsolescence (that is, better products have come along) – whether from NLM or another group

☒ No longer aligned with NLM priorities or mission needs

☐ Incorrect or out-of-date information. If information cannot be updated, then archive the resource

☒ Reallocation of staff to different products because resource is no longer a priority

☒ Cost in relation to value

☒ Other (Please explain) The US EPA now produces several GIS products and visualization applications (https://www.epa.gov/geospatial/epa-geospatial-applications) that have the similar GIS functionality, except the ability to search TOXNET from within the GIS tools. This was a unique feature in TOXMAP-classic, which was retired due to the obsolete technology platform. The new version of TOXMAP does not have this feature either. To make the new TOXMAP to have this feature will require major investment in software development. We cannot justify the effort because the usage of this feature was very low, averaging about 400 searches a year.

II. **Approval.** This form must be signed by:

- NLM Division head (within LHC, LO, NCBI, OCCS, SIS, OD) Initial Here Date

- Upon approval by NLM division head, forward completed form to Kathy Cravedi, Director, OCPL (kcravedi@nlm.nih.gov), for distribution and approval by:
  NLM Director Initial Here Date
  NLM Deputy Director Initial Here Date
  NLM Communications Director Initial Here Date

III. **Prepare Communications plan for sunsetting the NLM resource.** This document is developed for sharing news about the retirement of the NLM resource with relevant internal and external audiences. Please address the following key elements:

A. ***Internal communication plan*** for NLM staff. Identify who needs to be informed? (staff, contractors) SIS staff, NLM staff, NNLM staff and core set of dedicated users from the Public Health and Toxicology Communities.

1. Determine questions that may need to be addressed. These may include:
   What information needs to be provided? TOXMAP will be retired because it no longer aligns with NLM priorities and because the US EPA now

provides several GIS products that provide similar GIS functionality of TOXMAP.

- When will the information be provided? End of FY2019
- By what method(s) will information be provided? Example: Email to all NLM staff Email, GovD posts, announcement on TOXMAP web site
- If multiple messages are to be sent, by what method(s) and with what frequency? Over a three-month period.
- Are there any potential areas for misunderstanding or concern? None except that core users of TOXMAP will not have a comparable resource available. PLEASE EXPLAIN – YOU SAY ELSEWHERE THAT THE INFORMATION IN TOXNET IS AVAILABLE FROM OTHER SOURCES, AS IS MOST FUNCTIONALITY.

2. Establish what may need to be communicated to internal audiences. This could include:
   - Why is this program or service being retired? TOXMAP will be retired because the US EPA now provides several GIS products that provide similar GIS functionality.
   - What content, if any, will still be available and, if so, why and where? (Options may include archived pages on the NLM website, FTP, the Wayback Machine internet archive, and tape.) US EPA GIS applications and TRI applications; possibly NLM TOXNET TRI
   - What will happen to the staff working on the product or service? Assigned to other areas and projects within NLM/SIS.
   - What staff will be involved in this transition? Colette Hochstein
3. Identify mechanisms to be used for communicating with internal audiences. These may include some or all of the following (Check all that apply):
   - ☒ Emails
   - ☒ Signage
   - ☐ Information delivered at staff meetings
   - ☐ Point of discussion at brown bag luncheons
   - ☐ Town Hall meetings, etc.
   - ☐ Other (Explain) Enter other mechanism(s)
4. Develop and attach a set of Talking Points for the NLM Director TOXMAP has helped users visually explore data primarily from the EPA's Toxics Release Inventory (TRI) and Superfund Programs. TOXMAP also features Canadian NPRI data, U.S. EPA coal plant emissions data, and U.S. commercial nuclear power plants. TOXMAP overlays U.S. Census demographic data, income figures from the U.S. Department of Commerce, and health data from the NCI SEER program. It will be retired at the end of FY2019. the US EPA now provides several GIS products that provide similar GIS functionality.
5. Does the NIH Director or other IC Directors need to be informed? No

   If Yes, check all that apply:

   ☐ The service is produced jointly with another IC or serves an audience of interest to the IC

Comment [SJ([]: Do we need to provide any advanced warning to NIEHS? Are they or their stakeholder communities users of this resource?

☐ The service has high visibility and sunsetting may result in questions, letters, emails to the NIH Director from the public, key stakeholders, Congressional staff, HHS leadership

☒ Other (Please elaborate) SIS has worked for many years with the US EPA regarding the data and functionality of TOXMAP. Their staff should be informed of its status.

B. ***External communication plan*** for users, stakeholders, and the public

1. Who needs to be informed? (Identify stakeholders).
    - Why is this program or service being retired? The US EPA now produces several GIS products (https://www.epa.gov/geospatial/epa-geospatial-applications) that have the similar GIS functionality.
    - What content, if any, will still be available and, if so, why and where? Data used in TOXMAP will be available from other original sources. GIS application users can access them by overlaying the data in their GIS applications. TRI and NPL data: US EPA; Canadian NPRI data from Environment and Climate Change Canada; Nuclear Regulatory Commission publishes the commercial nuclear power plant data; BEA data from the US Department of Commerce; TRI lat/long info from EPA's Facility Registry System (FRS).; coal plant data from EIA Electricity Data Browser; EPA Air Markets Program Data (AMPD) data available from the EPA Clean Air Markets; Cancer and Mortality data available from the US NIH NCI.
    - What will happen to the staff working on the product or service? Assigned to other areas and projects within NLM/SIS

2. Establish what may need to be communicated. This could include—
    - Why is this program or service being retired? The US EPA now produces several GIS products (https://www.epa.gov/geospatial/epa-geospatial-applications) that have the similar GIS functionality.
    - What content, if any, will still be available and, if so, why and where? Data used in TOXMAP will be available from other sources. GIS application users can access them by overlaying the data to the maps. TRI and NPL data: US EPA; Canadian NPRI data from Environment and Climate Change Canada; Nuclear Regulatory Commission publishes the commercial nuclear power plant data; BEA data from the US Department of Commerce; TRI lat/long info from EPA's Facility Registry System (FRS).; coal plant data from EIA Electricity Data Browser; EPA Air Markets Program Data (AMPD) data available from the EPA Clean Air Markets; Cancer and Mortality data available from the US NIH NCI.
    - What will happen to the staff working on the product or service? Assigned to other areas and projects within NLM/SIS
    - How can I or how can my group be involved in this transition? Provide related information as needed.

3. Identify what needs to be completed:
   - ☐ Deliverables Specify
   - ☒ Responsible party or parties for the sunsetting process Colette Hochstein, Florence Chang
   - ☐ Due date 9/30/2019

   Identification of communication channels. These could include (Check all that apply):
   - ☒ emails to stakeholders and users
   - ☐ signage
   - ☐ NLM homepage (public news announcement)
   - ☐ speeches
   - ☒ social media including Facebook, Twitter, LinkedIn, etc.
   - ☒ newsletters/blogs, including *Technical Bulletin*, *NLM in Focus*, *Circulating Now*, *Musings*, etc.
   - ☐ Other (Please Explain) Enter other possible communication channel(s)

4. Determine questions that may need to be addressed, including:
   - What information will be provided? The US EPA now produces several GIS products (https://www.epa.gov/geospatial/epa-geospatial-applications) that have the similar GIS functionality.
   - When will the information be provided? Starting Summer 2019)
   - With what frequency? Monthly
   - Are there potential areas for misunderstanding or concern? Probably not.
   - After informing stakeholders that the site will no longer be accessible, where can they find information once the site is retired? TRI and NPL data: US EPA; Canadian NPRI data from Environment and Climate Change Canada; Nuclear Regulatory Commission publishes the commercial nuclear power plant data; BEA data from the US Department of Commerce; TRI lat/long info from EPA's Facility Registry System (FRS).; coal plant data from EIA Electricity Data Browser; EPA Air Markets Program Data (AMPD) data available from the EPA Clean Air Markets; Cancer and Mortality data available from the US NIH NCI. Links to direct users to these external data sources will be provided on the TOXMAP home page for 6 months prior to the sunset.
   - How will NLM respond to questions and comments? Staff will respond to questions received through customer service emails
   - Is this an issue that may generate media interest? (If so, please include strategies for responding in the plan.) No

IV. **Posting notice on central NLM "sunsetting calendar" (coming soon) on the NLM Wiki.** A notice should be posted on the "NLM resource sunset calendar" immediately following the effective

date of the retirement of the resource. The sunset calendar, which will also be found on the NLM wiki, will serve as an historical record about retired NLM products and services.

V. **Identification of primary point of contact for further information about retired NLM resource.** Provide name and contact information for primary point of contact for retired NLM resource here:

Subject: Question re: media clearance

Hi John and Renate,

We received two email media inquiries (*Undark Magazine* and *Inside EPA*) this afternoon asking why the NLM is retiring its TOXMAP website. We are not entertaining interviews, but we would like to provide the reporters with language that aligns with other messages that NLM has shared in recent months about some of the changes that have been made as part of NLM's strategic plan and realignment efforts.

Below is the response that we would like to provide to these two reporters, but we wanted to check in to ask if this action would require going through the traditional media interview clearance process.

Thanks in advance for your guidance.

Diane

***
Dear XXX,

As the National Library of Medicine (NLM) implements its current Strategic Plan, it has had to make some difficult organizational changes that have resulted in some resources and programs being integrated into other NLM resources, made accessible on partner sites, or discontinued. These changes are intended to provide greater alignment of resources to fulfill NLM's mission.

While the TOXMAP website will be retired this month, selected TOXMAP data can be accessed from the following sites:

- U.S. EPA Toxics Release Program (TRI)
- U.S. EPA Superfund Program
- U.S. EPA Facilities Registry System (FRS)
- U.S. EPA Clean Air Markets Program
- U.S. EPA Geospatial Applications
- U.S. NIH NCI Surveillance, Epidemiology, and End Results Program (SEER)
- Government of Canada National Pollutant Release Inventory (NPRI)
- U.S. Census Bureau
- U.S. Nuclear Regulatory Commission (NRC)

Part of the decision was prompted by the increasing availability of the underlying data from their original sources. Many sources such as the EPA, among others, offer several products that provide similar geographic information system (GIS) functionality.

Sincerely,

The NLM Team

Subject: Personal Info - status of activities
Attachments: K Pruitt announcement 12.12.19 approved for posting to NLM Announcements page.docx, OfficeShot (2).png

Hi Nicole,

Personal Info. Feel free to call me if you need anything.

Status of key activities:

- TOXMAP media inquiries – cc:d you on the email to Alise. Initiated media clearance request and have language (approved by Jerry and Jody) that Alise can be sent to the reporters via the NLM Comms mailbox.

- Musings blog for next week – sent Patti a draft for her review. Will check emails – working with John and Andrew on the video.

- Kim Pruitt announcement – NLM all staff email went out today; requested (via JIRA) to post announcement and headshot to the NLM Announcements page. Will check in tomorrow re: status. I might not have access to JIRA for approvals so I might forward email to you just so you can give approval on my behalf. (I've attached the language and headshot that was submitted – for reference only).

Nothing else that I know of that should require any immediate attention while I'm out.

Thanks!
Diane

Dr. Kim Pruitt Announcement
For dissemination via NLM Announcements Page

Kim D. Pruitt, PhD, Appointed Chief, Information Engineering Branch, National Center for Biotechnology Information, National Library of Medicine

Kim Pruitt, PhD, has been named the Chief of the Information Engineering Branch (IEB) at the National Library of Medicine's (NLM's) National Center for Biotechnology Information (NCBI).

As head of IEB, Dr. Pruitt is responsible for NCBI's collection, creation, analysis, organization, curation, and dissemination of data and analysis tools in the areas of molecular biology and genetics, as well as for the collection and management of bibliographic information. Dr. Pruitt leads NCBI's more than 500 highly skilled scientific and technical staff in the design, development, and maintenance of databases, information systems, and software tools, as well as operational management of data submissions, quality checks, and data access.

"Dr. Pruitt is a superb example of a scientist who has used her data science background, knowledge of NLM's mission, and extensive management skills to develop innovative products to meet the needs of our stakeholders," said NLM Director, Patricia Flatley Brennan, RN, PhD.

Dr. Pruitt has been with NLM since 1998 and has taken on many roles and responsibilities during that time. In 2017, she became Acting Chief of IEB, where she established a Production Services Operating Board to communicate on the status and future directions of critical services, including PubMed, PubMed Central, PubChem, ClinicalTrial.gov, GenBank, RefSeq, BLAST, Pathogen Detection, ClinVar, and dbGaP. This effort led to notable changes to guide and inform product decisions and development priorities.

"Dr. Pruitt brings a determination, organization, and a drive to any project she engages with," said NCBI Director, James M. Ostell, PhD. "During her two years as acting chief, she has been an innovative and effective leader, implementing many new processes and programs that have enhanced IEB operations and services. Please join us in congratulating Dr. Pruitt in her new role."

Hi Diane,

Thanks for the information! We received clearance approval late last night. I will respond to the reporters with the templated response you drafted.

Enjoy your weekend!

Thank you,
Alise Crutchman

Hi Alise,

Personal Info but will be checking emails and available by phone at Personal Info

If we get clearance tomorrow, do you mind responding to the two reporters below (with the language below) via the NLM Comms Box?

Thank you!

Diane

Subject: Interview requests: Retirement of NLM's TOXMAP website

One request for two different media outlets:

Reporter: Michael Schulson
Organization: Undark Magazine
Phone #(s): michael@undark.org / Personal Info

Reporter: David LaRoss
Organization: Inside EPA
Phone #(s): dlaross@iwpnews.com / Personal Info

Subject: Retirement of NLM's TOXMAP website
Deadline: ASAP
Spokesperson: General written response; no interview
Expected place of publication (print, online, broadcast): online
Expected date of publication/airing: TBD
Expected prominence (e.g. front page, Sunday, evening/morning show, etc.): TBD
Additional information: See language below for recommended response to reporters

Dear XXX,

As the National Library of Medicine (NLM) implements its current Strategic Plan, it has had to make some difficult organizational changes that have resulted in some resources and programs being integrated into other NLM resources, made accessible on partner sites, or discontinued. These changes are intended to provide greater alignment of resources to fulfill NLM's mission.

While the TOXMAP website will be retired this month, selected TOXMAP data can be accessed from the following sites:

- U.S. EPA Toxics Release Program (TRI)
- U.S. EPA Superfund Program
- U.S. EPA Facilities Registry System (FRS)
- U.S. EPA Clean Air Markets Program
- U.S. EPA Geospatial Applications
- U.S. NIH NCI Surveillance, Epidemiology, and End Results Program (SEER)
- Government of Canada National Pollutant Release Inventory (NPRI)

- U.S. Census Bureau
- U.S. Nuclear Regulatory Commission (NRC)

Part of the decision was prompted by the increasing availability of the underlying data from their original sources. Many sources such as the EPA, among others, offer several products that provide similar geographic information system (GIS) functionality.

Sincerely,

The NLM Team

From: Goodwin, Rebecca (NIH/NLM) [E]

To: Babski, Dianne (NIH/NLM) [E]
Cc: Paltoo, Dina (NIH/NLM) [E]
Subject: RE: NLM TOXMAP Retirement

Good morning, Dianne,

Will the info from ToxMap continue to be available/accessible via search from any NLM website after ToxMap retires? Or will it only be available by going directly to the other USG sites listed on the web page?

> **The TOXMAP website will be retired in December 2019.**
> Selected TOXMAP data can be accessed from the following sites:
> - U.S. EPA Toxics Release Program (TRI)
> - U.S. EPA Superfund Program
> - U.S. EPA Facilities Registry System (FRS)
> - U.S. EPA Clean Air Markets Program
> - U.S. EPA Geospatial Applications
> - U.S. NIH NCI Surveillance, Epidemiology, and End Results Program (SEER)
> - Government of Canada National Pollutant Release Inventory (NPRI)
> - U.S. Census Bureau
> - U.S. Nuclear Regulatory Commission (NRC)

The NIH Office of Legislative Policy and Analysis (OLPA) received a question from the Hill about ToxMap, and they want to know

- **why the website will be retired and**
- **if there are any plans to continue this service in a similar way after its retirement**.

Best regards,
Rebecca

Subject: NLM TOXMAP Retirement

Hi Dina,

We've received a question from the Hill about NLM's TOXMAP website and the fact that it says it will be retired this month. I was wondering if you know why the website will be retired and if there are any plans to continue this service in a similar way after its retirement.

Best,
Chris

Thanks, Alise. Think it will be helpful before we meet that you reach out to David Gillikin (sp.) and Jean Hirshshorn (sp.) to get some feedback on the below. They are who Stacey Arneseen recommended contacting. For the questions that are inappropriate we can reach out to Amanda Fine in NIH OCPL for guidance.

Please ask Terri/Pam to put time on the calendar for us to meet. I believe Diane will be leaving at some point Monday morning to go over to Rockledge.

Regards,

Jody

Subject: some toxmap info

Based on the Download TOXMAP Data web page, https://toxmap.nlm.nih.gov/toxmap/download.html, the data in ToxMap is not up to data. Several of the data sources cover the data range of 1988-2016. There were some additions in 2017. The Superfund data appears to be 5 or so years old based on looking at the actual data.

We have these downloadable files saved to a sharepoint site at this point.

Subject: RE: Press Follow Up- ToxMap

Greetings,
We also have a similar question from OLPA, so am copying Jerry, Dina and Rebecca.

Not sure which questions "are inappropriate so we will follow up with NIH OCPL for guidance. "

Here are a few answers. Some will take longer.
1 – NLM leadership made the decision this summer.
2 – no response now
3 – based on the 2018 NPA estimates, ToxMap cost NLM ~$250K
4 – I don't have use data now. We could get some if this is an "appropriate question."

Subject: Re: question from a reporter re: ToxMap

Hi, NLM Communications,

Thanks so much for this quick and helpful reply. Just a few follow-up questions:

- I know that NLM launched a new version of ToxMap as recently as June 2018. When did NLM decide to close down the site altogether? Who made that decision?
- One concern I have heard from multiple ToxMap users is that, while the EPA and other agencies do offer some of the data available on ToxMap, there is no other tool that is similarly comprehensive and accessible to non-experts. Does NLM have a response to those concerns?
- How much did it cost to run ToxMap?
- How many people used ToxMap? Is there user data for the website that you can share?
- One researcher has expressed concern that ToxMap's "disappearance only extends that larger pattern of decreasing transparency of environmental data during the Trump era." Does NLM have any response to those fears?

Thanks again for your help on this. I'm happy to hop on the phone, if that would be easier: Personal Info

Personal Info

All the best,

Michael

On Fri, Dec 13, 2019 at 8:35 AM NLM Communications <NLMCommunications@nlm.nih.gov> wrote:

Good morning Michael,

As the National Library of Medicine (NLM) implements its current Strategic Plan, it has had to make some difficult organizational changes that have resulted in some resources and programs being integrated into other NLM resources, made accessible on partner sites, or discontinued. These changes are intended to provide greater alignment of resources to fulfill NLM's mission.

While the TOXMAP website will be retired this month, selected TOXMAP data can be accessed from the following sites:

- U.S. EPA Toxics Release Program (TRI)
- U.S. EPA Superfund Program
- U.S. EPA Facilities Registry System (FRS)
- U.S. EPA Clean Air Markets Program
- U.S. EPA Geospatial Applications
- U.S. NIH NCI Surveillance, Epidemiology, and End Results Program (SEER)
- Government of Canada National Pollutant Release Inventory (NPRI)
- U.S. Census Bureau
- U.S. Nuclear Regulatory Commission (NRC)

Part of the decision was prompted by the increasing availability of the underlying data from their original sources. Many sources such as the EPA, among others, offer several products that provide similar geographic information system (GIS) functionality.

Sincerely,

The NLM Communications Team

Subject: RE: NLM TOXMAP RetirementFrom Subject Received

Rebecca, Dina,

Before you respond to this, note that we received another inquiry from a journalist writing for Undark Magazine (see attached email thread). I think it's important to ensure we are using the same language for requests. This is the original response that OCPL (with jerry) sent which would suffice for the OLPA email.
-Dianne

As the National Library of Medicine (NLM) implements its current Strategic Plan, it has had to make some difficult organizational changes that have resulted in some resources and programs being integrated into other NLM resources, made accessible on partner sites, or discontinued. These changes are intended to provide greater alignment of resources to fulfill NLM's mission.

Subject: RE: NLM TOXMAP RetirementFrom Subject Received

Good morning, Dianne,

Will the info from ToxMap continue to be available/accessible via search from any NLM website after ToxMap retires? Or will it only be available by going directly to the other USG sites listed on the web page?

> **The TOXMAP website will be retired in December 2019.**
> Selected TOXMAP data can be accessed from the following sites:
> - U.S. EPA Toxics Release Program (TRI)
> - U.S. EPA Superfund Program
> - U.S. EPA Facilities Registry System (FRS)
> - U.S. EPA Clean Air Markets Program
> - U.S. EPA Geospatial Applications
> - U.S. NIH NCI Surveillance, Epidemiology, and End Results Program (SEER)
> - Government of Canada National Pollutant Release Inventory (NPRI)
> - U.S. Census Bureau
> - U.S. Nuclear Regulatory Commission (NRC)

The NIH Office of Legislative Policy and Analysis (OLPA) received a question from the Hill about ToxMap, and they want to know

- **why the website will be retired and**
- **if there are any plans to continue this service in a similar way after its retirement**.

Best regards,
Rebecca

Subject: RE: Press Follow Up- ToxMap

Greetings,
We also have a similar question from OLPA, so am copying Jerry, Dina and Rebecca.

Not sure which questions "are inappropriate so we will follow up with NIH OCPL for guidance. "

Here are a few answers.
1 – NLM leadership made the decision this summer.
2 – no response now
3 – based on the 2018 NPA estimates, ToxMap cost NLM approximately $250K
4 – I don't have use data now. We could get some if this is an "appropriate question."
5 – DRAFT – NLM strives to provide biomedical information and data to the public through our resources, including PubMed, ClinicalTrials.gov, MedlinePlus, Genbank and others. Retiring ToxMap isn't intended to limit access to information in any way since it is available elsewhere, but rather to decrease the duplication of government effort.

Subject: Press Follow Up- ToxMap
Importance: High

Good afternoon,

Our office recently received a press inquiry regarding the sunset of ToxMap. We worked to develop a templated response to provide to stakeholders (see below), which we have provided to this particular reporter. We have declined interviews and wished him well. He has followed up with a list of questions. We are hoping you could assist with providing feedback. We are aware that some of the questions are inappropriate so we will follow up with NIH OCPL for guidance.
Thanks so much for this quick and helpful reply. Just a few follow-up questions:

- I know that NLM launched a new version of ToxMap as recently as June 2018. When did NLM decide to close down the site altogether? Who made that decision?
- One concern I have heard from multiple ToxMap users is that, while the EPA and other agencies do offer some of the data available on ToxMap, there is no other tool that is similarly comprehensive and accessible to non-experts. Does NLM have a response to those concerns?
- How much did it cost to run ToxMap?
- How many people used ToxMap? Is there user data for the website that you can share?
- One researcher has expressed concern that ToxMap's "disappearance only extends that larger pattern of decreasing transparency of environmental data during the Trump era." Does NLM have any response to those fears?

Thank you for your assistance!

Subject: FW: NLM TOXMAP RetirementFrom Subject Received

Below is a generic response re: ToxMap that we've modified in different ways for different respondents. Farther below is the sunsetting information we sent to Larry back in April. I don't have an exact date, but the sunset plan was announced around June, when we were closing SIS.

As the National Library of Medicine (NLM) implements its current Strategic Plan, it has had to make some difficult organizational changes that have resulted in some resources and programs being integrated into other NLM resources, made accessible on partner sites, or discontinued. These changes are intended to provide greater alignment of resources to fulfill NLM's mission. The decision to retire ToxMap took into consideration the increasing availability of the underlying data and visualization tools from their original sources. Many sources such as the EPA, among others, offer several products that provide similar geographic information system (GIS) functionality.
While the TOXMAP website will be retired this month, selected TOXMAP data can be accessed from the following sites:

- U.S. EPA Toxics Release Program (TRI)
- U.S. EPA Superfund Program
- U.S. EPA Facilities Registry System (FRS)
- U.S. EPA Clean Air Markets Program
- U.S. EPA Geospatial Applications

- U.S. Nuclear Regulatory Commission (NRC)

Sunsetting

2. TOXMAP – Proposed sunset date: October 1, 2019

Original purpose: TOXMAP helps users visually explore toxicology data primarily from the EPA's Toxics Release Inventory (TRI) and Superfund Programs. TOXMAP also features Canada's National Pollutant Release Inventory data, U.S. EPA coal plant emissions data, and U.S. commercial nuclear power plant data. TOXMAP overlays U.S. Census demographic data, income figures from the U.S. Department of Commerce, and health data from the NCI SEER program.

Why no longer needed: The US Environmental Protection Agency now produces several GIS products and visualization applications that have similar data and GIS functionality. Use of unique TOXMAP features (e.g., the ability to search TOXNET from within the GIS tools) has declined to a level too low to justify continued NLM investment in technological upgrades necessary.

Critical issues: Data used in TOXMAP will be available from their original sources (EPA, Canada, Nuclear Regulatory Commission, etc.), and GIS application users can overlay the data in their GIS applications. NLM will inform EPA and NIEHS of the proposed sunset, in addition to TOXMAP users.

Dina,
You should submit the response to OLPA. I'm about to send Patti some information, too, and will copy you. I included some additional info that doesn't need to be communicated to OPLA but that you may want for your own background.

Please channel any other press or user inquiries to OCPL and put me in copy (for awareness)

Thanks
Jerry

Subject: RE: Press Follow Up- ToxMap

Greetings,
We also have a similar question from OLPA, so am copying Jerry, Dina and Rebecca.

Not sure which questions "are inappropriate so we will follow up with NIH OCPL for guidance. "

Here are a few answers.
1 – NLM leadership made the decision this summer.
2 – no response now
3 – based on the 2018 NPA estimates, ToxMap cost NLM approximately $250K
4 – I don't have use data now. We could get some if this is an "appropriate question."
5 – DRAFT – NLM strives to provide biomedical information and data to the public through our resources, including PubMed, ClinicalTrials.gov, MedlinePlus, Genbank and others. Retiring ToxMap isn't intended to limit access to information in any way since it is available elsewhere, but rather to decrease the duplication of government effort.

Joyce

Subject: Press Follow Up- ToxMap
Importance: High

Good afternoon,

Our office recently received a press inquiry regarding the sunset of ToxMap. We worked to develop a templated response to provide to stakeholders (see below), which we have provided to this particular reporter. We have declined interviews and wished him well. He has followed up with a list of questions. We are hoping you could assist with providing feedback. We are aware that some of the questions are inappropriate so we will follow up with NIH OCPL for guidance.
Thanks so much for this quick and helpful reply. Just a few follow-up questions:

- I know that NLM launched a new version of ToxMap as recently as June 2018. When did NLM decide to close down the site altogether? Who made that decision?
- One concern I have heard from multiple ToxMap users is that, while the EPA and other agencies do offer some of the data available on ToxMap, there is no other tool that is similarly comprehensive and accessible to non-experts. Does NLM have a response to those concerns?
- How much did it cost to run ToxMap?
- How many people used ToxMap? Is there user data for the website that you can share?
- One researcher has expressed concern that ToxMap's "disappearance only extends that larger pattern of decreasing transparency of environmental data during the Trump era." Does NLM have any response to those fears?

Thank you for your assistance!

Subject: RE: NLM TOXMAP RetirementFrom Subject Received
Attachments: FW: Press Follow Up- ToxMap

Rebecca, Dina,

Before you respond to this, note that we received another inquiry from a journalist writing for Undark Magazine (see attached email thread). I think it's important to ensure we are using the same language for requests. This is the original response that OCPL (with jerry) sent which would suffice for the OLPA email.
-Dianne

As the National Library of Medicine (NLM) implements its current Strategic Plan, it has had to make some difficult organizational changes that have resulted in some resources and programs being integrated into other NLM resources, made accessible on partner sites, or discontinued. These changes are intended to provide greater alignment of resources to fulfill NLM's mission.
While the TOXMAP website will be retired this month, selected TOXMAP data can be accessed from the following sites:

- U.S. EPA Toxics Release Program (TRI)
- U.S. EPA Superfund Program
- U.S. EPA Facilities Registry System (FRS)
- U.S. EPA Clean Air Markets Program
- U.S. EPA Geospatial Applications
- U.S. NIH NCI Surveillance, Epidemiology, and End Results Program (SEER)
- Government of Canada National Pollutant Release Inventory (NPRI)
- U.S. Census Bureau
- U.S. Nuclear Regulatory Commission (NRC)

Part of the decision was prompted by the increasing availability of the underlying data from their original sources. Many sources such as the EPA, among others, offer several products that provide similar geographic information system (GIS) functionality.

Cc: Paltoo, Dina (NIH/NLM) [E] <dina.paltoo@nih.gov>
Subject: RE: NLM TOXMAP RetirementFrom Subject Received

Good morning, Dianne,

Will the info from ToxMap continue to be available/accessible via search from any NLM website after ToxMap retires? Or will it only be available by going directly to the other USG sites listed on the web page?

The TOXMAP website will be retired in December 2019.

Selected TOXMAP data can be accessed from the following sites:

- U.S. EPA Toxics Release Program (TRI)
- U.S. EPA Superfund Program
- U.S. EPA Facilities Registry System (FRS)
- U.S. EPA Clean Air Markets Program
- U.S. EPA Geospatial Applications
- U.S. NIH NCI Surveillance, Epidemiology, and End Results Program (SEER)
- Government of Canada National Pollutant Release Inventory (NPRI)
- U.S. Census Bureau
- U.S. Nuclear Regulatory Commission (NRC)

The NIH Office of Legislative Policy and Analysis (OLPA) received a question from the Hill about ToxMap, and they want to know

- **why the website will be retired and**
- **if there are any plans to continue this service in a similar way after its retirement**.

Best regards,
Rebecca

Below is a generic response re: ToxMap that we've modified in different ways for different respondents.

As the National Library of Medicine (NLM) implements its current Strategic Plan, it has had to make some difficult organizational changes that have resulted in some resources and programs being integrated into other NLM resources, made accessible on partner sites, or discontinued. These changes are intended to provide greater alignment of resources to fulfill NLM's mission. The decision to retire ToxMap took into consideration the increasing availability of the underlying data and visualization tools from their original sources. Many sources such as the EPA, among others, offer several products that provide similar geographic information system (GIS) functionality.
While the TOXMAP website will be retired this month, selected TOXMAP data can be accessed from the following sites:

- U.S. EPA Toxics Release Program (TRI)
- U.S. EPA Superfund Program
- U.S. EPA Facilities Registry System (FRS)
- U.S. EPA Clean Air Markets Program
- U.S. EPA Geospatial Applications
- U.S. NIH NCI Surveillance, Epidemiology, and End Results Program (SEER)
- Government of Canada National Pollutant Release Inventory (NPRI)
- U.S. Census Bureau
- U.S. Nuclear Regulatory Commission (NRC)

Joyce, Dianne
We just got this request. I don't know who would have the background information on ToxMap costs and usage, but it's not something I have any access to.
I don't know who could really answer these questions.
David

Subject: Press Follow Up- ToxMap
Importance: High

Good afternoon,
Our office recently received a press inquiry regarding the sunset of ToxMap. We worked to develop a templated response to provide to stakeholders (see below), which we have provided to this particular reporter. We have declined interviews and wished him well. He has followed up with a list of questions. We are hoping you could assist with providing feedback. We are aware that some of the questions are inappropriate so we will follow up with NIH OCPL for guidance.
Thanks so much for this quick and helpful reply. Just a few follow-up questions:

- I know that NLM launched a new version of ToxMap as recently as June 2018. When did NLM decide to close down the site altogether? Who made that decision?
- One concern I have heard from multiple ToxMap users is that, while the EPA and other agencies do offer some of the data available on ToxMap, there is no other tool that is similarly comprehensive and accessible to non-experts. Does NLM have a response to those concerns?
- How much did it cost to run ToxMap?
- How many people used ToxMap? Is there user data for the website that you can share?
- One researcher has expressed concern that ToxMap's "disappearance only extends that larger pattern of decreasing transparency of environmental data during the Trump era." Does NLM have any response to those fears?

Thank you for your assistance!

Hi, NLM Communications,

Thanks so much for this note. I wasn't trying to schedule an interview, but I was hoping to get answers to these questions. Will that be possible? Happy to share more information or clarify anything, if that would be helpful.

Many thanks,
Michael

These changes are intended to provide greater alignment of resources to fulfill NLM's mission.

While the TOXMAP website will be retired this month, selected TOXMAP data can be accessed from the following sites:

- U.S. EPA Toxics Release Program (TRI)
- U.S. EPA Superfund Program
- U.S. EPA Facilities Registry System (FRS)
- U.S. EPA Clean Air Markets Program
- U.S. EPA Geospatial Applications
- U.S. NIH NCI Surveillance, Epidemiology, and End Results Program (SEER)
- Government of Canada National Pollutant Release Inventory (NPRI)
- U.S. Census Bureau
- U.S. Nuclear Regulatory Commission (NRC)

Part of the decision was prompted by the increasing availability of the underlying data from their original sources. Many sources such as the EPA, among others, offer several products that provide similar geographic information system (GIS) functionality.
Sincerely,
The NLM Communications Team

Greetings,
We also have a similar question from OLPA, so am copying Jerry, Dina and Rebecca.

Not sure which questions "are inappropriate so we will follow up with NIH OCPL for guidance. "

Here are a few answers.
1 – NLM leadership made the decision this summer.
2 – no response now
3 – based on the 2018 NPA estimates, ToxMap cost NLM approximately $250K
4 – I don't have use data now. We could get some if this is an "appropriate question."
5 – DRAFT – NLM strives to provide biomedical information and data to the public through our resources, including PubMed, ClinicalTrials.gov, MedlinePlus, Genbank and others. Retiring ToxMap isn't intended to limit access to information in any way since it is available elsewhere, but rather to decrease the duplication of government effort.

Good afternoon,

Our office recently received a press inquiry regarding the sunset of ToxMap. We worked to develop a templated response to provide to stakeholders (see below), which we have provided to this particular reporter. We have declined interviews and wished him well. He has followed up with a list of questions. We are hoping you could assist with providing feedback. We are aware that some of the questions are inappropriate so we will follow up with NIH OCPL for guidance.
Thanks so much for this quick and helpful reply. Just a few follow-up questions:

- I know that NLM launched a new version of ToxMap as recently as June 2018. When did NLM decide to close down the site altogether? Who made that decision?
- One concern I have heard from multiple ToxMap users is that, while the EPA and other agencies do offer some of the data available on ToxMap, there is no other tool that is similarly comprehensive and accessible to non-experts. Does NLM have a response to those concerns?
- How much did it cost to run ToxMap?
- How many people used ToxMap? Is there user data for the website that you can share?
- One researcher has expressed concern that ToxMap's "disappearance only extends that larger pattern of decreasing transparency of environmental data during

the Trump era." Does NLM have any response to those fears?

Thank you for your assistance!

Hi, NLM Communications,

Thanks so much for this note. I wasn't trying to schedule an interview, but I was hoping to get answers to these questions. Will that be possible? Happy to share more information or clarify anything, if that would be helpful.

Many thanks,

Michael

Subject: Re: question from a reporter re: ToxMap

Hi, NLM Communications,

Thanks so much for this quick and helpful reply. Just a few follow-up questions:

- I know that NLM launched a new version of ToxMap as recently as June 2018. When did NLM decide to close down the site altogether? Who made that decision?
- One concern I have heard from multiple ToxMap users is that, while the EPA and other agencies do offer some of the data available on ToxMap, there is no other tool that is similarly comprehensive and accessible to non-experts. Does NLM have a response to those concerns?
- How much did it cost to run ToxMap?
- How many people used ToxMap? Is there user data for the website that you can share?
- One researcher has expressed concern that ToxMap's "disappearance only extends that larger pattern of decreasing transparency of environmental data during the Trump era." Does NLM have any response to those fears?

Thanks again for your help on this. I'm happy to hop on the phone, if that would be easier: Personal Info

All the best,

Michael

On Fri, Dec 13, 2019 at 8:35 AM NLM Communications <NLMCommunications@nlm.nih.gov> wrote:

> Good morning Michael,
>
> As the National Library of Medicine (NLM) implements its current Strategic Plan, it has had to make some difficult organizational changes that have resulted in some resources and programs being integrated into other NLM resources, made accessible on partner sites, or

discontinued. These changes are intended to provide greater alignment of resources to fulfill NLM's mission.

While the TOXMAP website will be retired this month, selected TOXMAP data can be accessed from the following sites:

- U.S. EPA Toxics Release Program (TRI)
- U.S. EPA Superfund Program
- U.S. EPA Facilities Registry System (FRS)
- U.S. EPA Clean Air Markets Program
- U.S. EPA Geospatial Applications
- U.S. NIH NCI Surveillance, Epidemiology, and End Results Program (SEER)
- Government of Canada National Pollutant Release Inventory (NPRI)
- U.S. Census Bureau
- U.S. Nuclear Regulatory Commission (NRC)

Part of the decision was prompted by the increasing availability of the underlying data from their original sources. Many sources such as the EPA, among others, offer several products that provide similar geographic information system (GIS) functionality.

Sincerely,

The NLM Communications Team

Subject: RE: Press Follow Up- ToxMap

Greetings,
We also have a similar question from OLPA, so am copying Jerry, Dina and Rebecca.

Not sure which questions "are inappropriate so we will follow up with NIH OCPL for guidance. "

Here are a few answers.
1 – NLM leadership made the decision this summer.
2 – no response now
3 – based on the 2018 NPA estimates, ToxMap cost NLM approximately $250K
4 – I don't have use data now. We could get some if this is an "appropriate question."
5 – DRAFT – NLM strives to provide biomedical information and data to the public through our resources, including PubMed, ClinicalTrials.gov, MedlinePlus, Genbank and others. Retiring ToxMap isn't intended to limit access to information in any way since it is available elsewhere, but rather to decrease the duplication of government effort.

Importance: High

Good afternoon,

Our office recently received a press inquiry regarding the sunset of ToxMap. We worked to develop a templated response to provide to stakeholders (see below), which we have provided to this particular reporter. We have declined interviews and wished him well. He has followed up with a list of questions. We are hoping you could assist with providing feedback. We are aware that some of the questions are inappropriate so we will follow up with NIH OCPL for guidance.
Thanks so much for this quick and helpful reply. Just a few follow-up questions:

- I know that NLM launched a new version of ToxMap as recently as June 2018. When did NLM decide to close down the site altogether? Who made that decision?
- One concern I have heard from multiple ToxMap users is that, while the EPA and other agencies do offer some of the data available on ToxMap, there is no other tool that is similarly comprehensive and accessible to non-experts. Does NLM have a response to those concerns?
- How much did it cost to run ToxMap?
- How many people used ToxMap? Is there user data for the website that you can share?

- One researcher has expressed concern that ToxMap's "disappearance only extends that larger pattern of decreasing transparency of environmental data during the Trump era." Does NLM have any response to those fears?

Thank you for your assistance!

Thanks so much for this quick and helpful reply. Just a few follow-up questions:

- I know that NLM launched a new version of ToxMap as recently as June 2018. When did NLM decide to close down the site altogether? Who made that decision?
- One concern I have heard from multiple ToxMap users is that, while the EPA and other agencies do offer some of the data available on ToxMap, there is no other tool that is similarly comprehensive and accessible to non-experts. Does NLM have a response to those concerns?

- How much did it cost to run ToxMap?
- How many people used ToxMap? Is there user data for the website that you can share?
- One researcher has expressed concern that ToxMap's "disappearance only extends that larger pattern of decreasing transparency of environmental data during the Trump era." Does NLM have any response to those fears?

Thank you for your assistance!

Hi, NLM Communications,

Thanks so much for this note. I wasn't trying to schedule an interview, but I was hoping to get answers to these questions. Will that be possible? Happy to share more information or clarify anything, if that would be helpful.

Many thanks,

Michael

Part of the decision was prompted by the increasing availability of the underlying data from their original sources. Many sources such as the EPA, among others, offer several products that provide similar geographic information system (GIS) functionality.

Sincerely,

The NLM Communications Team

Subject: question from a reporter re: ToxMap

Hi, NLM--

I'm a reporter for Undark Magazine, which covers science and society for a national audience from its headquarters at MIT.

I'm working on a story about the impending shutdown of ToxMap, and wanted to get input from the NLM on the decision to close the service down. Is anyone available for a phone call today or tomorrow?

I'm at Personal Info

Thanks,

Michael

From: Brennan, Patti (NIH/NLM) [E]
Sent: 16 Dec 2019 11:19:40 -0500
To: Tabak, Lawrence (NIH/OD) [E];Collins, Francis (NIH/OD) [E]
Subject: Toxmap

HI Larry and Francis

Thanks for a very productive meeting this morning.

Below please find the public response about Toxmap as well as our original sunset plan for this resource.

This has been shared with Renate.

Here is a link to the report from 12/12 that we think may have sparked interest in Toxmap.

Please let me know if you would like additional information.

Best,
Patti

Patricia Flatley Brennan, RN, PhD
Director, National Library of Medicine
National Institutes of Health
US Department of Health and Human Services

From: Jerry Sheehan <sheehanjr@mail.nlm.nih.gov>

Below is a generic response re: ToxMap that we've modified in different ways for different respondents. Farther below is the sunsetting information we sent to Larry back in April. I don't have an exact date, but the sunset plan was announced around June, when we were closing SIS.

As the National Library of Medicine (NLM) implements its current Strategic Plan, it has had to make some difficult organizational changes that have resulted in some resources and programs being integrated into other NLM resources, made accessible on partner sites, or discontinued. These changes are intended to provide greater alignment of resources to fulfill NLM's mission. The decision to retire ToxMap took into consideration the increasing availability of the underlying data and visualization tools from their original sources. Many sources such as the EPA, among others, offer several products that provide similar geographic information system (GIS) functionality.
While the TOXMAP website will be retired this month, selected TOXMAP data can be accessed from the following sites:

- U.S. EPA Toxics Release Program (TRI)
- U.S. EPA Superfund Program

- U.S. EPA Facilities Registry System (FRS)
- U.S. EPA Clean Air Markets Program
- U.S. EPA Geospatial Applications
- U.S. NIH NCI Surveillance, Epidemiology, and End Results Program (SEER)
- Government of Canada National Pollutant Release Inventory (NPRI)
- U.S. Census Bureau
- U.S. Nuclear Regulatory Commission (NRC)

Sunsetting

2. TOXMAP – Proposed sunset date: October 1, 2019

Original purpose: TOXMAP helps users visually explore toxicology data primarily from the EPA's Toxics Release Inventory (TRI) and Superfund Programs. TOXMAP also features Canada's National Pollutant Release Inventory data, U.S. EPA coal plant emissions data, and U.S. commercial nuclear power plant data. TOXMAP overlays U.S. Census demographic data, income figures from the U.S. Department of Commerce, and health data from the NCI SEER program.

Why no longer needed: The US Environmental Protection Agency now produces several GIS products and visualization applications that have similar data and GIS functionality. Use of unique TOXMAP features (e.g., the ability to search TOXNET from within the GIS tools) has declined to a level too low to justify continued NLM investment in technological upgrades necessary.

Critical issues: Data used in TOXMAP will be available from their original sources (EPA, Canada, Nuclear Regulatory Commission, etc.), and GIS application users can overlay the data in their GIS applications. NLM will inform EPA and NIEHS of the proposed sunset, in addition to TOXMAP users.

Subject: Discussion items for LO BSD meeting, 12/16/19, 3:00
Attachments: HSDB cost update 2019_12_16.docx

Here are the discussion items for our 3:00 meeting.
And attached is an update on the HSDB contracts, to be discussed.

David

1. HSDB Contract discussion – handout/attachment

2. TOXNET retirement
   - Underway
   - Reminded Sunset Team about sending requests from reports to OCPL via NLMCommunications@nlm.nih.gov

3. BSD Supervisors
   - Will set up meeting with BSD Supervisors to meet with ADLO about renovation and moving issues.
   - IS supervisors are concerned about working conditions, health and air quality
   - MMS supervisors are getting questions like: is the move permanent and where will MMS go after the renovations. They are having difficulty providing positive messages when they feel they don't have information about the future.

4. OCCS Outcomes session
   - go a lot of information. It shows how OCCS and LO staff will need to work more as teams as we move into product owner roles.
   - A couple of items affect all areas, so will send notes to Div Chiefs

5. Space planning – met with D'Neen on Friday 12/13. Going to see the space on Thursday 12/19.

6. Holiday staffing for BSD: Will send this as a separate email. Coverage for BSD OC moves around lot for most supervisors are taking leave at different times.

Sunday	Monday	Tuesday	Wednesday	Thursday	Friday	Saturday

HSDB Current Contracts - From HSDB Analysis and Recommendation Document

HSDB has 2 production contracts that are referred to as the HSDB primary contract and the HSDB secondary contract. New contracts for both of these efforts were awarded in September 2019. FY2019 funds were used to fund the awards but could not fund the full amount of either contract. FY2020 funds will be needed.

Contract Information	HSDB Primary Contract	HSDB Secondary Contract
Contract Vendor	Technical Resources International , Inc. (TRI)	SRC, Inc.
Contracted awarded	9/13/2019	9/12/2019
Base year POP	9/13/2019 – 9/12/2020	9/12/2019-9/11/2020
Annual cost	$1,020,000	$400,000
Amount awarded, FY19 funds	$560,000	$200,000
Amount needed from FY20, not awarded yet	$460,000	$200,000

Status as of December 16, 2019

- Partial stop work order issued to both contractors on 11/19/2019
- Contractors were asked to provide cost estimate for several special projects.
- Initial cost estimates provided by Contracts Office to BSD on December 11. The estimates were for all projects in Task 7, not per project. We asked for a breakdown in order to know what we can afford.
- We have also asked for the final costs for all work up to the partial stop work order being issued, and any costs incurred because of the partial stop work order. We have not received all of this information yet but have gotten an estimate.
- TRI: estimated that $417.5K is the reminder of funds available from the $560,000 obligated. Their cost estimate for all of Task is $417K roughly.
- SRC: overall task 7 estimate is $197,838. They have not provided a cost estimate on what has been spent.
- The timeframe for these projects is meant to be by March 2020, but at least one contract firm is saying it would need to go through June.
- This probably won't be settled until early January. Bert is on leave for 2.5 weeks starting 12/23.

Hi, NLM,

Sorry to keep bothering you, but I did have one fact-checking question, at least, that I hope I can run by you: when you say that ToxMap will be retired or sunsetted, does that mean the site will be taken offline today (i.e., the link will no longer work), or that it will continue as it currently exists, but will no longer be updated or maintained?

Thanks,

Michael

Subject: Press Follow Up- ToxMap
Importance: High

Good afternoon,

Our office recently received a press inquiry regarding the sunset of ToxMap. We worked to develop a templated response to provide to stakeholders (see below), which we have provided to this particular reporter. We have declined interviews and wished him well. He has followed up with a list of questions. We are hoping you could assist with providing feedback. We are aware that some of the questions are inappropriate so we will follow up with NIH OCPL for guidance.
Thanks so much for this quick and helpful reply. Just a few follow-up questions:

- I know that NLM launched a new version of ToxMap as recently as June 2018. When did NLM decide to close down the site altogether? Who made that decision?
- One concern I have heard from multiple ToxMap users is that, while the EPA and other agencies do offer some

of the data available on ToxMap, there is no other tool that is similarly comprehensive and accessible to non-experts. Does NLM have a response to those concerns?
- How much did it cost to run ToxMap?
- How many people used ToxMap? Is there user data for the website that you can share?
- One researcher has expressed concern that ToxMap's "disappearance only extends that larger pattern of decreasing transparency of environmental data during the Trump era." Does NLM have any response to those fears?

Thank you for your assistance!

Unfortunately at this time, we are not scheduling interviews regarding the sunsetting of ToxMap. We hope that the alternative resources provided below will be useful for your future needs.

Thank you and best of luck,
NLM Communications

Subject: Re: question from a reporter re: ToxMap

Hi, NLM Communications,

Thanks so much for this quick and helpful reply. Just a few follow-up questions:

- I know that NLM launched a new version of ToxMap as recently as June 2018. When did NLM decide to close down the site altogether? Who made that decision?
- One concern I have heard from multiple ToxMap users is that, while the EPA and other agencies do offer some of the data available on ToxMap, there is no other tool that is similarly comprehensive and accessible to non-experts. Does NLM have a response to those concerns?
- How much did it cost to run ToxMap?
- How many people used ToxMap? Is there user data for the website that you can share?
- One researcher has expressed concern that ToxMap's "disappearance only extends that larger pattern of decreasing transparency of environmental data during the Trump era." Does NLM have any response to those fears?

Thanks again for your help on this. I'm happy to hop on the phone, if that would be easier: Personal Info

All the best,

Michael

Subject: question from a reporter re: ToxMap

Hi, NLM--

I'm a reporter for Undark Magazine, which covers science and society for a national audience from its headquarters at MIT.

I'm working on a story about the impending shutdown of ToxMap, and wanted to get input from the NLM on the decision to close the service down. Is anyone available for a phone call today or tomorrow?

I'm at Personal Info

Thanks,

Michael

Subject: NLM TOXMAP Retirement

Hi Dina,

We've received a question from the Hill about NLM's TOXMAP website and the fact that it says it will be retired this month. I was wondering if you know why the website will be retired and if there are any plans to continue this service in a similar way after its retirement.

Best,
Chris

Alise
The goal is that the site will be taken offline today, or hopefully by tomorrow. There are 21 other toxicology/TOXNET products that are also being retired today, as well as some other former SIS products (being handled by other areas NLM/LO). My division, BSD, is working with OCCS to retire the toxicology data sites. And hopefully OCCS will not run into problems as they are retiring the different TOXNET sites.

Subject: ToxMap Question
Importance: High

Good afternoon,

We've received a question regarding the sunsetting of ToxMap. Can you provide us with the answer to the below?

ToxMap will be retired or sunsetted, does that mean the site will be taken offline today (i.e., the link will no longer work), or that it will continue as it currently exists, but will no longer be updated or maintained?

Thank you for your help!

Thank you,

Subject: RE: Question re: media clearance- Follow Up

Hi All-

Apologies for the delay in getting back to you. To follow up on my call with Alise, we recommend that you respond to his follow up questions. For those question that you already answered, you can reiterate the previous responses by saying "As stated below etc." Regarding the questions about cost and users—if this data is not public, then you would let him know he can FOIA that information though not sure what would be shared.

You should definitely answer his last question and clarify that no it is not because of the Administration. This is part of a larger effort to streamline NLM resources, and this data is available through other government websites.

Renate may have additional input.

Hope this helps. Let us know if you have any questions or concerns.

Thanks!
Amanda

Subject: Question re: media clearance

Hi John and Renate,

We received two email media inquiries (*Undark Magazine* and *Inside EPA*) this afternoon asking why the NLM is retiring its TOXMAP website. We are not entertaining interviews, but we would like to provide the reporters with language that aligns with other messages that NLM has shared in recent months about some of the changes that have been made as part of NLM's strategic plan and realignment efforts.

Below is the response that we would like to provide to these two reporters, but we wanted to check in to ask if this action would require going through the traditional media interview clearance process.

Thanks in advance for your guidance.

Diane

***
Dear XXX,

As the National Library of Medicine (NLM) implements its current Strategic Plan, it has had to make some difficult organizational changes that have resulted in some resources and programs being integrated into other NLM resources, made accessible on partner sites, or discontinued. These changes are intended to provide greater alignment of resources to fulfill NLM's mission.

While the TOXMAP website will be retired this month, selected TOXMAP data can be accessed from the following sites:

- U.S. EPA Toxics Release Program (TRI)
- U.S. EPA Superfund Program
- U.S. EPA Facilities Registry System (FRS)
- U.S. EPA Clean Air Markets Program
- U.S. EPA Geospatial Applications
- U.S. NIH NCI Surveillance, Epidemiology, and End Results Program (SEER)
- Government of Canada National Pollutant Release Inventory (NPRI)
- U.S. Census Bureau
- U.S. Nuclear Regulatory Commission (NRC)

Part of the decision was prompted by the increasing availability of the underlying data from their original sources. Many sources such as the EPA, among others, offer several products that provide similar geographic information system (GIS) functionality.

Sincerely,

The NLM Team

Hi Renate and Amanda,

We received clearance to provide a written response to the two reporter inquiries about the sunsetting of ToxMap (*Undark Magazine* and *Inside EPA)*. We subsequently received follow up questions from *Undark Magazine* (see email thread attached). We believe our initial response was sufficient and we are seeking your guidance to determine if any further action is required.

Noting, we have a better idea of what may have sparked these inquiries.
https://envirodatagov.org/goodbye-to-toxmap-and-our-environmental-right-to-know/
As an FYI, Dina Paltoo (NLM policy team) received an inquiry from NIH OLPA about the sunsetting of ToxMap from the Hill that she is addressing with the language cleared as part of our original request.
Thank you,
Jody

Subject: Question re: media clearance

Hi John and Renate,

We received two email media inquiries (*Undark Magazine* and *Inside EPA*) this afternoon asking why the NLM is retiring its TOXMAP website. We are not entertaining interviews, but we would like to provide the reporters with language that aligns with other messages that NLM has shared in recent months about some of the changes that have been made as part of NLM's strategic plan and realignment efforts.

Below is the response that we would like to provide to these two reporters, but we wanted to check in to ask if this action would require going through the traditional media interview clearance process.

Thanks in advance for your guidance.

Diane

***
Dear XXX,

As the National Library of Medicine (NLM) implements its current Strategic Plan, it has had to make some difficult organizational changes that have resulted in some resources and programs being integrated into other NLM resources, made accessible on partner sites, or discontinued. These changes are intended to provide greater alignment of resources to fulfill NLM's mission.

While the TOXMAP website will be retired this month, selected TOXMAP data can be accessed from the following sites:

- U.S. EPA Toxics Release Program (TRI)
- U.S. EPA Superfund Program
- U.S. EPA Facilities Registry System (FRS)
- U.S. EPA Clean Air Markets Program
- U.S. EPA Geospatial Applications
- U.S. NIH NCI Surveillance, Epidemiology, and End Results Program (SEER)
- Government of Canada National Pollutant Release Inventory (NPRI)
- U.S. Census Bureau
- U.S. Nuclear Regulatory Commission (NRC)

Part of the decision was prompted by the increasing availability of the underlying data from their original sources. Many sources such as the EPA, among others, offer several products that provide similar geographic information system (GIS) functionality.

Sincerely,

The NLM Team

Hi, NLM Communications,

Thanks so much for this note. I wasn't trying to schedule an interview, but I was hoping to get answers to these questions. Will that be possible? Happy to share more information or clarify anything, if that would be helpful.

Many thanks,

Michael

Hi Amanda,

Thanks for this helpful information. We are working on a draft response – would you mind taking a look at it before we respond?

Also, confirming these new questions do not need to go for HHS clearance as they are “add-ons” from the original request.

Best,

Jody

Hi All-

Apologies for the delay in getting back to you. To follow up on my call with Alise, we recommend that you respond to his follow up questions. For those question that you already answered, you can reiterate the previous responses by saying "As stated below etc." Regarding the questions about cost and users—if this data is not public, then you would let him know he can FOIA that information though not sure what would be shared.

You should definitely answer his last question and clarify that no it is not because of the Administration. This is part of a larger effort to streamline NLM resources, and this data is available through other government websites.

Renate may have additional input.

Hope this helps. Let us know if you have any questions or concerns.

Thanks!
Amanda

Received 12/13/2019

- I know that NLM launched a new version of ToxMap as recently as June 2018. When did NLM decide to close down the site altogether? 2019
- Who made that decision? As stated below, the decision was an output of the Strategic Plan.
- One concern I have heard from multiple ToxMap users is that, while the EPA and other agencies do offer some of the data available on ToxMap, there is no other tool that is similarly comprehensive and accessible to non-experts. Does NLM have a response to those concerns? As stated below, data remains available from their original sources (EPA, Canada, Nuclear Regulatory Commission, etc.), and GIS application users can overlay the data in their GIS applications. Please see below links.
- How much did it cost to run ToxMap? As of this writing, this data is not publicly available. You may FOIA this information.
- How many people used ToxMap? Is there user data for the website that you can share? As of this writing, this data is not publicly available. You may FOIA this information.
- One researcher has expressed concern that ToxMap's "disappearance only extends that larger pattern of decreasing transparency of environmental data during the Trump era." Does NLM have any response to those fears? No, it is not because of the Administration. This is part of a larger effort to streamline NLM resources, and this data is available through other government websites.

Received 12/16/2019

- Sorry to keep bothering you, but I did have one fact-checking question, at least, that I hope I can run by you: when you say that ToxMap will be retired or sunsetted, does that mean the site will be taken offline today (i.e., the link will no longer work), or that it will continue as it currently exists, but will no longer be updated or maintained? The site will be retired and taken offline.

Good morning Michael,

As the National Library of Medicine (NLM) implements its current Strategic Plan, it has had to make some difficult organizational changes that have resulted in some resources and programs being integrated into other NLM resources, made accessible on partner sites, or discontinued. These changes are intended to provide greater alignment of resources to fulfill NLM's mission.

While the TOXMAP website will be retired this month, selected TOXMAP data can be accessed from the following sites:

- U.S. EPA Toxics Release Program (TRI)
- U.S. EPA Superfund Program
- U.S. EPA Facilities Registry System (FRS)
- U.S. EPA Clean Air Markets Program
- U.S. EPA Geospatial Applications
- U.S. NIH NCI Surveillance, Epidemiology, and End Results Program (SEER)
- Government of Canada National Pollutant Release Inventory (NPRI)
- U.S. Census Bureau
- U.S. Nuclear Regulatory Commission (NRC)

Part of the decision was prompted by the increasing availability of the underlying data from their original sources. Many sources such as the EPA, among others, offer several products that provide similar geographic information system (GIS) functionality.

Sincerely,

The NLM Communications Team

Good afternoon,

We have received three *identical requests*, from three different requesters.

I will need to get EO approval to have CIT conduct an email search for items 3, 4, and 5. Once I have that approval I can collect any responsive records for those items. Todd, please confirm via reply all that I have your permission to search the inboxes of he following individuals: Dr. Patricia Flatley Brennan, Jerry Sheehan, Dr. Milton Corn, Dr. Dina Paltoo, Dr. Michael F. Huerta, Todd Danielson, Jody Nurik, Joyce Backus, Dr. Steven J. Phillips, MD and, Gale A. Dutcher.

I have attached all three requests to this email, for ease of viewing.

Allison, please let me know if there are additional parties that I need to contact for items 1 and 2. If you are able to retrieve any of those records on my behalf please do and return them to me ASAP.

The request reads as:

1. *a copy of memos, reports, studies, and other documents regarding the shutdown/discontinuance of TOXMAP and TOXNET during calendar year 2019,*

2. *any analyses or studies regarding the proposal and/or decision to shutdown/discontinuance of TOXMAP and TOXNET during calendar year 2019,*

3. *a copy of any correspondence with NIH Office of the Director, HHS Office of the Secretary or the White House regarding TOXMAP and TOXNET during calendar year 2019,*

4. *a copy of any correspondence with EPA regarding TOXMAP and TOXNET during calendar year 2019, and;*

5. *the results of an electronic search for any emails (TO, FROM or CC) within the email accounts of the following specified individuals (search the accounts of those individuals, even if now in different positions) that include the word TOXMAP OR the word TOXNET during the time period January 1, 2019 to the present: Dr. Patricia Flatley Brennan, Director, Jerry Sheehan, Deputy Director, Dr. Milton Corn, Deputy Director for Research and Education, Dr. Dina Paltoo, Assistant Director for Policy Development, Dr. Michael F. Huerta, Office of Strategic Initiatives, Todd Danielson, Associate Director - Office of Administrative Management, Jody Nurik, Director, Office of Communications and Public Liaison, Joyce Backus, Associate Director, Dr. Steven J. Phillips, MD, (former) Associate Director, Gale A. Dutcher, (former) Deputy Associate Director.*

If you all have any questions please do not hesitate to contact me.

Thank you,
Elisabeth

Subject: Maryland Public Information Act Request: Toxmap and Toxnet Shutdown Records
Date: Monday, December 16, 2019 7:17:45 AM

National Library Of Medicine, National Institute Of Health
PIA Office
Room 6054
6705 Rockledge Dr.
Bethesda, MD 20817

December 16, 2019

To Whom It May Concern:

Pursuant to the Maryland Public Information Act, I hereby request the following records:

This is a request for records from the National Library of Medicine under the provisions of the Freedom of Information Act.

First, I request a copy of memos, reports, studies, and other documents regarding the shutdown/discontinuance of TOXMAP and TOXNET during calendar year 2019.

Second, I also request any analyses or studies regarding the proposal and/or decision to shutdown/discontinuance of TOXMAP and TOXNET during calendar year 2019.

Third, I also request a copy of any correspondence with NIH Office of the Director, HHS Office of the Secretary or the White House regarding TOXMAP and TOXNET during calendar year 2019.

Fourth, I also request a copy of any correspondence with EPA regarding TOXMAP and TOXNET during calendar year 2019.

Fifth and Finally, I also request the results of an electronic search for any emails (TO, FROM or CC) within the email accounts of the following specified individuals that include the word TOXMAP OR the word TOXNET during the time period January 1, 2019 to the present:

Dr. Patricia Flatley Brennan, Director
Jerry Sheehan, Deputy Director
Dr. Milton Corn, Deputy Director for Research and Education
Dr. Dina Paltoo, Assistant Director for Policy Development
Dr. Michael F. Huerta, Office of Strategic Initiatives

IN THE OFFICE OF ADMINISTRATIVE MANAGEMENT
Todd Danielson, Associate Director - Office of Administrative Management

IN THE OFFICE OF COMMUNICATIONS AND PUBLIC LIAISON
Jody Nurik, Director, Office of Communications and Public Liaison

IN THE DIVISION OF LIBRARY OPERATIONS
Joyce Backus, Associate Director

IN THE (FORMER) OFFICE OF SPECIALIZED INFORMATION SERVICES DIVISION (search the accounts of those individuals, even if now in different positions)
Dr. Steven J. Phillips, MD, (former) Associate Director
Gale A. Dutcher, (former) Deputy Associate Director

The requested documents will be made available to the general public, and this request is not being made for commercial purposes.

In the event that there are fees, I would be grateful if you would inform me of the total charges in advance of fulfilling my request. I would prefer the request filled electronically, by e-mail attachment if available or CD-ROM if not.

Thank you in advance for your anticipated cooperation in this matter. I look forward to receiving your response to this request within 10 calendar days, as the statute requires.

Sincerely,

Michael Morisy

Third, I also request a copy of any correspondence with NIH Office of the Director, HHS Office of the Secretary or the White House regarding TOXMAP and TOXNET during calendar year 2019.

Fourth, I also request a copy of any correspondence with EPA regarding TOXMAP and TOXNET during calendar year 2019.

Fifth and Finally, I also request the results of an electronic search for any emails (TO, FROM or CC) within the email accounts of the following specified individuals that include the word TOXMAP OR the word TOXNET during the time period January 1, 2019 to the present:

Dr. Patricia Flatley Brennan, Director
Jerry Sheehan, Deputy Director
Dr. Milton Corn, Deputy Director for Research and Education
Dr. Dina Paltoo, Assistant Director for Policy Development
Dr. Michael F. Huerta, Office of Strategic Initiatives

IN THE OFFICE OF ADMINISTRATIVE MANAGEMENT
Todd Danielson, Associate Director - Office of Administrative Management

IN THE OFFICE OF COMMUNICATIONS AND PUBLIC LIAISON
Jody Nurik, Director, Office of Communications and Public Liaison

IN THE DIVISION OF LIBRARY OPERATIONS
Joyce Backus, Associate Director

IN THE (FORMER) OFFICE OF SPECIALIZED INFORMATION SERVICES DIVISION (search the accounts of those individuals, even if now in different positions)
Dr. Steven J. Phillips, MD, (former) Associate Director
Gale A. Dutcher, (former) Deputy Associate Director

This is an individual noncommercial request. It falls into the "all other requesters" fee category. I agree to pay up to $250 for applicable fees associated with this request, if necessary.

Thank you for your assistance with this records request.

Sincerely,

Michael Ravnitzky

From: NHLBI FOIA REQUEST (NIH/NHLBI)
To: John Birrenbach
Subject: RE: FOIA Request to the National Library of Medicine
Date: Monday, December 16, 2019 10:04:17 AM

Good morning,

As of March 15, we accept requests through our NIH FOIA Request Portal. Please submit future requests through the Portal.

There are numerous benefits of using the Portal to submit your request, including:

You enter your request directly into our processing queue;

The portal guides your entry to ensure we have the necessary contact information and details related to your request, thus reducing administrative delays;

You will receive an automated message through the Portal confirming your request has been received;

When the documents are reviewed and ready for release, you will download them directly through the Portal;

You only register once – making it even easier to submit future requests.

Once you submit your request through the portal, you will receive an email confirming receipt. Please feel free to contact me with any questions about this process.

As a one time courtesy we will process your request via your below email.

We look forward to working with you as we adopt a more interactive and efficient FOIA process at the NIH.

Thank you,
NHLBI FOIA Service Center

RE: FOIA Request to the National Library of Medicine

This is a request for records from the National Library of Medicine under the Freedom of Information Act.

First, I request a copy of memos, reports, studies, and other documents regarding the shutdown/discontinuance of TOXMAP and TOXNET during calendar year 2019.

Second, I also request any analyses or studies regarding the proposal and/or decision to shutdown/discontinuance of TOXMAP and TOXNET during calendar year 2019.

Third, I also request a copy of any correspondence with NIH Office of the Director, HHS Office of the Secretary or the White House regarding TOXMAP and TOXNET during calendar year 2019.

Fourth, I also request a copy of any correspondence with EPA regarding TOXMAP and TOXNET during calendar year 2019.

Fifth and Finally, I also request the results of an electronic search for any emails (TO, FROM or CC) within the email accounts of the following specified individuals that include the word TOXMAP OR the word TOXNET during the time period January 1, 2019 to the present:

Dr. Patricia Flatley Brennan, Director
Jerry Sheehan, Deputy Director
Dr. Milton Corn, Deputy Director for Research and Education
Dr. Dina Paltoo, Assistant Director for Policy Development
Dr. Michael F. Huerta, Office of Strategic Initiatives

IN THE OFFICE OF ADMINISTRATIVE MANAGEMENT
Todd Danielson, Associate Director - Office of Administrative Management

IN THE OFFICE OF COMMUNICATIONS AND PUBLIC LIAISON
Jody Nurik, Director, Office of Communications and Public Liaison

IN THE DIVISION OF LIBRARY OPERATIONS
Joyce Backus, Associate Director

IN THE (FORMER) OFFICE OF SPECIALIZED INFORMATION SERVICES

DIVISION (search the accounts of those individuals, even if now in different positions)
Dr. Steven J. Phillips, MD, (former) Associate Director
Gale A. Dutcher, (former) Deputy Associate Director

I agree to pay up to $25 for applicable fees associated with this request, if necessary.

Subject: RE: Question re: media clearance- Follow Up

Hi Amanda,

Thanks for this helpful information. We are working on a draft response – would you mind taking a look at it before we respond?

Also, confirming these new questions do not need to go for HHS clearance as they are "add-ons" from the original request.

Best,

Jody

Hi All-

Apologies for the delay in getting back to you. To follow up on my call with Alise, we recommend that you respond to his follow up questions. For those question that you already answered, you can reiterate the previous responses by saying "As stated below etc." Regarding the questions about cost and users—if this data is not public, then you would let him know he can FOIA that information though not sure what would be shared.

You should definitely answer his last question and clarify that no it is not because of the Administration. This is part of a larger effort to streamline NLM resources, and this data is available through other government websites.

Renate may have additional input.

Hope this helps. Let us know if you have any questions or concerns.

Thanks!
Amanda

Importance: High

Hi Renate and Amanda,

We received clearance to provide a written response to the two reporter inquiries about the sunsetting of ToxMap (*Undark Magazine* and *Inside EPA)*. We subsequently received follow up questions from *Undark Magazine* (see email thread attached). We believe our initial response was sufficient and we are seeking your guidance to determine if any further action is required.

Noting, we have a better idea of what may have sparked these inquiries.
https://envirodatagov.org/goodbye-to-toxmap-and-our-environmental-right-to-know/
As an FYI, Dina Paltoo (NLM policy team) received an inquiry from NIH OLPA about the sunsetting of ToxMap from the Hill that she is addressing with the language cleared as part of our original request.
Thank you,
Jody

Subject: Question re: media clearance

Hi John and Renate,

We received two email media inquiries (*Undark Magazine* and *Inside EPA*) this afternoon asking why the NLM is retiring its TOXMAP website. We are not entertaining interviews, but we would like to provide the reporters with language that aligns with other messages that NLM has shared in recent months about some of the changes that have been made as part of NLM's strategic plan and realignment efforts.

Below is the response that we would like to provide to these two reporters, but we wanted to check in to ask if this action would require going through the traditional media interview clearance process.

Thanks in advance for your guidance.

Diane

***
Dear XXX,

As the National Library of Medicine (NLM) implements its current Strategic Plan, it has had to make some difficult organizational changes that have resulted in some resources and programs being integrated into other NLM resources, made accessible on partner sites, or discontinued. These changes are intended to provide greater alignment of resources to fulfill NLM's mission.

While the TOXMAP website will be retired this month, selected TOXMAP data can be accessed from the following sites:

- U.S. EPA Toxics Release Program (TRI)
- U.S. EPA Superfund Program
- U.S. EPA Facilities Registry System (FRS)
- U.S. EPA Clean Air Markets Program
- U.S. EPA Geospatial Applications
- U.S. NIH NCI Surveillance, Epidemiology, and End Results Program (SEER)
- Government of Canada National Pollutant Release Inventory (NPRI)
- U.S. Census Bureau
- U.S. Nuclear Regulatory Commission (NRC)

Part of the decision was prompted by the increasing availability of the underlying data from their original sources. Many sources such as the EPA, among others, offer several products that provide similar geographic information system (GIS) functionality.

Sincerely,

The NLM Team

Received 12/13/2019

- I know that NLM launched a new version of ToxMap as recently as June 2018. When did NLM decide to close down the site altogether? Who made that decision? The decision to retire the tool was made in 2019. As stated below, the decision was an output of the Strategic Plan 2019
- ~~Who made that decision? As stated below, the decision was an output of the Strategic Plan.~~
- One concern I have heard from multiple ToxMap users is that, while the EPA and other agencies do offer some of the data available on ToxMap, there is no other tool that is similarly comprehensive and accessible to non-experts. Does NLM have a response to those concerns? As stated below, data remains available from their original sources (EPA, Canada, Nuclear Regulatory Commission, etc.), and GIS application users can overlay the data in their GIS applications. Please see below links.
- How much did it cost to run ToxMap? As of this writing, this data is not publicly available. You may FOIA this information.
- How many people used ToxMap? Is there user data for the website that you can share? As of this writing, this data is not publicly available. You may FOIA this information.
- One researcher has expressed concern that ToxMap's "disappearance only extends that larger pattern of decreasing transparency of environmental data during the Trump era." Does NLM have any response to those fears? No, ~~it is not because of the Administrat~~the decision to retire the site was made by NLM and not by the Administration~~ion~~. ~~This~~The reevaluation of NLM online resources ~~-~~is part of a larger effort to streamline NLM resources, and because this data is available through other government websites, NLM decided to direct its resources to other education tools.

Received 12/16/2019

- Sorry to keep bothering you, but I did have one fact-checking question, at least, that I hope I can run by you: when you say that ToxMap will be retired or sunsetted, does that mean the site will be taken offline today (i.e., the link will no longer work), or that it will continue as it currently exists, but will no longer be updated or maintained? The site will be retired and taken offline.

Good morning Michael,

As the National Library of Medicine (NLM) implements its current Strategic Plan, it has had to make some difficult organizational changes that have resulted in some resources and programs being integrated into other NLM resources, made accessible on partner sites, or discontinued. These changes are intended to provide greater alignment of resources to fulfill NLM's mission.

While the TOXMAP website will be retired this month, selected TOXMAP data can be accessed from the following sites:

- U.S. EPA Toxics Release Program (TRI)
- U.S. EPA Superfund Program
- U.S. EPA Facilities Registry System (FRS)
- U.S. EPA Clean Air Markets Program
- U.S. EPA Geospatial Applications
- U.S. NIH NCI Surveillance, Epidemiology, and End Results Program (SEER)
- Government of Canada National Pollutant Release Inventory (NPRI)
- U.S. Census Bureau
- U.S. Nuclear Regulatory Commission (NRC)

Comment [FA([]: I would point to what exactly in the plan resulted in this outcome. If it has to do with a reorganization I would add that too.

Comment [FA([]: Recommend hyperlinking to the FOIA page.

Comment [FA([]: NLM-please check that this is accurate with your folks. You do not need to use this language verbatum, but something along these lines would be appropriate. Please edit for accuracy.

Comment [FA([]: Are we sure it's not goign to be archived?

Part of the decision was prompted by the increasing availability of the underlying data from their original sources. Many sources such as the EPA, among others, offer several products that provide similar geographic information system (GIS) functionality.

Sincerely,

The NLM Communications Team

Hi, NLM,

Nice to talk with one of you a couple hours ago! My editors did hit publish on the story, but if there are additional details on the retiring/sunsetting process for Toxmap that you want to share, we may be able to update. Just let me know.

Thanks,

Michael

> > > **Subject:** Re: question from a reporter re: ToxMap
> > >
> > > Hi, NLM Communications,

Thanks so much for this quick and helpful reply. Just a few follow-up questions:

- I know that NLM launched a new version of ToxMap as recently as June 2018. When did NLM decide to close down the site altogether? Who made that decision?
- One concern I have heard from multiple ToxMap users is that, while the EPA and other agencies do offer some of the data available on ToxMap, there is no other tool that is similarly comprehensive and accessible to non-experts. Does NLM have a response to those concerns?
- How much did it cost to run ToxMap?
- How many people used ToxMap? Is there user data for the website that you can share?
- One researcher has expressed concern that ToxMap's "disappearance only extends that larger pattern of decreasing transparency of environmental data during the Trump era." Does NLM have any response to those fears?

Thanks again for your help on this. I'm happy to hop on the phone, if that would be easier:

Subject: question from a reporter re: ToxMap

Hi, NLM--

I'm a reporter for Undark Magazine, which covers science and society for a national audience from its headquarters at MIT.

I'm working on a story about the impending shutdown of ToxMap, and wanted to get input from the NLM on the decision to close the service down. Is anyone available for a phone call today or tomorrow?

I'm at Personal Info

Thanks,

Michael

Importance: High

Reporter: Michael Schulson
Organization: Undark Magazine
Phone #(s): michael@undark.org / (Personal Info
Subject: Retirement of NLM's TOXMAP website
Deadline: ASAP
Spokesperson: General written response; no interview
Expected place of publication (print, online, broadcast): online
Expected date of publication/airing: TBD
Expected prominence (e.g. front page, Sunday, evening/morning show, etc.): TBD

See additional questions from reporter from Undark Magazine

- I know that NLM launched a new version of ToxMap as recently as June 2018. When did NLM decide to close down the site altogether? Who made that decision? The decision to retire the tool was made in 2019. As stated below, the decision was an output of the Strategic Plan.
- One concern I have heard from multiple ToxMap users is that, while the EPA and other agencies do offer some of the data available on ToxMap, there is no other tool that is similarly comprehensive and accessible to non-experts. Does NLM have a response to those concerns? **NLM PLEASE EDIT AS APPROPRIATE:** NIH regularly looks to offer tools to make data more accessible to the user. However, our ability to offer those tools needs to be in line with our long-term strategic objectives and projected resources. As stated below, the data remains available from their original sources (EPA, Canada, Nuclear Regulatory Commission, etc.), and GIS application users can overlay the data in their GIS applications
- How much did it cost to run ToxMap? This data is not publicly available, and thus you would need to submit a FOIA this information.

- How many people used ToxMap? Is there user data for the website that you can share? This data is not publicly available, and thus you would need to submit a FOIA this information.
- One researcher has expressed concern that ToxMap's "disappearance only extends that larger pattern of decreasing transparency of environmental data during the Trump era." Does NLM have any response to those fears? No, the decision to retire the site was made by NLM and not by the Administration. The reevaluation of NLM online resources is part of a larger effort to streamline NLM resources. This data remains available through other original government sources.
- Sorry to keep bothering you, but I did have one fact-checking question, at least, that I hope I can run by you: when you say that ToxMap will be retired or sunsetted, does that mean the site will be taken offline today (i.e., the link will no longer work), or that it will continue as it currently exists, but will no longer be updated or maintained? The site will be retired and taken offline.

Dear XXX,

As the National Library of Medicine (NLM) implements its current Strategic Plan, it has had to make some difficult organizational changes that have resulted in some resources and programs being integrated into other NLM resources, made accessible on partner sites, or discontinued. These changes are intended to provide greater alignment of resources to fulfill NLM's mission.

While the TOXMAP website will be retired this month, selected TOXMAP data can be accessed from the following sites:

- U.S. EPA Toxics Release Program (TRI)
- U.S. EPA Superfund Program
- U.S. EPA Facilities Registry System (FRS)
- U.S. EPA Clean Air Markets Program
- U.S. EPA Geospatial Applications
- U.S. NIH NCI Surveillance, Epidemiology, and End Results Program (SEER)
- Government of Canada National Pollutant Release Inventory (NPRI)
- U.S. Census Bureau
- U.S. Nuclear Regulatory Commission (NRC)

Part of the decision was prompted by the increasing availability of the underlying data from their original sources. Many sources such as the EPA, among others, offer several products that provide similar geographic information system (GIS) functionality.

Sincerely,

The NLM Team

Subject: FW: NLM TOXMAP RetirementFrom Subject Received

Below is a generic response re: ToxMap that we've modified in different ways for different respondents. Farther below is the sunsetting information we sent to Larry back in April. I don't have an exact date, but the sunset plan was announced around June, when we were closing SIS.

As the National Library of Medicine (NLM) implements its current Strategic Plan, it has had to make some difficult organizational changes that have resulted in some resources and programs being integrated into other NLM resources, made accessible on partner sites, or discontinued. These changes are intended to provide greater alignment of resources to fulfill NLM's mission. The decision to retire ToxMap took into consideration the increasing availability of the underlying data and visualization tools from their original sources. Many sources such as the EPA, among others, offer several products that provide similar geographic information system (GIS) functionality.

While the TOXMAP website will be retired this month, selected TOXMAP data can be accessed from the following sites:

- U.S. EPA Toxics Release Program (TRI)
- U.S. EPA Superfund Program
- U.S. EPA Facilities Registry System (FRS)
- U.S. EPA Clean Air Markets Program
- U.S. EPA Geospatial Applications
- U.S. NIH NCI Surveillance, Epidemiology, and End Results Program (SEER)
- Government of Canada National Pollutant Release Inventory (NPRI)
- U.S. Census Bureau
- U.S. Nuclear Regulatory Commission (NRC)

Sunsetting

2. TOXMAP – Proposed sunset date: October 1, 2019

Original purpose: TOXMAP helps users visually explore toxicology data primarily from the EPA's Toxics Release Inventory (TRI) and Superfund Programs. TOXMAP also features Canada's National Pollutant Release Inventory data, U.S. EPA coal plant emissions data, and U.S. commercial nuclear power plant data. TOXMAP overlays U.S. Census demographic data, income figures from the U.S. Department of Commerce, and health data from the NCI SEER program.

Why no longer needed: The US Environmental Protection Agency now produces several GIS products and visualization applications that have similar data and GIS functionality. Use of unique TOXMAP features (e.g., the ability to search TOXNET from within the GIS tools) has declined to a level too low to justify continued NLM investment in technological upgrades necessary.

Critical issues: Data used in TOXMAP will be available from their original sources (EPA, Canada, Nuclear Regulatory Commission, etc.), and GIS application users can overlay the data in their GIS applications. NLM will inform EPA and NIEHS of the proposed sunset, in addition to TOXMAP users.

Subject: RE: NLM TOXMAP Retirement

Hi Dina,

Thanks for your response! We've also received a question related to TOXNET as well. I assume the response for this will be the same – i.e. NLM has made some organizational changes to be more efficient and have retired TOXNET because of the increasing availability of the underlying data from its original sources. Can you confirm this?

If so, could you also send along any resources that show the same data TOXNET was using?

Thank you for your continued help!

Best,
Chris

Subject: RE: NLM TOXMAP Retirement

Hi Chris,

As NLM implements its current Strategic Plan, it has had to make some difficult organizational changes that have resulted in some resources and programs being integrated into other NLM resources, made accessible on partner sites, or discontinued. These changes are intended to provide greater alignment of resources to fulfill NLM's mission. The decision to retire ToxMap took into consideration the increasing availability of the underlying data and visualization tools from their original sources. Many sources such as the EPA, among others, offer several products that provide similar geographic information system (GIS) functionality.

While the TOXMAP website will be retired this month, selected TOXMAP data can be accessed from the following sites:

- U.S. EPA Toxics Release Program (TRI)
- U.S. EPA Superfund Program
- U.S. EPA Facilities Registry System (FRS)
- U.S. EPA Clean Air Markets Program
- U.S. EPA Geospatial Applications
- U.S. NIH NCI Surveillance, Epidemiology, and End Results Program (SEER)
- Government of Canada National Pollutant Release Inventory (NPRI)
- U.S. Census Bureau
- U.S. Nuclear Regulatory Commission (NRC)

Also, please see: https://www.nlm.nih.gov/pubs/techbull/ja19/brief/ja19_sis_closure.html and https://www.nlm.nih.gov/pubs/techbull/so19/so19_toxnet_discontinued.html.

Thanks.

Best,
Dina

Subject: RE: NLM TOXMAP Retirement

Chris,
The answer w/ TOXNET overall is more complicated. We are integrating many of the TOXNET resources into other NLM information services, such as PubChem. This page indicates where various TOXNET resources have moved. https://www.nlm.nih.gov/toxnet/index.html

TOXMAP was a little different in that it provided a mapping service for data from other primary sources. Because those other primary sources now make the data available and offer mapping services, NLM decided to discontinue TOXMAP.

Dina can provide more details.

Thanks
Jerry

ADD:

Reporter: Michael Schulson
Organization: Undark Magazine
Phone #(s): michael@undark.org / (Personal Info
Subject: Retirement of NLM's TOXMAP website
Deadline: ASAP
Spokesperson: General written response; no interview
Expected place of publication (print, online, broadcast): online
Expected date of publication/airing: Article published 12.16.19.https://undark.org/2019/12/16/toxmap-national-library-of-medicine-retired/
Expected prominence (e.g. front page, Sunday, evening/morning show, etc.): TBD

See additional questions from reporter from Undark Magazine. While the initial article was published late afternoon on 12.16.19 (https://undark.org/2019/12/16/toxmap-national-library-of-medicine-retired/), reporter notes that the story may be updated.

- I know that NLM launched a new version of ToxMap as recently as June 2018. When did NLM decide to close down the site altogether? Who made that decision? The decision to retire the tool was made in 2019. As stated below, the decision was an output of the Strategic Plan.
- One concern I have heard from multiple ToxMap users is that, while the EPA and other agencies do offer some of the data available on ToxMap, there is no other tool that is similarly comprehensive and accessible to non-experts. Does NLM have a response to those concerns? NIH regularly looks to offer tools to make data more accessible to the user. However, our ability to offer those tools needs to be in line with our long-term strategic objectives and projected resources. As stated below, the data remains available from their original sources (EPA, Canada, Nuclear Regulatory Commission, etc.), and GIS application users can overlay the data in their GIS applications
- How much did it cost to run ToxMap? This data is not publicly available, and thus you would need to submit a FOIA for this information.
- How many people used ToxMap? Is there user data for the website that you can share? This data is not publicly available, and thus you would need to submit a FOIA for this information.
- One researcher has expressed concern that ToxMap's "disappearance only extends that larger pattern of decreasing transparency of environmental data during the Trump era." Does NLM have any response to those fears? No, the decision to retire the site was made by NLM and not by the Administration. The reevaluation of NLM online resources is part of a larger effort to streamline NLM resources. This data remains available through other original government sources.
- Sorry to keep bothering you, but I did have one fact-checking question, at least, that I hope I can run by you: when you say that ToxMap will be retired or sunsetted, does that mean the site will be taken offline today (i.e., the link will no longer work), or that it will continue as it currently exists, but will no longer be updated or maintained? The site will be retired and taken offline.

Subject: RE: NLM TOXMAP RetirementFrom

My edits are below, in CAPS for visibility

- I know that NLM launched a new version of ToxMap as recently as June 2018. When did NLM decide to close down the site altogether? Who made that decision? The decision to retire the tool was made in 2019 AS PART OF A BROADER NLM REORGANIZATION THAT INTEGRATED MOST OF NLM'S TOXICOLOGY INFORMATION SERVICES INTO OTHER NLM PRODUCTS AND SERVICES.
- One concern I have heard from multiple ToxMap users is that, while the EPA and other agencies do offer some of the data available on ToxMap, there is no other tool that is similarly comprehensive and accessible to non-experts. Does NLM have a response to those concerns? WE ARE PLEASED THAT SOME USERS PREFERRED THE NLM INTERFACE, BUT TOXMAP IS NOT UNIQUE AS A GIS VISUALIZATION APPLICATION. EPA OFFERS (AND CONTINUES TO IMPROVE) SUCH TOOLS. IN ADDITION, as stated below, the data remains available from their original sources (EPA, Canada, Nuclear Regulatory Commission, etc.), AND GIS application users can overlay the data in their OWN GIS applications.
- How much did it cost to run ToxMap? This data is not READILY available. COST WAS NOT A MAJOR FACTOR IN NLM'S DECISION
- How many people used ToxMap? Is there user data for the website that you can share? This data is not publicly available [CAN WE GET THIS DATA? I'M NOT AVERSE TO SHARING IT, AND I'D PREFER NOT TO BE SEEN AS NOT TRACKING USAGE OR NOT BEING TRANSPARENT ABOUT USAGE. IF IT WILL TAKE SOME TIME TO GET IT, JUST SAY SO].
- One researcher has expressed concern that ToxMap's "disappearance only extends that larger pattern of decreasing transparency of environmental data during the Trump era." Does NLM have any response to those fears? NLM HAS TAKEN GREAT CARE TO ENSURE THAT NO DATA BECOME UNAVAILABLE AS WE REORGANIZE OUR TOXICOLOGY AND OTHER RESOURCES. SOME DATA HAVE BEEN ARCHIVED AND MADE AVAILABLE VIA FTP. IN THE CASE OF TOXMAP, UNDERLYING DATA REMAIN AVAILABLE FROM THEIR ORIGINAL SOURCES. THE LINKS TO THOSE SOURCES ARE AVAILABLE ON THE TOXNET REDIRECTION SITE
- Sorry to keep bothering you, but I did have one fact-checking question, at least, that I hope I can run by you: when you say that ToxMap will be retired or sunsetted, does that mean the site will be taken offline today (i.e., the link will no longer work), or that it will continue as it currently exists, but will no longer be updated or maintained? The site will be retired and taken offline. THE SUNSET WAS ANNOUNCED IN [DATE – I THINK IT WAS JUNE] TO GIVE USERS SUFFICIENT TIME TO TRANSITION TO OTHER SOURCES. AS NOTED ABOVE, THE LIST OF LINKS TO DATA SOURCES WILL REMAIN ON THE TOXNT REDIRECTION SITE

Thanks,
Jody

Subject: FW: NLM TOXMAP RetirementFrom Subject Received

Below is a generic response re: ToxMap that we've modified in different ways for different respondents. Farther below is the sunsetting information we sent to Larry back in April. I don't have an exact date, but the sunset plan was announced around June, when we were closing SIS.

As the National Library of Medicine (NLM) implements its current Strategic Plan, it has had to make some difficult organizational changes that have resulted in some resources and programs being integrated into other NLM resources, made accessible on partner sites, or discontinued. These changes are intended to provide greater alignment of resources to fulfill NLM's mission. The decision to retire ToxMap took into

consideration the increasing availability of the underlying data and visualization tools from their original sources. Many sources such as the EPA, among others, offer several products that provide similar geographic information system (GIS) functionality.
While the TOXMAP website will be retired this month, selected TOXMAP data can be accessed from the following sites:

- U.S. EPA Toxics Release Program (TRI)
- U.S. EPA Superfund Program
- U.S. EPA Facilities Registry System (FRS)
- U.S. EPA Clean Air Markets Program
- U.S. EPA Geospatial Applications
- U.S. NIH NCI Surveillance, Epidemiology, and End Results Program (SEER)
- Government of Canada National Pollutant Release Inventory (NPRI)
- U.S. Census Bureau
- U.S. Nuclear Regulatory Commission (NRC)

Sunsetting

2. TOXMAP – Proposed sunset date: October 1, 2019

Original purpose: TOXMAP helps users visually explore toxicology data primarily from the EPA's Toxics Release Inventory (TRI) and Superfund Programs. TOXMAP also features Canada's National Pollutant Release Inventory data, U.S. EPA coal plant emissions data, and U.S. commercial nuclear power plant data. TOXMAP overlays U.S. Census demographic data, income figures from the U.S. Department of Commerce, and health data from the NCI SEER program.

Why no longer needed: The US Environmental Protection Agency now produces several GIS products and visualization applications that have similar data and GIS functionality. Use of unique TOXMAP features (e.g., the ability to search TOXNET from within the GIS tools) has declined to a level too low to justify continued NLM investment in technological upgrades necessary.

Critical issues: Data used in TOXMAP will be available from their original sources (EPA, Canada, Nuclear Regulatory Commission, etc.), and GIS application users can overlay the data in their GIS applications. NLM will inform EPA and NIEHS of the proposed sunset, in addition to TOXMAP users.

Subject: RE: NLM TOXMAP RetirementFrom

Patti/Jerry,

As we were working with NIH OCPL on answering the reporter's follow up questions, the reporter let us know that the article posted - https://undark.org/2019/12/16/toxmap-national-library-of-medicine-retired/. – per NIH OCPL's recommendation, we plan to answer the reporter's additional questions below. Working now on HHS clearance.

- I know that NLM launched a new version of ToxMap as recently as June 2018. When did NLM decide to close down the site altogether? Who made that decision?
- One concern I have heard from multiple ToxMap users is that, while the EPA and other agencies do offer some of the data available on ToxMap, there is no other tool that is similarly comprehensive and accessible to non-experts. Does NLM have a response to those concerns?
- How much did it cost to run ToxMap?
- How many people used ToxMap? Is there user data for the website that you can share?
- One researcher has expressed concern that ToxMap's "disappearance only extends that larger pattern of decreasing transparency of environmental data during the Trump era." Does NLM have any response to those fears?
- When you say ToxMap will be retired/sunsetted, does that mean the site will be taken off line today or that it will continue as it currently exists but no longer be maintained?

Thanks,
Jody

Subject: FW: NLM TOXMAP RetirementFrom Subject Received

Below is a generic response re: ToxMap that we've modified in different ways for different respondents. Farther below is the sunsetting information we sent to Larry back in April. I don't have an exact date, but the sunset plan was announced around June, when we were closing SIS.

As the National Library of Medicine (NLM) implements its current Strategic Plan, it has had to make some difficult organizational changes that have resulted in some resources and programs being integrated into other NLM resources, made accessible on partner sites, or discontinued. These changes are intended to provide greater alignment of resources to fulfill NLM's mission. The decision to retire ToxMap took into

consideration the increasing availability of the underlying data and visualization tools from their original sources. Many sources such as the EPA, among others, offer several products that provide similar geographic information system (GIS) functionality.
While the TOXMAP website will be retired this month, selected TOXMAP data can be accessed from the following sites:

- U.S. EPA Toxics Release Program (TRI)
- U.S. EPA Superfund Program
- U.S. EPA Facilities Registry System (FRS)
- U.S. EPA Clean Air Markets Program
- U.S. EPA Geospatial Applications
- U.S. NIH NCI Surveillance, Epidemiology, and End Results Program (SEER)
- Government of Canada National Pollutant Release Inventory (NPRI)
- U.S. Census Bureau
- U.S. Nuclear Regulatory Commission (NRC)

Sunsetting

2. TOXMAP – Proposed sunset date: October 1, 2019

Original purpose: TOXMAP helps users visually explore toxicology data primarily from the EPA's Toxics Release Inventory (TRI) and Superfund Programs. TOXMAP also features Canada's National Pollutant Release Inventory data, U.S. EPA coal plant emissions data, and U.S. commercial nuclear power plant data. TOXMAP overlays U.S. Census demographic data, income figures from the U.S. Department of Commerce, and health data from the NCI SEER program.

Why no longer needed: The US Environmental Protection Agency now produces several GIS products and visualization applications that have similar data and GIS functionality. Use of unique TOXMAP features (e.g., the ability to search TOXNET from within the GIS tools) has declined to a level too low to justify continued NLM investment in technological upgrades necessary.

Critical issues: Data used in TOXMAP will be available from their original sources (EPA, Canada, Nuclear Regulatory Commission, etc.), and GIS application users can overlay the data in their GIS applications. NLM will inform EPA and NIEHS of the proposed sunset, in addition to TOXMAP users.

Sure. If we think it is needed, we should reach out to Lisa Theisen or put in a JIRA request to get the usage data.

Reporter: Michael Schulson
Organization: Undark Magazine
Phone #(s): michael@undark.org / Personal Info
Subject: Retirement of NLM's TOXMAP website
Deadline: ASAP
Spokesperson: General written response; no interview
Expected place of publication (print, online, broadcast): online
Expected date of publication/airing: Article published 12.16.19.https://undark.org/2019/12/16/toxmap-national-library-of-medicine-retired/
Expected prominence (e.g. front page, Sunday, evening/morning show, etc.): TBD

See additional questions from reporter from Undark Magazine. While the initial article was published late afternoon on 12.16.19 (https://undark.org/2019/12/16/toxmap-national-library-of-medicine-retired/), reporter notes that the story may be updated.

- I know that NLM launched a new version of ToxMap as recently as June 2018. When did NLM decide to close down the site altogether? Who made that decision? The decision to retire the tool was made in 2019. As stated below, the decision was an output of the Strategic Plan.
- One concern I have heard from multiple ToxMap users is that, while the EPA and other agencies do offer some of the data available on ToxMap, there is no other tool that is similarly comprehensive and accessible to non-experts. Does NLM have a response to those concerns? NIH regularly looks to offer tools to make data more accessible to the user. However, our ability to offer those tools needs to be in line with our long-term strategic objectives and projected resources. As stated below, the data remains available from their original sources (EPA, Canada, Nuclear Regulatory Commission, etc.), and GIS application users can overlay the data in their GIS applications
- How much did it cost to run ToxMap? This data is not publicly available, and thus you would need to submit a FOIA for this information.
- How many people used ToxMap? Is there user data for the website that you can share? This data is not publicly available, and thus you would need to submit a FOIA for this information.
- One researcher has expressed concern that ToxMap's "disappearance only extends that larger pattern of decreasing transparency of environmental data during the Trump era." Does NLM have any response to those fears? No, the decision to retire the site was made by NLM and not by the Administration. The reevaluation of NLM online resources is part of a larger effort to streamline NLM resources. This data remains available through other original government sources.

- Sorry to keep bothering you, but I did have one fact-checking question, at least, that I hope I can run by you: when you say that ToxMap will be retired or sunsetted, does that mean the site will be taken offline today (i.e., the link will no longer work), or that it will continue as it currently exists, but will no longer be updated or maintained? The site will be retired and taken offline.

Dear XXX,

As the National Library of Medicine (NLM) implements its current Strategic Plan, it has had to make some difficult organizational changes that have resulted in some resources and programs being integrated into other NLM resources, made accessible on partner sites, or discontinued. These changes are intended to provide greater alignment of resources to fulfill NLM's mission.

While the TOXMAP website will be retired this month, selected TOXMAP data can be accessed from the following sites:

- U.S. EPA Toxics Release Program (TRI)
- U.S. EPA Superfund Program
- U.S. EPA Facilities Registry System (FRS)
- U.S. EPA Clean Air Markets Program
- U.S. EPA Geospatial Applications
- U.S. NIH NCI Surveillance, Epidemiology, and End Results Program (SEER)
- Government of Canada National Pollutant Release Inventory (NPRI)
- U.S. Census Bureau
- U.S. Nuclear Regulatory Commission (NRC)

Part of the decision was prompted by the increasing availability of the underlying data from their original sources. Many sources such as the EPA, among others, offer several products that provide similar geographic information system (GIS) functionality.

Sincerely,

The NLM Team

Good afternoon,

We have received three *identical requests*, from three different requesters.

I will need to get EO approval to have CIT conduct an email search for items 3, 4, and 5. Once I have that approval I can collect any responsive records for those items. Todd, please confirm via reply all that I have your permission to search the inboxes of he following individuals: Dr. Patricia Flatley Brennan, Jerry Sheehan, Dr. Milton Corn, Dr. Dina Paltoo, Dr. Michael F. Huerta, Todd Danielson, Jody Nurik, Joyce Backus, Dr. Steven J. Phillips, MD and, Gale A. Dutcher.

I have attached all three requests to this email, for ease of viewing.

Allison, please let me know if there are additional parties that I need to contact for items 1 and 2. If you are able to retrieve any of those records on my behalf please do and return them to me ASAP.

The request reads as:

1. *a copy of memos, reports, studies, and other documents regarding the shutdown/discontinuance of TOXMAP and TOXNET during calendar year 2019,*

2. *any analyses or studies regarding the proposal and/or decision to shutdown/discontinuance of TOXMAP and TOXNET during calendar year 2019,*

3. *a copy of any correspondence with NIH Office of the Director, HHS Office of the Secretary or the White House regarding TOXMAP and TOXNET during calendar year 2019,*

4. *a copy of any correspondence with EPA regarding TOXMAP and TOXNET during calendar year 2019, and;*

5. *the results of an electronic search for any emails (TO, FROM or CC) within the email accounts of the following specified individuals (search the accounts of those individuals, even if now in different positions) that include the word TOXMAP OR the word TOXNET during the time period January 1, 2019 to the present: Dr. Patricia Flatley Brennan, Director, Jerry Sheehan, Deputy Director, Dr. Milton Corn, Deputy Director for Research and Education, Dr. Dina Paltoo, Assistant Director for Policy Development, Dr. Michael F. Huerta, Office of Strategic Initiatives, Todd Danielson, Associate Director - Office of Administrative Management, Jody Nurik, Director, Office of Communications and Public Liaison, Joyce Backus, Associate Director, Dr. Steven J. Phillips, MD, (former) Associate Director, Gale A. Dutcher, (former) Deputy Associate Director.*

If you all have any questions please do not hesitate to contact me.

Thank you,
Elisabeth

To Whom It May Concern:

Pursuant to the Maryland Public Information Act, I hereby request the following records:

This is a request for records from the National Library of Medicine under the provisions of the Freedom of Information Act.

First, I request a copy of memos, reports, studies, and other documents regarding the shutdown/discontinuance of TOXMAP and TOXNET during calendar year 2019.

Second, I also request any analyses or studies regarding the proposal and/or decision to shutdown/discontinuance of TOXMAP and TOXNET during calendar year 2019.

Third, I also request a copy of any correspondence with NIH Office of the Director, HHS Office of the Secretary or the White House regarding TOXMAP and TOXNET during calendar year 2019.

Fourth, I also request a copy of any correspondence with EPA regarding TOXMAP and TOXNET during calendar year 2019.

Fifth and Finally, I also request the results of an electronic search for any emails (TO, FROM or CC) within the email accounts of the following specified individuals that include the word TOXMAP OR the word TOXNET during the time period January 1, 2019 to the present:

Dr. Patricia Flatley Brennan, Director
Jerry Sheehan, Deputy Director
Dr. Milton Corn, Deputy Director for Research and Education
Dr. Dina Paltoo, Assistant Director for Policy Development
Dr. Michael F. Huerta, Office of Strategic Initiatives

IN THE OFFICE OF ADMINISTRATIVE MANAGEMENT
Todd Danielson, Associate Director - Office of Administrative Management

IN THE OFFICE OF COMMUNICATIONS AND PUBLIC LIAISON
Jody Nurik, Director, Office of Communications and Public Liaison

IN THE DIVISION OF LIBRARY OPERATIONS
Joyce Backus, Associate Director

IN THE (FORMER) OFFICE OF SPECIALIZED INFORMATION SERVICES DIVISION (search the accounts of those individuals, even if now in different positions)
Dr. Steven J. Phillips, MD, (former) Associate Director
Gale A. Dutcher, (former) Deputy Associate Director

The requested documents will be made available to the general public, and this request is not being made for commercial purposes.

In the event that there are fees, I would be grateful if you would inform me of the total charges in advance of fulfilling my request. I would prefer the request filled electronically, by e-mail attachment if available or CD-ROM if not.

Thank you in advance for your anticipated cooperation in this matter. I look forward to receiving your response to this request within 10 calendar days, as the statute requires.

Sincerely,

Michael Morisy

To: John Birrenbach
Subject: RE: FOIA Request to the National Library of Medicine
Date: Monday, December 16, 2019 10:04:17 AM

Good morning,

As of March 15, we accept requests through our NIH FOIA Request Portal. Please submit future requests through the Portal.

There are numerous benefits of using the Portal to submit your request, including:

You enter your request directly into our processing queue;

The portal guides your entry to ensure we have the necessary contact information and details related to your request, thus reducing administrative delays;

You will receive an automated message through the Portal confirming your request has been received;

When the documents are reviewed and ready for release, you will download them directly through the Portal;

You only register once – making it even easier to submit future requests.

Once you submit your request through the portal, you will receive an email confirming receipt. Please feel free to contact me with any questions about this process.

As a one time courtesy we will process your request via your below email.

We look forward to working with you as we adopt a more interactive and efficient FOIA process at the NIH.

Thank you,
NHLBI FOIA Service Center

I will need to get EO approval to have CIT conduct an email search for items 3, 4, and 5. Once I have that approval I can collect any responsive records for those items. Todd, please confirm via reply all that I have your permission to search the inboxes of he following individuals: Dr. Patricia Flatley Brennan, Jerry Sheehan, Dr. Milton Corn, Dr. Dina Paltoo, Dr. Michael F. Huerta, Todd Danielson, Jody Nurik, Joyce Backus, Dr. Steven J. Phillips, MD and, Gale A. Dutcher.

I have attached all three requests to this email, for ease of viewing.

Allison, please let me know if there are additional parties that I need to contact for items 1 and 2. If you are able to retrieve any of those records on my behalf please do and return them to me ASAP.

The request reads as:

1. *a copy of memos, reports, studies, and other documents regarding the shutdown/discontinuance of TOXMAP and TOXNET during calendar year 2019,*

2. *any analyses or studies regarding the proposal and/or decision to shutdown/discontinuance of TOXMAP and TOXNET during calendar year 2019,*

3. *a copy of any correspondence with NIH Office of the Director, HHS Office of the Secretary or the White House regarding TOXMAP and TOXNET during calendar year 2019,*

4. *a copy of any correspondence with EPA regarding TOXMAP and TOXNET during calendar year 2019, and;*

5. *the results of an electronic search for any emails (TO, FROM or CC) within the email accounts of the following specified individuals (search the accounts of those individuals,*

even if now in different positions) that include the word TOXMAP OR the word TOXNET during the time period January 1, 2019 to the present: Dr. Patricia Flatley Brennan, Director, Jerry Sheehan, Deputy Director, Dr. Milton Corn, Deputy Director for Research and Education, Dr. Dina Paltoo, Assistant Director for Policy Development, Dr. Michael F. Huerta, Office of Strategic Initiatives, Todd Danielson, Associate Director - Office of Administrative Management, Jody Nurik, Director, Office of Communications and Public Liaison, Joyce Backus, Associate Director, Dr. Steven J. Phillips, MD, (former) Associate Director, Gale A. Dutcher, (former) Deputy Associate Director.

If you all have any questions please do not hesitate to contact me.

Thank you,
Elisabeth

To: NHLBI FOIA REQUEST (NIH/NHLBI)
Subject: Maryland Public Information Act Request: Toxmap and Toxnet Shutdown Records
Date: Monday, December 16, 2019 7:17:45 AM

National Library Of Medicine, National Institute Of Health
PIA Office
Room 6054
6705 Rockledge Dr.
Bethesda, MD 20817

December 16, 2019

To Whom It May Concern:

Pursuant to the Maryland Public Information Act, I hereby request the following records:

This is a request for records from the National Library of Medicine under the provisions of the Freedom of Information Act.

First, I request a copy of memos, reports, studies, and other documents regarding the shutdown/discontinuance of TOXMAP and TOXNET during calendar year 2019.

Second, I also request any analyses or studies regarding the proposal and/or decision to shutdown/discontinuance of TOXMAP and TOXNET during calendar year 2019.

Third, I also request a copy of any correspondence with NIH Office of the Director, HHS Office of the Secretary or the White House regarding TOXMAP and TOXNET during calendar year 2019.

Fourth, I also request a copy of any correspondence with EPA regarding TOXMAP and TOXNET during calendar year 2019.

Fifth and Finally, I also request the results of an electronic search for any emails (TO, FROM or CC) within the email accounts of the following specified individuals that include the word TOXMAP OR the word TOXNET during the time period January 1, 2019 to the present:

Dr. Patricia Flatley Brennan, Director
Jerry Sheehan, Deputy Director
Dr. Milton Corn, Deputy Director for Research and Education
Dr. Dina Paltoo, Assistant Director for Policy Development
Dr. Michael F. Huerta, Office of Strategic Initiatives

IN THE OFFICE OF ADMINISTRATIVE MANAGEMENT
Todd Danielson, Associate Director - Office of Administrative Management

IN THE OFFICE OF COMMUNICATIONS AND PUBLIC LIAISON
Jody Nurik, Director, Office of Communications and Public Liaison

IN THE DIVISION OF LIBRARY OPERATIONS
Joyce Backus, Associate Director

IN THE (FORMER) OFFICE OF SPECIALIZED INFORMATION SERVICES DIVISION (search the accounts of those individuals, even if now in different positions)
Dr. Steven J. Phillips, MD, (former) Associate Director
Gale A. Dutcher, (former) Deputy Associate Director

The requested documents will be made available to the general public, and this request is not being made for commercial purposes.

In the event that there are fees, I would be grateful if you would inform me of the total charges in advance of fulfilling my request. I would prefer the request filled electronically, by e-mail attachment if available or CD-ROM if not.

Thank you in advance for your anticipated cooperation in this matter. I look forward to receiving your response to this request within 10 calendar days, as the statute requires.

Sincerely,

Michael Morisy

To: John Birrenbach
Subject: RE: FOIA Request to the National Library of Medicine
Date: Monday, December 16, 2019 10:04:17 AM

Good morning,

As of March 15, we accept requests through our NIH FOIA Request Portal. Please submit future requests through the Portal.

There are numerous benefits of using the Portal to submit your request, including:

You enter your request directly into our processing queue;

The portal guides your entry to ensure we have the necessary contact information and details related to your request, thus reducing administrative delays;

You will receive an automated message through the Portal confirming your request has been received;

When the documents are reviewed and ready for release, you will download them directly through the Portal;

You only register once – making it even easier to submit future requests.

Once you submit your request through the portal, you will receive an email confirming receipt. Please feel free to contact me with any questions about this process.

As a one time courtesy we will process your request via your below email.

We look forward to working with you as we adopt a more interactive and efficient FOIA process at the NIH.

Thank you,
NHLBI FOIA Service Center

Hi there,

We are missing some important emails from Friday and now today. Please do not delete or move any press emails. I have sent two test emails and one has disappeared.

Please restore all/any emails from Friday and today back into the Inbox. I have attached an email that was sent to the Comms Inbox that I cannot locate within the inbox nor did we receive the forwarded message. I only received the notification because I cc'd myself and Diane. We need the press/media emails immediately.

Hi, NLM,

Sorry to keep bothering you, but I did have one fact-checking question, at least, that I hope I can run by you: when you say that ToxMap will be retired or sunsetted, does that mean the site will be taken offline today (i.e., the link will no longer work), or that it will continue as it currently exists, but will no longer be updated or maintained?

Thanks,

Michael

Subject: Re: question from a reporter re: ToxMap

Hi, NLM Communications,

Thanks so much for this quick and helpful reply. Just a few follow-up questions:

- I know that NLM launched a new version of ToxMap as recently as June 2018. When did NLM decide to close down the site altogether? Who made that decision?
- One concern I have heard from multiple ToxMap users is that, while the EPA and other agencies do offer some of the data available on ToxMap, there is no other tool that is similarly comprehensive and accessible to non-experts. Does NLM have a response to those concerns?
- How much did it cost to run ToxMap?
- How many people used ToxMap? Is there user data for the website that you can share?
- One researcher has expressed concern that ToxMap's "disappearance only extends that larger pattern of decreasing transparency of environmental data during the Trump era." Does NLM have any response to those fears?

Thanks again for your help on this. I'm happy to hop on the phone, if that would be easier: Personal Info

All the best,

Michael

On Fri, Dec 13, 2019 at 8:35 AM NLM Communications <NLMCommunications@nlm.nih.gov> wrote:

> Good morning Michael,

As the National Library of Medicine (NLM) implements its current Strategic Plan, it has had to make some difficult organizational changes that have resulted in some resources and programs being integrated into other NLM resources, made accessible on partner sites, or discontinued. These changes are intended to provide greater alignment of resources to fulfill NLM's mission.

While the TOXMAP website will be retired this month, selected TOXMAP data can be accessed from the following sites:

- U.S. EPA Toxics Release Program (TRI)
- U.S. EPA Superfund Program
- U.S. EPA Facilities Registry System (FRS)
- U.S. EPA Clean Air Markets Program
- U.S. EPA Geospatial Applications
- U.S. NIH NCI Surveillance, Epidemiology, and End Results Program (SEER)
- Government of Canada National Pollutant Release Inventory (NPRI)
- U.S. Census Bureau
- U.S. Nuclear Regulatory Commission (NRC)

Part of the decision was prompted by the increasing availability of the underlying data from their original sources. Many sources such as the EPA, among others, offer several products that provide similar geographic information system (GIS) functionality.

Sincerely,

The NLM Communications Team
